Cause, Causality.

THOMPSON (R. CAMPBELL), M.A., F.S.A., F.R.G.S.
Formerly Assistant in the Department of Egyptian and Assyrian Antiquities in the British Museum (1899–1905); formerly Assistant Professor of Semitic Languages in the University of Chicago (1907–1909).
Charms and Amulets (Assyro-Babylonian).

THOMSON (BASIL HOME).
Barrister-at-Law; formerly Acting Native Commissioner in Fiji.
Communion with Deity (Fijian).

THURSTON (HERBERT), B.A., S.J.
Joint-Editor of the Westminster Library for Priests and Students; author of the *Life of St. Hugh of Lincoln, The Holy Year of Jubilee, The Stations of the Cross.*
Church, Doctrine of the (Roman Catholic).

TRACY (FREDERICK), B.A., Ph.D.
Associate-Professor of Philosophy in the University of Toronto.
Conceptualism.

TURMEL (JOSEPH).
Prêtre; ancien Professeur de Théologie au Séminaire de Rennes; auteur de *Histoire de la théologie positive, Histoire du dogme de la Papauté des origines à la fin du quatrième siècle.*
Concordat.

VOLLERS (KARL), Dr. phil.
Ehemals Professor der Semitischen Sprachen an der Universität, und Direktor des Grossherzogl. Munzkabinets zu Jena.
Calendar (Muslim).

WADDELL (L. AUSTINE), C.B., C.I.E., LL.D., F.L.S., F.R.A.I., Lt.-Colonel, I.M.S.
Late Professor of Tibetan in University College, London; author of *The Buddhism of Tibet, Lhasa and its Mysteries.*
Celibacy (Tibetan), Charms and Amulets (Tibetan), Chorten.

WALSHE (W. GILBERT), M.A.
London Secretary of Christian Literature Society for China; late 'James Long' Lecturer; author of *Confucius and Confucianism.*
Chastity (Chinese), China, Communion with the Dead (Chinese), Communion with Deity (Chinese).

WENLEY (ROBERT MARK), D.Phil., Hon. LL.D. (Glasgow), D.Sc. (Edinburgh), Hon. Litt.D. (Hobart).
Professor of Philosophy in the University of Michigan; author of *Modern Thought and the Crisis in Belief*, *Kant and His Philosophical Revolution*.
Casuistry.

WHITTUCK (CHARLES AUGUSTUS), M.A. (Oxon.).
Vicar of St. Mary-the-Virgin, Oxford; late Fellow of Brasenose College, Oxford; author of *The Church of England and Recent Religious Thought*.
Clericalism and Anti-Clericalism.

WILLIAMS (HUGH), M.A., D.D. (Glasgow).
Professor of Ecclesiastical History in the Theological College, Bala; editor of Gildas, *De Excidio*; author of *Christianity in Early Britain*.
Church (British).

WOODHOUSE (WILLIAM J.), M.A.
Professor of Greek in the University of Sydney, New South Wales.
Charity (Greek), **Cimmerians.**

WOODS (FRANCIS HENRY), M.A., B.D.
Rector of Bainton, Yorkshire; late Fellow and Theological Lecturer of St. John's College, Oxford.
Calendar (Hebrew).

WORRELL (WILLIAM HOYT), A.B., B.D., Ph.D.
Professor in Hartford Theological Seminary.
Charms and Amulets (Abyssinian).

WÜNSCH (RICHARD), Dr.phil.
Ordentlicher Professor der Klassischen Philologie an der Universität zu Königsberg.
Charms and Amulets (Roman).

YOUNGSON (JOHN W.).
Of the Church of Scotland Mission, Poona.
Chuhras.

CROSS-REFERENCES

In addition to the cross-references throughout the volume, the following list of minor references may be useful:

Topic.	Probable Title of Article.
Butterfly	Animals.
Byss, Bythus	Abyss, Gnosticism.
Cæsarians	Sects (Chr.).
Cairn	Stones.
Caliph	Khalīf.
Callistians	Sects (Chr.).
Calumny	Slander.
Calvinistic Methodists	Presbyterianism.
Cameronians	Covenanters, Presbyterianism.

Concupiscence	Desire.

LISTS OF ABBREVIATIONS

I. General

A.H. = Anno Hijrae (A.D. 622).
Ak. = Akkadian.
Alex. = Alexandrian.
Amer. = American.
Apoc. = Apocalypse, Apocalyptic.
Apocr. = Apocrypha.
Aq. = Aquila.
Arab. = Arabic.
Aram. = Aramaic.
Arm. = Armenian.
Ary. = Aryan.
As. = Asiatic.
Assyr. = Assyrian.
AT = Altes Testament.
AV = Authorized Version.
AVm = Authorized Version margin.
A.Y. = Anno Yazdigird (A.D. 639).
Bab. = Babylonian.
c. = *circa*, about.
Can. = Canaanite.
cf. = compare.
ct. = contrast.
D = Deuteronomist.
E = Elohist.
edd. = editions or editors.
Egyp. = Egyptian.
Eng. = English.
Eth. = Ethiopic.
EV = English Version.
f. = and following verse or page: as Ac $10^{34f.}$
ff. = and following verses or pages: as Mt $11^{28ff.}$
Fr. = French.
Germ. = German.
Gr. = Greek.
H = Law of Holiness.
Heb. = Hebrew.
Hel. = Hellenistic.
Hex. = Hexateuch.
Himy. = Himyaritic.
Ir. = Irish.
Iran. = Iranian.
Isr. = Israelite.
J = Jahwist.
J″ = Jehovah.
Jerus. = Jerusalem.
Jos. = Josephus.
LXX = Septuagint.
Min. = Minæan.
MSS = Manuscripts.
MT = Massoretic Text.
n. = note.
NT = New Testament.
Onk. = Onkelos.
OT = Old Testament.
P = Priestly Narrative.
Pal. = Palestine, Palestinian.
Pent. = Pentateuch.
Pers. = Persian.
Phil. = Philistine.
Phœn. = Phœnician.
Pr. Bk. = Prayer Book.
R = Redactor.
Rom. = Roman.
RV = Revised Version.
RVm = Revised Version margin.
Sab. = Sabæan.
Sam. = Samaritan.
Sem. = Semitic.
Sept. = Septuagint.
Sin. = Sinaitic.
Skr. = Sanskrit.
Symm. = Symmachus.
Syr. = Syriac.
t. (following a number) = times.
Talm. = Talmud.
Targ. = Targum.
Theod. = Theodotion.
TR = Textus Receptus.
tr. = translated or translation.
VSS = Versions.
Vulg. = Vulgate.
WH = Westcott and Hort's text.

II. Books of the Bible

Old Testament.

Gn = Genesis.
Ex = Exodus.
Lv = Leviticus.
Nu = Numbers.
Dt = Deuteronomy.
Jos = Joshua.
Jg = Judges.
Ru = Ruth.
1 S, 2 S = 1 and 2 Samuel.
1 K, 2 K = 1 and 2 Kings.
1 Ch, 2 Ch = 1 and 2 Chronicles.
Ezr = Ezra.
Neh = Nehemiah.
Est = Esther.
Job.
Ps = Psalms.
Pr = Proverbs.
Ec = Ecclesiastes.
Ca = Canticles.
Is = Isaiah.
Jer = Jeremiah.
La = Lamentations.
Ezk = Ezekiel.
Dn = Daniel.
Hos = Hosea.
Jl = Joel.
Am = Amos.
Ob = Obadiah.
Jon = Jonah.
Mic = Micah.
Nah = Nahum.
Hab = Habakkuk.
Zeph = Zephaniah.
Hag = Haggai.
Zec = Zechariah.
Mal = Malachi.

Apocrypha.

1 Es, 2 Es = 1 and 2 Esdras.
To = Tobit.
Jth = Judith.
Ad. Est = Additions to Esther.
Wis = Wisdom.
Sir = Sirach or Ecclesiasticus.
Bar = Baruch.
Three = Song of the Three Children.
Sus = Susanna.
Bel = Bel and the Dragon.
Pr. Man = Prayer of Manasses.
1 Mac, 2 Mac = 1 and 2 Maccabees.

New Testament.

Mt = Matthew.
Mk = Mark.
Lk = Luke.
Jn = John.
Ac = Acts.
Ro = Romans.
1 Co, 2 Co = 1 and 2 Corinthians.
Gal = Galatians.
Eph = Ephesians.
Ph = Philippians.
Col = Colossians.
1 Th, 2 Th = 1 and 2 Thessalonians.
1 Ti, 2 Ti = 1 and 2 Timothy.
Tit = Titus.
Philem = Philemon.
He = Hebrews.
Ja = James.
1 P, 2 P = 1 and 2 Peter.
1 Jn, 2 Jn, 3 Jn = 1, 2, and 3 John.
Jude.
Rev = Revelation.

III. For the Literature

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

Baethgen = *Beiträge zur sem. Religionsgesch.*, 1888.
Baldwin = *Dict. of Philosophy and Psychology*, 3 vols. 1901–1905.
Barth = *Nominalbildung in den sem. Sprachen*, 2 vols. 1889, 1891 ([2]1894).
Benzinger = *Heb. Archäologie*, 1894.
Brockelmann = *Gesch. d. arab. Litteratur*, 2 vols. 1897–1902.
Bruns-Sachau = *Syr.-Röm. Rechtsbuch aus dem fünften Jahrhundert*, 1880.
Budge = *Gods of the Egyptians*, 2 vols. 1903.
Daremberg-Saglio = *Dict. des ant. grec. et rom.*, 1886–90.
De la Saussaye = *Lehrbuch der Religionsgesch.*[3], 1905.
Deussen = *Die Philos. d. Upanishads*, 1899 [Eng. tr., 1906].
Doughty = *Arabia Deserta*, 2 vols. 1888.
Grimm = *Deutsche Mythologie*[4], 3 vols. 1875–1878, Eng. tr. *Teutonic Mythology*, 4 vols. 1882–1888.
Hamburger = *Realencyclopädie fur Bibel u. Talmud*, i. 1870 ([2]1892), ii. 1883, suppl. 1886, 1891 f., 1897.
Holder = *Altceltischer Sprachschatz*, 1891 ff.
Holtzmann-Zöpffel = *Lexicon f. Theol. u. Kirchenwesen*[2], 1895.
Howitt = *Native Tribes of S. E. Australia*, 1904.
Jastrow = *Die Religion Babyloniens u. Assyriens*, 2 vols. 1902–1905.
Jubainville = *Cours de Litt. celtique*, i.–xii., 1883 ff.
Lagrange = *Études sur les religions sémitiques*[2], 1904.
Lane = *An Arabic-English Dictionary*, 1863 ff.
Lang = *Myth, Ritual and Religion*[2], 2 vols. 1899.
Lepsius = *Denkmäler aus Ægypten u. Æthiopien*, 1849–1860.
Lichtenberger = *Encyc. des sciences religieuses*, 1876.
Lidzbarski = *Handbuch der nordsem. Epigraphik*, 1898.
McCurdy = *History, Prophecy, and the Monuments*, 2 vols. 1894–1896.
Muir = *Sanskrit Texts*, 1858–1872.
Muss-Arnolt = *A Concise Dict. of the Assyrian Language*, 1894 ff.
Nowack = *Lehrbuch d. heb. Archäologie*, 2 vols. 1894.
Pauly-Wissowa = *Realencyc. der classischen Altertumswissenschaft*, 1893–1895.
Perrot-Chipiez = *Hist. de l'Art dans l'Antiquité*, 1881 ff.
Preller = *Römische Mythologie*, 1858.
Réville = *Religion des peuples non-civilisés*, 1883.
Riehm = *Handwörterbuch d. bibl. Altertums*[2], 1893–1894.
Robinson = *Biblical Researches in Palestine*[2], 1856.
Roscher = *Lex. d. gr. u. röm. Mythologie*, 1884.
Schaff-Herzog = *The New Schaff-Herzog Encyclopedia of Relig. Knowledge*, 1908 ff.
Schenkel = *Bibel-Lexicon*, 5 vols. 1869–1875.
Schürer = *GJV*[3], 3 vols. 1898–1901 [*HJP*, 5 vols. 1890 ff.].
Schwally = *Leben nach dem Tode*, 1892.
Siegfried-Stade = *Heb. Wörterbuch zum AT*, 1893.
Smend = *Lehrbuch der alttest. Religionsgesch.*[2], 1899.
Smith (G. A.) = *Historical Geography of the Holy Land*[4], 1896.
Smith (W. R.) = *Religion of the Semites*[2], 1894.
Spencer (H.) = *Principles of Sociology*[3], 1885–1896.
Spencer-Gillen[a] = *Native Tribes of Central Australia*, 1899.
Spencer-Gillen[b] = *Northern Tribes of Central Australia*, 1904.
Swete = *The OT in Greek*, 3 vols. 1893 ff.
Tylor (E. B.) = *Primitive Culture*[3], 1891 [[4]1903].
Ueberweg = *Hist. of Philosophy*, Eng. tr., 2 vols. 1872–1874.
Weber = *Jüdische Theologie auf Grund des Talmud u. verwandten Schriften*[2], 1897.
Wiedemann = *Die Religion der alten Ægypter*, 1890 [Eng. tr., revised, *Religion of the anc. Egyptians*, 1897].
Wilkinson = *Manners and Customs of the Ancient Egyptians*, 3 vols. 1878.
Zunz = *Die gottesdienstlichen Vorträge der Juden*[2], 1892.

2. Periodicals, Dictionaries, Encyclopædias, and other standard works frequently cited.

AA = Archiv für Anthropologie.
AAOJ = American Antiquarian and Oriental Journal.

OF
RELIGION AND ETHICS

B

BURIAL.—See DEATH AND DISPOSAL OF THE DEAD.

BURIATS.—**1. Language and population.**—The Buriats form a branch of the Eastern Mongols, and speak a dialect of the Mongolian language which differs both from the spoken tongue of the true Mongols of Khalkas and from the language of Mongolian literature. The Buriat language is distinct also from the Kalmuk. The degree of relationship between these four groups of the Mongol language has not yet been clearly defined, and, indeed, no thorough study of all the Mongol dialects has yet been made.

Speaking generally, the Buriats are found within the following territorial limits, viz. the Baikal Basin and the upper course of the river Angara from Irkutsk to the point where the river Ilim flows into the Angara; but a number of them—the Aga Buriats—live about the tributaries of the rivers of the Amur Basin—the Onon, Ingoda, and Argun—while in Mongolia itself, along the Russian frontier, a small tribe—the Bargu Buriats—is found. Further, Buriats are met with in other places within the limits of the Russian Empire, viz. on the upper tributaries of the Vitim, which is a right tributary of the Lena, and also on the upper left tributaries of the Lena itself. All the above-mentioned homes of the Buriats are within the boundaries of the two administrative territorial divisions of Eastern Siberia, viz. the Irkutsk Province and the Trans-Baikal Region. According to data obtained in 1831, the Buriats were estimated in all at 152,000 souls. Castrén reckons them as being about 190,000, but at the present time their number may be fixed at 250,000.

2. Lamaism and Shamanism.—According to their religious beliefs, the Buriats may be divided into two groups—the Southern and the Northern. The Southern Buriats, who dwell on the confines of Mongolia, are zealous Buddhists, and belong to the Yellow-hat men, or Lamaists, followers of Tson-ka-pa, the well-known Tibetan reformer of Northern Buddhism, and founder of the above-mentioned sect. This sect has a predominating influence in Tibet, and prevails, without any division, over Mongolia. Its doctrines, which have so large a following, are contained in a voluminous literature and require no special examination, seeing that Buriat Lamaism does not differ in any way from the Mongolo-Tibetan Lamaism. The Buriat Lamaist studies under the Mongolian and Tibetan Lamas, and he finds his religious literature in the sacred Tibetan language. Lamaism did not reach the Buriats earlier than the end of the 17th cent., viz. at the time of and after the Djungar wars, when, as is known, a multitude of peaceful people (amongst whom, of course, were Buddhist teachers) sought a quiet refuge amongst the Buriats. Buddhism, therefore, is a comparatively new factor in the religious life of the Buriats. Animated, as it has been, by a very tolerant spirit, this religious teaching, in crossing over from India into Tibet, not only brought with it a host of non-Buddhist beliefs, but also incorporated a whole body of local ones in Tibet, and a great many still more extraneous ones in Mongolia. And it was in this condition that it finally reached the Buriat plains. Now Lamaism is the predominating belief among the Buriats dwelling to the south of Lake Baikal. An exception is furnished only by the Buriats living at the mouth of the river Selenga; but these do not belong to the original inhabitants of Trans-Baikalia, being colonists from the northern shores of Lake Baikal, who migrated southwards in the first half of the 18th century. Further, we must note that about the north-eastern extremity of Baikal, among the Bargudji Buriats, who are kinsmen of the Bargu Buriats living in Mongolia, there is, along with Buddhism, an extensive cult of Shamanism. Until recently, our investigators, among whom was the author of this article, thought that there could not be any room for the adherents of the old religion in the southern part of Trans-Baikalia among the zealous Lamaists, who were under the influence of their teachers, and many of whom had received their religious education in Urga—the residence of the first enlightener of Mongolia, Djebtsun-damba-kutukta (see LAMAISM)—and some in Lhasa. But this opinion was due only to our insufficient acquaintance with the religious life of the Buriats. A young investigator, Djamtsaranoff, himself a native Buriat, in the year 1903 discovered in his native district, viz. in the valley of the river Aga, worshippers of the

old faith along with their priests, the so-called Shamans. And he asserts that the Buddhist Buriats of the Alar district are semi-Shamanists, and that their Lamas perform many Shaman rites. (For the sake of completeness, it should be mentioned that the Russian Mongolian scholar Professor Pozdneyeff discovered genuine Buriat Shamanists among the Chakars, living to the north of Kalgan on the southern frontier of Gobi.) To the west and north of Lake Baikal, Lamaism is by no means wide-spread. It is met with to the south-west of the Baikal, in the valley of the river Tunka, along the Irkut, the Oka, and the White River, and on the small rivers Alar and Golumet. According to the traditions of the inhabitants, both the Tunka and the Alar Buriats are settlers from Mongolia. The rest of the Buriats of the Irkutsk Province profess the religion common to the whole north of Asia and to the non-Aryan north-east of Europe—a religion which is well known in scientific literature under the name of Shamanism (*q.v.*).

This term, originally employed only for the beliefs of the north-east of Europe and of Asia, has in comparatively recent times received an extended signification, which has been adhered to in the work of the Moscow scholar Mikhailovski on this subject—a work which, unfortunately, has not been completed. Taking a general, ethnological point of view, he includes as Shamanism the beliefs of the American Indians and the aborigines of Africa, Polynesia, etc. Without here entering into an unsuitable polemic, we shall merely remark that, for convenience' sake and to be strictly methodical, we shall speak of Shamanism only in the restricted sense of the word. We do not dispute that in the New World and in southern countries we meet with forms of belief at the same stage of development as contemporary Shamanism; but, indeed, we also know that there exists a whole series of monotheistic religions, whose monotheism does not prevent their differing from one another in their conceptions about the Deity and His relations to men and to the world, in ritual, forms of worship, and ideas about the destiny of mankind, etc. One must not lose sight of the fact that in the various beliefs of the Siberian tribes a very close connexion is noticeable, and, likewise, there can be observed an uninterrupted identity in the foundations of their mythology and in their rites, even extending as far as the nomenclature—all of which gives one the right to suppose that these beliefs are the result of the joint work of the intellectual activity of the whole north of Asia. The Buriat Shamanism is one of the most highly developed forms, but, in order to elucidate certain rites and beliefs, we must draw parallels from other Shaman beliefs.

3. Religious development.—In determining the degree of development of the religious belief of the Buriat Shamanists, we must assert that, like some other Shamanist modes of worship among the more enlightened Siberian tribes, such as the Yakuts and the South Siberian Turks, it has reached a degree of somewhat advanced polytheism, reminding one of the Homeric polytheism. The Shamanists have their own Olympus, while among the Yakuts and Turks, who come more into contact with Christianity, there is noticeable a tendency to hierarchical monotheism. The supreme deity of the Altaians—Ulghen, or, as he is called in some places, Khormusta-Tengri (the Uyun-artoyen of the Yakuts)—stands far higher and farther removed from mortals than the thunder-bearing Zeus. These deities are freer from human weaknesses and stand on a more unattainable height, in comparison with the minor gods and genii, than Olympic Zeus. Buriat Shamanism has not evolved from itself such a Supreme Deity; it has, however, a whole assembly of heaven-dwellers (Tengris), some of whom are well-disposed to mankind, and some hostile. To some of them sacrifices are offered regularly, to others only on rare occasions. The Buriats have a whole series of thunder-gods. The influence of Buddhism in its later form, with its numerous Buddhas—Buddhas of non-earthly origin, Dhyāni-Buddhas, and deities—has obscured the monotheistic tendency. Amongst almost all Shamanists we see a cosmogony pervaded with dualism, a complex doctrine of the soul, and a conception about a future life and about requital. The priestly hierarchy remains in a primitive form, out of which caste has not yet been evolved; one must take into consideration that such evolution can be effected only in a more advanced and developed social state, to which the Buriats have never attained, although the hierarchy of the Shaman, as we shall see, has already been elaborated somewhat distinctly. In Homer we often see Agamemnon, Ulysses, and Achilles offering sacrifices to the gods. Here leaders and chiefs of clans enter into direct relations with the gods, but in Shamanism this has now almost disappeared. On important occasions they always resort to the Shaman.

One constantly hears it stated that, in Shamanism, there are to be found, together with polytheistic beliefs, examples of animism, fetishism, the worshipping of animals, of trees, and of hills, and other lower forms of religious belief. We can answer to this, that, owing to the conservatism of mankind and to their lack of initiative, primitive habits of life and old-fashioned beliefs very seldom disappear altogether. Many Christian sects, even among highly-civilized peoples, maintain, alongside of the Gospel teachings, a whole series of heathen survivals in the shape of prejudices, superstitious rites, and so on. The folk-tales and traditions collected by the brothers Grimm still live among the people. The German folk-lorists still continue to collect a rich harvest of living antiquity in Bavaria and the Tirol. Slavonic countries are full of dual beliefs in which paganism survives in Christian form. In Russia, especially amongst the common people but also in the higher classes of society, rationalism often flourishes along with the belief in fortune-tellers and sorcerers, and belief in the production of miracles. What are the spiritualism and occultism, by which Europe is periodically carried away, but survivals of barbarous times? The determining of the average level of the religious horizon of some civilized people would present a far more difficult task than, for example, that with which we are now occupied; for a semi-civilized people, like the Buriats, does not present such a variety in the character of its development as a more highly civilized people. We may take it then for granted that the majority of the Buriats profess a polytheistic religion in the shape of Shamanism. It is at least the predominating feature of their present-day belief.

In comparison with the more studied and more highly elaborated polytheism of the classical peoples, the Buriat polytheism must be characterized as immature, and, in a sense, chaotic. The anthropomorphization of even the highest divinities of the Buriat pantheon has been by no means completed; throughout it there is apparent a simple worshipping of the phenomena of Nature. Individualization into separate personages has only been aimed at. There is no need to look here for such plastic images as we see in Zeus, Phœbus, Pallas Athene, Aphrodite, and so on. The Buriats and Mongols possess neither the poems of Homer, nor odes, nor hymns; they have not the *Rāmāyaṇa* or even the Finnish *Kalevala*. They possess only a series of detached narratives, incantations, and prayers, in which is represented to us, with very indistinct features, the theography of this nomad people, who had only here and there adopted a settled mode of life, being at the same time occupied with hunting and trapping wild animals, not by way of sport, but as an indispensable element of their economic existence.

4. Tengris or heaven-gods.—The higher heaven-dwelling deities among the Buriats are called by the name of 'Tengris.' *Tengri, tegri, tiger, tangara* in all the Turco-Mongolian dialects signifies 'the heavens.' One of the leading experts in Mongol-Buriat mythology, Dordji Banzaroff, in his book, *Black Faith, or Shamanism* (St. Petersburg, 1892), adduces a whole series of proofs of the existence of the worship of the heavens among the Mongol races. Mongolian official documents usually begin with the formulæ, *munku tengriin khutzun dor*, 'by the power of the eternal heavens'; *tengri chi midnya*, 'heaven, know thou'; *tengri chi shitegchuy*, 'heaven, be thou judge'; which are common expressions among the Mongols. They assert also that Jenghiz-Khan appeared by the command of Heaven. The worship of the heavens does not in itself present anything exceptional among pastoral peoples; but among the Buriats a remarkable metamorphosis

took place in this worship. Instead of one single eternal heaven, they acknowledge 99 different Tengris, of which 55 are Western and 44 Eastern. The sharply defined dualism, peculiar to the whole Siberian Shamanism, honours in the Western Tengris the divinities or forces that are well-disposed to mankind, in the Eastern the forces that are destructive and hostile to man. Everywhere else where Shamanism is professed these hostile forces are placed, not in any part of the heavens, but in the lower regions, notwithstanding the fact that the cosmogony, about which we shall speak further on, testifies that once upon a time Father Ena, Erlik-Khan, or Erlen-Khan, lived in the heavens, whence, after a struggle with the spirit of light, he was cast down with his servants into the lower world. His assistants appear upon the earth and work evil there, but in heaven there is no place for them. Agapitoff and Khangaloff (of whom the latter is still actively investigating the Shamanism of his native country), being firm believers in the theory of the atmospheric explanation of myths, in their first work, *Materials for the Study of Shamanism in Siberia* (Irkutsk, 1883), were of the opinion that, in the 99 Tengris, the heavens in their various states are personified : in a quiet, a clear, a dull state, during storms, gales, winter snow-storms, wind, etc. But the Tengris not only control the atmospheric phenomena — they bring about diseases, they bestow happiness upon mankind, protect particular tribes, trades, etc., and perform a number of other acts.

One must not lose sight of the fact that there is, indeed, another name for 'heaven'—*oktorgoi*—viz. the physical heaven (the sky), with its phenomena; and the word *tengri* among the Mongols has a double signification, viz. the heavens, and the particular beings inhabiting the heights beyond the clouds of the worldly mountain Sumeru, with their leader Khormusta-Tengri. The Tengris have their antagonists in the Asseuris—beings living under the mountain Sumeru. The Tengris are holy and benevolent; the Asseuris are spiteful and quarrelsome. Between them a constant war is carried on. It does not seem to us improbable that the division of the Buriat Tengris into two hostile camps is inspired partly by this idea about the Tengris and Asseuris, borrowed from the Buddhist mythology. We shall meet with similar examples more than once in our discussion of the subject. It appears almost superfluous to mention that the Tengris, at any rate those about whom we have fuller information, in their life appear as genuine Buriat nomads. They, just like the Buriats, possess flocks and herds acquired from sacrifices, and betake themselves to the Shamans in circumstances of difficulty. All about whom we possess any information have families, and their children for the most part occupy a position inferior to that of the Tengris in the Buriat mythology, and bear the title of *Khan*.

The Buriats who live along the river Kuda, a tributary of the Angara, regard Zayan-Sagan-Tengri, the white deity of the Tengris, as the eldest among the Tengris. (Among the Balagans, instead of Zayan-Sagan-Tengri, stands Khan Tiurmes-Tengri, who has three sons, Zasa, Isykhur, and Akha.) Merchen-Tomeh, the second one, came down to earth to save people (the Balagan Buriats call him Abay-Ghesser-Bogdo), and the third, Erkhe-Bashatey (the great wise man), wrote laws for the government of nations. Here, under the influence of the written Tibetan narratives, the old local names have partly given way to foreign ones. Khan Tiurmes, as the Russian folk-lorist Potanin has proved by numerous comparisons and parallels, is identical with Khormusta-Tengri. Abay-Ghesser-Khan, in the well-known heroic tale, is the second son of Khormusta, viz. Ulu-Butugekhchi (the accomplisher of works) (see the Mongol text of this tale, published by the Russian Academician Schmidt). He comes down to this world to eradicate the sources of the ten evils.

The most popular among the Western Tengris, who is constantly mentioned in the Shaman incantations and the narratives of the Buriats, is Esseghe-Malan-Tengri. According to some narratives, he is one of the sons of the Monkhon Tengri. This name Agapitoff and Khangaloff translate by the words 'heaven—bottom of the vessel.' We prefer to leave the word *tengri* untranslated, since it has a double signification, meaning at the same time the heavens, as an object of worship, and an anthropomorphized being dwelling in the heavens. Other narratives affirm that Esseghe-Malan was a man, who lived on the earth and promised certain nine deities to build a palace up to the sky, on condition that, in the event of his carrying out the undertaking, the nine gods should come down to earth to mankind and give up to him their place in heaven. Esseghe-Malan carried out the proposed undertaking, the gods took up their abode on earth, and he in heaven. In the Buriat narratives Esseghe-Malan sometimes lives not in heaven, but on earth, somewhere beyond a high mountain. He often appears in these narratives as a simple-minded Buriat; in the story 'Girgulai-Mergen,'[1] the sister of the hero Agu-Nogon-Abakhai, the maiden Yatiaz, in order to resuscitate a brother who had been killed, and to obtain a bride for him, goes as a suitor to seek the hand of the three daughters of Esseghe-Malan-Tengri; she vanquishes the other claimants for marriage with the daughters of Esseghe, in all warlike sports and exercises. Esseghe-Malan is prepared to give his daughters to the victor, but the Shamans warn the god that he is giving them in marriage to a woman; yet the god, notwithstanding this, gives his daughters. The clever girl-heroine makes the daughters of Esseghe-Malan bring her dead brother to life, and afterwards gives them in marriage to him. In the tale about the old man Khoridai, the hero does not fulfil the orders of Esseghe-Malan, and the enraged Buriat thunder-bearer prepares to strike him with lightning. The old man Khoridai appeases the wrath of the god by a sacrifice, and excuses himself for his transgressions with somewhat flat excuses and sophisms. In heaven Esseghe-Malan has a box with round stones; by throwing them on the earth he produces thunder and lightning. One clever Buriat, during a period of drought on earth, made his way to heaven, and, taking advantage of the absence of the person who was entrusted with the box containing the stones, began to throw them down of his own accord, and produced a storm and rain-shower on earth. Esseghe-Malan has a somewhat large family and an extensive household. His wife, Ekhe-Urani, is mentioned in all ritual offerings to the Tengri, although she herself appears as rather a colourless person. This couple have nine daughters, according to the incantations of the Shamans, but only three according to the narratives of the Buriats. These have the power of making the poor rich and bringing the dead to life. The eldest of them (according to the Buriat accounts) steps over the bones of the deceased person, spits on them, waves a black handkerchief, and the skeleton is put together; the second one, having executed the same manipulations, completely restores the phy-

[1] *Records of the East-Siberian Section of the Imp. Russ. Geog. Soc.*, Section of Ethnography, vol. i. pt. i., 'Buriat Tales and Superstitions,' Irkutsk, 1889, pp. 33–43.

sical outline of the deceased; the third one gives life. In addition to his daughters, Esseghe-Malan has three sons. The eldest of these is regarded as ruler of the large island of Olkhon on Lake Baikal; but, by other accounts, the lord of Olkhon is Oren, who will be referred to more fully in describing animal-worship; the second son appears before the Tengris as the principal representative of the elder earthly gods (children and kinsfolk of the Tengris); the youngest son is the patron of Kiakhta (a trading station on the frontier of China), and lord of the red goat. Besides children, Esseghe-Malan possesses also three shepherds, the first of whom, Makita-Mangi, acts as intermediary between the Tengris and mankind, and is the patron of the Shamans, whom he protects from the evil Tengris, hostile gods, and genii. The second, Badshindai, having been present at the creation of man, protects people from diseases sent upon them by the hostile Eastern Tengris. Debetsoi, the third, is the patron-shepherd of flocks and herds; he rides on horseback with a quiver, a bow, and lasso in his hands.

Besides the thunder-bearer, Esseghe-Malan, there are others, both Eastern and Western, who control atmospheric phenomena, such as, for example, Mundur-Tengri (*mundur*=hail), the god of hail, loud thunder, and lightning; Galta-Ulan-Tengri (the fire-red Tengri), the god of heat and drought and storm-lightning causing conflagrations. In some places the Buriats assert that from this Tengri people received fire; but, generally, the principal lord of storms and lightning is considered to be Zayan-Sagan-Tengri. He sends forth storms against unclean and evil spirits, and he hurls upon earth *sakhilgata budav*—stones from heaven causing lightning. Such a stone was found by the white Shaman of Unga, Barnak-Khognuyev, and is preserved as a relic by his descendants.

There are, further, a whole body of Tengris who throw stones upon the earth. Some of these cast down special red stones, the *zada*, by means of which storms can be caused at will. There are three Tengris of the Northern, and three of the Southern winds, Tengris of gentle, warm rain, and of cold rain. As to the family position and actions of these Tengris we have no information; it is evident that here anthropomorphization has scarcely yet commenced. Of the remaining Tengris we shall mention only those whom it is necessary to notice in giving an account of other beliefs of the Buriats; for example, Seghen-Tengri, who, it is said, was the cause of the dissensions between the Western and Eastern Tengris. He had a beautiful daughter, for the possession of whom rivalry sprang up among the heaven-dwellers, Dolon-Khukhu-Tengri (the seven blue Tengris). They are the bestowers of rain; but when rain is required, one does not apply directly to them, but offers sacrifices to the Ukhan Khans, the water divinities, and asks for their mediation with the seven blue Tengris. Shara-Khasar-Tengri (the yellow-cheeked one) has been indirectly connected with the legends about the origin of the Buriats. His three daughters, dressed in swans' skins, came down to earth to bathe in a lake, and there they took off the swan's dress; the Buriat Khoridai was watching them, and he hid the dress of one of them, Khoboshi-Khatun. The heavenly maiden could not fly up to heaven without the wings of the swan's dress. Khoridai, having seized her, married her, and had children by her, from whom sprang the Buriat tribes Khanghin and Sharat. Subsequently the wife of Khoridai discovered her swan's dress and flew off to heaven in it, leaving her husband and children behind. Budurga-Sagan-Tengri deserves mention, as being the progenitor of many persons who play a foremost part in the Buriat mythology—his eldest son, Ukha-Solbon, being the patron of horses. This Ukha-Solbon had two wives of heavenly origin, but his third was snatched by him from earth. Whilst she, as a Buriat bride, was being conducted to her bridegroom, Ukha-Solbon sent down a storm, during which he seized the maiden. The second son of Budurga-Sagan-Tengri is Bukha-Noin-Baobai (father-master-ox), the hero of a whole series of narratives. No less significance have the third son of the above-mentioned Tengri, Sakhidai-Noin, and his wife, Sakhala-Khatun, the rulers of fire.

5. **Folklore of the smith.**—In many primitive religions, a divine origin is ascribed not only to fire and domestic animals, but to various handicrafts. The lame god Vulcan, the wise cripple, son of Juppiter and Hera, is not the sole instance of a blacksmith god, a god-artisan. But the blacksmith is regarded in two ways: the Hellene, with his bright intellect and his artistic creativeness, saw in him a divinity favourable to mankind, the teacher of the artist; among many other peoples the blacksmith is a magician, living and working amid fire and smoke and covered with soot. He, in an incomprehensible manner, works iron out of stone. He is acquainted with the dark forces of Nature. He is wise and yet terrible. Such a view might easily establish itself where the blacksmith's handicraft was borrowed from some immigrant foreign people; and this view prevails also among the Siberian natives. There traditions have been preserved about one-legged men, dwarfs dressed in skins, living in caves, and possessors of various mineral treasures and precious metals. In the Buriat mythology both views about blacksmiths have been maintained at one and the same time. They have both white and black smiths, just as there are white and black Shamans; the former are favourable and well-disposed to men, the latter are malicious and hostile towards them. The patron of the white smiths is considered to be the Western Tengri, Daiban-Khukhu-Tengri, who, by command of all the Western Tengris, sent on earth his smith Bojintoi. The latter descended on the Tunka mountains, to the south-west of Lake Baikal, and began to teach people his trade. The patron and progenitor of the black smiths is an Eastern Tengri.

6. In concluding our discussion of the Western Tengris it is necessary to refer to a special act of benevolence which several of them perform. During rain and storms they send down from heaven to the houses of their favourites, in the shape of a small cloud, *urak*, thick cow's milk. This is collected and preserved when it comes down in visible manner; when unseen, the gift is made known by the results. The possessor of the *urak* becomes successful in everything—he grows rich, his children thrive well, his cattle multiply. This *urak* appears in the shape of a scum which forms on the puddles during heavy showers.

7. **Hostile Tengris.**—The Eastern Tengris inhabit the eastern half of the heavens. They are hostile to man, or, speaking more accurately, they are in general wicked, irascible, exacting. They afflict people with infectious diseases, storms, and misfortunes. They are the patrons of the black Shamans, who often punish people and steal their souls, and of the black smiths, who, at one and the same time, are master-artisans and magicians who ruin people. In the Eastern Tengris is personified, as it were, the negative principle of evil, which carries on an irreconcilable struggle with good and light; but in the Buriat Shamanism this struggle has become obscured, and it has not such a definite,

permanent character as among the other followers of Shamanism.

According to the cosmogony of the Shamanists, the enmity between good and evil begins with the Creation. Here this antagonism is preached with the same consistency and inexorability as in the ancient teachings of Iran and in the dualistic Christian sects. Erlik-Khan carries on an implacable struggle with the spirit of light, Ulgheo, or the Khan Tiurmes of the Altaians, the Kudai of the South Yenisei Turks. Erlik once lived in heaven, but for his impiety and struggle against good was thrown into the nethermost parts. At one time the Eastern and the Western Tengris lived at peace with one another, but they quarrelled after a while; then they became reconciled and even entered into relationship with one another. Thus a daughter of a Western Tengri was given in marriage to an Eastern, and her father endowed her with a chestnut steed and a red cow. In honour of this occasion the Kuda Buriats consecrate to the Eastern Gujir-Bogdo-Tengri a chestnut steed and a red cow. Afterwards, however, the feud was again renewed. As eldest among the Eastern Tengris we find not Erlik-Khan, as one would have expected, but only some little-known personages; among the Balagan Buriats inhabiting the district round the town Balagansk, Ata-Ulan-Tengri, and, among the Kuda, Khimkhir-Bogdo-Tengri. Erlik-Khan is not even to be found among the Tengris; this Satan and Ahriman of Shamanism is here degraded from his high position to that of a Khan; he appears as judge of the dead, as a Buriat Minos. We shall speak more in detail about him when we reach the subject of the Khans. The Eastern Tengris, like the Western, are divided into groups. Among these a prominent place is occupied by the Yukhun-Shukhan-Tengris, nine bloodthirsty Tengris—the cause of destructive hailstorms and of bloody rain; they are also the patrons of the Eastern Khans. In the exorcism consecrated to them it is said:

'Red blood is (our) beverage
Food consists of human flesh
Black wine is our knowledge (wisdom, inspiration)
Black is (our) kettle
Food is black as tar. . . .'

After these bloodthirsty heaven-dwellers come 13 Assaranghi Tengris, the mighty patrons of the blacksmiths, of the black Shamans. Among these Assaranghis, Khara-Dargakhi-Tengri (= the blacksmiths' Tengri), or Boron-Khara-Tengri (= the Tengri of black rain), by order of the others taught a man named Khojir the blacksmith's handicraft, and the seven sons of Khojir became blacksmiths. The exorcism says: 'Wisdom was taught us by Boron-Khara-Tengri, one of the 44 Eastern Tengris; he it was who placed in our hands the magic art.' Some Shamans consider certain Tengris of darkness and Tengris of multi-coloured mists as teachers of the blacksmiths. The invocation addressed to them says: 'From the dark Tengris, Tengris of the mists, Tengris of the multi-coloured mists, take their origin the seven blacksmiths, sons of Khojir.' Among the Eastern Tengris we find a whole series of such as inflict various grave maladies, as frenzy or insanity, on people, and epidemics on cattle. Cattle being the chief source of livelihood, some of the incantations against epizootics are especially touching; thus, in the exorcism of the Trans-Baikal Buriats, taken down by the writer upon the occasion of an epizootic, it is not the originator of the misfortune, Ukhin-Booum-Tengri, but his father Gujir-Tengri, who is thus addressed: 'Thou, owner of 400 milk-cows and 40 bulls, thou, bellowing Tengri, who possessest 99 cattle-yards, 13 fences, and 13 lassos, deliver us from troubles and maladies, and do thou restrain Ukhin-Booum-Tengri! And do thou help also, father Aikushi (another Tengri), and thou, too, mistress Almoshi (his wife). . . .' Such is the approximate characteristic of the higher aristocracy of the Buriat Olympus; and this aristocracy is quite recent in the Shamanist pantheon, which has been largely renovated by borrowing from Buddhism. In Trans-Baikalia, among the Shamanists of the mouth of the river Selenga, there appears, as the progenitor of some Tengris, a purely Buddhist personage, not Khan Tiurmes, whose identity with Khormusta-Tengri has been established by approximation, but the chief Tengri of Mount Sumeru himself, under his own name of Khormusta-Tengri. The Dalai-Lama of Tibet and Bogdo-Gegen of Urga appear as gods of the dawn. The next rank in the descending order of the deities is occupied by the Khans living on earth, but related, for the most part, to the Tengris, although here also the same relations to man are maintained as among the Tengris: the Eastern are hostile, the Western favourable to man. But even among the Tengris one and the same person is looked upon by different Buriat tribes now as an Eastern, now as a Western Tengri; among the Khans such intermixture occurs oftener. The most popular among the Western Khans is Bukha-Noin-Baobai, a mythical bull and progenitor of one of the Buriat tribes. He appears, according to some narratives, as the son of Budurga-Sagan-Tengri; according to others, of Zayan-Sagan-Tengri; while again other narratives give him the name Ellat Khara-Noin, an official attached to the person of Erlik Khan, the judge of the dead, the guardian of the infernal dungeons, the most terrible of the Eastern Khans.

8. Origin of strife among the Tengris.—Once upon a time men led a peaceful, happy life on earth, lived to an advanced age, and died, after having enjoyed life to the full, peacefully and without regret, like the patriarchs of the Bible. Such a life, free from cares, was led by the Western Tengris; but the Eastern Tengris did not slumber, and propagated diseases among mankind. (Here also one cannot help noticing an echo of Buddhist traditions.) The Western Tengris once happened to open the window through which they probably not very frequently cast glances down upon earth, and noticed the frightful devastation which was being caused by their rivals. They decided to send down the Tengri Shargai-Noin, distinguished for his intellectual and physical powers, who used to beat the Eastern Tengris at all warlike sports, and who successfully brought about the marriage of a maiden of the Western Tengris with an Eastern Tengri. Shargai-Noin, however, could not alone overcome the malicious Tengris and their representatives on earth, so he was reinforced by Bukha-Noin, and finally a third associate was sent, and then only were they able to subdue the fury of the enemies of mankind. According to some accounts, Bukha-Noin, the son of one of the Western Tengris [another tradition reckons them as Eastern Tengris], is transformed into a young bull, having been born of one of the cows belonging to Esseghe-Malan's son (see above), and descends to earth. He is followed thither by Esseghe-Malan's son; his father calls him back, since he has no one to talk to during the son's absence. 'You can talk to the son of the Tengri Jenghiz-Khan,' rejoined the son of Esseghe-Malan, and he remained on earth. The chief episode in the history of Bukha-Noin is his struggle with another beast of divine origin. The Eastern Tengri Gujir transforms himself into a speckled bull in the herd of Taidji-Khan on the southern shore of Lake Baikal, and challenges other bulls to fight him. Bukha-Noin from the northern shore hears the bellowing, swims across the lake, and accepts the challenge; the combat lasts several days. Bukha-Noin fights with his adversary, and, from time to time transforming himself into a handsome young man, makes love to Taidji-Khan's daughter, who, as the result of this liaison, gives birth to a son. The father is indignant with his daughter. Bukha-Noin places his son in an iron cradle and throws him over the Baikal; then he himself swims across the waters and nurses his son. Two childless Shaman women, wishing to have children, sacrifice to Bukha-Noin. He gives his son to the Shaman woman Assukhan as her child. The infant is named Bulagat. He grows up and runs about playing on the shore of Lake Baikal. From the water a boy emerges, and plays with him. The Shaman women, hearing of this, give their boy some well-cooked food (*ben*), with the intention that his playmate may partake of it also. The children, having played, partake of the nice dish and fall asleep. The Shaman women come to the shore and carry the sleeping boys away with them; thus the second Shaman woman also came into possession of a son, who was named Ikhirat. From these boys originated the two Buriat tribes Bulagat and Ikhirat. Tradition also asserts that Bukha-Noin, during the time of his struggle with the bull, Bukha-Mul, journeyed along the mountains Khukhu-Mundurgu (the Tunka Alps to the south-west of Lake Baikal); at the places through which Bukha-Noin passed, there grew up juniper bushes (*Juniperus communis*) and pitch pines (*Abies sibirica*). These plants are considered sacred, and are used for incense at the sacrificial rites.

9. The Khans.—Among the Western Khans, according to the tradition of the Kuda Buriats, are reckoned the nine sons of Bukha Noin. These persons are accounted lords of different localities in the Province of Irkutsk, as, for instance, the mouth of the Angara, the source of the river Irkut, Kiakhta in Trans-Baikalia, etc. Among the Balagan Buriats, whose traditions and beliefs have,

in general, borrowed largely from the Buddhist mythology, we again find Khan Shargai-Tengri as founder on earth of the Western Khanate; but the tradition concerning him is a repetition of the tale about Bogdo-Ghesser-Khan descending upon earth, with the sole difference that he appears here not as a son, but as a grandson of Khormusta-Tengri, the chief of the 33 Tengris inhabiting Mount Sumeru. Among the Balagan Buriats also we find the same Khans—lords of various localities, as among the Kuda Buriats, but under different names. New personages are also to be found here, as, for instance, the Khans—protectors of wedlock, and of young children, of both the male and the female sex. Among the Trans-Baikalian Shamanists, the Eastern Khans are specially respected. This, we think, is due, not to any special strongly developed worship of the terrible gods, but to the fact that local gods, lords of various regions lying to the East, far away from the dwelling-places of the Idgins on the northern side of Lake Baikal, were turned into Khans. Of these Idgins there is an infinite number, and, as far as their rôle is concerned, they are often completely identical with the Khans. The difference is often a purely external one. The majority of the Idgins are deified human beings,—the Khans are the children of celestials. Similar in character to the cult of these Idgins is the worship of the Water Khans. These latter, Ukhan-Khat (*khat*=plural of *khan*), like the various terrestrial Khans, came down from heaven, having made for themselves bridges out of rays of light—some of red, others of yellow, and others, again, of blue rays. By means of these bridges they first descended upon Mount Sumeru, and afterwards into the water. A fourth party, however, came down from the heavens on the wings of a blue eagle. In the invocation to the Water Khans, 12 Western Tengris, or heavens, are mentioned, whence the Water Khans descended. Here the Tengris have positively a dual character; they may be regarded both as personalities and as divers divisions of the heavens. In the Shamanist cosmography, *e.g.* among the Altaians, there are 13 heavens covering each other like concentric envelopes, and over each heaven presides its own peculiar deity. There the anthropomorphization is more sharply pronounced than in the Buriat Shamanism. Agapitoff states positively that in the different personages of the Ukhan Khans the various properties of water are personified: its glitter, its mobility, its faculty of being agitated, and so on. Being in possession of but scanty materials—only a single prayer addressed to the Ukhan Khans—we cannot undertake to say how far the personality of the deity is here separated from the element itself which he controls.

The subsequent stages of the settlement of the Water Khans in their new surroundings are as follows. In the sea they became kings of the fishes; after that they travelled along the bottom of the sea, where among their attendants was the Uriankhai Shaman, Unukhuieff; then they visited the *yurta* of Ukha-Lobsan-Khan, the eldest of the Water Khans, whence they flew away by the smoke-outlet, transforming themselves into a whole series of new beings, which we do not enumerate. Here we shall make one remark: the designation 'the eldest among the Water Khans—Ukha-Lobsan,' as Agapitoff and Khangaloff give it, seems to us incorrect. This passage probably should read 'Ukha Lusan,' or 'Lusat.' In that case, the name would be explicable—Lu, Lus meaning a water-dragon, the lord of the seas among the Chinese and Mongol Buddhists, whereas Lobsan is simply a proper name borrowed from the Tibetan, and has no relation whatever to the element of water. In a prayer to the Ukhan Khans, mention is made of their possessing a meadow, full of snakes and buzzing bees, and also a lake swarming with frogs. Side by side with this, just as the blacksmiths have patrons of their handicraft, so among the Ukhan Khans there are patrons of fishing and navigation. We find there the lord of the boat, of the oar, of the pole, etc. The Water Khans, descended as they are from the Western Tengris, are generally well-disposed towards mankind.

In describing the water kings, one is involuntarily confronted by the question: What about the Khan-king of the great Baikal? Does he exist? If there are lords of the river-sources and of insignificant tracts of land, can it be then that the Baikal has no king of its own? Agapitoff in 1883 expressed himself as certain of the existence of one, and probably, wherever the Buriat Shamans in their prayers mention the sea, Lake Baikal is really meant. The writer in 1883 succeeded in recording among the Buriats living on the shores of Lake Baikal, at the mouth of the river Selenga, invocations to several deities connected with the lake. The shortest of them is uttered by people starting on a voyage or fishing expedition in the sea, and is in the form of a prayer or petition: 'Chief of the eighty black water-dragons (Lu—see above) and of the eight black Belkites (the Shaman could not explain of what kind these water beings were), we pray to thee.' . . . Then follows the exposition of the request, according to the needs of the supplicant—for mild, quiet weather in the case of coasting, for a fair wind in the case of distant voyages, for success in fishing, and so on. In an invocation addressed to Khagat-Noin, one of the Eastern Khans, the following is sung: 'Thou, O son of Khormusta-Tengri, Khagat-Noin, art our father; thy wife, the hairy mistress, is our mother! The lowland of Olkhon (the island) and the small stormy black sea are thy dwelling-place; the mountainous Olkhon, the wide stormy sea, is thy dwelling-place.' . . . This is followed by the supplication. The name, *small sea*, small Baikal, is given to the straits between the island of Olkhon and the northern shore of Lake Baikal, that of *great sea* to the remaining part of the lake.

Exactly in the same manner to another Khan, Kharhariai-Noin, is sung as follows: 'High is thy dwelling-place, O Idjibey, upon the dark, wind-swept, wide black sea. On the one side, thou art descended from a bird, the swan, and the warlike Mongols, from father Khaga-Tai-Noin, from the sacred bird and a hairy mother, and from the thirteen Khalkhases. Thy distant relatives are the seven Dokshids (terrible Buddhist deities) and lords of the Dalai-Lama and the Bogdo-Gegen.' The name of Bogdo-Gegen is usually given to the regenerator of the famous Buddhist teacher in Tibet, the historian of Buddhism, Tāranātha. He became incarnate in the person of a saint of Urga, in Mongolia. There is another prayer (to the lord of the black ram) in which there is also a reference to domination over the Baikal and its transference from the Baikal to the river Lena.

Here we discern an indication of the Mongolian and non-Buriat origin of one of the gods; but there are several of them. With regard to the water kings, it has already been noticed that their cult was established by Unukhui's son from Uriankhai. The connexion between the Buriat Shamanism and the Shamanism of the neighbouring peoples is, however, not limited to this. Among the gods and the spirits of the dead, the Buriat Shaman in his prayers often mentions the Shamans of the Karagases (a small tribe inhabiting the Eastern Sayan mountains), and especially those of the Tunguses. In the prayer to the lord of the black ram, mention is made of his pulling up a larch tree and making a scourge of it; also of his subsequently entering into relationship with the 99 and the 77 Orotchons—Eastern Trans-Baikal Tunguses.

10. Tea-gods.—Side by side with the Khans, descendants of the Western Tengris, a peculiar, as yet little known, worship of 'tea-gods,' who are also well-disposed to mankind, like the Western Khans, is gradually being elucidated; but nothing beyond a few names is known concerning it. In this cult the name of Bejin-Khatun, 'self-created mistress Bejin,' demands particular attention. From the fragments of exorcisms which have been written down, one observes only indications concerning palaces of the watery sea; these are described as having drawn up before them 90 black steeds, and 90 grey ones, their saddles covered with costly fur cloaks. Together with the sea-palaces, a palace of the Dalai-Lama is mentioned; it has been introduced into the exorcism probably for no other reason than the temptation presented by the word *dalai*, 'sea.'

Mention is made in this prayer of 50 burning candles (a novelty borrowed from Christians or Buddhists), and of 99 mallets for the Shamans' tambourines. The deities dealt with here are called *tea-gods* because no bloody sacrifices are offered to them, and libations are made not in wine, but in tea. This cult is developed among the Buriats living along the river Kuda, a tributary of the Angara. They have also a certain other cult—that of the Western, white gods, favourable to men. These are not descended from the Tengris, but have them as protectors. Side by side with the tea-*burkhans* (-gods) there is to be found among the Kuda and Balagan Buriats a cult of similar beings, favourable to men—*khorduts*. The only thing that is known concerning them is that they are under the protection of Oer-Sagan-Tengri, and

that their daughters and sons have at various times been great Shamanesses and Shamans.

11. Erlik-Khan.—The Eastern Khans, children and relatives of the 44 terrible Tengris, are as ferocious as their celestial progenitors. The first place among them is occupied by Erlen-Khan or Erlik-Khan, the judge and overseer of the subterranean dungeons. He has children, sons-in-law, and other relatives. It is remarkable that the court and numerous retinue of Erlik present, in regard to their organization, an exact copy of Russian judicial and administrative institutions. Erlik-Khan has his own chancelleries, his own functionaries for special missions, couriers, etc. One of these, Som-Sagan-Noin, in executing the Khan's instructions, is in the habit of riding in a cart, which flies through the air without wheels or horses. The functionaries of the Siberian viceroys and governors boasted of the speed with which they moved from one place to another. Besides that, Som-Sagan-Noin tries law-suits. The Buriats who have litigation or suits pending in the Russian courts offer sacrifice to Som-Sagan-Noin. As most of the Siberian functionaries have subordinates, assistants, factotums, so Som-Sagan-Noin has two such assistants: Ukha-Tolegor-Khovduieff of the black Shamans, and Khan-Khormo-Noin, whose origin is not clear. They are commissioned by Erlik-Khan to preside at various tribunals. Besides these, Erlik-Khan has yet another important official, Khurmen-Edjin, overseer of 88 prisons, to which again hundreds of clerks and other functionaries are attached. They are all engaged in examining the affairs of men, whilst evil spirits are busy catching the souls of the guilty; men do not, however, die on that account, but only sicken. The souls remain in these prisons until their earthly possessors die. Powerful Shamans are able to deliver a soul from its prison, but with great difficulty. There are also other prisons whence a Shaman can deliver a soul only with the help of the ancestors of the Shamans. There are some from which souls cannot be freed. The world is full of evil—hence, besides Erlik-Khan, there are others who, in the opinion of some Buriats, are even more terrible than Erlik himself; such are Albin-Khan and Kharlak-Khan, who also have their tribunals. Albin-Khan is remarkable for the extraordinary swiftness of his movements and actions. The Buriats have a saying, 'to drive like Albin,' *i.e.* very fast.

If in other Buriat deities we see true Buriat nomads and hunters possessing supernatural powers, as far as Erlik is concerned, we have before us a real 'culte moderne.' In the transformation of Erlik from the spirit of darkness, Ahriman, to the judge of the dead, Minos, a Lamaist influence may be discerned, but his attributes are certainly modern. The Erlik-Khan of the Shamans does not even make use of a mirror to see the deeds of a deceased person. Erlik-Khan has become a judge, an official, a governor-general sent by the celestial gods. Wishing to depict the sufferings of the sinful soul, the Buriat could think of nothing more terrible and unrelenting than Russian red-tapeism and the Russian prison system. The image of Erlik obscured the more ancient idea of retribution in another world for the deeds committed in this one. We shall enlarge on these things in examining the question of Animism and its part in the beliefs of the Buriats. Other Eastern Khans harm man in various ways, by destroying his cattle (see above), or by inflicting maladies, especially infectious ones. Smallpox, typhoid fever, syphilis, measles, cancer, and other malignant diseases have their own lords.

12. Deified human beings.—The Buriat pantheon, as we have described it, presents a sufficiently familiar picture of a dualistic religion at its polytheistic stage; but it is not yet complete. Deified human beings, Shamans, and, in general, prominent persons who have attained to the rank of *zayans* (deities) and protectors of various localities, must be included in it. According to some narratives, Esseghe-Malan himself was a man who had migrated to heaven, and there became a Tengri; Jenghiz-Khan also is looked upon as a Tengri. The process of canonization has not been completed up to the present time, and we have contemporary examples of it.

A retired major in the Russian army, Yefim Pavlovich Sedykh, a poor solitary wretch, settled on the river Selenga in the village of Fofanova; he was in the habit of taking a walk every Sunday up a hill situated near the village. For his amusement on these occasions he drank vodka, and under its influence he sang and danced till sleep overpowered him, when a Buriat servant brought him home without waking him. And so it happened that Yefim Pavlovich Sedykh died and was nearly forgotten. His memory, however, was resuscitated during a severe epizootic of horned cattle, a calamity that came from Mongolia and made its way down the river Selenga. The Shamans exhausted all their arts in adjurations and sacrifices, but the epizootic rapidly advanced to the mouth of the Selenga, and ruin threatened the Kudara Buriats. Now, one of the Buriats, having remembered Major Sedykh, proposed to offer sacrifices to him, as the lord of the Fofanov hill. Shamans were found who were able to compose an invocation to him, and a hymn in his praise; sacrifices were offered, and the epizootic, so it is affirmed, ceased. Now Major Sedykh is considered as the lord of the Fofanov hill, and colleague of the lord of the river Selenga. The second instance of contemporary canonization took place almost under the eyes of the writer. Two girls were terribly persecuted by their step-mother. Being unable to endure their sufferings or to obtain protection from their father, they complained to the local authorities; but the latter did not take any steps in the matter, since it is the duty of children to obey their parents, and not to make complaints against them. The girls, showing extraordinary pluck and energy, applied to all the numerous tribunals of the Russian judicial and administrative system; they got as far as the Governor-General of Irkutsk, but here also they failed to obtain redress. They returned to Trans-Baikalia, and probably died forgotten by everybody. Traditions concerning a wicked step-mother persecuting her step-daughters may be found among many Buriats. In 1889 a destructive epidemic of influenza broke out among the Buriats at the mouth of the river Selenga. Again the local Shamans were at their wits' end, and, notwithstanding all their efforts and their prayers, could not succeed in warding it off. They decided to send some Shamans to the isle of Olkhon to ask the old and experienced Shamans of that place for counsel and help. The wise men of Olkhon found that the malady, being a new one, required prayers to new *zayans*. The two sisters above mentioned were remembered; information was collected to the effect that, after their return from Irkutsk, they began to practise Shamanism. Girls and, to a certain extent, women, according to the Buriat tales, often possess a magic power, foretell the future, perform heroic deeds, and the like. Thus a cult of the two sisters was formed, and ceremonies, almost mysteries, were arranged, in which not only the Shamans, but also the youth of both sexes, depicted the adventures and trials of the two sisters. In these invocations it is asserted that the unhappy sisters went in search of protection, not only to the Governor-General of Irkutsk, but even to the Chinese Emperor, the Bogdo-Gegen of Urga, and the Dalai-Lama. The last, indeed, prophesied that their misery would end on their return to their native place.

13. Idgins.—Idgins, *i.e.* lords, protectors of localities and of the phenomena of nature, originating from posthumously deified human beings, are very numerous. The famous Shamans of old are mostly looked upon as protectors of their own tribesmen, of certain localities, and even of particular animals. Every *taiga* (a primeval forest thicket) has its lord. Often, when hunting has been unsuccessful in a certain place, one hears that the lord of the *taiga* has lost his squirrels, sables, etc., to the master of a neighbouring *taiga* at cards. The multitude of these lords will become quite comprehensible when we leave the regions of polytheism and come down to the more ancient strata of Buriat beliefs.

14. Animism.—Here, above all, we encounter a widely developed Animism. In stories, a hero, when encountering his adversary, especially if the latter is a monster, a multi-headed semi-snake, or semi-man (*mangus*), often hears the following question: 'What is that standing behind thee?—thy soul or the soul of thy steed?'

Not men only, but also certain objects and animals, have souls—not such, however, as men have, but of a lower sort. In answer to the question whether all objects possess a *sunessun*, a soul of inferior quality, a Kudara Shaman said 'No!' It appeared from questioning that only self-moving objects possess a *sunessun*, or such as, although incapable of moving themselves, appear to have the power of manifesting or producing motion, as, for instance, a gun or a bow. An arrow, according to Buriat stories, is certainly endowed not only with a *sunessun*, but even with traces of a rational soul. A discharged arrow gives chase to its fleeing victim; it threatens it. Here we come into contact with the question of the complexity of the soul. This idea, extremely wide-spread as it is among uncivilized nations, is a further step in the development of primeval Animism. Believing that everything in nature has a spirit, man nevertheless observes that the capabilities and sphere of action of different beings are not identical, and that their faculties also are different. Evidently in many of these, besides an 'animus,' and besides a breath, similar to a breeze or atmosphere, there is also a whole series of other capabilities; consequently in them the soul also is different. In man, and in the higher animals also, capabilities are not at once developed; consequently they do not acquire a complete soul immediately.

The doctrine concerning the complexity of the soul, and the existence of several kinds of souls, has long since been noticed by European and American ethnologists among almost all the Indians of North America. Its existence among the Eskimos has been demonstrated by Kranz, among the Polynesians by Ellis, and among the West Africans by M. H. Kingsley, while this belief among the ancient Egyptians is too well known to require more than a mere mention. As far as the Siberian Shamanists, and especially the Buriats, are concerned, this subject was first broached by Podgorbunski, a priest, who based his researches on materials previously collected by Khangaloff, Shashkoff, and Potanin. His article, 'Conceptions about the soul, the next world, and the life hereafter, among the Shamanist Buriats,' was published in the Records of the Eastern Siberian Section of the Imperial Russian Geographical Society, 1892. Later, the same thing was brought to light by Trostshansky among the Yakuts, and by Shvetsoff among the Altaians.

Among some Buriats a belief exists that a child acquires a soul only at the age of four years. The Olkhonian Buriats, according to observations of the young Buriat investigator Djamtsaranoff, consider that man has three souls: the least important one rests on the bones, and the intermediate one flies in the air, and after death becomes a 'Dakhul' (see below). We have already mentioned that the souls languish in Erlik-Khan's prisons, but their possessors do not die, they only sicken; and a good Shaman may deliver the soul. Shashkoff ('Shamanism in Siberia,' *Rec. of the Imp. Russ. Geog. Soc.*, 1864, i.) tells us why the Shamans of the present day do not possess the same power as their predecessors. The son of a rich man had fallen ill. A wise Shaman guessed that the invalid's soul had been taken and was in the possession of the highest amongst the gods. The Shaman went to him and saw that the soul in question was kept by the god in an empty bottle, which he had closed with his finger. The Shaman transformed himself into a vicious fly, and bit the god so painfully in the cheek that he pulled his finger out of the bottle and grasped his cheek; the captive soul jumped out of the bottle, and the Shaman took it up and brought it back to the invalid. After this unpleasant incident the god thought fit to limit the power of the Shamans. Sometimes the Tengris take human souls to themselves, and if they are pleased with them they call the souls up a number of times. Such attention on the part of the higher beings is not particularly flattering to the Buriats, the chosen persons having to pay for the favour by sacrificing their longevity. The Buriat scholar Dordji Banzaroff, in his book *The Black Faith* (2nd ed., St. Petersburg, 1893), has already shown that the souls of the wicked remain *zakhura-ben*, or occupy the middle part between heaven and earth. The more circumstantial information of which we are now in possession goes to explain that the soul which neither has been stolen nor has accidentally departed from the body, but has been removed only by way of natural death, cannot at first comprehend the change in its situation, and does not know what to do. It suspects that something unusual has happened, on noticing that its feet leave no traces behind them on the ashes of the hearth, and that walking through woods or over grass does not make the shrubs bend beneath its weight or the grass to appear trampled.

As these wandering souls often injure the living, it happens that among many Shamanist tribes the remaining members of the family in which death has taken place migrate to other localities. The influence of this fear of the defunct is very great. In Mongolia the writer has seen Buddhists, in the case of someone's death in a house late in the autumn, move their winter camp away from places where they had already collected large stores of fuel—a thing by no means easy either to obtain or to keep there—to other places, while their former neighbours were afraid to make use of the neglected fuel and other winter stores collected by the fugitives.

15. **Souls of the dead.**—The Buriats, like many other semi-civilized peoples, believe in the existence of several categories of souls that after death become injurious to the living. The best known of them are the *Dakhuls*, *Mu-Shubu*, *Bokholdoys*, and *Adas*. The 'Dakhuls' mostly spring from the souls of the poor, both men and women. Every Buriat hamlet has its Dakhul; but it is injurious only to little children. Adults treat them with indifference. Children of the gods themselves also suffer from Dakhuls. Ukha-Solbon-Tengri, having married a common Buriat woman, thereby offended the goddess of the sea, and she transformed herself into a Dakhul and attacked Ukha-Solbon's son. The Tengri sought the help of two Shamans, the second of whom managed to save the semi-divine child from his sickness. The Alar Buriats have another enemy of children, a human blood-sucker of the vampire kind; this little creature, called Aniukha, has never been seen by any one. It sucks up the life blood of an infant. In these cases the help of a Shaman is sought.

The souls of deceased young women or girls are transformed into creatures called 'Mu-Shubu'—a bad or injurious bird—if their father puts tinder with them into the grave. A Mu-Shubu has the appearance of a woman, but its lips project like a bird's beak; it can transform itself into various animals, but its beak remains unchanged. It always carries tinder under its right armpit; if the tinder is taken away from it, it cries, 'Look in your hand'; if the person does so, the tinder turns into worms; if he does not, the tinder is preserved, and by means of it one may become rich. Beyond trifling annoyances, the Mu-Shubu cannot do people any harm. Souls of the dead sometimes take the shape of more injurious beings, such as the so-called 'Bokholdoys,' which steal human souls.

In the story *Upitel-Khubun* (= 'Orphan') (*Records of the East-Siberian Section of the Imp. Russ. Geog. Soc.*, Ethnog. Section, vol. i. pt. 2nd, Irkutsk, 1890), the hero, who understands the language of birds, finds the means of curing the king's son. He accordingly presents himself before the Khan, cures the latter's son, and, having been rewarded, departs. On his way he meets a number of Bokholdoys dragging away the stolen soul of the king's son, and enters into conversation with the kidnappers. He asks them what the Bokholdoys are afraid of. It appears that they are most afraid of prickly shrubs. The Bokholdoys, in their turn, ask him why the grass he is walking on gets trampled, and why the shrubs break under his feet. 'Because I died only recently, and have not yet learned to walk as you do,' comes the answer from the living man. Then a second question is put to him: 'What were you most afraid of when

you were alive.' It turns out that he was most afraid of fat meat. He then asks them to teach him how to steal souls. 'Come and just carry this soul,' reply the Bokholdoys, but the cunning Buriat, having got hold of the soul, hides himself with it in a thicket of thorny shrubs. The Bokholdoys, in order to compel the man to give up the soul, throw pieces of fat meat at him. He screams terribly, but does not part with the soul. In the end the Bokholdoys depart without having achieved anything, and the orphan returns the soul to the king's son and thus completes his cure.

The 'Adas' are the souls of dead children. They look like miniature human beings, but their mouth is situated under the lower jaw, and opens not upwards and downwards, but to the right and left. On meeting people they hide the lower part of their face in their sleeves in order to avoid being recognized. People often see the Adas, particularly the Shamans. The Adas greatly fear horned owls, and in houses where there are children the skin of one of these birds is hung up. The Adas are injurious to children, drink up the milk in the *yurtas*, eat up the food, and spoil things. When the Adas become too troublesome to a family, a Shaman is summoned. One Shaman forced thirteen Adas into a cauldron, shut them in with the lid, and burnt them over the fire. The Adas can be killed. When dead they resemble a little animal. Besides evil Adas there are also good ones that keep watch over dwellings and guard them from thieves. If a thief or an unknown person takes anything belonging to the owner of the house, the Adas will not give it up, and shout: '*Manai, manai!*' ('Ours, ours!').

Like most other semi-civilized and primitive tribes, the Buriats have no marked boundary between life and death. The heroes in their stories rise up from their graves, and not only they but the monsters—the Mangkhatais—slain by them do so too. To prevent a slain Mangkhatai from returning to life, it is necessary to scatter its bones and reduce its flesh to ashes. Notwithstanding the wide-spread cult of snakes, we do not consider that of the Mangkhatais to be merely a local Buriat one. Agreeing with Podgorbunski, we consider it to have been brought from the South. The Mangkhatais are absolutely identical with the Mongolian Mangus and the Rākṣasas of India; the same must be said of the winged snakes. But let us now return to the question about life and death. Besides the idea of life after death, retribution also is not unknown to the Buriats. Among the *Records of the East Siberian Section of the Geographical Society*, which have so often been quoted, there are in the section relating to the ethnography of the Buriats characteristic data on the above question.

In the story about Mu-Monto, the hero set out for the other world in order to induce his grandfather to give him a horse and a saddle which the father of Mu-Monto had promised him. He got to the other world by holding on to a fox's tail. There he saw a drove of horses pasturing on bare stones, and yet they were very fat; farther on he saw a herd of lean domestic cattle on a splendid pasture-ground. After that he came across some women sewn together in pairs by their mouths; then he encountered Shamans and officials being boiled in cauldrons, men with hands and feet tied, and naked women embracing knotty stumps of wood. In another place farther on he saw women apparently not possessing anything at all, but living in plenty; and finally, starving ones surrounded by riches. At last he found his grandfather, who gave to the hero the coveted horse and saddle, and explained to him everything he had seen. The fat horses fattening on the stones belonged during their lifetime to a good master, the lean cattle to a bad one. The women sewn together by their mouths were slanderers and gossip-mongers; the women embracing stumps were in the habit of leading an immoral life; the officials and Shamans were being boiled in a cauldron for oppressing the people; the contented-looking women were compassionate to the poor. In another story the hero goes to the Sun's mother, and on his way meets with three women: one hanging on a door, another on a cow's horns, and a third fixed with her back to a boat. The first drove the poor from her door, the second refused milk to them, the third would not give even water.

The souls of the dead have a chief of their own over them who has only one eye. He can be killed by shooting him in the eye. After being killed this chief becomes transformed into a pelvis, which must be burnt.

16. **Worship of ancestors.**—Having to deal with such a widely developed Animism, one is involuntarily confronted by the question of the worship of ancestors. Among the materials hitherto collected there are few data relating to this subject. Only distinguished persons are venerated. Here perhaps the very ancient custom of depriving old people of their lives did not pass away without leaving a certain lasting influence. Aged men and women were dressed in their very best clothes, were seated in the place of honour among the circle of their relatives and friends, and, after conversation and libations of wine, were made to swallow a long strip of fat. This, of course, resulted in their death from suffocation. The custom, according to tradition, was dropped by order of Esseghe-Malan-Tengri himself; but, notwithstanding this, we heard of a Buriat who drove away with his feeble grandfather and left him to die in the forest. Stories full of examples of parents causing the destruction of their children for fear of being maltreated by them are not rare. At the same time, between brothers and sisters we find again and again examples of tender affection and self-denial. Young women are distinguished for their perspicuity, their supernatural knowledge, their bravery, strength, and proficiency in the use of weapons. Such heroines often vanquish the most famous warriors and monsters.

17. **Worship of animals.**—From the example of the above-mentioned horses (§ 15) we have seen that animals also pass over into the world beyond the grave, and live there after death. So it should be, for a horse is the closest friend of its master. The knight and his steed are inseparable. When a hero is born in a family, a rare and heroic horse is born for him too. Each hero speaks of himself as 'I, So-and-so, rider of a chestnut, or a black, or a steed of some other colour.' The horse gives his master advice, extricates him from calamities, and dies defending his rider. In Bukha-Noin-Baobai, the bull that subsequently became one of the Western Khans, a Tengri's son and progenitor of two Buriat tribes, are clearly seen the germs of totemism, the only difference being the fact that Bukha-Noin is not claimed as the protector of any particular clan, but is worshipped by all Buriats. Not less honoured is the eagle. In the Mongolian history of Sanan-Sezen-Khan (of Ordos) it is mentioned that the Buriats presented an eagle to Jenghiz-Khan in token of submission. The eagle is looked upon as the son of Khagat-Noin, Khormusta-Tengri's son. The eagle was born without feathers, and went to the Western Tengris, who stuck feathers over the right half of its body; the other side was covered with feathers by the Eastern Tengris. The eagle was the first Shaman; but, being unable to communicate with men, it requested that its duties should be transferred to a man, and a human son was born to it; this son became the first Shaman in human form. Considerable respect by reason of its wisdom is enjoyed by the hedgehog, concerning which many legends are current.

One of them relates that the lord of the earth, Dib'a Sagan-Noin, whilst visiting Khormusta-Tengri, asked the latter to make him a present of the rays of the sun and moon. Khormusta was puzzled. To refuse his guest's request was impossible, and to gratify it meant to deprive mankind of light. The master of the earth took his departure, threatening to vent his vengeance on mankind for the violation of the rules of hospitality. Khormusta, wishing to save man from such a calamity, tried to catch the rays of the sun and moon, but did not succeed. A council of all the Tengris was convoked, and the hedgehog was invited to it. The hedgehog's appearance among the Tengris caused general laughter, because it rolled like a ball (as the Buriats think) instead of using its limbs. The hedgehog took offence and went home. Khormusta sent spies after it to listen in case the animal on its way might talk to itself. (In all the

legends the hedgehog shows an inclination to express its thoughts aloud.) The hedgehog on its way home was, indeed, talking to itself. 'To catch the rays of the sun and moon is impossible,' it was saying; 'the lord of the earth must be compelled to withdraw his demand. Were Khormusta to visit him, and ask of him as a present a horse out of the sun's reflexion and an arrow made of an echo, the lord of the earth would be unable to procure them.' This speech, overheard by spies, was communicated to Khormusta-Tengri, who acted on the hedgehog's advice, and in this way extricated himself from the difficulty and saved the human race from misfortune.

The wise hedgehog is often subjected to ridicule; but it also takes revenge. Once, while it was passing by a herd of oxen, and, later on, some horses, the animals laughed at it. The hedgehog cursed them, and declared that they should be men's slaves. After that people began to domesticate oxen and horses and to make them work. On another occasion, when a bridegroom, after taking up his abode in his bride's house (this was a Tengri wedding), soon left his wife, the hedgehog said that the bride ought to be sent to the bridegroom, because a bride would not leave her husband's house, whereas a husband is prone to escape at the first favourable opportunity from his father-in-law's house. After this both the Tengris and mankind discarded the old custom and followed the hedgehog's advice. Swans are also highly honoured, since in their form the Tengris' daughters frequently appear. Swans have their lord and protector. Any one killing a swan is doomed to die soon afterwards; the same is affirmed by the Buriats respecting ravens and kites. The fox, too, in Eastern lands, retains the traits of cunning Reynard; but they are not so malicious as those of his Western brother. Neither on the wolf nor on the bear does he play his malicious tricks. The fox more frequently plays the part of protector, of simpleton, and helps them on in the world. In one story two swans get the better of the fox in cunning, and almost drown that animal in the sea.

The Buriats, being a race of cattle-breeders, and at the same time hunters, have an immense number of legends about various animals, of which many have their Idgins (lords).

Besides that of the Mangkhatais, or monsters, there exists also a snake-cult widely spread over the whole Shamanist world. Ribbons, straps, and twisted thongs over the Shaman's vestments represent snakes or their souls. Even the world of lower animals is not forgotten: these are supposed to possess an organization similar to that of human society. Ants have their king—Sharagoldgi-Khan; field-caterpillars and worms are also divided into communities governed by chiefs, who in their turn are under kings. All the animal kingdoms have their sovereigns: the birds have Khan Garideh, a mythical bird of the Indian tales; the beasts—Arslan-Zon, the lion; the snakes—Abyrga-Mogoi, the snake; Abarga-Ekhe-Zagassun, the great fish, ranks as king of the fishes; it has 13 fins. The bat alone is not subject to any one, it being neither bird, nor beast, nor fish, nor insect. The bear, which is so prominent in the cult of other Shamanists, does not play an important part in the beliefs of the Buriats.

18. Tree-worship.—The vegetable world also has its sacred trees, with their corresponding Idgins (lords). A sacred tree must have red pith; it is known by the name of Gan-mod, the fire-tree. If used for building houses, it will be warm in winter, but it is insecure in cases of fire and lightning. In woods, along footpaths, at fords, and on the highest points of mountain-passes, trees decorated with ribbons (*iren*) are often met with. It does not, however, follow that such sacrifices are offered to the tree itself. More frequently they are intended for the lord of the mountain-pass, ford, or forest. Only trees of a strange and uncommon aspect are considered worthy of worship. Some plants, according to the belief of the Buriats and other Shamanists, cause rain and thunderstorms, if dug out; such is the root of the *Statice gmelini.* Others, such as the *Juniperus communis, Picea sibirica, Thymus serpyllum, Betula alba,* and *Betula daurica* are considered pure and sacred, and are used in religious rites. Along with these there exist also unclean trees, such as the aspen tree (*Populus tremulans*). Wicked black Shamans of both sexes sometimes drive even gentle and peaceful Buriats to the most extreme degree of exasperation and even to murder. But to kill a Shaman does not mean to have got rid of him. To deprive the corpse of the power of working harm, it must be fixed down in the grave with aspen poles and covered over with aspen logs.

19. Nature-worship.—In inorganic Nature also Shamanists find objects of worship. We refer here to mountain summits, cliffs, etc., which have their own lords or Idgins, one of the most terrible of whom is the lord of a cliff at the source of the river Angara. At this spot runs a range of submerged rocks, and amongst them rises a high and steep cliff, past which the stream rushes with incredible rapidity, the high foaming waves unceasingly hurling their spray at the rocky ramparts. In former times Buriats suspected of great crimes were sworn in before this rock. The Russian Government, however, has been specially requested by them to put an end to this practice, as it frightened not only the accused but also those who had to administer the oath. 'An ungodly man even there, at that awful spot, would not be afraid of lying, whilst believers and god-fearing men do not dare to disturb the terrible *zayan* even in a right cause, and, however innocent, rather take the guilt upon themselves' (see Samokvasoff, *The Law of Custom among the Siberian Aborigines*). According to the Altaians, the lords of mountains quarrel with one another, enter into relationship, get married, and form alliances.

20. Fetishism.—In the part dealing with the Tengris we mentioned the stones cast down by them from heaven—the *buman shulun* and *zada.* Here we have already real fetishes, possessing magic properties similar to a magnet, which has the property of attracting iron. The Shamanist Turks do not stop here: every strange-looking little stone is regarded as a *saat* and *tchaat tash* (*saat* and *zada* reveal the common origin of the names). Such stones are often worn on the girdle, together with their knife and tinder, by the Uriankhai Sojots. In localities which abound in ancient archæological monuments, tumuli, and statues of stone, these are called *tchaa tas,* and to some of them even sacrifices are offered. According to tradition, Jenghiz-Khan was in possession of a very powerful magic stone, and in a decisive battle with the Naimans, after which the Mongol conqueror acquired a powerful influence over Eastern politics, he made use of his stone, causing a terrible snow-storm to arise against his enemies and thus putting them to flight.

21. Earth-worship.—Among the Buriats and Mongols earth-worship exists, but it assumed different forms among the two. To the Mongols, according to Banzaroff, the earth appears as a female principle, and heaven as a male one. This ancient belief has, according to Banzaroff's statement, been observed by older travellers among the Kumans who inhabited the steppes of South Russia, and in ancient Russian historical documents were known under the name of Polovtsi, as well as among an earlier people that lived in the present Northern Mongolia—the Tukin, according to the Chinese transcription, and Turks, according to

ancient runes, like lapidary inscriptions, first deciphered in 1893 by the Danish scholar Thomsen. The name of the goddess of the earth was Etugen; by the Mongols she is more often called Teleglen-Edzen, the master or mistress of the surface of the earth. In the higher style on Mongolian documents the earth is called Altan-telgey (the golden surface). Banzaroff's remarks lead one to believe that the word Etugen was also used in the collective sense of the 77 Etugens as a 'pendant' to the 99 Tengris. The indications relating to the existence of this cult among the Kumans and the Tukiu, the ancient Turks, and the number 77, which is a favourite with the Siberian Turks, instead of the multiple of 9, which is usual among the Mongols, make one suspect the non-Mongolian origin of the cult. Simpler, more original, and more exact is the conception concerning the lord of the earth among the Balagan Buriats. His name is Daban-Sagan-Noin, he is an old man with white hair; his wife is a grey-haired old woman called Deleyte-Sagan-Khatun. The Olkhonian Buriats, living as they do in the midst of the Baikal, offer sacrifice to the mistress of the sea—Aba-Khatun—whilst as lord of the whole earth we find here Bukha-Noin, with whom we have already acquainted the reader. Sacrifices to the lord of the earth are made when the agricultural season is over.

22. The cult of the heavenly bodies.—This is but slightly developed in the Buriat Shamanism. The sun is said to have its Idgin—a woman to whom it is the custom to sacrifice a ram. A former investigator, Shashkoff, saw *ongons* of the sun and moon in the shape of discs covered with red stuff; but Khangaloff and Agapitoff could find no trace of them; thus one may perhaps agree with Agapitoff that this cult is passing into oblivion. The moon is better remembered: according to Shashkoff, it is sometimes the cause of a woman's pregnancy. In the short Mongolian annals, *Altan Tobchi* (golden button), it is mentioned that one of Jenghiz-Khan's ancestors was conceived of a moon's ray. A legend about a malicious woman and her step-daughter, whom a wolf wanted to devour, but who was saved by the sun and the moon, is wide-spread among all the Shamanist tribes. The sun and the moon descended and carried off the persecuted girl to the heavens, together with the pail she was using to get water with, and the shrub by which she held herself whilst coming down to the water's edge. The moon prevailed upon the sun to leave the girl to him, because of his feeling lonely on his tedious nightly rounds. In the spots which appear on the moon's surface the Buriats and other Shamanists discern a girl with a pail and a shrub in her hands. We have already mentioned Venus—Ukha-Solbon, the evening star, which is considered a Tengri's son. The conceptions concerning heavenly bodies are probably very ancient ones. The Great Bear is called by the Buriats and the Mongols 'seven old men,' and sometimes 'seven Tengris.' Banzaroff tells us that, in the book of sacrifices, or the veneration of the stars and gods, there is a prayer to seven Tengris, but he does not quote it. The Turks of Siberia call the Great Bear *Djity Kudai*, 'seven gods,' and also *Djity Khyz*, 'seven maidens.' The common name is here an indication of ancient origin. In the constellation of Orion every one can see three marals (*Cervus maral*) chased by a huntsman and three dogs. The star with a reddish tint has been wounded by the hunter's arrow. We have heard that this hunter is the son-in-law of Erlik-Khan. The dogs in time will overtake the marals, and that will be the end of the world. The Polar star along with the two bright stars of the Little Bear group is called the picket, to which two lassoed horses are tethered and around which they move. We have already spoken of the fact that certain occupations (*e.g.* the fisherman's and the blacksmith's) have their protectors.

23. Fire-worship. There are also gods of the chase and of the household, as 'Udeshi-Burkhat,' the doorkeepers; but the Tengri of fire, the brother of Ukha-Solbon—Sakhidai-Noin—stands above all and commands the greatest respect; his wife is known by the name of Sakhala-Khatun. The master of fire is called in incantations the maker of happiness; he sits by the hearth nodding his head, and with his tinder strikes fire and kindles a flame. His wife sits swinging to and fro like a person in a state of intoxication (depicting the dancing flame on the hearth). Just as among the Indo-European nations, fire has a sacred importance to the Mongols and Buriats. 'His fire is out,' one says of the head of an extinct or ruined family. The Mongols, when selling a person's property for debt, close up his dwelling and extinguish the fire by pouring water down the smoke-outlet. A bride, in taking leave of the paternal house in the company of her friends, walks round the fire. On entering her husband's house she bows before the fire, arranges the firewood, and, by way of sacrifice, throws pieces of mutton grease on to the hearth. Among many Shamanists, tinder, being the means of procuring fire, is never placed with the deceased. The explanation of this is twofold: a corpse is considered unclean, and tinder may not be placed alongside of one, as it is the symbol of fire, the all-cleansing element. Likewise a deceased person, as he may perhaps show hostility towards the living, must not be given the dangerous implement possessing the mysterious power of creating fire.

24. Cosmogony.—The cosmogony of the Buriats is not distinguished by originality. Other Shamanists have more elaborate cosmogonies: from the very beginning they evolve in regular sequence the idea of two principles of good and evil. In the four Buriat variations known to us we discover only fragments, retained in the memory of the people, of an entire epic which has been preserved in the greatest detail in the Altai tales. The Buriats say that formerly there was nothing except water; then the god Sombov-Burkhan, or (according to others) three gods or Burkhans, Esseghe-Burkhan, Maidari-Burkhan, and Shibegeni-Burkhan (in the last two are clearly seen the Buddhist Maitreya and Sakyamuni), met a bird, Anghir (*Anas rutila*), that swam on the waters, and compelled it to dive to the bottom of the sea and fetch up from there some earth. Anghir brought up some black earth in its beak, and on its feet some red clay. Thereupon God, or the gods, threw both the black and the red earth round about, and thus hard soil was formed, upon which grew up both trees and a variety of grass. Afterwards the gods created man (man and woman) covered with wool, and in order to decide to whom should fall the honour of giving life to the couple so created, they agreed to place each a candle in a vessel and to retire to rest. He whose candle should burn till morning and in whose vessel a flower should blossom was to give life to men. Shibegeni awoke before the others, and observing that only Maidari's candle was still burning, and that there was also a flower grown, whereas his own candle was already extinguished and there was no flower in his vessel, hastened to change candles with Maidari and to transplant his flower into his own pot. When the others woke up and found the flower and burning candle in Shibegeni's vessel, they decided that he was to give life to men. Maidari, however, in virtue of his capability of knowing everything, was aware of the deception

perpetrated, and said to Shibegeni: 'Thou hast deceived us, and consequently the men given life by thee will be deceivers.' Thereupon the two Burkhans flew up to heaven, and Shibegeni gave life to men, and set a dog to watch them. Here there appears on the scene a new person, Shitkur (devil), who promised to feed the dog and give it a hair covering to ward off the attacks of winter frosts, if the dog permitted his approach to men (the dog was created naked, without any hair). The dog was tempted by this promise of food and hair, and admitted Shitkur to men; the latter were spat upon, and the dog got covered with coarse hair. Shibegeni thereupon came down to earth and cursed the dog, saying that notwithstanding its hair it would suffer from frosts in winter, and would be enslaved by man; it would get beaten, and to satisfy its hunger it would have to gnaw bones and to devour excrement. As to man, Shibegeni shaved off all his hair, excepting that on the head, so that now man became naked, and only here and there, when he is grown, does he get some hair on his body. According to this legend men were created by a deceiver. In the Altai version, over the waters there appear the god of light and his assistant Erlik-Khan. The latter plunges down to get earth, but on handing it to the god he keeps back a part of it; it grows in his mouth, and he is compelled to pray to God to be delivered from this infliction. The earth taken out of the mouth of Erlik forms, later on, mountains and stones. Between the two principles a struggle is carried on, until at last the giant of the god of light, Mandy-goshun, precipitates Erlik-Khan into the abyss. At the present time, according to the Altai cosmology, the god of light, Ulghen the Good, governs the world, but his goodness prevents him from persecuting and punishing men for their faults. He only deprives them of his protection; then it is Erlik who assumes his right to torture men. Having suffered his infliction, men improve again, and return to Ulghen. The god of light restrains Erlik.

25. Ongons.—Turning now to the material and ritual side of the cult, we shall first treat of the ongons. The Turks of Yenisei call the ongon *tyus*, whereas among the Altaians it is named *kurmes*. On the one hand, it is an image of God, and, on the other, God himself, a fetish possessed of his own power. The tyus, or ongon, reminds us of the rôle which among some Christian peoples is filled by the images of saints.

In the teaching of the Church the icon is a representation of some saint, and has for its object to call up in believers pious reminiscences of the life and deeds of the depicted person, and to arouse the desire to follow his example, but the common people look upon the icons in a different light. Candles lighted before the icons are not merely an outward sign of veneration, but also a sacrifice to God; bowings and prayers are petitions and thanksgivings for benefits vouchsafed. The saints have their own special spheres of influence. St. Humbert is looked upon as the patron of hunters; St. Nicholas as the patron of sailors. There are patrons of cattle, and healers of diseases. Even one and the same person possesses different qualities on different icons. In every chapel one can find several pictures of the Madonna, and yet we see the lame and the crippled make their pilgrimages of hundreds of miles to pray to a Madonna, the healer of the cripple; others go to another icon to free themselves from nervous fits, hysteria, and epilepsy. The icons perform miracles; consequently in one way or another, either by their own power or by that obtained from another source, they manifest their capability of acting, and therefore cannot be considered as simple representations, or as pictures which engender certain feelings and dispositions, but as an independent power. The conception of the ongons is much more coarse and naive. Together with the ongons, pictures are also known under the name of ongons; these represent the deities of a lower order. According to Banzaroff, all the relatives and forefathers of Jenghiz-Khan have become ongons; as ongons also are accounted some dead, but renowned, Shamans. The method of representing the ongon does not present much variety. Generally speaking, it is either a piece of some material, or several pieces with designs, mostly of human figures, and various accessories in the shape of owl-feathers or bits of otter fur. In some instances we find a coarsely made wooden figure of man. The Baikal Buriats (of Kuda, Olkhon, and Verkholensk) acknowledge the so-called mountain ongons. These are found mostly among newly married couples. On a small piece of brocade or silken material are designed a few coarsely made human figures, the trunk being represented by a straight line, as also the hands and legs, while the eyes are made of glass beads sewn on, over the head being fixed the feathers of an owl; from the upper side of the ends of the piece with the above designs ribbons hang down; on the breast of every image are suspended little figures made of tin. Among the antiquities found on the Ural Mountains in the Government of Perm, one frequently meets with bronze figures of birds with their wings outstretched, and of human beings with small human figures on their breasts. A probable explanation of these little figures found on bronze articles and upon ongons is that they represent the souls of the large figures. The number of figures and their names vary in different localities. The mountain ongons are not kept inside the *yurta*, but in the yard, and more frequently in the neighbourhood of the winter quarters. A niche is cut out in a column, and therein is placed an ongon, which is first deposited in a wooden case or a felt bag, in which, by way of an offering, are also placed branches of the *Thymus serpyllum* and tobacco. The Buriats of Olkhon construct a low deal enclosure with an overhanging roof, and suspend their ongons within the enclosure; sometimes they cut down a birch tree and put it with its branches in the ground, suspending their ongons in felt bags from the branches, just as birds are suspended in their cages; then they erect over the tree a protecting roof of deals. The acquirement of mountain ongons after a wedding, when the couple are moving into their own house, and the variety of figures on the ongons and of their names, seem to point to their representing local, specially venerated, household deities. Each of these ongons serves only for its particular owner; after his death the ongon is burnt, and the new master calls in a Shaman to consecrate a new one and place it in position. Among some Shamanists, as, for example, those of Altai, the ongon is fixed for a time only. They make ongons of hares' skins and keep them for seven years only, after which period they are replaced by new ones. The ongons which are kept inside the *yurtas* are divided into men's and women's; the former are kept on the left-hand side of the entrance, or husband's part; the latter on the right-hand side, which is destined for women and their special belongings. Speaking of men's ongons, Agapitoff mentions a very ancient one among the Balagan Buriats, which was brought from Mongolia by a progenitor of one tribe of Buriats. It consisted of a coarsely made human head with hair on it and a beard of sheepskin, and had iron rattles round the neck. It was called Borto. Judging from the name, it may represent an ancient, semi-mythical ancestor of Jenghiz-Khan, Burte-Chono. Its Mongolian origin is corroborated by the fact also that devotions before it are performed in the same way as the Buriat Lamaists bow before their Buddhas. Although the ongon spirits are accounted as lower deities, the ongon pictures are sometimes representations also of the highest personages of the Buriat Olympus. The son of a Tengri, the god of fire, Sakhidai-Noin, and Sakhala-Khatun, his consort, have their own ongons—two coarse wooden figures covered with red cloth. Such an ancient ongon Agapitoff saw in the house of a Buriat fifty years old, who told him that it belonged to his grandfather, *i.e.* to the period of the expedition of Pallas and of Georgy. Some ongons of fire seen by Agapitoff were evidently of a more recent, common origin (*ongons zurukhtan* = ongons with designs on them). The Ukhan-Khat ongons, *i.e.* those of the Water Khans, present, on comparison with the above described, the peculiarity that, besides the pictures of men, on the upper part of the piece of stuff there is a line representing heaven, the human figures are drawn in two rows, one beneath the other, and under the lower row there are representations of the camel, the snake, and the frog. On many ongons which are to be seen in the Russian Museum of the Emperor Alexander III., over the human heads and above the line roughly representing heaven, a number of points stand for the stars. Among the latter one can always distinguish the constellation of the Great Bear; other stars are also indicated, but their arrangement has not the slightest resemblance to the actual arrangement in the heavens; sometimes a cloud in the sky is represented on the ongons by a curved line.

The ongons are very numerous, and would almost require an article to themselves. It will suffice here to mention only a few of them. Women's ongons, placed on the right-hand of the entrance, are generally considered as protectors of children, but there are also some which protect child-bearing. Ongons of the lords of animals, such as the ferret, the ermine, and the marten, are also met with. As lord of the ferret is considered a famous ancient Shaman Ollengha, who came from Mongolia, learned Shamanism in Pekin, and travelled not on horseback, but on a ferret. This Shaman, according to tradition, lived at the time when the Buriats were subjugated by Russia, and was the first to pay tribute to the White Czar. The distinguishing feature of the ongons of animals, with the exception of the lord of the goat, consists in the skin of the animal, or a part of it, entering into the composition of the design. The Baikal Buriats have an ongon with a human figure representing a Shaman with a tambourine. This ongon was known to Georgy, but we have little information about it. Agapitoff affirms that, according to the accounts of the Buriats, it is a representation of an ancient Shaman. There are also ongons of diseases. The one which is considered helpful in cases of swellings and boils consists of a bit of skin cut up into strips in the form of a ring, and there is an ongon of the itch—viz. a bit of sheepskin. Extremely complicated is the Balagan Khotkho ongon. It is dedicated to fifty-eight personages among whom are included both

Ukha-Solbon and the nine daughters of Esseghe-Malan and Gaiznshin—two girls who had died in winter of cold and hunger, and who are invoked in the places at the estuary of the Selenga in cases of influenza (see above)—and the lord of the moon and sun. But all the Khotkho ongons seen by the writer had less than fifty-eight pictures. The most complete ongon, which is preserved in the Museum of the East Siberian section of the Geographical Society, has only thirty-eight pictures.

The ongons of the white smiths—the sons of Bojntoi—stand quite apart. They, it is asserted, came down from heaven, and each one held some smith's implement in his hand. Their ongons represent small human figures of iron, holding smith's implements in their hands.

With the ongons should be mentioned also the so-called *zya*. If a person desires to destroy his enemy, he draws a figure of him on a bit of cloth-stuff or paper, and, with adjurations, hides it in, or somewhere near, the house of his victim. This is a very dangerous thing, especially if done with the help of a black Shaman. The victim begins to sicken, and his only safety is to be found in calling in a good Shaman, who finds the *zya* and burns it.

26. **Dedication of animals.**—Alongside of the ongons, there is a custom among Shamanists of dedicating to their gods domestic animals. The Turks of Yenisei and the Altai black Tatars, even at the time when an ongon or tyus is being prepared, frequently deem it necessary to dedicate to the ongon some animal possessed of certain definite marks. The process of dedication consists in fumigating the animal with the smoke of a burning *Juniperus communis*, in sprinkling it with wine, and hanging coloured ribbon on it, whilst the Shaman chants his adjurations. The colour of the ribbon depends on the ongon and the god to whom the animal is consecrated. The consecrated animal is then sent to the herd, and becomes something like a Polynesian tabu. It must not be ridden (if it be an animal for riding) by any one but its own master; a married woman may not touch it, and it must not be used for any heavy work. An animal may be so consecrated either for a time or for life. These animals are called by the Turks of Yenisei *yazykh*, by the Sojots *adykh*, by the Mongols *setertey*. All these words denote both the dedication and the tabu. This custom prevails also among the Mongolian Buddhists. In Pozdneyeff's book, *The Life of the Buddhist Monks in Mongolia* (St. Petersburg, 1894), there is a table showing the colour which horses must have when they are dedicated to certain Buddhas and Bodhisattvas. Evidently Buddhism, in its toleration of religious superstition among its followers, whilst spreading over Mongolia, adopted the ancient custom of dedicating animals to the higher beings, but changed the ancient Shamanist names of the deities into the new Buddhist ones. These animals may be considered as living ongons up to a certain point, although there is a substantial difference between the two. The ongon, be it what it may, is at all events a god, but the *setertey* is merely an animal dedicated to God, and is frequently adopted as an addition to the ongon. To every ongon offerings are made of wine, meat, incense, etc. In the writer's work on the tyuses (ongons) of the South Yenisei Turks, the order of offering sacrifices to them is given in detail. The sacrifices are extremely varied. An animal dedicated only to a god is carefully kept, but no offerings are made to it. The Buriats also have the same custom. Georgy, in his time, saw a horse dedicated to a god. To Bukha-Noin is dedicated a grey uncastrated ox; to the Water Khans, a red breeding-ox, and sometimes also fish or eels; to the Shaman Itzerkel-Aiakhanzaieff, a piebald horse; to the lord of the black horse and his wife, a dark bay horse, and, in sacrifice, a raven-black one; to the Eastern Tengris are dedicated a chestnut horse and a cow of the same colour. To some deities are also dedicated wild animals or birds: for example, to the lord of the island of Olkhon, a pigeon. Among the Buriats' neighbours—the Karagals—the traces of totemism are clear. According to their traditions, their people sprang from four brothers—the mole, the bear, the eelpout, and man. A totem of the mole—the eldest brother—is to be found in the *yurta* of almost every Karagal; but these people are dying out, for in 1888 there were only 300 of them, and now there are not more than 150. They are dying both physically and morally, as may be seen in their forgetting of their traditions and customs.

27. **Imitative dances.**—An interesting phenomenon is presented in the so-called *nadan ongoner* (= merry-making ongons). At the evening parties of young people a Shaman is frequently invited to enliven the company. Before entering the assembly, he stops at the door and takes off his boots and girdle (*i.e.* he follows the customary proceeding when deities are to be invoked), takes into his hands the conjuring wands (*morini-khorbo* = horse-staves; see p. 16[b]), and begins his invocation to the *zayans* (gods). Having finished his invocation, he calls forth one of the deities, and thereupon turns himself into that deity, and plays the part of the latter. The themes vary greatly. Sometimes he plays the part of Batya-ubugun—an old man who complains of the infidelity of his wife, tells stories of her scandalous on-goings, and seeks her among those present. Thereupon the woman herself comes forth, and enlivens the young people by her cynical sallies. Afterwards Ukha-Solbon, with his three wives, is invoked. The most popular personages are the belted ongon and the joking ongon. Sometimes a scene of taming a horse is played. But more frequently the Shaman induces the young people to dance, to go through different gymnastic tricks, and awkward persons he jokingly rewards with blows from his staff. The Shaman also plays the part of the bear, ox (Bukha ongon), wolf, pig, and, among the Kuda Buriats, also of Zarya-Asarghi, *i.e.* the porcupine. In all these rôles the Shaman imitates the personages whom he represents. The funny nature of these displays does not obscure their signification. Here we may see the origin of those masquerades which have a sacred meaning, and in which the youth of Polynesia still participate; there, not one person only, but a whole assembly or club, a secret society, participate in the mystery. With fearful masks of ghouls on their faces, they terrify the spectators (see Schurtz, *Urgeschichte der Kultur*, Leipzig, 1900, and his more detailed work, *Altersklassen und Männerbünde*, Berlin, 1902). Masks are by no means unknown to the Shamanists. Formerly the Shamans used to wear leather and metallic masks on their faces; nowadays they have plaits which fall down from their hats over their faces. The complete costume of a Buriat or Tungus Shaman, by its numerous projections, imitates a human skeleton whose toes are provided with claws. At sacrifices, especially great ones, the Shaman carries on dialogues consecutively with different deities. Not infrequently he performs the ceremony with assistants. In Shamanism, however, the dramatization of religious rites stopped short in the primary stage, but it became highly developed in Northern Buddhism, in Tibet, also here and there in Mongolia, and partly among the Buriat Lamaists. In Tibet they represent whole dramas and mysteries from the life of Śākyamuni in his former transmigrations (see Waddell, *Buddhism of Tibet*, London, 1895, p. 515).

28. As regards the rites of Buriat Shamanism, the presence of a Shaman is by no means required in all of them. The feeding of ongons is done by the master of a house; even some women's ongons are made by women themselves, without the participation of a Shaman. When crossing a mountain, there is hardly a Shamanist who would not jump off his horse to cast *tarasun* (wine of milk) before the lord of the pass, and a person of import-

ance ties a piece of ribbon and horse's hair to a tree on the pass, near a heap of stones which has been collected by the faithful. Banzaroff, in his time, noticed that even public sacrifices were not all celebrated in the presence, and with the participation, of a Shaman. The Turks of Yenisei, in summer, celebrate the so-called mountain sacrifices (*tag-tai*) and heavenly sacrifices (*tiger-tai*), the latter being performed by the oldest of the tribe but not by a Shaman. Certain sacrifices, on the occasion of the birth of a child, and also of its passing from childhood to adolescence, are made without the assistance of a Shaman, just as on the above-mentioned occasions. Here everything is done by the eldest of a family, and, in case the rites and the prayers are forgotten by him, he is helped by some experienced person acting as a prompter. Divination and foretelling the future are done also by ordinary competent people. The future is guessed by the sound of the string of a bow, but the most popular way of divination is by means of a sheep's shoulder-blade burnt on the fire. This has been known from the times of Attila, and in Mongolia a large literature exists on the subject. Divination is practised also during the sacrifices to the Water Khans, and consists of pouring melted tin into water: if the tin comes out entire at once, without being separated into parts, it is regarded as a favourable sign. If the tin poured out does not form a regular figure, the latter is examined with a view to determining the future accordingly. Divination is also practised by arrows, for the discovery of missing things. A thick arrow is taken, placed on the hand, and the direction towards which it inclines is followed. This kind of divination is now practised by some Buriat Lamas, although every indication points to its Shamanist origin. It probably stands in connexion with the stories about divining arrows which of themselves seek out the object aimed at.

29. **Sacrifice.**—In their form the Buriat sacrifices may be divided into private (*kirik*) and public (*tailgan*).

Indispensable adjuncts of every sacrifice are sprinkling with wine, milk, sometimes tea, and libations. These are the simplest forms of offerings, and are made almost daily. Before a Buriat drinks a cup of wine, he throws some drops of it into the fire, upwards, and round about. Further, in more complicated forms of appeal to the gods, there come real sacrificial offerings, which are slain to the accompaniment of divers ceremonies. In this case the soul of the proceedings is the Shaman. He directs the libations and invokes the deities; then he himself plays the part of a deity, and in the latter's name relates the story and adventures of the god or gods whom he has invoked previously. There is still another very simple way of making offerings, which, in the majority of cases, does not require a Shaman. This consists in tying ribbons and throwing coins in those places in which the presence of some deity is expected. By far the most common and frequent occasion for sacrifices is supplied by diseases. For that reason, the Shaman is considered by many rather as a physician and diviner than as a priest. The simplest form of exorcism against an illness consists in the sick person's being seated with his hat on near the fire, when a cup of wine is handed to him; by his side a Shaman takes his stand, fumigates him with sacred herbs, and utters an invocation to the particular deity; he relates the biography of the latter, and entreats the deity to help the sick one. During the prayer a libation of wine is made thrice; the fourth libation is for the ongon, lord of the ferret, who is considered as the patron of the hearth; after this a cup of wine is handed to the Shaman, who, after sprinkling to the lord of fire and drinking some of the contents, hands the cup back to the members of the household; the next cup is poured out for the sick person, who shares it with his relatives; and the last cup is intended for the Shaman. There are other ways of curing diseases, into which is introduced, together with the mystic acts, an element of a purely therapeutic character: such are the *tarims*. *Ukhan-tarim*, viz. the water-*tarim*, consists in the sick man, most frequently suffering from rheumatism, being, after divers exorcisms and aspersions made by a Shaman, besprinkled or (as in a Russian bath-house) beaten with a bunch of sacred herbs dipped in boiling and consecrated water. In doing this the Shaman raves like a madman, calling out '*Khalkai, khalkai*,' 'Hot, hot'; and then '*Tyty, tyty*,' 'Cold, cold,' in this way driving out the disease. This rite over, the patient, who has been perspiring very freely, is wrapped in his fur coat and put to bed. The fire-*tarim* is the rite at which the Shaman brings iron to a white heat, rubs his foot on it, and places it over the diseased spot.

Sometimes, but rarely, the water- and fire-*tarims* follow one another, *i.e.* first the water cure is applied, and then the fire.

Very interesting are the cures consisting in the substitution for a sick man of another person or animal. An astonishing historical example of this was shown in the sickness of a Mongolian Khan. The illness would not yield to either Lama's or Shaman's treatment, therefore recourse was had to an extreme measure: instead of the Khan's soul, the souls of a hundred of his subjects who inhabited the woodlands of the Mongolian mountain chain, 'Ghentey,' were presented to the evil spirit Shitkur. The details of this remarkable rite are not known to us; but evidently the bargain was struck, since the Khan recovered; and yet the people offered to the devil remained alive also. This Khan and his successors did not dare any longer to interfere in the government of another's subjects, and asked the Bogdo-Gegen of Urga to transfer them to himself. The Bogdo-Gegen himself is the incarnation of a deity, and he has no fear of the devil. This small group of the inhabitants of Northern Mongolia is known even now under the name of 'the devil's subjects.' People shun them, and avoid any relationship with them as unclean. The only obligation which they have to perform consists in supplying a yearly tribute of game to the Bogdo-Gegen, of wild boars, wild goats, and zerens (*Antilope gutturosa*). But the Bogdo-Gegen does not himself partake of this tribute; he distributes it in presents. The Buriats, however, have no means to pay to the devils such costly ransoms, and they manage to dispense therewith by a simple device. Should a child suffer from dysentery, the women of the family fill a sheep's stomach with sheep's blood, boil it in a pot, and put it, whilst still warm, over the child's stomach, and then, taking three pieces of tinder and giving them the names of three of the oldest women in the neighbourhood, they place these pieces so named in the sheep's stomach, over the child's body, and set it on fire. If one of the three pieces of tinder begins to crackle in burning, it denotes a favourable issue, since it is supposed that, instead of the child, the old woman whose name was given to the crackling piece will die. In carrying out this rite, neither the Shaman nor men generally take any part; everything is done by child-loving mothers and experienced neighbours. At another similar rite, *dolio*, no Macbeth-like witches take any part. An experienced Shaman is brought to a dangerously ill person, and, in some cases, he offers, in the place of the sick man's soul, stolen by an evil spirit, some animal known by certain definite signs, which the Shaman with great care and minute details specifies. This animal is led into the *yurta*, thrice it is dragged up to the sick-bed, and the patient three times spits upon it. Thereupon the latter is killed, its flesh boiled, and the patient is made to inhale the steam of the soup. The meat is eaten by those present, but a part of it is left until the recovery of the patient; of this a bit is thrown into the fire, and the remainder eaten.

Kirik, like the preceding rites, belongs in intention to propitiatory rites, but it presents a generalized form. It is performed not only in cases of sickness, but of any misfortune. The sacrifice in this rite does not denote a substitute for the soul of the sick man, but is rather a propitiatory offering. Generally domestic animals are sacrificed, and only in rare cases fish. The selection of an animal for the sacrifice, as well as the enumeration of its signs and peculiarities, is left to the Shamans. In *kirik* we can distinguish three chief moments of action. The first is devoted to the consecration of the dishes and beverages prepared for the sacrifice, viz. milk-wine and sour milk. The invited Shaman fumigates them with the smoke of the fir bark; then he walks out of the *yurta*, followed by men carrying the prepared food; outside, the Shaman begins to sing a hymn to the invoked *zayan* (deity), three of those present sing with him, whilst the others arrange the food, previously prepared at a spot which is called *turghe*, and light the fire under the pot in which the sacrificial meat is to be boiled. The consecration of the victim goes on, the Shaman reads a prayer and sprinkles wine. This sprinkling may be considered as a distinct moment; it is called *sasali barokhu* (= to make *sasali*, i.e. a libation). This rite is an essential feature and an invariable adjunct of all sacrificial offerings when a Shaman is present, as well as a shortened form of a sacrifice which every one offers almost daily. When *sasali* is over, the animal is killed, its skin is taken off with the head and legs, and the larynx, lungs, and heart are left with the skin. The skin is stuffed with straw, and birch branches are stuck in the nostrils; on the forehead, by means of a small stick, is fixed a bit of the bark of *Picea sibirica* called *jido*; afterwards the skin is hung on a birch tree, full of branches, previously set in the ground, care being taken that the animal's head shall look in the direction where, in the opinion of the participants, the invoked *zayan* (deity) resides. The boiled meat is separated from the bones, the latter being scraped for the removal of the adhering flesh, and the whole is placed in a wooden vessel; part of the contents is burnt later on, but the greater portion is consumed. The Shaman, who during the performance of the rites above described is seated with his hosts and drinks *tarasun*, stands up after the sacrificial mounted skin has been hung, and begins his invocations to the *zayan*. The latter makes his approach, and the Shaman trembles, feeling the breath of the deity; he now goes up to the latter, now springs back from him, under the influence of fear; at last, getting into a most ecstatic state, he suddenly changes his manner: the deity has entered into him, and in a tone of authority begins to talk within him. The *zayan*, having entered the Shaman, relates his whole history, his exploits, and foretells the future. Having accomplished what he was invoked for, the *zayan* comes out of the Shaman, and the latter at that moment groans, cries loudly, shivers; he undergoes a very painful process; the deity forsakes him, the

light and the power which were in him disappear, move away from him; he feels weak; round about him is darkness; his thoughts get confused, and sometimes he falls down in a fit, or continues standing as if hypnotized; it is only by degrees, and as if awakening from a deep sleep, that he returns to his usual mode of life. Such is the description of his state given to the writer by a young and popular Turkish Shaman.

The *tailgan* is a public sacrifice, performed on behalf of a whole community, the sacrificial animals being supplied by several households, according to their means; but the meat after the sacrifice is divided equally amongst the participants. The *tailgan*, at the same time, is enjoyed as a popular festival, at which the youths engage in wrestling and jumping, whilst in olden times there was arrow-shooting. The *tailgans* dedicated to the various *zayans* are performed at certain definite seasons of the year: the one to the Western Tengris in spring corresponds to the Yakutsk spring festival called *yhsyckh*; that to the Water Khans is in summer, and to the mother-earth at the end of the summer season. All the *tailgans* have a general character; the only special features are connected with the character of the deities invoked. The most widely-spread and common form of the ritual is that which is practised at the sacrifices in honour of the Western Khans. For this sacrifice people go into the fields and select there a fine commodious space at the foot of a hill. In this festivity only men and girls take part; married women and widows have to stay at home. The utensils, wine, and sour milk are fumigated with pine bark, before starting for the selected spot, by one of the men (cf. *kirik*). The sprinkling with *tarasun* is done by the Shaman at the house of one of the more respected participants in the *tailgan*, where the others also assemble and take part in the rite. On an appointed spot utensils with provisions are arranged in a row from west to east, whereas the participants take their seats towards the south; the place where they sit is called *turghe*; in front of the utensils are stuck birch branches, which are also called *turghe*. The sacrificial animals are kept apart; there also are steaming the big kettles for boiling meat. When everything is arranged, birch trees are stuck into the ground, on which later on are hung the skins of the sacrificed animals; thereupon every participant has to supply a white rope of hair intertwined with white and black ribbons, which each one prepares beforehand. These ropes are tied together, and to them is affixed a white hare skin. By means of this rope they bind the tops of the birch trees; the latter are placed in an inclined position and are supported with pegs. After the trees have been fixed and their tops united with the rope, the Shaman reads a prayer, and the participants, having cups filled to the brim in their hands, at the command of the Shaman, '*Seg!*' pour out the contents of their cups. This libation is repeated three times, after which they throw away their empty cups. For him whose cup falls on its bottom the omen is considered favourable; this person is acclaimed by all with '*Torokh! torokh!*' These libations are further repeated, but previously the Shaman places in every cup a branch of the *Picea* (*jido*). Afterwards sour milk is offered to the sacrificial animals. Among classical peoples it was also a custom to offer drink to the sacrificial animals before they were killed. Afterwards the sacrificial animals are killed, and their skins and meat are treated as has been already described at the *kirik*. The bones of the animals, each one separately, are collected on little tables made of birch sticks and burnt; the ends of the intestines of the animals are burnt on a separate fire. The principal rite is performed after the ceremony. Every one takes a pail, in which meat is put, and stands up; the Shaman invokes the Western *zayans*; they come in turns and relate their own stories, until it is the turn of Bukha-Noin-Baobai. The Shaman then stands on all fours, bellows like a bull, butts those present as if with horns, and attempts to upset the birch trees tied with white rope, whilst several men keep them in position. After his unsuccessful attempts at upsetting the trees, Bukha-Noin goes away, bellowing ten times more. On his return, the Shaman invokes another *zayan*, Nagad-Zarin, and then the rite is concluded by petitions and entreaties to the Western gods for divers favours. This ends the whole ceremony. Strictly speaking, the *tailgan* is, in its form, a more solemnly performed *kirik*. At other *tailgans* the ritual observed is almost identical, but at the *tailgan* to the lord of fire the principal part is done in the *yurta*, since the sacrifice is offered to the lord of the domestic hearth; the *tailgan* to the Water Khans is arranged at a river, the participants drinking the water thereof, and divining not by means of throwing down the cups, but by pouring melted tin upon the water. The Shaman here does not butt with his horns, but tries to throw himself into the river.

At the domestic sacrifices of the blacksmiths, the master beats the iron and strikes it with a hammer, whilst the Shaman reads the prayers. Striking the heated iron enters also into the ritual of the *tailgan* to the Eastern Khans.

30. The Shaman. — In all the religious ceremonies the Shaman is the principal actor. No people nowadays call their priests by that name. Banzaroff derived the word 'Shaman' from a Manchu root. A Samoyed would call a Shaman *Taibey*; a Lapp, *Noyda*; a Siberian Tatar, *Kam*; a Buriat and Mongolian, *Boo*. Banzaroff assures us that the word 'Shaman' is met with in Chinese writings of the 7th cent., when Northern Mongolia was dominated by *Yuan-Yuan*, a people of Tungus-Manchu origin. But, generally speaking, the most ancient mention of Shamanism may be found in Herodotus's reference to priests who used to divine by means of rods. In his works we find also that the way of killing animals by means of compressing the aorta is exactly the same as that which is made use of by the Shaman at sacrifices (iv. 60, 67). The Shamans of the Buriats believe in their origin from the eagle, the son of a Tengri, and many of the black and white Shamans boast of long pedigrees; they have also many a quarrel and reckoning amongst themselves. The ancestors of many became *zayans*, whose memory is honoured by sacrifices. A real Shaman has to possess many qualifications. First of all, his organism has to be sensitive, full of nerve, and receptive. He must have a good memory to remember the manifold formulas and conjurations necessary for him to repeat by heart; he has also to make extempore prayers for certain occasions, and consequently must be able to give rhythmical form to his speech. Above all, he must not doubt his own calling and abilities, and has to be sincere. Many of the Shamans are capable of most sincerely and devotedly giving themselves up to the rôle they have to fill. When a nervous child cries in its sleep or is inclined to hallucinations, the aborigines say he is troubled by spirits and must become a Shaman. It must also be mentioned that the native races in Siberia are very liable to suffer from nervous diseases. Young girls, during their monthly periods, frequently fall into a temporary aberration; the young men also suffer from aimless yearning, which drives many to suicide. All this, of course, may account also for the Shamans' disposition and hallucinations. Among some tribes there are epileptic Shamans, who murmur disjointed words during the services; such Shamans are provided with assistant interpreters. We have not, however, seen such Shamans among the Buriats. Although among them any man who shows certain qualifications may become a Shaman, yet, his abilities notwithstanding, he would find himself in an unfavourable position in comparison with others who had a Shaman's origin and a whole series of Shaman ancestors; these help him and mediate for their client, even before Erlik-Khan himself. It is possible, however, to note even among the Buriats the commencement of an evolution of hereditary priesthood, which keeps up not only the education of the people, but also the memory of the achievements of their ancestors. The black Shamans of the Buriats have gone still further: they conceal from the crowd the secret of their mysterious lore. They monopolize it in order to keep ordinary mortals in fear. It is owing to this circumstance that the efforts of native investigators, and of persons closely connected with the Buriats, are so barren of results in respect of knowledge of the servants of the awe-inspiring Tengris. There are some cases of grown-up and even aged people becoming Shamans; but these are exceptional. Generally it is a child of Shaman origin who begins almost from infancy to learn his business. The writer saw among the Uriankhis a boy of ten years old singing the conjurations with his mother during Shamanic attendance on a sick man.

The future Shaman visits the *tailgans* and the *kiriks*, watches the proceedings attentively, learns of experienced elders how to sing prayers and conjurations; but, whilst preparing, he frequently retires into the mountains and forests, and there spends many days at a stretch in solitude. There, by the side of a log fire, he utters conjurations, brings himself into a state of ecstasy, and masters the technique of Shamanic actions. Sometimes, after such practice, a neophyte comes straight out and begins his work; but generally it is necessary for him to obtain the consecration which enlightens the Shaman's mind. In this case the principal actor is the father-Shaman, usually the early

instructor of the candidate. The consecration begins with the rite of purification by water. The water is taken from three springs, at which an offering of wine is made to the lords of the springs. The water is then carried home and warmed; at the same time, bundles of young birches, plucked with their roots, are also brought in. Into the water are thrown the *Juniperus*, *Thymus serpyllum*, and the bark of the *Picea sibirica*. Then follows the sacrifice of a goat, which is killed not by compressing the aorta with the hand through a cut made in the side of the animal, but by a thrust of a knife into the heart. Some drops of the blood are poured into the water. The father-Shaman, helped at the ceremony by nine assistants who are called sons of the Shaman, divines by means of the shoulder-blade, and makes a libation to the ancestors of the Shaman; then, lowering the birches into the cauldron and making them soft, he strikes the naked Shaman with them, at the same time giving him instruction regarding his future duties. These deserve to be mentioned in detail. '(1) When a poor man calls thee in, go to him on foot, claim from him no remuneration and be satisfied with what is given thee. (2) Always take good care of the poor, help them, defend them from evil spirits, and intercede for them with the good spirits. (3) If a rich man should call thee in, proceed to him on an ox (only the poor make use of such conveyance), and do not claim much for thy trouble. (4) If a rich and a poor man should call thee in at the same time, go first to the poor man.' The consecrated one swears duly to obey the instructions imparted to him.

After the purification, in a few days, follows the *first consecration*. There are in all nine of them; but there appear to be no longer any Shamans who have undergone all these. In the first place, every consecration requires some expenditure; in the second place, the persecutions and extraneous hindrances to which all non-Christian religions are subjected make the native races avoid and shun all public ceremonies. At the first consecration, the neophyte, with the nine sons of the father-Shaman, goes about the houses to collect the means for defraying the expenses of the ceremony. Afterwards the father-Shaman, his nine sons, and the consecrated one proceed into solitude to hold a nine days' fast, their food consisting only of tea and toasted flour. To keep away evil spirits from the *yurta*, or rude hut, in which the fasters reside, it is tied three times round with a rope of hair, and some wooden ornaments having a symbolical meaning are here and there attached to it. On the eve of consecration a Shaman arrives, and along with those fasting sings a hymn to the *zayans*. For the day of consecration the following preparations are made. (1) A birch tree is planted in the *yurta* of the Shaman, the top of the tree being passed through the upper aperture of the *yurta*. This tree is called *izdeshi-burkhan*—a symbol of God opening the gate of heaven to the Shaman. (2) A birch tree decorated with coloured ribbons—red and yellow if a black Shaman is being consecrated, white and blue if it be a white Shaman, or all four colours if the Shaman is going to serve both the black and the white *zayans*—is also placed in position. (3) A birch tree (*Azarghi serghé*) to which is tied a small bell and a sacrificial horse. (4) *Ekhe-sharimes* (*i.e.* the large yellow tree) with incisions made on it in the sides, so that the Shaman can spring up it. Afterwards posts are fixed to which to tie the sacrificial animals, as well as the trees on which the bones of the sacrificial animals will have to be burnt. From the tree fixed in the *yurta* to the posts outside either a coloured ribbon is stretched or a path of turf is laid out—the way for the neophyte to his high calling. Next, the Shaman's implements are consecrated, viz. the horse-staves (which, among the Buriats, are a substitute for tambourines), little bells—*khesé* (*khesé*, *khesm*, strictly speaking, means a tambourine, but among the Buriats, who have the horse-staves, its place is taken by a little bell)—and the *khur*, a musical instrument somewhat resembling a tuning-fork, having a thin wire of steel fixed between the two side-pins. When being played, it is put into the mouth, which serves as a resonant, and the middle wire is set in motion, which then gives a dull, jarring sound. The consecration is accompanied by prayers chanted to the Western Tengris, and by the smearing of the ends of the staves with blood. Over the *khur* is sprinkled *tarasun* prepared on the spot. After the consecration of the implements a fresh invocation to the Tengris commences, in which the neophyte also takes part. Thereupon they all proceed from the *yurta* outside, and here, as at the purification with water, hot water is prepared and mixed with the blood of the sacrificial goat; with this is smeared the head, the eyes, and the ears of the neophyte, who is then again subjected to strokes of the birch on the bare body, the instructions given him at the preceding purification by water being repeated. The new Shaman, with the staves and the *khesé* in his hands, chants along with the others the adjurations, above all to the lord of the pole-cat, who established the rites of consecration, viz. the learned Shaman who brought to Baikal from Pekin the science of Shamanism. The Shaman then climbs up the birch tree to the very top, followed by the others. Such, at least, is the assertion of Agapitoff and Khangaloff. According to others, however, the Shaman, at his first consecration, springs up only to the first notch made in the tree, the second consecration entitling him to climb up to the second notch. Every new consecration gives the Shaman new privileges, *e.g.* to add new stripes and to hang new rattles on his costume. After the fifth consecration he acquires the right to carry the *shiré*, i.e. a box on four legs, the sides of which are filled with representations of the sun and the moon and other symbolic figures. It is asserted that with every new consecration, up to the ninth, the dimensions and the height of the *shiré* go on increasing. This statement, however, cannot now be verified, since there are no longer such multi-consecrated Shamans to be found; more especially, as the custom of carrying the *shiré* has been preserved only among the poorest of the Olkhon Buriats. Be that as it may, we have here the beginning of a priestly hierarchy. The meaning of the notches on the tree can be easily explained from the Altaian Lamaism. Whilst praying to the god of light, Ulghen, the Shaman also by degrees raises himself higher and higher during the ceremony. Every such notch denotes a special heaven, including the ninth; every heaven has its special deity, whom the Shaman consecutively meets and with whom he holds converse.

A consecrated Shaman, like the ministers of other religions, is distinguished from ordinary mortals by special outward attributes, besides having obligations of service to the gods and natural characteristics of his own. As the most essential implement of a Buriat Shaman must be considered the horse-staves—*morini-khorbo*; without them he cannot perform any of the principal rites. The staff is about 80 centimetres in length; the upper end is bent, and out of it is cut the figure of a horse's head; at some distance from the upper end the staff forms a small knot; in the middle part the staff is thicker (the knee-joints of the horse), and on the lower end a hoof is cut out. On the upper half of the staff are fixed miniature stirrups, little bells, conical weights of iron (*shamshorgo*), and coloured ribbons. The staves are cut, for the newly consecrated Shaman, from a live birch tree standing in a forest where Shamans lie buried. It is considered desirable to cut off the pieces for the staff in such a manner that the tree shall not perish, otherwise it is of bad omen for the Shaman. A Shaman who has already had five consecrations may provide himself with iron horse-staves. Their signification can be gathered from the description: they are the horses on which Shamans fly to heaven and to the earthly *zayans*. As to the tambourine (*khesé*), it is but little known among the Buriats, although among the Mongol Shamanists and Mongolized Uriankhis it is in use. At great Shaman ceremonies, in which a Shaman and his nine sons take part, and some of which the writer witnessed at the estuary of the river Selenga, among the Kuda Buriats, one of the assistants holds in his hands a small tambourine; but neither the meaning of the tambourine, nor the rôle of the assistant, is quite clear. Next, as an appurtenance of a Shaman may be considered the *khur*, a tuning-fork, with a wire tongue between the sides (see above), an implement largely in use among Shamanists. It may be met with from the sources of the Amur to the Ural, and from the Arctic Ocean down to Tashkent. Here and there it is merely a musical instrument. The Shaman's mantle (*orgoy*) is now in some parts put on only after death, for burial; with the white Shamans it is of white stuff, and among the black Shamans of a blue colour. One no longer hears about the Shaman's boots, or about the metal diadem, consisting of an iron ring with two convex arches, also of iron, crossing one another at right angles, and with a long jointed chain, which hangs down from the nape of the neck to the heels—we know of them only from the descriptions of travellers, and from specimens preserved in a few museums. The old-fashioned *orgoy* was shorter than the *orgoy* of the present day. In front, over the chest part, there used to be sewn at the sides thin iron plates, and on these were hung iron figures of single- and double-headed birds, with pictures of small fishes and animals. The whole of the back part was covered with twisted strips of iron, which represented snakes and their rattles (*shamshorgo*). On the back also were suspended two planchets, with a whole row of little bells and tambourine-bells. On the chest, above the thin plates, used to hang little copper planchets with radii. On the sleeves were also hung thin iron plates, in imitation of the shoulder, forearm, and

ray bones (*os radialis*). On the shoes there were also sewn thin plates in imitation of the tibia, and toes of iron with claws. This prompted Gmelin to assert that two Shamans who came to him from Nizhne-udinsk resembled chained devils. About the masks on the faces we have spoken above. Sometimes the Buriat Shaman has, besides, a whip with bells. A proper explanation of all the parts of a Shaman's costume has still to be given. The existing accounts are extremely contradictory, since the old travellers were so little prepared for the study of Shamanism at the period of its development.

31. Thus equipped, the priest enters upon his difficult calling. If he be a white Shaman and his first efforts are successful, he is beloved and received by all. But if he be a black (or a female) Shaman, he (or she) is feared rather than loved. Cases of murdering female and male Shamans, simply on their being suspected of having stolen souls, spread disease, or caused drought and other misfortunes, are not infrequent. Shamans are rarely well-to-do or possessed of means; they are unpractical people, and sometimes, when their work is hard, they have recourse to stimulants, which shatter still more their disordered nervous system. The writer saw a big Shaman the day after he had worked throughout the night. He was lying utterly exhausted and could scarcely breathe. We offered him a glass of brandy, in the hope that it would refresh him, and that he would take food to strengthen him; but instead of taking food he at once jumped off his bed, snatched his tambourine, and, in token of gratitude, wished to entreat the gods to grant a favourable issue to our travels; but the excitement soon passed off, and he fell down and went to sleep. We had to leave the place without his blessing, as we could not wait until he awoke. Nearing the end of his earthly travels, when there no longer remains any hope of recovery, notwithstanding all the efforts of his brethren, the Shaman begins to foretell his own future, what Tengris he will serve, promises to take care of his own people, and names the horse which should be despatched with him. A dead Shaman's body is kept in the *yurta* for three days, dressed in a new costume, over which his *orgoy* is put. The young people, his nine sons, compose and sing hymns to his memory, and fumigate his body with sacred herbs. Thereupon the body is put on the back of the horse named by the deceased, one of those present sitting with the body and supporting it on the horse's back. When the horse has been led three times round the *yurta*, the dead body is taken into a wood, to the cemetery for Shamans. His relatives and clients accompany the dead man, making libations, and at a place halfway to the cemetery they set a table with eatables. On arrival at the grave, the dead body is placed upon a felt matting, and the ninth arrow is discharged in the direction of the house, the remaining eight, with quiver and bow, being placed with the body to enable the deceased to defend good people from evil spirits. All the other marks of the Shaman's calling are either broken or burnt. A pyre is then erected, they set the body on fire, kill the horse, and return home. On the third day they return to collect the Shaman's bones, put them into a sack, and, having made a hole in a thick pine, put the sack into it, cover the hole, and plaster it over. Sometimes the Shamans' bodies are not burnt, but placed upon a scaffolding erected for the purpose in a wood. This kind of burial is also practised by the Yenisei Urianklıis.

32. The present decay of Shamanism is to be explained not so much by persecutions as by the fact that under the influence of Buddhism and Christianity the religious horizon of the people has expanded to a great extent. The religious missionary polemicists saw in the Shaman nothing but a cheat and a conjurer, a man morally depraved. His religion was unhesitatingly pronounced to be the worship of the evil spirit. One of the most enlightened and impartial Russian missionaries, who has done a very great deal for the study of Shamanism in the Altai, the Archpriest Basil Verbitzky, asserted that in some of the mysteries of the Shamans one could not deny the participation of the spirit of darkness.

Let us conclude this sketch by the words of another authority on Shamanism, the academician Radloff, taken from his *Aus Sibirien*, 1884: 'It is perfectly comprehensible when a minister of a certain religion and a missionary, preaching and glorifying his own teaching, criticizes what he considers to be a delusion; but it is absurd to be obliged to read and to hear such asseverations as that the Shamanist religion is the worship of the spirit of falsehood and of evil, whereas the most important of the Shamanist rites—the worship of the god of light, Ulghen (among the Altaians)—consists entirely of prayers and entreaties for protection against the enemy of mankind—the evil spirit! This dirty, half-savage Shaman, illiterate inhabitant of the forest—ignorant and poor man as he is—after all appears as a propagator of the idea of truth, goodness, and mercy in the midst of his countrymen, who are ignored by the civilized world.'

LITERATURE.—Gmelin, *Reise durch Sibirien*, Gottingen, 1750; Pallas, *Reise durch verschiedene Provinzen des russischen Reiches*, esp. vols. ii. and iii., 1777 (there is also a Fr. tr.), also *Sammlungen der historischen Nachrichten uber die mongolischen Volkerschaften*, vols. i. and ii., 1787; Georg, *Beschreibung aller Volker des russischen Reiches*, 1792, also *Merkwurdigkeiten bei den unbekannten Volkern des russischen Reiches*, 1797; Georgy, *Reise durch Sibirien*, 1785; Alexander Castrén, *Versuch einer buriatischen Grammatik*, 1845, also *Ethnologische Vorlesungen*, and *Reiseberichte und Briefe*, and *Reiseerinnerungen* (the works of Castrén do not treat largely of the Buriat Shamanism proper. The works above enumerated form part of a series of his works edited by Schiefner and published by the St. Petersburg Academy of Sciences under the general title of 'Alexander Castren, Reisen und Forschungen'); Shashkoff, 'Shamanism in Siberia,' in *Records of Imp. Russ. Geog. Soc.*, 1864, bk. ii.; *Records of the Eastern Siberian Section of Imp. Russ. Geog. Soc.*, section of Ethnography, vol. i. pt. v., 'Folk-tales of the Buriats, collected by various collectors,' Irkutsk, 1889, also vol. i. pt. ii. 'Stories of the Buriats, collected by various collectors,' 1889; Agapitoff and Khangaloff, *Materials for Research into Shamanism*, 'Shamanism amongst the Buriats,' Irkutsk, 1883; *Records of the East. Sib. Sec. of Imp. Russ. Geog. Soc.*, section of Ethnography, vol. ii. pt. i.; Agapitoff, *Further Materials respecting Shamanism among the Buriats*, 1890; Podgorbunski, 'Ideas of the Buriat Shamanists about the Soul, the Next World, and a Future Life,' *Records of East. Sib. Geog. Soc.*, 1892; Dordji Banzaroff, *Black Faith*, 2nd ed. edited by G. N. Potanin, 1893 (Banzaroff gives a whole series of references to Mongol sources); Altan Tobchi, *Short Mongolian Chronicle*, translation of the Lama Galsan-Gomboeff, 1856; Mikhailovski, *Shamanism: A Comparative Ethnogr. Study*, Moscow, 1892, partly tr. by O. Wardrop, *JAI* xxiv. 62-100 (in this work the Buriat Shamanism is referred to; but the author has worked upon literary sources, and has no original observations); G. N. Potanin, 'Sketches of North-West Mongolia, vols. ii. and iv. publ. of the Imp. Russ. Geog. Soc. 1882, 1883 (this work contains a great quantity of materials regarding Shamanism, obtained both from personal observations and from literary sources. It is an indispensable aid to students of Shamanism, including Buriat Shamanism. The fundamental sources for the latter are Nos. 12 to 17 inclusive. Nos. 1 to 7 are important for details concerning the material side of the worship).

DEMETRIUS KLEMENTZ.

BURMA.—In order to arrive at definite ideas on the religious notions of the population of a country like Burma, which is a meeting-point of distinct varieties of mankind and distinct civilizations, its geographical, ethnological, linguistic, and historical positions and the resultant ethics have all to be taken into consideration.

I. *GEOGRAPHY.*—Geographically the country known as Burma lies east of India, south of China, and west of Siam and modern Indo-China; and the population has been deeply affected by all the surrounding religious influences. Politically it is divided into Upper and Lower Burma—divisions

that do not at all affect religious considerations. Upper Burma is a fairly compact area, roughly between 92° and 101° E. longitude, and between 28° and 20° N. latitude in its extreme limits. Lower Burma is a very long-drawn-out and straggling area along the N.E. and E. coasts of the Bay of Bengal, stretching from about 20° N. a long way down the Malay Peninsula as far as 10° N. The whole country, therefore, covers a large irregular space, within which dwells an apparently heterogeneous population of some ten and a half million people, of many nationalities, and certainly presenting a great variety of appearance and civilization.

II. *ETHNOLOGY.* — The whole of the existing indigenous, *i.e.* non-immigrant, population of Burma belongs to the general Indo-Chinese type of mankind in one form or another. Ethnologically it was, nevertheless, originally an immigrant population from the North, migrating from Western China—probably from between the upper courses of the Yangtse Kiang and Hoang Ho rivers—which in very early times entered the area now known as Burma in three main waves. These invasions are represented at the present time by the three chief races inhabiting the country—the Talaings, the Shans, and the Burmese—spreading over it in that order. Belonging ethnologically to these races, themselves all considerably civilized, there are a great many lesser tribes in every stage of civil development from practical savagery upwards. These crop up all over the country, which is mainly mountainous. They have been left in the wilder parts as backwaters in the rolling stream of invasion. The congeners of these tribes are to be found all about the long frontiers of Burma, in Tibet and the Northern borders of India, in isolated patches in India itself to the westwards, eastward all over the Indo-China of to-day as far as the shores of the ocean, and beyond doubt in many parts of Southern China as well. The foundations of the religious notions of the whole people must be sought, therefore, in those of the aboriginal Indo-Chinese races.

1. **The Talaings.**—Of the principal races now inhabiting Burma, the Talaings, as the Burmese and Europeans call them, or **Peguans**, as they are known to Europeans particularly, or **Mons**, as they still call themselves in their own language, are the remains of the earliest irruption (Mon-Annam or Mon-Khmer) of the Indo-Chinese into the S.E. corner of Asia, which once presumably covered the great area between the Khāsi Hills of Assam and the Pacific Ocean. Although nowadays, as the result of conquest by the Burmans as late as the middle of the 18th cent., the Talaings are almost altogether absorbed by the predominating Burman, they always before that exercised an enormous influence on the population generally as a ruling race; and their religious ideas have consequently greatly coloured those of the other occupants of a large part of the country.

2. **The Shans.**—The Shans, as they are known to the Burmese, or **Tai**, as they call themselves, represent what may be termed the mid-irruption (Siamese-Chinese) from the North—this time, so far as there is acceptable evidence, from S.W. China. Beyond the Eastern borders of Burma their best known representatives are the Laos and the Siamese, while to the West they became powerful as the Āhoms (*q.v.*) of Assam. In fact, they have at some time or other extended from the Brahmaputra to the Gulf of Tongking, and even into the islands of the China Sea. They, too, have been a ruling race in many parts of Burma, and have exercised a great influence on the religious notions of the people.

3. **The Burmese.**—The **Bamā** (written *Mramma*), whom we call the Burmese, constitute the results of the latest of the great expansions of the Indo-Chinese, which took place in comparatively recent times, southwards into Burma and the Eastern borders of India, and westwards into Tibet, where they formed respectively the chief divisions of a great Tibeto-Burman race represented by themselves and a number of allied tribes in all stages of civilization, from the Western Himālayas down to the southernmost portion of Burma. After a long and varying struggle for supremacy, the Burman has succeeded in the land of his adoption in attaining an overwhelming influence, which is still increasing owing to the beaten races seeking to merge their nationality where they can in that of the conqueror.

4. **Classification of allied tribes.**—In a country where the population is practically of one ultimate stock, language plays the most important part of all considerations in relation to internal classification and to establishing local affinities and differences. It must obviously have a great influence over the religions professed by the people. In Burma, consciously or unconsciously, students of ethnology have almost invariably tended to classify race by language, and language no doubt in that country is the surest criterion of difference.

5. **Burman tribes.**—Adopting the above method now, it may be stated that attached to the Burmans proper are eighteen minor tribes and divisions. Of these the **Maghs** or **Arakanese**, on the Bengal borders to the S.W., and strongly influenced by situation, form the chief civilized division; while the **Lihsaw** wild tribes, living among the Shans on the Chinese frontier to the N.E., are the principal representatives of the lower culture.

6. **The Kachins.**—Then follows, in many petty subdivisions, the important race of the Kachins, also known as **Chingpaws** and **Singhphos**. These are a specially interesting people as relics of a post-Mon-Annam irruption of Tibeto-Burmans left behind in the Northern Hills of Burma, after the branches that subsequently became the Tibetans, Nagās, Burmans, and Kuki-Chins had passed onwards. Their most interesting feature is that they are still following the ancient instinct of the main race and spreading steadily southwards, showing all the old fight and turbulence that no doubt served to bring success to their ancestors in their emigrations of long ago. Though minutely subdivided, they are all one people. All the chiefs are considered to be of one family, and a Szi Kachin, for instance, settling under a Maran chief becomes a Maran.

7. **The Kuki-Chins.**—All along the western frontier of Burma, and spreading far into the Assam hills to the West, lies the Tibeto-Burman race of the Kuki-Chins in eighteen tribes, known under a bewildering variety of synonyms, according as they have been reported on by Assamese or Burmese officials. This people in its still existing wild condition probably preserves to the present day many of the customs once prevalent among the whole Burman race, before the civilizing influences of Buddhism acted on that nationality. On this ground the Chins are of special interest to the student of the religions prevailing in Burma.

8. **Shan divisions.**—Turning to the minor congeners of the Shans, we find them spread about the country as widely as the Burmans from N. to S., but chiefly round by the East. Of the Shans proper we have the Southern Shans with Siamese influence, and the Northern Shans with the older Chinese and Āhom (ancient Assamese) influence.

9. **The Karens.**—For our present purpose the Karens are perhaps the most interesting and valuable division of the Siamese-Chinese race. They are now spread, in fifteen tribes, over the

S.E. frontier and the Talaing area, and are also wedged in between the Shans and Burmans proper in Upper Burma. The Karen undoubtedly had his original home in China, and his speech belongs to the Siamese-Chinese sub-family; but his ethnic peculiarities are many, and he is not readily to be identified with the other races among whom he dwells, and with whom his affinities lie. A striking modern characteristic is his readiness to adopt the teachings of Christianity.

10. Talaing divisions.—As in the case of the other two main races in Burma, the Mon-Annam tribes allied to the Talaings are to be found scattered about the country, chiefly on the N.E. frontiers of the Shan States, and even in the centre of Upper Burma, sometimes in a very primitive condition. The Talaings themselves may be referred to the Northern Cambodian people, and the allied tribes, numbering a dozen, may be called the **Wa-Palaung** group. Of these the 'Wild Was' are chiefly known, outside their habitat, for head-hunting on religious ceremonial principles, though their close relations, the Palaungs, are peaceful and industrious Buddhist traders of some education.

11. Relative strength of the races.—By language the Census of 1901 returned roughly 77½ per cent of the indigenous population as speaking Burmese, 5 per cent Tibeto-Burmese, 17 per cent Siamese-Chinese, ½ per cent Mon-Khmer. The extent to which the Burman is absorbing the other races, as shown by domination of language, may be stated thus, so far as it is possible to co-ordinate the Census statements on this point: of the indigenous population the Burmese number 69 per cent, the other Tibeto-Burmans 4 per cent, the Siamese-Chinese 26 per cent, and the Mon-Khmer 1 per cent.

12. Minute subdivisions.—One cause of the enormous number of subdivisions of the hill peoples especially is well illustrated by the remarks made in the *Upper Burma Gazetteer*, pt. i. vol. i. p. 592, when speaking of the Akhās (also Akhös, Kaws, Hka-Kaws), a remote Lihsaw tribe of the higher hills in the Shan State of Kengtung on the Chinese border. They have strong Chinese leanings, and are of a simple, timid, unresourceful nature. Akhā girls will marry any stranger.

'One often finds half a dozen Chinamen with Akhā wives living in an Akhā village. Akhā settlements, in which a good proportion of the male inhabitants are Chinese, or in which the inhabitants are of mixed Chinese and Akhā descent, style themselves *Khochia*, or Communities of Guests. It is as well to record this fact, because the word will certainly become corrupted and unintelligible before long, and the people will have a distinctive type of feature, which may well puzzle the ethnographer of the future.'

Such communities will have also a confused mixture of Chinese ancestral and Burmese animistic worship. Such must also be the case with the offspring of the numerous marriages permitted between free men and Kachin and Chin female slaves.

13. List of tribes.—The locally recognized divisions of the people are usually spoken of as if their names and ethnical reference were well known, and in describing superstitions and customs it is difficult to avoid making references to small sub-tribes. It is necessary, therefore, to give here a list of those more commonly spoken of under their best known names, grouped together according to the ethnology above adopted.

INDO-CHINESE TRIBES.

I. TIBETO-BURMAN RACE.

(*a*) *Burmese Group.*

Burmese, Arakanese, Tavoyan, Yaw, Chaungthā, Yabein, Inthā, Taungyo, Kadū, Mro, Hpon.

Lihsaw Sub-group.

Lihsaw, Lahū, Akhā, Akho.

(*b*) *Kachin Group.*

Chingpaw, Singhpho, Kauri, Szi, Lashī, Marū, Maingthā.

(*c*) *Kuki-Chin Group.*

Northern: Thado, Sokte, Siyin.
Central: Tashon, Lai, Shonshe, Kyaw.
Southern: Chinmē, Welaung, Chinbok, Yawdwin, Yindu (Shendu), Chinbōn, Taungtha, Kami, Anu, Sak (Thet), Yoma Chin.

II. SIAMESE-CHINESE RACE.

(*a*) *Tai (Shan) Group.*

Northern: Burmese Shan, Khamti, Chinese Shan.
Southern: Siamese, Lao, Hkun, Lu.

(*b*) *Karen Group.*

Northern: Karenni (Red Karen), Bre, Mano, Sawngtung, Padeng Zayein, Banyang Zayein, Kawnsawng, Yintale, Sinhmaw Mepauk, Yinbaw, White Karen.
Southern: Sgau, Pwo, Mopghā, Taungthū.

III. MON-ANNAM RACE.

(*a*) *North Cambodian Group.*

Talaing.

(*b*) *Wa-Palaung Group.*

Hka Muk, Lemet, Palaung, Wa, Tai Loi, En, Hsen Sum, Mong Lwe, Hka La, Son, Riāng, Danaw.

III. *HISTORY.*—The history of Burma, so far as the present purpose is concerned, is that of a struggle for supremacy among the Burmans, the Shans, and the Talaings, lasting through all historical times, with practically no intervention on the part of alien races until the arrival of the English in 1824. The story is a veritable tangle of successive conquests and re-conquests of the whole or part of the country by these races, whose influence as such may be said to have been paramount roughly in the following regions: the Burmans in the valleys of the Irrawaddy and Sittang Rivers above Prome and Toungoo; the Talaings in the deltas of these two rivers below those points, and in that of the Salween and what is now the Province of Tenasserim; and the Shans in all the country in the hills to the East and North. For considerable periods each of these races has been supreme over the whole area, the last to rule being the Burmans after the middle of the 18th cent. A.D.

Taking as comprehensive a view of the situation as is possible in the face of the kaleidoscopic changes presented to us, we may say that there were Burman dynasties at Tagaung in the North at any rate in the early cents. A.D., followed by a dynasty connected with them at Prome, succeeded in its turn by another at Pagān, which lasted till 1298. This last gave way to two contemporary Shan dynasties at Pinyā and Sagaing up to 1364, while a Burman dynasty was set up at Toungoo from 1313 to 1540. Contemporaneously there was an ancient Talaing dynasty at Thatōn and Pegu from 573 to 1050, which then became tributary to the Burmans of Pagān till 1287, at which date a Shan dynasty was set up at Pegu till it was ousted by the Burman line of Toungoo mentioned above, which then became the Burman dynasty of Pegu in 1540.

In 1364 the Shan lines of Pinyā and Sagaing became merged in the Burman dynasty of Ava, and this in its turn was upset by the Burman line of Pegu in 1551. This general dynasty of Pegu and Ava lasted, with a good many Shan irruptions from Siam, as regards Pegu, till 1740, when for 17 years a second Shan line was established at Pegu, giving way finally to the Alompra dynasty of Shwebo, Ava, Amarapura, and Mandalay till 1886, when the whole country came under the domination of the English. The English had in the meantime taken Arakan and Tenasserim in 1826, and all Burma as far north as Thayetmyo and Toungoo in 1852.

All this time there had been an independent State in Arakan from early times with varying capitals, the last of which was Myaukū (Myohaung, the Old City), near Akyab, until it was conquered by the Alompra dynasty in 1782.

The main point to grasp in all this confusion of struggle is that the conquerors for the time being

usurped the chief influence over the population, and did their best to destroy the individuality of the conquered, with varying success almost up to the point of extinction, as in the case of the Talaings by the Burmans after 1757. And so the result has been thoroughly to mix up the ethical ideas of the people subjected to so much change of influence.

The capitals of the various dynasties have existed all over the country as centres of religious influence. Tagaung and Shwebo are to the North. Then come Ava, Sagaing, Myinzaing, Pinyā, Amarapura, and Mandalay, all close together. Some distance to the South lie Pagān, Toungoo, and Prome. The rest, Martaban, Thatōn, Pegu, and Rangoon, are all in the deltas near the sea. Rangoon, however, though containing the most important Buddhist shrine in the East, the Shwēdagōn Pagoda, was never a native capital. Arakan was always a district apart, and in Tenasserim proper there was never an important town.

The religious history of Burma, apart from the indigenous influences created by the conflicts of the native population, has been materially affected by the introduction of Buddhism from India and the consequent Indian modifications of the ethics of the people. The history of that introduction is still a controversial subject, but it may be generally stated thus: The Northern (Mahāyāna), or debased ritualistic School of Buddhism, was the first to come into Burma from the North, and also among the Talaings in the South with a considerable admixture of pure Hinduism. This brought with it a perceptible leaven of Hindu and Indian animistic ceremony. In the early centuries A.D. the Southern (Hīnayāna), or purer School of Buddhism from Ceylon, began to have influence in the Talaing country, and was introduced into Burma proper by the conqueror Anawrahtā of Pagān in the 11th cent. wherever he had power. There was then a further overwhelming revival of the same school in the 15th cent., again among the Talaings, under the whilom monk, King Dammazēdi or Yāzādibadi of the Kalyāni Inscriptions at Pegu. This has spread all over Burma, and has so wiped out the Northern School that the very existence of the latter in the country at any time is denied by the orthodox natives of the present day.

LITERATURE.—C. C. Lowis, *Census Report*, pt. i., 1901; H. L. Eales, *Census Report*, 1891; G. A. Grierson, *Linguistic Survey of India*, II. and III., pts. ii. and iii.; F. Mason, *Burma, its People and Productions*, ed. Theobald, Hertford, 1882; C. J. F. S. Forbes, *Comp. Grammar of the Languages of Further India*, London, 1881, *British Burma and its People*, London, 1878; A. P. Phayre, *Hist. of Burma*, London, 1883; H. R. Spearman, *British Burma Gazetteer*, Rangoon, 1880; J. Stuart, *Burma through the Centuries*, 1909; E. H. Parker, *Burma Relations with China*, Rangoon, 1893.

IV. *ETHICS AND RELIGION.*—It will be clear that the basis of the religious notions and ethics of the people now inhabiting Burma must lie in those of the general Indo-Chinese race, as preserved in the three great branches thereof that have spread themselves over the land. The superstructure must be the result of such variations as partial isolation, caused by local antipathies covering a very long period, has brought about in the case of individual tribes and associations, and of such accretions and modifications as contact with surrounding aliens has produced in the course of migrations.

1. Buddhism.—The professed religion of Burma is Buddhism (see next art.). It counts among its adherents, according to the Census of 1901, practically the whole indigenous population; but the Census returns are in reality entirely misleading, as will be explained below (§ 3).

2. Alien religions.—Of the other great religions, professed chiefly by alien immigrants and temporary residents, the representatives are insignificant in numbers. There are about 300,000 Hindus, mostly foreigners; some 340,000 Muhammadans; and about 150,000 Christians, many of whom belong to the native population. All the natives professing these religions present interesting phenomena to the student. There are also a few Jews, Jains, Sikhs, and Parsis, who need not be considered here.

(1) *Hindu Animists.*—Among the Hindus are some 50,000 Paraiyans and Malas, representing the 'low-caste' pariahs of the Madras Presidency. The interest attaching to these classes in Burma is that they are regarded as Hindus, and are likely to increase largely in immigrant numbers. In reality, however, they go to swell the ranks of the undiluted Animists in the country. In their Indian homes they are classified as followers of the Saiva form of the Hindu religion, but they are nevertheless 'Devil-worshippers,' *i.e.* Animists, just as the great majority of the inhabitants of Burma are Animists at heart, as will be shown later on.

(2) *Manipuri Hindus.*—There is in Upper Burma, and spread in families over many parts of the country, a considerable community of Manipuris from Assam, across the hills on the Western borders. They were originally Hindu captives from Manipur, brought over in the 18th and early 19th cents., and settled about Upper Burma. The lower classes of these forced immigrants are now known as Kathēs, and the upper classes as Ponnās. The former have mostly become Buddhists, while retaining many of their old Hindu customs, but the latter have exercised a great influence as priests and astrologers over all classes of their conquerors from the former Royal Court downwards, and have no doubt had much to do with the existing unorthodox practices and beliefs of the professedly Buddhist population. Their name implies that they are Brāhmans (*Punyā*), though very few could have had any claim to be such in their own homes before capture.

(3) *Muhammadans.*—Among the Muhammadans there are in Burma two native communities which attract considerable general attention—the Zairbādis or Pathīs, and the Panthays. The Zairbādis are in various ways descendants of Indian Muhammadans, who acquired a Burmese domicile and reared families by local wives. They have, except in the case of the products of recent intermarriages in Arakan, thoroughly mixed with the people, and in appearance, manner, and costume are not easily distinguishable from the ordinary Burman. They are apt to be fanatical Muhammadans, with an admixture of belief and custom adopted from their surroundings. For instance, their women have the same extreme freedom of movement as the other indigenous women enjoy. No doubt it would repay the student to give the Zairbādis a closer examination than has hitherto been accorded them. The Panthays are the well-known Muhammadan Chinese of Yunnan, of mixed alien military and native descent, who until quite recently ruled there. Some of them are settled on the extreme North-Eastern borders, and numbers wander about the country as traders, but they can hardly be said to influence the religion of the people.

(4) *The Chinese.*—There are altogether some 65,000 Chinese in Burma, chiefly from the Southern parts of China, who were all returned at the Census of 1901 as Animists, except such as definitely called themselves Christians, Muhammadans, or Buddhists. In the words of the *Census Report* (p. 35), 'Taoism and Confucianism differ but little in their essence from the national worship of the people of Burma.'

(5) *The Selungs.*—In the Mergui Archipelago off the coast of Tenasserim is a small race of 'Wild Malays,' known as the Selungs, who are primitive Animists, but do not properly belong to Burma and its civilization at all.

(6) *Christianity.*—The strength of the various forms of Christianity among the native population is purely a question of missionary effort. The Protestants compare with Roman Catholics as 90 to 36, and of the Protestants, the Baptists (American) compare with the rest as 67 to 23, the great bulk of the remainder being Anglicans.

(7) *The 'Christian' sect.*—In addition to these there were no fewer than 18,000 persons, or over 11 per cent of the whole community, that returned themselves in 1901 merely as 'Christians.' They largely represent a secession from the Baptists, which is of interest as illustrating the manner in which sects can arise in obscure and unexpected places. In 1884, certain members of the American Baptist Church at Lamadaw, Rangoon, had a dispute with their missionary and were formally excommunicated, a proceeding acutely felt in an isolated community such as any body of Christians must be in a country like Burma. Among these people were some who held prominent official and other positions, and they formed themselves into a sect labelled merely 'Christian' without any qualification. They elected pastors of their own, and created their own ritual and literature, all printed in Burmese at Rangoon and elsewhere.

(8) *Christianity among the Karens.*—Christianity among the wilder converts, as in the case of the Karens, of whom whole villages are now reckoned as Baptist Christians (American), is largely tinged with the old Animism. The mental attitude of these people towards religion is still best illustrated by a legend recorded in Smeaton's *Loyal Karens of Burma*, p. 184, often quoted because it so clearly explains so many phenomena of

religious practice in general, and because it admirably describes 'the whole spirit of compromise in which rude uncultured minds regard new faiths that appeal more to the reason than to the instinct that heritage of an immemorial past' (*Census Report*, 1901, p. 24). The story relates that some children, along with a litter of pigs, had been left by their parents on a high platform, out of the way of a dangerous tiger. The tiger came, and, disappointed of his prey in the house, soon scented out the children. He sprang at them, but fell short. He tried to climb, but the hard, smooth surface of the bamboo defied his claws. He then frightened the children by his terrible roars. So in terror the children threw down the pigs to him, one after another. Their eyes, however, were fixed not on the tiger, but on the path by which they expected to see their father come. Their hands fed the tiger from fear, but their ears were eagerly listening for the twang of their father's bowstring, which would send the arrow quivering into the tiger's heart. And so, say the Karens, 'although we have to make sacrifices to the demons, our hearts are still true to God. We must throw sops to the foul demons who afflict us, but our hearts are ever looking for God.'

3. Animism : Nat-worship.—It is now a recognized fact that, whatever the profession of faith may be, the practical everyday religion of the whole of the Burmese peoples is Animism, called generally in Burmese 'Nat-worship,' *nat* being the generic term for all kinds of supernatural beings.

The term *nat* is probably not derived from the Indian imported word *nātha*, 'lord,' though that term has precisely the same scope and sense. Its use to describe the indigenous spirits, and also those adopted from India, is possibly the result of its happening exactly to translate such Indian terms as *dēva*, *dēvatā*, and the like, denoting subordinate gods, so far as the Burman is concerned with them.

To the Burman Buddhists, even among the members of the late Royal Court and the *pōngyīs* (Buddhist monks and teachers) themselves, the propitiation of the Nats (called also by the Karens *Las*, and by the Talaings *Kaluks*) is a matter of daily concern, and in this they are followed by the Buddhist Shans and Talaings. Meanwhile, as Sir J. G. Scott says, the formal exercise of their professed religion need only 'be set about in a business-like way and at proper and convenient seasons.' In daily life, from birth to marriage and death, all the rites and forms observed are Animistic in origin, the spirit-worshipper's object being to avert or mitigate calamity. Nat-worship is the most important and the most pervading thing in religious life. Even the Buddhist monasteries are protected by the Nats, the spirit-shrines (*natkun*, *natsin*, usually tr. 'nat-houses') stand beside pagodas, and the Buddhist monks themselves take part in Animistic rites and act as experts in astrology and fortune-telling.

'The Burman has much more faith in ascertaining lucky and unlucky days and in the deductions from his horoscope than in the virtue of alms (to Buddhist monks) and the efficacy of worship at the pagoda' (*Thirty-Seven Nats*, p. 2).

At the extremity of every village (*yuāson*) there is a *natsin* for the guardian *nats* of the neighbourhood, in whose honour feasts are held at regulated seasons. Certain feasts in honour of the Nats were also formally recognized by the former Burmese Court. Ministers of State, and even the King himself, who was the religious as well as the secular chief, attended them in their official capacity; while the ritual to be observed was carefully set forth in the *Lawka Byūhā*, the *Shwe Ponnidān*, and other treatises on Court etiquette and duties. A highly educated Talaing has thus described (*Thirty-Seven Nats*, p. 2) the prevailing feeling:

'Not only has every human being, but also every conspicuous object and every article of utility, a guardian spirit. When people die, it is said that they become spiritual bodies requiring spiritual food; and in order that these spirits or *nats* may not harm the living, they make certain customary offerings to them. Some persons who have familiar spirits make annual offerings to the *nats*.' He then goes on to say that the great Buddhist reforming conqueror in Burma, Anawrahtā, in the 11th cent. A.D., attempted to destroy the worship, with the result that, 'when the people came to hear about the order of the king directing the destruction of their *nat* houses, they obeyed it, but they hung up a cocoanut in their houses to represent them, and as an offering to the dispossessed *nats*.'

In Nat-worship, as practised at the present day, we have, in fact, presented to us a composite faith, the result of all the influences which have through the ages been brought to bear on the modern inhabitant of Burma. Perhaps the best way to define the Nats is as supernatural beings derived from three separate sources: (1) The tutelary spirits that fill the earth and all that is thereon, man himself and all the creatures, objects, and places among which he lives and moves and has his being—springing out of the ancient indigenous Animistic beliefs of the people. (2) The ghosts and spirits of the departed—the ancestor-worship of the Chinese and Indo-Chinese races to the North and East. (3) The supernatural beings of the Buddhists, celestial, terrestrial, and infernal—imported with the professed faith, derived westward from the old Brāhmanic cosmogony of India, and indicating in its terminology and form the sources of importation. The Nats and their worship represent, indeed, a mixture of three distinct cults—nature-worship, ancestor-worship, and demon-worship. The comparatively recent imports from India are not yet, however, completely assimilated in the minds of the Burmese with their indigenous spirits. They more or less clearly distinguish between them, and keep the ancestors and the spirits of nature distinct from the demons and godlings that have come to them from across the western borders.

The multiple origin of the modern Nat-worship accounts for the long-established attitude of the educated and the late Royal classes towards the cult of the Nats, in that it has made them accept in its entirety the demonolatry accompanying the importation of Buddhism, and reject the grosser forms of nature-worship inherited from their forebears. It also accounts for the opposite attitude of the uneducated classes, who have accepted in a confused way the Indian demonolatry, and have at the same time adhered to the old mixed nature- and ancestor-worship of their inheritance as their chief cult. Among the wild tribes, the further they are removed from civilization the more surely do their beliefs and practices accord with their descent or with their environment.

This mixture of variant indigenous Animistic influences and Indian Brahmanic demonolatry with Buddhist modifications thereof pervades all the religion and ethics of the civilized Burmans, Shans, and Talaings, and colours all their customs, ceremonies, beliefs, and superstitions, and the practices resulting therefrom. It is by no means absent from those of the uncultured peoples, and even wild tribes, who have come and are steadily coming year by year in greater numbers, under the influence of Buddhism, and in the case of the Karens both under Buddhism and Christianity. This fact should never be lost sight of by any one who wishes to describe or to study the mental equipment and attitude of the peoples of Burma.

Eclecticism in Burma.—A confused intermingling of everything around them is often observable in the religious ideas of the more uncultivated tribes of mixed origin, *e.g.* the Taws, Danūs, Danaws, Payes, Kadus, Yaws, Hpons, etc., but it reaches a climax in the Lahus or Muhsos (called also Lahunā, Lahu-hsi, and Kioi), who are the Musus, Mossos, and Luchais of Garnier, Prince Louis of Orleans, Bons d'Anty, and other French observers. The Lahūs are a Tibeto-Burman tribe of the Burmese group and Lihsaw sub-group, living among the Shans and Was on the N.E. frontier bordering on China. Their traditions are Tibetan, and their cult an amalgam of ancestral Animism, Chinese Buddhism, and Burmese practices, with an admixture of Confucianism. They worship *tawura*, guardians of houses, villages, the flood, the fell, and so on, of the ordinary type, and also a great general sky-spirit, Ne-u. They had priests (*huye*) in charge of shrines (*fufang*), under a *tafuye*, or high priest. All this is Tibetan Buddhism with Chinese nomenclature. There is still a *tafuye*, the Chief of Mong Hka, who is civil and ecclesiastical ruler. His abode and the temple he controls are Confucian in form, but with the usual Burmese Buddhist accessories. The shrines are called indifferently *kyaung* (Burmese) or *fufang* (Chinese), and are decorated with Chinese inscriptions. Their chief festivals (*wawlong* and *wawnoi*) are held at the Chinese New Year (like those of the Lihsaws generally), with Chinese and Indo-Chinese characteristics.

4. Attitude towards Divinity.—There is no doubt that the idea of a single universal God is foreign to the Indo-Chinese mind as developed in Burma. There is no tendency towards a belief in God, or in idols or priests, as the symbols or interpreters of Divinity, or towards the adoration of stocks and stones.

The nearest approach to an apprehension of the idea of God-head is among the Kachins, who in one series of legends refer to Chinun Way Shun. He is said to have existed before the formation of the world, and to have created all the Nats. But, under the name Ka, he is also the Spirit of the Tilth.

Nevertheless, there has always been much made of the possession by the Karens of traditions concerning God and of ethics of a distinctly Christian type before 1828, when the existing American Baptist missionary influence commenced. The pronounced Christian and Judaistic tone of these traditions has naturally excited much comment, but there can be no doubt that they are imported, probably through early Roman Catholic missionaries about 1740 (*Vita di Gian Maria Percoto*, 1781). Their strongly Jewish form has given rise to a rather vague conjecture that they were learnt from early Nestorian Christians, during the wanderings of the Karens southwards from their original Indo-Chinese home.

5. The soul.—To the Burman the soul is an independent immaterial entity, bound by special attraction to an individual body, and giving life to it. But the soul can leave the body and return to it at will, or be captured and kept away. It is, however, essential to the life of the body that the soul should be in it, and so when it wanders the person affected is thrown into an abnormal condition, and dreams and swoons, or becomes ill. In a general way these ideas are shared by the Kachins, Chins, and Karens. The soul is materialized in the form of an invisible butterfly (*leippyā*), which hovers a while in the neighbourhood of the corpse after death. The *leippyā* of King Mindōn Min, who died in 1878, dwelt in a small, flat, heart-shaped piece of gold (*thenyōn*), which was suspended over his body until burial.

Sickness is caused by the wandering *leippyā* being captured by an evil spirit or a witch. It is recalled by ceremonies (*leippyā-hkaw*) for adults, consisting of offerings to the spirit to induce it to give up the *leippyā*. Infants whose mothers have died are in great danger lest the dead woman, having become a spirit, should retain the *leippyā* of her child. The ceremony in this case consists in propping up a mirror near the child, and dropping a film of cotton on it. If the film slips down into a kerchief placed below the mirror, it is laid on the child's breast, and thus the *leippyā* is saved.

Among the Kachins there is a belief that persons with the evil eye have two souls (*numlā*), while all other people have only one. The evil eye is caused by the secondary soul. The Kachins say also that the spirit of a man lives in the sun, which is the universal essence (probably an echo of Indian Vedāntic philosophy through Burmese Buddhism), and from it the threads of life spread out to each individual, in whom life lasts until the thread snaps.

The soul is so much mixed up with the idea of a spirit in the popular philosophy of all the races, that European observers have called the Karen *la*, which is really a synonym for an ordinary spirit or *nat*, the soul. Thus, the Sawngtung Karens, the Taungthūs, and the Taungyōs have a *sabā-leippyā* (paddy-butterfly), which is the Spirit of the Tilth. So essential is this spirit to the success of the tilth of the Karens that, when paddy is sold, a handful is always retained out of each basket, to preserve the *sabā-leippyā* to the sellers. Allied to this belief, among the Sgau and Pwo Karens, is the Spirit of Harvest, Pībiyaw, which is a cricket that lives in a crab-hole. And so the earth thrown up by crabs is used on the threshing-floor, and crickets are placed on the yoke-supports of ploughing oxen.

6. The future life.—Ideas as to a future life are but feebly developed in the Indo-Chinese mind as exhibited in Burma; and, where distinct notions of heaven and hell are reported (as amongst Kauri and Szi Kachins, and amongst Siyin and other Chins), they are due to contact with Burmese Buddhists.

The Kachins generally do not go beyond consigning the spirit of the dead to a position among the Nats, or to the place 'where its fathers and mothers have gone,' accordingly as harm does or does not befall the family or any of its members after the death. By certain ceremonies they induce the spirits of the recently dead to go away and not return, but they do not know where they go. Siyin Chins after death still enjoy drinking and hunting, but in no definite place. The Haka Chins believe in Mithikwa (Deadman's Village), divided into Pwethikwa and Sattikwa, pleasant and unpleasant. Every one goes to the former except those who are slain by the enemy, for they have to remain his slaves in Sattikwa until avenged by blood. This presents an Animistic explanation of the blood-feud. When Sawngtung Karens die they go to Loi Maw Hill, the home of Lei, the tribal guardian.

7. Benevolent spirits.—The Kachins say that Shingrawa, the man-creator of the earth, which he shaped with a hammer, is kind and good, and therefore little notice is taken of him, and shrines to him are few and neglected. This attitude towards benevolent *nats* is important as explaining the absence of their worship in Burma, and also the statement of most European observers that all *nats* and spirits are malevolent, which is not the case. The Southern Chins also have a national spirit, Kozin, who is indifferent. The house-guardian (*eing-saung nat*) of the Burmans and Talaings is another instance of a spirit who is described as simply indifferent.

Besides Shingrawa, the Kachins recognize as beneficent *nats*: Sinlap, the giver of wisdom; Jan, the sun; and Shitta, the moon. These may be worshipped only by the chief, once a year or at the periodical national festival (*manau*), and then without sacrifices. Trikurat, or Kyam, is a good spirit of the forest, who fascinates the game which the hunter stalks. He is propitiated by treading on ashes from the house-hearth on return from a hunting expedition, and sprinkling the blood of the victim towards the jungle. The Spirit of the Forest himself, Chitōn, is, however, of doubtful character. In some places he is represented as malignant and in others as good-natured.

The attitude of the ordinary Burman Buddhist in regard to this point is shown by an extract from the inscription in Burmese on a bell for a village pagoda: 'May the *nats* who dwell in the air and on the earth defend from evil creatures the two fat bullocks which plough the fields. May the guardian *nats* of the house and the village keep from harm Chit-ū, our son, and little Mā Mī, our darling daughter.'

8. Nature-worship.—There is a distinct worship, or propitiation, of spirits representing Nature generally among all the tribes, in addition to that of the individual, familiar, or tribal guardians. There are everywhere national spirits of the Sky, the Sun and Moon, Rain and the Flood, of the Fell, the Forests and Trees, and of Agriculture. But the tendency to localize the national spirit is everywhere visible, and in reality the national spirit is often hardly differentiated from the tribal. Good instances of this are to be found in Uyingyī, the Spirit of the Neighbourhood, among the Talaings, and in the 'District' *nat* of the Burmans and Talaings, who is known as 'the Lord' (*Ashingyī* in Burmese, *Okkayā* in Talaing).

(1) *Spirits of the Sky.*—Mu, or Mushang, is the *nat* of the heavens among the Kachins. Ponphyoi of the Kachins dwells in the sky, and generally interests himself in the affairs of mankind, and so does Upakā of the Burmans; but his interest is sinister, as he snaps up mortals. On the other hand, Sinlap, the Kachin Spirit of Wisdom, also dwells in the sky.

(2) *Spirits of the Sun and Moon* are found in various places. The best instances are the Kachin Jan, the Sun, and Shitta, the Moon, already mentioned.

(3) *Spirits of Rain.*—The Thein *nats* of the Burmese are the Spirits of the Showers. They cause showers by coming out of their houses, the stars, to sport in mimic fight. Thunder and lightning are the clash of their arms.

(4) *Spirits of the Wind.*—Mbon, the Spirit of the Wind among the Kachins, may be worshipped only

at the national harvest festival (*manau*), and then by the chiefs alone. The periodical winds bring the fertilizing rain; hence, no doubt, the cult and its importance.

(5) *Spirits of the Flood.*—The Burmans and Talaings believe that Maung Ingyī lives in the water, and causes death by drowning. He has a feast to himself in Waso (the Buddhist Lent). The wild head-hunting Was are careful to appease Ariynom, the Spirit of the Flood, on their expeditions after heads.

(6) *Spirits of the Fell.*—The Wild Was are careful also to propitiate Hkumturu, the Spirit of the Fell, on their head-hunting expeditions.

(7) *Spirits of the Forests and the Trees.*—The most widely spread nature-cult of all is that of the forest and tree *nats*. All the hill tribes dread them, and the most characteristic superstitions of the people of the cultivated plains are related to them. Every prominent tree, every grove, every area of jungle, besides the forest in general, has its special *nat* (*seikthā* in Burmese), often with a specialized name. Everywhere the ordinary home of the non-personal and non-familiar *nat* attached to the earth is in the trees. Among all the tribes, every dark and prominent hill-coppice has a *nat*-shrine in it. Among the Karens and all the allied tribes, the village-guardian lives in a tree, coppice, or dense grove near the village, where he has a shrine. Among the Tame Was also the village *nat* dwells in a tree, while the Wild Was always hang the guardian heads taken in head-hunting on the avenue approaches to the villages. The general character of the forest-*nat* is that of an evil spirit. Among the Burmans, Hmin Nat drives mad those who chance to meet him; and, despite his occasional good character, Chitōn, the forest-*nat* of the Kachins, represents the evil principle. Wannein, or Ple, Nat of the Taungyos is feared throughout a district which is larger than the habitat of the tribe. The familiar Burmese Akāthasō, Seikkasō, and Bōmmasō, who live respectively in the tops, trunks, and roots of trees, are, however, direct importations, names and all, from India.

The attitude of the more civilized peoples in the hills towards the forest spirits is well explained in an account of the Buddhist Palaungs in the *Upper Burma Gazetteer* (i. 491):

'Their *nats* live in a big tree, a well marked hill, a large rock, or some such natural feature. They are male and female, and all of them have names. The most powerful is the spirit who dwells on Loi Seng Hill and is called Takālū. Others of note are: Tarū-Rheng, who lives near the group of pagodas at Zeyān Village; Peng-Mong, who frequents the dense jungle on the west side of the big hill near Zeyān; Tahkūlōng used to live close to the ruin of an old pagoda near Payāgyi or Selān Village, but he was much neglected, and has been invited to bestow himself in the clump of jungle on the hillock at the east gate of Namshan, due east of the Sawbwā's (chief's) palace; the Loilan Nat lives on a hill near Myōthit, and there are many more.'

Palaung customs are often illuminating, and one of the most instructive is the national festival held in March on Loi Seng Hill for the worship of the 'first tea tree.' Tea is their chief form of agriculture, and the interest in this worship and annual festival is that this tree is said to have been introduced only three hundred and seventy years ago. Here we have, then, before us the actual rise of an Animistic ritual.

(8) *Spirits of Agriculture.*—These are, of course, universal, and are best dealt with generally, when discussing festivals and ceremonies. The Burmans and Talaings have Būmadī (Indian origin) and Nāgyī, Spirits of the Earth and Grain respectively. Among the Kachins, Wawm or Chinwawm can be worshipped by the chiefs alone, and only at festivals. The *sabā-leippyā* (paddy-butterfly), the Spirit of the Tilth among the Karens, is worshipped by sprinkling lighted distilled liquor over the ground at the time of jungle-clearing by fire (*taungyā* cultivation). Often the tribal guardian and the Spirit of Agriculture are mixed up, as in the case of the Nat of Loi Maw Hill among the Karens, whose festival is in May.

9. National Festivals.—(1) *Quasi-Buddhist.*—The Burman has a natural talent for making his proceedings attractive and beautiful, and his national festivals have, therefore, attracted much attention, but the chief of them are now Buddhist, or so overladen with Buddhism as not to come within the present purview, the Animism in them being more or less directly Indian. Such as these are the New Year's Feast, Thingyān Pwe, a feast of offerings (to the monks), the Water Feast of European observers held in Tagū (April); the illuminations in Thadingyut (October); the Tāwadeinthā in Tasaungmōn (November).

At the *New Year's Feast*, the dousing of every one met with is perhaps the most remarkable custom that the European observes in the country, but it is really a reference to Indian Brāhmanism, as the water represents consecrated water used for washing the sacred images. The root-idea of throwing it on human beings is to honour them by treating them as sacred. Its true ceremonial nature comes out well in the words of Sir J. G. Scott (*The Burman*, ii. 51):

'The wetting is considered a compliment. A clerk comes up to his master, *shekos* to him, and gravely pours the contents of a silver cup down the back of his neck, saying, "*Ye kadaw mi*," "I will do homage to you with water."'

At the *Tāwadeinthā Festival*, the *padēthā bin*, a sort of Christmas tree, representing the abode of the *nats* and covered with gifts of all kinds, including money, is of an Indo-Chinese type. It is, however, deposited at the pagoda or monastery, and is used for the maintenance of the place or for alms at the disposal of the custodians (*kyaung-thugyī*, *kāppiyā dāyakā*).

(2) *Indigenous seasonal.*—The majority of the indigenous festivals are seasonal feasts connected more or less directly with agriculture, and they exhibit two prominent phenomena: There is no prayer for assistance connected with them, but plenty of precaution that the spirits may not interfere, and they mostly include a drunken orgy. The root-idea of much of the ceremonial is illustrated by the great October *nat*-feast of the Palaungs held at Namshan, in which the *nats* are simply invited to join, their arrival being signified by atmospheric changes determined by the wise man called in.

The Red Karens have a *seedtime* festival in April, at which the ceremony is chiefly a maypole dance round a ceremonially selected post; and before sowing, the Kachins have six holidays, all connected with agricultural operations. What the object of the Karen festival is does not appear, but that of the Kachins is distinctly to avert danger to the coming crop.

Averting danger is also the clear object of the *harvest* festivals. At the Edu festival of the Red Karens (the term implying merely a 'public ceremony'), a tribal scape-goat in the shape of an image of an elephant or horse is provided. The same idea runs through the harvest feast of the Talaings and Burmans, at which a straw woman, clothed in skirt (*tamein*), kerchief, and articles of female attire, and a quantity of *kauk-hnyin* (sticky rice confection) are put into a cart and driven round the fields, and finally set up at the place selected for the *bin*. The village boys usually eat the rice, though in some fear and trembling for the vengeance of the *nat*. The Red Karens are not, however, satisfied with their scape-goat, but further proceed to frighten away the ghosts of friends and relatives by noise, and to appease them by small pieces of roasted bullock or pig sent in

procession to the next village, to be eaten by friends there. They thus avert danger in all the occult ways known to them.

10. **Ancestor-worship.**—The obvious origin of the races inhabiting Burma would argue strong proclivities towards pronounced ancestor-worship, but it is a matter of great interest and importance in the study of religion in the Far East that the facts point the other way. The further removed tribes are from the Chinese frontier and influence, the vaguer is the nature of the worship of ancestors, and the more do their spirits become mixed up with the worship of the *nats* in general. Thus, among the Southern Chins, as well as among the cultured Talaings, Shans, and Burmans, strongly imbued with Indian ideas, the ancestors and the general *nats* are all mixed up. Among the Kachins any one may, but does not necessarily, become a *nat* after death, and additions are constantly being made to the number of such ancestral *nats*, on the motion of the mediums called in when sickness occurs. The most primitive form of ancestor-worship is observable among the Hpons, a wild nomad waterways tribe of the Burmese group who worship only the dead parents, and not even the grand-parents. When there is any sickness about, food is placed at the north end of the house, perhaps indicating the origin of immigration, and the head of the family prays to his parents to help themselves and him.

On the other hand, tribes along the Eastern frontiers show strong Chinese proclivities. The recently arrived Mengs (Miaotzu) to the N.E. are practically purely ancestor-worshippers, with very vague ideas of a general over-ruling power. The Yaos, also strongly Chinese, have a particular dread of the ancestors, who are worshipped shortly after a marriage, at a special altar, which is carried into the hills and left there. The more secluded the place, the less chance have the ancestors of finding their way home. The Akhās propitiate the ancestors (*miksas*), who are said to live in the regions of the setting sun, in order to prevent their returning home and injuring them. They enter the house by the *west* door, which is tabued to males, though women may use it reverently. Similarly, the gates and great entrance arches to Akhā villages are meant to keep out the ancestors, and are closed when a sacrifice is going on. It may here be noted that among Karens and other tribes the house *nats* live to the *west* of the house. The Akhās will not talk about the ancestors, as they might avenge any derogatory remarks on the speaker. The allied Akhös believe that the ancestors dwell at a special hearth in the house tabued to all but the family. The Lihsaws, who have many Chinese leanings, have a mixed worship of ancestors and *nats* of the forest and fell.

11. **Totemism.**—Totemism may be said to exist in Burma in certain indications to be found only in customs relating to eating and marriage, and doubtfully in the naming of children. The tendency throughout the country is to eat all edible living creatures, without superstitions being attached to those selected; but the tribes will sometimes eschew certain animals. Kachins except from their diet snakes, wild cats, monkeys, and usually dogs. Karens will not eat any monkeys, except the white-eyelid monkey. Among Kachins and Karens there is in some instances a very strict limitation of marriage to certain villages. In the Burmese Royal Family marriage between the king and his sister (half-sister preferred) was prescribed, and such marriages between the original ancestors are the rule in tales of origin. Kadū villages are divided into two factions, Amā and Apwā, which take each other's girls in marriage; the girls then belong to the faction into which they have married. The strongest indication of a former totemism is in a custom among the Kachins by which persons of the same 'family name' are all considered to be of the same blood, and may not marry even when belonging to different tribes. The Shan and Kachin system of naming children after animal 'birthday' names, and of changing and concealing personal names in after life, has been referred to a former totemism; but this is an extremely doubtful reference, especially as the Burmese *nan* (Indian *nāma*), or animal name, distinguishing the birthdays of Burmans, relates solely to astrological ideas.

12. **Tales of origin.**—The meaning and objects of tales of origin told by the tribes in Burma, where not directly intended to connect a tribe with some revered personage or people of a higher civilization, are obscure, and it would be difficult to trace any connexion even between tales of animal origin and totemism. Most of the tales are merely historical, or meant to be historical, as in the cases where origin is traced to a certain village (Sokte and Kweshin Chins), or in the common ascription of the birthplace of a tribe to a rock or hill with a special name, usually in remembrance apparently of some place before migration. Other tales are obviously attempts at an explanation, such as coming out of the bowels of the earth (Thadō and Yo Chins). The more civilized tales are old-world stories, partly out of their Scriptures, dished up afresh, as when the Burmans relate in a circumstantial way their descent from nine celestial beings—five men and four women. Sometimes we find incompatible origins recorded by different observers of the same tribes or groups of tribes. Thus Was are variously said, in different stories, to be descended from celestial beings, frogs, and gourds.

(*a*) *Human origin.*—Tales of human origin generally contain a miraculous element, but not always. The White Karens say that they came from the children of a married brother and sister that quarrelled and separated. Kachins also claim descent from a married brother and sister—Pawpaw Nan-chaung and Chang-hko—and the fragments of her child cut up by a *nat*. White Chins came from a man and a woman that fell from the clouds. The miraculous element sometimes involves the idea of virgin conception, perhaps more or less directly Buddhist. Thus, a variant of the Kachin tale of Chang-hko describes her as having no husband: and the Inthās claim descent from a Burmese princess by the spirit of a lover whom she had never met. The miraculous element often involves descent from an egg. The Yahao Chins are descended from an egg laid by the sun and hatched in a pot by a Burmese woman, the Palaungs from one of three eggs laid by a Nagā (serpent) princess; but this last legend is largely of Buddhist origin. The Taws, however, simply say that they came out of an egg. Magic is sometimes brought into play to account for tribal origin, as when the Sgau and Pwo Karens say that they are descended from a primeval ancestor, Tawmaipah, through the magical powers of a boar's tusk.

(*b*) *Animal origin.*—Hsenwi (Theinni) Shans are descended from tigers, and all their *sawbwās* (chiefs) include *hsö* (tiger) in their personal name. Yokwā, Thettā, and Kapi Chins were all born of a wild goat. The ancestor of the Marū Kachins was a *nat* married to a monkey, and their children were the bear and the rainbow, and a brother and sister that married. All these were *nats*.

(*c*) *Vegetable origin.*—According to the Kachins, the Creator, Chinun Way Shun, made the first man, Shingrawa, out of a pumpkin with the aid of the *nats*. Shingrawa made the earth. The primeval pair of the Siyin Chins came out of a gourd that fell from heaven and split open as it fell. The Tame Was also came out of a gourd.

13. **Deluge tales.**—Closely connected with tales of origin, stories of a Deluge are common in Burma among Shans, Kachins, and Karens. The Kachins say that the world was destroyed by a flood, and only a brother and sister were saved in a boat, though the *nats* were unaffected by it. This seems to point to a partial flooding of the country at some period, as the Deluge tale of the Kengtung Shans refers directly to the time before the great lake in the Kengtung State was naturally drained off.

14. **Evil spirits.**—(1) *General characteristics.*—The root characteristic of the *nats* is power. They can do as they like, and the fulfilment of wishes depends on them. They are all-powerful, and

irresistible so far as mankind is concerned. As to the supposed exercise of their powers, it is commonly said by observers that among the wild tribes all the spirits are maleficent (*natso*); but this is an obvious error, arising out of the fact that worship is almost entirely devoted to the warding off of the evil spirits, the kindly ones being not usually worshipped at all. This is shown in the notable instance, *inter alia*, of the Kachin belief that the ghosts of the murdered cannot trouble the murderer, as they would be too much afraid of his ghost after his death to worry him while still alive.

The general attitude of the people of Burma towards the evil spirits is well illustrated by that taken respectively by the Chins, and the Sgau and Pwo Karens. To the Chins the evil spirits are individual, and belong to everything—village, house, clan, family, person, the flood, the fell, the air, the trees, and especially the groves in the jungle. They are innumerable. In the house alone there are twenty, of whom the following six are important:

'Dwopi lives above the door of the house, and has the power of inflicting madness. Inmai lives in the post in the front corner of the house, and can cause thorns to pierce the feet and legs. Nokpi and Nalwun live in the verandah, and can cause women to be barren. Naonō lives in the wall, and causes fever and ague. Awaia lives above and outside the gate, and can cause nightmare and bad dreams' (*Upper Burma Gazetteer*, pt. i. vol. i. p. 473).

The Sgau and Pwo Karens believe that Nā is incarnate in all dangerous animals, and he is ceremonially driven away from the fields and houses. The Seven Nā destroy by the tiger, old age, sickness, drowning, man, fall, and 'every other means.'

(2) *Ghosts.—Tasē* is the generic term for malignant ghosts, which are the spirits of those who have existed as human beings and are still endowed with passions and material appetites. They roam about after sunset in search of human prey. There is a great fear of the ghosts of the recently dead. This is illustrated in various ways. Thus to the Kachins the ordinary evil spirit is the ghost of a recently deceased ancestor, and among the Red Karens no dead body may be taken through the village, or by any way but that nearest to the cemetery, even if a hole in the house wall is entailed thereby. Burmans have a modified form of the Karen idea as to carrying the dead to burial.

(*a*) *Haunting ghosts.*—To the Burmans *natsein* are the ghosts of persons who have died a violent death (*thayē*) and haunt the place of death. Under Buddhist influence the idea has been extended to monks and nuns who break their vows.

(*b*) *Ghosts of women who die in childbirth.*—In common with every part of India, all the people of Burma have a special dread of the ghosts of women who die in childbirth (*thabēt*). Among the Red Karens (Ere) no man may help to bury such a woman. The Kachin *swawm* is a vampire, composed of a woman dying in childbirth and her child, which transmigrates into animals; but this notion is, no doubt, due to mixed Brāhmanic and Buddhist influence, from propinquity to Shans and Burmans.

(3) *Forms assumed by evil spirits.*—The ideas current in the most civilized parts among the Burmans as to the forms which evil spirits assume are typical of the whole country. They may become incarnate in dangerous animals, especially the large poisonous snake, hamadryad. They may be contained in anything, such as a large wooden *limban* (low food-stand), which disappears on being touched, or a stone pillar embedded in the ground, which will rise and disappear suddenly (Mandalay District). They take terrifying forms—a leopard, a black pig swelling into an enormous black shadowy figure, a white apparition rushing at its victim (Mandalay District). *Hminza* are the ghosts of children in the form of cats and dogs. *Thayē* and *thabēt* are hideous giants with long slimy tongues, which they use as an elephant uses his trunk (borrowed from India).

(4) *Disease and death.*—Disease and death are always due to the action of evil spirits. The origin of this belief is well illustrated by the Red Karens, who say that Lu is a particularly wicked spirit, living on corpses and causing disease and death in order to supply himself with food. So among the Talaings the house guardian will cause fever, unless offerings of money, rice, eggs, sugar, and fruit are made to him, as he has to be kept well fed.

Much of the belief in the causing of disease and death by spirits is due to the idea of vengeance on the living for misfortunes that the spirits have suffered during life. The spirits of the unfortunate (*tasē, thayē, thabēt*) all cause death or epidemics. This idea has brought about a peculiar form of vengeance, inflicted by the living on the man who introduces an epidemic into a Karen village. The unlucky individual incurs a perpetual debt, payable by his descendants until the 'value' of each life lost in consequence is wiped out. Vengeance for slights and injuries inflicted on spirits is, of course, expected. Thus, fever is the natural consequence of mocking at a spirit-shrine (*natsin, nat-thitpin*).

There is a mixture of the ideas of the benevolent guardian and the malignant spirit in this connexion, no doubt due to the notion of vengeance above alluded to. This comes out clearly in the legend of Mahagiri or Māgayē Nat, one of the Thirty-seven. He was in the story a blacksmith put to a cruel death at Tagaung, the first capital of the Burmans, and he is also the house guardian of to-day (*eingsaung nat*). He causes a fatal colic, known as Tagaung colic, and recognized as such in Burmese pharmacy. Among the Kachins disease and death are caused by the action of ancestors, who have become *nats*, and pain by the bite of *nats*. In 1902 a quantity of circumstantial evidence was produced to the Land Revenue Settlement Office of Mandalay as to a number of deaths occurring in succession in consequence of cultivating certain fields of the Kannizā and Nanmadawzā *kwins* (cultivated areas), all attributed to the action of the guardian *nats*.

15. **Guardians.**—The people of Burma regard guardian spirits with mixed feelings. They look to them for support and safety in all conditions of life, and at the same time consider them to be decidedly capable of infinite mischief. They occupy a place midway between the indifferent benevolent spirit and the actively malignant spirit. The predominant feeling towards the guardians is that they have to be kept in a good temper.

Guardians are, of course, infinite in their variety, as everything connected with mankind and his environment has its guardian. The propitiatory candles offered everywhere at pagodas are in the shape of the guardian *nat* of the day on which the worshipper was born. The combination of the guardians of the birthdays of the bridal pair controls the lucky and unlucky days for marriage. All this, however, is Brāhmanic influence on a Buddhist people.

(*a*) *Human guardians.*—The Sgau and Pwo Karens say that every man has his guardian (*la*), which may wander in his sleep or be stolen by demons, and then follow sickness and death. Sickness can be removed only by a sacrifice at which every member of the family must be present, or it is unavailing. Incidentally this is a cause for reluctance to being baptized as a Christian, as refusal to join in the ceremony is looked on as committing murder; or, on the other hand, it may lead to entire families being baptized together. A convert to Christianity is treated as dead, and there is a mock burial to induce his *la* to believe that the convert really is dead, so as not to miss him at the next sacrifice for restoration to health.

(*b*) *House guardians.*—The *eingsaung nat*, or house guardian, is regarded and treated in a great variety of ways. One use made of him by the Talaings is to scare away burglars. The Burmese have largely incorporated their ideas regarding him into their acquired Buddhism, and make images of Buddha (*thayō*) out of the bones of respected relatives who have been cremated, ground to powder, and mixed with wood-oil (*thissi*). They pray to these images as the house guardians. The incorporeal house *nat* of the Burman, however, lives in the south post of the house (*thabyēteing*), and so it is adorned with leaves, and all corpses are placed beside it when laid out. Among the Taungthus the interest of the house guardian in the people is so great that he must be informed if the family is increased or decreased in size. The Karens think that the best way to propitiate the house guardian is to supply him with liquor an instance of anthropomorphism. The abiding terrors of the Wild Wa are Ariya and Liyea, his house guardians, and he propitiates them with perpetual sacrifices of considerable value whenever anything goes wrong.

(*c*) *Village and town guardians.*—The terror of the house

guardian exhibited by the Wild Wa is intensified to such an extent when he contemplates Hkum Yeng, the village guardian, that it has led to the human sacrifice and to the head-hunting for that purpose which have made him famous throughout Burma and Indo-China and many parts of China itself. Among the Burmans and the people generally the village and town *nats* (*Ywa saung, Myoma*) are regarded much in the same light as are the house *nats*.

(*d*) *Tribal and national guardians*.—Among the Chins the founders of clans (*khun*) are the guardians of all their descendants—a fact which gives a clue to the institution of tribal or State guardians generally. Sometimes the State or national guardian exists at a special locality, but has no particular ceremonial attached to him. Thus Lei, the national guardian of the Sawngtung Karens, lives on Loi Maw Hill, but is not propitiated; and Nang Nagā, the female *nat* of Yang Hpa Hin Hill at Kengtung, who is the guardian of that State, has no particular ceremonies belonging to her. This is modified usually to an annual festival, as with the Hpons, who are said to know of no other spirit than the Great Nat (Natgyī), and have the idea of the national guardian in its simplest form. Formal worship on a large scale is, however, fairly common, as with the Kachins. It is sometimes most reverential, as when the Szi Kachins worship Yunnu with bared head and crouching attitude. Wannein or Ple Nat of the Taungyos is a generic name for the guardians of groups of villages. He is worshipped at a considerable festival held annually.

(*e*) *Property guardians*.—The guardians of objects belonging to or connected with mankind assume an infinite variety of form. Examples are the spirit maidens (*nat-thamī*) who guarded the eleven royal umbrellas at the Palace of Mandalay, one being specially attached to each. Racing boats, and therefore the royal boats, are possessions of great value in Burma, and the whole world of the *nats* was called in to guard those at the Royal Palace of the late dynasty. The guardians were represented by carvings and pictures in great variety all over the boats: squirrels, tigers, fish, birds, centipedes, *nats* of Indian origin, men, centaurs (*athamōkkī*), crocodiles, parrots, *nats* of the sun and moon, and the man-lion (*manuthīhā*). The lake-dwellers of the Yawng Hwe Lake, the Inthās, have copied this idea in the worship of the *Hpaungdaw-ū*, five images of Buddha, on their ancestral barge. To this category of *nats* belong the Oktazaung, or treasure-guardians, of the Burmese, who are spirit maidens in charge of treasures buried in the earth. Sawlapaw, the late great chief of the Red Karens, had a special spirit-guarded treasury above ground (*aukhaw*); but this was due to Shan influence.

16. **Propitiation.**—(1) *Ceremonies*.—All propitiatory ceremonies among the wild tribes end in drinking and dancing, and commonly in drunken orgies. Among the Burman villagers a typical instance of the procedure at such a ceremony is that here extracted from the *Upper Burma Gazetteer*, pt. i. vol. ii. p. 30:

'The rites were performed in a stretch of thick jungle, about a quarter of a mile from the village. There were about twenty men and as many boys, but no women. Although women are most commonly the hierophants in the exorcism of *nats*, they are never present at formal *nat* feasts. The *natsin* (shrine) was a small wooden house on piles at the foot of a fine *padauk* tree, which was connected at the back of the door of the shrine by a number of plies of white thread, called the *nats'* bridge. The spirit ordinarily lived in this tree, and only came to the shrine to secure the offerings. He was a jungle spirit, a hamadryad. Their officiating wise man was an old Burman of no particular position in the village. He commenced proceedings by offering a corked bottle of *kaungyē* (rice beer) to the *seikthā* (jungle spirit) of the *padauk* tree. This was followed by another of water, and then little heaps of *lapēt* (tea salad) placed on large leaves were deposited with the same genuflexions as are customary at the pagoda. This was done by the assembled villagers, and, while it was going on, the *sayā* (wise man) sprinkled water all round the shrine, and strewed rice in handfuls about it. This rice was furnished by each household in the village. The officiating *sayā* then recited a long prayer for rain from the north and from the south (which was the main object of the ceremony), and for peace and deliverance, and for immunity from evil generally.'

A formal tug-of-war is performed by the whole village taking sides. This is a Burman ceremony, and its object is to rouse the *thein nats*, spirits of the showers, to come out of the stars, which are their houses. In the Chindwin district a bamboo basket, on which is painted a woman's face, swathed in a jacket and skirt (*tamein*), is carried on a man's shoulders, to the dancing of youths and maidens.

(2) *Offerings and sacrifices*.—The Kachins give an explanation of the objects of animal sacrifices and of the common practice of consuming the flesh of the sacrifice. They say that, when they are in trouble, their primeval mother, Chang-hko, demands the pigs and the cattle, or she will eat out their lives. So, when any one is sick, they say, 'We must eat to the *nats*.' The Kachins have, further, an illuminating custom of being able to promise the sacrifice ordered by the *tumsa* (exorcist) at some future time, if it be not available when first ordered. Here we seem to have the embryo of the idea leading to the pictures and effigies, in lieu of actual sacrifice, used by the Chinese and their followers in Indo-China.

The principle of sacrifice is to give a small portion of the animal or thing sacrificed to the *nats* and to devour the rest, or to eat up what has temporarily been deposited as an offering. Sometimes only the useless parts of the sacrifice are offered. Thus the White Karens give up small portions only, and the Kachins a portion, cut off by the village butcher (*kyang-jong*), of all animals taken in hunting, to the house guardians as '*nats'* flesh.' Among the Burmans the edible parts of large animals sacrificed are placed on the *nats'* shrine for a short time. The commoner practice, however, is to give what is useless. Burmans hang round shrines the entrails of fowls used for divination. Some Kachins give only the offal of sacrificed animals, while Red Karens deposit the head, ears, legs, and entrails, on the shrines of *nats*.

Absolute sacrifice, though uncommon on any considerable scale, is not unknown. In times of sickness, Red Karens give offerings of pigs, fowls, rice, and liquor, at the cemetery, to the evil spirit, Lu. Akhās offer a portion of all feasts to the ancestors, at the place where the last death occurred, or to the *west* of the house 'where the ancestors live,' in a pot which is afterwards buried.

On a small scale, absolute sacrifice is common enough. Burmans always pour out a libation (*yēsetkya*) at alms-givings and funerals. Marū Kachins make a libation to the *nats* before drinking any liquor. Talaings offer the first morsel of all food to the village guardian, by holding the platter in the air. At the great national pastime, boat-racing, there is always a preliminary paddle over the course by both sides to propitiate the guardian spirits of the river; 'at the stem of each boat a man crouches, holding with outstretched arm a bunch of plantains, some cooked rice, flowers, and betel' (Scott, *The Burman*, ii. 59).

The animals and food sacrificed are usually those used for food by the people: buffaloes, pigs, fowls (Kachins, Chins, Karens); pigs and fowls (Was, Shans, Burmans, White Karens); dogs (Kachins, Chins); cows and goats (Kachins, Chins); fish and eggs (most tribes). Of vegetable foods, cooked rice is the usual offering, and also the locally made liquors. Taungthūs offer annually fish (*ngāpein*), liquor, rice, and the household stew in Kasōn (April–May) to the house *nats*; and fish, rice, ginger, salt, and chillies in Nayōn (May–June) to the village *nats*.

17. **Human sacrifice.**—There can be no doubt that human sacrifice prevailed in Burma until recent days, both as a propitiatory and as a preventive action in reference to the unseen powers; and, in the case of the Wild Was, the extension of the practice even to the present time in the form of head-hunting is of the greatest interest, because that custom has there a direct ceremonial origin.

(1) *Burmans*.—When Alaunghpayā, the founder of the last or Alompra dynasty of Burma, founded Rangoon in 1755, he sacrificed a Talaing prince, whose spirit became the Sūlē Natgyī, or Guardian (*Myōsadē*), of Rangoon, still worshipped at the Sūlē Pagoda, a prominent shrine in the heart of the now great city. When his last great successor, Mindōn Min, father of Thībaw who was deposed in 1885, founded Mandalay in 1857, he caused a pregnant woman to be slain at night on the advice of a *pōnnā* (Hindu astrologer), in order that her spirit might become the guardian *nat* of the new city. Offerings of fruit and food were openly made by the king in the palace to the spirit of the dead woman, which was supposed to have taken the

shape of a snake. It should be borne in mind that the word 'Alaunghpayā' as a name means 'a coming Buddha,' and that Mindōn Min was a strict Buddhist in ordinary life. In the Anglo-Burman war of 1826, the commander of the Burmese army, the Pukhan Wungyī, proposed to offer the European prisoners at Ava as a sacrifice to the *nats*, and sent them to the Aungbinlē Lake, near Mandalay, for the purpose.

In addition to this direct evidence, there is that afforded by the stone figures, grasping clubs, as guardians (*sade*), at the corners of the city walls at Mandalay, seated above jars filled with oil of various kinds. Circumstantial tales exist of human sacrifices on the setting up of such figures both at Amarapura (1782) and at Mandalay.

The object of such human sacrifices, also attached to the foundation of the main city gates, is that the haunting ghost (*natsein*) of the deceased shall hover about the place, and attack all strangers who come with evil intentions. The frequent change of capital which has occurred throughout Burmese history is said by the Burmans to have been due to the loss of efficiency on the part of the guardians, as shown by the disappearance of the oil in the jars under their images, and other portents.

(2) *Shans.*—About a hundred years ago the boundary at Kenglaw between the Shan States of Kengtung and Kenghung, now the British and Chinese boundary, was fixed by burying two men alive, one facing north and the other south. In British times two images of Buddha were substituted, back to back, at the same place for the same purpose.

(3) *White Karens and Danaws.*—White (Mepū) Karens have abandoned slavery, but, while it existed, slaves were buried alive with their masters. A small hole was left through which they could breathe, and food was supplied to them for seven days. If they could then rise unaided from their graves, they became free. The same thing is said of the Danaws.

(4) *Wild Was: head-hunting.*—The Wild Was expose human heads for the general propitiation of guardian spirits, the custom being one of the most instructive among those to be observed in Burma, as these people have to hunt annually for the heads they thus set up. The Wild Was' own description of the origin of their head-hunting is thus given in the *Asiatic Quarterly Review*, Jan. 1896:

'Ya Htawm and Ya Htai are the father and mother spirits of the Was, and of all their spirits alone were genial and benignant. The most seemly offering to them was a snow-white grinning skull. The ordinary sacrifices on special occasions were, however, to be buffaloes, bullocks, pigs, and fowls, with plentiful libations of rice spirit. The special occasions were marriage, the commencement of a war, death, and the putting up of a human skull. In addition to these meat offerings, a human skull was always desirable under exceptional circumstances, or for special objects. Thus, when a new village was founded, a skull was an imperative necessity. If there were a drought which threatened a failure of the crops, no means would be so successful in bringing rain as the dedication of a skull. If disease swept away many victims, a skull alone would stay the pestilence. But the good parental ogres expressly said it was not necessary that the villagers should slay a man in order to get his head. They might get the skull by barter.'

The regulated posting up of men's heads ensures plenty of dogs (to eat), corn, and liquor. The Wa regards his skulls as a protection against the spirits of evil. Without a skull his harvest might fail, his kine might die, the ancestral spirits might be enraged, or malignant spirits might gain entrance to the village and kill the inhabitants or drink all the liquor.

The skulls are placed on posts (*tak-keng*) or in an avenue approaching the village, usually under over-arching trees or dense undergrowth, after the fashion of the Kachin avenue approach, which consists of posts ornamented with symbols and imitation weapons to keep off evil spirits.

A Wa never misses an opportunity of taking a head, because the ghost of the dead man hangs about his skull and resents the approach of other spirits. For this reason the skulls of strangers are the most valuable, for such a ghost does not know his way about, and cannot possibly wander from his earthly remains. An unprotected stranger is therefore pretty sure to lose his head if he wanders among the Wild Was, no matter what the time of the year may be. The more eminent he is, the more sure he is to die.

There is a regular season for head-hunting—in March and April—to protect the crops, and at least one new head is required annually. The head-hunting party is usually about a dozen strong. Villages are never attacked, nor does the party leave its own country. They sometimes meet and attack each other for heads, but this does not provoke revenge. There is a tariff for heads when bought, according to ease in securing them. Lem are lowest; Lahū much more expensive; Chinese very expensive; ordinary Shan are rare; Burmese never secured.

When heads are brought home there is a general dance ending in drunken orgies. They are cleaned before being put up. No offerings are ever made in the avenue of skulls, and sacrifices are all made at the spirit-house in the village, while the bones, skins, horns, hoofs, and feathers are deposited there or in individual houses, never in the avenue.

One proof of the sacrificial nature of the human head-hunting lies in the treatment of buffalo heads. Each house stands apart on its own plot of uneven ground, and is usually enclosed within a slight fence. Inside this is the record of the number of buffaloes the owner has sacrificed to the spirits. For each beast he puts up a forked stick, in shape like the letter Y, and there are usually rows of these from three or four to hundreds. The heads thus represented are piled up in a heap at the end of the house, as a guarantee of good faith in the matter of the sticks.

As a consequence of this head-hunting habit, Wa villages are cleverly contrived savage fortresses; but, except in this matter, the Wild Was are harmless, unenterprising agriculturists, well behaved and industrious.

The breaking down of the custom from actual head-hunting to mere symbolism is seen from the Chinese view of the Was. They reckon the Wa's civilization by his method of head-collecting. The most savage, the Wild Was proper, are those who take any heads, next those who take heads in fights only, next those who merely buy them, and the most civilized are those who substitute heads of bears, panthers, and other wild beasts for human heads. There are, however, real Wild Was who ring all these changes round the head-hunting centre, which is about the Nawng Hkeo Lake.

18. Protective action.—Apart from the employment of such agents as mediums, exorcists, and the like, with their arts, such as necromancy, magic, and so on, the peoples of Burma take protective action on their own account against the unseen powers of evil. This is roughly a residuum of the various kinds of knowledge that their 'wise men' have taught them. No part of the population is free from the resultant practices. Buddhism is quite powerless not only to restrain these practices, but even to help the people to escape from them. Orthodox Buddhist monks will not, in the more civilized parts and under the ordinary conditions of life, join in the more openly Animistic protective ceremonies, yet they will be present on sufficiently important occasions, and take, as it were, a scriptural share in them. The use of the monk at deathbeds, with which he is not professionally concerned, and which he is not always asked to attend, is that the good influence of his pious presence may keep away evil spirits. His pres-

ence is, in fact, an additional protective charm against the *nats*.

(1) *General protection*.—In all Burmese houses there is kept a pot of charmed water (*nyaunggyē-ō*), over which an astrologer has uttered spells. This water is sprinkled about the house, as a protection against evil spirits generally. Another specific for protection against troublesome familiar spirits is a change of name practised by Burmans and Shans. Burmans when on a journey keep away evil spirits by tying a bunch of plantains and a twig of the *thabyè* tree to a cart or boat. An offering to the nearest shrine (*natsin*) each time a fishing boat is launched will prevent the *nats* from interfering with a haul. Hunters tie back the twigs of any large tree they meet in their way, to scare away the forest demons (*tawsaung nat*). At all boat-races the main object of the preliminary paddle over the course with offerings is to prevent the *nats* who inhabit that particular reach of the river from interfering with the race.

(2) *Specific action*.—(*a*) *Protection against the spirits of the recently deceased*.—The Kachins and other tribes put up entanglements to prevent the dead from entering their villages, and supply them with models of whatever they may be supposed to want. The protective nature of the death ceremonies comes out clearly in those of the Taungthūs, who tie the thumbs and great toes together, and release the spirit by measuring the corpse with twisted cotton, setting food before it, taking it to the cemetery, pouring water over the face as an emblem of the division between the quick and the dead 'as a stream divides countries,' and setting a torch in front of the biers of persons dying on holidays (when domestic ceremonies are impossible) 'to show the way.' Among the Padaungs the bodies of women who die in childbirth are first beaten with sticks to ascertain death, and are then cut open, so that the infant may be buried separately. The protection here is found in the idea that the woman's spirit will hover round the infant and leave the village alone.

(*b*) *Protection against epidemics*.—The avowed attitude of the Karens towards ceremonials in times of distress explains them. They say that at such times it is well to make peace with all religions. This feeling comes out in all popular efforts in Burma to scare away the spirits that cause epidemics. Burmans paint the figure of an ogre (*balū*) on a pot, which is then broken. On three nights the whole village turns out to frighten away the spirits of disease by noise. If that fails, the Buddhist monks are called in to preach away the pestilence. If that fails, the village and the sick are abandoned. Before the people return, the monks read 'the Law' (*Dammathat*) through the streets, the *nat* shrine is repaired, and new offerings are abundantly supplied. Among the Talaings, when the Buddhist ceremonial has failed, the Village Saving Ceremony (*yuā-hkyā*) is resorted to. This is pure devil-dancing on the part of the people, who impersonate evil spirits (*tasē*), ogres (*balū*), *nats*, witches, dogs, and pigs. The object is to get an answer from the spirits that the sick will recover. There is always a favourable answer, whereupon there is a wild rush for the *leippyās* (errant butterfly souls of the sick). They are captured in loincloths (*pasō*) and shaken over the head of the sick. Burmans drive away the cholera *nat* by beating the roof and making as much noise as possible (*thayētōp*), after a (Buddhist) ceremony of consecrating water-vessels (*payēt-ō*), which contain, *inter alia*, sticks with yellow strings wound round them. These strings are afterwards worn as prophylactic bracelets, and are also hung round the eaves of the houses in bags. The noise-making in all these ceremonies is largely copied from the Chinese.

(*c*) *Protection of houses and sacred buildings*.—The Talaings suspend a coco-nut wrapped in yellow or red cloth in the south-east angle-post of a house, to invoke the protection of the house guardian (*eingsaung nat*), Min Māgayē, one of the Thirty-seven. The Burmans place a piece of white cloth, with fragrant *thanākā* ointment, on the tops of all the posts, or on one in three, to protect all wooden buildings, houses, wayside rest-houses (*zayāts*), and bridges from the ill-luck brought by the evil spirits inhabiting the knots in the wood of the posts. The object of striking the great bells on Buddhist pagoda platforms is spirit-scaring. During the foundation ceremony of a village pagoda built by a Shan, a round earthen vase, containing gold, silver, and precious stones, besides rice and sweetmeats, was closed with wax, in which a lighted taper was stuck, and deposited by the builder in the south-eastern hole made for the foundation. The builder also repeated a long prayer while earth was being filled into the hole and sprinkled with water. All this was to scare away the great serpent in whose direction the south-eastern corner of the foundation pointed (Anderson, *Mandalay to Momein*, 52).

(3) *Transfer of evil spirits: scape-goats*.—The ideas of inducing evil spirits to betake themselves elsewhere and of making scape-goats in some form or other are universal in Burma. Red Karens have a scape-goat in the shape of an image of a horse or elephant carved on the top of a post set up at the harvest festival (*edu*), and surrounded by offerings of rice spirit, fruit, and flowers. The animal is supposed to carry off all evil spirits to a safe distance. Sgau and Pwo Karens never forgive injuries, real or fancied, of village to village. When it is necessary, however, to combine in times of common danger, they create a scape-goat in the shape of a man chosen 'to confess the sins of the nation.' He runs off, and is captured and made to repeat each injury in turn, which is settled then and there. Burmans, on occasions of sickness, set up small figures of clay outside the house, and draw pictures of peacocks and hares (representing the spirits of the sun and moon respectively) on small fans kept in the house. Small coffins, with miniature effigie of the sick persons (*ayōt*) inside them, are buried to the east or the west of the house. This ceremony (*payātayā*) is a protection against further sickness, and the image and pictures are scape-goats for carrying away the spirits of disease.

19. **Divination**.—(1) *General methods*.—In Burma, divination is left to the people by the monks, and the *Deittōn* (*Ditthavana*, The Collection of False Doctrines), the great book used by the Bēdinsayās (imported Indian astrologers), is not admitted into the monasteries. The governing principle is, as elsewhere, augury from uncontrollable chance. The Kachins heat bamboos (*saman*) till they split, and the length of the resulting fibres settles the augury. So do the knots in torn leaves (*shippā wot*)—a system of augury copied by the Hpons under another name. Szi Kachins count the odd sticks in each group placed haphazard between the fingers of one hand, out of thirty-three selected bamboos. Chins go by the direction in which the blood of sacrifices flows. Burmans boil eggs hard, and judge by the whiteness: the whiter the egg, the more favourable the omen.

The most important form of divination in Burma is that of the Karens, from the bones of fowls. This has spread far and wide, and decides everything in the Red Karen's life, even the succession to the chiefship. Any one can divine. The thigh and wing bones are scraped till holes appear, and that bone is selected in which the holes are even. Bits of bamboo are placed in the holes, and the augury is taken from the slant of the bamboos: outwards, for; inwards, against. Among the Kachins the bones are kept until they are grimed with the smoke of years, as they have then acquired an established reputation. War chiefs keep such old bones in carved bamboo phials, and usually store them in the roof.

Kachins use also the brains, sinews, and entrails of fowls, and the entrails of cattle and pigs. Divining from the entrails of fowls is common among the Burmans. The birds are cut open from the tail, and the entrails are extracted and turned larger side uppermost. The longer and thicker they are, and the larger the stomach, the more favourable the omen. The White Karens extend the idea to the livers of fowls and pigs: smooth, straight, or pale wins; malformed or dark loses. This augury is so trusted that it will serve to break off a love match.

Spirit action is also brought into play for the purposes of divination. Among the Taungthūs, if the offerings at the annual festival to the village guardian are insufficient for the appetites of those present, there will be a bad harvest. The heaviness of a good crop depends on the surplus after all have finished. At funerals, Kachins place heaps of rice-flour at or near graves. If they are found to have been disturbed in the morning, there will be another death in the family. One kind of augury the Burmese people have in common with most of the world. Sgau and Pwo Karens place a clod of earth under the pillow, so that dreams may point out the proper site for hill-side cultivation (*taungyā*, forest-burning).

The Chins employ an obscure method of divination from the contents of eggs blown through a hole at each end. After the operation the shells are placed on sticks with some cock's feathers.

(2) *Ordeals and oaths*.—Ordeals and oaths are hardly separated in the native mind in Burma, and each is in reality a form of divination. Oaths of the native sort are in consequence much dreaded, whereas the form adopted by the English (*chanzā*) from the Buddhists, with its Indian spiritual horrors, has not now any supernaturally terrifying effect.

(*a*) *Ordeals*.—Trial by ordeal (*kabbā*) was constantly in requisition in the native courts, and the treatment of witches was horrible. There were four regular kinds of judicial ordeal.

(1) Candle burning (*mi-htun*). Candles are placed on an altar, and the party loses whose candle goes out first. (2) Thrusting the finger into molten lead (*hke-htauk*). The fore-finger is protected except at the tip; the least hurt, as decided by the flow of serum on pricking, wins. (3) Water ordeals (*yela*). Whichever party can stay under in deep water longest wins. (4) Chewing or swallowing rice (*sanwa*). The guilty cannot swallow, probably through anxiety affecting the nerves. This is also a common Indian idea.

Kachins deposit stakes on each side. Rice is then boiled on a leaf; the best boiled rice wins. Among chiefs the accused puts his hand into water boiled in a bamboo ceremonially selected by an exorcist (*tumsa*). If the skin comes off, he loses.

(*b*) *Oaths.*—Among Lai Chins, the oaths most feared are drinking water which has been poured over a tiger's skull, and drinking blood mixed with liquor. Among the Northern Chins, contracting chiefs pour liquor over a cow and shoot or stab the animal, cut off the tail, and smear their faces, to an imprecatory chant. A stone is set up to mark the spot. The oath most feared by the people is to eat earth. Sgau and Pwo Karens lay hands on the sacrifice (buffalo) in settlement of claims, and divide it into portions, each party eating half his portion and burying the rest.

(*c*) *Oaths of allegiance.*—Among Sgau and Pwo Karens, individuals, villages, and clans are bound together by drinking spirits in which the blood of the parties has been mixed. Blood-brotherhood of this nature is also known among the Burmans. Another method of swearing allegiance is to divide an ox exactly in two, and every member of each contracting party eats a part of the half belonging to his party. Each side also takes one horn so marked that they are recognized as being a pair. Production of the horn compels either party to aid the other in any circumstances. See BROTHERHOOD (artif.) i. 3.

(3) *Astrology.*—The Burman is so fettered by his horoscope (*sadā*) and the lucky and unlucky days for him recorded therein, which are taught him in rhymes (*lingā*) from childhood, that the character has been given him by strangers of alternate idleness and energy. But both are enforced by the numerous days and seasons when he may not work without disaster to himself. Unlucky days (*pyatthādanē*) cause him so much fear that he will resort to all sorts of excuses to avoid business on them. Similarly, on lucky days (*yētyāza*) he will work beyond his strength, because he is assured of success. These facts are worthy of careful attention, as it is so easy for European observers to mistake Asiatics: *e.g.*, the character of laziness given to the Nicobarese is greatly due to their habit of holding their very frequent feasts and necromantic ceremonies all through the night.

Burmese astrology, and the superstitions on which it is based, are *primâ facie* Indian. Many of the terms used are certainly Indian. Nevertheless, they are only partially Indian, and Chinese influence has had much to do with the development of Burmese astrology as we now find it. The astrologers of the Burmese Court were all *pōnnās* (supposed Brāhmans from Manipur), whose chief study was the Sāmaveda, and whose books were the Tantra, Jyoti, and Kāma Śāstras of Bengal. Their title was Bēdinsayā, 'learned in the Vedangas.' Their astronomy is purely Hindu. They worked the Royal clepsydra, calculated the incidence of the year and the intercalary months, drew up the horoscopes, calculated the lucky days, and told fortunes. But they are dying out, and at no time did they have much influence on the astrology of the country side, which followed the *Hpēwān*—the Shan system of the Sixty-Year Cycle, so well known in China, Siam, Cambodia, Annam, etc.—for reckoning the calendar. Shan soothsayers are considered the most learned, and all their prognostications are worked out from the *Hpēwān*. Almost all the Burmese superstitions about the path of the dragon (*nagā-hlē*), which regulates the lucky days, and the lucky rhymes (*mingalā lingā*) that control marriages, are taken direct from this table, which in its main lines is exactly that of Taoist fortune-tellers in China.

The *Hpēwān* is used to work out horoscopes, settle marriages (by the theory of hostile pairs taught in *yan-pet-lingā*, rhymes known to every Burmese girl), partnerships, and undertakings generally; and since, in Burma, the Shans have partially adopted the Buddhist calendar, such confusion is caused in the almanac that much practice and experience are required to work it. Hence partly its charm and power. Its influence is proved by the fact that the Buddhist monks nowadays issue annually an almanac (*mahā-thingān*), which shows many traces of the *Hpēwān*.

Based on this difficult method of calculation, a very complicated astrological system has been set up, which has, however, a strong admixture of Buddhist astrological notions in it. The day of birth is one governing point, and on horoscopes the days of the week are represented by numbers and symbols of 'the presiding animal of the day.' Another governing point is the position of the dragon (*topai, nagā*), as the great thing to aim at is to avoid facing its mouth in any transactions, especially cattle-buying. This is ascertained by the terminal syllables of the names of the days. The *Hpēwān* is also used to ascertain, by a simple calculation, which looks like a real puzzle to the uninitiated, what offerings to the *nats* are suitable on any given day.

Lucky and unlucky days are fixed according to the Shan and not the Burmese calendar; and, as they do not correspond, the Burman cannot calculate them for himself, and is thus forced to go to the astrologer. There is a long list of lucky days for building operations, picked, in eclectic fashion, out of the imported Buddhist and indigenous animals and *nats*; the unlucky days depend on the final syllable of the names. Lastly, a long series of days are individually unlucky for a very great variety of enterprises, practically for all the business of native life. The lucky days in the month are in a considerable minority.

There is a curious superstition as to bleeding, which has an astrological basis. The centre of vigour in the human body is believed to shift downwards during the week: on Sunday it is in the head, Monday in the forehead, Tuesday in the shoulders, Wednesday in the mouth, chin, and cheeks, Thursday in the waist and hands, Friday in the breast and legs, Saturday in the abdomen and toes. Bleeding from any of these parts on their particular day is considered very dangerous and sinister (*Upper Burma Gazetteer*, pt. i. vol. ii. p. 63).

20. Necromancy.—(1) *Nature of necromancy in Burma.*—'The object of the Burmans' necromancy is to acquire influence over the spirits and make them do their bidding. Witches and wizards are supposed to be materialized spirits or beings who can project their bodies into space and regulate their movements' (Taw Sein Ko, *Upper Burma Gazetteer*, pt. i. vol. ii. p. 73). Such beings are usually women. Although the familiar spirits and spells of the Burman necromancer can be shown to be chiefly Indian in origin, his incantations are composed in Sanskrit, Pāli, Burmese, Talaing, and Shan, or in an unintelligible jargon made up of one or more of these languages, thus showing both their eclectic and their indigenous nature. They are used in conjunction with something to be worn or kept with a view to protection from disease or injury of a pronounced kind—gunshot wounds, famine, plague, epidemics, hydrophobia, enemies in general, and the like.

All necromancers (*wēzā*, 'wise men') are mixed up in the Burman's mind, and are divided into good (mediums and exorcists) and bad (wizards and witches), and each of the two categories is divided into four classes, according to the element with which they work—mercury (*pyadā*), iron (*than*), medicine (*se*), magic squares (*in*). All this is Indian.

Medicine, which among the Burmans is Indian in origin, is not clear of necromancy. The doctor

(*sethamā*) is a mere quack, with an empirical knowledge of leaves, barks, flowers, seeds, roots, and a few minerals. The *dātsayā* is a dietist, and the *beindawsayā* is a druggist, but a doctor seldom combines both practices, and in either case is largely necromantic, professing to cure the witch-caused diseases (*son*) commonly believed in. The position of the moon and the stars has more to do with the cure than the medicine, and the horoscope than the diet. Cases of death or failure to cure are attributed to error in the astrological or horoscopic information supplied. In Lower Burma there is supposed to be a wizards' town at Kalē Thaungtot on the Chindwin River, with a wizard king, who can undo the effects of bewitchment in those who go on a pilgrimage there.

The methods of wild necromancy appear in the practice of the Kachins. Somebody wants a powerful man to be made ill. The *tumsa* (exorcist, wizard) recites the special charm necessary to cause the particular sickness desired, and meanwhile his client plants a few stalks of long grass by the side of the road leading towards the victim's house. Then either a dog or a pig is killed, and the body is wrapped in grass and placed by the road and left there, while spears are cast and shots fired in the same direction. The ceremony closes by the *tumsa* and each of those present taking up four or five stalks of grass and casting them similarly towards the person who is to be charmed (*kumpachin khyemnai*) (E. C. S. George, *Upper Burma Gazetteer*, pt. i. vol. ii. p. 427).

(2) *Alchemy and palmistry.*—The Burmese are inveterate alchemists and palmists, and their practice is a mixture of all the occult superstitions known to the people, from Indian alchemy and palmistry to Karen augury from chicken bones.

(3) *Exorcism.*—Evil spirits and malignant ghosts (*tasē, hminzā, thayē, thabēt*) are exorcized by the general public by making a loud jarring noise, by beating anything that comes in their way—walls and doors of houses, kettles, metal trays, cymbals, and so on. In cases of spirit-caused sickness the *nat* is sometimes simply scared away by threats; but it is usual to apply drastic measures, such as severely beating the patient and rubbing pungent substances into the eyes. The argument is that the ill-treatment falls on the spirit, and that, therefore, when it has departed, the patient will be free from any after effects. The methods of the exorcists are usually as eclectic as possible; but among the Chins every spirit has its own special sacrifice, known only to the wise men and women, and will accept no other.

Every professional curer of disease—physician, priest, medium, wise man, necromancer, or wizard—is an exorcist, following practices that are hardly to be differentiated one from the other.

(*a*) *Priests.*—The idea of a priesthood is foreign to the untutored Indo-Chinese mind, and a recognized priestly class does not exist among the uncultivated tribes in Burma, or indeed among the more civilized population. The persons who profess to deal with supernatural matters follow in ordinary life occupations carrying no particular respect, often the reverse. The Burman, Talaing, or Shan *pōngyi*, or Buddhist monk, is not technically a minister of religion, and the only approach to priesthood among the Kachins is the *jaiwa*, who is an exorcist (*tumsa*) practising his art for powerful chiefs (*duwas*). Some tribes, notably the Kachins, have an incipient priesthood, however, in the persons of their chiefs, who alone can perform certain tribal and national sacrifices; and the idea of personal sanctity in its very infancy is to be seen in the triennial feast of the White Karens, at which men only may be present. The cases of the *tafuye*, high priest chief of the Lahūs, and of the *damadā sawbwā*, the hereditary priest of the *nats* among the Palaungs, are not to the point. The former is the result of a jumble of Chinese and Indo-Chinese ideas on the part of a tribe of Tibeto-Burman origin with strong Chinese proclivities, and the latter of a Mon-Annam tribe settled in the Shan country, of some education derived from Burmese sources. This last hereditary priesthood is an inaccurate adaptation of the Burmese *thāthanābaing*, or 'head of religion,' whose title is usually with equal incorrectness translated by the English term 'archbishop,' as he is merely the chief of the heads of the Monastic Order, *primus inter pares.* Ordinarily the priestly personage is not to be distinguished from the necromancer or exorcist, and acquires his qualifications in the same way.

(*b*) *Wise men and women.*—The Burman wise men and women and diviners generally (*natsaw, tumsa, mitwe*) are merely ordinary villagers of no social standing, who act in a *quasi*-priestly capacity as occasion demands. The chief professional exorcist (of Indian origin) is the wise-man physician who 'works in iron' (*than wezā*), and is a vendor of charms against injury. The female medium is known as the *nat*'s wife (*natkadaw*), and retains her powers only so long as the *nat* possesses her and keeps her in an hysterical condition. This condition is recognized as necessary, and a formal marriage with the *nat* is celebrated. At the late Royal Court, under Indian influence, mediums and professional exorcists, both male (*natsayā, natōk, natsaw, natthungē*) and female (*natkadaw, natmeimmā*), were employed to chant and pray in the proper form at the State festivals.

(*c*) *Qualifications.*—The qualifications of an exorcist or wise man commence with none at all, as in the case of the Wild Was, who have no priests or mediums, and among whom any old man can conduct the invocations. The Red Karens require very slight qualifications, and the diviners are usually selected old men, who carry out the national chicken-bone divination, and have charge of the village *nat*-shrine. But the Kachin exorcist (*tumsa*) succeeds to the office by natural selection after a voluntary apprenticeship, and the Kachin diviner (*mitwe*), who is a medium entirely under spirit possession, divining while in a state of frenzy, has to undergo a severe apprenticeship and ordeal to prove that he has communications with the spirit world.

Among the civilized Burmans, the qualifications of the exorcists (*hmawsayā*) are much more sophisticated. They drink water in which ashes of scrolls containing cabalistic squares and mystic figures have been mixed, or take special medicines, or are tatued with figures of *nats*, magic squares, and incantations. Some of these exorcists maintain their reputation by conjuring tricks (*hkontelet pwe*) which are regarded as miracles.

(*d*) *Methods.*—The ordinary use of an exorcist or medium is to restore health, and the methods usually employed are magic and dancing. In the Chindwin District, Aung Naing Nat causes cattle disease, and he is exorcized by placing a betel box and a pipe in a bag hung from a bamboo pole, and by dancing round the diseased animal, which is tied to a post. Some exorcists have a divining rod (*ywātān*), with which they thrash the possessed to drive out the witch in possession. The true dancing mediums are generally women (*natwun*), who limit their operations, as a rule, to hysterical chanting and whirling dances, though they occasionally exorcize as well. Such women wear a distinctive garment in the shape of a red cloth wrapped round the head. Among the Talaings the dancing medium is of importance, and is employed at the triennial national feast to the village guardians, to dance away sickness in general. A costume suited to the particular spirit to be addressed or invoked is customary among Burmans, Kachins, and others—a custom that is specially noticeable in the festivals in honour of the Thirty-seven Nats, when the dress of the medium is an essential part of the ceremony.

(*e*) *Ceremonies.*—A typical instance of a Burman exorcizing ceremony, applicable also to the Kachins, to drive out sickness is the following: 'A bamboo altar is constructed in the house, and various offerings (boiled fowls, pork, plantains, coco-nuts, rice, etc.) are placed on it for the *nat.* The exorcist (*natsayā*) then stands a bright copper or brass plate on end near the altar, and begins to chant, at the same time watching for the shadow of the *nat* on the polished copper. When this appears, the officiant begins to dance, and gradually works herself into a state of ecstasy. The state of tension produced frequently causes the patient to do the same thing, with obvious results one way or the other, especially if, as not unseldom happens, this invocation of the possessing spirit is continued for two or three days' (*Upper Burma Gazetteer*, pt. i. vol. ii. p. 29).

Sick children are afflicted by Chaungzōn Nat, the Spirit of the Junction of the Waters. Little boats, in which are placed an egg, some of the child's hair, and some sweetmeats, are made and consigned, by way of providing a scape-goat, to the Irrawaddy after such a ceremony as that just described.

(*f*) *Spirit possession.*—The idea of spirit possession in other creatures than mediums has not been much developed in Burma; but Burmans, possibly under Indian influence, believe that evil spirits and malignant ghosts enter into alligators and tigers and cause them to destroy human life.

(4) *Magic.*—The object of Burmese magic (*pyinsalēt*) is to secure hallucination in respect of the five senses, and to confer temporary invulnerability. This is achieved by potent mixtures, such as the following: equal parts of the livers of a human being, monkey, black dog, goat, cobra, and owl, and a whole lizard, pounded from midnight till dawn, and kept in a gold or silver box, and rubbed on various parts of the body. This will secure second sight, invisibility, death of an enemy, and a good many other objects of desire.

(*a*) *Indian influence.*—Certain specific kinds of magic have no doubt come from India—which accounts for the otherwise

puzzling fact that Buddhist monks (*pōngyis*) themselves are much addicted to it. That they have drawn on native Animistic sources to enlarge their knowledge is but natural. The name, story, and exorcism of Pōnnakā Nat are all from the West. He does mischief through an invisible agency in three ways: throwing stones at a house, beating people with a stick, and burning houses or villages. Invisible stone-throwing on the roofs of houses, attributed to *nats*, is a common grievance in Burma.

(*b*) *Wild tribes.*—Among the wilder tribes, magic takes a simpler and more directly unsophisticated form. The Sgau and the Pwo Karens, when embarking on an expedition, kill a hog or a fowl, and roll up in a leaf, with some salt, a portion of the heart, liver, and entrails. This ties up the heads of the enemy.

(*c*) *Articles subjected to magic.*—(i.) *Boats.* The Great Nat (Buddhist in origin) of the Palaungs visited Loi Seng Hill in Tawngpeng in a magic barge (*hpaung setkyā*). Inthās, who are lake-dwellers on the Yawng Hwe Lake, worship the magic boat (*hpaung-daw*) in which their original ancestor came (probably of Burmese origin).—(ii.) *Stones.* At Nyaung-ū there is a twisted stone, in which dwells Ape Shwe Myosin, a spirit. If the sick can lift it, they will recover; if not, they will die. On Mandalay Hill, before a shrine, there is a flat oval stone. If the stone is heavy to lift, it is a bad sign for a journey.—(iii.) *Charms.* There are numerous charms for invulnerability and security from violence, which consist of internal medicine, bathing in medicated water, carrying balls of mercury, iron, or orpiment, and amulets and talismans about the body, especially in the head-dress (*gaungbaung*), or wearing small silver charms inserted under the skin, which is tatued with figures and cabalistic squares. The main charms for invulnerability are Indian, and are connected with the legend of Bawithādā, the miraculous leaper, which is but the Burmese pronunciation of an uncorrupted Pāli form.

(5) *Evil eye.*—Except as the result of Hindu influence, the idea of the evil eye (*lusōnkyā*) has never developed in Burma, though it exists; and among the Kachins some people who have two souls (*numla*), one of which possesses the evil eye, are looked upon as dangerous, and are murdered.

(6) *Tatuing.*—Every self-respecting Burman is extensively tatued from the waist to the knee. The practice is largely connected with magic.

(*a*) *Male tatuing.*—Among Burmans the tatuing is almost always for reasons of magic. Exorcists (*hmawsayā*) attain their powers by being tatued with figures of *nats*, incantations, and cabalistic squares (*in*). With these also every Burman is tatued. Being tatued with figures of *nats* in red, by means of a charmed mixture of vermilion and human fat, gives protection against wounds inflicted by sword, gun, or cudgel, and confers reckless courage. Figures of *nats* and cabalistic squares confer invulnerability. Conventional figures of tigers on the legs confer swiftness of foot, and are sought after by thieves and highwaymen. The sources of this kind of magic are eclectic, and even Buddhist inscriptions in Pāli are brought into requisition.

Shan military officers of rank were tatued in order to acquire the powers of deceased heroes, and the ceremony was accompanied with ceremonial cannibalism. Red Karens are tatued in red with the tribal emblem of the rising sun on the small of the back, as a magic symbol. Sawngtung Karens had two black squares beneath the chin for the same reason. Was are occasionally tatued on the arms and breast with charms.

The tatuing of the Burman from waist to knee is nowadays a mere custom for 'beauty,' but was beyond doubt originally a protective magical charm, as is shown by the figures ordinarily selected, and by the incantations repeated during the operation. Shan tatuing of the same kind is more extensive, down the calves and up the back and chest, and is still more avowedly of a necromantic nature, as are all the additional figures about the bodies of some Burmans. Tatuing with the figure of Bawdithādā, the miraculous leaper, as a symbol of fighting capacity, and carried out with occult ceremonies, is a notable instance of necromancy adopted originally from Indian sources.

The Burman has an ineradicable belief in the efficacy of tatued charms. In 1881 a youth in Rangoon was tatued with a *byeing* (paddy-bird) as a protection from drowning, and was thrown with his consent into the Rangoon River and was drowned. The tatuers (*sayā*) were convicted of manslaughter; but all the Burmans thought it a miscarriage of justice, as the drowning was due in their minds to some mistake in the ceremony (Scott, *The Burman*, i. 56).

(*b*) *Female tatuing.*—Among Burmans, female tatuing is rare and disreputable, and is resorted to as a love-charm—a small triangle of three red dots.

Lai Chin women are tatued in black all over the face and breast, originally probably as a means of identification if captured by outsiders. A similar custom is said to exist in the North at the sources of the Nam Ma, the extreme north-east of the Shan States. Maru Kachin women used to be tatued in a series of rings from the foot to the knee, perhaps for identification.

(*c*) *Tatuing as a badge.*—Burman soldiers were tatued with the animal badge of their regiments on the small of the back—dragon, lion, rat, etc.—no doubt as a charm.

(*d*) *Tatuing as a punishment.*—Burman criminals were tatued with a circle on the cheek (*pagwet*), or with descriptive devices on the chest, to show that they were murderers (*luthat*), thieves (*thu-hko*), or dacoits (*damya*, highwaymen). Sometimes the offence was tatued on them in words.

(7) *Witchcraft.*—Brāhmanic influence, through Buddhism, has had a distinct effect on the modern Burmese practice of witchcraft, which is recognized in the Burmese 'Law-Books,' wherein are instructions as to the finding of witches and as to the manner of punishing them. The Talaings consider that witches and wizards are the result of the 'devil-dances' instituted to drive away epidemics.

Witches (*sōnmā*) and wizards (*sōn*) can harm others by occult influence, and by sending out their own spirits (*leippyā*) to possess them. Proofs of their action in case of death used to be found by cremating the body of the person affected, and discovering pieces of hide or beef (*apin*) in the fire; in the case of the living, similar information is sought by placing food in a platter outside the house at nightfall, for the dogs to eat. If in the morning grass was found in the platter, the victim was under a witch's displeasure; if stones, he would recover; if earth, he would certainly die.

If a witch confessed on accusation, she was merely banished. If she would not confess, she had to go through a cruel and disgusting ordeal by water, when, if she floated, she was judged to be guilty, because she must have floated on account of the charmed empty gourd or bladder in her stomach. If she sank, she was not guilty, and had to be heavily compensated. She was not allowed to drown.

Among the Kachins, some exorcists (*tumsa*) are also wizards, and can cause sickness by bewitching their victims (*marong matsai*). The 'wild' attitude generally towards witchcraft and its professors is thus well described by George in the *Upper Burma Gazetteer*, pt. i. vol. i. p. 427, when summarizing a case between Kachins before himself:

> 'C, the brother of A and B, happened to die of fever, and before dying declared that D had bewitched him. Within a fortnight A and B collected a following, attacked D's house, shot him dead, and, capturing the whole of the household and relations, some thirteen in all, sold them into slavery. Even on trial A and B would not admit the possibility of C having made a mistake, and were scandalized that the British Government should interfere on the behalf of the wizard.'

21. Cannibalism.—Cannibalism is persistently, but quite doubtfully, ascribed to the Wild Was, Kachins, and even Shans. It probably always existed in a ceremonial form, to obtain magical powers, among Shan military officers of distinction, while undergoing a particular form of tatuing. In 1888 the captured rebel chief Twet Ngalū was shot and buried by his guard. He had been a monk, had a great name as a sorcerer, and was elaborately tatued. The nearest Shan *sawbwa* (chief) dug up the corpse, and boiled down the head and other portions of the body into a potent decoction, and was with difficulty dissuaded from sending a small phial of this for the use of the British Chief Commissioner (*Upper Burma Gazetteer*, pt. i. vol. ii. p. 37). The existing head-hunting of the Wild Was is a relic of cannibalism, as is admitted by themselves, and it has been attributed to them as long as there have been Europeans in the East (see Camoens, *Lusiadas*, cant. x. 86).

22. Domestic customs.—(1) *Pregnancy.*—Customs connected with pregnancy are not common. Kachin women must not eat honey or porcupine flesh at that time, as they cause miscarriage. Among Shans the husband should not drive pigs, carry the dead, dig or fill in holes, or mock at others.

(2) *Birth.*—Kachin customs explain the reason for the observances at birth. Normal births are under the protection of the house guardian. Abnormal births occur when the jungle *nats* (*sawn*) have driven out the guardians—a situation which the exorcist ascertains by divination from bamboos

(*chippawot*). Therefore, by way of general propitiation, at all births two pots of beer are prepared: one for the general company and one named after the child immediately on its appearance, and drunk in its honour. So also it is necessary to notify the fact of the birth to the *nats* by sacrifices. After a normal birth the mother remains at home out of the *nats'* way for three days, and on the fourth she is formally protected from the *nats* who desire to carry off her child, by throwing a spear at a spring. At abnormal births the *nats* are appeased by sacrifices, and driven away by noise and the burning of foul-smelling things.

The Red Karens improve on the beer-drinking of the Kachins by turning their birth feasts into orgies of meat and drink, and teaching the infant to drink liquor while still at the breast. When the child is three or four days old, the mother takes it and a hoe in her arms, and hoes a little ground, soon after which the ear-boring ceremony, usually a function at puberty, takes place, showing its protective origin. Sawngtung Karens on the birth of a child place a brass ring and a skein of white cotton on the shrine (*natsin*) of the house guardians. Among them, too, twins and triplets, being spiritually dangerous, are always killed.

Spirit-scaring, combined with spirit protection, under cover of driving out evil humours—an idea acquired from Indian medicine of no very early date—is no doubt responsible for the extraordinarily cruel birth-customs of the modern Burman. Immediately after the birth of the child, the mother is rubbed over with turmeric (*nā-nwin*), and then heated with fire, blankets, and hot bricks (*ōt pū*) for seven days. She is then steamed over a jar of boiling water, and finally has a cold bath. All this time she perpetually drinks *sein*, a secret green concoction prepared by midwives (*wunzwē*), and smells at *samōnnet* (balls of the *Nigella sativa*).

Among Shans, and Red Karens especially, a good many articles of food are forbidden to the mother, and even to her husband, for from seven days to a month. Impurity of the mother is recognized by the Shans for seven days, and purification is effected by exposure to the fire of any wood that does not exude milk or gum, and finally by bathing.

Among Red and White Karens there are curious traces of the *couvade*. Among the Red Karens only the father may act as midwife, and he may not speak to any one after the birth of his child. Among the White Karens (Mēpū) no one may leave the village after a birth until the umbilical cord is cut, this event being announced by bursting a bamboo by heating. This custom is said to be extended to the birth of domestic animals. No stranger may enter the house of a woman during her confinement. No customs seem to exist connected with the umbilical cord, except that the Red Karens hang up all the cords of the village in sealed bamboo receptacles (*kyedauk*) on a selected tree. The Shans have a custom, borrowed from India, of bathing male infants in a bath containing articles of value.

(3) *Names and naming.*—Kachins give a child a name immediately after birth, or the *nats* will give it a name that will kill it. There is a good deal of restriction in naming children. Shans, copied in this by the Kachins and White Karens, are confined to quite a small choice of names, according to the order in which the child is born. Among the Bre and Sawngtung (Red Karens) a child must be named after its maternal grandparent, according to sex—by the mother, unless the chicken-bone augury is against her, when the father has the right. Burmans are named after the initial of the name of the day of the week on which they are born (Indian influence), and the future character of the child is deduced from the name of the birthday.

There is a good deal of changing of names. All boys, on entering on the obligatory probation in a monastery, are given a scholastic name in Indian horoscopic fashion, which is retained for life if they become monks, but may not be used if they return to lay life. But amongst Shans, if there is illness or misfortune or suspected hostile spirit influences, the name is changed, to avert evil and procure better luck, according to horoscopic rules which are Buddhist, subjected to Chinese influence. In the case of infants, a lucky name is given by a supposed exchange of the child for something after which it is named: *e.g.* cloth, silver, weight, roast meat, visitor, moon, birth-marks, alms (to a monastery). A Burman, however, may change his name at any time by merely sending a packet of tea salad (*lapēt*) to all concerned, and announcing the fact. Among Sgau and Pwo Karens the parents change their names on the birth of a child.

(4) *Puberty* is not much noticed domestically. Ear-boring is obligatory on all girls, but is optional with boys, among the Burmans. All Bre (Red Karen) children stain their teeth black with much ceremony at about ten years of age—no doubt in connexion with puberty.

(5) *Marriage.*—Marriages in Burma present an astonishing variety of practice and principle, and nearly all the methods known to mankind are there in vogue somewhere or other. The only general guide disclosed as to the mental attitude of the people towards the subject is that marriage is on the whole regarded as a purely civil matter with which religion has very little concern—an attitude that is encouraged by the Buddhist religion, but not at all suited to the notions of Brāhmanism, or of the modern Hindu astrologers, who have introduced all the ceremony possible to them in the conditions.

(*a*) *Forbidden degrees.*—The rule is that marriage with parents, grandparents, children, grandchildren, brothers and sisters, is forbidden, but sometimes uncles and aunts are added (Shans). A Burman may marry his stepmother. The matriarchal system of forbidden degrees is in vogue among the Kachins, so that the usual marriage is with the daughter of the mother's brother, but never with the daughter of the father's or mother's sister. Likewise any one, even a stranger, with the same family name (father's side) is within the forbidden degrees, and consequently all blood-relationship runs through the females. The same idea obliges a Kachin or a Chin to marry his elder brother's widow, or in extreme cases to provide a substitute for her re-marriage.

A severely restricted area of marriage found among the Karens looks like a relic of totemism, but probably has quite a different explanation. Among Sgau and Pwo Karens, in times of general danger, the girls of allied villages are given in exchange as brides to become hostages for the good faith of the villagers towards each other. Hence we seem to have an explanation of some curious Karen customs. The Sawngtungs may marry only among cousins residing in specified villages, and then not without the consent of the elders. The area of choice is so small that many aged enforced bachelors and spinsters exist, and it results in great irregularity of age in the married couple. This is carried to an extreme extent by the Banyoks of Banyin in Loi Seng, where the field of choice is among six families at the order of the chief official of the district (*taungsā*). It has nearly wiped out the tribe.

The Szi Kachins have a custom which looks like an instance of Indian hypergamy, but is probably really referable to those above mentioned. They have permanently connected families, one of which gives daughters to another, but cannot receive them back. *E.g.*, Chumlūt girls may marry Malangs, but Malang girls may not be married to Chumlūts.

(*b*) *Freedom of choice.*—Absolute freedom of action is a characteristic of the Burman woman. She has separate property, whether owned before or acquired after marriage, and she takes this property with her on divorce. She marries whom she pleases, and separates or divorces, if offended, without any ceremony beyond the consent of the village elders. She has a voice in all domestic matters and in purchases and sales of family property, and acts with her husband's authority in his absence, when he is a village official. All this is in direct contradiction of the equally prevalent marriages by capture or by purchase.

(*c*) *Courtship.*—Courtship among Burmans and Shans is formally conducted according to social rules, so as to prevent improprieties. The exactly opposite custom of recognized experimental cohabitation before marriage is practised by the Kachins, who provide 'bachelors' huts' (*dum-ntā*) for the

purpose. A child born in consequence is a 'debt' to the girl's father, and its father has to pay a fine or marry the girl. On the other hand, among Sawngtung Karens boys on attaining puberty must live entirely in a bachelor's hut (*haw*) outside the village, and may not speak to a girl until married, except at death-feasts and marriages.

Among the Meng (Miaotzu) there is a sort of irrevocable betrothal, at which the engaged couple sing and dance and go off together at intervals for years, or until the girl is *enceinte*. The Yao have the same custom, but less crude—the girl remaining at home until claimed, and the singing of the couple being by way of strophe and antistrophe, while there is some consultation of horoscopes. Karens, however, have infant marriage, or irrevocable betrothal between children of five or six, when a feast, consisting of orgies, takes place, and another is held at the subsequent marriage. Breach of such a betrothal is expiated by a fine.

(*d*) *Marriage by purchase.*—Palaung girls are bought and retained for life in the husband's family. Lihsaw girls are bought at fixed customary prices, become their husbands' property, and are saleable if they cannot agree with them.

(*e*) *Marriage by capture.*—Marriage by capture is a widespread custom among hill tribes. Kachin marriages are preceded by actual capture, after a respectable householder in the girl's village has fixed her dower. The girls are not consulted, and are bound by their parents' wishes. Even the bought wives of the Lihsaws are actually abducted as a preliminary. Among the Palaungs, boys and girls first romp together and are subsequently drawn by lot in pairs. The marriage is a concerted elopement, without ceremonies. Among Akhās, the pair leave the hut for the night, and in the morning inform the girl's parents.

Among Burmans, throwing stones on the roof of the bridal pair on the marriage night, and tying a string across the bridegroom's path in order to demand a present, are probably relics of a bygone marriage by capture. This last custom is practised also by secluded tribes on the eastern frontiers.

(*f*) *Absence of ceremonial.*—Everywhere the feeling is that marriage does not require any ceremony. There is none amongst the Mengs, Chins, Akhās, Taungyos, or Banyok Karens, or among Shans and Burmans in the villages.

(*g*) *Ceremonial.*—It rarely happens that anything takes place beyond public announcement to friends or a feast of rejoicing. The Red Karens and Kachins indulge in drunken orgies. Amongst educated Burmans, Shans, and others who copy them, there are sometimes ceremonies of an Indian type conducted by *pōnnās*, but these are foreign to the indigenous ideas. Kachins have a simple ceremony, the essential point of which is feeding each other in public. The Akhos tie the arms of the bridal pair together. The Sgau and Pwo Karens are more elaborate in their ceremonies. They drench the bride with water as she enters the bridegroom's house, and the binding ceremony is the drinking of a cup of spirits by the elders representing the parties. Among Red Karens the cup is drunk by the bridal pair themselves in each other's houses. The only approach to a regular ceremony is among the Kadūs. Both they and the Taungthūs ask the daughter of the house from the house *nat*, but the Kadū bridegroom makes a present of a bamboo, full of tea, equal in length to the king-post of the bride's house; and small packets of *lapèt* are suspended by a string, the whole length of the king-post. The hands of the young couple are then joined, and they go hand in hand down the stairs and *shikho* to the *nat* of the house at the foot.

(*h*) *Adultery.*—One hears but little of married adultery, but a good deal of connexion between the unmarried. The usual penalty is expulsion from the village among some tribes, as the Taungthūs, who resent it when it results in illegitimate children. Among Taungyos, the mother of an illegitimate child must either be married or compensated. If she cannot prove the affiliation, she is turned out of the village. Sawngtung Karens expel the runaway couples of their villages, but punish elopements of their own girls with strangers by enforced suicide of the guilty parties or by hanging.

(*i*) *Polygamy.*—Polygamy is unrestricted among the Chins, and is the rule among the Akhās. It is permitted to the Taungyos, where the wife is merely cook and household servant. Among the Kachins, it is the result only of the obligation to marry a widow of an elder brother. It is not forbidden, but rare, among Burmans, Talaings, Shans, and Padaungs. It is forbidden to all Karens, except Padaungs, and to Akhos.

(*j*) *Divorce.*—Among Burmans, Shans, and Red Karens, divorce is by mutual consent; nevertheless it is neither common nor reputable. Palaungs copy the Burmese, but adultery demands compensation merely, not divorce. Among Akhos it is easy on a money payment. It is unknown among Sawngtung and White Karens, and among Chins, whose absconding wives, if recovered, are taken back on the murder of the seducer.

(6) *Death.*—Throughout Burma the object of the death ceremonies is to prevent the spirits of the dead, especially of the person just deceased, from injuring the living; and the origin of the universal wakes and feasting is to propitiate the spirits by letting them have a share in them. The ceremonies are a combined exorcism and propitiation. This is shown in the practice of postponing funerals until the community can properly carry out the necessary ceremonies.

Among Palaungs, bodies are kept unburied for some time under the control of the village elders, and the whole village is feasted in the interval. All funerals are public, the entire community attending. If a Red Karen dies away from home, his funeral cannot be celebrated until his guardian spirit permits it. Feasting, dancing, and noise-making go on until the spirit announces its arrival by tinkling a cow-bell, when the funeral takes place over a straw effigy. Here the sense of the funeral ceremonies clearly comes out.

Postponement of funerals is general. A prominent example is the often described *pōngyibyān*, or funeral of a respected monk long after his death. Lihsaws keep their dead in a wooden coffin surrounded by stakes, until the spirits are consulted. Siyin Chins artificially dry corpses for a year or more before burial, by smoking and sun-drying, until they are reduced to a quarter of their original size. The Kachins bury the dead at once, without ceremony, but postpone the funeral ceremonies till a convenient period. In the case of chiefs, the body is kept in a coffin supported above the earth.

Kachins commence the funeral ceremonies (*manmakhoi*) by presenting the *nats'* portion of a sacrifice (buffalo, bullock, pig, or fowl), chosen by an exorcist (*tumsa*) in consultation with the spirit of the deceased (*manshippawt nat*), at his temporary shrine (*manjong*) at the back of the house, where the household *nats* are worshipped. The sacrifice is then devoured. Among the Akhās, the slaughter of five buffaloes and a drinking-feast are the only ceremonies, even at the death of a man of position. Wakes are universal, and are intended to be propitiatory in the sense that the spirits can join in them. The Siyin Chins commence the funeral ceremony (*mithi*) with a slow measured dance, with locked hands and bent heads, round a platform on which the corpse is set upright, covered with gay cloths and ornaments. They wind up with a drunken debauch, such as is common on similar occasions among Red Karens, Kachins, and others.

The Kachin's elaborate death ceremonies, after he has propitiated the spirit of the deceased, are all designed to frighten it away. There is a death-dance and a wild rush into the jungle to frighten the ghost and drive it away. The spirit is requested not to become a *nat* and worry the living. The reason is made clear by the belief that a man returns six days and a woman seven days after a funeral; therefore the temporary shrine to the deceased (*manjong*) is destroyed so that it may not be found, and the first thing caught in the interval is offered to the ghost with spirits, with the avowed object of inducing the ghost to keep away. There is a death-dance after the destruction of the shrine, and a general drinking bout ends the ceremonies. Red Karens fire off guns at an approaching death, and make all the noise possible at funerals, to frighten away the *nats*. Burmans still do the same, although the practice is discouraged by their Buddhism, and was not permitted under native rule. So great is the fear of the returning spirit that, among Sgau and Pwo Karens, widows and orphans are banished the house, lest their misfortune should prove contagious. Shans sweep the place selected for the grave, with brambles and thorns, to clear off the evil spirits.

Kachins and some Karens have disconcerting notions as to exacting compensation for injury of whatever kind, real or fancied. Deaths, and even any debts or injuries, are avenged by murder or blood-money, or by reprisal against the place or thing causing the injury, at any time thereafter as long as memory lasts. A stream (in theory its *nat*) will be hacked with swords (*dhas*) if any one is drowned in it.

Both Burmans and Shans have special customs, which do not appear to be indigenous, and are due to the Brahmanism introduced with Buddhism. Of these may be mentioned placing 'ferry money' (*kadoka*) between the teeth of the deceased; swing-

ing the corpse three times over the grave, and throwing in a handful of earth by each person present (*utcik*) before the body is lowered into the grave; allowing no marks of a burn on the wrappings of the corpse; and not allowing people who have touched the corpse to enter the village without bathing.

(7) *Disposal of the dead.*—The various peoples and tribes in Burma dispose of the dead by burying the body, or burning it and burying the ashes, or by both these methods. Where burial is resorted to, coffins are universal, and there is much variety as to place of burial. With different tribes there are customs of burying in formal cemeteries, in separate graves, and in lonely places in the jungle. So also there are many ways of dealing with graves—from ignoring and forgetting them to elaborate monuments, dolmens, cromlechs, and barrows. The principle determining all the ceremonies and practices seems to be the prevention of injury to the living from the spirits of the dead by haunting.

(*a*) Burial.—(i.) *Burial in cemeteries.*—Formal public cemeteries are used by Burmans, Karens, and Chins (Lai, Siyin, Sokte, Thadō, and Tashōn), the last named burying their dead outside the village in structures of mud and stone erected on the surface of the ground. In the Wild Wa country, barrows are found near the villages, three feet high by three wide, and up to a hundred yards long.

(ii.) *Separate burial.*—Tame Was bury inside their villages, and Wild Was at the foot of the steps leading to the house. Northern Chins (Haka, Shunkla) bury in deep catacombs in the yard in front of the house. Among Chins also (Siyin, Sokte, Thadō, Tashōn), superior families have vault-like structures entered by a door, and surrounded by stone pillars and tall carved posts. Chiefs are separately buried on the road leading to the village.

(iii.) *Burial in remote places.*—The object of burial in remote and lonely places is to keep the spirit from haunting the living. The living forget the place, and the dead their way home. The idea in an attenuated form is seen in the Shan custom of burying separately in the jungle or near the village, and in the Burman custom of putting up no stone or other mark on or near the grave. Lihsaws merely bury the corpse at a distance. Akhās simply bury in a lonely place without ceremonies, and forget the grave, which is made level with the earth. Yaos bury in some remote spot, and mark the grave by three stones placed in a small triangle, but the poorer classes make no mark on the grave. Mengs (Miaotzu) bury in the deep jungle, and the nearest relative tends the grave for three years, after which it is forgotten. Kachins explain all these customs by their habit of burying at any spot chosen by a Chinese soothsayer (*sensen*) as favourable for security from the ghost of the deceased.

(iv.) *Coffins.*—Burial is nearly always in a coffin, but the poorer Yaws merely wrap the corpse in matting. The usual coffin in the jungles is made from a trunk, hollowed out for the purpose. Those of the Red Karens are large, and contain, besides the corpse, food, clothing, implements, and necessaries of life. They are decorated during life as handsomely as the owner can afford. The Burman, on the other hand, is buried in a light coffin roughly nailed together.

(*b*) Cremation.—(i.) *Objects of cremation.*—Cremation is resorted to both for reasons of safety and of honour. All Kachins burn lunatics (*marā*), victims of violent deaths (*sawā*) or of smallpox, and women dying in childbirth (*ntang*)—*i.e.* all persons likely to become dangerous ghosts. Palaungs burn their chiefs, and the Yaos their wealthy personages, in coffins. Some tribes burn all their dead (Szi, and formerly Marū Kachins and Lai Chins). The ashes of cremated bodies are always buried. Lai Chins bury them together with the clothes of the deceased.

(ii.) *Cremation of the respected and holy dead.*—The well-known cremation of a respected *pōngyī*, or Buddhist monk (*pōngyībyān*), with all its Indian Buddhist ceremonial, is in reality an indigenous ceremony. Burmans burn especially respected and aged persons as well, collect the bones, wash them, and bury them in a pot in the cemetery or near a pagoda. Over the ashes they erect a small pagoda without the crowning umbrella (*htī*), but over the ashes of a great *pōngyī* an ordinary pagoda is erected.

(*c*) *Burial at ancestral home.*—In direct contradiction to the lonely grave, which is to be forgotten as soon as possible, there is the strong feeling among Karens and Chins of the necessity of being buried at the ancestral home. The explanation is to be found in the Red Karen funeral ceremonies, which show that the guardian spirit of the deceased will haunt the living until the corpse has been disposed of with its permission. All Chins attach great importance to burial in the ancestral villages, and Chinbōn Chins who die at a distance from home are burnt, and their ashes are carried to the ancestral cemetery. Among Red Karens the body should be taken, if possible, to the grave from the deceased's house; if that is impossible, there must be a mock funeral over an effigy.

(*d*) *Monuments.*—The object of the ordinary monument in Burma is to provide a home for the spirit of the deceased, in the hope that it may remain there. Kachins erect a conical thatch (*lup*) over graves, but Szi Kachins a *lup* or a hut. The Chinbōn Chins build a miniature house of the ordinary type, and the Red Karens a miniature shed containing food. In the Wild Wa country are found cromlechs and collections of boulders, with pointed stones in the centre which are said to be the abode of house *nats*. This statement is supported by the Meng custom of raising oblong heaps of stones over the lonely graves they make in the deep jungle, evidently in the hope of keeping the spirits of the deceased, or house *nats*, at a distance. Lai Chins erect a dolmen over the ashes of the cremated dead.

(8) *Slavery.*—Slavery is almost universal among the hill tribes. It has a distinct effect on their physical development, and accounts for the great variety of form and feature, and sometimes of custom, observable where it is prevalent. Usually it is the result of raids on neighbours, but people of the same tribe and even of the same village (Kachins, Chins, Karens) and also relatives (Red Karens) may be enslaved or sold into slavery. Slavery for debt is everywhere recognized, and the general principle of legalized slavery is clearly shown by the Sgau and Pwo Karen custom of selling into slavery defaulting debtors, captives in forays, and confirmed thieves. This principle, in its extreme application common in the Far East, is visible in the Akhā custom of selling themselves into slavery when their crops fail. The Chins prefer monks (*pōngyīs*) and women as slaves, because they are the least likely to escape, and Sgau and Pwo Karens killed the men and the children in forays, but saved the women as slaves.

The custom is to treat slaves well, and not to make them work harder than their masters, provided they give no trouble. The female slaves are not turned into concubines, and are not made to suffer indignities (Red Karens, Chins, and Kachins). They may marry free men, the master acting as father-in-law (Kachins), and slaves may marry free women (Kachins). But the abiding principle in Burmese slavery is—once a slave always a slave for all succeeding generations. All the children of slaves are slaves. It is the only idea of 'caste' that has reached the Indo-Chinese races in Burma, and it has been applied to religious uses with cruel effect. It begins with a superstition. The Sgau and Pwo Karens sell into slavery widows and widowers who cannot pay the 'price' of the deceased, and those who introduce epidemics—a principle that was extended to the tillers of the Royal lands (*lamaing*) in Mandalay, who were all slaves *ipso facto*. With the help of imported Brāhmanical ideas, the principle was further extended to the attendants at Buddhist shrines, the so-called pagoda slaves (*parāgyūn*). The pagoda slave, absolutely dedicated to the service of the pagoda, is a familiar spectacle in Burma. He could not be liberated or find a substitute, and the slavery descended for ever to all children, wives, and husbands of pagoda slaves, and to any free children they might have had on marriage. The duty was to keep the pagodas in order, and the slave might be employed in no other capacity, on pain of the employer being sent to the lowest (Buddhist) hell. The pagoda slaves are, in fact, a 'low caste.' The whole idea is Indian, no doubt introduced with Buddhism from the analogy of the dedicated attendants of Hindu shrines, with the help of the indigenous practices as to slavery. So great is the stigma attached to slavery of this nature, that all the prestige and authority of the British Government have been unable materially to alter the status or means of livelihood of this unfortunate class since the emancipation granted them under British rule.

23. Palace customs.—The customs of the late Royal Court of Burma, up to the British occupation of the country in 1885, are preserved in the *Lawkābyūhā Inyōn* volume, and in the *Yāzawindaw*

(Royal Chronicle) of Mandalay. They not only present a faithful picture of all the religious and superstitious ideas of the people, but are also a sort of epitome of them, whether indigenous or imported. Many of the allusions contained in the religious or *quasi*-religious practices of the Palace refer directly to Buddhism, or to the old Brāhmanism which accompanied it, or to the modern Hinduism introduced by the Royal astrologers. The references to the indigenous Animism are also numerous, and of these the most instructive and important for the study of religion in Burma are recorded in the following account:

(1) *Enthronement ceremonial.*—At the enthronement of the kings of the last dynasty, a temporary palace was erected, called the Thagyānān (the Palace of Thagyā, the arch-*nat* of the Thirty-seven and Buddhist 'archangel'), where the king performed the ceremonial washing of his head before ascending the throne. Here was also deposited a golden casket containing some 'golden quicksilver' with the nine precious stones (Indian) and some charmed water. After the washing the king was 'anointed' with water blessed by eight Hindu astrologers (*pōnnās*), and presented by them with a charmed flower (*payeitpān*). After this ceremony a *pōnnā* fixed the auspicious day for ascending the throne, which was made of *pīpal* wood (the Indian sacred fig). As soon as the royal couple were seated thereon, the lucky silver gong (*mingalā ngwēmaung*) was sounded.

(2) *The king's sacred position.*—The king's title was Athē-ū-san-paing-than-ashin, 'Lord of the life, head, and hair of all human beings.' His word was above the law and infallible. His orders were Divine communications (*byā-theit*). He was immeasurably above every other human being; all, even the chief queen, were obliged to treat him and all his personal property with the utmost respect as sacred, and a special honorific language was used in his presence with respect to him.

(3) *The royal wives.*—The king was obliged to have eight queens and as many concubines as Chinese and Shan potentates presented to him. The neglect of Thībaw, the last king, to comply with this custom caused much concern among his most law-abiding subjects. The chief queen was usually a half-sister, but sometimes even a sister.

(4) *The Order of the 'Salwē.'*—This was an Order established in the persons of those who were entitled to wear the *salwē*, a belt of golden chains tied together by bosses, worn over the shoulder, the number of strands indicating the rank. The regulations concerning it are recorded in the *Salwēdin Sadān* (Book of the Order of the Salwē). These show that the *salwē* is nothing but the Indian *janēu* (Brāhmanical cord) turned to secular purposes.

(5) *Court festivals.*—In every month of the year there was a Royal feast for the Court and the public. Some of these were national, some peculiar to Mandalay, some almost exclusively Court functions. Animistic practices were current at many of them.

(*a*) March-April, *Tagū: Hnit-thit Thigyāndaw Pwe*, New Year's Day and Water Feast.—On New Year's Day water from the Irrawaddy, doubly sacred from the blessing of the *pōnnās* and the handling of the king, was used to wash the sacred images in the pagodas. The king and chief queen washed their hair in water from the hollows of sacred cotton trees growing in the villages of Bōk and Kyūwun, while *pōnnās* invoked the *nats* of *hōn* (fire) and *gyō* (planets).

(*b*) April-May, *Kasōn: Nyaungyēdaw Pwe*, Charmed Water Feast.—Water from the Irrawaddy was formally presented to the king and chief queen, and given by them to the courtiers and maids of honour to wash the sacred images within the palace walls.

(*c*) May-June, *Nayōn: Mōnāt Pūzaw* (Hindu *Moghanatha-pūjā*), Worship of the Lord of the Clouds.—This consisted of prayers for rain (*nga-payeik*) by the *sadaws* (heads of Buddhist monasteries), also known as Ngayān Min's Prayer. He was king of the murrel fish (snake-head), whose prayer when his lagoon dried up is known all over Burma. At this ceremony *pōnnās* prayed to figures representing the *nats* of the rain, which are human spirits, and the *nats* of the water, which are the spirits of alligators, frogs, and murrel fish. These were set up in *tazaungs* (temporary seven-tier structures), and finally thrown into the Irrawaddy. The whole festival has a strong Indian bias.

(*d*) In the same month was held the feast of the *Mingalā Lēdan Pwe*, the Feast of the Lucky Ploughing, when the king, in full military costume, ploughed and harrowed a certain field to procure a good harvest, while *pōnnās* offered prayers to fifteen Hindu gods, and male and female necromancers (*natsayās, natōks, natsaws*) invoked the Thirty-seven Nats.

(*e*) July-August, *Wāgaung: Sayēdān Pwe*, the Feast of the Offerings.—The king sent officials (*natōks* and *natteins*) with offerings of clothing to the shrine (*natkun*) of the Shwēbyin Nyinaung Nats, two of the Thirty-seven, at Taunghyōn.

(*f*) October-November, *Tasaungmōn: Kateindaw Pwe*, the Feast of the Presentation of Robes (to the monks).—The wives of the Court officials had to perform, between sunset and sunrise, the whole process of making cloth for draping the most sacred images in the Seven Nānthin Pagodas, from spinning to the woven material, out of raw cotton supplied by the king. At the full moon the fifteen chief *nats* of the royal family (all really Hindu deities), whose metal images were kept in a special building with a three-tier roof, were worshipped by the Court.

(*g*) At the *Tazaungdaing Pwe*, the Feast of Burning the Shrines, also held in this month, eight large *pyātthāts* (ornamented wicker work spires) and many small bamboo models of pagodas were displayed to the king and chief queen and then burnt.

(*h*) November-December, *Nadaw: Mahā-peinnē Pwedaw*, the Feast of the Royal First-fruits.—The first-fruits of the royal fields from the crown predial lands (*lamaing*), were sent by the king to the Mahā-peinnē Nat at the Arakan Pagoda at Amarapura. Mahā-peinnē represents Mahāvinṇa or Gaṇeśa, the Hindu god of learning, and the whole ceremony was largely Indian, including the distribution of largesse in the shape of Maundy money (*kyūlōn*), received as revenue from Bhamo.

(*i*) February-March, *Tabaung: Payā Pwe* or *Thepōn Zēdīdaw Pwe*, the Feast of the Shrines.—This is the month for worshipping the *nats*, and royal offerings were sent to the Nats, Aungzwāmagyī, Ngāzīshin, and Mahāgiri (Māgayē) of Pōpā Hill (all of the Thirty-seven), and also to the guardians (*nats, balūs*) of the four great gates of the city of Mandalay. Pagodas of sand were also reared to gain or retain good health.

24. **Hindu influence.**—In cases where the old Brāhmanism (introduced with Buddhism) and the modern Hinduism (introduced by the Manipurī astrologers) have affected the religious ideas of the natives of Burma, the fact has been already pointed out in each instance. But there are certain other prominent examples of the influence of Hinduism which require to be considered separately.

(1) *On the Royal Court.*—The late Royal Court was strongly impregnated with Hindu superstition, which was prominently present in the punishment by the legal flogging of persons who habitually killed cows or ate beef. It came out strongly after the king had been deposed, in the doings of various persons who had been connected with the Court. A Hindu Manipurī astrologer (*pōnnā*) was employed by the two Chaunggwā princes in a plot against the British Government at Mandalay in 1886, though they were accompanied by a Burman Buddhist priest (*pōngyī*). He drew their horoscopes, prophesying that the younger brother only would succeed. The party of the elder brother thereupon dissolved. The *sadaw* (abbot) of the Mōdī Monastery at Mandalay was in the plot, and during a second plot, hatched in 1888 in that Monastery, the horoscope of the prince, a charmed bullet-proof image, and a jar of sacred water were found, when the place was attacked. The jar had been used for taking the oath of allegiance to the prince, and the ceremony had consisted of drinking a cupful of the water from the jar, in which an image of Gautama Buddha, made out of wood from the Bo-tree at Bodh Gayā, had been dipped. The Indian proclivities of the Court also appear in the magic stone in the courtyard of the Shwēdagon Pagoda at Rangoon, which is engraved with the hare (moon) and the peacock (sun), symbolical of the claim of the last dynasty to both 'lunar and solar' descent (Rājpūt). The worship of *the White*

Elephant was greatly mixed up with the Court ceremonial, and, though apparently a peculiarly Burmese and Far Eastern institution, is nevertheless an instance of Indian influence introduced with Buddhism. The *Saddān*, or *Sinbyūdaw*, or White Elephant, was not white, but was an animal endowed with mystical signs and powers of so pronounced an Indian type that Hindus greatly reverenced it.

(2) *On the people.*—Among the people it is perhaps natural to find, considering their source, that powers of witchcraft, sorcery, and necromancy generally should follow the typical Indian custom of running in families. Hindu influence also causes much confusion in belief, and *nats* (Burman), *balūs* (ogres, doubtfully Burman), and *pyeittās* (ghosts, clearly Indian *prēta*) are all found mixed up in the same story as disease- and death-bringing spirits. Most of the Animistic customs of the Burmans, Talaings, and Shans are nowadays referred incorrectly to a Brāhmanic origin through Buddhism. Hindu influence, too, much affects the Burmans as to lucky and unlucky days of the week, and these in their turn exercise so great an influence on their actions, ceremonies, and medicinal dieting as seriously to interfere with daily life.

(3) *Pagoda slaves and other outcasts.* — The Pagoda slaves (*parāgyūn*) [see above, 'Slavery'] are an 'outcast' caste of the true Indian type—an idea entirely foreign to the Indo-Chinese mind. There is the same feeling towards professional wandering beggars (*tadaungsā*), who may follow no other occupation; and with these are associated lepers, the deformed and the maimed (recalling the Indian idea of the 'sin of misfortune'), conductors of funerals, makers of coffins, and diggers of graves (*sandalē*). The feeling was extended to the slave tillers of the government lands (*lamaing*), to the lictors (*letyātaung thingyeing*), and to those specially tatued for crime (*pagwēt*), who were also constables, jailors, and executioners. No one associated with them, and they were often denied burial, being thrown out along with the town offal.

(4) *The Nawngtung vestals.*—The marriage of four virgins every three years to Sao Kaing, the Spirit of Lake Nawngtung at Kengtung (Shan States) is Hindu in type, the influence in this case probably coming up from the South through Siam from Cambodia. There is little dedication, however, as the girls go home after the ceremony and may marry; but if one of them dies soon afterwards, the *nat* has 'accepted' her.

(5) *On festivals.*—Hindu influence clearly appears again at the New Year Festival at Kengtung, when an indecent figure of Lahū Nat, a frog, is carried through the town, and thrown into the river with obscene antics, 'for the public welfare.'

(6) *On superstitions.*—A *pōnnā*, by means of necromantic dreams, successfully cultivated a field in Nānmadawzā Kwin near Mandalay, in which dwelt a death-dealing *nat*, when every Burman who tried to cultivate it came to an untimely end. The posts of a house are believed to be male, female, neuter, and the ogre's (*balū*) respectively, or according as they are of one size throughout, or bulge at the bottom, in the middle, or at the top. Female posts are the best for building, next the male; the others must be avoided. *Nat* shrines in trees are connected to the trees by a bridge made of threads for the use of the *nat*.

(7) *Serpent-worship.* — The accepted Burmese tradition is that King Anawrahtā (Anawrahtāzaw) of Pagān, the Buddhist reformer of the 11th cent. A.D., put an end to the *nāgā-* (pronounced in Burma *nāgā*), or serpent-worship then prevalent. He probably merely scotched it, as is shown by the *naga* images about the Shwēzīgōn Pagoda at Pagān, built after his death. The cult must, however, as its name implies, have been imported from India, and the numerous legends and folktales now current of *naga* maidens and *naga* heroes may safely be referred to a form of Animism that is not indigenous in the country, or be regarded as indigenous animal fables coloured by the cosmogony received through Buddhist sources. The presentation of a monster *naga* to the Pagoda is still an annual ceremony at the Tāwadeinthā (Buddhist) festival in Tasaungmōn (November), and on either side of the Mintet Tagū, or State Staircase at the Palace at Mandalay, are four guardian images (*pyawthā tayinthā*) directly referable to Indian *naga*-worship.

(8) *The Five Nats.*—Burmese books lay much stress on the Five Nats, which have all Indian names combined with the native word *so*, meaning 'ruler.' They are all 'nature' spirits: Mekkasō, Lord of the Rain (*mēgha*); Bōmmasō, Lord of the Earth (*bhummi*); Yōkkasō, Lord of the Trees (*rukkha*); Akāthasō, Lord of the Sky (*ākāsa*); and Thārasō, Lord of the Waters (*sāra*, lake).

(9) *The Thirty-seven Nats.*—The Thirty-seven Nats, famous throughout Burma, are clearly of Buddhist origin, and represent the inhabitants of Tāwadeinthā, the *tāvatiṁsa* heaven, the abode of the Thirty-three, where dwell the ruling spirits that interfere with mankind. To the Thirty-three four have been added in modern times, making up the now orthodox number of Thirty-seven. The existing spirits are not by any means, in name, form, or representation, identical with the original Thirty-three, whose images, much debased from the Indian form, are still in existence at the Shwēzīgōn Pagoda at Pagān, which was constructed at various dates from A.D. 1094 to 1164. At the present day, the Thirty-seven are all, with one exception, national heroes or heroines, whose story or life has caught the popular fancy. Consequently there is some vagueness in the orthodox list, though there is an extraordinary unanimity, among those who profess to know the subject, as to their names, and even the order in which they should come. In their existing form they exhibit in a remarkable manner the tendency of all mankind to fasten old-world stories and attributes on popular heroes. The Thirty-seven Nats are now purely Animistic in nature. The one *nat* of this Order that retains his original characteristics is Thagyā Nat, who represents Indra in the form of Śakra (by Burmese phonetics *Thāgyā*), the *primus inter pares* in the heaven of the Thirty-three in Buddhism, and the Recording Angel of Burmese orthodoxy. He is the first or chief of the Thirty-seven among the Burmans, but the Talaings find no place for him, and rank the second of the Burmans, Mahāgiri or Māgayē, the house *nat* personified, as the first.

On analysis, the Thirty-seven Nats resolve themselves into five groups, each connected with a cycle of *quasi*-historical tales, an explanation of which in detail would involve an examination of the very complicated history of Burma, often in its more obscure passages. Roughly, the five cycles of tales are all connected with royal families, including several kings, and therefore with great heroes and heroines. They commence with stories of mythical times in Tagaung and Prome, and are continued all through Burmese history to modern times. The great king of Pegu, Tabīn Shwēdī (1530–1550), and a prisoner of war taken by Bayīn Naung of Pegu (1551-1581), the Branginoco (Bayīngyīnaungzaw) of the contemporary Portuguese writers, are included in the list. Even the great-grandson of Branginoco, alive in the middle of the 17th cent., is one of the Thirty-seven. Only one of the Order besides Thagyā Nat belongs to no special category. He was a personage of no particular consideration, Maung Po Tu, a trader of Pinyā, who was killed by a tiger, and became famous by his tragic death. Tragedy in life, indeed, has been the usual passport to inclusion in the Thirty-seven.

Each member of the Order has his or her own particular festival, and there is a well-known book, the *Mahāgītā Mēdanīgyān*, which purports to be

a book of odes to the Thirty-seven Nats, though, strictly speaking, it contains a series of short biographical and genealogical sketches in verse for recitation under spirit possession by female mediums (*nat-kadaw*) at the festivals. They are by way of being moralities, and are meant to impress on the audience the sins of treason, rebellion, and assassination. The ceremonial at the festivals of the Thirty-seven Nats is distinctly Animistic in tone.

25. Superstitions.—The superstitions of Burma naturally embody tags of every kind of belief that has at one time or other attracted the attention of the people. Superstitions are apt to run through the country without regard to origin. Those of the Burmans may be looked on as common, at any rate, to the Talaings and Shans also, and to the tribes that have come in contact with them. They all have, however, some that are peculiar, more or less, to themselves. Of these superstitions some are now selected as samples:

(1) *Burmans and general.*—Combings of hair and parings of nails are tied to a stone and sunk in deep water. Water soiled by washing clothes, and saliva, are carefully disposed of. Children's cauls bring promotion in life to the possessor. The smell of cooking brings on fever, especially frying in oil. The mother of seven sons or daughters will become a witch. Women dying in childbirth are cut open and the child (*alôn*) is buried in some secret spot to prevent necromancers (*hmawsayā*) from digging it up and misusing it. At the funeral of a *pongyi* (*pōngyibyān*) there is a tug of war (*lōnswē*), to ascertain which side is to have the merit (*kūthō*) of dragging the body to the pyre. The natural 'spirit flames' at Kamā, between Prome and Thayētmyō, are the fire of a spectral blacksmith. A live boa-constrictor (*sabāgyī*) is kept on fishermen's boats as a warning of storms, as, when one is coming, it slips overboard and makes for the shore. The gall bladder of the snake is a good medicine, and the fat a remedy for rheumatism. It is unlucky for bees to hive under the house, but lucky on the house-top. Shavings of rhinoceros horn cure epilepsy and poisons. Horns of buffaloes, when flawless and solid (*thanāt-hpī*), are a charm for invulnerability. Stones found in the heads of birds, in trees, and in animals (*amadē*) are highly prized as amulets. In the Mandalay Palace grounds there stood the Hkōnān, the palace of the king of the pigeons. If a hen lays an egg on a cloth, the owner will lose money. A snake crossing the path will delay a lawsuit, a journey, or a raid. If a dog carries an unclean thing into the house, it denotes riches to the owner. The steps of a monastery (*kyaung*) must be in odd numbers. Knots in the side pieces (*hlēgatit*) of the steps leading to the house determine its luck. Oil at the Yenangyaung oil-wells is found by the direction in which a marble elephant on a flat stone moves of itself, or in which its shadow falls on the surrounding offerings. Scrapings from meteoric stones cure ophthalmia. Eating *lapēt* (tea salad) settles all bargains, and is sometimes the binding part of a marriage ceremony. In all the native Courts, except the Supreme Court (*Hlutdaw*), decisions were finally settled when the parties had received and eaten a packet of *lapēt*. Appeal after that in any circumstances was a crime, punished by public flogging (*maung-kyaw*) round the roads. Omens are drawn from the sun and moon, howling of dogs, flight and song of birds, twitching of the eyelids or any part of the body. If a mushroom is met with at the beginning of a journey, it will succeed. Small charms (*hkaung-beit-set*) to secure invulnerability, up to as many as thirty, are let in under the skin; they consist of discs of gold, silver, lead, pebbles, tortoise-shell, and horn. Charmed necklaces and bracelets are worn for the same purpose.

(2) *Shans.*—Inhaling the smoke of pine-wood or taking a mixture of monkey's blood and turmeric prevents bleeding at the nose and mouth in lying-in women. Corpses of the unmarried are married to stumps by being knocked against them on the way to burial.

(3) *Talaings.*—It is dangerous to mention any one by name during a devil-dance held to frighten away an epidemic, as the evil spirits might afflict the owner with it.

(4) *Kachins.*—Eclipses are caused by a dog (*shittākwā*) swallowing the moon. The rainbow is from a crab (*chikan*), which lives in marshy hollows connected with a subterranean ocean. Thunder is the voice of Mushang, the Nat of the Heavens. Lightning is represented by a phrase, *myit hpyap kalamai*, 'rolling and shaking the eyes (of Mushang).' Earthquakes are caused by crocodiles burrowing in the earth from the subterranean ocean. The markings of the moon are due to the foliage of the rubber tree. It offends the house *nat* if a visitor goes out at the back door. Snakes and porcupines across the path are unlucky; deer, hedgehog, rhinoceros, and otter are lucky. The wild cat is doubtful, being classed both ways in different places. It is unlucky for young men to drink the beer named at births after a new-born child.

(5) *Karens.*—It is lucky if a cricket, representing the Harvest Spirit, crawls up the yoke-support of the oxen and flies upwards from the top. Lights on graves are the spirits of the dead, and are the occasion of an annual festival. The Bre Karens drink, for strength and courage, the blood of any animal they kill. Among the Sawngtung Karens no one may leave the village on the day of the birth of a child in it, and no eggs may be kept in the village while the fields are being reaped. The first ancestor of the White Karens had a magic wishing drum. Taungthū ghosts do not walk on festival days. Giving away anything at all on sowing or planting days means blight for the crop. Among the Taungyo Karens no paddy may be taken out of the bins during Pyāthō (December–January).

(6) *Was and Palaungs.*—Among the Palaungs, if a person dies on the last day of the month, the body must be buried at once, or there will be fire, epidemic, or murder in the village. Among the Ens, if a tree is felled, a man dies, and so over extensive areas the people will not work hill-fields, for fear of offending the spirits.

LITERATURE.—In addition to the works mentioned at the end of § III. the following may be consulted:

MODERN BOOKS: Scott and Hardiman, *Gazetteer of Upper Burma and the Shan States*, 5 vols., pt. i. 1900, pt. ii. 1901; Carey and Tuck, *The Chin Hills*, 2 vols., Rangoon, 1896; Shway Yoe [Sir J. G. Scott], *The Burman, his Life and Notions*, 2 vols. 1882; Nisbet, *Burma under British Rule and before*, 2 vols., Westminster, 1901; M. and B. Ferrars, *Burma*, 1900; A. M. Hart, *Picturesque Burma*, 1897; Bigandet, *Life, or Legend, of Gaudama*[3], 2 vols., 1886; H. Fielding, *Soul of a People*, 1898; E. D. Cuming, *In the Shadow of the Pagoda*, 1893; A. R. Macmahon, *Far Cathay and Farther India*, 1893; H. Yule, *Narrative of the Mission to Ava, 1855*, London, 1858; Smeaton, *The Loyal Karens of Burma*, 1887; Wylie, *Gospel in Burmah*, 1859 (for Karens); Maung Tet Pyo, *Customary Law of the Chin Tribe*, Rangoon, 1884; Temple, *The Thirty-Seven Nats*, 1906; Goss, *Story of Wethandaya*, Rangoon, 1886; Taw Sein Ko, *Selections from the Records of the Hlutdaw* (in Burmese), Rangoon, 1889; *Indian Antiquary*: Taw Sein Ko, 'Folklore in Burma,' xviii. xix., 'Thwe-thauk' (blood-brotherhood), xx., 'Notes on the National Customs of the Karennes,' xxi.; Houghton, 'Folklore of the Sgaw Karens,' xxii.; Temple, 'A Native Account of the Thirty-Seven Nats,' xxxv.; Whitehead, 'The Chins of Burma,' xxxvi.

MODERN TRAVELS: Anderson, *Mandalay to Momein*, 1876; Gill, *River of Golden Sand*, 1880; Clement Williams, *Through Burmah to Western China*, 1868; Holt Hallett, *A Thousand Miles on an Elephant in the Shan States*, 1890; Colquhoun, *Amongst the Shans*, 1885; Gouger, *Personal Narrative of Two Years' Imprisonment in Burma*, 1860.

OLDER BOOKS: Crawfurd, *Embassy to Ava*, 1829; Sangermano, *Description of the Burmese Empire*, ed. Tandy, Rome 1833, ed. Jardine, Westminster, 1893; Symes, *An Account of an Embassy to Ava in 1795*, London, 1800; Cox, *Journal of a Residence in the Birmhan Empire in 1796*, ed. 1821; Wilson, *Documents relative to the Burmese War*, Calcutta, 1827; Judson, *An Account of the American Baptist Mission into the Burman Empire*, 1827; Malcom, *Travels in South Eastern Asia*, vol. i., 'Burman Empire' (American Baptist Mission), London, 1839.

PARLIAMENTARY PAPERS: Sladen, *Report on the Bhamo Route*, No. 251, Session 1868-9 (17th Aug. 1870); M'Leod and Richardson, *Journeys*, 1836 (10th Aug. 1869); Baber, *Report on the Route of Grosvenor's Mission between Talifu and Momein*, 1878, China, No. 3.

Books on Siam, Annam, Cambodia, and travels in Southern China and French travels to the East of Burma, as well as books on Assam to the West, can also be studied with advantage for information on Animism in Burma.

R. C. TEMPLE.

BURMA AND ASSAM (Buddhism in).—i. BURMA.—1. Origin and history.—The common assertion is that Buddhism was first established in Burma by Buddhaghosa from Ceylon about A.D. 450. The delta lands were not even called Burma then, and the Mons or Talaings were the inhabitants, to the complete exclusion of the Burmese proper. The capital of the Burmese was then Pagān. It is supposed that the fighting, which ended in the destruction of Tharekettara (the modern Prome) and the building of Pagān, was carried on by settlers from India, some of whom had come by ship to Prome, which was then on the sea, and others who had come to Northern Burma by way of Manipur. These last were certainly Mahāyānists, who followed the canon drawn up by Kanishka, at the synod held at Jalandhara in the Panjāb. The Mon converts, and assumedly the Indian immigrants, were Hīnayānists, who adopted the canon of Asoka, formulated by him at his synod in 250 B.C., held at Pātaliputra. This canon was taken to Ceylon, where it has been followed ever since. Pagān was established about the beginning of our era, and Tharekettara, the site of which is a short distance east of the modern Prome, had been a famous capital for something like five centuries before this.

There is no real history of Burma till the time of Anawrahtā, who succeeded to the throne of Pagān in A.D. 1010, and is renowned as the first Burmese national hero—a sort of Alfred the Great. He began the struggle between Burma proper and Yamanya, between the Burmese and the Mons, which did not end till 1755, when Pagān was captured and Rangoon founded. This was also the struggle between Buddhists of the Northern canon and Buddhists of the Southern; between Sanskrit and Magadhi, as the Burmese call Pāli; between the Mahāyānists and the Hīnayānists, the Great Vehicle and the Little Vehicle. The doctrinal form of the conquered was imposed on the conquerors, but this came about through the personality of the originator of the great struggle.

Serpent-worship had been followed for about a hundred years before the time of Anawrahtā. It was grafted on the Kanishka canon by a usurper king, Saw Yahan, and the ministers of this debased religion were called *Ari* or *Ariya*, 'the Noble.' They lived in monasteries, but are said to have been of dissolute life. Their robes were blue like those of the lāmas of Tibet and China, and they let their hair grow two inches long. Anawrahtā was converted to the purer form of Buddhism by a wandering monk, who is called Arahan, and is therefore practically nameless. The first act of the proselyte king was to send a messenger to the Mon king, Manuha of Thatōn, asking for a copy of the *Tripiṭaka*, the three Baskets of the Law. King Manuha refused. Anawrahtā made no second request. He raised an army, marched to Thatōn, levelled the city with the ground, and brought everything—the Books of the Law, the king Manuha, and the people—in a body to Pagān. From this time dates the erection of the temples which make Pagān so remarkable a ruined city, and also the spread of the present form of Buddhism over all the land of Burma.

This is the common story, and it may very well represent the establishment of Buddhism of the Southern school throughout Burma; but the slow disinterment of buried cities and the study of Chinese and Tai annals seem to show that Buddhaghoṣa had predecessors as missionaries, and it is quite certain that there were Buddhists in Burma proper long before Buddhaghoṣa's time.

Hitherto the assumption has been that Buddhism firmly established itself in Burma about the time when it was beginning to disappear in India. It may be true that it was then first universally accepted in the form which it retains to the present day. It seems very clear, however, that Buddhism had been introduced long before, perhaps only to struggle with the Animists, who then inhabited the country, but at any rate had been introduced and stayed, and was certainly not merely a tolerated religion.

Buddhaghoṣa landed at, or near, Thatōn with his volume of the Scriptures. Thatōn was then certainly on the sea-coast, but Forchhammer maintained that the apostle landed, not at the modern Thatōn, but at Golanagara, which lies twenty-two miles north-west of it. This is quite possibly the site of the original Thatōn, for the changing of capitals was always a characteristic of the peoples of Burma, whether Burman, Mon, or Tai. There are frequent references to the struggle between Brāhmans and Buddhists in the coastwise lands before this, and it seems quite probable that there is some truth in the legend, believed by all Burmans, that king Dhammathawka, as they call Aśoka, sent two missionaries, Thawna and Ottara, to what we call Burma, after the sitting of the third great synod in 241 B.C.

Kanishka, the last and probably the greatest of the three great Buddhist monarchs of Northern India, is commonly called the Constantine of the East. His date is very uncertain, but the best authorities seem to agree that he ascended the throne about A.D. 120. He carried Buddhism to far-away Khotan. He defeated the armies of the emperor of China, and he beat back the attacks of the Parthians. It is possible that it was he who introduced Buddhism into China and Japan.

But the name of the Buddhist monarch best known in Burma is that of Aśoka (Dhammathawka), who was crowned in 269 B.C. and reigned till 231 B.C. He was the grandson of Chandragupta, the petty chief who founded the Maurya dynasty, the great military monarchy that held the whole of India from Patna to the Panjāb. Aśoka was the greatest of these Maurya monarchs. He was converted to Buddhism, and made it the State religion of all Northern India. Kanishka is called the Constantine of the East, but Aśoka was both a Paul and a Constantine. He sent missionaries over all the world known to him. He ordered the dedication of *stūpas* to the Buddha in the remotest parts. It is nearly certain that he introduced Buddhism into the Tai kingdom of Nanchao, which had its capital at Talifu, and remained there till it was overthrown by Kublai Khan.

The Burmese Buddhists know little of Kanishka, but the name of Dhammathawka is well known, and tradition credits him with the foundation of many pagodas with the bones and relics of the Buddha (see art. BUDDHA in vol. ii. p. 884[b] f.). There are such *stūpas* at Tavoy, Moulmein, Toungoo, and Thayet in Lower Burma. There are many of these *shwemōkthos* and *shwemōkdaws* in the Upper Province, and even farther off still, in the tributary Shan States: at Kyauksè, Sampenago, in the Bhamo District; at Pwela in the Myelat, round the Inle lake, and in many parts of the hills. They are all implicitly credited to Dhammathawka, and it can hardly be that some of them are not on the list of the 84,000 which he ordered to be built. It is perhaps significant that the Burmese royal history says that a band of *kṣatriyas* came after the founding of Tagaung (old Pagān) and established a capital which they called Mawriya, in the neighbourhood of the present village of Mweyen.

When the Maurya empire broke up, Buddhism did not cease to be the dominant religion of the north of India. The *Questions of Milinda* give us the history of the conversion of the Greek Menander and of his disputations with the sage Nāgasena. The Bactrian Greeks, though they were pushed southward and farther south by the Śākya, or Hun tribes of the Scythian steppes, established a great kingdom in the Panjāb, and Menander's empire was hardly less extensive than that of the warlike Aśoka, and even included for a time the sacred Magadha. The Scythians themselves were not content with driving the Greeks across the Oxus. They pushed on and established the Kushan dynasty, and seized the Middle Land itself, the sacred heart of India. It was then that Kanishka fixed his home in the holy city of Peshāwar, and it was there that he received and befriended Yüan-Ch'ang (Hiuen-Tsiang), the Master of the Law, the great traveller and writer. Kanishka built a great audience-hall for the monks, and a noble relic-tower. It is not impossible that this is the shrine discovered in 1909. Kanishka also convened a great council to examine and codify all the Buddhist writings. The canon which we now have was laboriously drawn up and engraved on copper. It was buried in the relic-chamber of a pagoda, and, since the ashes of the Buddha claim to have been found after more than 2500 years, possibly this canon also will be discovered in the same neighbourhood.

With the death of Kanishka the decay of Buddhism in India began. It seems likely that the growth of Buddhism in Burma began at least then, and probably earlier. At any rate, everything seems to show that the theory that it did not begin till five centuries later is mistaken. All the researches of the very poorly supported Archæological Department in Burma tend to establish the certainty of the early connexion of Burma with India, and indeed to prove that the Burmese race came from the north-west, and not from the north-east; from the northern slopes of the Thian Shan range, and not from any part of the modern China. The Burmese Chronicle, the *Mahāyāzawin*, asserts this, and all recent discoveries tend to prove that it is right.

In the year 1908–09, excavations conducted under the direction of Taw Sein Ko at Hmawza have conclusively proved that the Northern school of Buddhism was established at Prome, the ancient

Tharekettara. Votive tablets found at the Legu pagoda, and the sculpture there, are in the same style as the familiar Gupta work of Northern India. It seems, therefore, indisputable that there was communication between the kingdom of Tharekettara and Northern India, when the Guptas (A.D. 319–606) rose in Kanauj, and the term 'Pali' began to be used instead of 'Magadhi.' Magadhi declined as the Guptas rose, just as Kosali declined when Magadha conquered and annexed Kosala. It may be asserted with some confidence that communications did not begin with the Guptas, and that there was connexion between Burma and India long before, and that Buddhism came much earlier than has been hitherto believed.

Neither the Mahāyānists nor the Hīnayānists use the tongue in which the Buddha Gautama preached, the widely diffused dialect of Kosala, or Koshala, where he was born and brought up. After his death Kosala was conquered, and Magadha took its place. The edicts of Aśoka were issued in Magadhi, though history records that the Sanskrit of the Veda was still in official use at the court of his grandfather, Chandragupta. Kosala was the ancient land of Oudh, and Magadha is the modern Behar. Rhys Davids, however, points out that the official tongue of Magadha differed from the local Magadhi, or Kosali, in many little ways, because it was based on the tongue which Gautama spoke, the dialect which had been the form of speech used by Rama and his race. The literary form of Kosali was known as Pāli, that is to say, 'canonical,' because the *Pāli*, or canon, of the Buddhists was composed in the ancient dialect of Oudh.

The relation of Pāli to Sanskrit may be roughly compared with that which the Romance languages bear to Latin. Because it became the language of the Buddhist canon, Magadhi gradually came to be called Pāli, and so identified itself with the reformers. Sanskrit remained the form in which the orthodox Brāhmans expressed themselves. It may be noted that the people of Burma and Ceylon still prefer to use the old name 'Magadhi' instead of 'Pāli.' Magadhi, at the time of the missionary journeys of the first Buddhist apostles, was a sort of *lingua franca*, as Hindustani or Malay is now, and the Sinhalese language is, as a matter of fact, derived from Magadhi. Any one talking Pāli could probably make himself understood by the people of Ceylon, just as a Yün-nanese can understand a Peking Chinaman, or a Lao Shan can follow a Siamese on the one side, or a British Tai on the other.

It seems to be proved beyond reasonable doubt that Buddhism was established both in Southern and in Western Burma long before the hitherto accepted dates. Very probably it got no great hold on the country. It is also probable that the Mahāyānist school was much the more strongly represented until the time of Anawrahtā. It can hardly be doubted that some of Aśoka's apostles visited and settled in both Upper and Lower Burma. Probably, however, the missionaries of Kanishka were much more numerous and more successful.

By the time of Kanishka, Indian Buddhism had lost the simple morality and 'agnostic idealism,' as Waddell calls it, of its founder, and had taken in much from the *Bhagavad-Gītā* and from Śaivism. It had become 'a speculative theistic system with a mysticism of sophistic nihilism in the background' (Waddell, *Buddhism of Tibet*, p. 10).

It is unfortunate that the age of Kanishka is very imperfectly determined. We have so far records varying from the year 3 to the year 18, and the learned are at variance as to whether these are years of reign or years of an era. Fleet holds that they refer to the Samvat era, while others take them to refer to other eras with omitted hundreds. The net result is that Kanishka may be placed anywhere between 56 B.C. and A.D. 288—rather a wide interval for a monarch who made his influence felt from the upper reaches of the Tigris to the Great Wall of China.

It has been authoritatively asserted that the Mahāyānist form of Buddhism was introduced into Burma by Chinese missionaries in the 4th century. If for this we read Tai or Shan missionaries between the 1st and 4th cents., it will probably be much nearer the truth. Hīnayānist Buddhism had probably come in a tentative way with Aśoka's apostles before this, and, as is clearly established, Mahāyānism penetrated even as far as the Malay Peninsula, not at all impossibly through Burma, at the time when Buddhism is generally credited with being first planted in Burma itself.

The Northern school may certainly be called corrupted in comparison with the first teaching of the Buddha, and it was still further corrupted by the Tantra system. This was founded by Asaṅga, a noted monk of Peshāwar in the Panjab, and is a mixture of magic and witchcraft with Śiva-worship. This was grafted on the already corrupted Buddhism, and has left many traces in Burmese Buddhism. The religion which existed in Pagān before Anawrahtā's rape of the king and the religious books and the people of Thatōn was a medley of *naga-* or serpent-worship, Tantrism, and Mahāyānism, with not a few traces of Tibetan lāmaism, which came with the 8th cent. and possibly gave the country the word *pōngyī*, or 'monk,' which may be compared with *bōn-gyepa*, the Tibetan *bon*, 'mendicant.'

The professors of the Northern school of Buddhism, the *Ariya* of Pagān, were full of superstitions, and they were workers of miracles. Burnouf had little respect for them. 'The pen,' he says, 'refuses to transcribe doctrines as miserable in respect of form as they are odious and degrading in respect of meaning.' How long they had been found in Pagān there is nothing to show. It is, however, quite certain that the autocrat Anawrahtā effected the fusion of the two schools in the 11th century. He finally put an end to the *Ariya*, but traces of Mahāyānism have clung to the outward form of Hīnayānism in Burma ever since. If the religion may be said certainly to belong to the Southern school, it may no less certainly be asserted that it was moulded by the Northern. But Buddhism can hardly be called a religion. In its concrete form it is rather a sort of philosophy practised by a monastic organization like that of the Dominican or Franciscan Orders.

2. Buddhist Scriptures and religious works.—The canons of Buddhism may have been the work of an immediate disciple of the Buddha, drawn up at the first council in the year after the Benign One's death, but it is certain that the canon of the *Tripiṭaka* was really first settled at the council held under Aśoka in the 3rd cent. B.C. From the inscriptions we may rest assured that at that time the most important part of the Buddhist canon existed, as we now have it, divided into five portions.

The miracle-mongering Mahāyānists enlarged the original canon to a huge extent by expanding the texts of the original documents, by adding material of their own, and by entering into compromises with any local form of popular superstition; but however the individuals may have affected Burmese forms, this canon was never adopted in Burma. The Buddhist of the Southern school may be a scientific freethinker, as Lillie calls him, but he maintained with great tenacity the purity of the early Buddhistic teaching. This exists in the canon of Ceylon, and it is this form which Burmese Buddhism implicitly adopts. The Burmese also recognize only the Pāli, the canon language. This is as distinctively the language of the Hīnayānist school as Sanskrit is of the Mahāyānist. When the natives of India began to use Sanskrit as their literary language, from the 2nd cent. A.D. onwards, the people we call Buddhists gave up writing in Pali, though they probably understood it. But the books they wrote in Buddhistic Sanskrit were new books. We find that the Buddhistic Sanskrit texts abound in wild, extravagant, and exasperating digressions. Such works as the *Lalita Vistara*, the *Buddha Charita*, and some others are based on the old myths of Asia. In these we can detect the common origin of the story of Bacchus, of Kṛṣṇa, and of many other gods and heroes.

The last census of India showed that out of

nearly nine and a half million Buddhists in the Indian Empire, all but about 300,000 are in Burma. Ceylon may be regarded as the holier place by the Buddhist, possibly even by the Burmese Buddhist, but, since very shortly after the permanent establishment of Buddhism in Pagān by Anawrahtā, Burma has consistently held a very high place in the interpretation of the authentic Buddhist Scriptures in the language which they call Magadhi, or the Mula-bhasa, and Western scholars call Pāli. This Magadhi, or Pāli, has been to the Burmese what Latin was to the mediæval scholiasts and scholars of Europe. This has been so much the case that Burmese writings dealing with matters of religion or philosophy are as full of Magadhi terms as European scientific phraseology is filled with classical terminology.

Since the 11th cent. there have been produced in Burma, in the Pāli language, great numbers of religious works, grammatical treatises, and dissertations on philosophy, which have attained a reputation far beyond the limits of Burma. They have been studied in Siam and perhaps not least in Ceylon itself.

The palm-leaf manuscripts spread so much that copies may be found both in Ceylon and in Siam, in any monastery which pretends to a respectable library; and of later years, when all the more noteworthy works of Burmese authorship have been printed at the local presses, Burmese treatises have become still more common.

The reputation is well deserved. The Burmese *bhikṣus*, since the days of the Pagân monarchy, have been noted, not merely for their study of the *Abhidhamma*, but for scholarly researches in the canons which deal with metaphysics and psychology. For centuries monks from Siam and from Ceylon have come to study in Burmese monasteries, which have always been rich in commentaries and exegeses on the *Abhidhamma* (*q.v.*). Only one specimen of this literature is to be read in any Western language. The *Dhamma-saṅgaṇi* was translated in the first few years of the 20th cent. by Mrs. Rhys Davids under the title of *Buddhist Manual of Psychological Ethics*. This introduction to Buddhist metaphysics is the shortest of the canonical works, but it is to be followed by a translation of the *Saṅgaha* by Mrs. Rhys Davids in collaboration with a Burmese scholar, Maung Shwe Zan Aung. A Pāli dictionary is also in process of production to take the place of Childers' dictionary, which has fallen far short of the knowledge and needs of the Western student of Pāli.

3. Religious education.—While the Buddhist monks of Burma have long been noted for their scholarship, the Buddhist people of Burma have been no less noted for their education. The percentage of literates among the men is almost as high as it is in Ireland, and is higher than the proportion in Italy. Burma has less than a third of the population of the Madras Presidency, yet the number of literate persons is very nearly the same. The census figures of 1901 are not nearly so favourable as those of 1891, because at the latter census a much higher proportion of hill peoples were enumerated, and, besides this, the number of natives of India in the country had largely increased. Still, even on this less favourable estimate it appears that, on an average, of every five persons in Burma one individual would have been found who could read and write. The proportion of literates is much higher in the rural districts, and especially in Upper Burma, than in the delta, where the number of illiterate immigrants from India is very considerable.

The credit for the superiority of the Burman is entirely due to the monastic schools. These have existed for centuries, much as they may be seen now in country places. If the *śrāmanas* had done nothing else, they would deserve honour for the way in which they instruct the boys of the country. The theory of Buddhism is essentially selfish, or at any rate it encourages selfishness. Each individual must work out his own salvation, and no one else can help him, except by example, just as the Buddha is a model not only for the people, but for the *bhikṣu* himself. There are no regular services held by the mendicants; no preaching of sermons at stated times; no assembling of congregations; no religious forms for burials, or births, least of all for marriages. Some energetic and zealous monks do read homilies and deliver sermons, but there is no need for them to do so, and there is no summoning of the religious to attend. The one religious ceremony is the admission of the novice to the Order, when the postulant has completed his studies, has decided to put off the world and join the company of the *samanera*, and this is really a continuation of the teaching of the youth of the country. It enables the creature to become a human being, for no Burman can claim to have attained humanity until he has put on the yellow robe, and the ceremony of initiation is intended merely to provide that no one defective mentally or physically shall enter the Noble Order.

At the age of eight or nine every Burman boy goes to the monastery school, except in the towns, where the people are degenerate, and, as often as not, are half-Chinese, half Muhammadan, half-Hindu, or half-English, and go to the Government or Mission schools. In the country villages—and the Burman is not a lover of towns, but essentially a tiller of the soil—it may be taken for certain that every one sends his boys to the monastery. There they begin by learning the alphabet, shouting out the letters at the top of their voices, and copying them out with steatite pencils from the roughly made black wooden board on which the teacher-monk has written them.

As soon as the boy has learnt his alphabet thoroughly he is started on his first text. This is practically always the *Mingala-thut* (*Miṅgala Sutta*), which may be translated, 'the Buddhist Beatitudes.' It is made up of twelve Pāli versicles, with a short introductory preface. In the version given to the schoolboy each Pāli word has its Burmese equivalent. This is learnt ploddingly word by word, and verse by verse, and the pupil is not considered to have mastered it till he can repeat the text and its translation without blundering or hesitation of any kind. After this the meaning is taken up word by word and stanza by stanza, and the whole is explained in simple language. The choice of this poem is a most admirable one, for the Pāli is exceedingly simple, and the sentiments are of the most elevating kind. After the text and its meaning have been thoroughly learned, the easiest rules of grammar in connexion with the *Mingala-thut* are explained. Time is of no object to the monk or the boy, or to the Burman of any age or position; and the study of 'the Beatitudes' in many cases takes a year, more or less, according to the application and the intelligence of the pupil. But when he does know the text, he knows it thoroughly.

The second text taken up is generally the *Nāma-kāra* of Buddhaghoṣa, which is a short lyric, composed in a moment of inspiration by that apostle. A small treatise giving a list and description of the most excellent things is often studied instead of the *Nāma-kāra*. These are: the Nine Excellences of the Buddha; the Six Excellences of the Law; and the Nine Excellences of the Assembly of the Perfect. This also is in verse, as indeed is the case with by far the greater part of the literature not merely of Burma, but of the rest of Indo-China and of India. By the time the monastery schoolboy has got through the *Miṅgala-thut*, the *Nāma-kāra*, and the Book of the Excellent Characteristics of the Church and its Founder, he has acquired considerable proficiency in both reading and writing, and he is able to go on to the study of the works of Shin Silavamsa, Shin Ratthasara, and others of the poetical composers of the Burmese classics. These are the most noted writers, and it is only after he has mastered them that the young Burman student begins to read the Ten Great *Zats*, the descriptions of the *avatāras* of the Buddha, which are in prose. It is with these prose works that the Western student usually begins his Pāli reading.

But the monastic scholar does not merely read these easier poetical works. Step by step he continues his grammatical studies with them, and the meaning of the text, and its applications to the Buddhist religion, are exhaustively explained to him by his bedesman teacher. From the very beginning the boy is taught, with many illustrative examples and stories from the Scriptures and from the Commentaries, to shun evil in thought as much as in deed, because it is an obstacle to progress towards a higher form of life, and final emancipation from the sorrow of earthly existence. He is taught to be upright and pure, not in the hope of escaping punishment, but because of the peace of mind which rewards him. He is taught to reverence parents, wife, children, and teachers; and, above all, the duties which every Buddhist owes to the Lord, the Law, and the Assembly are impressed upon him. He is in fact educated in everything that a proper citizen owes to his country, to society, and to himself. The theory is excellent, and the education of the monasteries far surpasses the instruction of the Anglo-vernacular schools from every point of view, except that of immediate success in life and the obtaining of a

post under Government. At the time when the boy is at his most impressionable stage, his mind is built up, instead of being buried in a mass of ill-digested information; and his heart is being trained instead of being ignored.

A boy whose parents can permit him to stay on in the monastery, and are willing that he should learn the literature of his country, instead of the science and wisdom of the Western nations, now passes on to the *Pareittam*, the *Lawkaniti*, the *Dhammaniti*, and the *Rajaniti*. The *Pāreittam*, or Book of Protection, is a collection of excerpts in prose and verse from the *Tripiṭakas*, each of which is supposed to be a safeguard against some calamity or danger: against evil spirits, plague, pestilence, and famine, fire, battle, and murder, snake-bite, and even against poison. The *Lawkaniti* teaches him worldly wisdom; the *Dhammaniti* gives further moral instruction; and the *Rajaniti* is a work like *The Prince* of Macchiavelli, compiled, to suit Oriental ethics, by the sage Chaṇakya.

Many pupils stop far short of this. In the old days all parents who could afford to keep their son idle let him proceed as far as this if he had the necessary intelligence and industry. At this point, however, ordinary teaching ended. If the pupil continued his studies, it was usually as a *samanera*, or novice. The boy was dressed up in princely robes to recall Siddartha's renunciation of the world. He made the tour of the town or village in jubilant procession, with troops of gaily dressed maidens. He bade farewell to parents, relatives, and friends, entered the monastery, and went through the customary examination before the head of the community. Then his head was shaved. He was robed in the yellow monkish garments, had the begging bowl hung round his neck, and fell in among the body of the mendicants. He received his religious name, which he kept for the rest of his life if he remained in the Order, and remembered only as an incident if he went back to secular life.

The old-fashioned rule was that every youth should spend three Lents (roughly from July to October) in the monastery and conform to all its rules, including fasting after noontide and going the begging round in the morning. One Lent was for the father, one for the mother, and one for the *samanera* himself. To spend less than one entire Lent was considered hardly decent. Western influences, however, have taught many that life is not long enough for this, and the Lent is often cut down to a month, a week, or even a few days. Three days is considered the shortest period that is respectable. The novices, of course, go on with their studies. The code of the *Vinaya*, the Buddhist *Ancren Riwle*, the doctrine taught in the *Dighanikāya*, and, finally, the psychological ethics of the *Abhidhamma*, are as much as the most apt are able to study before they are qualified for formal admission to the Order.

The Southern school of Buddhism has never recognized a hierarchy. There is nothing like the system of Tibet, which is so surprisingly like that of the Church of Rome, even to the practice of the confessional and the recognition of purgatory. The need for unity and the requirements of church discipline, however, call for some sort of grading, and a system of classes is recognized, which is very much the same as existed in the time of the Buddha himself.

There is, firstly, the *shin*, the novice, or *samanera*, who is not a professed member of the Order; secondly, the *upasin*, who, after the prescribed time, has been formally admitted to the Order, and becomes a *śrāmana* or *bhikṣu*; and thirdly, the *pōngyi*, or 'great glory,' who, by virtue of not less than ten years' stay in the monastery, has proved his steadfastness, and becomes a *thera*. In actual practice there is a slightly extended system of grades: first, the *shin*, or postulant; second, the *pyitshin*, the full member of the Order; third, the *saya*, the head of the monastery, who never has fewer than ten Lents; fourth, the *gaingōk*, whose control extends over groups of monasteries; and fifth, the *sadaw*, who might be compared to a vicar-general. The *thathanapaing*, or Grand Superior of the Order, in the time of the Burmese monarchy, was appointed from among the *sadaws*, and had a council, called the *thudhamma*, varying in number from eight to twelve. In 1904 the British Government recognized in formal darbar a *thathanapaing*, chosen by the *sadaws*, and gave him a formal patent, and it is probable that this course will be followed in the future.

Notwithstanding these ranks, however, the religion is eminently republican in character. The monasteries are open to all,—to the peasant and to the highest dignitary,—and the longest stayer has the greatest honour. Rank counts by number of Lents spent in the monastery, no matter whether the *bhikṣu* is a provincial or merely a wandering friar, and individual dignity releases no one from the duty of the daily begging round. Nothing except the frailty of age excuses the most learned and famous *sadaw* from the morning round. The bedesman's robes are the same for the postulant and the member of the *thudhamma*. The monk has no obligation to bestir himself on behalf of his fellow-monks or the laity. He is not called upon to convert the unbeliever or to reassure the doubter. All he has to do is to work out his own salvation. But he teaches the youth of the country, and this binds the entire population to his support. He not merely teaches them letters, but forms their mind and character. The nightly vespers, when the lauds are chanted and all bow three times before the figure of the Buddha, and three times before the head of the monastery, are more impressive than the most eloquent sermon would be.

4. Schism.—There is very little non-conformity, to say nothing of heresies, among the Burmese Buddhists. For years there were bitter disputes as to ordination, after Anawrahta had established Hinayanism in Pagān. Chapada, the monk, had received the *upasampada* ordination from the *theras* of the Mahāvihara in Ceylon, and he loftily denied the validity of the orders conferred on the Burmese religious of the old school, called the *Marammu-samgha*, not less than those of Purima Bhikku Samgha, who claimed apostolic sanction from Sona and Uttara, said to have been sent forth by King Aśoka. These bickerings ended only with the destruction of Pagān itself, and they have never since been revived.

The sects of modern times have mostly risen out of revolt against excessive austerity, or as a protest against reprehensible laxity. There are a few communities, called *Sawtis* or *Mans*, who are anti-clericals. They neither reverence the mendicants nor support the monasteries, and some do not even worship before the pagodas, but recite their prayers in the open fields instead. The doxologies which they use are the same as those repeated by the ordinary orthodox Buddhists, and the schism is unimportant. The disputes between the *Mahāgandis* and the *Sulagandis* are simply the sempiternal quarrel between the ascetic and the weak of flesh, between the High Churchman and the Low, the Catholic and the Puritan, the emotional and the austere. These differences have some dignity imparted to them by the assertion of the *Mahāgandis* that man is endowed with free will. This the *Sulagandis* deny, claiming that a man's whole life is controlled entirely by *kan* (*karma*), the influence of past good and evil deeds on existences to come. The *Sulagandis* attribute all importance to the intention; the *Mahāgandis* think that action is sufficient and the intention immaterial.

5. Spirit-worship.—But doctrinal schisms are insignificant compared with the undoubted fact that all Burmese Buddhism is tainted with spirit-worship. The Southern form of the faith triumphed, but the Northern belief in magic and devil-worship has left lasting traces on the religion of Burma, and still more on the Buddhism of the Shan States. It is not merely that they recognize the Twelve Guardian Spirits, whom they have borrowed from the Hindus. The *nats*, the spirits of the air, the flood, and the fell, are much more present influences to the Burman than the calm, philosophic model of the Buddha. The *nats* are constantly consulted and propitiated. The Buddha is, as a rule, directly addressed only on worship days. Spirit-trees sometimes intrude into the limits of the monastic grounds, and spirit-shrines are to be seen in the shadow of the pagoda, and have as many offerings as the relic-shrine. And the spirits, as always, are malignant, and have to be propitiated. The World-Renowned One is long-suffering and benign. Moreover, he is only a model. The spirits are everywhere, and they are malicious, and constantly active. So the Burman does his best to serve both, and has the greater bias towards the spirits.

There is a pagoda at, or near, every village in the

country, and probably also a monastery, but there is a spirit-shrine in every house, and the spirits are consulted before houses are built, marriages made, bargains struck, or journeys begun. In the times of native rule, spirit-feasts were formally recognized by the State, and the ritual was very carefully set forth in lengthy treatises. Moreover, there is a precise list of 'The Thirty-seven *Nats* (spirits) of Burma,' with forms of the odes to be sung to them, the dances to be performed before them, the vestments to be worn on the occasion, and the life histories of these anthropomorphic deities.

All this is written at length in the *Mahāgita Medani*, and presentments of the Thirty-seven *Nats* are to be seen in the curtilage and enclosure of the Shwēzigōn pagoda at Pagān. Further details of spirit-worship are to be found in the *Deitton*, of which a summary is given in Father Sangermano's *Burmese Empire* (1833).

Notwithstanding all this, the Burman would be greatly offended if he were called a spirit-worshipper, and genuinely believes himself to be a most orthodox Buddhist.

The census of 1901 showed that there were 15,371 monasteries in Burma. This gives an average of over two for each village and town in the province, and implies one monastery for every ninety-three houses. In these religious houses there were 46,278 fully ordained monks and probationers, and 45,369 acolytes, wearing the yellow robe. There were thus more than 91,500 wearing the bedesman's robes, and this represents 2½ per cent of the male population of Burma. Perhaps Burma is not so conspicuously the centre of Buddhist religious life and learning in Indo-China as it was in the time of the Pagān dynasty, from the 10th to the 13th century. In those days fraternities came to Pagān from Ceylon, then called Sihaldīpa; from the conquered Haṁsavatī (Pegu); from Ayuttara (Siam); from Kampoja (the Shan States); from Nepāl, and from China; and each sect or fraternity had separate quarters given in which it could live. But even now, notwithstanding the spirit-worshipping taint, Burma can claim to maintain Buddhism in a form nearer that of the Buddha's teaching than any other country.

6. Buddhist architecture.—(*a*) *Monasteries.*—The Burmese monastery never varies in design. Some few may be built of bricks; most are of timber. In very poor neighbourhoods, they may be of bamboo, but the ground plan is always the same. The *pōngyī-kyaung* so strongly resembles the wooden temples of Nepāl that it can hardly be doubted that the model came from there, or that both have a common origin. The whole building stands on piles, and there are technically only two rooms (if they can be called rooms). In some cases there may be partitions, but there are never any doors, so that the whole interior is practically one hall. A staircase, generally of brick and stucco, frequently embellished with dragons, leads up to the verandah. The verandah, called *zingyan*, is open to the sky, and runs round three sides of the building, and from this there is free entrance on all three sides to the main body of the monastery, which is really one big chamber. The flooring rises in steps. There is one grade from the verandah to the outer chamber, where lay visitors find their place; another step up marks the entrance to the inner chamber, where the monks sit; and a third rises to the structure, always on the eastern side of the building, where the image of Gautama Buddha is enthroned. Over this is built the tiered spire, called the *pyathat*, shooting up in regularly diminishing, super-imposed roofs to the *hti*, or umbrella, which is placed on the top. Both the spire and the umbrella are marks of sanctity, and the spire has three, five, or seven roofs, according to the dignity of the *pōngyī-kyaung*, or rather of its head. The wood for a monastery is always chosen from the best and most seasoned logs available, or within the means of the pious founder. Sometimes these are excessively large. At the south-west corner there is a chamber, which is used as a store-room. On the west side there is another, which the younger members of the community use as a dormitory. The head of the house, whether *sadaw*, *gaingōk*, or plain *pōngyī*, sleeps at the south-east corner of the building, that is to say in the part closest to the *hpaya-kyaung*, where the image of the Buddha is. The north-eastern part is used as the schoolroom and for the reception of visitors, and has the appearance of a separate room, but is not really so.

Outwardly the monastery looks as if it had several storeys, but this is never the case. The national, and still more the religious, feeling against having any one's feet above the indweller's head is very strong. The outside line is broken up into apparent pavilions, with a profusion of gabled roofs, culminating in the eastern spire, all adorned with carvings, lavished on gables, ridges, eaves, finials, and balustrades, greater or less, according to the wealth of the founder. No monk, it may be remarked, can build a monastery for himself, nor can he ask to have one built for his accommodation. The monasteries are the only national buildings, now that there is no palace, which make any attempt at ornamentation.

A *pōngyī-kyaung* is never, at any rate when it is first built, inside a village or a town. Dwellings may spring up around it later, but always at a considerable distance. The monastery always has the best and quietest site, and stands in a spacious compound, fenced in and planted with umbrageous trees and bamboos, and often with fruit trees, flowering shrubs, and rare and curious plants. The monastic library is invariably detached from the main building, to avoid danger from fire. Within a certain limit from the monastery fence, pillars mark out a boundary, inside which the taking of any kind of life is forbidden. All Buddhist visitors take off their shoes or sandals as soon as they enter the *hparawaing*, as the monastic curtilage is called, and carry them to the foot of the staircase, where they are left until the visit is over. Inside the monastery compound, but perhaps more frequently on a site of its own, is the *thein*, where monks are admitted to the holy Order. This is seldom more than a spire, rising over a lofty pillared space for the ceremony.

(*b*) *Pagodas.* — The characteristic pagoda of Burma is a solid pyramidal relic-shrine, such as is called a tope or a *stūpa* in India. The masonry temples are almost entirely confined to Pagān. The Arakan temple, the Mahāmyatmuni of the suburbs of Mandalay, is almost the only notable example outside of that ruined city.

Pagoda is almost certainly a metathesis for *dagoba*. The Burmese name is *zedi* or *hpaya*. The Burmese recognize four kinds of *zedi*: first, *dat-daw zedi*, containing relics of a Buddha or of a *rahanda*; second, *paribawga zedi*, erected over the clothing or utensils of a Buddha or of a sainted personage; third, *dhamma zedi*, built over sacred books or texts; and fourth, *udeiksa zedi*, containing images of the Buddha or models of sacred buildings. The last two classes are naturally by far the most numerous.

It is the desire of every Burman Buddhist to be known as the founder of a pagoda, and sacred texts and facsimiles of noted shrines are obviously more easily obtained than relics, or even exact models of relics. The vast majority of *zedis* are of brick, covered over with stucco, and white-washed at intervals during the founder's life-time. Very rich men gild either the whole shrine or the spire.

Many of the most famous shrines, notably the Shwēdagōn in Rangoon, have been cased and re-cased and cased again many times. The original shrine was of quite modest dimen-

sions, and a tunnel, which was driven into the centre of the Rangoon *zedi* at the time of the First Burmese War, showed that it had been enlarged in this way seven times. The original pagoda is thought to have been only twenty-seven feet high and to have been erected in 585 B.C. The present spire rises to a height of three hundred and sixty-five feet.

The modern Burmese pagoda is undoubtedly the lineal descendant of the ancient Buddhist *stūpas* of India, and the development of the type can therefore be traced for a period of over two thousand years. The oldest forms were massive and simple. The modern ones have fined away into slender spires, and have added a great deal, in the way of exterior adornment. They have gained in elegance, but have lost in grandeur.

All the more notable pagodas have palm-leaf *thamaings*, or chronicles, very often containing much that is of interest in secular history. Like the monasteries, they all stand on a wide open platform, and on this there are built numbers of smaller pagodas, shrines, rest-houses, *tazaung pyathats*, crowded with tier upon tier of images of the Buddha, altars for offerings, and *tagondaings*, flag-staffs crowned with umbrella *htis*, metal caps, or figures of heraldic creatures. The approaches to the pagodas in very many cases are along covered ways called *saungdan*, the sides of which are adorned with fresco paintings, and the stairways are mostly in groups of steps of uneven numbers, just as, according to immemorial rule, the stair to a monastery must have an odd number of steps.

Pagodas, as far as structure is concerned, are divided into four distinct parts. There is first the terrace. This is square, and is usually of brick or mason work. At the corners are often found the *manōtthiha*, the curious, human-faced lions, with one head and two bodies, embellished with wings. They inevitably recall the ancient winged lions of Assyria. Upon this terrace stands the plinth, usually of an elaborate polygonal form, and with a boldly moulded, stepped contour. Above this rises the bell-shaped body of the pagoda, divided into an upper and a lower part by an ornamental band. Upon this stands the spire, which is made up of a number of rings: a lotus-leaf belt, with a bead moulding in the centre, and lotus leaves fringing it above and below. The spire ends in a spike-shaped cone, which is finished off with the metal-work crown, or *hti*. This is usually very graceful in design, made of open metal-work, very commonly gilt, and always hung with bells, sometimes of gold and silver and studded with gems. The Burmese divide important pagodas into twelve parts, most of which are symbolical subdivisions of the spire portion of the *zedi*.

The symbolical meaning of the different parts of the pagoda is not universally recognized by the Burmese, but it is a favourite subject of discourse with many monks, and seems to have come to Burma from the Shan States and perhaps from China. According to this view, the four-sided base is intended to represent the dwellings of the four great world-kings, 'Chaturlokapālas,' whose figures are enthroned within the four arched shrines, and who act as guardian spirits of the world. The eight-sided centre, called *shittaung*, is the *tuṣita* heaven. It is here that Arimadeya or Maitreya, the Buddha of the next world-cycle, dwells, and with him are all the other Bodhisattvas, or Buddhas in embryo, awaiting the season when they will descend to the earth as Buddhas. The upper bell-shaped portion, above the circular moulding, called the *kyiwaing*, is intended to represent the highest heaven, where the Buddhas go after they have attained to complete enlightenment and have fulfilled their high mission. This is called the *kaunglaungbōn*. Another symbolization represents the five diminishing terraces of the base, to stand for Mount Meru in its five-fold division; or a triple basement recalling the three worlds of *kāmaloka* (sense), *rūpaloka* (form), and *arūpaloka* (shapelessness), the Benign One, called *Tilokamahita*, being 'the revered of the three worlds.'

(*c*) *Temples*.—The masonry temples of Pagān are not nearly so characteristic of the country, though they are the pride of Burma. They are absolutely different from the national *zedi*, and the general details may almost all be traced to Indian art, but at the same time there are notable originalities. The arches and vaults resting on their pilasters, with cornice, capital, and base, are quite foreign to Hindu architecture, and suggest rather the Bactrian Greeks of the time of Milinda. In one sense, therefore, they are Burmese, for nothing like them is to be found anywhere else. Unlike the pagodas, the purpose of these temples is to contain, not relics, but huge images of the Buddha. This naturally affects their plan, and instead of rising in bell-shape they are constructed in gradually diminishing terraces, and are only capped by a spire of the type of the ordinary Hindu *śivālaya*, or perhaps more like the Jain temples of Northern India. The Thapinyu temple has only one shrine, directly below the *sikra*, to receive the image, but the Ananda has four, with presentments of all four Buddhas of this world-cycle, fronting to the four cardinal points of the compass. A striking feature is the narrow slit windows, so placed that a shaft of light falls full on the placid features of the Buddha.

Such temples have always been rare in Buddhist countries, and are foreign to the idea of Buddhism, which does not recognize idol-worship. The only example existing in India is that of the Mahābawdi at Bodh Gayā, in the charge of Hindu *mahants*. A model of it may be seen at Pagān, and the original is believed to date from about A.D. 500, when Mahāyānism was the form of North Indian Buddhism. There is no similarity between the Mahābawdi and any of the Pagān temples. Of late years a fashion has sprung up, especially in the Shan States, of building temples of this kind, on the model of the Mahāmyatmuni in Mandalay—the Arakan pagoda of the tourist, and presumably 'the old Moulmein Pagoda' of Rudyard Kipling.

(*d*) *Images*.—It seems clearly established that the making of images of the World-Renowned One did not appear in Buddhism until some time after the beginning of the Christian era. They are extraordinarily abundant in Burma now. Only three forms are recognized: seated images, figures standing erect, and recumbent images, called by the Burmese respectively *tinbinkwe*, *mayat-daw*, and *shinbin tha-lyaung*. They represent the Buddha in the act of meditation under the Bo-tree, where he attained to supreme wisdom; in the act of preaching; and after death, when he had attained to the blissful calm of *nirvāṇa*. The seated form is by far the most common. In the Eastern Shan States, in the Lao country, and in Siam, figures which suggest the worship of Indra are not uncommonly found and suggest Mahāyānism. So also do the images, enthroned in vaults, under the bell-shaped pagodas, which are not uncommon in the Shan States, but are rarely, if ever, found in Burma.

ii. ASSAM.—The Buddhism of Assam is fast disappearing. At the time of the census of 1901 there were only 9065 Buddhists in the country, that is to say, no more than ·16 of the population. At one time they held the whole, or at any rate the whole of the Brahmaputra area, which is the main portion, of Assam. The rest, even to the present day, is inhabited by hill tribes: Chingpaws, Nagas, Mishmis, and the like. In the early part of the 13th cent. the Tais invaded and occupied the country. They gave themselves, or were given, the name of *Āhoms*, from which the name Assam is derived. The Shans called it *Wehsali-lōng*, and the Buddhistical name of the province is *Weisali*. The invaders were an army sent by Hsö Hkan-hpa, the Tai king, who founded the Möng Mao empire, which may not impossibly have been the 'kingdom of Pong.' They settled on two long islands, formed by branches of the Brahmaputra, and never returned to their Shan homes. Gradually they occupied the whole of the valley, or main part of Assam, and established Buddhism everywhere except in the hills. For four hundred years they maintained themselves and Buddhism, and then in 1611 their ruler Chu-cheng-hpa (an essentially Tai name) was converted to Hinduism, and practically the whole of his subjects followed his example.

At the present day the *Kalitas*, as the monks of the Ahoms were called, are found in only a few remote recesses of Assam, and it seems probable that even these will disappear before long, and with them Assamese Buddhism. All that will remain will be the Mongolian features which characterize a considerable proportion of the inhabitants of Assam. The Tai language is almost as much changed, where it is used at all, as the religion of the country. The few pagodas, fast crumbling away, are of the same type as the pagodas of Burma and of the Shan States, and none has any special celebrity. The monasteries of the Kalitas seem to be of the immemorial type of the Buddhist monastic buildings, which, some say, reproduce the traditional forms of ancient wooden architecture in India, Assyria, and parts of Central Asia. They may represent to us the wooden palaces of Nineveh, and hint at the architecture of King Solomon's temple, built of the cedars of Lebanon.

Buddhism has never been a propagandist religion among the Eastern peoples who have adopted it. In quite recent times, however, the faith has been adopted, chiefly in Burma, by Europeans of zeal, education, and energy, who are writing and preaching its merits and beauties. It is possible that they may revive Buddhism in Assam and plant it elsewhere, but it does not seem very probable.

BUSHNELL.—**1. Life.**—Horace Bushnell was born on April 14th, 1802, in Litchfield, Connecticut, U.S.A. His father, Ensign Bushnell, came of a family with a Huguenot strain of mental alertness and religious sincerity. His mother, Dotha (*née* Bishop), had been brought up in the Episcopal Church. When the family removed to New Preston, Connecticut, in 1805, they joined the Congregational Church there. The mingling of religious traditions in his home saved Horace from being brought up in the strict and arid Calvinism of the time. He described his mother as 'rising even to a kind of sublimity in the attribute of discretion.' There was no atmosphere of 'artificial pious consciousness in the home, but stress was laid on industry, order, time, fidelity, reverence, neatness, truth, intelligence, prayer.' In this way he experienced the meaning of 'Christian nurture' before he attempted to interpret it as a theory of the beginning of the religious life. Similarly, his practical education in household duties is described in the lecture on the 'Age of Homespun,' in his book, *Work and Play* (1864).

He entered Yale College in 1823, when he was 21 years old, and, having graduated, became Tutor in Law in 1829. He threw off his doubts and hesitations in a College revival. His own account was: 'When the preacher touches the Trinity and logic shatters it all to pieces, I am all at the four winds; but I am glad I have a heart as well as a head. My heart wants the Father; my heart wants the Son; my heart wants the Holy Ghost, and one just as much as the other' (Cheney, p. 56).

In 1831 he took leave of his pupils, telling them as his parting advice: 'Be perfectly honest in forming all your opinions and principles of action; never swerve in conduct from your honest conviction. If between them both you go over Niagara, go' (*ib.* p. 62).

He was ordained pastor of the North Church in Hartford in 1833. In the same year (13th Sept.) he was married to Mary Apthorp, a lineal descendent of John Davenport, the first minister of New Haven.

The main part of his life was passed in Hartford, where his public service to the town is kept in memory by the Bushnell Park. The important events of his life were the publication of his books challenging the dogmas held by the Churches of the 'standing order' (*i.e.* the original Congregational Churches of New England), the replies made to his challenge, and the public and private consequences of his views. He was a keen but sweet-tempered controversialist, and without bitterness accepted what came. He had four children, of whom two, a daughter and a son, died. Two daughters, to whom he wrote some delightful letters, survived him. Other events were his holidays in search of health, some of which were spent in California and in Europe, and his invitations to important lectureships and appointments. He lived 'till all men were at peace with him,' and died at the age of 74, on 17th Feb. 1876.

2. Theology.—Bushnell's life work was largely determined by the theological atmosphere in which he found himself. In his own Church there was an old and a new school, and he found himself 'daintily inserted between an acid and an alkali, having it for his task both to keep them apart and to save himself from being bitten by one or devoured by the other.'

The religious atmosphere of New England was still more heavily charged with theological animus. Bellamy, Hopkins, Emmons, the younger Edwards, Dwight, and Taylor were engaged nominally in making improvements on the Calvinism of Jonathan Edwards, really in trying to accommodate that system to the pressure of modern thought by introducing, in various degrees, a leaven of pantheism. In 1828, Dr. W. N. Taylor of New Haven had made an unqualified assertion of the self-determining power of the will. Bushnell brought into this environment both a fresh and vigorous personality and a new method. He was a builder, but on a new foundation, rejecting fundamentally the syllogisms of Calvinism, and endeavouring to interpret rationally the religious experience of the Christian heart.

Outlined against the theological background of New England Calvinistic theology, Bushnell's work may be described as the work of a mediator between old and dualistic, and new and monistic schemes of Divine and human relations.

His eye is always on the Christian experience of spiritual things. If it be the nature of religion to deal with the things of the Spirit, Bushnell makes his impression by keeping close to nature. He is deferential to tradition but not bound by it, and frankly distrustful of all dogmatic definitions, as creating more difficulties than they allay. Although strenuously critical of the theologies which he found in possession, his aim was always constructive, and in intention comprehensive.

(1) In *Christian Nurture* (1847) he criticized the revivalism which had become the popular method of recruiting the Church. He recognized that the revival movement had displaced an era of formality and brought in the demand for a genuinely supernatural experience. His criticism was that it

makes nothing of the family and the Church—organic powers which God has constituted as channels of grace. His thesis is that the child is to grow up a Christian, and never know himself as being otherwise. He repudiates baptismal regeneration as a superstition, but finds a reason for infant baptism in the organic unity of the parents with their child, 'who is taken to be regenerate presumptively on the ground of his known connexion with his parents' character, and with the Divine or church life which is the life of that character.' His conception of Christian nurture begins with a kind of ante-natal nurture, and he looks to the Church to possess the world by the 'out-populating power of the Christian stock.' The plea contained in the book is as one-sided in its emphasis as the religion—beginning in an explosion and ending in a torpor—against which he protests. But Bushnell gave a great truth—the law of Christian growth—which has never been better expressed, a home in New England Churches. The materials for a complete synthesis between him and his opponents are only now slowly accumulating in the work of religious psychologists and in the comparative study of historic religions.

(2) The second challenge to current conceptions was an interpretation of the doctrine of the Trinity intended to get rid of a form of statement which could be criticized as tritheistic. He found a convenient instrument for his task in his theory of language, which is described in 'A Dissertation on the Nature of Language as related to Thought and Spirit,' and forms the introduction to the volume *God in Christ* (1849). He regards language as essentially symbolic and pictorial, relative to the subject rather than to the object, and therefore argues that the doctrine of the Trinity might be true for man and yet not give him real information as to the inner nature of the Godhead.

God in Christ was an outcome of 'a personal discovery of Christ and of God as represented in Him.' The change was from faith into faith—a fuller sense of the freeness of God and the ease of approach to Him—and it was associated with an experience in sleep in which he 'saw the Gospel' (see Munger, p. 114). Coleridge, Madame Guyon, Upham, and Fénelon had much influenced him, and led him to a position which he believed could mediate between the old and the new schools of thought. He accepted invitations in one year to lecture in the Divinity School at Cambridge, which was Unitarian; in the Theological School at Andover, which stood by historical Christianity; and in the Divinity School in New Haven. The permanent value of Bushnell's contribution is his insistence that the Christian 'Trinity' is a result of the fact that the revelation of God to man is by historic process. He does not deny that the Persons of the Trinity have real existence in the Godhead. He is not to be classed as a Sabellian, though this charge was made against him. The revelation of God is, in fact, historical. It is only through relations, contrasts, actions, and reactions that we come into a knowledge of God. As the norm or ideal of the race, God will 'live Himself into the acquaintance and biographic history of the world.' Bushnell coins a phrase to express this, and speaks of an 'Instrumental Trinity,' and of the Persons as 'Instrumental Persons' (*God in Christ*, p. 175). In dealing with the Trinity his eye is on experience. He writes on the 'Christian Trinity a Practical Truth.' He maintains that the Trinity is necessary to satisfy the demands of the heart. On the other hand, he makes room for nothing that does not ally itself with experience.

This book led to an unsuccessful attempt to put the author on trial for heresy before the Association, or Associated Churches of the District. Bushnell replied to his critics in a series of brilliant and vigorous essays. In these he approaches more nearly to the historic Christian tradition by recognizing that the Trinity has immanent and permanent existence in the Godhead, but he still regards it as necessary only for purposes of revelation and expression.

(3) His third challenge to the prevailing orthodoxy was more directly in line with the first. In *Nature and the Supernatural* (1858) he challenged the view of miracles which regards them as a suspension of natural law. His object is to defend miracles by regarding them as not contrary to the fundamental constitution and laws of the universe, but as exceptional illustrations of the continuous action of God immanent in the universe. He wishes 'to find a legitimate place for the supernatural in the system of God, and show it as a necessary part of the Divine system itself.' The world was made to include Christianity. The coming of God in Christ is part of its proper and complete order; all the appointments, events, and experiences of human history are consummated in this revelation of God; and in this the final cause of the world's creation is revealed. Miracles belong to the revelation of this higher and final order. It was an essential development of Bushnell's teaching, that religion is man's ascent into the sphere of the liberty of the children of God. On the other hand, he gets rid of the idea of miracle as an infringement of law, by including miracle under law, and naming the law supernatural. What ordinarily prevents man from entering into this freedom is not human nature as such, but sin. 'There is no hope for man or human society, under sin, save in the supernatural interposition of God' (p. 250). In the chapter on 'Miracles and Spiritual Gifts not Discontinued,' he accepts the full logical consequences of his position. Criticism attacked him as a 'demolisher of nature,' but no criticism has invalidated his position as bringing the principle and law of miracles within the sphere of rational statement.

His work on the Atonement (*Vicarious Sacrifice*, 1865, cf. *Forgiveness and Law*, 1874) is noticed elsewhere (see EXPIATION AND ATONEMENT [Chr.]). It is mentioned here only to call attention to its essential harmony with the rest of his work. His central position is that the Vicarious Sacrifice declares the supreme law of human life, and is grounded in principles of duty and right that are universal. 'It is not goodness over-good, and yielding a surplus of merit in that manner for us, but it is just as good as it ought to be, or as the highest right required it to be, a model in that view for us, and a power, if we can suffer it, of ingenerated life in us' (*Vicarious Sacrifice*, p. 32). As in parallel monistic systems of thought, Bushnell does not stop short of Patripassianism.

Apart from his work as a religious teacher, Bushnell made great and permanent contributions to sermonic literature, and to the analysis of the function and method of preaching. His sermons rank with F. W. Robertson's as an example of insight into moral law and the spiritual order. They surpass Robertson's in wealth of poetic imagery and the use of imaginative and rhetorical statement. His sermons and essays are still alive with the frank, vivid, personal perceptions of a man intensely alive, observant of everything he saw, and led step by step by the Divine Spirit into the categories required for registering his experience. His daughter said of him that 'he had no unrelated facts.' His scheme of religion was large enough to include public affairs of town, State, and nation, and to include all work which made for the

education of the whole man—music, art, economics, and politics. His excursions into these subjects led to his receiving invitations to leave the ministry for other spheres, such as that of President of the University of California. On his visit to San Francisco he did actually lay out the site for the present University buildings. But he felt rightly that his own work was central, and kept to it.

Bushnell's theological work has hardly received the attention it deserves in England. His books are well known in Scotland, and his ideas are the basis of the work of many subsequent New England teachers, such as Theodore Munger, George D. Gordon, Lyman Abbott, William Newton Clarke, and others. They were introduced into English religious thought by Alexander Mackennal and Charles Berry, but, owing to want of sufficient theological training, the representatives of the monistic tradition have strayed into pantheism.

DUGALD MACFADYEN.

BUSINESS.—**1.** 'Business' is a term used with several slight variations in meaning. Primarily it implies a man's occupation or employment, the labour by which he obtains his maintenance as contrasted with that which he expends upon pleasure. Thus the *Times* writes: 'Who and what are those 2000 athletes whose struggles we have been watching for the last two weeks? In the first place they are almost without exception business men, they are an integral part of the community that labour in their several countries.' Again, 'business' conveys the idea of attention to a man's affairs, his investments of capital or stock by the management of which, in factory, shop, or bank, he obtains his income. In Pr 22[29] we read, 'Seest thou a man diligent in his business? he shall stand before kings.'

'Business' is also used to indicate the legitimate employment of a man's powers, his right to act in certain affairs in contrast with action in other matters which would be deemed interference or meddling. St. Paul (1 Th 4[11]) advises his Christian disciples: 'Study to be quiet, and to do your own business, and to work with your own hands.'

2. Business, in the broad sense, then, implies systematic attention to those affairs and duties by which the necessaries and comforts of life are obtained, and by which the social organization is supported. It thus becomes co-extensive and practically coincident with the field of economic inquiry, *i.e.* the production, distribution, and exchange of wealth. Economic science has come to be regarded as 'a theory of business,' and the exposition of the principles which determine and regulate the making and sharing of wealth constitutes a scientific treatment of business, since these principles set forth the fundamental ideas and laws which underlie business phenomena and procedure.

In 1876, Walter Bagehot wrote in the *Fortnightly Review*: 'The science of political economy as we have it in England may be defined as the science of business, such as business is in large production and trading communities; it is an analysis of that world—the great commerce—by which England has become rich.' The financial and commercial policy of nations, *i.e.* their national and international business, is based on and embodies the economic ideas which prevail at the time. Of this the so-called Mercantilism of the 17th and 18th cents. is an example, and the change in policy effected in the 19th cent. by the writings of Adam Smith further illustrates the same fact.

For the purposes of investigation of the phenomena of business, economics, according to Bagehot, has created an abstract science, that is, one which detaches the peculiar phenomena or aspects of trade and considers them in a scientific manner in isolation. It assumes that men are actuated in business affairs only by motives of business; this is the hypothesis of the 'economic man,' which regards men in matters of business as acting only from motives of gain; in buying and selling they have only this one consideration, and the market is assumed to be composed of men animated by the same force. From this abstract treatment emerge the principles which mainly determine prices, rate of interest, rent, wage-values, etc.

That men are constituted entirely in this way no one suggests; it is purely an abstraction of one aspect of life, a mental separation of certain motives from other influences in order to ascertain what are the laws which operate in the conditions of the isolation of those motives. Just as in dealing with quantities the mathematician ignores other attributes and seeks to ascertain mathematical relations, and as the physicist endeavours to isolate his phenomena so as to learn the laws of electricity, light, and heat, so the hypothesis of the 'economic man' is an attempt to study separately the effects of conduct under such influences as constitute the economic or business attitude, in order to ascertain their tendencies. Of course these tendencies are modified and counteracted in actual life by the action of other forces; but scientific knowledge consists in ascertaining the laws of each force; the method is by isolation where possible, and the economist only follows scientific method in mentally separating certain phenomena for special study. Bagehot says: 'The history of a panic is the history of a confused conflict of many causes, and unless you know what sort of an effect each cause is likely to produce you cannot explain any part of what happens: it is trying to explain the bursting of a boiler without knowing the theory of steam.'

This hypothesis of the economic man has been much criticized, because it has been misunderstood. It has been thought that economists treated the concrete or real man in such a way as to ignore the nobler and moral elements. To such objectors the 'economic man' seemed to postulate a human race governed only by selfish considerations and a universal egoism. This is entirely a misapprehension: in the first place, in business most men are engaged in providing sustenance for their families; the industrious members of society are those who strive to be self-supporting, and these by taxes and voluntary aids help in supporting many of the less industrious. No motive of gratitude, sympathy, or charity is excluded by the fact that a man's industry in business gives him a larger means of expenditure.

Again, the science of economics advocates nothing; it only investigates and explains the manner in which certain business tendencies operate, it does not say what ought to be the case; its laws, as Marshall puts it, are in the *indicative*, not in the *imperative*. Economics deals, in fact, with those motives alone which are measurable and can be represented in terms of money-values. It is because business motives can be expressed by a common measure that explanations can be offered of the phenomena of business which can afford guidance and warning for the

future. Explanation and prediction are of the very essence of science, and it is in the economic rather than in the ethical aspects of conduct that approximate measurement is attainable.

Ricardo's Economics has been much assailed on account of his abstract method; succeeding economists have, however, sufficiently demonstrated both the use of the abstract method and the importance and necessity of inductive methods and historical investigation; modern Economics emphasizes equally the value of the abstract method and the collection of facts and statistics, and their joint application to the solution of social problems, in which also many other factors besides the economic have to be considered. This point need not here be further pursued; it is sufficient for the present purpose that the complexity of modern business has come to be recognized as a subject for scientific treatment. Principles of business, applicable alike to commerce, manufactures, transport, and public administration, can be discovered by investigation, and the varied forms of business are conducted with greater efficiency and profit by those who have made themselves acquainted with these principles and methods. Business becomes more sure, more serious, more dignified, when it is seen to be no mere matter of haphazard, rule of thumb, or personal genius, but a system capable of explanation and demonstration, and one which can be taught on scientific methods. There still remains scope for individual talent, industry, and that peculiar insight which contributes to personal success; but general education in business principles and methods contributes to public convenience, efficiency, and economy, just as scientific training does in engineering or in medicine.

3. The recognition of business as a subject for scientific treatment has taken a very practical form by its introduction into public education and University curricula. At Birmingham and the northern Universities, Faculties of Commerce have been established, in London University a Faculty of Economics. The object in all alike is the encouragement of the investigation of business phenomena and the systematic training of business men. As Professor Ashley stated in his address at Owen's College: 'The Academic teacher will interpret to the business world that world's own experience by his wider acquaintance with the field of inquiry than most men actually engaged in trade have time to acquire.'

These new Faculties, starting with Economics, comprise in their syllabuses the whole technique of commerce—the analysis of banking and the money market, the principles of transport in all its forms, industrial and commercial history, accounting, statistics, logic and scientific method, geography commercial and regional, an account of the British constitution, public administration imperial and local, industrial and commercial law, constitutional and international law and history, principles of insurance, etc. The curriculum is sufficiently wide to allow of specialization in its final courses; at the same time it is sufficiently broad to compel a general knowledge of all the important aspects of business life, and to secure a liberal training and intellectual discipline. Cambridge has not been slow to adopt the new idea, and has instituted a Tripos in Economics and the associated branches of Political Science. America and Germany have also made provision for commercial training in their schools and Universities.

The conclusion is that business is now regarded as offering a career similar to professional and scientific pursuits, and one demanding serious equipment and special training for success. Its scientific bases are established, its methods are formulated, and are capable of exposition and acquisition. It is now accepted that matters which touch so profoundly the well-being of men cannot be left to mere empirical methods, but that the highest efficiency and progress can be attained only by scientific treatment; thus business has come to rank as a University subject with a large and varied curriculum—a proceeding which at once adds to its dignity and importance while it tends to advance civilization and comfort.

G. ARMITAGE-SMITH.

BUTLER.—1. Life.—The greatest name among English philosophical theologians—Newman said 'the greatest name in the Anglican Church'—is that of Joseph Butler, the author of the *Analogy*. He was born of respectable Presbyterian parents at Wantage on 18th May 1692, and was at first destined for the Presbyterian ministry. To this end, he was educated at an academy for Nonconformist theological students, which enjoyed a deservedly high repute, carried on, first at Gloucester and afterwards at Tewkesbury, by a Mr. Samuel Jones. Here, among Butler's contemporaries, were several men who afterwards attained to eminent positions in Church and State. Secker, who became Archbishop of Canterbury, has described (in an interesting letter to Isaac Watts, 18th Nov. 1711) the severe and prolonged study which candidates for the ministry were there required to undertake. After some years, the young Butler felt that his intellectual and theological convictions called him to the service of the Established Church rather than to that of the Nonconformist bodies; and, with his father's consent, he matriculated at Oriel College, Oxford, on 17th March 1715. There was nothing remarkable, so far as we know, in his Oxford career.

'We are obliged,' he wrote to Dr. S. Clarke, 'to mis-spend so much time here in attending frivolous lectures and unintelligible disputations, that I am quite tired out with such a disagreeable way of trifling.'[1]

However, he took his degree in 1718, and in the same year was ordained deacon by Bp. Talbot at Salisbury, his ordination as priest following two months later. He was immediately appointed Preacher at the Rolls Chapel, where his famous series of Fifteen Sermons was preached. His first rectory was that of Haughton-le-Skerne, near Darlington, and in 1725 he was appointed to the wealthy benefice of Stanhope. Shortly after this he resigned the Rolls preachership; he became a prebendary of Rochester in 1733, and Clerk of the Closet to Queen Caroline in 1736. In this year he published *The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature*, the work by which he is best known.

Butler was a special favourite of the Queen, whose taste for learned conversation was indulged at her private parties, to which Butler was frequently bidden, in company with Hoadley, Secker, Sherlock, and other divines of the then fashionable latitudinarian school. An interesting account of Butler's conversation at this period is preserved in the *Journal* of John Byrom,[2] in which the future bishop is represented as urging the fallibility of Church authority in matters of religious belief. 'The Doctor,' says Byrom, 'talked with much mildness, and myself with too much impetuosity.'

Butler attended the Queen in her last moments, and she took occasion to charge the King with his advancement—a recommendation which led to his

[1] Letter to Clarke (*Works*, i. 332). References are given throughout to the edition of Butler's writings in two volumes, published by the writer of this article in 1900.

[2] Printed for the Chetham Society, 1854–56, vol. ii. p. 96: cf. also p. 486.

preferment to the see of Bristol, the poorest bishopric in England, in 1738. The dissatisfaction, plainly expressed, of the new bishop with the provision thus made for him, was allayed by the addition of the Deanery of St. Paul's, which he held *in commendam* while he remained at Bristol. That he was by no means a lover of money was, however, evident throughout his career; and his private charity was as splendid as it was unostentatious. While at Bristol, he published six remarkable sermons preached on public occasions, which give his views on great questions. Foreign Missions, Poor Relief, Hospitals, Primary Education, the Nature of Liberty, and the Genius of the British Constitution are their respective subjects;[1] and they are still worthy of study. It is interesting to observe the development of Butler's thought, as years went on, in the direction of a more definitely ecclesiastical position than that from which he started. Bred a Nonconformist, as we have seen, he became attracted to Anglicanism as a student. His earliest writings, the Letters to Clarke,[2] written when he was only 21 years of age, are occupied with the deepest and most abstract of all arguments, the *a priori* arguments for the Being of God. He passed on to review the foundations of morality in his ethical discourses at the Rolls; and the last of these, on 'The Ignorance of Man,' contains in germ the dominant thought of the *Analogy*. This great contribution to the Philosophy of Religion deals, indeed, in the Second Part, with topics peculiarly Christian; but there is little in Butler's treatment that was distinctive of his position as a member of the Church of England (unless the mention of a visible Church in *Anal.* ii. 1. 10 be taken to imply this). He does not mention the Sacraments at all, although the nature of his argument would readily admit of an application of it to Sacramental doctrine. But three years after the publication of the *Analogy*, we find him, as Bishop of Bristol, strenuously insisting on the prerogatives of his clergy; and John Wesley records in his *Diary* (August 1739) that Butler wished to prevent him from preaching in the diocese of Bristol. Butler's dread of extravagance and emotionalism was, no doubt, at the root of his objection to Wesley's ministrations; and it is necessary for a bishop to follow ecclesiastical precedent more closely than would be expected of a simple presbyter. But, for all that, the episode is significant. And Butler's charges to his clergy, both at Bristol[3] and at Durham,[4] are definitely assertive of the doctrines and practices of Anglicanism, in a degree for which the student of his earlier works is hardly prepared. It was said of him, indeed, both at Bristol and at Durham, that his proclivities were towards Roman Catholicism—a foolish calumny which hardly needed an answer.

Butler's wide views as to the needs and opportunities of the Church abroad were markedly illustrated by the proposals which he put forward in 1750 for the appointment of bishops to rule the clergy serving in North America.[5] His scheme came to nothing, as political difficulties were urged against it, and the Church in America remained without bishops of its own for a generation after Butler's death. But it was a remarkable illustration of his sagacity that he foresaw the necessities of the situation. In the same year (1750) he was translated to the see of Durham; but his work was nearly finished. He died at Bath on 16th June 1752, and was buried in Bristol Cathedral, where a monument with a fine inscription by Southey marks his grave. It has often been said that in 1747 he refused the Archbishopric of Canterbury, but the story is not sufficiently authenticated. Little is known of his capacity as a ruler of men; but both in regard to intellectual power and to sanctity of character he occupies a very high—perhaps the highest—place in the hierarchy of the Anglican Church.

2. **Writings.**—Butler's position as a moralist is defined in his *Fifteen Sermons* and in the *Dissertation on Virtue* appended to the *Analogy*. The ethical and political philosophy of Hobbes was fashionable in England during the first half of the eighteenth century, and it was mainly with the view of combating its conclusions, which Butler regarded as dangerous to public and private morals, that the *Sermons* were published. The first three are 'Upon Human Nature.' In Sermon i. he expounds the several constituent principles of human nature, of which self-love, benevolence, and conscience are regarded as primary. Its principal thesis—which is in direct conflict with Hobbes—is that

> 'there are as real and the same kind of indications in human nature, that we were made for society and to do good to our fellow-creatures; as that we were intended to take care of our own life and health and private good' (i. 5).

In Sermon ii. he argues for the *supremacy* of conscience, as the guide of man's higher nature, and he insists strongly on its superiority to the natural passions and instincts (a point which he found Shaftesbury to have neglected). This is further brought out in Sermon iii., where, the soul being compared to an organized constitution in which the inferior elements are subordinated to the superior, the obligation to virtue is expounded. 'Follow nature' is a reasonable rule, provided that it be recognized that the constitution of human nature is adapted to virtue as truly as the constitution of a watch is adapted to the measurement of time. The two sermons on 'Compassion' (v. and vi.) develop further his polemic against Hobbes. Not so directly controversial are the important discourses on 'Resentment' and the 'Forgiveness of Injuries' (viii. and ix.), in which the distinction between sudden anger (θυμός) and deliberate indignation against wrongdoing (ὀργή) is brought out, and the precept 'Love your enemies' is explained. Of much psychological interest are the sermons on 'Self-Deceit' (x.) and on 'Balaam' (vii.); and in those on the 'Love of our Neighbour' (xi. and xii.) there is a valuable account of the relation between pleasure and desire, where once again Hobbes' psychology provokes the discussion. It is a fundamental principle with Butler (as with most modern psychologists) that desire seeks its appropriate object directly, and that it is not aroused, as Hedonism would teach, by the anticipation of its own satisfaction.

> 'All particular appetites and passions are towards external things themselves, distinct from the pleasure arising from them' (xi. 6).

Thus Love of our Neighbour, or Benevolence, may be described as 'disinterested'; it is a natural principle which primarily seeks its own gratification. That indirectly it ministers to personal happiness does not rob it of its disinterested character, or afford any excuse for resolving it into self-love, as the school of Hobbes would do. From this, Butler is led on to treat of the 'Love of God' in two noble and almost eloquent discourses (xiii. and xiv.), in which, with Fénelon and the mystics of every age, he defends its 'disinterested' quality.

A part of his ethical system which has found many critics is his conception of the relation between self-love and conscience. Both, in his view, are 'superior' principles; and in his anxiety to recommend his system as reasonable to those who have been attracted by Hedonist doctrines, he allows much to prudence and self-love.

'So far as the interests of virtue depend upon the theory of it being secured from open scorn, so far its very being in the world depends upon its appearing to have no contrariety to private interest and self-love' (xi. 21).

And it is Butler's conviction, and it lies behind his whole argument, that under the control of a benevolent Providence conscience and self-love will, in the end and at last, be found always to have pointed the same way. But he recognizes (as every observer must) that cases arise in life in which the two do not give the same counsel for the guidance of personal conduct, and in which honesty does not appear to be the best policy, so far as the present world is concerned. In such cases there is no hesitation in his teaching as to the supremacy of conscience; and even if he permits or encourages the man who is thus perplexed to look forward to the equity of the future life, where the wrongs of the present will be redressed, he does not allow this to be the dominant motive of his action. His ethics are *intuitional*, not *utilitarian*, like those of Hobbes, and they are not stained by that taint of 'otherworldliness' which is manifest in the moral doctrines of Paley and his school.

Butler's fame rests more securely on his contribution to Christian Apologetic than upon his Ethics, and the *Analogy* has always been more widely read than the *Sermons*. The title of this famous work is self-explanatory. *The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature* falls into two parts, the first concerned with the analogy of 'Natural' Religion to what we know of Nature and her laws, and the second with the analogy of 'Revealed,' *i.e.* the Christian, Religion to the same model. His aim throughout is to present the reasonableness of religious belief to those who recognize a Supreme Author and Governor of the world, but who hesitate as to the religious doctrines of a Future Life, of Future Reward and Retribution, of the Moral Government of the world, of Miracles, of the Redemption of Christ, and so forth. He is not arguing the case of Theism against Atheism or Pantheism. He has, in his mind, the Deistical philosophy prevalent in England and France, which had not only affected minds hostile to religious influences, but had infected the teaching of professedly Christian theologians (see DEISM). In his early correspondence with Clarke, to which reference has been made above, he shows that he had pondered deeply the abstract and metaphysical arguments for the Being of God; but in the *Analogy* he is not directly concerned with these. John Toland (1670–1722) and Matthew Tindal (1656–1733) are the writers whom he has most clearly in view,[1] although he does not directly name them as he names his ethical opponent, Hobbes, in the *Sermons*. Their books, *Christianity not mysterious*, and *Christianity as old as the Creation*, were intended to rationalize the Christian system, and to show that the idea of revelation is a quite unnecessary element, while incidentally their tendency was to undermine the foundations of natural religion as well as of revealed, by urging the grave difficulties with which the theory of religion is beset. Butler's line of defence is bold and original. He takes as his text a saying of Origen, that

'he who believes the Scriptures to have proceeded from Him who is the Author of Nature, may well expect to find the same sort of difficulties in it as are found in the constitution of Nature' (*Introd.* 6);

and he urges that difficulties in the theory of religion, whether natural or revealed, cannot be regarded as insuperable by practical men, if similar difficulties remain unexplained in nature. His argument from analogy is mainly a negative one. He never claims that natural law may be discerned everywhere in the spiritual world; he does not pretend to offer a 'natural' analogue to *every* spiritual fact. But he urges that for many of the difficulties which Deists and their disciples find in religious theory natural analogies may be found, and that thus an answer is provided to those who rely on these difficulties as destructive of belief. Probability is, for men, the guide of life; and exact demonstration of the purposes of the Eternal is hardly to be expected by those who recognize man's ignorance and the Divine Infinitude.

The opening chapter of the *Analogy* upon 'A Future Life' is, perhaps, the least convincing, as it seems to suggest a materialistic doctrine of the soul which is incredible. But Butler's argument does not necessarily involve this. We do not know, he urges, that the soul is extended in space and consequently 'discerptible,' and hence we cannot infer its destruction or the cessation of its activities from the analogy of bodily dissolution. He does not venture to argue positively from the immateriality of the soul to its immortality, as many of his metaphysical predecessors had done. Chapter ii. is concerned with the rewards and punishments of a future state, and he urges the analogy between what religion teaches about these and what experience teaches us about the temporal punishments of this present life. The Moral Government of the world is next passed under review (ch. iii.); if a perfect moral administration is not to be observed now, yet its *beginnings* may be traced, the natural tendency of virtue seems to be in the direction of happiness, and it may be reasonably expected that this tendency will hereafter be actualized in a perfect manner. A state of probation implies trial, difficulties, and danger (ch. iv.), which are also the conditions of our life under the natural government of the world. Such a state is intended for moral discipline and improvement (ch. v.), and the present order of things seems peculiarly fit to serve this purpose. Theoretical doctrines of necessitarianism (ch. vi.) need be no hindrance to religious belief, for religion is a practical matter, and in all the practical affairs of life we act as if we were free. And, finally, our inevitable ignorance of the whole scheme of Providence (ch. vii.) should make us cautious in laying stress on difficulties which we cannot completely resolve.

In Part II. of the *Analogy*, Butler begins by explaining the *importance* of revelation, supposing it to be a fact (ch. i.), in opposition to the Deistical doctrine that reason is a quite sufficient and satisfactory guide without it; and he is urgent in pointing out that we are not competent to determine *a priori* what is the method or the content of revelation (i. 28). True to his practical good sense throughout, he insists that *a priori* methods in theology are apt to mislead, as the subject is really beyond our powers. There is no special presumption, he proceeds, against a revelation because it involves miracle (ch. ii.)—an argument which he develops with vigour, but which is not entirely satisfying. He returns in ch. iii. to the question of our competence for theological speculation, and his answer is decisive: 'Reason can, and it ought to judge, not only of the meaning, but also of the morality and the evidence of revelation' (iii. 13)—a far-reaching proposition. Conscience, he teaches, is the gift of God quite as much as Scripture; and no alleged dictum of revelation can be allowed to outweigh the unmistakable dictates of our moral faculty. We could not predict, that is, what course a true revelation must take; but if an alleged revelation contain clear immoralities or inconsistencies, we may safely pronounce it to be false. The stately chapter on the Redemption of

[1] Tindal, in *Christianity as old as the Creation*[2] (1732, p. 251), had tried to controvert the doctrine of benevolence put forward in his sermons by 'the judicious Mr. Butler.'

Christ (v.) is notable chiefly for its insistence on the great principle that it is the Death of Christ, and not theories as to the manner of its influence in the spiritual world, which brings redemption. That the evidence of Christianity does not amount to demonstration, and that the Christian religion has not gained the allegiance of all mankind, are often urged as obstacles to its acceptance (ch. vi.); but probable evidence is all that nature provides, and truth always takes time to win its way.

So brief an account of the contents of the *Analogy* does not exhibit either the power of the argument or its extent; but Butler's style is so severely concise that it is all but impossible to make a *précis* of his reasonings. It is sufficient if some idea has been provided of the scope of his work, the most remarkable feature of which is, perhaps, the sagacity with which he has anticipated objections. Most of the apologetic literature of the eighteenth century is useless in the twentieth century, but this cannot be said of the *Analogy*. The author was conscious, in a degree to which his contemporaries, whether heterodox or orthodox, did not attain, of the limitations of human knowledge—of the greatness of God and the littleness of man; and the pleas of modern Agnosticism, accordingly, hardly affect his carefully considered argument. Pitt is reported to have said that the *Analogy* is 'a dangerous book, raising more doubts than it solved'; but this would be a shallow criticism. The difficulties with which it deals are not of Butler's making; they had been suggested openly by the writers whose influence he set himself to combat; and although many hasty readers may remember the difficulties while they forget the answers to them, that is not the fault of the book, but of human nature. It may be said, on the contrary, that there is no better tonic, even in the twentieth century, for weakness of spirit when a man is confronted with the perplexities of religious theory than the manly and straightforward work of Butler.

3. **Influence.**—It is curious that the *Analogy* is little quoted by the professedly apologetic writers of the age immediately succeeding that of the author. Leland, in his *View of the Deistical Writers* (1754), does not mention Butler at all, although he is at the pains of collecting various answers to Deistical doctrines; nor is it easy to find references to the *Analogy* for fifty years after its author's death, although it passed through a good many editions, and, as we have seen, his reputation as a metaphysical theologian stood high in his lifetime. But in the nineteenth century Butler's writings exerted a truly remarkable influence upon divines of every school, and no writer was more frequently quoted in English theological circles. The study of the *Analogy*, says Newman (*Apologia*, ch. i.), 'has been to so many, as it was to me, an era in their religious opinions.' And Newman mentions specially Butler's doctrine of Probability, and his doctrine of Analogy suggestive of a sort of sacramentalism of Nature, as underlying much that he himself taught in after years. At first sight, the connexion between Butler and the Tractarians is not obvious; but it may have been real, nevertheless, and the banishment of Butler's works from the curricula of the Oxford schools as a result of the anti-Newman reaction in 1845 may not have been so unreasonable as it seemed. The fact is that Butler's system had little in common with the simple evangelical piety of Wesley and the successors of Wesley in the English Church in the beginning of the nineteenth century; he laid more stress on reason as a judge of revelation, and spoke more warmly of the importance of a visible Church, than was agreeable to the popular divinity of the period between 1760 and 1830. Butler was, indeed, markedly independent of the influences of his time. There is no trace in his works of wide or extensive reading.[1] He was a wise rather than a learned man; and he was little affected, to all appearance, by the currents of opinion in his own day. This may serve to explain at once his aloofness from contemporary controversy, to the personalities of which he never descends, and the slight impression which he made on the literature of his time, as contrasted with the massive reputation which he achieved a hundred years after his death.

LITERATURE.—For Butler's career: T. Bartlett's *Memoirs of Joseph Butler* (1839) is the main authority; see also the *Life* prefixed to Fitzgerald's edition of the *Analogy* (1860); W. Lucas Collins, *Butler* (1881); W. A. Spooner, *Bishop Butler* (1901); and W. M. Egglestone, *Stanhope Memorials of Bishop Butler* (1878). Of the various editions of Butler's works the most complete are those by W. E. Gladstone (2 vols., 1895), with supplementary volume of Butler studies; and by J. H. Bernard (2 vols., 1900); both of these have notes, and the latter provides an Introduction. Steere's edition of the *Sermons* (1862) is specially noteworthy as including a Memoir and some hitherto unpublished fragments; and Fitzgerald's edition of the *Analogy* (1860) is excellent. The essays upon Butler's writings and influence are innumerable.

J. H. BERNARD.

C

CABBALISM.—See KABBALISM.

CÆSARISM.—From the time of Augustus to the time of Diocletian, what is called 'Cæsarism' is the most noted feature of the Roman Empire. Cæsarism was the outcome of many tendencies. It was a stream which was fed from many sources. It was, for instance, the culmination of the Greek conception of the city-State, in which the latter was regarded as the sphere in which the citizen was to realize himself, the measure and the goal of all his efforts, towards which his whole strength was to be directed. The rights and the duties of the citizen were alike exhausted within the city-State. This relationship governed the whole activity of the citizen. There was no limit to the duty which he owed to the State. For it he was bound to live, for it he ought willingly to die. Within the city-State there was no room for difference of view. State ideals were to be the ideals of the citizen, nor was there any room for the modern idea of freedom as against the State, or any distinction between religion and politics. The citizen was bound to worship and to serve the gods of the State. To refuse the gods their due was treason, and he was liable to punishment by the authorities for refusing to worship the city-gods, as he was liable for any refusal to serve the State in the time of danger or of war. This view, which obtains full expression in the works of Plato and Aristotle, was also the view of Rome. Only it obtained in Rome a more thorough expression. Like everything Roman, it was practical and utilitarian. Devotion to the State—patriotism as it was then understood—had really no limit. It had not only all the

[1] See, for a discussion of the authors who were probably well known to him, a paper on 'The Predecessors of Bishop Butler' by the writer of this article, in *Hermathena*, 1894.

characteristic marks of what we now call patriotism; it had the deepest religious sanction as well. Negatively, to refuse service to the State was treason, and not to recognize and serve the gods was also treason. For the gods and the State were one. They were bound up together, and the highest officer of the State might also be, and often was, the Pontifex Maximus.

Reserving for a little the question of the influences of the Roman provinces on the official Imperial religion, let us glance at the Roman religion itself and its character at the time of the Cæsars, since the advent of the Imperial religion coincided with the decay of the religion of Republican Rome. The old Roman religion was practically inoperative in the Imperial time. The worship of Janus, and of some other Latin and Sabine deities, was continued and offered by the State. But the worship of other Roman deities had decayed. As early as the close of the Punic wars there was a tendency on the part of the people to transfer their devotion to the gods of other peoples. The gods of Olympus were identified with the gods of Rome, and the more abstract forms of the Roman deities were made concrete and anthropomorphic by their identification with the more lively gods of Greece. Nor were these identifications limited to the gods of Greece and Rome. From Egypt there came the worship of Isis, and after a long struggle this worship was allowed by the Roman authorities. The worship of Aesculapius and Cybele also had a recognized place and validity. As Rome proceeded on her conquering career, and as district after district fell under her sway, the thoughts of the citizens were widened, new problems arose, wider horizons needed newer principles and larger methods than were required in the olden times. Means which were used in the narrower spheres had become inadequate. Thus religious rites and ceremonies, which were relied on to avert disaster or to win success, seemed, as the sphere of government enlarged itself, to be quite inadequate to the magnitude of the new situation. It was the custom in earlier Rome, in times of great peril, when all other means had failed, to choose a dictator for the sole purpose of driving a nail into the temple-wall of Juppiter. This remedy seems never to have been used after the time of Scipio. In Rome itself those rites which appeared adequate and sufficient in the old city-States seemed out of all proportion when the city had become a world-wide government. What had seemed sufficient when Rome was simply a city-State among other Italian States, or even when she had brought all Italy under her sway, had become clearly inadequate when her dominion extended from Persia to Britain, and from the Rhine to the Great Desert. Rome had attained to Imperial dominion, the world had attained to some unity under her sway, the decrees of the Senate were operative everywhere, but where was any unity in the world of the gods to correspond with the visible unity of the Roman rule? The Roman citizen could not but feel in some measure that he was a member of an imperial race; he must have felt that adversity and prosperity were now on a larger scale than formerly, that disaster now meant something infinitely more serious than in the olden time. His religious instincts, his feeling that he must somehow have the gods on his side continued, but how was he to propitiate them, or which were the gods to be propitiated? Could there be a power supreme over all the gods, one deity to whom he might surrender himself and the State, one deity who could support and protect him in all situations and difficulties? Thus even on the subjective side, from the pressure of his own needs, there was a necessity which drove the Roman away from the multiplicity of the gods to some Divine centre of unity. For how was he to know which god he had offended or neglected? Or, if he could ascertain this, how was he to propitiate him? Or, if he could answer these questions, how could he know that the god he had offended and had propitiated could avert the disaster? Might not the propitiation of one god offend the others?

On the other hand, there were difficulties in reaching the one Divine power to whom one could surrender oneself and be at peace. It is difficult to reach unity where the gods are the personified powers of Nature. For these powers are so unlike. The sea is unlike the land. Streams are different from mountains. Light has no resemblance to darkness, and the gods, who are these powers personified, can never be reduced to a common denominator. The gods of Greece were so well defined, each of them had attributes so distinctive, that it was scarcely possible to reach unity except by discarding the individual gods. They belonged also to a numerous Divine society, in which each had his place and function, and thus none of them could serve the new need which a world-wide government had brought into prominence. The more clearly defined the gods in the Olympic system, and the more definite their separate functions the less fitted were they for the function of unifying the Divine action, needed by the Roman religious citizen. As a matter of history, we find that the search after Divine unity led the Roman away from his own ancestral gods, and away from the well-marked gods of Greece, to the more vague and mysterious deities of Egypt or the nearer East. Thus the vague, undefined, and mysterious attributes of Isis attracted the Roman worshipper, and her worship rapidly spread in the later Republic and the early Empire. The priests of the goddess claimed that she cured diseases of every kind; she was identified with the female deities of Greece and Rome, possessed all their attributes, and usurped all their functions. Even more intense and absorbing, and affording more scope for passionate devotion, was the service of the Phrygian Mother of the Gods. Her name appears frequently on inscriptions, and she is 'the one, who is all' (Orelli, *Inscr.* no. 1871). We need not dwell here on other signs of the decay of the religion of old Rome, or on the passionate quest of the Romans for a satisfying religion, or for a religion which would justify them in surrendering themselves to its guidance. It is enough to refer to Mithraism and its wide-spread influence over the Roman Empire in the first and second centuries of our era (see the masterly and exhaustive account of its extent and character in Dill's *Roman Society from Nero to Marcus Aurelius*). It is sufficient for our purpose at present to point out that one element in the formation of the Imperial religion was the widespread unrest in every class of society, in Rome itself, and in all the provinces of Rome. Faith in the reality and efficiency of the gods of Rome and Greece had passed away, and the need of a Divine protecting power was felt more than ever. The need of devotion was as clamant as ever, or even more so, inasmuch as men's thoughts had widened, and their imaginations could people the universe with pictures of disasters unknown heretofore. They felt the need of one god—a god approachable, placable, able and ready to help. And this need went far to create its object, and to make them fill up with all Divine attributes the visible form of the power of Rome, till it attained an elevation fitted to inspire their trust and reward their devotion.

The ancient throne of the gods was vacant, and there was placed on it the figure of the Emperor, the visible holder of the greatest power known

to man. Many influences helped to make this apotheosis reasonable and fit to the people of the time. There was the fact already noted of the identity of religion and rule in the city-State. The belief that the State and the god were one easily led to the thought of the divinity of the State. Then the decay of belief in the ancient gods, and the need, deep-seated in the human spirit, of something to worship, led on to the worship of visible and beneficent power as embodied in the majesty of Rome. Further, it was no new thing to worship men, either in Rome itself or in the provinces of Greece and of Asia Minor. In Greek story men were raised to Divine rank, or raised themselves to it, as the reward of work well done, and of heroic tasks completed at the cost of labour and of life. So we read the story of Heracles, of Theseus, and of many others. In truth, in no race of the world save the Hebrew was the conception of man far removed from the conception of God. Gods might become men, and men might be raised to Divine rank. And this universal attitude of mind helped to make the thought of the divinity of the Emperor not an absurd or untenable idea. None of the races within the Empire, save only the Jews, had any unalterable or invincible objection to the conception of a Divine humanity. In truth, in the old Roman religion the Divine and the human were thought of as inseparable. This appears very clearly in what is perhaps the most marked feature of the old Roman religion, namely the belief—one of the most universal and effective of the beliefs which ruled the Roman mind—in the Genius of the home, of the city, of the State. This belief peopled all existence, in all its forms, with beings, living, energetic, and helpful, with whom men stood in most intimate relations, and without whom and whose help it was impossible to prosper. It was necessary to invoke the help of the Genius in every transaction, and every process was carried on under the direction and with the help of its presiding spirit. Merchants, setting forth with their goods to some foreign land, invoked the protection of the Genius of the Roman people and of trade. They sought to conciliate, as they journeyed, the Divine power who presided over that way, and whose province it was to give them protection. But more intimate still was the relation of the family to its household Genius, who shared the family meal, who presided over the family's destiny, and was identified with it in weal and woe. The Lares, the Penates, the Genius, were described in many ways, and they had many functions; and the worship of them persisted, despite the opposition of the Church, far down into Christian times. The worship of the Genius of the household prepared the way for the acceptance of the worship of the Emperor and of the Roman State. It was simply an extension of the common belief, on the one hand; and, on the other, it was the identification of the belief in tutelary deities generally with the Genius of the reigning house. As the merchant and the traveller were wont to invoke the protection of the Genius of the Roman people, so now they invoked that same Genius, but as embodied in the reigning Emperor. Thus on this side also there was an open way that led to the worship of the Cæsar.

We must leave to other articles in this Encyclopædia to trace the influence of philosophy and science and speculation generally on the religious beliefs of the Roman people, meaning by that phrase all the populations of the Roman Empire. Only we must affirm that from the literature of the period, and from the philosophy and speculation of the time, no sure indication of the religious state can be obtained. In the speculation of the time there were many tendencies which affected only the cities, and only the educated and the learned. The tendencies to monotheism, to pantheism, to atheism, and to scepticism influenced only a limited number. The larger number, particularly outside of the greater cities, were intensely religious, if they only had known what to worship. Even if their faith in their ancestral gods had become faint, yet the trust in the Divine continued, and they sought for and obtained a more fitting expression. The Genius of their own house became one with the Genius of the Imperial house, and thus Emperor-worship was hallowed by the associations of many memories of former generations; the good ascribed to the action of the family Genius during all the family history was ascribed to the Genius of the Emperor; and so the sacredness of the past was carried over into the new worship. In this way the devotion to the new cult could become fervid and intense, and the delights of devotion could be experienced.

Thus in many ways and through many avenues Emperor-worship was prepared for as the official religion of the Empire. If we glance at the provinces, we can easily see that the preparation for the reception of this official religion was even more effective. As we have seen, in Greece proper the worship of the human as Divine was not foreign to the people. Heroes had been deified, and temples had been erected to them. Founders of States and founders of religions were regarded as Divine. Laws were thought of as Divine, and the traditional givers of laws, like the Athenian and Spartan lawgivers, were regarded as Divine, feared, worshipped, and obeyed. But when we pass further east, among the Grecian peoples of Asia Minor, or into Egypt, we find a condition of things which facilitated the acceptance of the official worship of the Empire. The sacredness which hedged the persons of the kings of Babylon and Assyria passed over to the persons of the Persian kings; and they, if not regarded as incarnations of the Divine, were yet thought of as representatives of it. Titles of honour were heaped on them, and the resources of language were exhausted in order to set forth their unapproachable majesty. In their hands was the power of life and death; peace and gladness were the lot of those on whom they smiled, dishonour and death lay in their frown. The successors of Alexander fell heirs to the reverence shown to their predecessors. Read the history of the Ptolemys of Egypt, note the titles bestowed on them and the reverence accorded them, and it will be evident that to the Egyptian the new religion presented no strange feature. Nor would the claim seem strange to the subjects of the Syrian monarchs, the successors of Alexander in Asia Minor. They also made Divine claims, and to them worship was offered, or something not to be distinguished from it. We cannot enter into detail, but enough has been said to show that to all races, except the Jews, there was no historical reason why they should reject the claim of Rome to Divine obedience.

But the visible power of Rome was greater and more extensive than any other dominion which the world had ever seen. If it did not extend as far eastward as Alexander had reached in his meteoric career, it had penetrated into regions which Alexander had never entered. The dominion of Alexander was broken up into many parts. Rome had grown from more to more throughout the ages, and her dominion appeared to the subject populations to be as stable as the stars. Now, all that symbolized the Roman power was gathered into one hand, and embodied in the Emperor. It was the one supreme power in all lands around the Mediterranean Sea. But that power was not merely the power which could set the legions in motion

and direct them along the Roman roads, east and west, and south and north. That of itself was sufficient to ensure the respect of the subject populations. But the physical power was strengthened and supported by all other sources of power. And all the sources of power lay in the hand of Rome. Moral and spiritual forces were added to her splendid physical resources. The nations were subdued in every sense of the term. With the fall of the nations their gods also were held to be subdued. The gods of the besieged city were invited to leave it ere the final assault was made. When the city or the State fell, the gods were dishonoured. They had not been able to defend their followers. This result was modified by the practice which grew up of identifying the gods of the conquered peoples with the gods of Rome. We have seen how this was accomplished in the case of the gods of Greece. Though the names were different, yet it was thought that in principle and essence they were the same. Thus the gods of the peoples with whom Rome was brought into contact came to be regarded as local forms of the gods known under other names as gods of Rome. This identification was made easier by the fact that the gods of Syria, Asia Minor, and Egypt were known to the Romans under the names already given to them in Greece. Julius Cæsar and Tacitus illustrate the process, for they thought they recognized the Gallic and Teutonic deities as other forms of Mercury, Juppiter, Mars, and Minerva. Thus there was established a sort of identity between the gods of the victors and those of the vanquished; and the latter received a place within the pantheon of Rome. In the temples which were speedily erected within the provinces, Roman and barbarian deities were worshipped; and, remote though they were from each other in their original attributes and character, in the temples they were recognized as one.

Still this process did not lead to satisfactory results. There was needed a universal religion for the Empire. This was pressed on the governing minds of the Empire from many points of view. While there was toleration for the religions of the subject races, as long as they did not interfere with the public peace, yet Rome was absolutely intolerant of religious practices and observances which seemed to interfere with the proper ends of government. If a doctrine interfered with the worship of the State-gods, if it assumed a hostile attitude towards Roman religion, if a strange god, so individual as not to be brought into harmony with the supremacy of Juppiter Capitolinus, was worshipped, then that form of religion was persecuted until it disappeared. Thus Druidism was persecuted to the death. It had a tradition and an organization which stoutly resisted any assimilation with the Roman system, and it was the boast of the Emperor Claudius that he had completely annihilated Druidism (Suet. *Claudius*, 25). This may be taken as an illustration of the usual process, and of the method of Rome with regard to religions which proved refractory to the process of assimilation. But the need of a common religion for the Empire became more obvious to the ruling class. In fact, such a need was apparent to many empires before the problem became a practical one to the rulers of Rome. It was the main motive of the action of Antiochus Epiphanes in his persecution of the Jews. It was also a spur to action and a leading force in the active process of Hellenization carried on by the successors of Alexander. But the need of Rome was greater, for the differences of races and of religions and of languages were more conspicuous in the Roman Empire than in any former period of history. In order to unify the Empire, there was needed not only the outward power of military supremacy; there was needed a moral, and especially a religious, bond; there was needed a common oath whereby every one in the service of the Empire could profess his fidelity to the Empire. Soldiers, magistrates, officials, people in office all over the Empire, must have some common symbol of allegiance. This was found in the *sacramentum*, the oath of allegiance by which they swore fidelity to the Empire. This oath was made sacred and universal, for it was sworn by the Genius of Augustus, which was made one with the Genius of the Roman people. A common bond was required for the preservation and the consolidation of the common interests of the Empire, and this was found in the worship of the Emperor as the visible symbol of Roman strength. This, as we have seen, was not inconsistent with the tradition and character of the subject peoples. They were familiar with the thought of the divinity of the State, and of its rulers. Apotheosis was not strange to them. That visible tangible power which was seen in the hand of the masters of many legions was reinforced by the more dreaded forthcoming of supernatural consequences. Thus religion added its sanction to the forces of Imperial might.

While the needs of the time almost forced the Roman rulers to institute this religion of Imperial unity, there are many testimonies to the fact that the earlier Emperors were somewhat reluctant to accept the necessity. There are evidences that Augustus was unwilling to accept the Divine honours which were thrust upon him. But he could not withstand the force of the current. Even in Rome itself the popular current pressed strongly in the direction of ascribing Divine honours to the head of the State. The Senate had set apart and made sacred the place in which Augustus was born (Suet. *Cæsar Augustus*, 5). Many stories of portents and wondrous signs which accompanied his birth were in circulation, and these seemed to have grown with the years. Men looked back from the elevation to which Augustus had attained, and found or feigned many premonitions of it in the past. It is not necessary to dwell on these; it is sufficient to say that in Rome itself a glad welcome was given to the doctrine of the divinity of the Emperor. It is true that this was discouraged by Augustus himself. It is also true that Tiberius followed in this respect the example of his predecessor. It is told by Tacitus how Tiberius refused the petition of ambassadors from farther Spain, who asked for leave to build a temple to the Emperor and his mother, as had been done in Asia. Tacitus even gives a speech which Tiberius was said to have made on the occasion (*Annal.* iv. 37, 38).

Notwithstanding the apparent reluctance of the Emperors to accept Divine honours, the new religion of the Empire made rapid progress. Augustus had permitted temples and altars to be dedicated to him and the goddess Roma at Pergamum (Tacitus, *Annal.* iv. 36). At other places also the practice was permitted. After the death of Augustus, his worship was introduced into Italy and Rome, where it was not allowed during his lifetime. Thus during the reign of Tiberius the worship of the Emperor was widely spread over the whole world. Some testified that they had seen Augustus ascend to heaven. It soon became a crime to profess reluctance to worship the Imperial god. On his death, Divine honours had been decreed to Augustus by the Senate. There were instituted a new order of priests and a new series of religious rites in the service of the Imperial god. As if to give éclat to the new departure, names to the number of twenty-one, from the most prominent citizens, were chosen, and the names

of Tiberius, Drusus, Claudius, and Germanicus were added to the number (Tacitus, *Annal.* i. 54). Repeated references are made in the *Annals* of Tacitus to the existence of the Augustan priesthood. A lawsuit was raised against a Roman citizen because he had sold, among other effects, a statue of Augustus. Nor was the name of the Emperor, *Augustus*, without religious significance. It had a religious meaning from the beginning, and the people were conscious of this. Suetonius speculates as to the meaning, but he is persuaded that it did mean something worthy, great, and religious. He tells that the new ruler was called Augustus, because this name was new, and was of higher dignity, and because places devoted to religion and consecrated by augury were called 'august.' He even makes an excursion into philology, and says that it was derived from *auctus*, which signifies 'increase,' or *ab avium gestu gustuve*, 'from the flight of birds' (Suet. *Cæsar Augustus*, 7). Whatever we may think of the etymology, there is no doubt about the fact that the name challenged the reverence of the people, and had a religious significance from the first. What was implied in it is seen from the fact that the crime of *majestas* meant not only treason to the reigning Emperor, but disrespect towards the object of the adoration of the people, whether of the Emperor who had attained to an apotheosis, or of the reigning ruler. The significance of the title Augustus is further made manifest from the following, which we take from Lightfoot's *Apostolic Fathers*², part 2, 'St. Ignatius and St. Polycarp,' 1889, vol. iii. p. 405: 'Imperator cum Augusti nomen accepit, tamquam praesenti et corporali deo fidelis est praestanda devotio' (Veget. ii. 5). A part of this passage is also quoted by Döllinger, *The Gentile and the Jew*, Eng. tr. vol. ii. p. 166.

However reluctant Augustus and Tiberius were to accept the new honours, the pressure of events was too strong for them. The new worship speedily became imperative. It became a crime not to worship, and the citizens of Cyzicus were deprived of their privileges because they had suffered the ceremonies in honour of Augustus to fall into contempt (Tacitus, *Annal.* iv. 36). In this case Imperial pressure was brought to bear on the people in favour of the new Imperial religion. This, however, was almost a solitary instance. There was no unwillingness to accept it. Rather there was keen competition between cities for the honour and the privilege of building temples and organizing priesthoods for the cult of the new religion. It is recorded by Tacitus that eleven Asiatic cities strove for the honour of building a temple to the reigning Emperor: 'Eleven cities rivalled each other, not in power and opulence, but with equal zeal contending for the preference' (*Annal.* iv. 55). If it was an honour to institute a religious organization, with proper buildings and persons for the Imperial worship, it was a very costly honour, as would appear from the fact that the claim of some cities was refused as they could not bear the expense. In the final issue the claim of Smyrna was allowed, mainly because 'of all the cities of Asia, they were the first that built a temple to the Roman name' (Tacitus, *Annal.* iv. 56). Other testimonies might be added to show how rapidly the new religion spread throughout the Empire, and how greatly esteemed was the honour of having a temple to the Cæsar-god within the city. The Senate of Rome was besieged by the cities of the Empire for the privilege of styling themselves *neocori*, servants of the Cæsar-god, and for the privilege of inserting that title on their coins. It is evident that the honour was highly esteemed. But it is time to ask why the provinces, in particular, welcomed the new religion with such eagerness and enthusiasm.

In answer we must remember what the advent of the Empire meant for the provinces. It is scarcely possible to exaggerate their misery and wretchedness in the later ages of the Republic. The proconsuls raged furiously, knowing that their time was short. It is not necessary to dwell on this, or to cite the authorities for it. But we may refer to the miseries of civil war, and to the terror of the times when Marius and Sulla strove for the mastery. The wars between Julius Cæsar and Pompey, the wars between Augustus and Antony, had brought unspeakable misery on the peoples and places where they were conducted. With the advent of the Emperor Augustus wars ceased, the temple of Janus was shut, a government which might fairly be called just held sway in all the provinces. The people felt a sense of security unknown for ages. Cæsar was their friend, their ruler, their defender from enemies without their gates, and from oppression by those within. He gave them security and a peaceful time in which they could live and work. He enabled them to provide for their wants, to accumulate property without the haunting dread that its possession would serve only to make them the mark for the envy and the greed of those possessed of power. Thus the Emperor became an earthly providence, which grew ever greater, as the peoples became more accustomed to its care. Imagination delighted to picture the greatness and the goodness of the Imperial power; orators discoursed on it, and philosophers dwelt on the thought of the great community of the universe, in which gods and men had their places and their functions. Then the common people gathered into one all that they or their ancestors had conceived of greatness and goodness, and piled that upon the head of the Cæsar-saviour. If we had space, we might easily gather from the inscriptions a collection of epithets, descriptive of the glory thus ascribed to the Roman Emperors. These epithets are not merely adulation; they are the outcome of a real religious persuasion. Nor were the Imperial Cæsars without a feeling of reciprocal devotion to the ideal of their calling, and to the duty devolving on them as beings invested with powers and responsibilities more than human. Seneca—to refer only to one instance—reminds Nero that he has succeeded to a vicegerency of God on earth. He is the arbiter of life and death, on whose word depend the fortunes of citizens, the happiness and misery of the people. His innocence raised the highest hopes. The Emperor is the one bond that holds the world-empire together; he is its vital breath. The Imperial task is heavy, and its perils are great. Man, the hardest of animals to govern, cannot be governed long except by love, and can be won only by beneficence and gentleness. In his godlike place, the prince should imitate the mercy of the gods. Wielding illimitable power, he is the servant of all, and cannot usurp the licence of the private subject. He is like one of the heavenly orbs, bound by inevitable law to move onward in a fixed orbit, unswerving and unresting. Such was the teaching of Seneca to his pupil; and this was the ideal of the best Emperors, who felt that they were in the place of an earthly providence to their people. But the consciousness of power led the holders of it from one stage to another. While some felt that this was a power entrusted to them by the gods, others came to regard the divinity by which they ruled as possessed of some inherent significance, and regarded themselves as Divine. Domitian issued his rescripts and formally claimed Divine power under the formula 'Dominus et Deus noster' (Suet. *Domitian*, 13).

On the one hand, the Emperors increasingly

brought forward their claims to Divine power, and insisted on the popular recognition of the claims; on the other hand, the people, especially in the provinces, were forward in ascribing to them all the attributes recognized as Divine by them. Nor was there any other power which could reasonably enter into competition with this. Behind the visible majesty of the Emperor there lay all the prestige of the unrivalled history of Rome. The might of possession belonged to it, and all the visible forces of the world were at his command. Nor can we forget that the deification of the ruling power seemed the fulfilment of a hope which had been cherished for a long time by all the peoples of the East. There was a hope, there were prophecies, of a coming deliverer, and there are evidences extant of the wide-spread character of such a hope. The hope of the individual races was coloured by their history and by their idiosyncrasy. It took one form in Judæa, another in Asia Minor, and another in Greece, but the ferment caused by such an expectation can be traced over all the known world. It is very marked in the inscriptions which still remain. It is not necessary to multiply examples. But a quotation from one inscription may be made, because it illustrates the universal expectation, and describes what it was. The inscription will be found in *Mittheilungen Inst. Athen.* xxiv. [1889] 275 ff.; cf. also W. Dittenberger, *Orientis Græcæ Inscriptiones Selectæ*, Leipzig, 1895, ii. 366. The date of the inscription seems to be about 9 B.C.; Sir William Ramsay dates it 9–4 B.C. (*The Letters to the Seven Churches*, p. 436). The inscription refers to the birthday of Augustus. We quote a passage from it:

'This day has given the earth an entirely new aspect. The world would have gone to destruction had there not streamed forth from him who is now born a common blessing. Rightly does he judge who recognizes in this birthday the beginning of life and of all the powers of life: now is that ended when men pitied themselves for being born. . . . From no other day does the individual or the community receive such benefit as from this natal day, full of blessing to all. The providence which rules over all has filled this man with such gifts for the salvation of the world as designate him the Saviour for us and for the coming generations: of wars will he make an end, and establish all things worthily. By his appearing are the hopes of our forefathers fulfilled: not only has he surpassed the good deeds of men of earlier time, but it is impossible that one greater than he can ever appear. The birthday of God has brought to the world glad tidings that are bound up in him. From his birthday a new era begins.'

Speaking of this inscription, Ramsay says that it records 'the decree of the Commune of Asia instituting the new Augustan Year, and ordered to be put up in all the leading cities' (*op. cit.* 436). Of the language of the inscription he says: 'All this was not merely the language of courtly panegyric. It was in a way thoroughly sincere, with all the sincerity that the people of that over-developed and precocious time, with their artificial, highly stimulated, rather feverish intellect, were capable of feeling' (p. 54). Other inscriptions to other Emperors might be quoted, but this is sufficient to show the feeling in the Commune of Asia towards the new cult. Reference might be made to the effect which the perusal of such inscriptions had on the attitude of the people. It would enhance their feeling of the majesty and worth of the Roman Emperor. It would stimulate their loyalty, and deepen it into devotion.

But the missionary energy of the new religion was not left to the passive power and effect of mere inscriptions, however effective these might be in their own way. The new religion had for its propagation an effective organization, a powerful priesthood, with many privileges, with ample powers, and with functions of a large order. While it is probable that, wherever there was a temple built for the worship of the Emperor, there was also an organized priesthood, yet it was in the provinces, especially in the province of Asia, that the priesthood attained to the highest organization and to the greatest efficiency.

'To the confederation of towns the Roman Government in Asia Minor had no occasion to oppose special obstacles. In Roman as in pre-Roman times nine towns of the Troad performed in common religious functions and celebrated common festivals. The diets of the different provinces of Asia Minor, which were here, as in the whole Empire, called into existence as a fixed institution by Augustus, were not different from those of the other provinces. Yet this institution developed itself, or rather changed its nature, here in a peculiar fashion. With the immediate purpose of these annual assemblies of the civic deputies of each province—to bring its wishes to the knowledge of the governor or the government, and generally to serve as organ of the province—was here first combined the celebration of the annual festival for the governing Emperor and the Imperial system generally. Augustus, in the year 725, allowed the diets of Asia and Bithynia to erect temples and show divine honour to him at their places of assembly, Pergamum and Nicomedia. This new arrangement soon extended to the whole Empire, and the blending of the ritual institution with the administrative became a leading idea of the provincial organization of the Imperial period. But, as regards pomp of priests and festivals and civic rivalries, this institution nowhere developed itself so much as in the province of Asia, and, analogously, in the other provinces of Asia Minor; and nowhere, consequently, has there subsisted, alongside of, and above, municipal ambition, a provincial ambition of the towns still more than of the individuals, such as in Asia Minor dominates the whole public life' (Mommsen, *The Provinces of the Roman Empire*, Eng. tr., 1886, i. 344 f.).

The diets of the different provinces in Asia Minor were thus constituted for certain civil and religious purposes. They had the name of Commune Bithyniæ, Ciliciæ, Galatiæ, Pamphyliæ. The presiding officers of these unions were called 'Bithyniarch,' 'Ciliciarch,' 'Pamphyliarch,' according to the name of the province. We find, for instance, in Ac 19[31] the title 'Asiarch,' used to describe certain friends of Paul, who 'besought him not to adventure himself into the theatre.' As the province of Asia was the earliest and the most distinguished of all the provinces of Asia Minor, we naturally hear more of it than of the others. Not to dwell on the history of these Communes, the important matter for our present purpose is to note their bearing on the Imperial religion. In these Communes, temples were erected and priesthoods were established for the maintenance of this worship. 'In six at least of the cities comprised in the *Commune Asiæ* (Smyrna, Ephesus, Pergamum, Sardes, Philadelphia, and Cyzicus), periodic festivals and games were held under the auspices of the confederation' (Lightfoot, *op. cit.* 405, where the authorities for the statement are given).

It appears, also, that each of these cities had a temple or temples dedicated to the worship of the Emperors. As the separate cities were united in the Commune, so they were united in relation to religion. There were local chief priests, and there was a provincial high priest, who had supreme control of this worship over the whole province. The various designations were 'the chief priest of the temple in Smyrna,' 'in Ephesus,' according to the place in which the temple was situated. The provincial high priest was designated 'the high priest of Asia,' or 'of the Commune of Asia.' It was keenly debated for a time whether the high priest of Asia and the Asiarch were descriptions of different offices, or whether they were identical. The question may now be regarded as settled by the investigation of Lightfoot. The evidence which he has brought forward for the view that the chief priest of the province of Asia was also the Asiarch seems quite conclusive. Equally conclusive is the evidence he brings forward as to the tenure of the office. Many authorities assumed that the tenure of the office was for one year. This may have been the case with regard to the local priesthoods, but, as the Asiarch had to preside over the games which were held every fifth year, it is likely that the tenure of the office extended over that period. It is not

necessary for our present purpose to enter minutely into this controversy. All we are concerned with is the importance of the office, and the testimony which these facts bear to the prevalence, the influence, and the seriousness of this form of religion. The position of Asiarch was highly honoured and eagerly sought after. It was a position which no one could maintain unless he had great resources at his command.

'In spite of the expense, this was an honorary position much sought after, not on account of the privileges attached to it, *e.g.* of exemption from trusteeship, but on account of its outward splendour. The festal entrance into the town, in purple dress and with chaplet on the head, preceded by a procession of boys swinging their vessels of incense, was in the horizon of the Greeks of Asia Minor what the olive-branch of Olympia was among the Hellenes. On several occasions this or that Asiatic of quality boasts of having been not merely himself Asiarch, but descended also from Asiarchs' (Mommsen, *op. cit.* 346).

The civil, religious, and social standing of the Asiarch, the organized priesthood in every city of the province, the solidarity of the whole priesthood, ruled and directed by the Asiarch, and the favour of the Imperial government were factors in the popularity and effectiveness of the Imperial religion. It was a visible, tangible religion, invested with all the influence which the favour of the Government and the applause of the people could give it. If, as is probable, the Asiarch had control, not only over the priesthood of the Imperial religion, but also over religion in general, one can easily see how much its power and prestige would be enhanced.

'It is probable that this superintendence, although it primarily concerned the Emperor-worship, extended to the affairs of religion in general. Then, when the old and the new faith began to contend in the Empire for the mastery, it was probably, in the first instance, through the provincial chief priesthood that the contrast between them was converted into conflict. These priests, appointed from the provincials of mark by the diet of the province, were by their traditions and by their official duties far more called and inclined than were the Imperial magistrates to animadvert on neglect of the recognized worship, and, where dissuasion did not avail, as they had not themselves a power of punishment, to bring the act punishable by civil law to the notice of the local or Imperial authorities, and to invoke the aid of the secular arm—above all, to force the Christians to comply with the demands of the Imperial cultus' (Mommsen, *op. cit.* 348 f.).

This quotation from Mommsen brings us face to face with the principle of all the persecutions of the Christian Church, from the first century down to the time of Diocletian. It was the refusal of the Church to submit to the Imperial cult that led to the declaration that they were outlaws, with no rights, and with no legal standing before the rulers. The test of their standing was whether they were willing to burn incense, or to offer worship to Cæsar. The Imperial religion became more and more eager, militant, and oppressive. It was filled with the spirit of aggressive persecution. In its militant aspect, as against all those who refused to bow the knee to Cæsar, it was intolerant, aggressive, and exclusive. Whether it could long continue to command the inward assent of its adherents, or would long be able to satisfy the religious needs of its votaries, is another question. The fervid feeling, and the intense devotion expressed in the inscription quoted above, did not last very long. It lessened after the death of Augustus. As a religious force it is not apparent in the end of the 2nd century. But it still continued to fulfil its purpose as an official religion, and as a test of the loyalty of the citizen. It was well fitted to act the part of an engine of persecution. Its social power remained long after its energy as a religion had passed away. We shall end this article with a quotation from Ramsay, mainly to show what was the real character of this Imperial religion. He is expounding a passage in the Apocalypse (13[12ff]).

'"*It maketh the earth and all that dwell therein to worship the first beast*," for the provincial administration organized the State religion of the Emperors. The Imperial regulation that all loyal subjects must conform to the State religion and take part in the Imperial ritual, was carried out according to the regulations framed by the Commune, which arranged the ritual, superintended and directed its performance, ordered the building of temples and the erection of statues, fixed the holidays and festivals, and so on—"saying to them that dwell on the earth that they should make an image to the beast. . . . *And it was given him to give breath to the statue of the beast, that the statue of the beast should both speak and cause that as many as should not worship the statue of the beast should be killed.*" The last statement is familiar to us; it is not directly attested for the Flavian period by pagan authorities, but it is proved by numerous Christian authorities, and corroborated by known historical facts, and by the interpretation which Trajan stated about twenty-five years later of the principles of Imperial procedure in this department. It is simply the straightforward enunciation of the rule as to the kind of trial that should be given to those who were accused of Christianity. The accused were required to prove their loyalty by performing an act of religious worship of the statue of the Emperor, which (as Pliny mentioned to Trajan) was brought into court in readiness for the test: if they performed the ritual, they were acquitted and dismissed; if they refused to perform it, they were condemned to death. No other proof was sought; no investigation was made; no accusation of any specific crime or misdeed was made, as had been the case in the persecution of Nero, which is described by Tacitus. That short and simple procedure was legal, prescribed by Imperial instructions, and complete' (*The Letters to the Seven Churches*, pp. 97–99).

JAMES IVERACH.

CAGOTS.—The Cagots are a despised and formerly persecuted people of unknown origin, scattered in small groups under diverse names throughout the Western Pyrenees and in Brittany. They are the *Cagots*, *Cahets*, *Agotacs*, and *Gafets* of the French, the *Agotes* or *Gafos* of the Spaniards, and the *Cacous* of the Bretons, although, strange to say, they are first mentioned as 'Chrestianos' in the year 1288. In 1460 the States of Béarn, where they were most numerous, called on the king of France to curtail their liberties; and in the towns the Cagot communities were then confined to separate quarters called *cagoteries*, which answered to the ghettos of the Jews. In the country districts they dwelt in wretched huts apart from the villagers; they were everywhere obliged to enter the church by a separate door; and after death they were buried by themselves, apparently in unconsecrated ground. In the church they were railed off from the rest of the congregation, a *bénitier* ('holy-water font') was reserved for their exclusive use, and they were either barred from the communion or else obliged to take the host from the end of a stick. In fact, everything was done to humiliate them, until they were emancipated by the French Revolution, at least from all these restrictions, though not from the hatred and contempt of their neighbours, which still largely persist. The side-doors of the churches were built up, but the separate fonts may still be seen in many districts, and other indications survive of the ostracism under which they formerly suffered.

Even in France the odium attaching to this 'infamous and accursed race' is by many attributed to some physical taint, such as goitre, cretinism, or leprosy, and, in 1872, Littré defined the Cagots as 'a people of the Pyrenees affected with a kind of cretinism.' In England, too, they were supposed to be 'afflicted with extreme bodily deformity and degeneracy, and with deficiency of intellect' (Guy and Ferrier, *Forensic Medicine*[4], 1875). But Dr. Hack Tuke, who visited several

of the groups in 1879, could find no evidence of goitre or cretinism amongst them, and he believes that they have been confounded with the inhabitants of the Pyrenees who really suffer from these complaints. Nor could he find any outward indications which marked them off as a people physically distinct from the surrounding inhabitants, except that some are not dark like their neighbours, but blue-eyed and light-haired. Otherwise the Agotaes of the Basques, who are chiefly weavers, blacksmiths, and joiners, but have no land, differ in no respects from the Basques (*q.v.*) themselves, whose language they speak, while, like them, they are strict Roman Catholics. As recently as 1842 in some districts they occupied a separate place during the service, and on Rogation Days they join in a procession which sometimes gives rise to disorders, due to the ill-feeling of their Basque co-religionists.

Although now free from any taint of leprosy, weighty arguments have been advanced to show that the Cagots were originally subject to this disease, and that to it was due their separation from the other inhabitants. This is the opinion of M. de Rochas, one of our chief authorities, who pointed out in 1876 that the Breton word *cacodd* meant 'leprous,' and that this word would easily assume both the French form *Cagot* and the present Breton form *Cacou*. He further remarks that they were also called 'Mézegs,' and that *mézeau* is French for 'leprous.' But such etymologies are seldom to be trusted, and the more general popular belief may still be the more correct one, that the Cagots are descended from some Visigoths or Vandals who were left behind in the Pyrenees when these barbaric hordes pushed through into Spain and Africa in the 5th century. Thus would be explained the above-mentioned blue eyes and light hair, the word *Cagot* itself (*canes Gothi*='dogs of Goths'), and the charge of heresy that in early times was very generally brought against them. For it is to be noticed that these Visigoths themselves were heretics, being members of the then wide-spread Arian sect, to which the orthodox peoples of Gaul and Spain were bitterly opposed. Hence Guilbeau, quoted by Tuke, may most probably be right in holding that the 'Agoths,' as he calls them, 'were originally heretics,' or 'the descendants of certain heretics.' We can now understand why from the very first they were subject to cruel persecutions in Gaul, just as the orthodox inhabitants of Spain were persecuted by their Arian Visigothic conquerors till the heresy was stamped out under King Riccaredus soon after the third Council of Toledo in 589.

No clear explanation has been given of the curious designation 'Chrestianos,' which dates from the 13th cent.; but Tuke writes that at times 'many were no doubt falsely suspected of leprosy'; and as lepers were actually called *pauperes Christi*, the term may have originated in this way. The suggestion is the more probable since the cretins, who, we have seen, were constantly confounded with the Cagots, were also called Christians.

CAKES AND LOAVES.—I. **Cakes made of firstfruits.**—In primitive communities, and as a ritual custom surviving into much later stages, firstfruits are the subject of solemn ceremonial observances, before the bulk of the harvest can be eaten. They are eaten sacramentally, in order that the eaters may obtain the Divine life which is present in them (for example, that of the corn-spirit). Or, probably at a later stage, they are offered sacrificially to the gods, who are supposed to have given the fruits of the earth to man; or sometimes both rites are combined (see FIRST-FRUITS).

The earliest form in which grain was cooked was probably that of roasting, grinding, and making it into rude cakes. This preceded that of baking it into loaves. Hence we find that the grain of the first sheaves is made into a cake, later a loaf, which is eaten, or presented, sometimes with a few sheaves, to the god. The transition stage was probably that of boiling grain, or mixing it with milk or honey—the mixture being poured out as a libation, or eaten. Thus in N.W. India, the first of the grain is mixed with milk and sugar, and eaten by each member of the family (Elliot, *Hist. of N.W. Prov. of India*, 1869, i. 197). Among the Basutos the grain is boiled and presented to the gods (Frazer, *GB*[2] ii. 459).

Some instances of this sacramental use of cakes formed of the firstfruits may be given. The Solomon Islanders, at the ingathering of the canarium nut, eat flat cakes made of the pounded nuts (Woodford, *Head Hunters*, 1890, pp. 26–28). The Ainus make new millet into cakes, which are worshipped by the old men. Then the cakes are eaten, after which the new millet may be used (Batchelor, *Ainu and their Folklore*, 1901, p. 204). Among the Natchez, the women gathered the first sheaves of maize; part was used as an offering, and part made into unleavened cakes, which were presented to the setting sun, and eaten in the evening (Chateaubriand, *Voyage en Amérique*, Paris, 1870, pp. 130–136). The Quichés of Central America, after gathering in the firstfruits, presented them to the priests. Some of the firstfruits were baked into cakes, which were offered to the idols who guarded their fields. These cakes were afterwards given to the poor (Brasseur de Bourbourg, *Hist. des nations civil. du Mexique et de l'Amérique Centrale*, Paris, 1857–59, ii. 566). The Totonacs made a dough of firstfruits and the blood of three slain infants, of which certain of the people partook every six months (*NR* iii. 440). The cakes made of maize by the Virgins of the Sun in Peru at the festival of the Sun were eaten sacramentally by the Inca and his nobles (Prescott, *Conquest of Peru*, 1890, p. 51). Among the Coorgs of Southern India, after the first sheaf of rice is cut, enough of it is prepared and made into flour to provide a cake, which the whole family must eat. The man who cuts the rice afterwards kneads a cake from the meal, mixed with other things. Every one must partake of this cake. The Burghers, a tribe in the Nilgiri Hills, choose a man of another tribe to reap the first sheaf of grain. This grain is made into meal and baked into cakes, when it is offered as a firstfruit oblation. Afterwards these cakes are partaken of by the whole family (Harkness, *Description of a Singular Aboriginal Race inhabiting the Summit of the Neilgherry Hills*, 1832, p. 56 ff.). The pagan Cheremisses eat sacramentally of the new loaf made from the new corn, the pieces being distributed by the sorcerer to each person (*GB*[2] ii. 321). Modern European folk-survivals show many instances of the ceremonial eating of a cake or loaf made of the new crops, and this doubtless represents an earlier sacramental eating of a cake or loaf containing the life of the corn-spirit, especially as the bread is often in the shape of a man or an animal. In Sweden the grain of the last sheaf is made into a

loaf in the form of a girl, the loaf being divided among the entire household and eaten by them. At La Palisse, in France, a similar use is made of the grain of the last sheaf, which is baked into the shape of a man. This is kept until the harvest is over, when the Mayor breaks it into bits, and distributes it among the people, to be eaten by them. The Lithuanian peasant used the grain of the sheaf which was first threshed and winnowed. This was baked into small leaves, of which each member of the household received one. These were eaten, accompanied by an elaborate ritual (*GB*² ii. 318, 319). In Sweden, Denmark, and Esthonia, the cake or loaf is in the form of a boar, a characteristic representative of the corn-spirit (*GB*² ii. 286 ff.; Grimm, *Teut. Mythology*, pp. 63, 213).

The sacrificial or other ritual use of cakes baked from firstfruits is of frequent occurrence. At Athens, during the Thargelia, the first loaf, made after the carrying home of the harvest, was called the *thargelos*. Part of the processional ritual consisted in carrying the *eiresione*, a bough of olive or laurel, tied up with wool, and laden with fruits and cakes (Harrison, *Prol. to Greek Rel.*, 1903, p. 78 ff.). At Rome, the cakes which the Vestals prepared from the firstfruits were called *mola salsa*. The corn for making these was plucked in May by the Vestals, and the cakes were prepared and offered by them in June. At the Vestalia, donkeys were also decorated with wreaths and cakes (Warde Fowler, *Roman Festivals of the Republic*, 1899, pp. 148–149; Ovid, *Fasti*, vi. 283 ff.). Among the Hebrews, at the feast of Pentecost, two loaves of fine flour made from the first of the wheat were offered as a wave-offering, and kept sacred for the priest (Lv. 23[15ff.]). In Nu 15[20f.] the Hebrews are ordered to make a cake of dough from the first-fruits of the land of Canaan, and use it for a heave-offering. See FESTIVALS (Hebrew).

The Celtic Beltane cakes, of which so many survivals have been noted in Scotland, may have been made of some of the firstfruits kept over till spring, though this is not stated. But they were generally divided, and eaten ritually. In some cases the pieces were drawn by lot, and he who received a blackened piece was regarded as 'devoted,' and was the subject of a mock sacrifice. The cakes were sometimes rolled down hill, and, if one broke, it determined the fate of its owner throughout the year. In another instance the cake was divided, and offered sacrificially to various noxious animals. The cakes were prepared in a special manner, and sometimes sprinkled with whipped eggs, milk, etc. In some cases they were made with raised knobs (Pennant, *Tour in Scotland*, 1774, i. 97; Sinclair, *Statistical Account*, 1791, v. 84, xi. 620, xv. 517; *Scotland and Scotsmen in the Eighteenth Century*, 1888, ii. 439 ff.; *FL*, 1895, vi. 2 ff.; see also FESTIVALS [Celtic]). Cf. with these the Teutonic custom of making a loaf of every kind of grain, and placing it in the first furrow—a custom resembling the Roman offering of meal cakes in the corn-fields. Both of these were sacrificial, and they were probably sprinkled with milk and honey and eaten sacramentally by the ploughmen (Grimm, 1239). In parts of England, ploughmen, at the end of wheat-sowing, are feasted with seed cakes, and, at sheep-shearing, with wafers and cakes (Brand, *Popular Antiquities*, 1870, i. 45).

In many parts of the world cakes stamped with the symbols or with the actual form of a divinity, or dough and paste images of gods and goddesses, are commonly found, and are frequently ritually eaten. Among the Egyptians, according to Plutarch, a cake stamped with the figure of a donkey (the symbol of Typhon) was baked on certain days (Jablonski, *Pantheon Aegyptiorum*, Frankfort, 1750, ii. 74). The Mexicans, at the festivals of various divinities, made images of dough and seeds, or of seeds kneaded with the blood of children, which were carried in procession or otherwise reverenced. The heart was then cut out, as in ordinary human sacrifices, and the image was distributed among the people and eaten ritually. The most marked instance was that of the god Huitzilopochtli, whose image was ritually slain, while the ceremonial eating was called *teoqualo*, 'god is eaten' (*NR* iii. 299, and *passim*). The Hanīfa, an Arab tribe, made an idol of *ḥais* (a mass of dates kneaded with butter and milk), and ate it in time of famine (W. R. Smith, p. 225). The cakes offered by Hebrew women to the queen of heaven (Jer 7[18]) may have been stamped with the figure of Astarte. In India, married women make an image of Pārvatī with flour, rice, and grain, which after some days is taken outside the village and left there (Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 438). A snake tribe in the Panjāb, every year on the same day, make a snake of dough, which is carried round the village and afterwards buried (*GB*² ii. 441). Among the Teutons baked figures of sacred animals or of gods were reverenced, and probably, to judge by folk-survivals, ritually eaten. In the *Fridthiofssage* we hear of images of gods baked by women and anointed with oil. The *Indiculus Superstitionum* (8th cent.) contains a section, 'De simulacro de consparsa farina,' showing that the making of such images continued into Christian times, while pastry and dough figures in much later times are a direct continuation of the earlier pagan instances (Grimm, 63, 501, 1306; Saupe, *Indiculus Superstitionum*, Leipzig, 1891, p. 30 f.).

2. Cakes in sacrifice and ritual.—Cakes are also offered in sacrifices of propitiation or thanksgiving, either alone or with other articles of food, or are made use of in other ritual ways. The Sea Dayaks offer cakes, with many other things, to the god or spirit who partakes of their essence (Ling Roth, *Natives of Sarawak*, 1896, i. 189). Similarly, the Malays propitiate the spirits of sickness by placing fourteen cakes—seven cooked and seven uncooked—along with numerous other articles, in a frame of bamboo, which is hung on a tree (Skeat, *Malay Magic*, 1900, p. 414). In Mexico, women who had died in childbed were deified and propitiated by offerings of bread, kneaded into various shapes, and pies. Balls of dough and pies were offered on one of the feasts of Tlaloc; and to Quetzalcoatl no bloody sacrifice was offered, but only bread, flowers, etc. (*NR* iii. 250, 334, 363). On the South American pampas, Darwin saw a tree on which were hung offerings of bread (*Journal of Researches*, 1897, p. 82). An interesting instance of the use of cakes, among other offerings, for purposes of propitiation and subsequent divination is recorded among the pagan Prussians by Jan Malecki (ed. Speyer, 1582, p. 259 f.). In their worship of 'Putscaetus, qui sacris arboribus et lucis praeest' (concerning whom see, further, Usener, *Götternamen*, Bonn, 1896, p. 99 f.), and who was believed to have his abode beneath an elder tree, the Prussians

'litant pane, cerevisia, aliisque cibis sub arbore sambuco positis, precantes a Putscaeto ut placatum efficiat Marcoppolum deum magnatum et nobilium ne graviore servitute a dominis ipsi premantur: utque sibi mittantur Barstuccae qui subterranei vocantur. His enim daemonibus in domo versantibus se fieri credunt fortunatiores: eisque collocant vesperi in horreo super mensam mappa stratam panes, caseos, butyrum et cerevisiam: nec dubitant de fortunarum accessione si mane reperiant cibos illic assumtos.'

In similar fashion, in India, cakes, sweetmeats, and parched or fried grain are frequent forms of sacrifice; and this custom dates from ancient times, since the Vedas prescribe an offering of cakes (*apūpa*) to be made to the gods (Muir, *Sanskrit Texts*, v. 463). At the present time the ordinary propitiatory offerings at village shrines in India are cakes, milk, and flowers. Cakes are also offered to the earth-goddess by the Patāris and Majhwārs (*PR* i. 32, 98), and Śiva is daily fed with cakes and pastry. Among the ancient Hindus the fortnightly religious services consisted chiefly in the preparation of sacrificial cakes of rice pounded in a mortar, kneaded into a ball by the head of the family, and baked on the fire. The consecrated cake was then cut up, and pieces, sprinkled with butter, were thrown into the flames, in the names of the various gods, including the god of flame himself. Other pieces were reverently eaten by the family (Monier Williams, *Rel. Thought and Life in India*, London, 1883, pt. i. pp. 93, 367). Among offerings in the Shinto ritual in Japan, food and drink take a very important place. Cakes made of rice are found among these offerings. At the present time these rice cakes, or *mochi*, are among the annual offerings at the tomb of the first Mikado, Jimmu. At every new moon the female attendants at the palace solemnly offered, in the 'place of reverence,' cakes to the sacred mirror which represented the sun-goddess. Among the New Year's Day observances in Japan one of the ceremonial rites consists in the laying on the domestic shrine of unleavened cakes made of glutinous pounded rice. These cakes are

called 'mirror' cakes on account of their shape, which is that of a flattened sphere. They are two in number—one representing the sun, or male principle; the other the moon, or female principle. This kind of cake is also called the 'tooth-hardening' cake, because it is supposed to strengthen the constitution (Aston, *Shinto*, London, 1905, pp. 212–13, 291, 313). In ancient Egypt, cakes were an invariable part of the offerings to the gods, and are referred to in the inscriptions. The formula of offering says: 'I give you a thousand cakes,' etc. These cakes were of different shapes, some being round or oval, and others triangular. Sometimes also they were made in the form of leaves, or even of animals. The round or oval were sometimes sprinkled with seeds. In the sacrifices to Isis at Bubastis the body of the sacrificial victim was filled with cakes and other meats, and then buried (Herod. ii. 40). Strabo (p. 811 f.) describes the offering to the sacred crocodile, Sukhos, as consisting of a cake, meat, and honey wine, which were put by the priests into its mouth (Wilkinson, iii. 416, 418, ii. 457; Wiedemann, Eng. tr. 192).

Among the ancient Hebrews, cakes or loaves were offered, either alone or together with animal sacrifices. These cakes were unleavened, sometimes made with oil or sprinkled with oil, and were baked either in an oven or in a pan (Lv $2^{4.5}$). The peace-offering consisted of unleavened cakes mixed with oil, leavened wafers anointed with oil, and cakes mixed with oil and fried. Leavened bread was also offered in this case (Lv $7^{12.13}$). Cereal offerings, sometimes in the form of cakes, accompanied animal sacrifices (Lv 5^{11} 8^{26} 14^{10}, Nu 6^{17} $15^{4.6.9}$). The most typical offering was that of the shewbread, consisting of twelve loaves or cakes of unleavened bread, which were placed in two heaps before the Lord in the Holy Place every Sabbath. On these frankincense was sprinkled, and the old loaves were eaten by the priests (Lv 24^{9}, Nu 4^{7}, 1 S 21^{4}; Jos. *Ant.* III. x. 7). The Hebrew ritual of the shewbread may have been derived from the similar Bab. custom. In the chamber of Bel-Merodach, at his temple in Babylon, stood a golden table on which were placed 12, 24, 36, or even 72 cakes of unleavened bread, which the god was supposed to eat (Zimmern, *Beitrage zur Kenntniss der bab. Rel.*, 1901, pp. 94, 95; Haupt, *JBL*, 1900, p. 59; Bel, vv.$^{3.6}$); and offerings of cakes are occasionally represented on early Bab. seals (Ward, in Curtiss, *Primitive Sem. Religion To-day*, New York, 1902, p. 267 f.).

In Greece, cakes (πέλανος, πέμμα, πόπανον) formed an important part of all sacrificial offerings, or were offered separately. Plato speaks of those who thought it impious to stain the altars of the gods with blood, and whose sacrifices consisted only of cakes and fruit mixed with honey (*de Legibus*, vi. 782). In many of the principal temples of Apollo, great importance was attached to bloodless sacrifices. There was an altar at Delos, called the 'altar of the pious,' on which only cakes of wheat and barley were placed (Porphyry, *de Abstinentia*, ii. 28). At Delphi, cakes and frankincense were consecrated in sacred baskets. At Patara the cakes took the form of bows and arrows, or lyres, symbolic of the two aspects of the deity (C. O. Müller, *Hist. and Ant. of the Doric Race*, 1839, ii. 331). In the ritual of Artemis Tauropolos the sacrifices were maintained with cakes and honey. Associated with this was the ritual of Artemis Munychia, where we hear of ἀμφιφῶντες, which were probably cheese-cakes stamped with torches (*CGS* ii. 454 f.). The Chaeronians worshipped a sceptre of Agamemnon, to which there was no temple, it being kept in the house of the priest; and daily sacrifices of all kinds of flesh and cakes were offered beside it (Pausanias, ix. 40. 11–12). The priests of Ægium had the custom of taking cakes, ordinarily used in that place, and flinging them into the sea, to be sent to Arethusa at Syracuse (Paus. vii. 24. 3). The Lilæans, on stated days, took cakes and threw them into the spring of the Cephisus, believing that they appeared again in Castalia (Paus. x. 8. 10). In a sanctuary dedicated to Sosipolis, a native Elean deity, it was the daily custom to lay before him barley cakes kneaded with honey (Paus. vi. 20. 2). In the Eleusinian mysteries the cakes offered were made from barley sown on the Rarian plain (Paus. i. 38. 6). At Athens a sacrificial cake, with twelve knobs on it, was offered to Kronos every spring, on the 15th day of the month Elaphebolion. In the cult of Ge, cakes of barley and honey were yearly thrown into a chasm in the earth, near which her sanctuary stood (*CGS* i. 27 f., iii. 24). In the cult of Demeter, during the processions of the Thesmophoria, cakes were carried. It was also customary at this festival to throw pigs and dough cakes into certain sacred vaults, called the chasms of Demeter and Proserpine. Serpents were said to live there, and these used to consume most of the flesh and cakes thrown in. Afterwards, probably at the next year's festival, women went down into the caverns, and, fetching up the remains, placed them on the altar. Whoever was lucky enough to get a piece of the decayed flesh or cakes sowed it with his corn, and it was believed to ensure good crops (*GB*^{2} ii. 300; *CGS* iii. 99). At the new or full moon the 'suppers of Hekate' were offered by rich people, and, at these feasts, small round cakes set with candles were placed at the cross-roads, as sacred to her and to Artemis (*CGS* ii. 511). At the Diasia, or spring festival, cakes of every imaginable shape appeared in the sacrifices (Harrison, *op. cit.* p. 14). At the Thargelia, cakes of barley, cheese, and figs were placed in the hands of the *pharmakos*, or human victim (*ib.* p. 98). At Athens, during the Plynteria, a cake of dried figs, called the *hegeteria*, was carried in procession (*ib.* p. 116). Cakes steeped in honey were offered to sacred snakes on the Acropolis at Athens, and at Lebadeia, in the shrine of Trophonios. The women in the 4th mime of Herondas offer a πέλανος to the snake of Asklepios (*ib.* p. 349). In the vestibule of the Erechtheum at Athens there stood an altar of Zeus. On this altar no living sacrifice was offered, but merely cakes without a libation of wine (Paus. i. 26. 6). Cakes made of flour, mixed with honey and olive oil, and into which flower blossoms had been kneaded, were offered to Adonis; and in the Dionysiac rites the women also offered mystic cakes—three to Semele and nine to Dionysos (Theocr. *Id.* xv., xxvi.).

In Roman religion, cakes (*libum*) were also offered separately or in conjunction with other sacrifices (for those connected with firstfruits, see § I). At the Palilia, shepherds offered to Pales baskets of millet and cakes made of the same (Ovid, *Fasti*, iv. 741 ff.). At the Liberalia, old women, crowned with ivy, sold cakes of oil and honey in the streets. These old women were named *sacerdotes Liberi*, and carried with them a small altar, for the convenience of the buyers of these cakes. From each cake that was sold they detached a small piece, which was offered on the altar to Liber in the name of the buyer (*ib.* iii. 725 ff.). At the rustic festivals of Ceres—the Feriae Sementivae and the Paganalia—cakes, along with a pregnant sow, were offered. Cakes of the most primitive kind seem to have been offered in each house in every *curia* during the Fornacalia, or feast of ovens. These cakes were made of *far*, a coarse meal, and formed into cakes by crushing in a primitive manner. Matrons offered to Mater Matuta, at the Matralia, cakes cooked in old-fashioned pans of earthenware (*liba*

tosta) (Ovid, *Fasti*, vi. 482 ff.). On the festival of Summanus, cakes, which Festus describes as 'liba farinacea in modum rotae ficta,' were offered or eaten (for moulds of a wheel shape or divided into segments, used for making such cakes, see Evans, *JHS*, 1886, p. 44 ff.).[1] The head of the 'October horse,' perhaps as a representative of the corn-spirit, was decked with cakes or loaves (Festus, ed. Müller, p. 178 ff.). In the sacrificial ritual, after the head of the victim had been sprinkled with morsels of the sacred cake, or *mola salsa*, it was killed by the assistants of the priests. In the old Roman marriage ceremonial (the *confarreatio*) the bride and bridegroom ate together a kind of cake, *panis farreus*, as a sacramental offering to Juppiter (Gaius, i. 108 ff.). In other forms of marriage, cakes sometimes formed part of the sacrifice, which was an important portion of the ceremony. On a bronze hand in the Payne Knight collection in the British Museum, believed to be of the time of the Roman Empire before Constantine, there is a table with three cakes, supposed to be offerings to Juppiter. Upon two other hands are objects which seem to be round offering-cakes, divided by cross lines into four parts. These are like the cakes found at Pompeii.

Offerings of cake or bread still occur occasionally in quarters where Christianity has ousted the ancient paganism. In Bohemia, when a man has been drowned, a loaf of new bread is thrown into the river. In Franconia, on entering a forest, people put offerings of bread and fruit on a stone, to propitiate the demon of the woods; and the bakers, for luck, throw rolls into the flues of their ovens (Tylor, ii. 195, 369).

Cakes were frequently part of the food offered to the dead. In Egypt, cakes were laid beside the dead in the tomb, for the *ka* to feed upon; and the goddess who dwelt in the sycamore trees around the cemetery is represented holding a tray of cakes for the food of the *ba*. Sometimes such offerings were not made of perishable bread, but of stoneware, which by virtue of magic formulæ produced the actual food for the requirements of the dead (Wilkinson, iii. 459; Flinders Petrie, *Rel. of Ancient Egypt*, 1906, pp. 13, 82; Wiedemann, Eng. tr. p. 297). The Ainus offer millet cakes to the dead, and also partake of the same at the funeral banquet (Batchelor, *Ainu of Japan*, 1892, p. 205). At the festival of the dead in Japan, tables of food, such as cakes and fruit, are laid out near the shrine for three days for the use of the dead (Hearn, *Unfamiliar Japan*, 1894, p. 106 ff.). At the elaborate funeral ceremonies of the Hindus, balls of rice (*piṇḍas*) and flat wheaten cakes, on which boiled rice, ghi, and sugar are piled up, are placed beside the deceased for his nourishment; and in the *śrāddha* ceremonies the characteristic feature is the offering of similar *piṇḍas* and cakes of meal, which are said to represent the deified bodies of the *pitṛis*, and which supply them with nutriment, and accumulate merit for them. The *piṇḍas* are left for animals to eat. The feeding of a Brahman with cakes, etc., concludes the ceremonies (Sir William Jones, *Works*, London, 1799, iii. 129 ff. ['Laws of Manu']; Monier Williams, *Religious Thought*, etc., 285 ff.). The Bengali Musalmāns have adopted these characteristic features of the *śrāddha* as an observance on the Shat-i-Barat (Arnold, *Trans. 3rd Inter. Cong. Hist. of Rel.*, Oxford, 1908, i. 319). In European folk-observances connected with funeral rites, survivals of the offering of bread or cakes to the dead are sometimes found. Thus, in the Tirol, on All Souls' Day, cakes are left out for the dead to feed upon (Tylor, ii. 33, 34); and in Russia, gingerbread and tarts are put on the graves by the common people. In some parts of England bread is given to the poor at a funeral, and, on All Souls' Day, 'soul-cakes' are begged for at farmhouses by peasant girls (for this and other references to 'soul-cakes,' cf. Brand, *Pop. Ant.*, 1870, i. 216 ff.).

Images, representing human or animal victims, made of baked or unbaked dough, are sometimes used in sacrifice as substitutes for those. The Egyptians, on account of poverty, made pigs of dough, and, having baked them, offered them instead of the actual animal (Herod. ii. 47). For the same reason, the Greeks, at the festival of Zeus Meilichius, offered little figures of dough in the shape of swine and other animals (Thuc. i. 126). This was a common practice among the ancients, where animals were beyond the means of the worshippers. Bakers made a regular business of baking cakes in the shapes of the various animals sacrificed to the gods (see *GB*[2] ii. 344 n.). Among the Romans, loaves in the shape of men were called *maniae*, and in their ritual use were probably substitutes for earlier human victims. The Hindus, where human sacrifice was not permitted, made human figures of paste or dough, and cut off their heads in honour of the gods (Dubois, *Description of India*, 1817, p. 490). The Brāhmanic sacrifices, in order to avoid taking life, took the form of models of the victim animals in meal and butter (Tylor, ii. 405). The Malays offer to the spirits, on the sacrificial tray, a dough model of a human being called the substitute (Skeat, *op. cit.* 72). Loaves bearing human figures are thrown into a river to disperse fog in China. The custom is said to have been invented in A.D. 220 by an official who was shocked at the barbarity of offering human victims for this purpose (Dennys, *Folklore of China*, 1876, p. 140). Dough images in the form of human beings are made to appease demons of disease and of death, in Bombay, Bhutān, and Borneo. In Borneo, also, if any one has been attacked by a crocodile and has escaped, he casts into the water a substitute for himself, in the shape of an image of a man made from dough or meal. This is done to appease the water-god (*GB*[2] ii. 348, 350). The Pueblo Indians offered dough models of animals after success in the chase (*NR* iii. 174).

3. Cakes in folk-survivals.—Some of the cakes which have a prominent place in folk usage at certain periods of the year, *e.g.* at Christian festivals and holy days, as well as on other occasions, are probably lineally descended from cakes used sacrificially or sacramentally in pagan times. This is suggested by the customs observed in the making of these cakes, or the eating of them, by their division among the members of the family, or by their being marked with sacred symbols (the Cross [hot cross buns]) or figures (those of Christ or the Virgin [Simnel cakes]). These last probably replace the cakes stamped with pagan images or symbols. As in so many other instances where pagan ritual was Christianized, nothing is more likely than that the cakes used at pagan festivals became, by an easy transition, cakes associated with Christian festivals. Among cakes which may have had this

[1] [In the Umbrian ritual for the purification of the Sacred Mount and the lustration of the people, as recorded in the Iguvine Tables, the use of cakes (*struśla*) and of cakelets (*fikla*) played an important part. The nature of the offerings is typically enumerated in ii. *a*, 17–19: *Huntia fertu katlu arvia struhçla fikla pune vinu śalu maletu mantrahklu veskla snata asnata umen fertu*: 'At the Huntia (festival) let him bring a whelp, fruits of the field, cakes, cakelets, mixed wine and vinegar (?), wine, pulverized salt, a mantle, vessels moist and unmoist, and unguent let him bring.' This Huntia was plainly an infernal goddess (cf. on her nature Bücheler, *Umbrica*, Bonn, 1883, p. 128). In the sacrifice to Puemans (a deity of fruits corresponding to the Lat. Pomona [Usener, *op. cit.* p. 34]), to whom a sheep was also offered, the cake played an equal rôle (iii. 27 ff.); and it is especially significant that in the analogous offering to his wife or daughter (*Vesune Puemunes*) the cake was to be in the shape of the female *pudenda* (*struhçla petenata*)—a peculiarly appropriate sacrifice to a fertility goddess (iv. 3 ff.). In like manner, a cake, together with three pregnant sows, fruits of the fields, mixed wine and vinegar, and cakelets, must be offered to Trebus Iovius, a deity of uncertain function (vi. *a*, 58 f.). Somewhat similar offerings were also to be made to Fisus Sancius (the patron deity of the Sacred Mount of Iguvium; vi. *b*, 3 ff.), to Tefer Iovius (a god of fire [?; cf. Umbrian *tefra*, Oscan *tefúrúm*, 'burnt-offering']; vi. *b*, 22 ff.), to Cerrus Martius (probably the war-god [on the etymology of the word, see Walde, *Etymolog. lat. Wörterbuch*, Heidelberg, 1906, p. 114 f., and the literature there cited]; vii. *a*, 3 ff.), to Torra Cerria (probably the personification of Terror [cf. Bücheler, p. 98]; vii. *a*, 41 ff.), and to Torra Iovia ('Terror inspired by Juppiter,' vii. *a*, 53 f.). Besides the instances already noted, the offering of cakelets (*fikla*) was also prescribed among the sacrifices to Juppiter Grabovius (an epithet connected by Bücheler, p. 52, with the Hesychian gloss γραβάν· βόθρον; vi. *a*, 56), Mars Grabovius (vi. *b*, 2), Mars Hodius (a deity of uncertain function; vi. *b*, 44), and Hontus Cerrius (the genius of the under world; vi. *b*, 46).—Louis H. Gray.]

history may be mentioned Yule cakes, made in the form of a child, Twelfth cakes, pancakes on Shrove Tuesday, cakes eaten on various Sundays in Lent (Mothering, Simnel, Whirlin cakes), hot cross buns on Good Friday, Easter cakes, Michaelmas cakes, Hallowe'en or All Souls' Day cakes. The Twelfth cake was divided into as many pieces as there were persons in the house. Portions also were assigned to Christ, the Virgin Mary, and the Magi, and these were given as alms. The member of the household who got the bean or piece of money hidden in the cake was hailed as king. In Devonshire, cakes were eaten and cider was drunk on Twelfth Day; parts of the cakes were presented to the apple and pear trees, and a libation of cider was poured over them. This was to secure a good crop (Chambers, *Book of Days*, 1865, i. 62–63; Brand, *op. cit.* i. 15 ff.). Older customs associated with wedding-cakes point to the connexion of this cake with some rite resembling the Roman *confarreatio* (Brand, *op. cit.* ii. 58). For many details regarding these cakes see Brand, *op. cit.*, and cf. the remarks of Grimm, *Teut. Myth.* 63, 501.

CALENDAR (Introductory).—By the term 'calendar' we understand the system by which days are named in relation to their place in larger units of time. In this sense the subdivision of the day into hours or other small units is independent of the calendar, while the era or other method by which years are named or numbered is also, as a rule, independent of it. Even the point from which the year is reckoned may be independent, and the Julian calendar has notoriously been used along with many different eras and many different New Year's Days. Wherever months have been used, the days have usually derived their names from their position in the months, and the system of reckoning months has therefore been a part of the calendar; but the months have sometimes been reckoned independently of the method of numbering the years, and even of the point from which each year has been made to run, so that the calendar is less concerned with the names of years than with the names of months.

1. Natural phenomena on which calendars are based.—The recurrence of day and night and the seasons of the year are so closely bound up with the conditions of human existence, that it is necessary for all men to have regard to them, and it is therefore natural that the day and year should be used everywhere as units for the measurement of time. The recurrence of the phases of the moon, governing as it does the supply of light at night, provides another measure which has been almost universally used from the earliest times, and the convenience of having a unit intermediate between the day and the year has led to the retention of the month, even where it has become an artificial unit independent of the phases of the moon. It is probable that the subdivision of the month has given us the week, though this again has become independent both of the moon and of the month.

2. Elementary principles of calendar construction.—It has been an almost universal practice to name or number the days according to their position in the month, and to name or number the months according to their position in the year. In order to do this it is convenient to have a fixed point for the beginning of each month, and a fixed point for the beginning of each year. Such a point is provided, in the case of the month, by the reappearance of the lunar crescent in the evening sky, after conjunction with the sun. This is what is known as the apparent new moon or phasis, and it probably served to mark the beginning of the month in all primitive calendars, and this phasis still regulates the beginning of the Muhammadan fast of Ramaḍān. But though Nature provides an obvious starting-point for the month, it is otherwise with the year. Except in extreme northerly and southerly latitudes, there is no annual return of the sun after a period of absence, corresponding to the monthly return of the moon; the seasons slide gradually one into another, and a definite starting-point must be obtained either artificially or by astronomical observation. The result is that early calendars, while, for the most part, adhering to the rule that the month must begin at the phasis, have no definite rule for the beginning of the year. The year had to begin at a fixed season, and was made to consist generally of twelve months, sometimes of thirteen months, so as to keep each month fixed to a particular season. The natural desire to make the calendar year correspond with the physical year was often seconded by the desire to connect some religious festival at once with a fixed day of the month (often the full moon, for the sake of evening light) and with a fixed season of the year. The earliest calendars were generally strictly empirical. The new month was determined by simple observation of the phasis, and the number of months in each year was settled from time to time by a civil or religious authority, which was in its turn guided by the state of the weather or of the crops. Father Kugler has shown (*ZA* xxii. [1908] p. 70) that this was the case in Babylonia in the time of the dynasty of Ur (26th–25th or 25th–24th cent. B.C.), as it was certainly the case with the Jews before the calendar reform of Hillel in the 4th cent. A.D. The great problem of ancient calendar-reformers was to discover a rule to determine which years were to contain twelve and which thirteen months, or, as it is more usually expressed, to discover a rule to govern intercalation, as the insertion of the thirteenth, or intercalary, month was called. As astronomical science developed, a second problem arose—that of finding a fixed rule to take the

place of observation in determining the duration of each month. In one or two cases the months were given an artificial length. Thus, in the Egyptian calendar (see CALENDAR [Egyptian]), which must be very ancient, though there is no evidence that it is as ancient as Ed. Meyer supposes (viz. 4241 B.C.), there are twelve months of thirty days each, and five additional days, making a year of the fixed duration of 365 days. On the other hand, the Romans had four months of 31 days, seven months of 29 days, and one month of 28 days, making a total duration of 355 days (approximately equal to twelve lunar months) for the year. When an intercalation was necessary, the Romans inserted 22 or 23 days only, so that the calendar months ceased to correspond with the lunar months. A further feature, peculiar to the Roman calendar, is the longer average duration of the six months from March to August than of the six months from September to February. This is merely an exaggeration of a natural phenomenon, the mean interval between conjunction and phasis being at its minimum at the vernal equinox in March and at its maximum at the autumnal equinox in September, so that the lunar months from March to August are on an average about eight hours longer than those from September to February.

3. The solar year and intercalation.—The oldest approximation to the length of the solar year, of which we have any knowledge, is the Egyptian calendar year of 365 days. It would appear, however, that the Egyptians were early acquainted with a more exact value. Of all the annual astronomical phenomena those most easily observed without instruments of measurement are the heliacal risings of the fixed stars. A star which rises in the daytime or shortly before sunrise is invisible, or visible only in the evening; at the end of this period of invisibility comes a day when the star can just be seen before it is lost in the morning twilight. This is called the heliacal rising of the star. The Egyptians specially observed the heliacal rising of Sirius, the brightest of the fixed stars, and reckoned the mean interval between one heliacal rising and the next at 365 days, 6 hours. Modern calculations have been unable to improve upon this value. We have several references to the date of the heliacal rising of Sirius, the oldest belonging to the reign of Senwosri III., about 1880 B.C. But, in spite of their knowledge of this more exact value for the year, the Egyptians continued to use the year of 365 days till after the introduction of the Julian calendar at Rome (see CALENDAR [Egyptian]). Where a lunar calendar was in use, the observation of annual astronomical phenomena was valuable for the regulation of intercalations, and must from an early date have been considered in addition to the state of the crops. Thus at Babylon the heliacal risings of different zodiacal stars and asterisms were observed, and some rules have come down to us for controlling intercalations in this way. But for the regulation of intercalations it was of more importance to determine the relative lengths of the natural year and natural month than the actual length of either. It would appear that as early as the 6th cent. B.C. a cycle of three intercalations in eight years was introduced both at Athens and at Babylon. Such a cycle assumed that the mean year contained $12\frac{3}{8}$ or 12·375 mean months. The most exact value that modern astronomy can give with certainty is 12·368267 for the number of mean lunar months in the tropical year, on which the seasons depend, and 12·368746 for the number of mean lunar months in the sidereal year, on which the heliacal risings of the fixed stars depend. These values are accurate for the present day; but, while it remains uncertain whether the earth's motion is subject to an acceleration, it is impossible to give the corresponding values in ancient times to more than four decimal places. We thus get 12·3683 for the number of lunar months in the tropical year, and 12·3687 for the number of lunar months in the sidereal year. A value almost identical with these was first proposed in 432 B.C. by the Greek astronomer Meton, who framed a cycle of seven intercalations in nineteen years, reckoning $\frac{235}{19}$ or 12·368421 mean months to the mean year. It is not certain whether the Metonic cycle was ever adopted at Athens (see CALENDAR [Greek]). The same cycle was brought into use in Babylonia in the 4th cent. B.C. at the latest, and has been generally adopted wherever intercalations have been regulated by cycles at all.

4. The calendar month.—Meton and his Greek successors aimed, however, not merely at establishing a cycle of intercalations, but at the establishment of a cycle which should regulate at once the length of the month and the number of months in the year, and which should thus render the calendar entirely independent of observation. For this purpose it was necessary to express the mean length of the month as a number of days represented by a fraction with 235 or a multiple of 235 as its denominator. Meton himself proposed $\frac{6940}{235} = 29^d\ 12^h\ 45^m\ 57{\cdot}45^s$. Callippus in 330 B.C. proposed $\frac{27759}{940} = 29^d\ 12^h\ 44^m\ 25{\cdot}53^s$. Finally, about 143 B.C., Hipparchus proposed $\frac{111035}{3760} = 29^d\ 12^h\ 44^m\ 2{\cdot}55^s$. The true length of the mean lunar month is $29^d\ 12^h\ 44^m\ 2{\cdot}81^s$ for the present day, or $29^d\ 12^h\ 44^m\ 3{\cdot}3^s$ for the time of Hipparchus, so that the cycles successively proposed mark a gradual approach to the true value. Elsewhere the length of the month was beginning to be obtained by calculation instead of by observation, but it was apparently among the Greeks only that these calculations were combined with those governing intercalation to form a cycle. The Elephantine papyri show that the Jews of that city were already, in the 5th cent. B.C., beginning their months not at the phasis of the moon, but at the sunset following the mean conjunction of the sun and moon, which they found by calculation; they adopted a value for the mean lunar month of not less than $29^d\ 12^h\ 43^m\ 44{\cdot}63^s$ and not more than $29^d\ 12^h\ 44^m\ 51{\cdot}15^s$ (*Monthly Notices of the Royal Astronomical Society*, lxix. 19). But, while they found the beginning of the month by calculation, they appear to have had irregular intercalations, governed perhaps by the state of the crops. In the 2nd cent. B.C. both Hipparchus and his Babylonian contemporaries adopted $29^d\ 12^h\ 44^m\ 3{\cdot}3^s$ as the true length of the mean lunar month—a value as exact as any that modern astronomy can assign. The Babylonian astronomers even went the length of computing the time of the true conjunction of the sun and moon, having regard to the anomalistic motion of both luminaries, and then performed the still more complex problem of computing the time of phasis, which determined the beginning of the calendar month.

5. The Julian calendar.—In the 1st cent. B.C. there was a reaction throughout the Roman Empire against the lunar calendar. In 46 B.C., Julius Cæsar, with the aid of the Alexandrian astronomer Sosigenes, constructed the famous Julian calendar, in which the motion of the moon was entirely ignored, and the mean year was taken at the value current in Egypt, 365 days, 6 hours. Each month was given a fixed number of days, with the single exception of February, which received 28 days in ordinary years, and 29 in every fourth year. The example set by Rome was rapidly followed, and different cities and communities in the Roman Empire either adopted the Julian calendar, or

framed calendars of their own based on the same principle. Sometimes the old calendar and the new lived on together, but lunar dates are rare in documents subsequent to the Christian era. The lunar calendar survived among the Jews, who, when they substituted calendar rules for observation in the 4th cent. A.D., adopted the Metonic cycle of intercalations and the Babylonian value for the mean lunar month.

6. The agricultural year.—Where the lunar calendar held good for religious, political, and commercial purposes, it was necessary for agricultural purposes to fix the seasons in some other way. The position of a particular month in the solar year might vary by a month within the space of a few years, and, where intercalation was irregular, might vary by considerably more. It was necessary therefore to have recourse to those phenomena which occupy a fixed place in the solar year, and from an early date Greek farmers recognized the season by observing the solstices and equinoxes, and the annual risings and settings of the fixed stars. They also noted what would be less easy to determine directly—in what sign of the zodiac the sun was stationed. No calendar, properly so called, was constructed out of these materials, but the interval between these different phenomena was early noted, and was connected with the change in the seasons and the state of the weather. Several of these intervals are given by Hesiod. When Meton published his calendar, he inserted the dates of the equinoxes and solstices and the heliacal rising of Sirius. Later astronomers compiled *parapegmata*, giving the exact intervals between those astronomical phenomena which recur annually, with the weather that ought to accompany each; and it was thus possible to obtain by dead reckoning from any single observation an accurate knowledge of the season of the year. These astronomical phenomena were inserted in Cæsar's calendar, often against the wrong date, and long continued in use to designate the season of the year, though their dates were doubtless taken in practice from the published calendar, and not from actual observation (*JPh*, No. 57, pp. 87–99).

7. The lunar calendar in the East.—It is believed that the modern Indian lunar calendar, first expounded in the *Sūrya-Siddhānta* belonging to one of the early centuries of our era, is based on Babylonian astronomy, from which several of its lunar values appear to be derived. The months are reckoned in some places from the true conjunction, in some from the true opposition, of the sun and moon; both are elaborately computed with reference to the anomalistic motion of both sun and moon. An intercalation takes place when two conjunctions or two oppositions occur while the sun is in the same sign of the zodiac. Here we have for the first time scientific computation entirely supplanting cycles and observations for both the number of days in the month and the number of months in the year. It is interesting to observe that, in order to accommodate the calendar the better to the anomalistic motion of the sun, the anomalistic year, *i.e.* the mean interval between two successive solar perigees, is taken as the solar year, and its duration is fixed at $365^d\ 6^h\ 12{\cdot}6^m$, whereas the correct duration at the present day is $365^d\ 6^h\ 13{\cdot}9^m$, and the duration in ancient times, for which it is impossible to determine the fraction of a minute, must have been $365^d\ 6^h\ 14^m$. It is interesting to observe that the Babylonians of the 2nd cent. B.C. reckoned $365^d\ 6^h\ 13{\cdot}8^m$, so that Indian astronomy is in this instance a little inferior to Babylonian (Kugler, *Die bab. Mondrechnung*, 1900, p. 95; Ginzel, *Handbuch der mathemat. und techn. Chronol.* i. [1906] 310–402). The Chinese calendar resembles the Indian lunar calendar in its general principles, both as regards the rule governing intercalation and the reckoning of the calendar month from the true conjunction as obtained by a strict astronomical computation; but the constants used are not Babylonian, and appear to have been derived from native astronomy, until this was superseded by Western science in the 17th century.

8. The week.—The Babylonians appear to have observed a Sabbath on every seventh day of the lunar month, and it is probable that this usage was originally connected with the four quarters of the moon. Among the Jews the seven days' week was reckoned independently of the moon, and we already find traces in the 1st cent. B.C. of its connexion at Rome with the sun, moon, and five planets, which have given their names to the seven days. In the modern Jewish calendar the length of the month is so arranged with regard to the days of the week as to prevent certain of the great festivals from falling on the day next to a Sabbath.

9. The lunar month and the week in the Christian calendar.—The connexion of the Christian festival of Easter with the Jewish Passover, and of the Christian Sunday with the Jewish week, has given rise to movable feasts in the Christian calendar. These feasts fall on a fixed day of the week, which is generally at a fixed interval from Easter, which falls on a Sunday on or near the date of Passover. From a very early period the Christians reckoned the date of the Passover and the consequent date of Easter for themselves. For this purpose we find an inaccurate 84 years' cycle used at Rome. Gradually the cycle of 19 years supplanted all others, and, in the form in which it was accommodated to the Julian calendar, the effect on the assumed date of Passover was the same as if the Callippic cycle had been adopted. It therefore assigned on an average 22^s too much to the lunar month. The result was that by the 16th cent. the calculated new moons fell on an average four days later than the true new moons. In the form which eventually won its way to acceptance the rule was that Easter fell on the first Sunday after that 14th day of a lunar month which fell on or next after March 21, where March 21 was supposed to represent the date of the vernal equinox, and it was widely, but erroneously, supposed that this rule was established by the Council of Nicæa in A.D. 325.

10. The Gregorian calendar.—The Julian year had been based on the mean interval between two consecutive heliacal risings of Sirius in Lower Egypt. This was a species of sidereal year. Already in the 2nd cent. B.C. Hipparchus had discovered a difference between the sidereal year, which governs the sun's position in relation to the fixed stars, and the tropical year, which governs the time of the equinoxes and solstices; but this discovery received little attention till the time of Ptolemy in the 2nd cent. A.D. The result was that the dates of the equinoxes and solstices moved slowly backward in the calendar year, until the date of the vernal equinox came to be March 11 instead of March 21. In consequence a new calendar was issued in the year 1582 by Pope Gregory XIII., assisted by the mathematician Clavius. Ten days were omitted at once so as to restore the vernal equinox to the date which it had occupied at the time of the Council of Nicæa; and the mean length of the calendar year was fixed at $365^d\ 5^h\ 49{\cdot}2^m$. The true length of the mean tropical year is at the present time $365^d\ 5^h\ 48{\cdot}8^m$, and must in 1582 have been $365^d\ 5^h\ 49^m$, the fraction of a minute being uncertain. It would appear, therefore, that the Gregorian calendar

adequately represents the tropical year. At the same time, provision was made for a correction of the lunar dates, by means of which Easter is calculated. The new calendar assumed for the lunar month a mean duration of 29d 12h 44m 2·71s —a duration which will be correct about 400 years after the present date. The reformed calendar was immediately adopted in nearly all Catholic countries, but only slowly among Protestant States, and has not yet been accepted by the Greek Church. It has the merit of checking the slow movement of the seasons backwards, which characterizes the Julian calendar; but it is a cumbrous system for calculations spread over long periods, and astronomers generally prefer to use the Julian and not the Gregorian year as the unit of time.

II. The Muhammadan lunar year. — The Muhammadan religion has given currency to an Arabian lunar calendar, in which the calendar year is a purely artificial period of twelve lunar months which is not correlated with the solar year, and which may begin at any season of that year. The beginnings of the months have usually been determined empirically; but calendar rules have been devised for astronomical purposes, and the empirical dates are rapidly giving way, except for religious purposes.

J. K. FOTHERINGHAM.

CALENDAR (African).—Data regarding the African calendar are scanty, and concerning many tribes are thus far entirely lacking; but in general it may be affirmed that the degree of development was only meagre. A typical African calendar seems to be presented by that of the Warumbi, a people centred between lat. 0°–1° N., long. 27°–28° E. According to Maes (*Anthropos*, iv. 627),

'ils comptent les mois par lunes, distinguent les saisons et divisent l'année d'après elles. L'année des Warumbi va d'une saison sèche à l'autre. Celle-ci commence en décembre et finit vers la fin de janvier. L'année comporte approximativement 13 lunes, mais les Warumbi n'en comptent point le nombre. Ils ne savent d'ailleurs point déterminer exactement le nombre de jours d'une année. Quelquefois ils comptent par lunes, vous diront qu'il y a quatre ou cinq lunes, que telle ou telle chose est arrivée, mais n'en tiennent point compte pour déterminer leur âge, dont ils n'ont que peu ou point de notion. Chez eux l'on est jeune ou vieux, mais on ne compte jamais le nombre d'années de la vie.'

Perhaps the acme of African calendrical development is shown by the Yoruba, who have a year (*odun*) which is divided into a dry season (*ewo-erun*), the season of the Harmattan wind (*ewo-oye*), and the rainy season (*ewo-ojo*), the latter subdivided into the first rains (*aro-ko*) and the last rains (*aro-kuro*). They have a system of moons and weeks. The week consists of 5 days:[1] *Ako-ojo* ('First Day'), *Ojo-awo* ('Day of the Secret' [sacred to Ifa]), *Ojo-Ogun* ('Day of Ogun' [the god of iron]), *Ojo-Shango* ('Day of Shango' [the god of thunder]), and *Ojo-Obatala* ('Day of Obatala'). The first of these days is unlucky, and during it all work is forbidden; while, in addition, all followers of a particular god must abstain from labour on the day sacred to that god; blacksmiths, for example, are not allowed to ply their craft on *Ojo-Ogun*. Six of these weeks are supposed to make a lunar month, about 12 hours being subtracted from the last week in the moon to make it synchronize with the lunar month. The Yoruba are unacquainted with the hour, but divide the day (*osan*) into 5 periods, and the night (*oru*) into 3 'cock-crowings.' The week of five days is also in use among the Akposa of W. Africa; these are named *Eɣla*, *Ewa*, *Imle*, *Ekpe*, and *Ewle* or *Uwolowo*-day, the last being sacred to that divinity. No work may be performed on the second day, when worship is paid to deities other than Uwolowo (Müller, *Anthropos*, ii. 201). The Ahanta, of the W. Gold Coast, on the other hand, divide the lunar month into two periods of 10 days and one of about 9½, while a week of 8 days is recorded in Old Calabar (Daniell, *L'Institut*, ii. 90).

The Tshi-speaking peoples of W. Africa divide their year, which consists of 13 lunar months (*infi*), into the 'little Hohbor' (*Ahohbor kakrabah*, May–August) and the 'great Hohbor' (*Ahohbor kassi*, September–April), although some of the northern members of this stock have 12 months of 30 or 32 days, named from the seasons, etc. The lunar months are divided into 4 periods of 7 days each: *Adjivo-da* ('Khwadjo's Day'), *Ibna-da* or *Bna-da* ('Kobina's Day'), *Wuku-da* ('Kwaku's Day'), *Yaw-da* ('Yow's [or Kwow's] Day'), *Iffi-da* ('Kwoffi's Day'), *Memin-da* ('Kwamin's Day'), and *Kwasi-da* ('Kwasi's Day'), these names apparently being those of distinguished chiefs apotheosized after death. Wednesday, Saturday, and Sunday are considered feminine and lucky; Tuesday is a day of rest for fishermen, Friday for agriculturists, etc. The Tshi weeks begin at different times of the day, and both the Tshi and the Gã add to each seven-day week, to make the period of 4 weeks agree with the lunar month. Besides this system, the Tshi also reckon by periods of 40 or 42 days, the end of each of these periods being the great Adae feast, which is followed, after 18 or 20 days, by the little Adae, these Adaes, like the weeks, beginning at different periods of the day.

Even where the system of lunar months has been developed, the older method may still persist, an admirable example of this being found among the Basuto of S.E. Africa.

'More or less they keep or purely reckon their time by the seasons of the year (their changes), by animals (their birth time), by plants (their annuality or growth), by the stars, such as the Pleiades (their position, time of rising and setting), but more especially by the moon itself. A full month consists of that space of time from the beginning of the evening when the new moon is to be seen in the west . . . to the last day of its appearance in the heavens; and, moreover, includes two more days when the moon cannot be seen at all in the heavens. . . . The first of these two days is called or said by them that the moon *e ile mefela*, lit. 'is gone into the darks'; and the second, *e tlakoa ke litsoene*, lit. 'is being greeted by the apes.'[1] . . . After these days the new moon will be plainly visible to everybody, and therefore on this account they begin on this day to count a new month. Little regard is paid as to counting the number of days in any month, since the bulky moon itself fills up the deficiency' (Sechefo, *Anthropos*, iv. 931 f.).

The twelve lunar months of the Basuto year (*selemo*, also meaning 'spring,' 'plough-time') begin in August, and bear the following names: *Phato*, *Loetse* ('Anointer,' because, in the quaint words of Sechefo, himself a native Basuto, 'the hardy month of Phato [August] has truly been syringed, anointed, and sweetened by the present Loetse [anointer] anointing the land as it were by the sweet oil of delicacy and smiling verdure'), *Mphalane* (apparently from *Liphalana*, 'glitters,' because 'the fields are sparkling and glittering as if it were oceans of water gently moved by the soft breezes, and thus dancing under the brilliant sun'; this was formerly the month for the rite of female circumcision), *Pulungoana* ('young gnu,' these animals being born at this time of the year), *Tsitoe* ('grasshopper,' being the time of the hatching of such insects), *Pherekhong* ('inter-joining of sticks' [for building the huts of the watchers who keep the birds from destroying the crops]), *Tlhakola* ('wiping off' [of the green but impregnated husks of

[1] Cf. the five-day *pasar* week of Java and Sumatra (below, p. 131b). With this may be compared the Bab. *hamuštu*, a period of 5 days (based on the sexagesimal system) used in commercial transactions (Ginzel, *Handbuch der mathemat. und techn. Chronologie*, Leipzig, 1906, i. 94, 119); for further details regarding the Bab. five-day week, see below, p. 76a.

[1] Because the apes, seated on the mountain-peaks, can see the new moon before it becomes visible to men dwelling lower down.

the *mabele* crop]), *Tlhakubele* or *Hlakubele* ('the *mabele* in grain'), '*Mesa* ('fire-kindling' [by the bird-scarers in the chill early morning] or 'roasting' [of mealies, which are plentiful in this month]), *Motseanong* ('laughter at birds' [the *mabele* now being ripe and able to mock the attacks of the birds, thus relieving the bird-scarers of their tasks]), *Phupjoane* ('beginning of swelling' [of the *senyarela-balemi*, a sort of bulb]), and *Phupu* ('bulging out' [of plants]).

It need scarcely be said that in parts of Africa, Muhammadanism has influenced the calendar, as is clearly seen, for instance, in the divisions of the day among the inhabitants of Bornu (Koelle, *African Native Literature*, London, 1854, p. 284).

The recurrence of sacred days among the Yoruba and Tshi has already been noted. In like fashion, Tuesday and Sunday, and especially Friday, are unlucky in Senegal; among the Mandingan Bambarra of the Sudan lucky days were the first of the month, even days not containing 6, and odd days containing 5; in Akkra, on the Gold Coast, a distinction was even drawn between lucky days of a greater or less degree of good fortune; and in Ashanti only about 150 days were recognized as sufficiently lucky for the commencement of important undertakings. Besides these days, there were festivals at greater intervals, such as the feast celebrating the planting of the yam in Dahomey, Ashanti, Fernando Po, etc., and that held at the harvest of the same fruit on the Gold Coast.

The special thanks of the writer are due to Father Wilhelm Schmidt, S.V.D., editor of *Anthropos*, for his courtesy in sending him advance sheets of the second part of Sechefo's study expressly for the completion of the present article.

LOUIS H. GRAY.

CALENDAR (American).—**I. Calendar systems of the North American Indians.**—The North American Indians may, broadly speaking, be classed among those peoples who stand midway between the hunter state and the agricultural condition of existence. Some of the tribes among them possess calendar systems rich in varied festivals and celebrations, all more or less of an agricultural character; whilst others scarcely appear to notice the passage of time and the seasons, and possess almost no distinguishing feasts or other social observances. But all, even those living upon a more or less fixed agricultural basis, are at one in the simplicity of their methods of computing time, varying only in the more or less elaborate manner in which they celebrate its principal seasonal stages. Day and night, the changes of the moon and the seasons, the growth of vegetation and annual plants, and the habits of animals and birds, form the data upon which their systems are based. By some of the tribes four daily divisions were recognized—sunrise, noon, sunset, and midnight; whilst the diurnal round was usually designated a 'night' or 'sleep.' The manner of reckoning the years depended upon the locality in which the tribe was situated. Thus, in the more northerly latitudes they were known as 'snows,' and in the south as 'summers.' The four seasons were very generally recognized, and were named according to the natural phenomena incidental to their recurrence in various latitudes.

The lunation is by far the most important of the time divisions known to the Northern Amerinds. Before the coming of the white man there was, it is supposed, but little attempt at the construction of anything like a lunar year, and, where this attempt was made, the number of lunations embraced by a 'year' was generally 12. Some of the tribes, however, reckoned 13 moons to a year; and in one calendar—that of the Kiowa, which possesses 12 moons—half a moon is intercalated in one of the unequal four seasons, and the other half in the following season, the year commencing with the second half of a moon. Among the Zuñi of New Mexico the year is known as a 'passage of time,' and the seasons as 'the steps of the year.' The new year is called 'mid-journey of the sun,' to designate the middle of the solar round between the summer solstices. With the Zuñi, half of the months are 'nameless,' and the other six months 'named'; that is, the first six months have definite names, and the last six of the year have ritualistic names (such as Yellow, Blue, Red, White, Variegated, and Black), derived from the colours of the prayer-sticks offered up at the height of each 'crescent,' or moon, to the gods of the north, west, south, east, zenith, and nadir, who are severally represented by these colours.

Compensation for the surplus days in the solar year appears to have occurred to the Sioux or Ojibwas. Captain Jonathan Carver, in his *Three Years' Travels through the Interior Parts of North America* (1796), says:

'Some nations among them reckon their years by moons, and make them consist of twelve synodical or lunar months, observing, when thirty moons have waned, to add a supernumerary one, which they term the lost moon; and then begin to count as before' (p. 161).

He proceeds to relate that the first appearance of each moon was hailed by the Indians with joy. They gave a name to each month as follows, the year beginning at the first new moon after the vernal equinox:

March, Worm Month; *April*, Month of Plants; *May*, Month of Flowers; *June*, Hot Moon; *July*, Buck Moon; *August*, Sturgeon Moon; *September*, Corn Moon; *October*, Travelling Moon; *November*, Beaver Moon; *December*, Hunting Moon; *January*, Cold Moon; *February*, Snow Moon.

They called the last days of each moon the 'naked days,' and its first appearance its 'coming to life again.' They had no division of weeks, but counted days by 'sleeps,' half days by pointing to the sun at noon, and quarters by the rising and setting of the sun, for all of which they possessed hieroglyphic signs. The Haidah intercalated what they called a 'between-month,' because it was between the two periods into which they divided the year; and it is possible that this was sometimes omitted in order to rectify the calendar. The Creeks counted 12½ moons to the year, adding a moon at the end of every second year, reckoned half in the preceding and half in the following year, much as did the Kiowa. Many tribes kept records of events by means of symbolic figures or hieroglyphs. One of the most remarkable of these is the Dakota 'Lone-dog winter count,' painted on a buffalo skin, and depicting the events embraced between the years 1800 and 1871. The calendar history of the Kiowa is a similar record of tribal affairs. The Sioux tribes of the East measure time by leather thongs knotted in various ways—a device which was adopted by the Governor of South Carolina in his dealings with them (Mooney). They divide the year into five seasons, but do not possess so minute and peculiar a division of it as the Bella Coola Indians of British Columbia, who resolve the year into two parts, separated by the winter and summer solstices, which they regard as periods of indefinite length, and between which five months are counted. Each solstice is reckoned, therefore, as approximately six weeks (Boas).

The tribes of California, though related ethnologically in a more or less intimate manner, differ considerably from one another in their calendar system. The Hupa keep no account of time, as they consider it superfluous to do so, and guess at

one's age by examining the teeth. The Maidu believe that Kodoyampeh, the Creator, established the seasons, which they divide into *Kum-men-ni*, the rain season; *Yo-ho-men-ni*, the leaf season; *I-hi-lak-ki*, the dry season; and *Mat-men-ni*, the falling-leaf season. The Pima of Southern Arizona have long been accustomed to record events by means of notched sticks.

'Four sticks,' says Russell, 'were "told" to me by the men in whose charge they were. To any other person they would have been absolutely meaningless' ('Pima Annals' in *American Anthropologist*, vol. v.).

The years are marked on these sticks by transverse notches; the events by smaller notches or rude symbols. The oldest of these annals date from the time of the meteoric shower of 13th Nov. 1833, but older sticks were remembered by aged members of the tribe.

The Algonquin Indians of Virginia reckoned years by 'winters,' or *cohonks*—a name taken by them from the note of the wild geese during that season. They divided the year into the budding or blossoming season (spring), highest sun season (summer), corn-gathering season (autumn), and *cohonk* (winter). The months they designated as the moon of stags, corn moon, first and second moon of *cohonk*, etc. They made no distinction between one hour and another; but they divided the day into three parts—the rise, power, and lowering of the sun. They kept a calendar by making knots in string, not unlike the *quipo* records of the Peruvians.

The modern Creeks commence the New Year immediately after the celebration of the *Busk*,[1] or ripening of the new corn, in August (see below). They divide the year into two seasons only, viz. winter and summer; and subdivide it by the successive moons, as follows:

Heyóthlúccoor (Big ripening moon), August; *Otauwoóskóchee* (Little chestnut moon), September; *Otauwoóskólúcco* (Big chestnut moon), October; *Hecwóolée* (Falling-leaf moon), November; *Thláffólúcco* (Big winter moon), December; *Thláffóchósee* (Little winter moon, or Big winter moon's young brother), January; *Hootáhláhássee* (Windy moon), February; *Taúsaútchoosee* (Little spring moon), March; *Taúsautchéelúcco* (Big spring moon), April; *Keéhássee* (Mulberry moon), May; *Kóchóhassee* (Blackberry moon), June; *Hóyeúchee* (Little ripening moon), July.

They count the number of days or years, either past or to come, by tens, and can rarely compute more nearly than within a moon the date upon which a given event took place.

The Comanches, says Schoolcraft (*Hist. of Indian Tribes*, ii. 129), possess

'no computation of time beyond the seasons, which they count by the rising height of the grass, falling of the leaves, and the cold and hot seasons. They seldom count by new moons. With them one sun is one day.'

The Dakotas, says the same authority (ii. 177), 'count time by seasons, and 28 days to the moon.' The names of the moons are:

January, Hard moon; *February*, Moon in which racoons run; *March*, Moon of sore eyes; *April*, Moon when the geese lay; *May*, Moon for planting; *June*, Moon for strawberries and hoeing corn; *July*, Midsummer; *August*, Moon in which corn is gathered; *September*, Wild rice moon; *October* and *November*, Running of the doe; *December*, Moon when the does shed their horns.

The Mandans and Minnetarees, Dakotan tribes, are generally aware that there are more than 12 lunations in a year, but have no formal names for the lunar periods. The Hidatsa, a people of the same nation, speak of the seasons of 'cold weather' or of 'snow,' of 'warm weather,' and of 'death' or 'decay'; but they do not regularly allot a certain number of moons to each of these seasons.

2. Festivals connected with the calendar of the N. American Indians.—To a tribe subsisting upon an agricultural basis the prime object of keeping a calendar is the proper recognition and timely remembrance of seasonal festivals. In latitudes where the seasons are by no means exact in their recurrence, the lack of a stated calendar would quite disorganize all these celebrations; and, even with its aid, some confusion prevails in certain tribes as to the exact dates upon which certain ceremonies should be held. Many of these functions are of a highly elaborate nature, and occupy many days in their observance, the most minute attention being paid to the proper performance of the various rites connected with them. They consist, for the most part, of a preliminary fast, followed by symbolic dances or magical ceremonies, and concluding with a gluttonous orgy. A wide similarity prevails among these ordinances in North America, and, broadly speaking, it may be laid down that visible differences may be accounted for by circumstances of environment or variations in seasonal changes.

Of the Indians of Virginia (Algonquins), who were the first to come under the notice of Europeans, it was observed that they held regularly recurring festivals to celebrate the ripening of fruits and grain, and more irregular feasts to mark the return of wild fowl and the hunting season in general. These were obviously the celebrations of a people subsisting on a basis midway between the hunting and the agricultural states. That they were being slowly impelled towards the latter phase, however, is evident from the fact that their most important annual festival marked the period of harvest, the celebration of which lasted several days. Dances were engaged in, and heroic songs recited; and the entire observance appears to have been identical, in its general aspects, with the Indian festivals of the present day. The Creeks, as noted above, commence their New Year at a similar period, after the celebration of the *Busk*. The Cherokees recognize the same feast, at which time they burn all rubbish, and cleanse their habitations. A fast is then held for three days, during which time purgatives are taken. All crimes except murder are pardoned, so that the community as a whole may commence the new period free of sin. On the fourth morning the high priest produces a new fire by friction, and the members of the tribe are supplied from it. Feasting and dancing are then indulged in for three days, after which the people return to their usual avocations. This festival of the *Busk*, however, appears to have had other significance besides that of a mere seasonal offering of first-fruits. All the dances, invocations, and rites were shaped and ruled by the application of the number four and its multiples in every imaginable relation. Besides being a seasonal celebration, it possessed the significance of a sacrifice to the four winds—the rain-bringers. Four logs were placed in the shape of a cross pointing to the four cardinal points, and then consumed by fire, thus symbolizing the four winds to which they were a burnt-offering. The four winds originally typified the four ancestors of the human race.

Adhering to our classification of tribes according to the chronological sequence by which they became known to Europeans, we find that the Mandans (Dakotas) celebrated each year, as their principal festival, the 'Buffalo Dance'—a feast which marked the return of the buffalo-hunting season. The actions of buffaloes were imitated by eight men wearing the skins of these animals on their backs, with horns, hoofs, and tails remaining. Their bodies were painted black, red, or white; and a lock of buffalo hair was tied round their ankles. In their right hand they held a rattle, and in the left a slender rod, 6 ft. long, while on the back a bunch of green willow boughs was worn. The ceremony took place at the season of the year when the willow leaves fully expand under the bank of the river. Pairing off,

[1] Derived from Creek *puskita* = 'fasting.

the dancers took up their positions on four different sides of a large canoe, to represent the four cardinal points of the compass. Two figures were painted black, to represent night; and two red, to represent day. Two men, dressed as grizzly bears, stood beside the canoe, continually threatening to devour any one who interfered with the ceremony: and these had to be appeased with food, which, in turn, was snatched away from them, and carried off to the prairie by two other men. These were chased by a swarm of urchins, who relieved the men of their spoil. During the ceremony the old men beat upon sacks, chanting supplications for buffaloes and other provender. On the fourth day a man entered in the guise of an evil spirit, who was driven from the vicinity with stones and curses.

Although, on the surface, this festival would appear to be wholly a seasonal celebration, the introduction of the four cardinal points, which are therein symbolized, renders it more complex in its aspect. Essentially a hunter, the red man has ever these points present to his mind, and indeed they are to him, as to Empedocles, 'the source of ever-flowing nature.' Catlin, who recounts the circumstances of the festival, did not detect its origin in the veneration of the cardinal points, but numerous cognate myths since collected prove it to have had this conception as its foundation. The Buffalo Dance was probably a purely seasonal feast, which became confounded with the older idea of worshipping the four points of the universe.

The festivals of the Thompson River Indians of British Columbia have been fully investigated by Teit. They appear to be almost wholly social in their nature, and to possess but little true seasonal significance. In the winter-house feasts of these people a messenger is sent ahead by the visitors to announce their coming, so that the function takes somewhat the shape of a 'surprise party.' He further lets down food through a hole in the hut. Another custom of this tribe is to let down a kettle bedecked with feathers, and a lighted slow match, into the hut of the person to be visited, and to swing it violently, to the accompaniment of a rhythmic song. Those who have inserted it keep withdrawing it, while those inside attempt to catch and detain it when captured. Bundles of clothing and food are thrown down to the inmates of the hut as presents, and later on they return the visit. The semi-public feasts of the Thompson River Indians are known as 'potlatches,' and the staple food at these entertainments is usually horse-flesh. When this tribe gathers at the spring-house (*nskaptsé'lx*) for the annual fishing, a great dance-feast takes place. The people assemble in full festival paint, and commence dancing at sunrise, the married and unmarried men and women forming four separate groups. One chief stands at the west, and another at the east. These help to keep time for the dancers, and lead the singing, at intervals praying and prophesying. The unmarried people choose their husbands and wives during the first dance of the morning, and this part of the ceremony would seem symbolic of the spring mating season. At sunset the people again dance four times, and then disperse to their homes. After sunset a ceremonial smoke is held by the older men, when four pipes are smoked to the four cardinal points, or their spiritual prototypes. About fifty or sixty years ago the chief of the ceremonies began to hold these dances once a week, on Saturdays, and kept the days by cutting notches in sticks.

The Kwakiutl Indians of British Columbia have a winter dance, connected with the refunding of the purchase-money for a wife. It is most elaborate, but consists chiefly in rigorous cleanliness, and dancing in character, and closes with a veritable orgy.

One of the most highly developed and elaborate festival-systems of the Amerinds is that of the Hopi or Moki of Arizona, which has been exhaustively studied by several prominent anthropologists. It is typical of the snake-dances of all the Pueblo Indians, and is almost theatric in its performances. The *Soyaluna* is a winter-solstice ceremony, held in December, and lasting about 9 days. It is purely an initiatory ceremony, in which the young men of the tribe are put through tests akin to those generally supposed to form part of the Masonic system. On passing the tests, the candidate is admitted to one or other of the secret societies of the tribe. The *Powamu* ceremony (*powamu* = 'put in order') is celebrated under the direction of the chief priest of the Powamu fraternity. By this rite the fields and gardens are symbolically put in order, and protected against sand-storms, ants, and other destructive forces, and finally are consecrated for the coming planting season. From 8 to 12 men participate, belonging to the different totem clans—Badger, Crow, Rabbit, etc. The high priest is assisted by the chief of the Katcina clan, the head of a kindred society. The period of the *Powamu* ceremony is in February. The *Mishonguori* ceremony is held in August, in alternate years, and is performed by the Snake and Antelope fraternities. It is announced on the fourth day following the last day of the *Niman*, or farewell ceremony of the Katcina brotherhood's season. It is essentially a seasonal festivity, the principal object of which is to obtain a good rain-supply, and it lasts 24 days. It is divided into groups of four days each—two of four days each, before the *yungya*, or assembly day; then, two of four days each of the ceremony pure and simple; and, finally, four days following the public performance, which are exclusively devoted to merrymaking. The *Oráibi*, summer snake-ceremony, has been more fully analyzed than any of the others. It is preceded by a preliminary ceremony sixteen days before, and by a nine-day ceremony which commences eight days before the snake-dance. In the years when the snake-dance is not performed, a complicated 'flute ceremony' takes its place. There exist two factions who never take part in the same festivities, called by Voth the 'Conservatives' and 'Liberals,' who are hostile to one another. The exact time for the performance of the snake-dance is difficult to place, as much depends on the condition of the melon and other crops. If the drought is great, the crops suffer, and the ceremony is hastened, but the date is partly regulated by that of the last *Katcina* ceremony in July, the snake-dance usually taking place on the fourth day after the last dance of the *Katcina* ceremony. There is also a winter ceremony lasting nine days, which is celebrated in January. The same *kivas*, or dance-houses, are made use of as in the summer ceremony, and the same songs introduced. This is the *Katcina* festival, which usually takes place in years with even numbers, and lasts intermittently until the summer festival season. These snake-charming ceremonies have their origin in the universal reverence shown to the serpent tribe all over America—a reverence based on the idea that the snake underwent an annual rejuvenescence in the casting of its skin, or perhaps that the symbol of the serpent with its tail in its mouth represented the round, full sun of August, the season of the ceremony of the snake-dance. The latter hypothesis is the more probable, as in the *Katcina* winter ceremony snakes are never used.

The Pima tribe of the Southern branch of the Athapascan family mark their drinking festivals or '*Tiswin* drunks' on their notched stick calendars by the letter 'T.' These take place at the harvest season of the *saguaro* cactus, which marks the beginning of the year. It also coincides with the maize and mesquite harvest, and the torrid heat

of summer. These festivals partake more of the nature of debaucheries than of ritualistic ceremonies, and are purely seasonal celebrations.

'Illness feasts' are common with the Apache Indians. These are held for the purpose of banishing illness, and consist in the patient who suffers being fed by the medicine-man with choice food and *tiswin* drink, to the accompaniment of chanting. Should an epidemic be prevalent, however, a regular festival with dancing takes place, for the purpose of exorcizing those powers of evil who are regarded as answerable for the misfortune. The Apaches are not, however, overburdened with reverential ideas, or prone to self-humiliation, and have few religious festivals. Their principal celebrations are the 'Scalp Dance,' held after a successful combat, a ceremony for the purification of weapons, and burial-feasts attendant upon the sepulture of famous warriors.

The Iroquois have a 'Feast of the Dead' which occurs once in twelve years. The tribe proceed to the burying-place, and, after 'reviving' the names of those who have been dead for twelve years, exhume their bodies and cast them into a pit, along with clothing and provender, much in the spirit in which pre-historic man supplied his dead with things material.

The festivals of the tribes of California have been fully examined by Stephen Powers, who has skilfully analyzed the seasonal ceremonies of the Maidu, Konkan, Karok, Yuki, and other confederacies. The Maidu have four great festivals in the year: the *Hok-tom-we-dah* (open-air festival), in the spring; *I-lak-kum-we-dah* (dry season festival), about 1st July; *Ush-ti-naoh* (burning of the dead), about 1st September; and *Yak-kai-we-dah* (winter festival), about the end of December—all seasonal. Other important festivals of this tribe are the 'Manganita Dance,' held to celebrate the ripening of the manganita berry, and the 'Great Spirit Dance' in propitiation of demons. The Konkan, in the *Tsi-pi ka-mi-ni*, or 'Weeping Dance,' have a ceremony akin to the Iroquois 'Feast of the Dead' and the Maidu 'Burning of the Dead.' It is held in the last days of August, begins in the evening, and lasts till daybreak. The celebrants bring food and clothing to the place of sepulture, all of which articles must be new. These they hang on a semicircle of boughs. In the centre burns a large fire, close to the graves, round which a solemn dance is executed. The goods are then burned, and their 'astral' counterparts are supposed to reach those deceased persons for whom they were intended. This occasion marks the New Year's Day of the tribe. The Karok have a 'Dance of Propitiation' on 1st September, for the purpose of propitiating the spirits of earth and forest, when a fire is kindled—the first of the rainy season. Their 'Salmon Dance' is held at the opening of the salmon-fishing season, to ensure a good catch. The Yurok have a similar festival. The Wailakki celebrate a 'Clover Dance,' which is held when the burr clover is fit to eat; the Yuki have a 'Green Corn Dance' at a similar season; and the Tatu and Pomu have an 'Acorn Dance.' The last mentioned race possesses a curious festival, or rather ceremonial observance, known as the 'Grand Devil Dance.' It is held under the auspices of the fraternity of the 'Woman-Tamers' once in 7 years, and is looked forward to with terror by the women of the tribe. *Yu-ku-ku-la* (the devil) is supposed to visit the tribe in the guise of certain of its members. With these Satanic emissaries the men of the tribe engage in sham combat in defence of the women. This quaint custom is said to have had its rise in the intractability of the women of the Pomu, whom the men hoped to render more amiable by this means. The Nishinam celebrate a 'First Grass Dance' after the rainy season, and a 'Second Grass Dance' in the spring. Another vernal festival of theirs is the *We-da*, held in the early spring to guard against snake-bites. The *Ta-tu-lo-wis*, or 'Rattlesnake Dance,' of the Yokuts is held by the medicine-men of the tribe for the purpose of giving immunity to the Indians, for a year, from the dreaded snake-bite.

3. **Fasts of the N. American Indians.**—The practice of fasting is observed far and wide among the Indians, and, although frequently practised in connexion with public ceremonials, is perhaps more generally carried out in private. The first fast of life is usually the *puberty-fast*, when the youth or girl is sent to a deserted locality to remain alone for a period ranging from one day to a week, during which time he or she is supposed to be granted visions by means of which their career in life, or sometimes the nature of their totemic connexion with the supernatural, is to be made clear. The fast is usually accompanied by signs of self-abasement, such as torn garments or complete denudation, and earth-strewn head.

The most complete account of a puberty-fast is that of Catherine Wabose, or Ogeewyahnockwut Oquay, an Indian prophetess, whose experiences thereof were taken from her own lips by Mrs. Schoolcraft. When she was 12 or 13 years old, she left her mother's lodge, and built a small one for herself. After a fast of four days, she was visited by her mother, who gave her a little snow-water to drink. On the night of the sixth day, whilst still fasting, she was conscious of a supernatural voice, which invited her to walk along a shining path, which led forwards and upwards. There she first met *Kau-ge-gay-be-qua*, the 'Everlasting Standing Woman,' who told her her supernatural name. She next met *Monido-Wininees*, or the 'Little Man Spirit,' who told her that his name would be the name of her first son. She was next addressed by *O-Shau-wau-e-geeghick*, or the 'Bright Blue Sky,' who endowed her with the gift of life. She was then encircled by bright points of light, and by sharp painless instruments, but, mounting upon a fish-like animal, she swam through the air back to the lodge. On the sixth day her mother fed her with a little dried trout, and on that night she experienced a repetition of the vision. On the seventh day she was fed with a little pounded corn in snow-water. After the seventh day she beheld a large round object like a stone descend from the sky and enter the lodge. It conferred upon her the gift of prophecy, and by virtue of this she assumed the rank of a prophetess upon her return to the tribe.

Before embarking upon *a warlike expedition*, or prior to *a great hunt*, it is quite common for the warrior or hunter to fast, and medicine-men regarded the practice as one which conferred upon them special powers of illumination. *Initiation into secret or religious societies* is almost invariably preceded by more or less rigorous abstinence, and in some of the great festivals the chief participants were obliged to fast prior to the ceremony. The length of these varied with the tribe, but in general their duration was from one to four days, a day being counted as from midnight to sunset. Water as well as solid food is generally prohibited in an Indian fast. The native standpoint as regards fasting is succinctly put by a Cherokee medicine-man, who explains its necessity as 'a means to spiritualize the human nature, and quicken the spiritual vision by abstinence from earthly food.' It is not uncommon to regard it as a means by which the 'smell' of worldly things may be removed. Tribal fasts are often announced, to avert any disaster which the medicine-men believe threatens the community.

4. **South American calendars and seasonal festivals.**—(1) *Peru.*—The only species of chronology known in the Peru of the Incas was a lunar reckoning. The four cardinal points in the sun's course were ascertained by means of the *inti-huatana*, a device consisting of a high flattened rock surmounted by a small cone, the shadow of which, falling on certain notches on the stone below, marked the date of the great sun-festivals. The Peruvians, however, had no true calendar. At Cuzco, the capital, the solstices were measured

by pillars called *pachacta unanchac*, or indicators of time, which were erected in four groups on eminences—two in the direction of sunrise, and two in that of sunset—to mark the extreme points of the sun's rising and setting. The solstices were known to have arrived when the sun rose and set between the middle pair in each group. The nearest approximation to the year known to the Incan astronomers was the primitive one of 360 days, divided into 12 moons of 30 days each. These moons were not calendar months in the correct sense, but merely a succession of lunations, commencing with the winter solstice; and no method appears to have existed by which the reckoning might be co-ordinated with the succession of years. The names of the twelve moons, so far as can be ascertained from various sources, were as follows:

Huchuy Pucuy Quilla (Small-growing moon), approximately January; *Hatun Pucuy Quilla* (Great-growing moon), approximately February; *Paucar Pucuy Quilla* (Flower-growing moon), approximately March; *Ayrihua Quilla* (Twin-ears moon), approximately April; *Aymuray Quilla* (Harvest moon), approximately May; *Aucay Cusqui Quilla* (Breaking-soil moon), approximately June; *Chahua Huarqui Quilla* (Irrigation moon), approximately July; *Tarpuy Quilla* (Sowing moon), approximately August; *Ccoya Raymi Quilla* (Moon of the Moon-feast), approximately September; *Uma Raymi Quilla* (Moon of the Feast of the province of Uma), approximately October; *Ayamarca Raymi Quilla* (Moon of the Feast of the province of Ayamarca), approximately November; *Ccapac Raymi Quilla* (Moon of the Great Feast of the Sun), approximately December.

That the natural course of the moon was the standard of time with the Peruvians is inferred chiefly from the fact that the principal religious festivals began on the new moon following a solstice or equinox. The ceremonies in connexion with the greatest festival, the *Ccapac Raymi*, were made to approximate to the lunar phases, the various stages commencing with the 9th day, full moon, and 21st day, or last quarter. But there is good reason to believe that the ruling authorities often determined upon which moon a certain festival was to take place, and were by no means rigid in their acceptance of ecclesiastical chronology.

With the Peruvians each month had its approximate festival, or rather a festival was apportioned to each lunation. But the solstices and equinoxes were the occasions of established ceremonies. The arrival of the winter solstice, which in Peru occurs in June, was celebrated by the *Intip Raymi*, or great feast of the sun. The principal Peruvian festival was the *Ccapac Raymi*, the national feast of the great god Pachacamac, which took place at the summer solstice, when the New Year was supposed to begin. Molina, Fernandez, and Garcilasso, however, date the New Year from the winter solstice. The vernal equinox, which in Peru occurs in September, and coincides with the beginning of the rainy season, was the occasion of the third great feast of the Inca year, the *Ccapac Situa*, or *Ccoya Raymi* (moon-feast).

The general character of these festivals appears to have been mild, and indeed almost child-like. They usually consisted in the sacrifice of llamas from the sacred herds, libations of *maguey* or maize-spirit, and the performance of symbolic dances. One of the most picturesque was that of the *Citoc Raymi*, or gradually increasing sun, held in June, when nine days were given up to festival. For three days previous to the event a rigorous fast was observed, and no fire might be kindled in any house. On the fourth day the Inca, accompanied by the people *en masse*, proceeded to the great square of Cuzco to hail the rising sun, the advent of which they awaited in silence. On its appearance they greeted it with a joyous tumult, and, forming in procession, marched to the golden Temple of the Sun, where llamas were sacrificed, and a new fire was kindled by means of a concave mirror. Grain, flowers, animals, and aromatic gums were the usual sacrificial offerings on such occasions. This festival was broadly typical of all the seasonal celebrations of the Peruvians.

The calendar of Incan Peru was purely agricultural in its basis, and marked in its great festivals the renewal or abandonment of the labours of the field. It owed little to astronomical observation, and was not more advanced than the calendars of races otherwise much inferior in civilization.

(2) *Chili.*—The Araucans, the aboriginal inhabitants of Chili, observed the solstices by the shadows of rocks, reckoning time independently by a succession of 12 lunations having seasonal names.

(3) *Brazil.*—The Bakairi Caribs of Brazil possess a calendar which is almost unique in its nomenclature, illustrating, as it does, the transition from a merely seasonal reckoning to one in which the period of harvest is indicated. It is as follows:

Khopolateri = 'hardest rain' (about January); *Khopopogeto*, 'less rain' (February); *Khopohoketatile*, 'rain ceases' (March); *Khuraitile*, 'it (the weather) becomes good' (April); *Sugheho*, 'wood-cutting' (May and June); (July nameless): *Ihuitabe*, 'end-of-the-day-time' (August); *Khopoewile*, 'the-rain-is-coming' (September and October); (Nov. nameless); *Anaziutule*, 'the-maize-ripens' (December).

The Uapes of Brazil have a calendar to mark the recurrence of the *Dabucuri* festival, or initiation of the young men of the tribe. This occurs six times in the year as follows:

The *assaby* on 1st Jan.; the *ucuqui* on 2nd Feb.; the *miritz* on 3rd March; the *pataud* on 4th May; the *umari* on 5th July; and the *uiga* on 6th November.

These revels are of the most riotous description. The neophytes, painted black and red, are wedded to women of the tribe, to the accompaniment of mournful chants and dances. The myth of the god Jurupari is symbolized (see art. BRAZIL), and the proceedings end in a saturnalia.

(4) *Paraguay.*—The Abipones of Paraguay had a feast on the 'Recovery of the Pleiades.' When they disappeared, they were said to be 'sick,' and much rejoicing was evinced at their reappearance and supposed recovery. The principal festivals of this tribe were occasional, and signalized victories, burials, birth of caciques, shaving of widowers and widows, the changing of names, and councils of war. Upon news of a victory, a public crier was dispatched from house to house, who saluted the women with a kiss, and the men with a spear to which a bell was attached. The spear was returned to him when he left the dwelling after inviting the inmates to the festival. This office was usually filled by a medicine-man of advanced age. The house of celebration was decorated with the scalps of the slain enemies, hung on an erection made of reeds. The victors spent the time from sunset until morning in chanting their victories, and in drinking a species of liquor resembling mead.

(5) *Patagonia.*—The Tehuelches of Patagonia signalize the birth of a child by slaughtering a mare or cow, and removing the stomach, in which the newly-born infant is laid. The tribe then feast on the remainder of the animal. They appear to have no seasonal festivals. See, further, the 'Mexican and Mayan' article.

LEWIS SPENCE.

CALENDAR (Armenian).—When they became a Christian nation, the Armenians felt the need of a regular calendar for their religious ceremonies, and hence there was developed among them the study of the science of time. So long as they were pagans, this people, like the Egyptians and Persians, had a year of exactly 365 days, while, according to our calendar, the year has 365¼ days. This is why we reckon 366 days every fourth year. In 1460 years there would be a difference of a year between these two computations, so that the Julian year 1460 corresponds to the year 1461 of the Armenian era.

To indicate the relation of events in time, the Armenian chronologists, in the course of ages, invented various eras. These we shall pass in succinct review, referring for fuller details to the special works dealing with them. There are the *great Armenian era*, in which the year is a vague quantity (this is the era usually employed), and the *lesser eras*, the year of which is a fixed quantity.

1. The great Armenian era.—(*a*) '*Vague' year.*—According to Dulaurier (*Recherches*, p. 6), it is probable that the 'vague' year, which is found very early among the Persians, came into Armenia with Zoroastrianism, which, according to Iranian traditions, took its rise in Atropatene; and this transmission was carried out under the successors of Tigranes I., when Armenia passed into the hands of the Achæmenians. The designation 'vague year' is derived from the fact that, in the Armenian year, the days change their positions; similarly, the festivals, in four years, change by a day.

(*b*) *Months.*—The year is divided into twelve months of thirty days, with five additional days (*aweleach*, pronounced *aveliats*) which are intercalated after the twelfth month. The names are given here according to the scheme of transliteration explained by the present writer in Bishop Sebêos' *Histoire d'Héraclius*, Paris, 1904, p. xv:

1. Nawasard.	7. Mehekan.
2. Hoṛi.	8. Areg.
3. Sahmi.	9. Ahekan.
4. Trê.	10. Mareri.
5. Khaloch (pron. Qaṛots).	11. Margach (pron. Margats).
6. Arach (pron. Arats).	12. Hrotich (pron. Hrotits).

Aweleach.

The meaning of the month-names is still very obscure, in spite of the explanations that have been suggested, *e.g.*, by Dulaurier and Hübschmann. First of all, it must be noted that these names are often in the genitive, because they are under the government of the phrase 'month of,' understood before them.

Nawasard means 'New Year' (Dulaurier, *op. cit.* p. 11; Hübschmann, *Armen. Gram.*, Leipzig, 1897, i. 202). It is a word of Iranian origin; for meaning, cf. Persian *Nauruz*.

Hoṛi and *Sahmi* are of very uncertain derivation; it has been observed that these words meant 'two' and 'three' in Georgian; these would therefore be the second and third months of the year.

Trê.—Galust Ter Mkrttschian found in a manuscript the older form *Treay*, which explains the common form *Trê*. *Treay* is a genitive; it must, then, be connected with the name of the god *Tir* or *Tiwr*, whom we find mentioned by Agathangelos. Thus the fourth month of the ancient Armenian year is the month of the god Tir.

Khaloch would be the month of harvest (Dulaurier, p. 11 f.); it may also be the Armenian form of a different word, of foreign origin, introduced into the Armenian calendar.

Arach also looks like a genitive plural. All etymologies proposed for it down to the present day are unsatisfactory.

Mehekan.—A good explanation of this word is given by Hübschmann (*op. cit.* p. 194). It means the month sacred to the festival of Mihr or Mithra.

Areg looks like an Armenian word, meaning 'sun'; but it also may be a foreign Armenianized word.

Ahekan, according to Hübschmann (p. 95), corresponds to the Pahlavi word *Ādaragān*, 'das Monatsfest am Tage Ādar des Monats Ādar.' The form *Aheki* is also found, recalling the Armenian word *ahek* or *aheak*, which means 'left.'

Mareri, according to its form, may be either a nominative or a genitive singular. The etymologies proposed as yet do not seem satisfactory.

Margach is, in form, a genitive plural. It is an Armenian form of a Persian name, *Markezan* or *Markazan* (cf. Hübschmann, p. 506).

Hrotich is an Armenianized Persian word (cf. Hübschmann, p. 184 f.).

(*c*) *Days.*—These are practically the same in the ancient and the modern calendar:

Sunday = Miašabathi or Kiraki.
Monday = Erkoušabathi.
Tuesday = Erekhšabathi.
Wednesday = Chorekhšabathi.
Thursday = Hingšabathi.
Friday = Urbath.
Saturday = Šabath.

The ancient Armenians had no continuous era for counting indefinitely. They reckoned by the years of the kings, patriarchs, etc. But when they became Christians they had to fix the Easter feast; they therefore borrowed the computation of Easter from the Alexandrians, who were the best Christian mathematicians at that time. They had Andrew of Byzantium's Paschal canon of 200 years, which lasted down to the 6th century. Then they borrowed the quincentenary canon (532) of Æas of Alexandria.[1] It must be carefully borne in mind that, when we speak of the establishment of an era, we mean the establishment of a canon.

When was the Armenian era established? Historical data on the subject will be found discussed at length in Dulaurier's work (p. 52). This author has shown that the beginning of the Armenian era is 552—the year when the 1st of Nawasard fell on the 11th of July. Chronologists have often fixed their synchronisms by writing 551; but this is a mistake. In spite of the disagreement amongst historians, it appears to be proved that, in 552, Nerses, and not Moses, was catholicos (cf. Kalemkiar's app. ii. in his Armenian tr. [Vienna, 1897, p. 107 ff.] of Gelzer's 'Armenien' in *PRE*[3] ii. 63 ff.; and the anonymous list of catholicoi [ed. Mgr. Ormanian] in *Calendrier de l'hôpital arménien*, Constantinople, 1908, p. 172). It is clear to the present writer that Nerses did not establish the Armenian era; for we must not confuse the starting-point of an era with the date of its establishment. It was while Moses was catholicos that the Armenian era was established, entirely for a canonical, viz. a Paschal, purpose. The starting-point of this era was fixed at 552 because the 200 years' canon of Andrew of Byzantium was completed then, and for several years there had been great difficulty in fixing the Easter feast. But the era could not have been actually established in 552, for the quincentenary cycle was not yet known. The latter computation was made at Alexandria by Æas in 562; it was the cycle of 532 (19 × 28). The Armenians reckoned 562 the tenth year of their cycle, and 552 became the first year. They must have required some time to acquaint themselves with this system and to adopt it. The result was that, by the end of the 6th cent., they had established an era to fix the computation of Easter, this era being based on the quincentenary canon of Alexandria, and started with the year 552. The catholicos Nerses, therefore, had nothing to do with this question.

[1] See Dulaurier (p. 36) for a very accurate list of canons, and for full information on the establishment and adoption of the various canons.

There was still, however, a great difficulty to face, since the reckoning was by Armenian 'vague' years, whereas for a Paschal cycle a fixed year was a necessity. In the 7th cent., we are told, Anania of Shirak tried to remedy this defect, but his work has not yet been discovered. The catholicos Anastasius (661–667) had deputed Anania to study the fixed calendar, and for this purpose he convoked the bishops to a national council. Anastasius died, however, before the meeting, and the Armenian era remains 'vague' down to this day (Dulaurier, p. 183). Dulaurier (pp. 383–389) gives an excellent table, which may still be employed, showing when the 1st of Nawasard falls for each year of the Armenian 'vague' chronology.

2. Lesser Armenian eras.—It was the end of the 11th cent. before Armenia had a fixed calendar, and she owed it to John the Deacon. His work consisted in the substitution of the Julian for the old 'vague' system; he intercalated the bissextile day of the Roman calendar after the fifth additional day, in imitation of the Alexandrians, and counted five instead of six additional days every fourth year, besides making the fixed year begin on the 11th of August. The Feasts of the Saints were made stable, and Armenian Menology received a regular definite form. The correspondence between the Armenian and the Roman months became absolutely fixed. The 'little era' of John the Deacon had vogue especially in Upper Armenia, but it is never used in the chronicles, and obtained no acceptance with the generality of the nation (Dulaurier, pp. 111–115).

Whereas the 'vague' year is called the 'great era,' the lesser eras have fixed years. The beginning of the 'little era' of John the Deacon is 1084, *i.e.* just a quincentenary after the opening of the 'great' Armenian era. Here, again, care must be taken not to confuse the starting-point of this era with the date of its establishment. John the Deacon established his 'little era' ten years after its commencement. It began in 1084, because that was exactly the first year of the second quincentenary; then he added an intercalary day (*Awelikh*), and thus obtained complete correspondence with the Julian year. Every four years there came a leap-year. Now a fixed year was established; the feasts changed no longer. John the Deacon kept the names of the days and months as they were in the ancient system, and his era is met with quite frequently in documents of the Middle Ages.

One question still remains obscure: in 1084 the 1st of Nawasard fell on the 29th of February; John the Deacon took as the beginning of his year the 11th of August. This fact has not yet received a satisfactory explanation (cf. von Gutschmid, 'Das iranische Jahr,' in *Berichte über d. Verh. der sachs. Gesellsch. der Wissensch.*, 1862, *passim*). In any case, John the Deacon established a purely ecclesiastical era, and brought it into agreement with the Julian era of the Martyrology.

After John the Deacon we have a third era, employed by the Armenians of Persia and the Indies—the 'little era' of Azaria, beginning with the year 1616 (1084+532). Like John the Deacon, Azaria employed the Julian year, with its intercalation every four years. He made a fixed year, but he added a day to the month of Nirhan, and so kept *Awelikh* unaltered. The year of Azaria began with the vernal equinox, *i.e.* 21st March, Julian = 2nd April, Gregorian. The names of the months in the calendar of Azaria are as follows:

	Julian.	Gregorian.
1. Šams . . .	21 March.	2 April.
2. Adam . . .	20 April.	2 May.
3. Šbath . . .	20 May.	1 June.
4. Naxay . . .	19 June.	1 July.
5. Lamar . . .	19 July.	31 July.
6. Nadar . . .	18 August.	30 August.
7. Thiray . . .	17 September.	29 September.
8. Damay . . .	17 October.	29 October.
9. Hamiray . . .	16 November.	28 November.
10. Aram . . .	16 December.	28 December.
11. Ovdan . . .	15 January.	27 January.
12. Nirhan . . .	14 February.	26 February.
Awelikh . . .	16 March.	28 March.

Dulaurier (p. 116) explains these names as follows:—*Šams*, 'the sun,' and *Lamar*, 'the moon,' are two Arabic words; *Thiray* is exactly the same as *Tir*, the 4th month in the Persian calendar; *Šbath* suggests the Hebrew שַׁבָּת (Dulaurier confuses this word with שְׁבָט, which was the 11th month, from the February new moon till the March new moon [Gesenius, *Heb. und aram. Handworterb.*[13], Leipzig, 1899]); *Hamiray* is the Arab. *Amir* or *Emir*; *Adam* is the name of the first man; *Aram*, that of the seventh descendant of Haik, the founder of the Armenian nation. The names of these months are, indeed, more or less comprehensible; but Dulaurier's explanations cannot be accepted. It must be remembered that the calendar of Azaria was employed by the Armenians of Persia and the Indies; the explanation of these names, then, must be sought in the direction of Persian and Hindustani.

From 1320 onwards (=760 of the Armenian era), the difference between the two eras was 550 years instead of 551. Nevertheless, to find the popular Christian year corresponding to a year of the Armenian era, it is necessary, as a rule, to continue adding 551. The reason for this is probably the fact that the fixed year of John the Deacon gained the ascendancy, so that the fixed year was used far oftener than the 'vague' year even by writers who employed the months of the latter [this theory will be developed by Galust Ter Mkrttschian in the preface to his edition of Agathangelos].

Although the 'vague' year of the Egyptians, Persians, and Armenians is the same (for the ancient Persians, cf. Tabari, *Gesch. der Perser und Araber*, tr. Nöldeke, Leyden, 1879, p. 436), there is a difference of five days between the Armenians and the Persians. The first day of the ancient Persian year fell on the 1st Awelikh of the Armenians, and not on 1st Nawasard. The Egyptian and Armenian computations, on the other hand, correspond exactly. An important question now arises. If, as is generally admitted on the evidence of the names of the months, the Armenians borrowed from the Persians, why did they not keep the same starting-point for their year? In the present writer's opinion, the Armenian computation was borrowed indirectly from the Egyptians, through the Aramæans of the South of Armenia; and then later, under Persian influence, the forms of the month-names changed. It was the Persians who, in borrowing from Egypt after its conquest by the Achæmenians, changed the method of computation for the beginning of the year. Von Gutschmid (*passim*) has tried to explain the cause and manner of this change; his explanation is ingenious but not convincing. Probably it was due to religious reasons.

The charts of the Rubenians, who ruled in Cilicia or Lesser Armenia, are dated by the Dionysian era of the Incarnation and by the Indiction, and occasionally, at the same time, by the Armenian era (Dulaurier, p. 122).

Galust Ter Mkrttschian, a monk of the monastery of Etchmiadzin, discovered a new Armenian era, the work of a certain Stephanos. In this era the months have the ancient names, and each has 30 days. It is probably a fixed era, and was used in Cilicia; the year began on 1st March (Julian). We have no further data. (This information is gathered from manuscript notes. It has not yet been published.)

There are other dates employed by the Armenians. On the walls of the cathedral of Ani and in certain manuscripts we find mentioned *thiw horomoch*, (pron. *horomots*), *i.e.* the 'Roman' or 'Byzantine era.' But it is not the well-known Byzantine era. This expression is explained by Brosset (*Collection des historiens armeniens*, St. Petersburg, 1874–76,

ii. 360), who makes this era begin in 248–249 (Julian)—the beginning of the second millennium from the foundation of Rome (751 + 249 = 1000).

There is another era called *thuakan Xosrovayin*, *i.e.* 'era of Khosrov,' but it has not yet been satisfactorily explained.

Mention should be made, finally, of a somewhat rare formula of the manuscripts, 'the era of the reign of the Lord,' in Armenia. This formula is found in an account of the Gospel of the Thargmanichkh, preserved among the Antonian Fathers at Ortakeuy (Constantinople), and would correspond to an era of Gregory the Illuminator, or of the conversion of Armenia to Christianity—301 of the Julian era (see Chamchean, *Hist. of Armenia* [in Armenian], Venice, 1784–86, iii. 2, 13; Karekin, *Catal. des anc. traductions armén.*, Venice, 1889, p. 606; Dashian, *Catal. der armen. Handschriften in der Mechitharisten Bibliothek zu Wien*, Vienna, 1895, p. 4, col. 2 of the Armenian text; *Survey of Armen. Palæography*, Vienna, 1898, p. 190 [in Armenian]). Dulaurier (p. 289 f.) also mentions a manuscript in the library of the patriarchal monastery of Etchmiadzin, which alludes to an era of the conversion of Armenia to Christianity, beginning with the year 304 (Julian), the time of Gregory the Illuminator's arrival at the patriarchal see.

3. The conversion of an Armenian into a Julian date.—The various chronologists who have turned their attention to the correspondence of Armenian dates with dates of other calendars, have invented systems more or less ingenious and more or less practical (which will be found in the works cited at end of art.). The following is a new method of converting an Armenian date into a Julian. Multiply the Armenian year by 365, add 191 and the number of the day reckoned from the commencement of the Armenian year, and call the result a. Divide a by 1461, calling the quotient b and the remainder c. Multiply b by 4, and add one of the numbers 0, 1, 2, 3, respectively, according as c is equal to or greater than the numbers 0, 365, 730, 1095, respectively, and call the result d. Add 551 to d, and the result is the Julian year in which the given Armenian date falls. Take from c one of the numbers 0, 365, 730, 1095, according as c is equal to or less than the 1st, 2nd, 3rd, or 4th of these numbers, and the result will be the place in the Julian year, already found, of the given Armenian date. The order 0 in a year means the last day of the preceding year. If the Armenian era is divisible by 4, it is necessary, finally, to add 1 to the Julian date.

Let us take two examples:

(1) Thomas Arcruni (10th cent.), *Hist. of Armenia* (tr. Brosset), p. 174, says: 'Ashot finished his days and died in the country of Vantosp, on Thursday, the 6th of the month of *Hoṛhi*, 323 by Armenian computation, and was conveyed to his brethren in the monastery of Surb-Khatsh, in the province of Agbbag':

$$323 \times 365 + 191 + 36 = 118122 = a$$
$$\frac{118122}{1461} = 80 = b \text{ and remainder} = 1242 = c$$
$$80 \times 4 = 320$$
$$320 + 3 = 323 = d$$
$$323 + 551 = 874$$
$$1242 - 1095 = 147 = \text{27th May.}$$

The Dominical Letter of the year 874 is *C*. The 1st of May is a Saturday, the 27th is a Thursday. Therefore, Thursday, the 6th Hoṛhi, 323 of the Armenian era = Thursday, 27th May, 874 of the Julian era.

(2) Stephen Orbelian (13th cent.), *Hist. of Siunia* (tr. Brosset), p. 134, says: 'In the year 344, Easter falling on the 4th of Nawasard, I, Ter Hovhannes, ordained Bishop of Siounie, successor of Ter Soghomon, began the building of this church':

$$344 \times 365 + 191 + 4 = 125755 = a$$
$$\frac{125755}{1461} = 86 = b \text{ and remainder} = 109 = c$$
$$86 \times 4 = 344$$
$$344 + 0 = 344 = d$$
$$344 + 551 = 895$$
$$109 - 0 = 109;\ 109 + 1 = 110 = \text{20th April.}$$

The Dominical Letter is *E*. The 1st of April is a Tuesday, the 20th is a Sunday. In the year 895, Easter fell on 20th April. Therefore, Sunday, the 4th of Nawasard, 344 of the Armenian era = Sunday, 20th April, 895 of the Julian era. (This is unpublished matter, following a manuscript note of Reverend Father Seraphin Abdullah, who will soon publish a complete, authoritative discussion of the Armenian era.)

Since the 'vague' Armenian year began on Thursday, 11th July 552, for the figures of the days of the week we count Thursday 1, Friday 2, etc., and Wednesday 7 or 0. To find the *1st of the Armenian year* or the 1st of Nawasard, we must divide the year by 7; the remainder is the day of the week of 1st Nawasard.

4. Peculiarities of the Armenian liturgical calendar.—The Armenian Church has not only the same feasts as other Christian Churches, but several peculiar to herself. While the other Churches celebrate their feasts on dates fixed by the civil calendar, with the exception of Easter and the feasts dependent thereon (movable feasts), the Armenian Church has only six fixed feasts: (1) the Theophany; (2) the Purification; (3) the Annunciation, formerly celebrated in the octave of the Nativity, on the fifth day; (4) the Nativity; (5) the Presentation; (6) the Conception. The Nativity of the Virgin was introduced among the Armenians in the 13th cent.; the Presentation and Conception are of a still later date (18th cent.). The Theophany was originally always celebrated on a Sunday; it was only in later times that it was fixed for the 6th of January.

The Armenian Church distributes the various feasts according to the days of the week. All the Sundays are consecrated to the Resurrection. Every Friday is sacred to the Crucifixion; fasting or very sparing diet is the rule on that day, and hymns of penitence are sung at service. A Dominical Feast may be held on a Friday; a Saint's Feast cannot take place either on a Sunday or on a Friday. Wednesdays, like Fridays, are given up to fasting and works of penitence; Wednesday, being considered the day on which the Annunciation took place, became the Feast of the Incarnation. The same rules, therefore, bind Friday and Wednesday; and no Saint's Feast can take place on Sunday, Wednesday, or Friday.

The Feasts of the Saints then may be celebrated only on Monday, Tuesday, Thursday, or Saturday; and, even on these days secured to them, they have to give place to a Dominical Feast or a fast-day falling on the same date. The Feasts of Saints falling on a Monday, Tuesday, or Thursday may be changed into Dominical Feasts or into days of fasting; those falling on a Saturday cannot be changed except into a Dominical Feast. There are about 125 days in the year on which the Feasts of the Saints may be celebrated, and the Armenian Church has also thought fit to group the memorials of several saints on one day.

The Dominical Feasts comprise all those connected with the Incarnation, the feasts of the Virgin, of the Holy Cross, and of the Church. These feasts have their own special hymns. The Feasts of the Saints are more simple, only some of them having special hymns; for the others, hymns are borrowed from the services of the Apostles or prophets, etc. On fast-days the hymns, psalms, and spiritual songs have a penitential tone.

The Easter Feast has a variability of 35 days (from 22nd March to 25th April), and there is accordingly a period in the liturgical year whose variability is determined by that of Easter. This period is divided into two parts: the days before and the days after Easter. The Armenians count back ten weeks from Easter Sunday, and fix for the tenth Sunday before Easter the day of Aradjavor, the beginning of their Paschal period. The second part contains fourteen weeks, seven from Easter to Pentecost, and seven from Pentecost to the Transfiguration (= *Vardavar*, the Feast of

Roses). This Paschal period of 21 weeks may begin at any date between 11th January and 15th February, and end between 28th June and 1st August.

The following are the prescriptions of the Armenian Church for the celebration of the Assumption of the Virgin and the Exaltation of the Cross.

If 15th August and 14th September fall on a Sunday, these feasts are held on those days. If 15th August and 14th September do not fall on a Sunday, they are celebrated on the Sundays nearest the dates in question. The Feast of the Assumption may fall on any day from the 12th to the 18th of August, and is preceded by a week of fasting, beginning on the preceding Monday. The Feast of the Exaltation of the Cross may fall between the 11th and the 17th of September. The period of Advent begins on the nearest Sunday to 18th November, and lasts on to the Theophany (see Tondini de Quarenghi, *op. cit. infra*, *passim*).

FRÉDÉRIC MACLER.

CALENDAR (Babylonian).—It is coming to be more and more clearly recognized that the Babylonian festivals and the rites connected with them are related in the most intimate way with the calendar, which, again, is as old as civilization itself. As the ancient Egyptians had already fixed upon a year of 360 days, dividing it into three seasons of four months each, and as the actual source of this computation was Babylonia, it is clear that the cycle of 360, representing the earliest attempt to make an adjustment between the lunar year of 354 days and the solar year of 365¼ days, goes back to a very remote antiquity. 'Twelve are the months of the year; six *sosses* (*i.e.* $6 \times 60 = 360$) are the days of the measure of the year's beginning'—so runs the well-known and frequently cited passage in *WAI* iii. 52, 37, which reproduces an Assyr. copy of the early Bab. work on astrology known as *Enu-ma Bel*. The Egyptians and the Babylonians, in fact, differed only in their methods of *intercalation*, which the aberration from the true solar year soon rendered necessary: the Egyptians inserted the five so-called *epagomenæ* at the end of every year, while the Babylonians intercalated a whole month every fifth or sixth year, as required; or, in districts where the lunar year of 354 days prevailed—as, *e.g.*, the city of Ur—every second or third year. In reality, therefore, the Egyptians had a year of 365 days, retaining the older tradition of 360 days only by marking off the intercalary five as *epagomenæ* dedicated to special deities. Even this increment was in time found to be inadequate, the deficiency amounting to one day in four years, or, otherwise, to a month in 120 years, and a quarter of a year in 360; and accordingly we find, as far back as the period of the Old Empire, a further correction in the so-called Sothis or Sirius year (1461 common years = 1460 stellar years). We cannot say whether the Babylonians had recourse to any such astronomical method of adjustment, but it is possible that the 'year of the great red serpent' (mentioned but once, in a text dating from *c.* 2000 B.C., *Cun. Texts*, xxii. 48, line 5), with its train of over a dozen—originally perhaps nineteen—names of animals, may refer to an intercalary cycle recognized in the period of the kings of Nisin.

The earliest Bab. calendar known to us shows a remarkable combination of purely agricultural operations and religious festivals, the calendar of the husbandman being thus interwoven with that of the priest. This consists of the names of months occurring in the temple archives found at Telloh, and dating from the period anterior to Sargon (*i.e.* the time of the *patesis* Lugal-anda and Uru-ka-gi-na, *c.* 3000 B.C., or even earlier). H. de Genouillac (*Tablettes sumer. arch.* p. xx, note 3) has essayed to arrange the names as follows:

1. Month of the festival of the goddess *Ba'u* (subsequently Tishri, *i.e.* the beginning of autumn).
2. Month of the *Ab-ud-du* festival (Tebeth).
3. ,, the *Amar-ai-si-zid-da* festival (Shebat).
4. ,, the *Še-kin-kud-du* festival ('corn-reaping': Adar), with the variants *Gúr-dub-ba* and *Gúr-im-dú-a* (written *-gab-a*), likewise referring to the apportionment of the corn.
5. Month of *Še-illa* (lit. 'corn-lifting,' possibly 'winnowing': Nisan), with the variants '*Lu-ku-še-a-illa* of the god Nin-Girsu,' '*Lu-ku-še-a-illa* of the goddess Iš-khanna'[1], and *An-ta-sur-ra*.
6. Month of the festival *Še-ku* ('corn-eating') of the goddess Iš-khanna.
7. Month of the festival *Gud-du-bil-sar-a* of the goddess Iš-khanna (Iyyar).
8. Month of the festival of the god Bil-dár.
10. ,, the festival *Dim-kú* ('corn-eating') of Nin-Girsu.
11. ,, the festival of the corn-eating of Nin-Girsu.
12. ,, the festival *Dim-kú* of the goddess Iš-khanna.

To these, however, must be added a few names which have not been identified, viz.:

Month *Mal-lu-úr* (meaning unknown).
Month of the god *Lugal-uru-ki* ('king of the city'), or *Lugal-uru-bar-ra*.
Month *Ši-nam-um-ni-ba-duru-ba-a* (meaning unknown).

One of these three would, no doubt, supply the name of the missing ninth month.

Tablets of a date slightly later, *i.e.* the period of the earlier Sargon of Agade (Akkad), furnish us with the following series, side by side with which we place the closely related series found in tablets dating from the times of the kings of Ur:

	SARGON.		UR.
1 or 7.	Month of *Gan-maš*.	2.	Month of *Gan-maš*.
2 or 8.	,, *Gud-du-bil-sar-sar*.	3.	,, *Gud-du-bil-sar-sar*.
3 or 9.	Month of the god *Bil-dár*.	4.	Month of the festival of the god *Bil-dár*.
4 or 10.	Month of *Šu-numun* ('sowing').	5.	Month of *Šu-numun* (the later Tammûz).
5 or 11.	Month of *Še-dim-kú*.	6.	Month of *Dim-kú*.
6 or 12.	,, the god *Tur-zi* (Tammuz).	7.	,, the festival of the god *Tur-zi*.
	Ur = intercalary month.	8.	Month of the festival of the deified *Dungi*.
7 or 1.	Month of the festival of the goddess *Ba'u*.	9.	Month of the festival of the goddess *Ba'u*.
8 or 2.	Month of *Mu-šú-du*.[2]	10.	Month of *Mu-šú-du*.[3]
9 or 3.	,, *Mes-en-du-še-a-na*.		. . . .
10 or 4.	Month of the festival *Amar-a-si*.	11.	,, *Amar-a-si*.
11 or 5.	Month of *Še-še-kin-a*.	12.	,, *Še-kin-kud*[4] (the later Adar).
12 or 6.	,, the festival *Še-illa*.	1.	Month of *Še-illa*.

The comparison of these lists is most instructive. While the meaning of the Sumerian names is in many cases obscure, the fact that in the Sargon list the intercalary month is placed after Tammûz (the later Elûl) makes it clear that in this calendar

[1] The goddess whose name is formed by the ideogram *ab* (or *eš*) and the inscribed symbol *kha*; in the period of Hammurabi it occurs in the phonetic form *Iš-kha-ra*, and is commonly, though wrongly, transcribed *Nina*, as the goddess was also the deity of the later town Ninua.

[2] Written *Mu-šú-gab*.

[3] Written *Mu-šú-ul*.

[4] Side by side with this we also find a month *Dir-še-kin kud*, *i.e.* the later *We-Adar*, or 2nd Adar (intercalary).

the year began in autumn, and that, accordingly, the festival of the New Year was observed on the 1st of Tishrī, the month of 'the festival of Ba'u.' We see, moreover, that in course of time the month associated with the new festival of the deified king Dungi took the place of the intercalary month (the so-called second Elûl). A further modification, however, must have been introduced at the same time, as the new month of the 'Dungi-festival' lost its intercalary significance, while, coincidently, the New Year festival was transferred to the first day of *Še-illa*, as follows indirectly from the fact that a second *Še-kin-kud* now makes its appearance as an intercalary month, thus fixing, of course, the end of the year. This modification also explains why the month of *Mes-en-du-še-a-na* simply drops out, thus making *Amar-a-si* follow immediately upon *Mu-šu-dú*.

It is unfortunate that the inscriptions of Gudea, which we must refer to a period shortly before the rise of the dynasty of Ur, supply only two names of months, viz., the 'festival of Ba'u,' or 'New Year' (Statue G, iii. 5 f. = E, v. 1 f.), and 'temple-month,' following immediately thereafter; but with the help of the partially mutilated third series of the calendar K. 104 (*WAI* v. 43) we can so far restore the calendar of Gudea, thus:

1.	Festival of *Ba'u*	= Tishrī (Autumn).
2.	Temple-month	= Arakhsamna.
3.	(unknown)	= Kislev.
4.	,,	= Ṭebeth.
5.	*Sin-ga-zu* [1]	= Shebaṭ.
6.	*Me-e-ki-gal*	= Adar.
7.	(unknown)	= Nīsan (Spring).
8.	*Gud-bil-sar-sar*	= Īyyar.
9.	Festival of the goddess *Nin-DÁR* [2]	= Sīvan.
10.	*Shu-numun-na*	= Tammūz.
11.	Festival of [*Gu-de* ?]-*a*	= Āb.
12.	*Ki-sig* (?)-*Ba'u*	= Elûl.

The following list (in Radau, *Early Bab. Hist.* p. 299) also dates from the period of the dynasty of Ur:

1. Month of *Še-kin-kud* ('corn-reaping': the later Adar).
2. ,, *Maš-azag-kú* (cf. *Gan-maš*?).
3. ,, *Dun-da-kú* ('eating of the *Dunda* fruit').
4. ,, *Khu-si-bil-khu-kú* ('eating of the *Khu-si-bil* bird').
5. ,, *Ki-sig* (?)-*Nin-a-zu* ('mourning for Nin-a-zu').
6. ,, *Isin-Nin-a-zu* ('festival of the god Nin-a-zu').

(1) 7. ,, *A-ki-ti* ('new year').
(2) 8. ,, *Isin-Dungi* ('festival of Dungi').
(3) 9. ,, *Shú-III-shá* ('third month').
(4) 10. ,, *Isin-makh* ('sublime festival')
(5) 11. ,, *Isin-an-na* ('festival of ears' [?]).
(6) 12. ,, *Isin-Me-ki-gál*.

This series clearly bears a close relationship to that which we have re-constructed for Gudea's time. It certainly begins the year with the month of *Še-kin-kud* (beginning of spring), but it still calls the seventh month 'new year,' and also retains *Me-ki-gál* as the last month of the autumn half-year, precisely as does the list of Gudea; and, as it embraces a festival of Dungi, it cannot have been redacted before the deification of that monarch (in the thirty-seventh year of his reign).

Although the various series of months given above are drawn from documents discovered in the ruins of Telloh, and must accordingly have been in use in the kingdom of Sirgulla or Girsu in particular, yet in these lists, dating from the period anterior to Sargon till that of the kings of Ur, a considerable degree of diversity presents itself. Lists current in other districts would of course show a still greater diversity. Thus in Nippur, for instance, as is shown by the documents of the University of Pennsylvania about to be published by P. Engelbert Huber, there was, in the period of the kings of Ur, a different set of names in use, viz., the Sumerian designations recognized throughout Babylonia from the days of Ḫammurabi till the late Bab. period (and also in Assyria); which designations, however, were generally read as Semitic, and accordingly had at a later date simply the value of so-called ideograms. This Sumerian group current in Nippur at that early date is as follows (we give in a second column the usual Semitic renderings which subsequently came into use, and which, as is well known, were adopted by the Jews during the Exile, and are retained to this day in the Jewish calendar):

[1] Incorrectly transcribed from *Še-kin-kud* or from *Še-illa*?

[2] As V. Rawl. 43 gives the form *Nin-DÁR-na* (with the prolongation *-na*), the name of this god, who is mentioned in the inscriptions of Gudea as the consort of Iš-khanna, would probably be more accurately transcribed *Nin-gún-na*.

Bár, *Bár-bár-garra*, *Bár-zag-garra* ('New Year's month')	Nīsan.
Gud-si, *Gud-si-su*(*-ga*) ('direction of the ox')	Īyyar.
Shig-ga, *Shig-a-A-ga-se-ga* ('month of bricks')	Sīvan.
Shu-numun-a ('month of sowing, seed-month')	Tammūz.
Bil-bil-gar, *Bil-bi-gar* ('month of fire-making')	Āb.
Kin, *Kin-Ishtar* ('work, or mission of Ishtar')	Elûl.
Dul, *Dul-azagga* ('sacred hill')	Tishrī.
Gish-apin-dû-a, *Apin-dû-a* ('plough-tillage')	Marchesvan.
Gan-gan, *Gan-gan-ud-du* ('coming forth of the clouds' [?])	Kislev.
Ab-pa-ud-du, *Ab-ud-du* ('coming forth of the flood')	Ṭebeth.
Ash-a ('curse of water') or simply *Ash* ('curse')	Shebaṭ.
Še-kin-kud ('grain-harvest')	Adar.
(*Dirig-še-kin-kud*, *Še-kin-kud II-kam-ma* .	Intercalary Adar.) [1]

The names of the Sumerian list recur commonly in contracts and letters dating from the Ḫammurabi dynasty, and are thenceforward found in the following fixed forms:

Bár-zag-gar, *Gud-si-sá*, *Shig-a*, *Shu-numun-na*, *Bil-bil-gar*, *Kin-Ishtar*, *Dul-azag*, *Apin-dû-a* (or *Gish-apin-dû-a*), *Gan-gan-ud-du* (subsequently *Gan-gan-na* always, but *Gan-gan-ud-du* as late as the Kassite period), *Ab-ud-du*, *Ash-a* (subsequently *Ash-a-an* was common), *She-kin-kud*; [2] in the Assyr. and later Bab. period, however, the names were generally written in an abbreviated form, thus: *Bár* (or *Bár-azag*), *Gud*, *Shig*, *Shû*, *Bil*, etc.

From the period of the Ḫammurabi dynasty onwards, however, we note the important fact that, besides the Sumerian names enumerated above, their *Semitic* renderings are occasionally met with, but not always the same designations as in later times.

Thus we have *Arakh Rabûti* (month of the 'great' gods Anu and En-lil) for *Bár-zag-gar* (subsequently Nisan); *Arakh Ayari* for *Gud-si-sá* (= Īyyar); *Arakh She-wa-*[*num*], and probably also *Khumtu*, for *Shig-a* (= Sīvan); *Arakh Tur-zi* (= month of Tammūz) for *Shú-numun-na* (= Tammūz, or Du'uz); *Arakh Elunu* and *Arakh Eluli* for *Kin-Ishtar* (subsequently *Ululu* = Elûl); *Arakh Sibûti* (month of the Seven Stars or Pleiades) for *Še-kin-kud* (later Adaru); as also *Tiru*, *Kinûnu* ('brazier,' probably = Kislev), *Nabri*, *Sandûti* (with the variant *Shadûti*), *Mamiti* (= Ṭebeth [?]) and 'festival of Ramman' (= Shebaṭ)—designations not yet precisely identified.

The usual Semitic series of names (K. 8521) seems to have become permanently established in the days of the Kassite period, and in the Assyr. age. We give it here, together with the names of the corresponding month-deities (K. 2049 + 129 = *WAI* iv.[2] 33):

Nisannu	(Nīsan)	Anu and En-lil.
Airu	(Īyyar)	Ea as the 'lord of mankind.'
Simannu	(Sīvan)	Sin (moon-god).
Du'uzu	(Tammūz)	The 'hero' Nin-ib (= Tammūz, or the Sun of Spring).
Abu	(Āb)	Nin-gish-zidda (fire-god).
Ululu	(Elûl)	Ishtar (the planet Venus).

[1] Along with these, as the writer is privately informed by Pater E. Huber, occur names—singly, it is true—with which we are already acquainted from the lists given above, such as *A-ki-ti*, *Šu-esh-sha*, *Isin-makh*, *Isin-an-na*, *Isin-Me-ki-gál*, *Mash-azag-kú*, *Kul-da-kú* (cf. above *Dun-da-kú* or *Shil-da-kú*), *Isin-Nin-a-zu*, i.e. eight names, elsewhere specifically vouched for only in Radau's list, together with a few otherwise unknown designations, such as *Azag-shim*, *Sha-sir-a-she-de-a-sar*, *Mi-du-du* (or *Mi-ush-ush* [?]).

[2] We find, further, in this period a month called *Si-a-ga* (perhaps also *Isin-a-ga*), which should probably be identified with the *Shig-a-A-ga-se-ga* (hence a variant of *Shig* = *Sīvan*) of the Nippur list; also a month called *Shu-gar gi-na* (= Tiru [?]; cf. *Shu-gar-gi* = *turru*).

Tishritu	(Tishri)	Shamash, the 'hero.'
Arakh-samna	(Marchesvan)	Marduk (the planet Juppiter).
Kisilimu	(Kislev)	Nergal (the planet Saturn).
Ṭebitu	(Ṭebeth)	Papsukal (messenger of Anu and Ishtar).
Shabaṭu	(Shebaṭ)	Ramman (storm-god).
Addaru	(Adar)	Seven-god.
Intercalary Adar		Assur, father of the gods.[1]

The etymology of these Semitic names is much more obscure than that of the corresponding Sumerian designations, which are for the most part quite intelligible. *Nisan* seems originally to have meant 'intercalary month';[2] *Airu*, 'the month of blossom or sprouting'; *Addaru* is perhaps the 'dark' or 'gloomy' month, and *Kisilimu* probably comes from the name of the river-goddess *Ka-silim*; a definite origin can be assigned only to *Du'uzu* (=Tammûz) and *Arakh-samna*, 'month of the numeral eight.'

It is obvious that the basis of this official Bab. calendar, more especially of its Sumerian terminology, is formed by the conception of a mythical world-year, which also dimly appears in the list of ten patriarchs given by Berosus and the Book of Genesis (before the Deluge). The first two months, viz. that of the 'Divine throne of destiny' (*Bár-zag-gar*) and the Ox-month (*Gud-si-sá*), belong to the highest triad of gods, and also to the first man, as being the creation of Ea (cf. in Berosus, *Aloros* [=Aruru], who creates man; *Adapados*, the Divine mediator or λόγος; *Amelon=amêlu*, 'man'). Then follow seven months assigned severally to the planets, as also to the zodiacal signs from Gemini to Sagittarius, viz. *Sîvan*, 'brick-month,' or the month of the heavenly twins Sin and Nergal, and of the building of the first city (cf. Gn 4[17]); *Tammûz* (Cancer); *Āb* (month of the 'descent of fire,' in the period of the Assyr. king Sargon; cf. the Sumer. designation 'fire-month' and the name of the sixth Heb. patriarch *'I-yarad*, 'fire came down,' abbreviated *Yared*); *Elûl* (Ishtar, the Virgo of the zodiac); *Tishrî* (*Dul-azag*, the 'sacred mount,' *i.e.* the altar of incense formed like a terraced tower in the sky near Libra); *Arakh-samna* (Scorpio; as regards 'plough-month,' cf. the Sumer. *lam*, 'plough,' and *Lamech*, the name of the corresponding Heb. patriarch), and *Kislev* (the 'clouds' of which foreshadow the Deluge). Moreover, just as in Genesis the Deluge takes place in connexion with Noah, so the next two months in this calendar, viz. *Ṭebeth* and *Shebaṭ* (Sumer. 'coming of the flood' and 'curse of rain,' respectively, and, in the zodiac, Capricornus and Aquarius, the watery region of the sky), carry an unmistakable reference to the Deluge, while the future burning of the world is symbolized by the last month, *Adar* (Pisces, but in Bab. astronomy, also 'lighthouse' or Pharos).[3] These cosmological ideas must, therefore, have been stamped upon the calendar system not later than the age of the kings of Ur.

Besides the Semitic names of the months already specified, there must have been other Semitic systems of nomenclature, of which, unfortunately, only a few isolated examples have come down to us. Thus we find, as far back as the days of the Ur dynasty, a month called *Dapitam* (sometimes *Dabi*), which was perhaps identical with the Sumer. *Bil-lal* (=*dabâti*; possibly we have here the origin of the later Ṭebeth). From Mesopotamia, again, in the period of Hammurabi, comes the name *Biriz-zarru* (from *Birid-sarru*, 'hostile coldness' [?]). The Assyrians, too, were acquainted with the usual Semitic appellations, but also used names like *Khi-bur*, *Kusallu* (=Sivan), *Tamkhiru*, or *Tamṭiru* (?), the last of which would mean 'rain-month' (=Ṭebeth), *Pit-bâbi*, 'opening of the gate,' probably some religious ceremony (=Tammûz), *Mukhur-ilâni* (as early as Hadad-nirâri I.), and others found in the so-called Cappadocian tablets discussed by Goleschineff and Delitzsch. It is therefore interesting to note the list in V. Rawl. 43, which, though a mere fragment, originally contained three series of names, for the most part purely Semitic:

Sivan:	*Apinum*	*Shir'i-eburi*	*Kusalli.*
Tammûz:	*Apal*	*Pite-bâbi*	*Allanâti.*
Elûl:	*Zargâtum* (? ירעות)	....	[*T*]*irrâti.*
Tishri:	....	*Lalulê*	*Liki*[*tâ*]*ti.*
Shebaṭ:	*Ibtâzu*	*Sililiti*	....
Adar:	*Khul-dubba-uddu*[1]	*Isin-Me-ki-gál*	*Kardâti.*

The second group seems to have been current especially among the Semitic inhabitants of Elam; for, according to Scheil, *Mémoires*, x. 19, Semitic contract tablets from Elam of the early Babylonian age furnish the following important series:

Tishri:	the month of	*Lalubum* (=Tishri).
Arakh-samna:	,, ,,	*Eḳil-ili*, *epinu* ('the ploughing of the field of God').
Kislev:	,, ,,	*Sherkhum*, *epinu*.
Ṭebeth:	,, ,,	*Tamkhirum* (cf. the Assyrian month *Mukhurilâni*).
Shebaṭ:	,, ,,	*Zililitum.*[2]
Adar:	,, ,,	*Eḳil-ili-She-kin-kud* ('ear-harvest of the field of God'), and *Adarum*.
Nisan:	,, ,,	*Sherkhum-She-kin-kud-a.*
Iyyar:	,, ,,	*Khar-hubirum* (cf. *kharshû*, 'land-cultivation' [ ]).
Sîvan:	,, ,,	*Lakhkhum* (?).
Tammûz:	,, ,,	*Datium* (?).
Āb:	,, ,,	*Abum.*
Elûl:	,, ,,	*Elûli.*

A dislocation to the extent of one month, introduced into Elam probably at a later period, is indicated by an isolated reference in II. Rawl. 49, No. 1, col. 1, 2: 'the month *Bár-azag-gar* (Nisan) = the month *Gud* (Iyyar) in Elam.' Another Elamite name, *Ra-khal* ('sheep-month' [?]; cf. the name of the Elamite deity *Lakhurat-il = Rukhuratir*), is mentioned in Scheil, *op. cit.* ix. 32, as occurring in documents of the 6th and 7th cents. B.C., which elsewhere make use of the ordinary abbreviated Bab. ideograms. As every month but Tishri has been traced in these, Scheil is probably correct in supposing that *Ra-khal* was an Elamite name for it. It is also possible that the twelve Elamite gods enumerated by Ashurbanipal immediately after the seven deities worshipped by the kings, *i.e.* the planetary deities, were originally gods of the months. The twelve are as follows: Ragiba (cf. the Arab. spring-month *Rajab*), Sunugursara ('the great king'), Karsa, Kirsamas, Shudânu, Aipak-sina, Bilala, Paningirri (rather than Panintimri), Silagara, Nabsa, Nabirtu, and Kindakarbu. The list is a *mélange* of Semitic (Ragib, Shudânu, Bilala, Nabsa, Nabirtu) and native Elamite names.

We have thus seen that in Babylonia the nomenclature of the months varied according to period and locality, and that eventually that particular system which is first attested by documents from Nippur in the age of the kings of Ur superseded all the others. The two great divisions of the year began respectively in spring (previous to 3000 B.C., in the sign of Gemini; from

[1] The assigning of the intercalary month to the supreme deity of Assyria shows that the Assyr. calendar likewise is of Bab. origin.

[2] Cf. the Arab. *nasa'a*, 'to intercalate a month.' This derivation would suggest that at an earlier period the year began with Airu, the 'coronation-month' of the Assyrian kings; and, in point of fact, the inscriptions bear witness to a 'second Nisan,' *i.e.* an intercalary Nisan.

[3] To the constellation Pisces corresponds the 'great mountain' of Zec 4[7], which in Rev 8[8] is actually called ὄρος μέγα πυρὶ καιόμενον; quite close to it, in Aries, stands what in Zec 4[2] is called the *menôrah*, and in Rev 8[7] πῦρ. The 'mountain' which Bel climbs with shouts (*WAI* iv. 11, 41a) is depicted on the Bab. seal-cylinders in storey-form.

[1] This name is transmitted in Sumerian only; *Khul-dubba* is a frequently mentioned tool of worship.

[2] Inexact spelling of *Sililitum*; in the Gilgamesh epic (Song 6), *Silili* is the name applied to the mother of the horse that Ishtar loved, *i.e.* probably the astronomical Pegasus (*Sililitu* is therefore the *plur. majest.* for Pegasus).

3000 to 1000 B.C. in Taurus; from 1000 B.C. in Aries), and in autumn (Sagittarius, Scorpio, and Libra, for corresponding periods). At first the year itself might begin either in spring or in autumn, but in no long time there arose the recognition of a definite date for its commencement, viz. either in Nisan or in Tishrī, with a second Adar or second Elūl as intercalary, according to period and locality. It may well be the case that the practice of beginning the year with autumn was a Chaldæan one, thus covering Ur, Girsu, and the region east of the Tigris, and that the beginning with spring belonged to Babylonia proper—Nippur, Babylon, etc. While it was the custom under Ḥammurabi to intercalate a second Elūl, we find that under his successors the intercalation of a second Adar already prevailed; in the reign of Abeshua, in fact, we have one instance of an intercalary Nīsan, with which should be compared the hemerology in K. 2514 + 4101, as also the suggestion already made, that at one time the year began with Īyyar. Perhaps this was actually the early Assyr. practice.

Similarly it is probable that the observance of a lunar year of 354 days, with months of 30 and 29 days alternately, and with an intercalary month every 2nd or 3rd year, was of Chaldæan origin, whereas the year of 360 days may be hypothetically assigned to Babylonia (see above). As a matter of fact, the temple archives of Telloh, dating from the period of the kings of Ur, suggest in all probability an intercalary cycle of 19 years, the additional month being introduced in the third year four times successively, and in the second year three times successively. Thus, *e.g.*, the intercalary year synchronized with the 28th and 31st years of king Dungi, and likewise with his 42nd, 44th, and probably his 46th year; as also with the 3rd, 5th (7th), and 9th years of Gimil-Sin; so that during the intermediate reign of Bûr-Sin the intercalation would fall in his 3rd, 6th, and 9th years (cf. L. Messerschmidt's list in A. Jeremias, *Das Alter der bab. Astr.*[2], Leipzig, 1909, p. 88 f.).

In regard to the *week*, we find a similar contrast between the practice in Chaldæa, *i.e.* among the nomadic and West Semitic tribes, and that of the Bab. state religion, in which the worship, not of the moon, but of Shamash and Marduk, was the dominant factor. As has been ingeniously argued by Sayce — with the independent support of Winckler and Jensen—from early Assyr. contract tablets found in Cappadocia, the most ancient division of the month was into weeks of five days, the year accordingly having 72 weeks (which presupposes, moreover, a year of 360 instead of 354 days), as was also the case in ancient Egypt, where a week of ten days—originally, no doubt, a double-week of 2×5 days—was recognized (for other instances of the five-day week in Africa, Java, and Sumatra, see p. 64[a]). In the hemerologies of the library of Ashurbanipal, however, in which apparently every month consisted of 30 days,[1] we find entries from a Chaldæan calendar with months of 30 and 29 days, according to which new moon fell on the 1st day of the 1st month and of alternate months thereafter, while a penitential day of some kind was observed on the 7th, 14th, 21st, and 28th days of the 1st month, and on the [5th, 12th, and] 19th of the 2nd month, and so on throughout the year; here, therefore, we have quite plainly a week of 7 days.[1] A like result follows from the division given in K. 170 (*Cun. Texts*, xxv. 50), viz., 1st day, new moon; 7th day, moon as a kidney, *i.e.* half-moon; 15th day, full moon (elsewhere *shabadtu*; Old Egyp. *smd-t*), and from the Creation epic, 5, 15 ff.[2]

According to this hemerology, the festivals observed every month—apart from the specifically Chaldæan festivals already named—were as follows:—

The *Nubattu*, or 'nuptial couch' of the god Marduk of Babylon and his consort *Ṣarpanit* (cf. Asurb. ix. 11), on the 3rd, 7th, and 16th days, and on the following days (the 4th, 8th, and 17th) the *Ab-ab* or *Eššešu* festival of the god Nebo.

On the 1st, 2nd, 13th, 15th and 16th, 18th and 19th, 20th and 21st and the 22nd days, sacrifices to the gods Shamash, Belit-matati ('mistress of lands'), Sin and Makh (*i.e.* Rûbatu, 'the exalted'), and to Sin and Makh only, on the 29th.

The *Se-gar* festival of En-lil and Nin-lil (cf. Asurb. i. 12) on the 12th, and the 'bright day,' the *Se-gar* festival of Sin and Shamash on the 20th.

The festival of Shamash and Ramman (summer sun and winter sun) on the 23rd.

The festival of En-egal ('lord of the palace,' *i.e.* probably, of the under world) and of Nin-egal ('mistress of the palace') on the 24th.

The festival of the goddess Gur as the consort of Nergal on the 27th; this was associated with the imminent disappearance of the waning (or so-called Nergal) moon, as was also the *Bubbulu* ('to be borne or washed away'; cf. Heb. *mabbûl*, 'the Flood') of Nergal on the 28th. Sacrifices to Ea, the god of the watery region of the heavens, and his consort Makh, were also made on the 26th and 28th.

That the majority of these festivals were of astral origin appears from their manifest connexion with the course of the moon; from the fact that most of the sacrifices had to be offered in the evening or by night; and, finally, from the explicit mention of the worship of the 'star of the waggon' on the 10th and 25th of the month.

The calendar in *WAI* v. 48 refers not to festivals, but to the performance or omission of certain actions; we are told, *e.g.*, that the 10th of Īyyar and the 27th of Tammūz are 'favourable for judgment' (or, 'for administering justice'), the 20th of Īyyar is a time for 'killing a goose,' the 21st for 'quarrels,' the 25th 'not to take a wife,' etc.

There were also festivals, however, which were observed not every month, but in some particular month, thus resembling the great festivals of modern times. Chief among these was the New Year festival (*Zag-mug* or *Akîtu*), which was celebrated with great pomp from the 1st to the 10th of Nīsan: on the 8th Marduk came forth in solemn procession from his temple of E-sag-illa, to the house of prayer or sacrifice situated outside the city in order to celebrate his marriage with Ṣarpanit, returning thereafter from the suburb of Shu-anna to Babylon on the 11th of Nīsan (cf. Nebuchadn. ii. 57). In Sippar the corresponding festival of Shamash was held on the 7th of Nīsan, and was repeated at the beginning of the second half-year, on the 7th of Tishrī.

On the 4th of Īyyar was celebrated the marriage-feast of Nebo and his consort Tashmit (K. 501 = Harper, *Letters*, No. 113, and cf. above the *Ab-ab* festival), and on the 10th of Īyyar there was in Sippar a festival of Shamash, with which the coronation festival in Assyria—the king being regarded as the incarnation of the sun-god (cf. 20, number of Shamash and ideogram for king)—was perhaps connected.

[1] The complete series consisted of fifteen tablets. Of these, Nos. 2 (II Nisan), 4 (Sivan), 8 (II Elūl), 10 (Marchesvan), 12 (Ṭebeth), 13 (Shebat) and 15 (II Adar) have survived, in full or in part; but only tablets 8 and 10 have been published (*WAI* iv.[2] 32, 33). From the variants furnished by Pinches we may infer that all the tablets contained approximately the same festivals. The name of the series was *Inbu* (the moon-god as 'fruit' that grows of itself (cf. *WAI* iv. 9. 22)) *bêl-arḫim* (*i.e.* as 'lord of the month').

[1] This required to be adjusted, however, by reckoning a week of ten days (from the 20th to the 29th) at the end of every second month.

[2] On the other hand, the week of five days is presupposed in *WAI* iii. 55, No. 3, lines 17–26; 1st–5th day, new moon; 6th–10th, kidney (half-moon); 11th–15th, full moon.

On the 17th of Sîvan—the month of the moon-god—the *Akîtu* festival was held in Ḫarran, the ancient lunar city of Mesopotamia; in Arbela, however, it fell on the 17th of Elûl, the month of the goddess Ishtar, who was greatly venerated in that city. A processional festival of the 'mistress of Babylon' was held there on the 25th of Sîvan (Ašurb. viii. 96–100).

On the 3rd of Tammûz the gods of Erech returned from a procession at Eridu—a ceremonial undoubtedly connected in some way with the 'death-mournings' (*ki-bad*) held in that month on account of the summer languishing of Tammûz, the god of spring and of vegetation (cf. Ezk 8[14]). In Âb, the month of the Sirius festival and of the zodiacal constellation Leo—the sacred beast of Ishtar—a great feast was celebrated in honour of that goddess (Ašurb. cylinder B. 5, 16), but it was presumably repeated in the following month, Elûl ('the corn-ears of Ishtar'), as we know to have been actually the case in Arbela (see above).

Corresponding to the festival of Shamash in Sippar on the 10th of Iyyar, a sacrificial feast in honour of the sun-god was also observed in that city in the month of Marchesvan. This, however, took place on the 15th of the month—the precise date, therefore, on which Jeroboam instituted the festival of the two golden calves in Bethel (1 K 12[32]), the calves being emblematic, at least in the first instance, of the waxing and waning moon, though the festival may have been intended simply to represent that of *Sukkôth* ('Booths'), with a postponement from the 15th of Tishri to the same day of the following month.

For the month of Kislev a special ephemeris in a late-Babylonian transcript has been preserved (Reisner, *Hymnen*, 1896, No. vii. p. 144). With certain days of this ninth or winter month, viz., the 4th and 7th, 8th, 10th, 12th and 13th, 15th and 16th, 22nd and 25th, and finally the 29th, this document associates certain temple-festivals in various cities; *e.g.* with the 4th, that of Marduk in E-Temen-an-ki (in Babylon), the Ishtar festival in Dûr-Kurigalzu, and that of the 'mistress of Ninâ' (in the district east of the Tigris); with the 15th that of Ash-kur in Sadirim. As the 29th is associated with the festival 'of the god Nergal' without indication of locality,—and therefore probably common to all Babylonia,—this function presumably represents the day of Nergal's death at the winter solstice (21st Dec.) or 'the mourning for the death of En-me-sharra.'

In the month of Shebat, as we learn from Asurb. ii. 134, the city of Kalakh observed the festival of Ninib, the chief deity of Nineveh, and there was a similar celebration in Elûl, the month of Ishtar. According to the list of month-gods in K. 2049 + 129 (*WAI* iv.[2] 33 a, at the foot), Shebat was dedicated to Papsukal, the messenger (*sukallu*) of Anu and Ishtar—in reality a representation of Tammûz as a youth (cf. Bab. *bâbu* = 'child'), and thus a deity allied in character to Ninib.

Finally, on the 15th of Adar a solemn sacrifice was offered to Shamash in the city of Sippar, as also on the 3rd of Elûl, the corresponding month of the other half-year. Whether the Jewish feast of Purim, which was likewise observed on the 15th of Adar, was in any way connected with this Shamash festival still remains a matter for investigation. The celebration of the Jewish festival lasted from the 13th to the 15th of Adar, while on the 13th of Iyyar the Assyr. eponyms entered upon office by pronouncing the words *pûru Asur Hadad agruru*, 'as I cast the lot of Asur and Hadad' (cf. the conjunction of Shamash and Hadad everywhere else; and with *garâru* cf. the Heb. *gôrāl*, 'lot,' probably an altered form of *gôrār*). In Est 3[7] the act of casting lots (פּוּר = גּוֹרָל) is manifestly associated with the accession and deposition (Nîsan to Adar) of Haman, the Persian grand vizier, *i.e.* the chief eponym: it would therefore seem that the name of the feast takes its origin from this event.

Had we a single complete calendar of the annual festivals observed in any of the more important centres of worship in Babylonia or Chaldæa, as, *e.g.*, Nippur or Babylon, or again, Ur or Eridu, we could, of course, give a more exact description of the various festivals. Even as it is, however, the astral origin of most of the functions is quite unmistakable. We have here, accordingly, a fresh corroboration of the fact that amongst the people of the ancient East there was no such thing as an agricultural festival without a religious basis. The two interests were combined from the first, even amongst nomads, but most completely, of course, amongst tillers of the soil.

In conclusion, something remains to be said with regard to the probable *origin* of the Babylonian—or more precisely, perhaps, the Chaldæan[1]—calendar. This problem is closely connected with that regarding the origin of the zodiac with its twelve divisions. The crux of the problem lies in the further question whether the Chaldæans had observed the phenomenon of precession, *i.e.* the advance of the equinoctial point by one zodiacal sign every 2160 (one-twelfth of 25920) years—a question undoubtedly to be answered in the affirmative. The list of monthly stars, with their relative degrees, given by Pinches in *JRAS*, 1900, pp. 573–5, shows clearly that the Babylonians, on the ground of early tradition, fixed the beginning of the zodiacal series at the eastern end of Gemini (cf. Hommel, *Aufsätze u. Abhandl.*, 1901, p. 459), and that accordingly their calendar must have originated *c.* 5000 B.C. This is corroborated by the delineations carved upon boundary stones dating from the Kassite period, these being based upon an equatorial zodiac beginning with the twin dragons. The figure corresponding to the latter—two heads of panthers or lions upon one neck—also plays an important part on the seal-cylinders, and sometimes occurs in conjunction with the severed head of Adapa, the god of creation, of whose blood mankind was formed on the morning of creation (or at the beginning of the world). The actual beginning of the world, however, which is anterior to the creation of man, was dated as far back as the period of Cancer, *i.e.* about 7000 B.C.; and this ancient astrological tradition is also implied by the Egyptian zodiac found in Denderah (dating from the Roman imperial period, but of Chaldæan origin), which likewise begins with Cancer. For in Cancer were situated the two contiguous dragons, one—that with the head of a lion—representing Tiâmat, the other—with the vulture's head—Kingu, her consort. The dragon with the lion's head, as a symbol of the beginning of the world, is found upon ancient seal-cylinders almost as frequently as the twin-dragon with two heads upon one neck just alluded to.

The Taurus era (*c.* 3000–1000 B.C.), immediately succeeding that of Gemini, is indicated by a sketch frequently reproduced on seal-cylinders, that, namely, in which the hero Gilgameš waters the wild-ox at the streams flowing from the vase bearing the young shoot—the treelet of Tammûz; while the twin-heroes Gilgameš and En-ki-kak (Eabani?), who are quite as frequently depicted together, point rather to the previous era. The shoot of Gilgameš, *ildakku* (earlier *išdakku*,

[1] As Chaldæa, *i.e.* the district to the west of the Euphrates, and perhaps embracing Eastern Arabia, was the native soil of astrology, and thus, too, of the earliest knowledge of the stars, it is altogether likely that the 'Babylonian' calendar has its origin in the same region, and not in Babylonia proper, which lies between the Euphrates and the Tigris.

Sumer. *giš-a-am*, i.e. 'tree of the water of the wild-ox'), the νάρθηξ of Prometheus, is not referred to in the surviving fragments of the epic, but it is mentioned in the ancient Sumerian hymn of Nergal (*Cun. Texts*, xv. 14, line 35). It is quite in keeping with this that we find Gilgameš (Orion) with his ship (Argo), the Bull, and the river Eridanus (cf. Eridu in Chaldæa?) in close proximity to one another among the stars.

The most ancient names of months so far identified, viz. those current in the period of Lugal-anda and the earlier Sargon, are not directly connected with the signs of the zodiac. The relation is of a more indirect kind, inasmuch as the festivals of the gods (including, in particular, Nin-Girsu = Ninib, Ish-khanna, the Scorpion-goddess, Bildár, and Ba'u, and also, even at that early date, Tur-zi = Tammūz) are of astral origin. Nevertheless, in the case of the Sumerian series, traceable from the age of the kings of Ur and current till the later Bab. period—a series which must at one time have begun with the ox-month (Gud-sidi = Iyyar; cf. above, the Assyr. coronation festival, and the ancient practice of intercalating a month after Nīsan instead of Adar)—the connexion with the zodiac is perfectly obvious. The reader should compare what has already been said (in dealing with the world-year) regarding the various names. The appellations Gud-sidi (Taurus), Brick-month (Gemini, and the building of the first city), the 'Ishtar month' Elūl, and the 'sacred hill' (the altar in the constellation Libra) are of themselves quite sufficient to place the matter beyond doubt.

LITERATURE.—In addition to the works mentioned throughout the article, reference may be made to the following: F. Thureau-Dangin, 'Anciens noms de mois chaldéens,' in *JA* vii. 339–343 (cf. *RAssyr* iv. 83 f., v. 73); H. Radau, *Early Babylonian History*, 1900, pp. 287–307 ('The Names of the Months'), with the very full review by F. Thureau-Dangin in *ZA* xv. 409-412; C. H. W. Johns, 'The Amorite Calendar,' in *Expositor*, 7th ser. vol. i. (1906) pp. 123–132 (cf. also the present writer's *Grundriss der Geogr. u. Gesch. des alten Orients*, Munich, 1904, p. 221, note 1); H. Winckler, 'Himmel, Kalender, u. Mythus,' in *Altor. Forsch.* ii. (1900) 354–395, and 'Astronomisches-mythologisches,' *ib.* iii. (1901) 179–211; F. X. Kugler, 'Darlegungen u. Thesen über altbab. Chronologie,' in *ZA* xxii. (1908) 63–78; T. G. Pinches, *The Amherst Tablets*, London, 1908, Introd. iii. 'The Calendar' (pp. xix–xxiii).

FR. HOMMEL.

CALENDAR (Buddhist).—Buddhism has no general system of its own for measuring times and seasons. In the land of its birth the new religion was, in almost every particular, influenced by prevailing Brāhmanical thought and practice. In ancient India the months were lunar, and the calendar varied in different parts of the country. Every month, including the intercalary, or thirteenth, had its *māhātmya*, or 'excellence.' The Buddhist year was based upon the ancient Brāhmanical rule that every new-moon day (*darśa*), and every full-moon day (*paurṇamāsa*), should be set apart for religious observances. In later times the intermediate quarter-moon days were also held sacred. The number of fast days (*upavasatha*) was consequently increased in Buddhism to four every month, or one per week.

Another Hindu idea was incorporated into Buddhism in its observance of seasons. Hinduism celebrated the junction of six seasons, viz. spring, summer, the rains (*varṣa*), autumn, winter, and the season of dew and mist. Buddhism added to these others of its own, but now generally observes only three seasons—summer, the rains, and winter.

The festival of the New Year has been universally observed from earliest times. It celebrates the victory of light over darkness. In Buddhist countries it signifies the triumph of Buddhism over ignorance. The corresponding Hindu festival is called *Makara Saṅkrānti*. In India, this marks the termination of the inauspicious month Pauṣa, and the beginning of the sun's northern course (*uttarāyaṇa*) in the heavens.

Four eras are commonly current among Hindus in India, but none is of Buddhist origin. In Burma, however, the third, the religious era, dates from 543 B.C., the year in which Gautama Buddha is supposed to have entered *nirvāṇa*.

In China the Buddhists have arranged their calendar of festivals and fasts to suit the Chinese months, which are lunar. In the popular calendar there is no mention of anything astronomical. Cf. art. CALENDAR (Chinese).

In Ceylon each Buddhist monk is supposed to keep a calendar (*lita*), from which he learns the *awach-hāwa* (the length of the shadow, by which, according to rules laid down, varying with the time of year, the hour of the day may be known), the age of the moon, and the years that have elapsed since the death of Buddha.

In the Japanese calendar, as introduced from China, the year is divided into lunar months (see CALENDAR [Japanese]). In 1872 the Japanese Government decided to discontinue the system of lunar months and adopt the Gregorian calendar.

The Tibetan system of reckoning time is of mixed Western and Chinese origin. It is by the twelve year and sixty year cycles of Juppiter, which have been derived through India from the West, but with the substitution of some Chinese astrological terms for the Indian, the Tibetans having derived their chronological system mainly from India, with their Buddhism.

In all Buddhist lands the weekly fast is more or less strictly observed. The commemorative and other festivals, in the various countries, differ considerably, both in regard to the time of their observance and the manner in which they are celebrated.

See, further, FESTIVALS (Buddhist).

J. H. BATESON.

CALENDAR (Celtic).—1. **Precedence of night.**—A certain knowledge of astronomy is ascribed to the Druids by Cæsar (*de Bell. Gall.* vi. 14: 'They discuss and impart to the youth many things regarding the stars and their motion, the extent of the universe and the earth') and Pomponius Mela (iii. 2), and some passages of Irish texts support their statements. But this knowledge probably did not surpass the primitive astronomy of barbaric races everywhere, sufficient to adjust roughly the lunar and solar years; and it was doubtless mingled with astrology (see DRUIDS). Our acquaintance with the old Celtic calendar depends mainly on a few classical references, on scattered notices in Irish and Welsh texts, and on the fragments of the calendar of Coligny. The Celtic year was a lunar year. This is attested by a passage in Pliny (*HN* xvi. 44) referring to the plucking of the mistletoe by the Druids. This is done 'ante omnia sexta luna, quae principia mensium annorumque his facit, et seculi post tricesimum annum, quia jam virium abunde habeat nec sit sui dimidia.' While it has been supposed from this passage that the Celts counted periods of time from the sixth day of the moon, there is reason to believe, as de Ricci points out (*RCel* xix. 26), that 'the phrase *quae . . . facit . . . tricesimum annum* is a general indication of the place of the moon in the Gaulish calendar, and that the subject of *facit* represented by *quae* is *luna* and not *sexta luna*.' Thus each month, year, and cycle of thirty

years would begin with a new moon, not on the sixth day of the moon (cf. Jullian, *Recherches sur la rel. gaul.*, Bordeaux, 1903, p. 63, where this view is also adopted). This custom of counting time by the moon is further attested by Cæsar (*de Bell. Gall.* vi. 18), who says that the Gauls 'define the divisions of every season, not by the number of days, but of nights; their birthdays and the beginning of months and years they observe in such an order that the day follows the night.' Many passages in Irish and Welsh texts show incidentally that this method of counting by nights prevailed; 'three nights' or 'nine nights' are frequently referred to, or a space of time is counted from such a night; or, when a certain number of days and nights is referred to, 'nights' precedes 'days.' Generally also when 'night' is used, it means a night and a day (cf. our 'se'nnight,' 'fortnight'). This is in accordance with Indo-European usage (see Schrader, *Reallex. der indoger. Altertumskunde*, Strassburg, 1901, p. 845 f.).

2. **The calendar of Coligny.**—A number of bronze fragments of a calendar were discovered, together with fragments of a statue of a god, at Coligny, near Lyons (the region formerly inhabited by the Sequani), in 1897. The calendar had probably been set up in a temple dedicated to the god. While some philologists have maintained that its language is Ligurian, it is generally believed to be Celtic, though its place in the Celtic group is not precisely fixed. The calendar is generally dated towards the second half of the 1st cent. A.D. The fragments as restored show that it had been engraved on a long bronze tablet, and that it covered at least a period of five years. There are in all sixteen columns, fourteen of which give vertically four months each, and two three months each; in all, sixty-two months. These two columns are headed by an intercalary month, which occupies double the space of an ordinary month. Each month is headed by its title, preceded in the case of the month called *Samon* by the word MID, and in other cases by the initial M. This word *mid* has been explained as meaning 'month' (*RCel* xix. 215, xxi. 23; cf. Ir. *mi*, Welsh *mis*, 'month'); but Loth contests this interpretation (*RCel* xxv. 130). To the title are added in the case of months of 30 days, MAT, and in the case of months of 29 days, ANM, except in the case of the month *Equos* of 30 days, which has ANM. Seven months have 30 days, and five 29 days. Each month has its days numbered from 1 to 15; then follows the word ATENOUX, and the remaining days are again numbered 1 to 14 or 15. When they are 14 in number the word DIVERTOMV or DIVORTOMV follows. Each number is followed by symbols, initial letters, or words, the significance of which, save in a few cases, has not been discovered, and is preceded by a small circular hole in which a peg may have been inserted to mark each day as it arrived. The names of the months as they occur in the calendar are:

Samon (30 days)	Giamon (29 days)
Duman or Dumannos (29 days)	Simivis (30 days)
Rivros (30 days)	Equos (30 days)
Anacan or Anacantlos (29 days)	Elembiv (29 days)
Ogron (30 days)	Edrini (30 days)
Cutios (30 days)	Cantlos (29 days)

The name of the intercalary month of 30 days is Ciallos.

Samon is the summer-month, from **samo-* (cf. O. Ir. *sam*, 'summer'); *Giamon*, the winter-month, from **gaiamo-* (cf. Old Welsh *gaem*, 'winter'); *Ogron*, 'cold' (cf. Welsh *oer* **ogro-s*, 'cold'); *Rivros*, the month of the god Rivos, the harvest-month, probably August. Rivos, according to Rhŷs, is the god whose statue was found along with the calendar. He is represented as Apollo, or perhaps as Augustus in the rôle of Apollo. Augustus, who had given his name to the month of August, was chosen to represent Rivos, the god whose name gave the month *Rivros* August (see Rhŷs, *Trans. 3rd Inter. Cong. Hist. Rel.*, Oxford, 1908, ii. 225 ff.).

The calendar is obviously lunar. The months are roughly lunar months; seven of 30 days each and five of 29 days each give a year of 355 days, instead of the usual lunar year of 354 days as with the Greeks. Loth (*RCel* xxv. 120) compares for this extra day the Irish, Welsh, and Breton phrase in contracts, promises, etc., 'a year and a day,' and states that the formula belongs to an epoch when the lunar year varied in duration from time to time by a day. While the popular current year of 354 days was retained, all chance of error in fulfilling the contract was avoided by prolonging the duration of the contract by a day; and it may have been religious and judicial scruples which led the Druids officially to augment the year by a day. We may compare Numa's Roman year (lunar) of 355 days, the number being decided because of the belief in the virtue of odd numbers. In the calendar of Coligny a month of 30 days is intercalated every two and a half years, in effect making each year a year of 367 days. This is evidently part of a system by which a given number of lunar years was made to synchronize with a given number of solar years.

De Ricci (*RCel* xix. 217, xxi. 25) finds the key to the system in Pliny's reference to a period of 30 years. In 30 lunar years, with 30 days intercalated every $2\frac{1}{2}$ years, there are 11,010 days, the difference between this and 30 solar years of 365·24 days (=10,957·20 days) being 52·80 days. De Ricci supposes (1) that every 15 years a month of 29 days was omitted, equivalent to 58 days in 30 years, thus reducing the difference to a fraction over 5 days; or (2) noting that the month Equos, of 30 days, has attached to it the letters ANM, reserved for months of 29 days, he supposes an error in the drawing up of the calendar. Altering Equos to a month of 29 days, and including the intercalary days (=366 days in the year), we obtain in the 30 years' cycle 10,980 days. In 30 solar years there are 10,957·20 days, which is nearly equivalent to 371 lunations of 29·53 days, viz. 10,955·63 days. If, then, a month of 30 days were omitted from the calendar every 30 years, this would give 10,950 days, increasing the error by 5·63 days. These, however, are problematical solutions, and it is unlikely that those who framed the calendar knew with mathematical exactitude the true duration of solar and lunar years. On the other hand, if they reckoned a solar year as consisting of 366 days, and if we assume the error in the month Equos, then the intercalated month of 30 days would give, in $2\frac{1}{2}$ years, 915 days—exactly the number of days contained in $2\frac{1}{2}$ solar years of 366 days. On such a system, if Equos were really a month of 30 days, the solar year may have been reckoned as containing 367 days, which would produce the same result.

The intercalary month of thirty days in $2\frac{1}{2}$ years, equivalent to twelve days in each year, has its days called by the name of the months in the calendar, beginning with Samon. Thus the twelve names are repeated two and a half times. Among the Germans and Hindus, as well as among the Celts, are found traces of twelve intercalary days or 'nights' in the year; and relics of the custom still exist in Brittany, where the first twelve days of January or the last six days of December and the first six of January are called *gourdeziou*, or 'supplementary days.' There is evidence also of their existence in Wales, where the twelve days added to the lunar year of 354 days were called *Dyddiau Dyddon*, 'days of days' (William ab Ithel, *Barddas*, Llandovery, 1862, p. 422 ff.), equivalent to the 'blank days' of the Welsh laws. We are thus, evidently, in presence of an old Indo-European method of accommodating the lunar year of 354 days to the solar year of 366 days (Loth, *RCel* xxiv. 310, xxv. 118). But in Brittany each of these days is regarded as prognosticating the character or quality of a month in the coming year. With this may be compared the fact that in Brahmanic belief the twelve days are 'an image of the coming year' (Schrader, *op. cit.* p. 391). De Ricci, therefore, surmises (*RCel* xxiv. 316) that this superstition was entertained by the framers of

the calendar, and that it is denoted by the fact that the days of the intercalary month bear the names of the thirty months which follow, and in the same order.

On one of the fragments which contains the month *Ciallos* that name is followed by *Sonnocingos* and a mutilated passage, which appears to refer to a 13th month and a year of 385 days, *i.e.* the lunar year of the calendar (355 days), plus a month of 30 days. *Sonnocingos*, according to Loth and Thurneysen, means 'course of the sun,' while Loth supposes *ciallos* to be connected with a root *ki*, 'to collect,' giving it the meaning of 'collection' or *résumé*—'an etymology confirmed by the fact that the intercalary month *collects* in effect the 12 intercalary days of 2 years, and the half of these 12 or 6 days of the first half of the third year' (*RCel* xxv. 119, cf. xxi. 14, 23).

A fragment of another calendar was discovered in 1802 in the Lake of Antre, near Moirans (Jura); on it the month *Ogron* appears to be mentioned (Villefosse, *Comptes Rendus de l'Acad. des Inscr.* xxvi. [1898] 256).

3. Division of the year.—Apart from counting by months or moons, the earliest division of time was probably by seasons rather than by years—summer and winter, and later also spring. The fourth season, autumn, was with the Aryans the last of the seasons to receive a distinctive name (Taylor, *Origin of the Aryans*, London, n.d., 164, 187; cf. also Schrader, *op. cit.* 366 f., 395–7). The adaptation of the lunar months to a course of the seasons finally issued in the attempts to synchronize lunar and solar time, but it is doubtful whether among the Celts generally the course of the year was divided by the equinoxes or solstices. Traces of the division by 2, 3, or 4 seasons are found in Celtic remains. Like the Teutons, they divided the year primarily into two parts. This is shown by the calendar of Coligny, since the intercalary month appears now before Samon, now before Giamon, each of them the first of six months. It appears also from Irish texts, which tell that 'the year was divided into two parts, *i.e.* the *Samradh*, from Beltine to Samfhuin, and the *Geimhredh*, from Samfhuin to Beltine' (cited in O'Donovan, *Book of Rights*, Dublin, 1847, Introd. liii.). The year is also expressed by *dá se mis*, 'twice six months,' in the Irish laws, where also a division into two unequal parts is referred to—*Samh-fucht*, a summer period of five months, and *Gamh-fucht*, a winter period of seven months. But 'this division was evidently made to regulate the price of grazing lands' (O'Donovan, lv.). In Welsh texts two divisions also occur, the calends of May (*Calan Mei*, May 1st), and the calends of winter (*Calan Gayaf*, Nov. 1st) (*Ancient Laws of Wales*, ed. Owen, London, 1841, i. 396, 588). The year probably began with the winter half; this seems to have been the case in Ireland, where *Foghamhar* ('the harvest') is defined as the name given to the last month, and where the year commenced with *Samhain* (*Samfhuin*), the day of the feast of Tara, *i.e.* Nov. 1st; cf. the phrase 'from one feast of Tara to another' (O'Donovan, liv. f.; Loth, *RCel* xxv. 126). In the Isle of Man, the beginning of the year with *Samhain* is still commemorated by mummers, who, on its eve, go round singing, 'To-night is New Year's night, Hogunnau' (Kelly, *Eng. and Manx Dict.*, Douglas, 1866, *s.v.* 'Blein'). There was also a custom of reckoning years as winters, *e.g.* Kulhwch's horse is said in the *Mabinogion* to be four winters old (Rhŷs, *Celtic Heathendom*, London, 1888, p. 360). The calendar of Coligny affords no evidence as to whether *Giamon* or *Samon* began the year. But if *Rivros* is the harvest month, approximately August, and if *Ogron* means 'cold,' then *Samon* cannot be May, since that would make *Ogron*, a cold month = September. Probably, therefore, *Samon* is approximately June, and *Giamon* approximately December. Loth (*RCel*, xxv. 130) points out that the name *Mid Samon* is almost exactly equivalent to the Welsh, Breton, and Irish names for June (Ir. *mís mithemain* = *meḋ-ṡamain* = *medio-samoni-*, 'middle of summer'). In this case the twofold division of the year in the calendar differs from that followed in Ireland and Wales, though, if *Mid Samon* is 'middle of summer,' there is here a trace of the division which made summer begin with May.

A threefold division of the year may have obtained among the Celts at some period. In all Aryan languages there is no primitive name for autumn—the last of the four seasons to receive a name. For the Celts this appears from the fact that, out of the Celtic names for the four seasons, three only are Indo-European,—those of winter, spring, and summer,—while those for autumn have arisen during the Celtic epoch. Some passages in the Welsh laws may point to this threefold division (Loth, *RCel* xxv. 127 f.). Possibly, too, the triple Celtic *Matres*, goddesses of that fertility with which the course of the seasons was connected, may owe their number to a threefold division of the year.

The later fourfold division is shown clearly by the old Irish method of arranging the four seasons, arrived at by subdividing the two halves of the year:

A. Geimhredh (winter half)	1st quarter, *Geimhredh*, beginning with the festival of *Samhain*, Nov. 1st. 2nd quarter, *Earrach*, beginning Feb. 1st (sometimes called *Oimelc*).
B. Samhradh (summer half)	3rd quarter, *Samhradh*, beginning with the festival of *Beltane*, May 1st (called also *Cét-soman* or *Cét-samain*, 1st day of *Samono-s*; cf. Welsh *Cyntefyn*). 4th quarter, *Foghamhar*, beginning with the festival of *Lughnasadh*, Aug. 1st (sometimes called *Brontroghain*).

For the texts and for the old explanations of these names, see O'Donovan, lii. ff.

This fourfold division must have been general over the Celtic area, for traces of the great festivals, with which three of the divisions began, still survive in folk-custom or can otherwise be discovered. Thus survivals of *Samhain*, *Beltane*, and *Lughnasadh* are found in Brittany, Ireland, Wales, the Isle of Man, and the Scottish Highlands, while a festival in honour of the god Lug occurred in Gaul on Aug. 1st (see these fully discussed under FESTIVALS [Celtic]). Traces of a festival to open the spring are lacking. If such a festival existed, it is now completely effaced by St. Bridget's Day, Feb. 1st. The ritual of these festivals, in accordance with the Celtic rule that night preceded day, began on the evening before with the moon's rising (*RCel* iv. 189; Monnier, *Traditions comparées*, Paris, 1854, p. 222).

None of these festivals is connected with the times of equinox and solstice. This points to the fact that originally the Celtic year was independent of these, that 'it was more thermometric than astronomical, and the Lugnassad was, so to say, its summer solstice' (Rhŷs, 419; Lughnasadh comes midway between Beltane and Samhain in the summer half of the year). On the other hand, there is ample evidence in folk-custom over the whole Celtic area, as in general over Europe, of the ritual observance of Midsummer day, June 24th, and its eve, while this ritual is scarcely to be distinguished from that of Beltane. It has been argued that the ritual of an old pagan summer feast was transferred, under Christian influence, to that of St. John Baptist on Midsummer day, and tradition in Ireland alleges that the change from Beltane to this feast was made

by St. Patrick (O'Donovan, li.; cf. Bertrand, *Rel. des Gaulois*, Paris, 1897, p. 105; Hyde, *Lit. Hist. of Ireland*, London, 1899, p. 91; Keating, *Hist. of Ireland*, tr. O'Mahony, 1866, p. 300; Grimm, *Teut. Mythol.* ii. 624). But, in spite of the Christian elements in the Midsummer festival, which at all events denote a desire to bring it under Church influence, the pagan elements, even in folk-custom, are strongly marked, while the festival is so deeply rooted in an earlier paganism all over Europe that this theory of transference must be given up. Without much acquaintance with astronomy, men must have noted the period of the sun's longest course from very early times; and it would probably be observed ritually. Whether this ritual observance existed before that of Beltane, or whether the two feasts arose independently and entered into competition with each other, it is impossible to say. Perhaps Beltane was an early pastoral festival marking the beginning of summer, when the herds went out to pasture (in its ritual cattle were passed through the fire), and Midsummer was a more purely agricultural festival. And, since their ritual aspect and purpose are similar, they may have borrowed each from the other, thus representing different currents of early custom. Or they may be later fixed dates of an earlier movable summer festival. Practically we may now regard them as twin halves of such a festival (see FESTIVALS [Celtic]). The Celts may have observed in some fashion the solstices and equinoxes, as the survivals of Midsummer Day tend to show, and as may be suggested by such facts as that of the Helvetii appointing a day close to the March equinox for an assembly of forces, perhaps because this was a sacred day (Cæsar, *de Bell. Gall.* i. 6). Some trace of this may also be found in the phrase 'from the middle of spring to the middle of autumn,' *i.e.*, according to the old computation, from mid-March to mid-September, in each case near the time of the equinoxes. (The phrase occurs in 'Destruction of Da Derga's Hostel,' *RCel* xxii. 167.)

The solar arrangement, however, did not affect the Samhain festival at the beginning of the Celtic year, or that of Lughnasadh. These remained, and still remain in folk-custom, constant. Probably very ancient village rituals for fertility, which may have been more or less liable to variation in the time of celebration, mark the origin of these greater periodic Celtic festivals. The latter were connected mainly with the anthropomorphic divinities of growth and with magical rites to induce fertility, and were apparently, in some cases, held at a stated centre in each large district. Where the Celts came under Roman influence, the observance of the Roman calendar tended to dislocate some of the festivals. Thus, in Gaul, much of the ritual of Samhain was transferred to the calends of January. Germanic influences may elsewhere have affected the Celtic calendar, since some of the Samhain ritual has passed over to Yule. The influence of the Christian calendar, with its list of feasts and saints' days, must also be taken into account. Not only did the introduction of the Roman calendar finally demolish the old Celtic method of computing time, but the Church attempted, with varying success, to hallow the older ritual by giving it a Christian colouring or by substituting holy days for the old festivals. Thus All Saints' and All Souls' Days occupy the place of Samhain; St. Bridget's Day occurs on Feb. 1st; St. John Baptist's Day at Midsummer; Lammas at Lughnasadh. Again, while some of the ritual of the old festivals still survives on their actual date in folk-custom, some of it now occurs on saints' days within the range of the pagan festival days. Specially is this the case with the Samhain ritual, some of which is found on St. Martin's Day (Martinmas) and on other saints' days in Nov. and Dec., while in Wales and the Isle of Man Lughnasadh rites occur on the first Sunday in August (see Rhŷs, 421 f.).

4. **Periods of years.** Certain periods of years seem to have been regarded by the Celts as significant, perhaps as sacred. In Irish and Welsh texts these periods are referred to as if they were well-marked divisions of time; or certain events, mythical or historical, are mentioned as occurring within them or are dated by them, showing that the mental outlook of the scribe, or of the folk among whom such traditional events were told, had been prepossessed by the influence of these periods. In the calendar of Coligny, 2½ years is clearly marked out as such a period, and the same period is mentioned in Irish texts, *e.g.* king Laegaire entered Leinster at the end of 2½ years (*RCel* xiii. 52). But the period of 3 years is much more usual. This is due, doubtless, to the sacred character of the number three among the Celts, as is evidenced by the three-headed gods and the number of triads, Divine, mythical, and customary, etc., in Celtic belief (cf. Rhŷs, Index, *s.v.* 'Three'; Usener, 'Dreiheit,' *Rhein. Mus. f. Phil.* lviii. [1903] 31). Note especially the three gods of Danu, the triple war-goddesses, triple Matres, the three cranes, three blemishes, three satires, the grouping of heroes by three, the triads of Welsh literature, etc. Wishes are made for three years; mythic kings reign for the same period; and—still more significant—the fair of Carman, celebrated at Lughnasadh, was held every three years (Windisch and Stokes, *Ir. Texte*, Leipzig, iv. [1900] 273; *RCel* xv. 312). In the Welsh *Mabinogion* and in the Welsh laws the same period occurs as a round measure of time (Loth, *Mab.*, Paris, 1889, i. 83, ii. 25, 30; *Anc. Laws*, i. 263, 488). Still more frequent both in Ireland and in Wales is the period of 7 years, which had evidently a well-marked and sacred significance, due, doubtless, to the fondness for the number itself. Thus mythic kings very frequently reign for that time; various events happen every 7 years, or occur at the end of 7 years, or continue during 7 years (Loth, *RCel* xxv. 138 ff., 147 ff.). The feast of Tara, held at Samhain, was celebrated every 7th (or perhaps every 3rd) year (O'Donovan, l.). Finally, the period of 30 years, referred to by Pliny, is mentioned as a round number of years in certain passages in Irish texts (Loth, *RCel* xxv. 140). In the absence of definite statements regarding such periods of years in the calendar of insular Celts, these references must be taken for what they are worth, but they seem at least to indicate the actual measurement of time by 3 and 7 years.

5. **The month.**—The oldest Indo-European name for periods of time was the 'month'; and there are traces, among the Teutons, Slavs, and other peoples, of a custom of grouping the months by two, considering them as brothers, as male and female, or as full and empty months, and using one name for two successive months qualified by 'great' and 'little,' etc. (Grimm, *op. cit.* ii. 788). Loth (*RCel* xxv. 124) considers that this usage may have been current among the Celts, since with some groups six of the twelve months have taken Latin names, as if originally each two months had but one name, while, occasionally, one month still bears popularly the name of the preceding month qualified by 'little.' Be this as it may, a primitive method of dividing the months into half-months by the light half and dark half of the moon is found among the Celts. In Celtic ritual the influence of a waxing or waning moon

was believed to be significant (see NATURE [Celtic]). Hence the lunar month was naturally divided into two parts, one before and one after full moon, in accordance with primitive usage. The calendar of Coligny divides the first 15 days from the second 15 (or 14), which are also numbered consecutively from 1 onwards, and between each half is placed in large letters the word ATENOUX, indicating the night of the full moon, 'great night,' or, as Thurneysen translates it, 'renewal' (*Ztschr. f. celt. Phil.*, Halle, 1899, ii. 523 ff.; cf. Mid. Ir. *athnughudh*), the period at which the month renewed itself. The same division occurs in Wales, where *pythewnos*, a fortnight, means 'a fifteen night,' and in Ireland, where *cóicthiges* had a similar meaning and where *teóra cóicthiges* meant 'three fifteens,' *i.e.* a month and a half (Loth, *RCel* xxv. 131; Rhŷs, 361).

6. The week.—Indo-European names for the week were late in being devised, and it is doubtful whether with the Celts, in spite of the sacredness of the number 7, a week of 7 days or nights existed before Christian influences were felt among them. Thus the Irish *seachtmain*, 'a week,' is due to Christian missionary teaching and is a corruption of Lat. *septimana* (cf. Gael. *seachduin*, Cornish *seithun*, Bret. *sizun*). The new week in Wales was, however, called by a native name, *wythnos*, 'eight nights,' in accordance with the custom of reckoning a period with the night on which it began and the night on which it ended. Thus *wythnos* would be equivalent to 7½ days, and it is possible that here the name of an earlier subdivision of the *pythewnos* has been used for the later week of 7 days. Native to the Celts are periods of 9 and of 3 nights and days. The number 9 is of frequent occurrence and evidently of sacred significance in Celtic texts, and a period of 9 nights, or of 9 nights and days, is found as a well-marked portion of time in Ireland, and is called by Rhŷs (*op. cit.* 360) 'the nine-night week.' In Irish its title is *nómad*, 'a space of 9 days' (Stokes, *RCel* xxii. 428); cf. *co cend nomaide*, 'until the end of a ninth,' *i.e.* of a 9-night week,—a phrase of frequent occurrence in the texts (cf. *RCel* xxii. 193),—while delays of 9 nights and periods of 9 nights are found in the Irish laws (Rhŷs, *op. cit.* 363; Loth, *RCel* xxv. 134; D'Arbois de Jubainville, *Études sur le droit celt.*, Paris, 1895, i. 365, ii. 112). Equally in Welsh texts and laws the same period is found, *e.g.* delays of 9 days (*Anc. Laws*, i. 84, 94, 142, etc.), while both in Wales and Ireland the names for the 9-night week were sometimes applied popularly to the new week.

Rhŷs (*op. cit.* 368) supposes that the 9th night was held to contain all the others, 'as being the boundary or limit within which the week was comprised.' If this be so, in accordance with the old rule of counting the night with which a period ended as well as that with which it began, the period consisted of 9 nights and 8 days. Thus a 'day' must have intervened between each week, if each began with a night, unless, as is probable, the 9th night originally ended one week and began another, *i.e.* it was common to both. Later the period is one of 9 nights and 9 days. Rhŷs also finds mythical personifications of the 9-night week according to two methods, and he cites cases of 9 personifications of a more or less uniform character, or a single personification with the attribute of 9 attaching to it (*op. cit.* 366 ff.). These must be regarded as hypothetical. Probably the 9-night week was divided into halves called *noinden*, of 5 nights and 4 days (cf. the *cess noinden Ulad*, 'the Ulster men's sickness of a week,' explained as 5 nights and 4 days). If 2 *noinden* thus made up the 9-night week, the 5th night must have been reckoned to each half, ending one and beginning another, as the 9th night also ended one week and began another (cf. Rhŷs, 363, 368, 370).

The week of 9 days being found among many races, its origin has been sought in various ways. Some have seen in it a multiple of the sacred number 3 (cf. the numerous triads and enneads of beings in 'Da Derga's Hostel,' *RCel* xxii. *passim*); others have adopted Kant's view that, before the synodical month of 29½ days was adopted, the sidereal month of 27⅓ days, divided into three parts, originated the period of 9 days (Loth, *RCel* xxv. 135 f.); Rhŷs offers another but by no means convincing explanation (*op. cit.* 364).

If the sidereal month divided into three parts produced roughly a period of 9 days, this again divided by 3 gave a period of 3 days. In any case 3 was a sacred number with the Celts, and a period of 3 days and nights occurs frequently in Irish and Welsh texts. Thus a delay of 3 nights in judicial matters is frequent (D'Arbois de Jubainville, *op. cit. passim*), and 3 nights and days of fasting, of hospitality, of a sojourn, of a journey, of a truce, etc., are common (Loth, *RCel* xxv. 132 f.; 'Tain bo Fraich,' *ib.* xxiv. 132; 'Finn and the Man in the Tree,' *ib.* xxv. 347, etc.).

7. The day.—The old Celtic names of days have been replaced by others borrowed from other sources and due to Latin and Christian influences (see MacBain, *Etymol. Dict. of the Gaelic Language*, Inverness, 1896, p. 117 f.). As has been seen, the days during which the moon was waxing were with the Celts, as with other peoples, considered propitious for many undertakings, especially for ritual purposes. This is gathered mainly from later folk-survivals; but older evidence is found in the case of the mistletoe cut on the 6th day of the moon, and in the fact that the Celtiberians danced in honour of their god on the night of the full moon (Strabo, III. iv. 6). Some evidence of 'lucky' days is also derived from the Irish texts (cf. *e.g.* 'Songs of Buchet's House,' *RCel* xxv. 27). Certain days, or groups of days, as well as certain hours of the day or night, were doubtless considered lucky or unlucky, as popular survivals show. Midday and midnight, according to Lucan (*Pharsal.* iii. 404 ff.), were hours when the Divine guardian of the grove showed himself, and when the priest himself dreaded to approach it. Certain days were appropriated to greater or lesser festivals, *e.g. Samhain*, *Beltane*, *Lughnasadh*, on the first of the respective months, as well as to other periodic festivals, in some cases to divinities on their festal days—the communal sacrifice of the hunters of Galatia to their Artemis 'on the day of her birth' (Arrian, *Cyneg.* 33), the yearly sacrifices of the Irish to Cenn Cruaich (*RCel* xvi. 35), the periodic holocausts of the Gauls (Diod. Sic. v. 32). Reference may also be made to the meeting of the Druids of Gaul 'at a fixed time of the year' (Cæsar, *de Bell. Gall.* vi. 13).

J. A. MACCULLOCH.

CALENDAR (Chinese).—The Chinese calendar, which was practically copied by the Japanese, with the substitution of Japanese for Chinese names, is scarcely so ancient as is generally supposed. It is true that at an early period the Chinese became acquainted with a twelve-year cycle of Juppiter, depending on that planet's progress through the twelve signs of the zodiac; but this cycle had in China only astrological significance, whereas in India it became part of the calendrical system. It is equally true that the Chinese early endeavoured to formulate a lunisolar year, and there is evidence of a year of 360

days side by side with one of 366 days, the discrepancy between the latter and the purely lunar year of 354 days being adjusted by intercalation at intervals of three or five years. Chinese tradition ascribes to the Emperor Yao (24th cent. B.C.) the institution of an astronomical board for the regulation of the calendar, and this tribunal, which still issues the official calendar each year, was profoundly influenced by the science of the Jesuit missionaries of the seventeenth century.

1. Era.—The Chinese have no initial point from which succeeding years are numbered. When recording dates, they usually give the name of the Emperor and the year of his reign (the first year of his reign being reckoned as beginning on the New Year's Day after his accession), as is the practice in England with regard to Acts of Parliament. Besides this, however, they also employ a sexagesimal cycle, beginning with 2637 B.C., for the years and days, and, to a limited extent, for the months. The basis of this cycle is the five elements, wood, fire, earth, metal, water (*mu, huo, t'u, kin, schui*), which, being divided into antitheses (active-passive, male-female, etc.), give the sub-cycle of the ten heavenly stems (*kan*): *kia* ('growing wood'), *yi* ('building wood'), *ping* ('natural fire'), *ting* ('artificial fire'), *wu* ('earth), *ki* ('earthen ware'), *keng* ('metal'), *sin* ('wrought metal'), *jin* ('running water'), *kuei* ('standing water'). The second sub-cycle is formed by the twelve earthly branches (*tschi*), each designated by the name of an animal. This duodenary cycle, which is also found in Tibet, among the Tai and Khmer, and, at least in part, in Egypt, Old Turkish inscriptions, and the Turfān fragments (Ginzel, *Chronologie*, i. 85 ff., 404, 411, 413, 501 f.; F. W. K. Müller, '"Persische" Kalenderausdrücke im chines. Tripitaka,' in *SBAW*, 1908, pp. 460–463), is as follows: *tsĕ* ('mouse'), *tscheu* ('ox'), *yin* ('tiger'), *mao* ('hare'), *schin* ('dragon'), *szĕ* ('snake'), *ngu* ('horse'), *wei* ('sheep'), *schin* ('monkey'), *yeu* ('cock'), *siü* ('dog'), *hai* ('swine'). The *kan* and *tschi* are grouped together, beginning with *kia-tsĕ*, and when the denary cycle has been repeated six times and the duodenary five times, the initial combination is repeated, and the cycle begins anew.

The year 1910 is the 47th year of the present cycle; and, as Chinese chronologers begin their cyclic reckoning with the year 2637 B.C., the present is the seventy-sixth cycle. But they have not adopted the system of numbering their cycles; and therefore a reader cannot tell to which cycle a date may belong, unless he be assisted by the context. In some historical works one finds both the cyclic number and the year of the reign given.

2. Year and month.—The Chinese year consists of twelve (synodic) lunar months, and is made to correspond with the solar year by the occasional insertion of an additional, or intercalary, month. The space of time covered by twelve of these lunar months being less than the solar year by 10 days 21 hours, in every nineteen years there are seven years of thirteen months. We shall now explain the rule under which the intercalary months are inserted. The length of a Chinese month is 29·53 mean solar days; and the time which the sun occupies in passing through one of the twelve signs of the zodiac averages 30·44 days. These two periods being of so nearly the same length, it happens in most cases that a Chinese month begins when the sun is in one sign of the zodiac, and terminates when it is in another sign. But, as the month is the shorter of the two periods, occasionally there must come a time when a month begins and ends when the sun still remains in the same sign. Every such month is adopted as an intercalary month; and by this simple plan there is provided exactly the right number of intercalary months to correct the divergence of the Chinese from the solar year. The intercalary month never occurs in the winter—not, as is generally supposed, because of some arbitrary rule, but because the sun (which moves faster in winter than in summer) is then travelling at more than its average rate of speed, and passes through a sign of the zodiac in less time than is occupied by a lunar month, so that at that season a month cannot possibly begin and end while the sun remains in the same sign.

At the present time the first month of the year is known in Chinese by a special name, *Tsching-yüe*, 'hallowed (or true) month'; but the remaining months are called the 'second month,' 'third month,' and so on. Anciently, however, the months were designated according to the characters of the *tschi*, which also corresponded to the twelve zodiacal signs (*kung*), although the latter were counted in reverse order. These old Chinese month-names were as follows: *Tsĕ-yüe, Tscheu-yüe, Yin-yüe, Mao-yüe, Schin-yüe, Szĕ-yüe, Ngu-yue, Wei-yüe, Schin-yue, Yeu-yue, Siu-yue, Hai-yüe*, their names being equivalent respectively to 'child,' 'bud,' 'plant-basket,' 'open door,' 'motion,' 'completion,' 'encounter,' 'laden trees,' 'ripeness,' 'jug,' 'destruction,' 'return to rest.'

An intercalary month takes its name from the month which precedes it. Thus, if it follows the fourth month, it is called the 'intercalary fourth month.' Every month begins with the first day of a new moon; and the new year begins with the first new moon after the sun enters Aquarius. New Year's day thus varies between 20th January and 19th February. As the length of a month is 29·53 days, it must consist sometimes of 29, sometimes of 30 days, the latter the more frequently.

It results from the above-described conditions that the equinoxes occur regularly in the second and eighth months, the solstices in the fifth and eleventh months.

The Chinese have no formal division of the month; but it is a common practice among them to speak of anything as happening in the first decade (1st to 10th day), middle decade (11th to 20th day), or last decade, of such a month, much as we say, 'first week in June,' etc.

The first month of the luni-solar year was originally *Yin-yue*, as ordered, according to tradition, by Tschuan-hiü (2513 B.C.). In the second dynasty (1766–1123 B.C.) the beginning of the year had retrograded a month, in the third (1122–255 B.C.) two months, and in the fourth (255–209 B.C.) three months, until the Emperor Wu-ti, in 104 B.C., in his reformation of the calendar, is said to have made the year once more begin with *Yin-yue*—a tradition which must not be taken too strictly.

3. Day.—As already noted, the Chinese divide their days into sexagesimal periods, their names being identical with those of the corresponding years:—*Kia-tsĕ, Yi-tscheu, Ping-yin, Ting-mao, Wu-schin, Ki-szĕ, Keng-ngu, Sin-wei, Jin-schin, Kuei-yeu, Kia-siü, Yi-hai, Ping-tsĕ, Ting-tscheu, Wu-yin, Ki-mao, Keng-schin, Sin-szĕ, Jin-ngu, Kuei-wei, Kia-schin, Yi-yeu, Ping-siü, Ting-hai, Wu-tsĕ, Ki-tscheu, Keng-yin, Sin-mao, Jin-schin, Kuei-szĕ, Kia-ngu, Yi-wei, Ping-schin, Ting-yeu, Wu-siü, Ki-hai, Keng-tsĕ, Sin-tscheu, Jin-yin, Kuei-mao, Kia-schin, Yi-szĕ, Ping-ngu, Ting-wei, Wu-schin, Ki-yeu, Keng-siü, Sin-hai, Jin-tsĕ, Kuei-tscheu, Kia-yin, Yi-mao, Ping-schin, Ting-szĕ, Wu-ngu, Ki-wei, Keng-schin, Sin-yeu, Jin-siü, Kuei-hai*. This cycle of days is found in the most ancient historical records, the dates of important events being recorded by mention of the cyclic day, as well as of the day of the month, month, and year of reign. These cycles, though not used for ordinary purposes, have been continued without interruption to the present time. Besides this the

Chinese have long possessed a cycle of 28 days, designated by the names of the 28 lunar mansions (*sieu, kung*): — *kio* ('horn'), *k'ang* ('neck'), *ti* ('fundament'), *fang* ('room'), *sin* ('heart'), *wei* ('tail'), *ki* ('dung-basket'), *teu* ('winnowing fan'), *nieu* ('cattle'), *nü* ('virgin'), *hiü* ('grave-mound'), *wei* ('house-ridge'), *schi* ('sacrificial hearth'), *pi* ('wall'), *kuei* ('sandal'), *leu* ('harvest woman'), *wei* ('field watchman'), *mao* ('setting sun'), *pi* ('net'), *tsui* ('mouth'), *ts'an* ('exalted'), *tsing* ('well'), *kuei* ('manes'), *lieu* ('pasture'), *sing* ('constellation'), *tschang* ('net'), *yi* ('wing'), *tschen* ('waggon'). The week of seven days, on the other hand, is unknown, except in commercial centres frequented by Europeans, where for Monday, Tuesday, etc., the names 'first day,' 'second day,' etc. (*Li pai yi, Li pai öl*, etc.), have been coined.

The day begins at midnight, and is divided into 12 *tschi* (see above, 1), each of which is subdivided into two parts, the former called *tsch'u* ('beginning') or *kiao* ('odd'), and the latter *tsching* ('even'). Each of these halves is subdivided into four *k'o*, or 'quarters' (*tsch'u-k'o*, 'beginning quarter,' *yi-k'o*, 'first quarter,' etc.); and a *k'o* falls into 15 *fen* ('minutes'), while European influence has introduced further divisions corresponding to 'seconds,' 'forenoon,' and 'afternoon.'

4. Other divisions.—An additional method of marking time is afforded by the 'Twenty-four Solar Terms,' which are divisions of a solar year, and quite independent of the official year with its twelve or thirteen lunar months. These Solar Terms commence alternately on the day of the sun's entry into a sign of the zodiac, and on the day of its reaching the 15th degree in the sign. Their length thus averages 15·22 days, though it varies between 14 and 16 days. The first term begins when the sun reaches the 15th degree in Aquarius, or approximately on the 5th of February. These 'Terms,' which are alternately odd (*tsie*) and even (*k'i*), have the following names:—*Li-tsch'un* ('beginning of spring'), *Yü-schui* ('rain-water'), *King-tschi* ('coming-forth of worms'), *Tsch'ün-fen* ('spring equinox'), *Ts'ing-ming* ('pure clearness'), *Ku-yü* ('seed rain'), *Li-hia* ('beginning of summer'), *Siao-man* ('little fertility'), *Mang-tschung* ('grain in granaries'), *Hia-tschi* ('turning of summer'), *Siao-schu* ('little heat'), *Ta-schu* ('great heat'), *Li-ts'ieu* ('beginning of autumn'), *Tsch'u-schu* ('boundary of heat'), *Pe-lu* ('white dew'), *Ts'ieu-fen* ('autumn equinox'), *Han-lu* ('cold dew'), *Schuang-kiang* ('fall of hoar-frost'), *Li-tung* ('beginning of winter'), *Siao-süe* ('little snow'), *Ta-süe* ('great snow'), *Tung-tschi* ('turning of winter'), *Siao-han* ('little cold'), *Ta-han* ('great cold'). These terms are marked in the almanac published annually by the Government; and agricultural operations, sowing, etc., are always regulated by them. Closely connected with them is the twelve days' cycle often called the 'cycle of choice,' whose twelve signs are associated with the 24 *tsie-k'i* just enumerated, inasmuch as the last day of a *k'i* and the first day of the following *tsie* come under the same sign. The names of the signs of this twelve days' cycle, which has some connexion with astrology, are as follows:—*kien* ('attain'), *tschu* ('exclude'), *man* ('full'), *p'ing* ('indifferent'), *ting* ('determinative'), *tschi* ('seize'), *p'o* ('break'), *wei* ('dangerous'), *tsch'ing* ('complete'), *scheu* ('conceive'), *k'ai* ('open'), *pi* ('close').

Mention should also be made of the three Chinese eras *tschang, pu*, and *ki*. The *tschang* is 19 luni-solar years, when the relation between the rise of the new moon and the beginning of the *k'i* again begins; the *pu* is a cycle of 72 years, when the difference between the tropical solar year and the lunar year is very nearly equal to the product of the sidereal and synodical time of revolution of the moon; and the *ki* is equal to 20 $pu = 1440$ years, and represents 261 sexagesimal cycles.

CALENDAR (Christian).—The Christian calendar derived its name (in the languages of Western Europe), as it did its form, from the Roman pagan calendar (see CALENDAR [Roman]), which it gradually superseded. The germ of the Christian calendar is to be sought in the customary observance, in each local church, of the death-days of its martyrs and bishops. Lists of these were preserved in the diptychs of each church. References to such lists meet us in St. Cyprian's letters. Writing (*Ep.* 37) about recent martyrs, he gives direction that the day of their death should be noted in order that their commemorations might be celebrated among the memorials of martyrs. In another letter (*Ep.* 34) he mentions as a well-known custom the celebration of the anniversaries of the Passions of martyrs. Tertullian (*de Corona*, xiii.), reproving Christians for taking part in pagan commemorations, reminds them that they have their own registers and *fasti*. Sozomen (*HE* v. 3) testifies in regard to two neighbouring towns in Palestine, Gaza and Constantia, that, although they were united by Julian under one civil government, each retained the festivals of its martyrs and the commemorations of the priests who had presided over it. See, further, COMMEMORATION OF THE DEAD.

1. Calendar of Filocalus.—The earliest festival lists which have come down to us belong to the local church of Rome. They are contained in a compilation of chronological documents of the date A.D. 354—itself a re-publication of an edition of 336. The title-page is inscribed 'Furius Dionysius Filocalus titulavit.' The name of this calligrapher is found in two inscriptions in Rome, in one of which he describes himself as 'Damasi Papae cultor atque amator.' He appears to have been employed by Damasus in designing the lettering for the metrical epitaphs which that Pope wrote for the tombs of the martyrs. The compilation commences with a civil calendar giving the national pagan festivals, but marking the Christian week by the letters A–G, which are prefixed in regular sequence to the days, side by side with the nundinal letters A–H. This probably had become a feature of the State calendar since the observance of Sunday had been legally sanctioned by Constantine in 321. There is a list of consuls from B.C. 510 to A.D. 354, in connexion with which certain Christian events are noted, viz. the birth and the death of Christ, and the arrival in Rome of SS. Peter and Paul, and their martyrdom. Other civil documents are also given. Of special Christian interest are a table of the days of the occurrence of Easter from 312 to 411, a catalogue of Bishops of Rome from Peter to Liberius, and two lists entitled respectively 'Depositio episcoporum' and 'Depositio martyrum,' which note in calendar order the days of the burial of the Roman bishops and martyrs, with the place of their interment, where the memorial service was annually held. In these two lists, which we may assume were copied from official archives, we have the calendar of the Church of Rome, as concerned immovable feasts, of the year 354.

With very few exceptions all the entries appear in the Roman calendar of the present day.

An analysis of this primitive calendar yields the following results. The 'Depositio episcoporum' contains the names of twelve bishops from Lucius (254) to Julius (352). The last two, Marcus and Julius, are inserted at the end, out of calendar order, by the second editor. One bishop of the period, Marcellus, is omitted, and another, Xystus (Sixtus), is placed in the martyr list. In the 'Depositio martyrum' 52 names appear, of which several are frequently assigned to a single day—that, no doubt, on which they suffered together, as we know to have been the case with Perpetua and Felicitas. 24 days in all are observed—Christmas, which heads the list, and St. Peter's Chair, Feb. 22 ('VIII. Kal. Martias, Natale Petri de cathedra') being included. The only entries relating to foreigners are: 'Non. Martias [March 7] (depositio) Perpetuae et Felicitatis, Africae'; and 'XVIII. Kal. Octob. [Sept. 14] Cypriani, Africae, Romae celebratur in (coemeterio) Callisti.' There is no notice of martyrs who suffered before the 3rd century. The earliest mentioned are Perpetua and Felicitas (202). The oldest Romans are Callistus (222), Oct. 14, and Hippolytus and Pontianus (235), Aug. 13. We may therefore conclude that the practice of celebrating the anniversaries of the martyrs at their graves did not arise at Rome until the 3rd century. If the festival of any martyr of the 1st or 2nd cent. had become traditional, it would hardly have failed to find mention in the 'Depositio martyrum.' The entry 'Petri in Catacumbas et Pauli Ostense Tusco et Basso Cons.' [June 29] is not the anniversary of the martyrdom of these Apostles, but the commemoration of the translation of their remains in the year 258. The collection of Filocalus was preserved until recent times in two MSS of the 8th or 9th century. One of these has totally disappeared, but two 17th cent. copies remain, one at Brussels and the other at Rome. Of the second MS, two fragments only survive in the library of Berne, but a copy made from it when entire is in the Imperial library at Vienna. (Mommsen has published the civil calendar in *CIL* i. 334, the other documents in *Mon. Germ. Auct. Ant.* ix. 13 f. For a summary of the contents of the collection, see Duchesne, *Le Liber Pontificalis*, i. 1892, p. vi. f., and see also Rossi-Duchesne, *Acta Sanct.*, Nov., tom. 2, pars i. p. xlviii. f.)

2. Gothic calendar.—A fragment of a list of martyrs, in the Gothic language, of the end of the 4th cent., has been published by Mai from an ancient palimpsest in the Ambrosian library at Milan (*Script. Vet.* v. 66), and by Migne (*PL* xviii. 878). It contains 38 days only,—from Oct. 23 to Nov. 30,—and in addition to national saints includes the Apostles Philip and Andrew, and the Emperor Constantine.

3. Calendar of Polemius Silvius.—A calendar of complete framework, *i.e.* with all the days of the year inserted, was drawn up by Polemius Silvius in 448—in an appendix he names the consuls of the following year—and addressed to Eucherius, Bishop of Lyons (d. 450). Silvius had before him another calendar, which, as he says in the preface, he set himself to simplify for the use of the unlearned. The calendar has a curious resemblance to a modern almanac. Historical dates are entered, as, *e.g.*, the day of the capture of Rome by the Gauls (Id. Feb.). The words 'Kalendæ' 'Nonæ,' 'Idus,' 'Epiphania' are explained by the author after a manner of his own. Weather indications are given. A few pagan festivals are recorded, evidently as legal or business dates. Christian commemorations are connected with 10 days only, and include Christmas, St. Stephen, Epiphany, St. Vincent (Jan. 22), the Passion (March 25), the Resurrection (March 27), St. Lawrence (Aug. 10), Hippolytus (Aug. 12), and the Depositio SS. Petri et Pauli, which is assigned to Feb. 22 instead of June 29. The Maccabees (Aug. 1)—the one OT commemoration in the West—appears here for the first time. This calendar is preserved in a single MS of the 12th cent. in the public library at Brussels (edited Boll. *Acta SS.*, June, vol. vii., Migne, *PL* xiii. 676, and Mommsen, *CIL* i. 335).

4. Calendar of Tours.—A list of the fasts and vigils in the diocese of Tours instituted by Bishop Perpetuus (461–490) finds a place in the *Historia Francorum* of Gregory, Bishop of Tours (x. 31). It mentions only the chief festivals, *i.e.* those preceded by a vigil. These are Christmas, Epiphany, the Resurrection on the fixed day March 27 (VI. Kal. April.—the only date given), as well as Easter and Ascension Day; also, among others, the Nativity and Passion of St. John Baptist,[1] St. Martin, St. Hilary, St. Peter's Chair (Natale S[ti] Petri episcopatus), and SS. Peter and Paul. The station days, *quarta et sexta feria*, from Quinquagesima to St. John Baptist's day, are appointed for observance amongst the fasts.

5. Calendar of Carthage. This calendar was first edited in 1682 by Mabillon in his *Vetera Analecta*, Paris, iii. 398. It was discovered by him in the monastery of Clugny, written on two parchment sheets, since lost, which formed the covering of a copy of St. Jerome's commentary on Isaiah. In this calendar, of the earlier Carthaginian bishops Cyprian (d. 258) alone is mentioned, being honoured as a martyr; eight bishops are commemorated as such, from Gratus who was present at the Council of Sardica (343) to Eugenius (d. 505). This latter date therefore marks the age of the final redaction of the calendar. From the names of the bishops, and that of St. Augustine (Aug. 29), we conclude that the calendar belonged to the Catholic Church and not to the Donatists. It begins on XIII. Kal. Maïas (19th April), and ends on XIV. Kal. Mart. (Feb. 16)—the nine weeks during which Lent occurs being omitted, either through compliance with the Eastern custom, attested by the Council of Laodicea (between 343 and 381), which discouraged festivals at that time, or simply owing to a defect in the MS. The heading is: 'Hic continentur dies nataliciorum martyrum et depositiones episcoporum quos ecclesia Cartagenis anniversaria celebrant.' Martyrs and bishops are not separated, as in the Roman calendar, but the distinction is maintained by the different descriptions—*natalicia* (birthdays, *i.e.* into the higher life) and *depositiones* (burials)—of their days in the heading. Moreover, in the list 'depositio' is prefixed to each bishop, except in the case of Cyprian (Sept. 14), who is classed among the martyrs. The number of days commemorated — 79 — shows a large increase when compared with the 12 and 24 of the Roman lists of a century and a half before. The calendar has also become wider in its scope: 18 foreign names appear in it, as compared with the 2 in the Roman. Among these we observe 9 Roman saints, 3 of whom are not found in Filocalus, though no doubt at this time they were commemorated also at Rome. And, as regards the African saints, they do not belong exclusively to Carthage, as the names in the Roman calendar are all Roman. Martyrs are included from the three ancient African provinces, viz. Africa proper, Numidia, and Mauretania. Festivals in honour of NT events and personages have multiplied. Christmas is now followed by its attendant feasts, St. Stephen (Dec. 26), St. John,[2] here coupled with his brother James (Dec. 27), and the Holy Infants (Dec. 28). With Christmas is also connected the day of St. John Baptist, *i.e.* his Nativity (VIII. Kal. Jul.–VIII. Kal. Jan. representing the six months' interval of Lk 1[36]). We find also Epiphany (Jan. 6), SS. Peter and Paul (June 29), St. Luke (Oct. 13), and St. Andrew (Nov. 29). The Maccabees (Aug. 1) has now gained a firm footing in the West (see Calendar of P. Silvius above, § 3).

6. Syrian calendar.—The calendars which have hitherto occupied us were mainly of a local character. We come now to a calendar which takes a wider range, being formed by the inclusion of the Saints' lists of several Churches.

In 1837 there was discovered by Dr. Henry Tattam in the monastery of St. Mary Deipara, on the Nitrian Lakes in

[1] In the *Sacramentarium Gallicanum* the mass for St. John Baptist (*i.e.* his Nativity) is followed by a mass for his Passion (Muratori, *Lit. Rom. Vet.* 1748, 878, 9).

[2] The text has 'sancti Johannis *Baptistae*'—undoubtedly a copyist's error for *Apostoli*, as the Baptist is commemorated in the calendar on June 24.

Egypt, a codex containing—in addition to the *Clementine Recognitions*, Eusebius on the *Theophania*, and other works—an ancient calendar written in Syriac. Tattam acquired the MS for the British Museum, where it now lies. The calendar was first edited by W. Wright in the *Journ. of Sacred Lit.*, 1866, viii. 45 ff., with an Eng. tr. 423 ff., and subsequently by R. Graffin in the 2nd Nov. vol. of the *Acta Sanctorum*, lii., the names being turned into Greek by Duchesne. A note in the last page of the codex is to the effect that it was completed at Edessa in 411.

The calendar consists of two parts. Part I. is arranged according to the Roman months (to which Syriac titles are given), and contains the names of martyrs belonging to the Roman Empire. It begins on the day after Christmas (Dec. 26),[1] and ends on Nov. 24. Part II. contains a list of Persian martyrs, arranged in the order of their ecclesiastical standing as bishops, presbyters, and deacons. As no dates are given, it must be regarded as a historical record, not as a calendar of martyr-festivals.

The calendar proper (*i.e.* Part I.) is evidently compiled from the martyr-lists of the chief cities in the Eastern (trans-Adriatic) part of the Empire. Only one local Roman feast (Xystus) occurs in it, and one African (Perpetua and her companions). The place of honour is given to Nicomedia, which has been credited with by far the largest number (32) of entries. From this and other indications we may infer that the first editor had his home in Nicomedia, and wrote in Greek. The date of his work is not earlier than 362, as martyrs are recorded who are mentioned by Socrates and Sozomen as having suffered under Julian. Owing to careless editing, many saints are mentioned twice or even thrice. The names of distinguished martyrs had found place not only in their own but in other calendars, and when the lists were combined, in cases where the day of celebration differed, they were allowed to appear again and again. The compilation is made up of Arian calendars. In the list received from Alexandria, Athanasius is omitted, but Arius is included. 'At Alexandria, Areios the presbyter' is the entry opposite July 6. Lucian (of (Antioch), Jan. 7, and Eusebius (of Cæsarea), May 30, are also commemorated. Possibly also 'Eusebius,' Nov. 8, is the Arian bishop of Nicomedia. But in substance the Catholic and Arian calendars must have been much the same, as after the schism both parties, no doubt, retained the old lists, merely adding distinguished partisans. In 15 entries the words 'of the ancient martyrs' are added to the name. If, as seems likely, this means that the martyrs mentioned suffered before the persecution of Diocletian, it follows that by far the greater number of the names of this calendar date from that persecution. From Nicomedia the calendar in all probability came to Antioch, and there received the long list of martyrs, falling little short of the Nicomedian, credited to that city. Thence it was carried to Edessa, where it was translated into the Syriac vernacular, and again augmented by the addition of local saints. Here also the list of Persian martyrs was appended; and, as thus edited, the calendar in the MS of 411 has come down to us. In this calendar the only festivals other than Saints' days noted are Epiphany and Easter, the latter in connexion with the commemoration of All Martyrs, which is assigned to the following Friday. The only Apostles commemorated are SS. John and James (Dec. 27), and SS. Paul and Peter (Dec. 28). St. Stephen, who is also called an Apostle, appears on Dec. 26.

7. The Hieronymian Martyrology.—The tendency to combine local festival records in one list, which we observe in the Syrian calendar, finds its fullest development in the compilation which came to be popularly known as the Hieronymian Martyrology.[1] It comprises, as its chief elements, the calendars of Rome, Carthage, and Syria. The nucleus of the work is the Roman calendar, but of a later stage than that presented to us by Filocalus. As it appears in H.M., it shows a great increase in martyr festivals. The 22 days marked for observance in A.D. 354 have grown to some 150, and, instead of the one or two names then allotted to each day, groups—sometimes large groups—of names are almost invariably found. The calendar has, moreover, ceased to be merely urban and suburban. It includes all Middle Italy. Opposite 'Romæ' are placed festivals of places a considerable distance from the city, even as far off as Forum Sempronii, 174 miles away—the number of miles from Rome being here, as elsewhere, noted in the text. The list of Roman bishops, kept separate from that of the martyrs by the chronographer of 354, has been made a part of the general calendar, and has been continued (with the sole omission of Zosimus) to Boniface I., of whom both the consecration day (IV. Kal. Jan.) and the death day (II. Non. Sept.) are given. As the consecration day would be observed only during the lifetime of the bishop, it may be concluded that the Roman calendar was received into the work shortly after the death of Boniface (422). After Boniface only Popes of wide-spread fame appear—such as Leo the Great, Hilary, and Gregory the Great—attached to whose names often occurs a notice showing that they were exceptionally added: *e.g.* IV. Id. Sept. 'Hilarius per quem Victorius ordinem paschalem conscripsit.' With the Roman calendar were incorporated the calendars, in part or whole, of other Italian cities—which probably already formed two collections (of Upper and Lower Italy) before they came into the compiler's hands—and the calendar of Carthage. To the calendar of the West thus formed, a later editor added the Syrian festival list—that is, its first part, for of the second he seems wholly ignorant—and thus gave a kind of ecumenical character to the work. Like the Roman, the two other chief sources have been received into H.M. with augmentations, as compared, that is, with the independent forms known to us. The African list has been swollen by a number of martyrs who, it has been conjectured, suffered during the raid of Genseric, 428 (Achelis, *Die Mart.* pp. 103, 107). The Syrian calendar has been extended to 460, as the translation of the remains of St. Simeon Stylites, which took place in that year, is commemorated on Jan. 5. It is noteworthy that the editor, who evidently accepted the calendar as Catholic, has in all innocence taken over its Arian colouring, the commemoration of the two bishops Eusebius being retained, and even that of Arius himself, his name appearing in the corrupted forms Arthoci, Artotes, or Ari Thoti in different MSS.

The preface to H.M. takes the form of a letter addressed to St. Jerome by two bishops of North Italy, Chromatius of Aquileia and Heliodorus of Altinum, in which they beg him to send them from the archives of Cæsarea the famous festal calendar of Eusebius; and of his reply, stating that he was sending them this calendar in a curtailed form which included only the most notable martyrs, and with the names arranged according to the months and days of the year. It was through this fabulous association of the work with St. Jerome (d. 420) that the Martyrology received its name, and no doubt won in large measure the prominent position which it attained. The preface is first cited by Cassiodorus (*de Institutione Divin. litt.* xxxii., Migne, *PL* lxx. 1148) in 544. As H.M. must have been then in currency, its final compilation, *i.e.* that which united its Eastern with its Western elements, may be assigned to an earlier date (*c.* 530) in the 6th century. Towards the end of that cent. the knowledge of it had reached the East. In 598, Eulogius, Patriarch of Alexandria, requested Gregory the Great to send him 'the deeds of the martyrs collected by Eusebius,'—a clear reference to the preface of H.M.,—and the Pope in his reply alludes plainly to the Martyrology. The compiler of H.M. was undoubtedly a native of North Italy. The additions which he made to his ancient materials are, as we have seen, mainly

[1] The omission of Christmas is remarkable. It probably stood at the commencement of the year in the original Greek text, and was struck out by the Syrian copyist, influenced by the usage of his own Church.

[1] Hereafter cited as H.M.

Italian, and the memorials of the northern cities seem best known to him. He has also selected North Italian bishops as correspondents with St. Jerome in the preface.

A work like H.M. would naturally receive augmentations from time to time. The most remarkable of these took place in Gaul. The numerous, almost daily, notices of Gallican saints, with other indications of Gallican use, point to this. Probably this expansion of H.M. occurred at Auxerre, which, although a comparatively insignificant town, furnishes more festivals than any other, and has all its bishops noticed but one. The last bishop whose name is recorded is Aunacharius, and, as his 'natale,' *i.e.* entrance upon office (Prid. Kal. Aug.), only—and not his death—is commemorated, we may assume that the recension was made during his lifetime or shortly after (*c.* 592). All existing MSS of H.M. are derived from this Gallican edition. The Martyrology contains more than 8000 names of saints, large groups being allotted to each day. On June 2 the names of 220 saints appear. It frequently happens that the same martyr is commemorated on different days, in connexion with different places. This was a natural result of an uncritical combination of several calendars, when no care was taken to avoid repetitions. Transcriptional errors abound, in many cases rendering the entries unmeaning. We find often, as in the instance given above, names divided, or two names fused into one. 'Milia' is sometimes changed into 'milites.' The names of cemeteries are regarded as names of martyrs. So great is the confusion, that de Buck, the first critical reviewer of H.M., gives as his verdict: 'Nullus forte in universa antiquitate horribilior liber' (Prœmium to *Index Hagiologicus ad Acta SS. Supplementum*, Oct.). And the latest editors, de Rossi and Duchesne, in despair of emending the text, have simply printed the three chief MSS in parallel columns (their edition is prefixed to *Acta Sanctorum*, Nov., tom. ii., pars prior).

8. The later Martyrologies. —Martyrologies, called 'Menologies' by the Greeks, are distinguished from calendars in this, that they do not merely give the names and dates of saints, but add historical or legendary accounts of their martyrdoms. Occasionally in H.M. the entries of the deaths of martyrs are thus enlarged, but this feature became characteristic in the works which succeeded and were based upon it, and which are therefore properly termed Historical Martyrologies. The chief sources from which these accounts are derived are, in addition to H.M., the *Passions* and *Acts of the Martyrs*, the works of Eusebius, Rufinus, Jerome, Cyprian, Gregory the Great, the *Liber pontificalis*, etc.

The series of Historical Martyrologies commences with the *Martyrologium Romanum Parvum*,[1] composed at Rome about 700. It makes a rather sparing use of biographical matter, so that the *Passions* found in H.M. are often more diffuse. About the same time Bede drew up his Martyrology. He made large extracts from his authorities, and added several English and Frankish saints to the Roman list, and also, contrary to the Western usage, introduced some names from the OT, taking their dates from Greek Menologies. He left many days vacant, but these were filled up by later hands, so that it is impossible to decide how much of the Martyrology ascribed to Bede is actually his. Bede was followed by a line of successors, each of whom used the works of his predecessors, while availing himself of other materials. These subsequent writers were Florus of Lyons (*c.* 830); Wandelbert of Prum, who composed a metrical Martyrology (*c.* 848); Hrabanus Maurus (*c.* 850), whose work, in the opinion of Achelis, is independent of Bede; Ado, Bishop of Vienne (*c.* 870); Usuard, a monk of St. Germain-des-Prés, Paris (*c.* 875), whose book is practically an epitome of Ado's, and was the most used of all the Historical Martyrologies; and Notker Balbulus, a monk of St. Gall (*c.* 896). The *Martyrologium Romanum*, which was compiled by Baronius at the instance of Gregory XIII., is a revised and augmented edition of Usuard. It was prescribed for exclusive use in choir, at the canonical hours, by a Papal brief in 1584.

Achelis traces a twofold series of Martyrologies, starting from H.M.: a Roman-French line, viz. M.R.P., Ado, Usuard, and Baronius; and an Anglo Saxon-German line, viz. Bede, Florus, Wandelbert, Hrabanus Maurus, and Notker. Dom Quentin does not make this distinction. He regards Bede as the source of all the later Martyrologies, and places M.R.P. late in the series, after 848.

The forementioned Martyrologies were written in Latin. A Martyrology in Anglo Saxon, which is probably a translation made *c.* 850 from a Latin original of 750, has been edited by Herzfeld, London, 1900. Two others, in Irish, and including many Irish saints, have come down to us—the Martyrology of Oengus, of the date 804, composed in rhymed verse, and the Martyrology of Gorman, also metrical, written between 1166 and 1174 (both edited by Whitley Stokes for Henry Bradshaw Society, 1895 and 1905). The need for Historical Martyrologies arose from the practice of reading the *Passions of the Saints* during Divine Service. This custom is first mentioned by Aurelian, Bishop of Arles (545) (*Regula ad monachos*, Migne, *PL* lxviii. 396). It was the origin of the Lections subsequently inserted in the Breviary. The earlier practice was to read passages from Holy Scripture alone.

[1] Hereafter cited as M.R.P.

9. Later calendars.—We have seen that H.M. is essentially a collection of the calendars of local churches. Such calendars, in fact, could be in many cases reconstructed from the materials which it furnishes. But, apart from H.M. and the early calendars of which we have already treated, we do not meet with calendars proper until the 8th century. In the West, however, the lack of calendars is supplied by the liturgical books of the Roman and Gallican (*i.e.* non-Roman) rites, as in them provision is made for special Masses on Sundays and other days of observance, following the local festival lists. The books of the Greek Church do not help us here, as it has never been the Eastern custom to vary the Liturgy according to the day or season. In the Western Service-books the Sunday cycle appears for the first time, and thus an important feature is supplied, in which the early calendars and the Martyrologies, which, with rare exceptions, notice immovable feasts only, are lacking. At first the Saints' days were distributed through the whole year, but eventually, as their number continued to increase, they were placed together in a separate division of the Service-books, the *Proprium de sanctis*, apart from the cycle of Sunday services, the *Proprium de tempore*.

Belonging to the 7th cent., among books of the Gallican rite, we have the *Missale Gothicum*, which was apparently drawn up for the diocese of Autun; the Lectionary (*i.e.* book of Lections read in the Mass throughout the year) of Luxeuil, which probably represents the use of the church of Paris (Dom Morin, *Revue Bénédictine*, 1893, p. 438); and the Lectionary of Silos (ed. Morin, Bruges, 1893, under the title *Liber Comicus*),[1] which shows the festival list of the ancient ecclesiastical province of Toledo. To the 7th cent. also belongs the Gelasian Sacramentary, a Roman Service-book in use in France before the time of Charlemagne. The earlier Leonine Sacramentary, being a private collection of Masses, is an uncertain guide as to the calendar of its age.

Coming to the 8th cent., we have the Gregorian Sacramentary, containing the Roman liturgical services of the time, adapted for use in France (for the Roman Sacramentaries, see art. COLLECT). In it, with Alcuin's supplement, the Sunday cycle, as represented in the *Proprium de tempore* of the later missals, is almost complete. We have also the Calendar of Charlemagne (ed. Piper, Berlin, 1858)—a Roman calendar with many Frankish saints inserted. Of the same age is a Lectionary published by Fronteau in 1652, from a MS written in gold characters belonging to the Church of St. Geneviève, Paris. The East is represented in this century by Coptic calendars published by Selden (*de Synedriis*, iii. 15, London, 1650–55) from MSS which have since disappeared; and by the Menology of Constantinople, which gives a long list of the martyrs, confessors, and doctors of the Eastern Church, but only three martyrs of the West—Lawrence, Gervasius, and Protasius (ed. by Morcelli, Rome, 1788).

To the 9th cent. belongs the Sacramentary of Cologne, which contains a complete calendar—that of Rome, with the addition of the local saints of Cologne. The Sacramentary has been printed, but without the calendar, by Pamelius, *Liturgicon Eccles. Lat.*, tom. ii., Cologne, 1571. The 'Comes' of Ada at Trèves, with full festival list, is also of this cent. (ed. in *Die Trierer Ada-Handschrift*, Leipzig, 1889, pp. 16–27); so is the marble calendar of Naples, which is remarkable as containing several Eastern features; *e.g.* OT personages are admitted, the Council of Ephesus is commemorated (Aug. 4), also Constantine (May 21), Theodosius (Nov. 10), and a few Bishops of Constantinople (ed. Mai, *Nova Coll. Script. Vet.*, Rome, 1821). Another calendar of the 9th cent. is incorporated in a treatise *de Computo*

[1] From 'Comes' = 'Lectionarius,' *i.e.* the book which is the 'companion' of the priest in Divine worship.

by an unknown author (Migne, *PL* cxxix. 1274). It seems to belong to the diocese of Sens. The Leofric Missal (ed. Warren, Oxford, 1883) contains the calendar of Glastonbury, *c.* 970. At foot of p. xliv. the editor gives a list of English calendars in MSS of 9th to 11th centuries. The Bosworth Psalter (ed. Gasquet and Bishop, London, 1908), gives the calendar of Canterbury (between 988 and 1023) practically as it stood before Archbishop Lanfranc substituted for it the calendar of Winchester, the capital.

When Missals and Breviaries took the place of the earlier Sacramentaries, Lectionaries, etc., they were generally provided with calendars. A great number of these, and also of separate calendars, have survived, and many have been published. See for specimens Hampson, *Medii ævi Kalendarium*, vol. i., London, 1841.

With the exception of the Irish and Anglo-Saxon documents already referred to, vernacular calendars are hardly met with until towards the close of the Middle Ages. A calendar in French, of the 13th cent., is preserved in the Library of Paris. Another in Norman French of the 14th cent. (Harl. MSS. Cod. 273) is included in Hampson's collection (see above). Calendars in German also appear for the first time in the 14th century. The mediæval calendars, like those prefixed to modern missals and breviaries, and to the Book of Common Prayer, are 'perpetual,' *i.e.* not for any special year, but containing only the invariable elements common to all years, tables being generally provided by which the movable feasts for any particular year may be ascertained. The first printed calendars imitate the MSS in their arrangement, and, like them, are perpetual. Weale (*Analecta liturgica*, vol. i., Lille and Bruges, 1889) gives calendars of the 15th and early 16th cent. belonging to several continental dioceses. Heitz (*Hundert Kalender-Inkunabeln*, Strassburg, 1905) has reproduced in facsimile 100 calendars printed for popular use in Germany in the 16th century. They consist of single broadsheets, are mainly written in German, and mostly contain only a few dates, ecclesiastical and civil. The first calendar for a definite year was printed in German and Latin by John Regiomontanus at Nuremberg in 1475. It is arranged for the years 1475, 1494, and 1513, as the first years of a nineteen-year cycle, and so designed that the dates for other years can be calculated from it.

10. **The Sunday cycle.**—(1) *Western.*—All Sundays in the year, like the movable festivals, depend upon the date of Easter, with the exception of those connected with Advent and Christmas, *i.e.* those which occur from Nov. 27 to Jan. 6, both inclusive. The Sunday cycle begins with Advent Sunday, which is always the nearest Sunday to the Feast of St. Andrew (Nov. 30), either before or after. Three more Sundays in Advent follow; then two after Christmas, in case Advent Sunday falls on a day from Nov. 28 to Dec. 1, otherwise only one. Next come Sundays after Epiphany—from one to six, according to the position of Easter; Septuagesima; Sexagesima; Quinquagesima; six Sundays in Lent—the two last being generally known as Passion Sunday and Palm Sunday; Easter Day; five Sundays after Easter; Sunday after Ascension; Whitsunday; Trinity Sunday; and lastly, Sundays after Trinity—from twenty-two to twenty-seven, according as Easter falls later or earlier. The reckoning of Sundays after Trinity is that of the Church of England, and the one that appears in most English almanacs. The Church of Rome and the Greek Church number the Sundays after Pentecost (Whitsunday).

(2) *Eastern.*—In the East, all the Sundays except those immediately before and after Christmas Day, Epiphany, and the Exaltation, depend upon Easter. According to the calendar of Constantinople, with which the Russian and Georgian practically agree, the cycle of Sunday observance begins with the Sunday which in the West immediately precedes Septuagesima; *i.e.* it starts with the season preparatory to Easter. The Sundays usually take their names from the Gospel of the day. The 1st Sunday is called the Sunday of the Publican and the Pharisee (Lk 18^{10-14}). Then follow in order: the Sunday of the Prodigal Son (Lk 15^{11-32}); Abstinence Sunday, *κυριακὴ τῆς ἀπόκρεω* (the Western Sexagesima)—so called because it is the last day on which flesh is eaten, though the fast does not begin until the following week; Cheese-eating Sunday, *κυριακὴ τῆς τυροφάγου* (Quinquagesima)—thus named because cheese and butter are allowed to be eaten until the end of the day; 1st Sunday of the Fast, or of Orthodoxy (1st Sunday in Lent)—commemorating the conclusion of the iconoclastic controversy; 2nd, 3rd, 4th, 5th Sundays of the Fast; Palm Sunday [Holy and Great Monday, Tuesday, etc.]; Easter Day (*κ. τοῦ Πάσχα*), sometimes called Bright (*Λάμπρα*) Sunday [Monday, Tuesday, etc., of the Renewal (*Διακαινήσιμος*)]; Antipascha, or Sunday of St. Thomas (Jn 20^{19-31}); Sunday of the Ointment-Bearers (Mk 15^{43}–16^{8}); Sunday of the Paralytic (Jn 5^{1-15}); Sunday of the Samaritan Woman (Jn 4^{5-42}); Sunday of the Blind Man (Jn 9^{1-38}) [Ascension Thursday]; Sunday of the 318 Fathers of Nicæa; Holy Pentecost; and All Saints' Sunday (Trinity Sunday). The Sundays that follow are numbered after Pentecost, or are styled the Sundays of St. Matthew. Next come Sunday before the Exaltation, *i.e.* of the Holy Cross (Sept. 14); and Sunday after the Exaltation. The Sundays onwards, up to that which corresponds with the Western 2nd Sunday in Advent, are numbered after Pentecost, or are styled Sundays of St. Luke. Then follow: Sunday of the Holy Forefathers; Sunday before the Nativity of Christ; Sunday after the Nativity; Sunday before the Lights, *i.e.* Epiphany; and Sunday after the Lights. The remaining Sundays, up to the Sunday of the Publican, are reckoned after Pentecost, or are called Sundays of St. Luke.

11. **The computation of Easter.**—The primitive Christians all agreed in celebrating Christ's death and resurrection at the season when they actually occurred, that is, at the time of the Jewish Passover. They also agreed that the Crucifixion took place on a Friday which coincided with the 14th day of the first Jewish (lunar) month Nisan, the day on which the Paschal lamb was slain. But a division of opinion prevailed as to the days or day on which the death and resurrection should be commemorated. The Christians of Rome and of the West, claiming the authority of St. Peter and St. Paul, with many Eastern Churches, attached most importance to the days of the week, Friday and Sunday, on which these events happened. If 14th Nisan did not fall upon a Friday, they celebrated the death of Christ on the Friday following it, and the resurrection on the Sunday that succeeded, continuing their fast until the latter date. On the other hand, the Christians of Asia (proconsular) and of some neighbouring provinces, who traced their tradition back to St. John and St. Philip, insisted upon the observance of the day of the month on which our Lord suffered, hence receiving the name of 'Quartodecimans.' They always celebrated Christ's death on 14th Nisan, irrespective of the day of the week, and, ending their fast at 3 p.m. (the hour when our Lord expired), then began their Paschal feast, thus commemorating the death and resurrection on the same day. It is noteworthy that 'Pascha,' which subsequently came to mean the day of the resurrection, was employed, when first used as a Christian term, to designate the day of the passion (Tertullian, *adv. Jud.* 10; *de Bapt.* 19). The distinction of *πάσχα σταυρώσιμον*, Good Friday, from *πάσχα ἀναστάσιμον*, Easter Day, marks a transitional use of the word (Suicer, *Thes. eccl.* ii. 621 f., i. 304).

The first recorded occasion on which the two customs came into competition was the visit of Polycarp, Bishop of Smyrna, to Anicetus, Bishop of Rome (*c.* 158). It was then judged fitting that each party should abide by its own usage. The controversy was renewed in 198 by a later Bishop of Rome, Victor. At his instance, apparently, several Councils were held in the East and West, which decided against the Quartodecimans. These refused to give up their traditional usage, and found a champion in Polycrates, Bishop of Ephesus, who wrote a vigorous letter to Victor in defence of their position. Victor excommunicated the Quartodecimans, and endeavoured, but without success, to induce other Churches to do the same. Finally, mainly through the mediation of Irenæus, Bishop of Lyons, who, as a native of Asia and a Western bishop, was in touch with both parties, peace was restored, and the Asiatics were allowed to retain their usage until the Council of Nicæa (Eusebius, *HE* v. 23, 24).

As Christians made their Paschal anniversaries coincide in season with the Passover, so, for a long period, they were satisfied to accept the Jewish computation of the time of that festival, which should fall on the first full moon after the vernal equinox. But in the 3rd cent., owing to supposed errors in the Jewish calculation, which was based on a lunar cycle of 84 years, and also doubtless with the desire to be independent of the Jews, Christians began to frame lunar cycles for themselves. The earliest of such cycles extant is one drawn up at Rome by Hippolytus, about the year 222. This was a 16-year cycle, that is, it assumed that the new moons fell on the same days of the month at the end of every 16 years. So highly esteemed was Hippolytus for his work, that a statue of him, still in existence, was erected in Rome, with his cycle engraved on the sides. But the cycle proved faulty, and although emended in 243 by another calculator, the author of *de Pascha computus* (published as an appendix to St. Cyprian's works), it was not retained in use. In the beginning of the 4th cent. we find an 84-year cycle again employed at Rome (Ideler, ii. 238). At Antioch the computation according to the Jewish methods was maintained until the Council of Nicæa. It was at Alexandria that special study was given to the question, and from it ultimately came the ruling which found general acceptance. Dionysius, Bishop of Alexandria, in a Festal Epistle (*c.* 250) published the earliest Greek Paschal canon on record. It was calculated on an 8-year cycle, and it specified that Easter should not be celebrated until after the vernal equinox (Eusebius, *HE* vii. 20). Subsequently (*c.* 277) Anatolius, a native of Alexandria and afterwards Bishop of Laodicea, took the momentous step of making Meton's cycle (see below) of 19 years the basis of a new Paschal canon (*ib.* vii. 32). This was adopted at Alexandria, with the important change that the vernal equinox, which, according to Anatolius, fell on March 19, was assigned to March 21.

It should here be stated, for the sake of clearness, that the need for the employment of cycles for fixing the date of Easter arises from the fact that the conditions for determining it involve both the solar and the lunar year. As Easter day must be a Sunday, and one subsequent to the vernal equinox, the solar year is involved. As, again, Easter day bears a certain relation to the age of the moon, the lunar month and year become a necessary element in the calculation. The Metonic cycle was that upon which the determination of Easter was finally based. Meton, an Athenian astronomer, discovered (*c.* 433 B.C.) that in 19 solar years there are almost exactly 235 lunar synodic months, so that after the completion of every cycle of 19 years the new moons, and therefore all other phases of the moon, recur in the same order and on the same days of the month as they did at the beginning of the cycle. An error in the Metonic cycle was pointed out and corrected by Callippus of Cyzicus in 340 B.C. Meton calculated that 19 solar years contained 6940 days. He therefore assumed that the length of the solar year was $365\frac{5}{19}$ days, that is $\frac{1}{76}$ longer than $365\frac{1}{4}$ days—a more approximate length, as was afterwards ascertained, and later on adopted in the Julian calendar. This excess would amount to a whole day in 76 years. The Metonic cycle, therefore, would be a day wrong at the end of that time, and should be corrected by dropping a day. This was done by a rule introduced by Callippus that every fourth cycle should consist of 6939 days instead of 6940. Some 200 years later a further correction was made by Hipparchus. He found that the Callippic year of $365\frac{1}{4}$ days was about $\frac{1}{300}$ of a day too long, and therefore proposed to omit one day at the end of every 304th year.

The lack of uniformity as to the date of Easter caused many inconveniences, and exposed Christians to the derision of pagans (Epiphan. *Hær.* lxx. 14). In the West the 1st Council of Arles (314) attempted, but without success, to make the existing Roman use universal by decreeing 'ut Pascha Dominicum uno die et uno tempore per omnem orbem a nobis observetur' (Mansi, *Collect. Concil.* ii. 471). The Council of Nicæa (325), at the request of the Emperor Constantine, next took up the matter. Its deliberations, we know, resulted in the decision—involving the condemnation of the Quartodecimans—that Easter day should always be kept on a Sunday and never at the same time as the Jewish Passover (Socrates, *HE* i. 9; Euseb. *Vit. Const.* iii. 18), but what the Council further decreed on the subject is involved in doubt. St. Ambrose, in a letter written about 60 years afterwards, states that it resolved that the moon of the first month should be determined by the cycle of 19 years (Ambrose, *Oper.* ii. 880, *Epist.* 23). But in the extant records of the Council no trace of such a decree exists. The most probable solution of the difficulty is that the Council commissioned the Church of Alexandria, as most skilled in astronomical science, to frame a rule based on the 19-year cycle.[1] After the Council of Nicæa, the Paschal computation of Alexandria was generally accepted throughout the East, but the Roman Church retained its own rules of calculation; so that it frequently happened that Easter was celebrated on different days at Rome and Alexandria. At last, through the instrumentality of Dionysius, a Scythian and a Roman monk, the question was settled. The Alexandrian computation, as modified by him in 525, was adopted at Rome, and subsequently gained universal acceptance in West and East.

The countries which fell latest into line with the rest of the Church in the matter were the British Isles and Gaul. The British and Irish Christians had learnt to compute Easter according to the cycle of 84 years which had been in use at Rome in the beginning of the 4th cent., and they continued this practice unaffected by changes elsewhere. Not only was this cycle erroneous in its method, but it permitted the occurrence of Easter Sunday from 14th to 20th Nisan (Bede, *HE* ii. 2, 4, 19). As 16th Nisan is the earliest day on which Easter can fall, we may probably see here the result of a confusion between the earlier and the later meaning of *pascha*—that word, which in 300 meant Good Friday, had now come to mean Easter day. The bitter controversies on the Easter question which followed the arrival of the Roman St. Augustine in England were not settled until 747, when the Council of Cloveshoe decided in favour of the Roman usage. In Gaul a Paschal cycle of Victorius, Bishop of Aquitaine, drawn up at Rome in 457, which had been employed by Dionysius as the basis of his table, found such acceptance that it continued in use until the time of Charlemagne.

The conditions which were finally adopted for the determination of Easter are these: 1. It must be kept on a Sunday. 2. (*a*) This Sunday must be the next after the 14th day of the Paschal moon reckoned from the day of the new moon inclusive. (*b*) If the 14th day should happen to be Sunday, Easter must not be kept until the following Sunday. 3. The Paschal moon is the calendar moon whose 14th day falls on, or follows next after, the day of the vernal equinox. 4. The 21st March is to be taken as the invariable day of the vernal equinox. The object of the second rule is to prevent Easter from being kept either *before*

[1] Cyril of Alexandria ('Prologus paschalis,' ed. Patavius, *de Doctrina Temporum*, Paris, 1627, ii. Append. p. 881), claims for his Church such a synodical commission to calculate Easter, but does not mention the Council which conferred it.

the day of the Jewish Passover—which would put the Resurrection day before the day of the Passion; or *on* the Passover day—a coincidence which Christian prejudice regarded as intolerable. The following brief summary of these conditions is given in the chapter 'De anno et ejus partibus' prefixed to the Roman Missal and Breviary:

'Ex decreto sacri Concilii Nicaeni Pascha, ex quo reliqua Festa mobilia pendent, celebrari debet die Dominico, qui proxime succedit xiv Lunae primi mensis; is vero apud Hebraeos vocatur primus mensis, cujus xiv Luna vel cadit in diem verni aequinoctii, quod die 21 mensis Martii contingit, vel propius ipsum sequitur.'

It is important to bear in mind that, as stated in rule 3 above, the moon[1] by which Easter day is calculated is the calendar moon or moon of the lunar cycle, and not the actual moon of the heavens. The real motions of the sun and moon, being variable, have not been employed by the Church for the fixing of her festivals. Similarly the vernal equinox in rule 4 is not the true but the calendar equinox. The true equinox obviously cannot be fixed to a single day, because, in consequence of the intercalary day every fourth year, it must necessarily oscillate between two days (Clavius, v. §§ 12, 13).

The Dionysian Easter canon had been generally accepted throughout Christendom; but it suffered from two defects which in process of time compelled attention. (*a*) Taking for its basis the Julian calendar (see CALENDAR [Roman]), it assumed that the solar year consisted of exactly 365¼ days. But the solar year falls short of the Julian estimate by somewhat more than 11 minutes, and this error would accumulate to one day in about 128½ years. (*b*) It further assumed that 235 lunar months are exactly equal to 19 Julian years, whereas they are nearly 1½ hours shorter—a difference which would accumulate to one day in 308 years. Notice was directed to the matter at the beginning of the 13th cent. in the *Computus* of Conrad, and later on by an anonymous writer, generally supposed to be Vincentius of Beauvais. A treatise of Roger Bacon, 'De reformatione calendæ,' which was addressed by him to Pope Clement IV., is still in MS at Rome. In the East also, Isaac Argyrus, a Greek monk, contributed (1372) an essay on the subject (criticized in Petavius' *Uranologion*, Paris, 1630, lib. viii.). In the 15th century the matter was brought before the Council of Constance (1414) by Cardinal Peter D'Ailly and before that of Basel (1436) by Cardinal Cusanus. It was again mooted at the Lateran Council under Leo X. Finally, the Council of Trent delegated the revision of the calendar to the Pope, and Gregory XIII. carried it out in 1582. The Papal commission appointed for this purpose worked upon proposals made by Luigi Lilio, a Calabrian astronomer. The commission was presided over by a distinguished mathematician, Christopher Schlüssel, who is better known by his Latinized name Clavius. To him the reformed calendar is mainly due.[2] For these earlier suggestions about revision see the 'Procemium' to Clavius's work, and Ideler, ii. 300 ff.

At the time that the Gregorian revision was set on foot, the error arising from the undue length of the Julian year amounted to nearly 10 days. The true equinox, therefore, had receded nearly 10 days from the calendar equinox, March 21. The error also of the lunar cycle had grown to more than 4 days, so that what was accounted the 14th day of the moon was really the 18th day. Different methods were suggested for getting rid of this accumulation of errors. That which was adopted by Gregory's mathematicians was to drop 10 days at once out of the calendar, and thus to restore the equinox to March 21, the day on which it fell about the time of the Nicene Council. It was accordingly ordered in the Pope's Bull that the 4th October, the Feast of St. Francis, 1582, should be immediately followed by the 15th, 10 days being thus omitted from the calendar. As regarded the rectification of the lunar cycle, it was decreed that the new moon should be drawn back 3 days. Consequently in the first rectified year of the cycle, the first new moon was removed from Jan. 3 to Dec. 31 preceding. To prevent the recurrence of similar confusion, rules were made that 3 bissextile days should be omitted every 400 years, and that the new moon should be carried back 1 day 8 times in 25 centuries, beginning from 1800.

The Gregorian calendar, or 'New Style,' was almost immediately adopted by Roman Catholic nations. In Germany the Emperor Rudolf II. and the Roman Catholic States accepted it in 1583, but the Elector of Saxony and the Protestant States adhered to the Old Style, objecting to the New, not merely as coming from Rome, but because of certain defects which Scaliger and other authorities pointed out in its astronomical accuracy. This difference of calendar was productive of much dissension and inconvenience, especially in places where populations were mixed. In 1700, at the instance of Leibniz, the Protestant States agreed to omit 11 days from their calendar, and so far conformed to the Gregorian revision. But, instead of following the rule that Easter should depend on the 14th day of the calendar moon, they determined it by the true astronomical full moon. Thus it still happened that in some years Easter was kept on different days by the two parties, and much confusion resulted. At last, in 1775, on the proposal of Frederick the Great, the Corpus Evangelicorum resolved to accept frankly the Reformed Calendar, thus producing uniformity of practice in Germany. In England the change was made in 1752, in pursuance of an Act of Parliament passed the year before, which enacted that the day next following the 2nd September 1752 should be called and reckoned the 14th September, the 11 intermediate days of the common calendar being omitted; and that the centennial years 1800, 1900, etc., should be common years, with the exception of every 400th year, beginning with 2000, which should be regarded as leap-years; also that for the future Easter day and the movable feasts depending upon it should be celebrated according to new tables and rules which, with a new calendar, were annexed to the Act, and which were directed to be substituted for the existing calendar, etc., in the Book of Common Prayer. The new tables and rules were prepared by the then Astronomer Royal, Dr. Bradley. All Eastern Christians, including Greeks and Russians, with the exception of the Romanized Uniats, still adhere to the Old Style. At present their reckoning is 12 days behind that of the rest of the civilized world.

12. Calendar letters.—In the Julian (pagan) calendar, days of the year were arranged in successive groups of 8, called *nundinæ*, with the letters A–H attached to them. This suggested to Western Christians—for the plan was never adopted by the Easterns—the marking of the days of the week in the Christian calendar with the 7 letters A–G, repeated throughout the year. These 'calendar *or* ferial letters,' as they are called, were, as has been noticed above, introduced probably at the time when the Christian Sunday was legalized by Constantine. We have seen that they occur in the pagan calendar of Filocalus side by side with the *nundinæ*. The Sunday, or Dominical, letter of each year is that

[1] Church chronologers were in the habit of giving the name 'Full Moon' to the 14th day of the calendar moon (Ideler, ii. 198). In the definition of Easter in the Book of Common Prayer, 'Full Moon' is used in this sense.

[2] Clavius, in a work (*Romani Calend. explicatio*) published at Rome in 1603, gave an exhaustive account of the whole subject.

which stands opposite the first (and every successive) Sunday in the year; and, when it is known, the week day of any day in that year can be ascertained. The 29th Feb., which occurs only in leap year, has no letter in the regular sequence affixed to it; it takes the letter of March 1, which therefore occurs twice. This has the effect of changing the Sunday letter for the rest of the year. A leap-year, therefore, has two Sunday letters; the first applicable to January and February; the second, which in the order of the letters of the alphabet is always one behind the first, to March and the remaining months. The Roman Catholic calendar still follows the Julian in placing the intercalary day between the 23rd and 24th Feb., thus making two 24ths, as in the Julian calendar there were two VI. Kalend. Hence the change in the Sunday letter takes place in the Roman calendar after Feb. 24. The English Church calendar retained the ancient practice until 1662.

13. **Golden numbers and epacts.**—The designation 'golden numbers' was given in the Middle Ages to the numerals in the calendar which denoted the 19 years of the Metonic lunar cycle (see above), either as an expression of the great value attached to them or as having been rubricated. These numbers were formerly marked throughout the year in the first column of the calendar, being affixed to the days of the occurrence of the new moons in each year of the cycle. But since 1752 they indicate in the Prayer Book the days upon which the full moons of the respective years fall, and they are inserted in the calendar only from March 22 to April 18, the Paschal full moon limits. Easter day itself occurs at earliest on March 22, and at latest on April 25. In the Roman calendar, since the Gregorian reformation, 'epacts,' which represent the number of days of the moon's age at the beginning of each year in the 19-year cycle, have taken the place of the 'golden numbers' in the first column.

14. **Christian era.**—As the Christian calendar was based, as regards its form and divisions, on the official (Julian) calendar of the Roman Empire, so during the earlier centuries Christians employed the eras used by their pagan countrymen. About the year 532, Dionysius, whose part in framing the Easter canon has been mentioned, proposed that the epoch of the birth of Christ, which he assigned to Dec. 25 A.U.C. 753, should be adopted by Christians. This was called the Vulgar or Dionysian Era, and gradually gained almost general acceptance. Dionysius did not make the epoch commence on the day of the Nativity, Dec. 25, but on Jan. 1 in the following year A.U.C. 754. Thus A.D. 1 is not the year of the Nativity, but the first current year after it. It is well known that Dionysius was incorrect in his calculation, and that the birth of Christ should more probably be assigned to A.U.C. 749 or B.C. 4.

15. **Commencement of the year.**—The acceptance by the Church of the framework of the Julian calendar involved the placing of Jan. 1 at the beginning of the Christian calendar. But, besides this New Year's Day, to which the calendar bore witness, other beginnings of the year, of more purely ecclesiastical origin, have been observed in Christendom. The chief of these are the following: (1) March 1, kept in Merovingian France, among the Lombards, in the Republic of Venice, and for a long time in Russia; (2) Easter, observed chiefly in France, and hence called *Mos Gallicus*; (3) Sept. 1, according to the custom of the Greek and Russian Churches; (4) Christmas Day—the usage in England in Anglo-Saxon times, also in Scandinavia, Prussia, Hungary, Switzerland, etc., in early times; (5) March 25, the Annunciation B.V.M., used first in the North of Italy, whence it passed into France and Germany. It was adopted in England as a Church reckoning in the 12th cent.—superseding Jan. 1, which had been the beginning of the year since 1066—and in the 14th came into civil use. This continued to be the legal and ecclesiastical usage until the revision of the calendar in 1751. It was then enacted

'that the supputation according to which the year of our Lord beginneth on the 25th day of March shall not be made use of from and after the last day of December 1751; and that the 1st day of January next following . . . shall be reckoned . . . to be the first day of the year 1752.'

It should, however, be noted that, although in the successive editions of the English Prayer Book from 1559 to 1662 it is stated that the year of our Lord begins on March 25, yet the expression New Year's Day is applied, in the rubric following the collect for St. Stephen's day, to Jan. 1. It is also to be observed that from 1549 onwards the series of daily lessons are arranged in the calendar with reference to Jan. 1. Thus both usages, the legal-ecclesiastical and the calendar, are recognized. While this double commencement of the year prevailed, it was customary, in giving the date of an event between Jan. 1 and March 25, to write both years—the legal first, the calendar afterwards: thus 20 Feb. 1721-2. A somewhat similar practice came into use, and was kept up for many years, after the introduction of the New Style, namely, that of writing the two dates in the form of a fraction, the old above, and the new below the line, thus $\frac{18}{29}$ May 1760.

Yet another arrangement of the year is that connected with the cycle of church services. The Latin and English Churches in the West, and the Nestorian in the East, commence their ritual year on Advent Sunday, or, as the Nestorians name it, the first Sunday of the Annunciation. The Armenians begin theirs on Epiphany, Jan. 6. The Constantinopolitan rite, with the Russian and Georgian, makes, as we have seen, the starting-point of its round of movable festivals the Sunday of the Pharisee and Publican, which coincides with the Western Sunday before Septuagesima. See also FESTIVALS AND FASTS (Christian).

LITERATURE.—For the early calendars and Martyrologies: de Rossi-Duchesne, *Martyrologium Hieronymianum*, prefixed to Bollandus, *Acta Sanctorum*, Nov., tom. ii., pars prior; Achelis, *Die Martyrologien, ihre Gesch. und ihr Werth*, Berlin, 1900; Quentin, *Les Martyrologies historiques du moyen-âge*, Paris, 1908; Piper, *Die Kalendarien und Martyrologien der Angelsachsen*, Berlin, 1862; Krusch, *Der 84jährige Ostercyclus*, Leipzig, 1880; Hefele, *Conciliengesch.*, Freiburg, 1855, Eng. tr., Edinburgh, 1871, i. 298 ff. For structure of the calendar and computation of Easter: Ideler, *Handbuch der Chronol.*, Berlin, 1825; Bingham, *Origines Eccles.*, bk. xx. ch. v.; Butcher, *The Ecclesiastical Calendar*, London, 1877; Salmon, *Introd. to the NT*, London, 1889, p. 262 ff.; Hennessy-MacCarthy, *Annals of Ulster*, Dublin, 1887-1901, vol. iv., Introd. JAMES G. CARLETON.

CALENDAR (Egyptian). I. *INTRODUCTION*. The calendar is always one of the most important elements in a society, for it denotes civilization. It is especially so in Egypt, where it explains a large part of the religion, and gave rise to some of the mythology. It is not only the fundamental basis of worship, but it is probably the element which has had the greatest influence on

the evolution of religious ideas, and, consequently, on the organization of ethics. The Egyptian calendar is also one of those for which we have the richest collections of information and documents. It may therefore be considered from two points of view: (1) by examining it with regard to its absolute divisions, its improvements, and its application to chronology; or (2) by studying the conception which gave rise to it, its original characteristics, and the very large part it played in connexion with religion. In the present state of science, everything seems to have been said and written from the first point of view.

II. *Documents.*—These are particularly abundant, and, fortunately, they extend from Memphite times to the Roman period. We may note the following as real calendars in chronological order: (1) the Palermo Stone (Vth dynasty, copied partly from documents of great antiquity), (2) the Kahun Papyrus (XIIth dynasty), (3) portions of the calendar of Thothmes III. at Karnak (XVIIIth dynasty), (4) portions of the same king's calendar at Elephantine, (5) calendar of Medinet-Habu (XIXth dynasty), (6) calendar of Sallier Papyrus (XIXth dynasty, cf. British Museum Papyrus 10,174), (7) calendar of Edfu (Ptolemaic age), (8) that of Ombos (same period), (9) that of Denderah (Roman period), (10) that of Esnèh (same period), (11) that of the Leyden Papyrus (same period).

Further, the tombs and stelæ from the end of the IIIrd dynasty to the close of the classical period present thousands of *funerary calendars*, sometimes with long lists of dates, anniversaries, and commentaries. We have them also for all the historical periods, and scattered throughout all the provinces (cf. below, § IX.).

Lastly, in addition to calendars properly so called, we may mention: (1) the series of calendric anniversaries quoted in all the Books of the Dead (even the very earliest known specimens), on papyri, and on the inner sides of coffins, and evidently copied from pre-historic versions; (2) the innumerable references in the texts in general, from the famous Texts of the Pyramids to the papyri, as well as the inscriptions in the temples, the accounts of historians, the texts connected with local festivals, the references on stelæ, tombs, etc.—the whole from the Memphite to the Roman period (for the chief bibliography on these documents, see § XVIII. of lit. at end of art.).

There is good reason for believing that the 'ancient plaquettes' of the monuments of the earliest dynasties are fragments of a calendar of the Thinite and pre-Thinite epoch, and therefore the oldest in the world, and also that the vases of the Neggadeh period reproduce still older calendric indications. On this hypothesis, which has not yet been formulated, see below, § IX., in connexion with the notation of time on the Palermo Stone and on the 'plaquettes.'

III. *Divisions of time.*—Egypt was never acquainted with anything like an era, referring to a cosmogonic date, such as the Creation, to a noteworthy meteorological event, to an imaginary episode, or to a legendary or historical fact. With the exception of the stele of Sân, dated the 400th year of an ancient king, Egypt never had any idea of dating her annals except by the years of rule of the reigning Pharaoh (see below, § VI.). Nor did she try to imagine periods and cycles; all that modern science has from time to time thought to discover in this sphere regarding so-called divisions of time has always been disproved by a more careful study of the texts. The Sothic period and the Sothic half-period (see below) were not invented until the time of the Antonines. The supposed *Sadu* period does not at all correspond to a cycle of thirty years, but to royal jubilees with variable anniversaries, not based on the ordinary calendar (except under the Ptolemys = *triakontacteris*), but perhaps on facts of astrological character; the *hunti* (simple or double) has in modern times been translated sometimes by 'cycle of 60 (and 120) years,' sometimes by 'millions of years' (de Rougé, *Chrestomathie*, ii. 129)—which clearly shows the absence of ancient texts. As a matter of fact, the *hunti* forms part of the group of vague terms by means of which the language tried to express 'great length,' and which may be translated, more or less inexactly, 'many years,' 'innumerable years,' 'as long as the existence of the sun,' 'indefinite length of time' (but *not* 'infinite'), etc. The Egyptian did not even know the century, or the fraction of the century. The four year cycle of Brugsch is no longer taken seriously; Borchardt's hypothesis (*Verhandl. Orient. Congr.*, 1902, p. 329) of a *census* cycle of fourteen years, under the first Thebans, is ingenious but nothing more; and if Breasted has noted that the moon occupied the same place in the calendar every nineteen years, no text shows that the Egyptians turned this to account in order to form a calendric division. These modern attempts seem destined to the same failure as the hypothesis of the 'period of the Phœnix'—a rubric which no longer figures in Egyptological publications (cf. Naville, *Festival-hall*, p. 7). And the year (*ronpit*), with its divisions, remains positively the only certain measure by which Egypt reckoned time.

The year began—in theory at least—on 19th July, and the 365 days of which it was composed were divided into three seasons (*tetramenies*) of four months, each month containing thirty days. The five complementary or epagomenal (cf. below) days, placed at the end of the twelfth month, form a sort of distinct period, intercalated between the 'small year' (360 days) and the 'large year' (365 days). The uniform months (*abudu*) were divided into three periods of ten days.[1] They were known as that of the beginning (*hati*), that of the middle (*abi*), and that of the end (*pahu*)—and this at least as early as the Xth dynasty (cf. Daressy, *Décans*, etc.). The day itself (*haru*), divided into twelve hours (*uônuit*) of daytime and twelve of night, obeyed the demands of tripartite and quadripartite symmetry of the whole system by dividing its hours of day and hours of night into three periods (*tôri*) of four hours each. There is no ground for saying that the subdivisions of the hour into minutes (*at*) and seconds (*hàt*) were known in the Pharaonic period. Lepsius (*Chronol.*) has shown that they are far more probably the work of scholars of the Ptolemaic age. The division of the second into 'thirds' (*anit*) is a modern invention of Egyptologists who took the words 'twinkling of an eye' literally for the measurement of an exact space of time. But even in the latest times the Egyptians were not aware of the existence of such a fraction.

The division of the day into three parts, marked by sunrise, midday, and sunset, is uncertain. The fact, often mentioned, of offerings of resin, myrrh, and incense, made to the sun of Heliopolis at these three moments of the day, is reported by Plutarch (*de Isid.* 80). Probably this simply indicates a local sacerdotal custom, and not an absolute division of time.

The names of the three seasons, *shait*, *pirit*, and *shômu*, refer roughly to the appearances of the valley of the Nile during the year, and to the cycle of irrigation. The first alone corresponds more or less exactly to the four months of *inundation.* The second and third are of artificially symmetrical composition; the second (*pirit*) may resemble in some measure the four months of the *growing of the crops* in Upper Egypt (the end of November to the end of March). The third (*shômu*) is clearly artificial. It is usually translated 'season of harvest'—a reading which is simply inferred by deductive reasoning, for neither the word nor the

[1] Daressy recently contended (in *Annales du Service des ant. de l'Egypte*, 1909) that they were formerly divided into four weeks of seven days; but there is no sufficient evidence for this.

sign refers positively in Egyptian to any such concept as the primitive meaning, and it is by inference that the meanings 'harvest' and 'products of the soil' have come from the sign for the season. Originally it probably designated works of irrigation preceding the rising of the waters (cleansing of canals, etc.).

The *names of the months* do not seem to have been in use in the earliest times. At least the official inscriptions never mention them. They say: first, second, third, fourth month of such and such a season. It seems probable that, at an uncertain date, popular custom gave currency to the use of nomenclature denoting the months by the characteristic religious episode which was commemorated in them. Some of these are cited by the classical writers. The fact that they are exactly those which the Copts use for the corresponding months gives reason for thinking that the same thing is the case with those which they do not cite, and science has adopted the habit of giving the names of the twelve Coptic months to the Egyptian months. They are, for the first season, *Thot, Paophi, Athyr, Choïak*; for the second, *Tybi, Meshir, Phamenot, Pharmuti*; and for the third, *Pakhon, Payni, Epiphi, Mesorî*.

IV. *HISTORY*.—1. **From earliest known origins to the year 238 B.C.**—As it has just been described in its simplicity and relative perfection, the Egyptian calendar appears throughout the whole of its history. However far back we may trace it, we cannot reach the moment of a change in it—any more than we can show an authentic improvement during the series of centuries down to Ptolemy Euergetes I. It has been said that the year was at first a lunar one of 354 days, in which the dates were given by the days of the moon, and that there are clear traces of it, for example, in the manner of writing the month by the sign of the crescent, or in the fact that the reign of Osiris had lasted twenty-eight years, which, says Plutarch (*de Isid.* 42), corresponds with the days of the lunar month. This is extremely plausible, because almost all the calendars known in the world began in this way, and because the movement of the moon was the only noteworthy division perceptible to man in his early efforts. This is proved clearly enough by the etymology of the word 'month' in the principal Aryan languages—to speak only of the calendars of our races. But, so far as Egypt is concerned, it is a mere assumption, for there are no real traces of it, and it is not right to say, as many writers have done, that 'the lunar year preceded the solar year, in Egypt as in India.' It has also been contended that there was a year of 360 days, traces of which are preserved in the religion; *e.g.* in the fact, quoted by Diodorus (i. 22), of the 360 cups of milk on the tomb of Osiris at Philæ. This is confusing a demand for symmetry—which is really a mark of civilization—with initial gropings. The year of 360 days is a year of administration, and of sacerdotal accounting, which we find in use in the height of the historical period, parallel with that of 365 days, and which naturally was completed by the five epagomenal days (cf. the calendar of Medinet-Habu or the 'contracts of Syut'); hence the terms 'small' and 'large' year used to denote the temple year and the ordinary year respectively. The efforts of all races show, on the contrary, that even comparatively civilized peoples, like those of Benin or the Bavili, have never passed from the lunar year to the year of 360 days, with months of 30 days, but have, as a rule, compensated for the error between the number of lunar months (12 lunations = 354·367 days) and the apparent revolution of the solar year by introducing after the twelve lunar months a complementary month of some days, often qualified by the name 'season.' The most probable supposition, then, if we want a hypothetical history of the Egyptian calendar, is that the lunar year (or the 13 sidereal months) was originally followed by an epagomenal month. The use of the numeration by ten, and especially the need for practical symmetrical divisions, naturally led (but undoubtedly much later) to the creation of the month of 30 days, which, owing to its artificial character, corresponding neither to the sun nor to the moon, denotes a distinct step in advance. The fraction remaining to be harmonized was thus reduced to the five epagomenal days.

We find these epagomenal days in the very earliest mentions of the calendar. The first Egyptologists for a long time believed that the invention did not go further back than the XIIth dynasty. It is now proved that these five days over and above the year (*haru duait hiru ronpit*) existed not only under the Memphite Empire but long before, since mention is made of them in the Texts of the Pyramids (Pepi 2, line 751). This, to all appearance, carries them back to the pre-historic period, and it is quite incorrect to ascribe the 'invention of the year of 365 days' to the year 4241 (Breasted, *Ancient Records*, p. 40). That is merely the earliest date postulated by those scholars who believe in the Sothic period (cf. below), but there is nothing to prove that these epagomenal days are not as old as Egypt itself. The legend of their invention by Thoth playing chess with the moon was long believed to be of comparatively recent date, on account of the Greek form which Plutarch (*de Isid.* 12) gives to it. But the Leyden Papyrus (i. 346) has shown that the legend existed in its essential features in the time of the Thebans, and the Texts of the Pyramids have carried it back to the very beginnings of Egyptian mythology. These five days preserve a further sign of their extreme antiquity in their designation 'little month,' which brings them peculiarly near to the 'short month' of the Bavili and the 'supplementary month' of Benin, and which was kept until the time of the Coptic calendar.

These ἐπαγόμεναι ἡμέραι were regarded under the Ptolemys as a complement of the year. The Leyden Papyrus presents a theory which is probably different. These days are really 'in addition to the year,' but religiously (and especially from the point of view of the dead, and of astrological influences on the living) they seem to be a sort of 'preface' to the new year. They form a period quite apart, which has its special calendar, its names (cf. Chabas, *Œuvres*, iv. 207), its horoscopes, its gods, and its spirits. If the whole is referred to the old tables of funerary calendars, the result seems to be that the 'year' ended with the last day of the twelfth month. The first of the epagomenal days, therefore, marked the 'opening of the year,' and the *beginning* of the year (*tep ronpit*) was the first day of the first month of the new year (cf. the five Mexican epagomenal days, which are called *nemontemi* = 'useless,' or 'unfit for work').

This calendar has justly been cited with admiration, and classed with those which mark most clearly the height reached by ancient civilizations; and Breasted (*Ancient Records*, p. 25) was right in pointing out the immense advance it was for humanity. It is sufficient to recall what were, down to a very late date, the best Hellenic calendars, and the testimony of Strabo (xvii.) on this point, or to think of what the Roman calendar was down to the end of the Republic. All the classical writers, from Herodotus onwards, were only performing an act of justice when they spoke of the Egyptian system in a tone of respect. If ancient Egypt knew nothing about the learned and manifold complications of the Indian cycles (length of

ancient Indian year = 13 sidereal months or 355·1823 days), the needs of absolute chronology may deplore the fact, but the historian can point out the superiority of this simple system, which harmonizes practical and symmetrical divisions so skilfully with real time. The whole world, from the time of the earliest civilizations, has proved the impossibility of adjusting to the course of the moon a notation of time suitable for human activity. And it was probably in this that the first superiority of the Egyptians consisted. If they did not know, as it seems, the famous period of 223 lunations recognized by the Babylonians, their 12 months of 30 days, followed by five days, were far superior to the lunar year of Chaldæa, with its very imperfect remedy supplied by the 'second month of *Adar*,' or the 'second *Elul*,' or the 'second *Nisan*,' added every six years; and far superior also to the 18 months of 20 days each of the Mexican calendar, with its five *nemontemi*. Undoubtedly, non-civilized races, like the Kikuyu, have also discovered the month of thirty days, but their double period of six months is what really accounts for this. If Egypt had kept to the lunar month, she would have experienced all the inconveniences of those peoples who have persisted in making use of it. The 'seasons,' to which it is customary to point as one of the merits of the Egyptian calendar, have been discovered in Africa by societies far less advanced. The 8 months' season and the 4 months' season of the Bavili correspond, as a matter of fact, to the 3 Egyptian *tetramenies*, and Benin possesses the 3 *tetramenies*. The great difference is that the Egyptians reduced the 'thirteenth month' to five days, by the adoption of the month of 30 days. At the same time Egypt made the very useful subdivision of the month into decades, instead of having recourse, like her sister nations of Africa, to the unsymmetrical week of 8 days, or to that of 4, or to the artifices of pastoral peoples like the Basutos. They might also, like ourselves, have absorbed the 365 days in their twelve months, by accepting the inconvenience of months of 31 days. Would any one dare to assert that their months, all symmetrical, are not better? And have we not heard it proposed in our day to place the five supplementary days apart at the end of the year, without the authors of these propositions having any idea that they were simply asking for a return to the calendar of the ancient Egyptians?

2. From Ptolemy Euergetes I. to the end of Egyptian civilization.—The system, nevertheless, presented two defects of very unequal importance: (1) the hours had only an approximate value, variable throughout the year; and (2) the year itself was shorter than the real solar year by 5 h. 48 m. 57 s. (length of the tropical year in 3000 B.C. = 365·24249916 days).

(1) The former of these faults proceeded from the basis on which the hour was introduced. The majority of African races had the same idea as the Egyptians: to divide the day into the same number of equal fractions as the year is divided into (excluding the 13th month). This was to obtain the division by twelve. It may be preserved, with a rough approximation, if the division is applied, as it is in the Upper Congo, to the space of time between one sunrise and another. In making special divisions for the day and for the night, the Egyptians encountered serious difficulties. As the first hour of the day began at dawn, and the twelfth ended with sunset, the length of each hour naturally varied according to the season. For a long time the Babylonians had the 12 equal fractions of the day, τὰ δυώδεκα μέρεα τῆς ἡμέρης (Herod. ii. 109)—undoubtedly owing to the regular divisions which the use of the πόλος had taught them to draw on the line described by the shadow of the pin of the sun-dial. It was not, however, until Asia had taught the Greeks the use of the two series of twelve similar hours, and the Ptolemys had come to Egypt, that this advance was realized. We saw above (p. 92[b]) that it was at this same time that the minutes were instituted, from the same Asiatic source.

(2) The second defect of the system was more serious. It had affected all calendars, including the Chaldæan, and still affects that of many systems in vogue at the present day. The quarter of a day, which the year of the Egyptian calendar neglected, in the long run produced errors which were manifestly intolerable, and it does not seem ever to have occurred to the Egyptians to adopt such a simple but clever correction as that of the Mexican *tonalpouhque* ('sun's examiners'), who added 13 complementary days after a cycle of 52 years. Authentic examples, taken from texts and cited by all Egyptologists, prove that the discrepancy might reach several months; and papyri have bequeathed to us complaints by the employees of the administration on the matter. The date of the low Nile in the inscription of Uni (VIth dynasty), the Ebers Papyrus under Amenhotep I. (XVIIIth dynasty), a date of the heliacal rising of Sothis under Thotmes III. (XVIIIth dynasty), and the date of the rising of the waters under Shabataka (XXVth dynasty) are four good examples of divergence between the calendar and the astronomical truth. The practical necessities of worship and of economic life could not put up with these discrepancies, which went so far beyond the limits of the reasonable. From time to time an administrative measure cut off, or added, the necessary number of days, and made the calendar year and the solar year start on the same day. Then things once more went on getting worse until the day when the too evident inconveniences made the government again have recourse to the forcible regularization of the two years, the real and the calendric. It had undoubtedly taken place shortly before the time of Herodotus, for he speaks (ii. 4) of the year of 365 days as a perfect instrument, agreeing with the seasons.

Nothing definite is known concerning these manipulations. Only it is probable that the further we descend in history the less frequent they were, because in the earliest times the direct observation of the sky and of Nature was more the basis of the calendar, and would thus speedily note the error. The increasing power exerted by what was *written*, as is always the case, must have resulted in a longer continued observance of the official calendar, in spite of the contradictions offered by the stars and the seasons; hence the paradoxical result that the discrepancies were more prolonged in proportion as the centuries of civilization increased in number. It is certain, in any case, that one of the largest discrepancies that we know is precisely the latest in date—that which existed at the time of the reform of the year 238 B.C. The heliacal rising of Sothis took place in that year on 1st Payni—an error of *ten months*.

This way of setting right the discrepancy by sudden leaps seemed intolerable to the astronomers, steeped in Asiatic science improved in Greece, who devoted their attention under the Ptolemys to the defects of the Egyptian year. Their calculations led them to the discovery that it was necessary to increase the duration of the year by about six hours. The easiest solution was to group these six hours in a supplementary day every four years, and, as a result, the world had the 'leap-year' introduced by the celebrated *Decree of Canopus* in the year IX, 17 Tybi of the reign of Ptolemy III. Euergetes I. (7th March 238). The fact that the definitely fixed year contained the mention of the appearance of the star Sothis, and that the heliacal rising of this star took place on the 19-20th of July, later on led the contemporaries of the Antonines to infer that the Egyptians had possessed, at least in the science of the temples, the knowledge of a perfect cycle in connexion with the

heliacal rising of this star. Noting the annual difference between the ancient calendric year of 365 days and the date of the appearance of Sothis exactly at sunrise, they were easily able to calculate that, after 1460 astronomical years, exact agreement would be re-established, so that these 1460 years were equal to 1461 years of 365 days. They imagined then that the priests had noticed the equation, and they therefore created the famous 'Sothic period,' which they affirmed had been known and used from the most ancient times by the national chronology. Egypt was thus supposed to have possessed two calendars—the one conforming to scientific truth, the other, in spite of all its inconveniences, used for administrative life, the two tallying exactly on one single day every 1460 years. Censorinus, who noted it in A.D. 239, attributed an indefinite antiquity to this period of Sothis, of which the only one that history has ever mentioned, and which ended, according to him, exactly 100 years previously (A.D. 139), was the last of a whole series. The statement of the author of the *de Die Natali*, taken up and commented on, represented from that time the view of official Egypt, which, in order not to stop half-way, imagined a Sothic half-period. 'Thy divine festival, Sothis, is celebrated every 730 years,' says the Philæ inscription.

The idea that the priests knew and employed the period of 1460 years led naturally to the inference that they were acquainted with, and employed, an exact Sothic year reserved for their use. The supposed use of a double year in Egypt and the idea of comparing the whole with the astronomical year have been further complicated, in modern science, by the use of a terminology (vague year, civil year, astronomical year, sacerdotal year, heliacal year, solar year, etc.) whose meanings vary according to the authors. The whole has been the subject of most difficult controversies from the time of Champollion down to the present day. It is strange to notice that the two initial data of the whole debate have been neglected—(1) Did the Egyptian word *pirit* mean 'heliacal rising,' or simply 're-appearance of the star on the horizon'? (2) Do the exact astronomical calculations adapt themselves to the argument? Nevertheless, it was not until 1909 that Legge (see literature at end of art.) raised these questions.

The reality of the Sothic period has given birth to infinite discussions for or against its existence (cf. the innumerable works on the subject in Egyptology). An incredible amount of patience, calculation, science, and ingenuity has been expended for a hundred years without the question having advanced one step, and the Egyptological School remains, to-day as formerly, divided into two equal camps. For the long and ingenious pleas of the ancient Fourier or of Wilkinson in favour of the Sothic period, too feeble to cope with the objections of a Krall, modern defenders have substituted more sound reasoning based on the monuments. But, in proportion as their scientific weapons were being improved, their opponents were striving after progress in the same direction. Neither the clever refutations of Maspero nor the objections, full of practical common sense, of Budge, were able to convince Borchardt, Mahler, or Sethe, any more than Birch long ago succeeded in persuading Rougé; and the latest works of Meyer or the vehement assertions of Breasted show that the Sothic period can always count on a number of determined and serious partisans. Each new discovery of an Egyptian document mentioning the heliacal 'rising' (?) of Sothis is therefore the signal for heated discussions for at least three or four years; cf. *e.g.* the bibliography on the subject which followed the publication, in 1898, of the Kahun calendar (XIIth dynasty). The intermediate opinion of Erman (holding to an exact agricultural year, and, up to a certain point, a sacerdotal one which agreed with the rising of the waters and the indications of Nature for practical life, while the year of 365 days remained in use on account of the value of its administrative symmetry) does not seem to have secured the support of either party. The refutation of Meyer by Torr (*Memphis and Mycenæ*), also quite recent, seemed to sum up the strongest practical objections which had been raised, with discussion based on the detail of the monuments and the nature of the above-mentioned astronomical facts. The attempt of F. A. Jones (*PSBA* xxx. [1908] 95) does not seem to be of any practical value. Lastly, Legge (*Recueil des Travaux*, xxxi. [1909]) was the first who thought of bringing the question on to scientific ground, which was what ought to have been done first. His strictly mathematical statements allow none of the proposed dates to hold good, and seem to give the *coup de grâce* to all attempts to draw chronological inferences from the system of Meyer.

A similar number of works, during almost a hundred years, not only shows the difficulty of the problem, but tells plainly of its importance. It does not consist in the question of the degree of science to which Egypt had reached, but in the application of the data to chronology, which the absence of every era and synchronism outside of Egypt renders extremely obscure when we go further back than the XVIIIth dynasty. The fact of finding at least six or seven references to the calendric date of the supposed heliacal rising of Sothis or of the height of the Nile at a given month, and the circumstance that these texts reach from the VIth to the XVIIIth dynasty, would give the key to the whole system, if it could be established that the calendar remained unchanged from the Ancient to the Modern Empire. A simple calculation would be sufficient to fix these guiding marks, and consequently to obtain from them the exact date, or very nearly so, of all the reigns or adjacent events. This is enough to show the value which all the historian partisans of the Sothic period may place upon the demonstration. The doubt which may legitimately be conceived does not arise from the degree of science which the system supposes. It does not imply any more patient observation than others known to less perfectly evolved civilizations; *e.g.* those which the fine works of Seler have brought to light for pre-Columban America (Venus-period, etc.). The objection derived from the inexhaustible patience implied in the Egyptians resigning themselves to see the two calendars in agreement only once in fifteen centuries is not absolutely decisive. The chief obstacle is found elsewhere: (1) in the complete absence of any formal mention of such a period in the classical texts; (2) in the actual contradiction presented by monuments like the Medinet-Habu calendar, or the significant silence of Herodotus on the divergences between the real year and the official computation of time; (3) in the technical objections of an exclusively astronomical kind, which have attracted too little attention throughout the whole controversy (secular shortening of the length of the solar year from equinox to equinox, confusion with the sidereal year [star to same star again], and omission of the problem of the anomalistic year [perihelion to perihelion]); and (4) in the evident impossibility of making use of indications of the supposed Sothic period without arriving at impossible chronologies (*e.g.* for the date of the XIIth dynasty, as Wiedemann has clearly shown [*OLZ* iii. 322]; or F. A. Jones's deduction that the Great Pyramid was built in 2170 B.C.). The series proposed by Breasted is itself subject to objections which in the end throw the whole matter into question again. See the conclusions of Jones, *PSBA* xxx. 5; Lefébure, *Act. Orient.* xiv.; Lieblein, *ZÄ* xliv. 101, and *Chronologie*; or the interminable unsettled discussions, during the years 1904 and 1905, of Meyer, Brix, Borchardt, Sethe, and Mahler in *ZÄ* xli. 26, 34, 38, *OLZ* viii. 6, *Untersuchungen*, iii. etc.); also the literature on the subject at end of article.

The magnificent reform of Ptolemy III. was very far from being accepted with the obedience which history manuals usually attribute to ancient Egypt. The old national year persisted in practice until the time when the edict of Augustus (A.D. 10) made the year of 365¼ days compulsory. The type was henceforth proposed to the classical world, and in its eyes Egypt was the country of high scientific culture to which it had to look for its models of reform. It is well known that it was the Egyptian Sosigenes of Alexandria (Macrobius, *Saturn.* i. 13) who definitely reformed the intolerable Roman calendar, and who, under Julius Cæsar (year 'of confusion'), at last gave the Mediterranean world a date derived from a calendar copied from the Egyptian model, with the necessary modifications for the seasons. We may therefore say that it is Egypt that has given us our calendar. The twelve minutes and twenty-nine seconds of deviation from the real time which it presents every year, and which make it necessary to drop out a day every 131 years (Gregorian year = 365·2425 days; solar year = 365·242918 days—in the year 1900), did not need to be taken account of until many centuries later. The Julian (properly speaking, Egyptian) calendar continues to be law in Russia and in the Oriental Christian world, which ignored the reform of Gregory XIII. (1582), as England itself did until 1752. Lastly, the Copts preserved not only the Julian year, but also the 1st of Thoth for the beginning of their year, which now falls on the 11th of September, after having started on the 29th of August in the year regulated by Euergetes.

V. *FUNDAMENTAL CHARACTER.*—If the Egyptian calendar is compared with other calendars,

not for its perfection but for the characteristics of its original elements, it reveals significant differences. The basis of its divisions, of its conspicuous dates, and of its festivals seems to be neither solar nor of a really agricultural nature.

Neither the solstices nor the equinoxes were used, as with so many other races, to mark the beginning, or the internal divisions, of the year; and the significant absence of myths or ceremonies referring to these phenomena (although Egypt was acquainted with them, as Brugsch noticed in his *Myth.* p. 671) is a decisive fact, which is corroborated by an examination of the Books of the Dead or the Texts of the Pyramids. The legend of Râ grown old is of late date. The statements of Plutarch referring to the feast of the autumnal equinox (22nd of Paophi) and of the winter solstice should not lead us astray any more than the 'little sun' or the 'infant sun,' which is assimilated with Socharis, and is the sun of the winter solstice. The whole thing, like the festival of the 30th of Epiphi, or that of the 'beginning of Summer,' belongs to Roman times. The interpretation of the sources in order to find out facts of this kind shows two elements combined in equal quantities: the influence of Græco-Roman civilization, and the final assimilation of ancient myth to the sun's courses (*e.g.* the winter solstice assimilated to the search for the parts of Osiris). The dates themselves, however, often show the recent entrance of these solar characteristics into the Egyptian calendar (*e.g.* the self-styled winter-solstitial character of the festival of Socharis, celebrated from the very beginning in the month of Choïak, necessarily supposes that month to have become the month of December, and consequently the 1st of Thoth carried back to the end of August, *i.e.* the accomplishment of the Ptolemaic reform).

This statement does not in any way contradict the high degree of Egyptian astronomical knowledge, or the position held in Egypt by the worship of all the primitive sun-gods, or the importance of the Râ-sun from proto-historic times to the historic period. But everything connected with its existence, its powers, its battles, the risks it ran, its birth, its zenith, its disappearance, and its travels over the world, had, from the time of the earliest theologies, been included in the daily cycle. The archaic texts or the compositions of the Theban age give sure evidence of it. It should also be noted that the prediction of eclipses was never attempted, and that this phenomenon was always to the Egyptian the unforeseen danger, and not the mythical theme which gives rise to symbolical allusions inserted in calendric cycles. The moon, with the sudden changes connected with it, had the same fate. Except the facts of the lunar month, there is nothing to be found resembling a cycle, or attempts to systematize eclipses. A sun whose whole existence is contained in a day, a moon with a longer and more varied life, the daily struggle between light and darkness, the fears of evil connected with this fact, the risks suddenly arising from the diminution at unforeseen times of the brightness of one or other of the two great luminaries—all these things are closely related to primitive religions, which the uncivilized races of the present day have not yet been able to get beyond. And the statement that these rudimentary data became solidified, *without evolving*, in the Egyptian religion of the historical period, shows of itself that, if the Egyptian calendar acquired its technical value and the superiority of its symbolical views or its moral character, it must have got them from other elements.

The absence of characteristics based on climatological or meteorological phenomena is no less remarkable. There are no anniversary dates, or seasons connected with states of the clouds, régime of the winds, or periods of cold or heat. Gods like those of the winds, who played important parts elsewhere (*e.g.* in Chaldæa and America), are unknown in the classical Egyptian calendar. And its divisions are not arranged according to anything resembling phases of germination, blossoming, or maturity of the natural or cultivated products of the earth, and, however far back we go, there is not a trace of a pastoral calendar, like that of Basutoland, for example. An exclusively agricultural country like Egypt should *prima facie* have based its calendar on the changes of the cultivation of the earth. But the latter did not play any direct part in it, except irrigation (see below). There is nothing to be found resembling the festivals of ploughing and sowing, and the panegyric of Min at Medinet-Habu is the only example where the harvest intervenes, *as a simple episode*, in a religious festival. We saw above (p. 92[b]) that the seasons of four months had above all a symmetrical character, but no real agricultural one. In the description of the seasons, it is stated that for the months neither agricultural denominations are to be found, nor legends, proverbs, adages, popular poems, nor any of the hundreds of significant facts which so clearly mark the months of uncivilized races throughout Africa in general. The festivals themselves might deceive by their titles when we hear of them only from Plutarch or Strabo, or through the brief allusion in a papyrus to a festival at which honey or lentils are eaten, where one inhales the perfume of the *honit* or the *tekhui* flowers, or to festivals of 'fishing' or 'ploughing.' When the monuments give the commentary on them, we see at once that the principle of the festival has no direct connexion with these references, or that our translations are veritable mistranslations. Honey, *e.g.*, is eaten at the 'feast of the valley,' and this originally refers to the annual exodus of the souls of the dead when the protecting gods come for them. The *honit* flowers are a simple episode in a group of funeral offerings, in a festival based on the *dénouements* of the Osirian drama. The so-called 'ploughing' means 'digging the ground,' and the texts show that the reference is to a nocturnal rite connected with the mysterious wars against the spirits of evil. The Memphite festival of 'fishing' is a fragment of the crowning ceremony, in which the king catches the fish, or the game of the moor, 'as Horus captured and destroyed the cursed,' etc. And the Ὕδρευσις of the Alexandrian calendars, if it is not a recent invention, must certainly have had an origin connected either with the Osirian cycle or with the warlike themes of pre-historic legends, before it assumed the peaceful character in apparent connexion with the seasons which it has according to the Græco-Roman classics. In short, if it is evident that a country like Egypt necessarily associated its rural and agricultural life with rejoicings and ceremonies of every kind, and if Egyptian literature occasionally shows that this was so, it is none the less certain that nothing of all this served as a formative element in the establishment of the calendar of the year, either for its divisions or for its anniversaries (but see Frazer, *Adonis*, 1907, p. 283 ff.).

These circumstances are quite easily justified by the conditions of the Egyptian portion of the Nile Valley. Being nearer the equator, the people here paid less attention than those in the north to the gradual diminution of the power of the sun's rays, to its sinking on the horizon, or to the difference (much less noticeable there) between the summer day and the winter day. The winter solstice was not noticed there as the signal of a deliverance, or spring as the awakening of Nature; hence an original suppression of calendric elements which increased in importance the further north one ranged. And, just as Egypt was ignorant of all the myths arising from the melting of ice or snow, so she did not know of the great annual events which are marked by the aspect of high mountains, or the successive verdure of the forest; her year and her mythology received none of these impressions, so strongly marked elsewhere that they are a part of our own intellectual equipment. At the same time she was safe from all those great meteorological phenomena which, further south, determine the divisions of the year. She had no

'rainy seasons,' 'periods of storms,' 'monsoons,' or prevailing winds sufficiently marked to characterize a complete portion of the year. Her gods, who inhabited neither the mountain peaks nor the rain nor the thunder clouds, had certainly to be situated very high among the stars, or very low on the same plane as human societies. In the end, soil or climatology, latitude or geography, all tended to leave Egyptian thought face to face with a single remarkable phenomenon, the only one of vital importance for her, viz. the fluctuations of that river on which all life depended in the fragment of the universe known to her. And, after all, it was with the study of its movements and the anticipation of them that everything had to be connected that had a bearing on the measuring of time.

The dates and festivals relating to inundation are well known to us. The 'reception of the Nile,' which denotes the opening of dikes and canals at the time of the rising of the waters, is indicated in a number of funerary calendars (cf. below), but no mention is made of the day of the month on which it was inserted. It was a movable festival, as it is in modern Muhammadan Egypt. Libanius (*Æthiopica*, xi.) has described the festivals of Silsileh, during which a wooden statue of the Nile-god was carried in procession. This was simply the form of the festivals of the 'opening of the canals' of Middle Egypt, adapted to local geography, and with a different name. The present-day Arab 'night of the tear-drop' is merely the modern transposition of the 'night of the tears of Isis,' the announcement of the first perceptible sign of the annual inundation (20th June). Lastly, the festivals of Socharis in the beginning of October are perhaps an adaptation, to Memphite funeral ideas, of the first sign of the retreat of the waters.

There are not many of them in all; if Libanius, Heliodorus, and the Egyptian inscriptions give us different names according to localities and times, these Nilotic festivals altogether number at most two or three: the first quivering of the rising waters, the time of opening the Egyptian fields for irrigation, and probably the time when the Nile begins to decrease. But the principal date was not there. It was the date of the exact moment when the height of the waters reached the level necessary for fertilizing the ground, after almost a month of rising (about the 20th of July in the classical age, but probably later in pre-historic times, before the disappearance of several of the upper cataracts of Nubia). It was a question of finding a sure index, somewhere in Nature, which would mark the fact that a new year had just become manifest to the Egyptians.

While intent on detecting in the sky some coincidence between the coming of the waters and the appearance of the stars, the Egyptians noticed (and undoubtedly long before the time to which we can go back by means of the monuments) a remarkable phenomenon. Sirius (one of the seven stars of the constellation *Canis Major*), which was invisible from the beginning of June, again appeared in the east, some minutes before sunrise, towards the middle of July. Its re-appearance coincided exactly with the time when the Nile entered the period of high water for Middle Egypt. In this unfailing coincidence there seemed to be the most manifest sign of an indissoluble connexion between the spring-tide of the river and the rebirth of the star. It was, therefore, the reappearance of Sirius that was adopted to mark the beginning of the new year: νομίζεται διὰ τῶν ἱερῶν γραμμάτων νέον ἔτος εἶναι (*Decree of Canopus*). The brightness of the star in the firmament was like the resplendent signal which unerringly announced the re-commencement of the gifts of the river. It was called 'a second sun in the sky.' Sirius (Egyp. *Sopdu*; Hellenized form *Sothis*) saw his glory associated with that of the sun; for it was 'like a crown on the head'; it was regarded as 'taking its place in his divine barque' on this first day of the new year. 'To be able to shine in the sky like Sopdu at sunrise' was a wish formulated in the texts for the destiny of the dead. Such a place in the national conceptions sooner or later caused the assimilation of the Dog-star with the greatest female deities of Egypt. The star 'by whose rising the years are counted' was the living image of Bastit and Sokhit, successively, and, according to local theologies, became the dwelling place of Isis, the star of Isis (τὸ ἄστρον τὸ τῆς Ἴσιδος [*Dec. of Canopus*]), or that of Hathor, or, rather, Isis and Hathor themselves. The confusion with the great Hathor of Denderah explains the strange ceremony of this temple, when on the first day of the year the statue of the goddess was brought on to the terrace of the sanctuary, there to receive the first rays of the rising sun. This was in order to realize literally and in this world what was going on at the same time in heaven. Syut, Assuân, and the temple of Thebes guarded most carefully the 'Ship of the Rising Waters,' which so many of the inscriptions attest to have been one of those relics which the kings tried to embellish and restore. Deified and assimilated with Sirius-Hathor, it was led to the river with great pomp on the first day of the year, and the local god—sun or companion of the sun—travelled on the bank that day, as if in material evidence of the fact that the return of Sirius, that of the annual Nile, and the new year of the sun were three aspects of the same act. Nor did the Egyptians hesitate to see in the rising of the star the real cause of the inundation; it was to Sopdu-Sirius that 'the abundant waters which spread over all the earth' were due (cf. Brugsch, *Matériaux*, p. 27). Once more in the religious history of humanity the relation was declared between what is seen in the sky and what happens on this earth. The most important date of the calendar thus became connected with the general theory of astrology. And the admirable constancy of the phenomenon, by urging the Egyptians to increase their observation of the coincidences, must have helped them to deduce the remainder of the calendar from the whole.

VI. *STELLAR NATURE; RELIGIOUS CONSEQUENCES.*—If the appearance of Sopdu was a remarkable case of the influence of the stars on our world, it was not an isolated one. This is not the place to repeat what is said of astrology in general, or to trace in detail its natural foundation, based on experimental pseudo-verification (see art. STARS [Egyptian]). The manner in which coincidences and the foreseeing of the return of influences were established in Egypt could not have differed in any way from what had taken place in the astrologies of other peoples (cf. *e.g.* for the Chaldæans, the excellent résumé of Maspero, *Hist.* i. 777). To these re-commencements of the same events, always in agreement with certain aspects of the sky, which man promptly determined, the animistic tendency immediately added another element. To these stars and their movements, to their combinations and their journeys, it gave the life and the representations of beings who struggle and act in this world. Because they seemed to draw silhouettes of men or animals, to appear like new-born children, to unite, or to knock against each other, people began to speak of their births, marriages, and struggles. These representations, made up of assembled stars, a Cambodian or Mayan calendar may draw differently; but they express

the same idea as that of an Egyptian or a Chaldæan. They are as old as the observation of man. From these two combined notions, influences, and representations, issued the detailed description of the forces by which this world is governed every hour. From these facts, duly noted, with the moment of their arrival, the Egyptian calendar emerged complete, portioned out with certainty, for the whole length of that year of which the appearance of a star was the important moment.

A third element determined its principal characteristics. Just as in the case of primitive, and modern non-civilized, races in general, this earth presented the spectacle of a perpetual struggle between thousands of visible and invisible beings. It was inexplicable in its confusion, so that it was almost impossible to discover whether the gods and spirits were the friends or the enemies of man. Thrown into the conflict, man did his best to conciliate the former and drive back the latter. The Egyptian, like the others, had very early connected the gods and good spirits with the sun, and the evil spirits with the darkness. The system did not lead him any further than the others, either for religious history or for ethics. On the contrary, when he conceived the notion of associating the spectacle of the terrestrial struggle and its combatants with that of the apparent conflict of the celestial beings, and when he combined the whole with the astrological data of influences, he realized one of the most decided advances ever known in the history of religions. At the same time, not only were the events of the terrestrial universe the result of those which happened in the sky, but they were the clear image, capable of being read in good order, of all that seemed so confused in this world. Henceforward the Egyptian became gradually more skilled in classifying the latter, and also the beings who took part in it.

The indissoluble link created in religion between the stellar world and the earth is repeatedly attested, at every time of ritual, by magic or so-called religious texts. The Texts of the Pyramids are a mine of valuable information for the very earliest times. They speak of 'the disturbances which we see in the sky,' of stars 'which fight,' and of 'bow-bearers who go their rounds'; and the study of allusions of this kind, not yet attempted, gives a long list. 'If the sky speaks, the earth trembles,' 'When the doors of the sky open, the doors of the earth open,' etc., on the other hand, are well-known phrases, among many others, of the ritual of the classical epoch.

The connexion established between the two armies of combatants led first to the assimilation of the facts, and then to that of the beings who were their agents. The astrological coincidences had given an opportunity of arranging, as far as the celestial world was concerned, the powers which were regarded as good and those which had to be looked upon as evil. The good naturally attracted to themselves the Divine beings or 'spirits' of this world who had a tendency to be rather the allies of man, and the evil did the same in the case of his constant enemies; hence the fusion of the stars (1) with the innumerable spirits or genii of primitive beliefs, (2) with the classical gods who took part in the life of man. It would be out of place here to justify the mechanism of these assimilations. They sometimes arise from the apparent form of the figures of the sky, sometimes from combinations of the conflict which seemed to be going on in the sky, and sometimes from purely astrological coincidences. Not only were the characteristics and representations of the Divine world particularly specified, but so also was the history of the gods, which the daily struggle of the sun interpreted too summarily ever to draw a complete mythology from it. There was the creation of legendary episodes in the life of the gods. It was putting into stories the battles which the stars seemed to fight, or the influences which they brought to bear on this earth. Formerly these things took place in the sky and on our earth at the same time. Henceforward they re-commenced on high, and annually subjected the domain of man to the same conditions as those experienced in legendary history. The anniversaries of marriages, travels, and 'births' (*e.g.* the Palermo Stone) of the gods were henceforth placed at fixed times by these re-commencements which man could note and predict by consulting the book of the celestial vault. At the same time, Egypt assimilated to this history, written for the celestial regions, the whole mass, which was up to that time confused, of its traditional, historical possessions: traditions more or less pure, more or less synthetized by legend or allegory, of great actual events of early times (invasions, wars, national catastrophes, organizations of society, etc.), or pseudo-historical summaries of origins. All this became incorporated by assimilation in the annual history of the stars; all this fixed the days. Facts, precisely stated, were henceforth inscribed, and their anniversaries were fixed for the days when the sky, by its tables and its different parts, presented the same arrangement as it had had before, at the time of these events. The whole gave rise to a national history, in which the gods and their legends were connected with the calendar by an indissoluble bond, and in which all that was seen in the country of Egypt still bore the material trace of their actions. For each part of the valley the theologies found etymologies which explained, in alliteration, the names of towns, sanctuaries, or hills by one of the legendary acts of the life of the gods, at the same time as they fixed the date of each of his acts in the year (Brugsch's *Dict. géographique* contains several hundreds of remarkable examples [cf. *e.g.* pp. 101, 174, 198]). The tendency to see this world only as a dependence and a momentary aspect of perpetual re-commencements was so strong that it marked the historical facts themselves with this trait. If kings are supposed to re-commence their terrestrial life *ad infinitum* in heaven, with the gods with whom they have become identified, the opposite is none the less true. What Pharaoh does on this earth is merely the repetition of the legendary Divine actions. And even their real historical victories—at least up to a certain point—were regarded as re-commencements by the calendars in which their anniversaries were inserted (*e.g.* for Usertesen in the XIIth dynasty, Thothmes III. in the XVIIIth, etc.).

The Divine and historical legend, formed by these successive elements, gradually became a whole, so coherent and so closely connected with the calendar that the sky became a sort of index where people day by day read the annals of legendary Egypt. Each year the cycle was renewed with the return of the same influences. Pictographic reproduction and written notation of direct observations gave rise to books or pictures of them, the interpretation of which supplied both a date and a whole page of this history. For it was sufficient to *read* the positions of the stellar Divine beings to understand who they were, what they were doing at that precise moment, and what events had followed in the sky, of which the events of the present moment were the mere consequence.

We shall confine ourselves to noticing the Egyptian point of view of the matter. It may be said that Egypt came very near the possession of an astrological scripture, with all the imperfections and all the obstacles encountered by the civilizations which have attempted it, when they have reached the time for the application of scripture to economic and non-religious life. Egypt escaped this owing to causes which cannot be explained here. The point which must be noted by specialists is the interest which arose in establishing in what measure and up to what point other scriptures—notably in America—have

assumed similar characteristics, being at the same time astrological and mytho-historical; so that they possess a double value of great importance for modern science.

The result of such a system was to subject each moment of the calendric year to an influence of one or more of the Divine beings. Egypt made a detailed application of it. Naturally the months, the seasons, and the 'decades' had their protecting deities, and the general theory could not fail to extend the system to the days. Those gods who governed the months ended by giving them for the most part the names which have just been cited (although the lists of the monuments are far from agreeing; cf. Budge, *Gods*, ii. 293). The names of the gods governing the 360 days (cf. Brugsch, *Matériaux*, p. 47) have been regarded as an invention of late date, but always in ignorance of older documents. They are perhaps as old as the gods of the 'decades,' of which we now possess lists of the time of the Xth dynasty (cf. below). Theology could not fail to push the distribution of Divine protectors to its furthest limit, and charge a god or a spirit with each hour of the day (Budge, *Gods*, ii. 294, 302). In short, there is not a moment when special influence, denoted by name, is not being exercised, either on the whole of Nature or specially on each of the creatures of this world.

The consequences of this calendar had infinite applications. At first haltingly, then less awkwardly, theology realized in these infinite re-commencements the notion that time does not exist, since it is reversible. The perpetual renewal of the conflicts assumed, in a theoretical form which gradually became more dogmatically abstract, the problem, confronting primitive man, of the conflict, also infinite, which goes on in this world between good beings and harmful beings. In describing and organizing it, the calendar not only created astrology; it attracted the attention of man to what he could do on those vital dates when the battle returned to decisive moments. Everywhere, even where religion had succeeded in reading in the sky that events re-commence continually and endlessly on this earth, experience, nevertheless, showed that the κόσμος is unceasingly disturbed by the return of evil. The endless duration of the re-commencements of victorious good was therefore an endless duration *in fact*, but in no way guaranteed for the future. There was always doubt concerning the final success of the beneficent powers. This distress of mind was greater in the religions which were unable to rise to the calendar. But both classes attempted to evolve the manner in which man may intervene in order to contribute to the success of the good spirits. The less civilized knew no way of taking part in the conflict except at the times when they were surprised unawares by its spectacle in the sky (*e.g.* the numerous accounts of intervention at the moment of eclipses of the sun or of the moon). Elsewhere the conflicts are precisely stated at lunar dates, especially equinoctial or solstitial. In every case the intervention of man made use of the same resources—a mixture of mimetic and sympathetic magic. Images of dolls, of battles, of travels, of voyages were and are still made all over the world. The Eskimos, the Aleuts, the Columbians (cf. artt. ESKIMOS, ALEUTS, etc., in this encyclopædia, and see *GB*[2], for many examples), when intervening in favour of friendly gods, acted in the same way as in the case of the collective mimetic ceremonies for fishing or hunting. The Indians of California and the Polynesians carried about on certain dates a sun manufactured and conceived in the same way as the Râ-sun which Egyptian processions made to sail in a barque. But if the Egyptian concept has not a less humble origin, the perfection of the calendar has given us the opportunity of tracing the information much further back. Bound not to the agricultural world, but to the history of the heavens, the calendar multiplied the *foreseen* and *precise* occasions of human intervention. The pretended battles of the worshippers of the Egyptian gods, or the manufactured images, were similar to what the Banks Islanders, for example, were able to make in this order of ideas. But the details, shown in the sky, of the history of the gods supplied a multitude of remarkable details concerning what these worshippers could do. Festivals worthy of the name, processions, and real dramas followed. The imitation of the acts of the gods gave rise to the imitation of episodes in their life, and then to the imitation of their whole life. Symbolism and the progress of meditation, starting from this point, were able to lead to the obtaining of moral information from the esoteric sense (created, of course, afterwards) of the anniversaries of all the calendar. Thus a whole section of religious information is derived from those festivals of the Egyptian calendar which—a significant fact for their stellar origin—almost all have their starting-point in *night*. To this possibility of co-operating, exactly at the propitious moment, in the struggle for good, magic naturally brought its ordinary resources. Mimetic and sympathetic data, brought to perfection (costumes, statues, etc.), combined with the infinite power given by the knowledge of names (*q.v.*), and with the power of the voice, and of the chant in the incantation—in a word, with the complete arsenal common to humanity. In associating it with the science of the calendar, Egyptian religion was able to guarantee that, if the same gods (or their mimetic substitutes) repeated the same acts in the same places (or in their equivalents by 'geographical magic') and on the same days (fixed by the calendar), the order of the world was assured. And the worshippers who had contributed to them were sure to have acquired the most important merits in the eyes of the gods.

The consequences of such a system (which has necessarily been only very briefly stated) are evident:

(1) First there is the importance for each person of knowing the propitious moment for accomplishing an action or for abstaining from it, and of knowing the sum of the influences for each instant of life; hence the important rôle among the clergy which was played by 'the people of the hours,' or priests charged with controlling and fixing them. Hence also the position held in the life of the temple by those people of the *sâu* (the Ptolemaic φύλαι), who, month after month, took charge of the whole service. These men were not so often scholars as watchmen (*urshui*), sentinels entrusted with the defence of the Divine castle.

The question of the technical perfection of Egyptian astronomy will not be examined here (see art. STARS [Egyptian]). Cf. as examples of its material implements, the apparatus published by Borchardt, *ZÄ* xxxvi. 67, and the emblems connected with measurement of time belonging to the religious observatory of Heliopolis, in Naville's *Festival-hall*, pl. ix.

(2) There is the part played in the life of the Egyptian by participation, in all its forms, in the dramas and mysteries, which, throughout the whole calendric year, reproduced in the sanctuaries, and for the purpose explained above, the phases of the life of the national gods.

The whole was translated into three practical applications, as far as the religion of living beings is concerned. Two are of a passive kind, and the third is active. (*a*) The production in pictures of the calendric influences common to all or belonging specially to one individual. These are the stellar pictures, the *decani*, and the zodiacs. (*b*) The drawing up of the list of influences for each day

(calendars of lucky and unlucky days). (*c*) The organization of anniversary days, when man intervenes on behalf of his gods, and repels the evil gods. These are the festivals, the processions, and the mysteries. Intervention of the dead or for the dead will be examined separately.

VII. *PRACTICAL APPLICATIONS.*—**1. Astronomical charts, etc.**—The number of documents and of works cited below on this subject permits only of a résumé of the chief notions, keeping in view the present state of science and the points not yet treated.

(*a*) *Astronomical charts.*—Charts of the sky, properly so called, considered in their connexion with the influences of each of the stars or groups of stars, must have existed from the very earliest times. As a matter of fact, as no ceilings of the temple of the Middle Empire have been preserved, we do not know of them any further back than the beginning of the second Theban Empire (Ramesseum). But the Texts of the Pyramids contain clear allusions to ordinances of the stellar gods, in astronomical pictures. These important references have never been pointed out, any more than the question has been discussed whether chapters xviii. to xx. of the Book of the Dead are not descriptions (more or less mutilated) of ancient astronomical pictures belonging to the oldest temples. Those of the temples of Esnèh, Edfu, Denderah, and Kom-Ombo, although of Ptolemaic or Roman times, and permeated with non-Egyptian ideas, are, in the main part of their wording, drawn from national chronicles. The collection and general comparison of all those pictures are still awaiting a special publication.

(*b*) *Zodiac.*—Babylonian influences, transmitted by Greece, brought into Egypt the generalization of the use of signs of the zodiac, the most famous types of which—those of Esnèh and Denderah—have been the subjects of very numerous works, which are, however, already out of date, and disregarded by modern Egyptology. It seems to be admitted in a general way that the zodiacs were unknown in Egypt before the Græco-Roman period. Their elements, nevertheless, are found on the tomb of Seti I., and they figure on a certain number of sarcophagi of the Saite epoch, or previous to the Greek period (cf. British Museum, No. 6678). Lastly, there are real indications that the signs of the zodiac were known and used as early as the first Theban Empire, according to certain allusions in the funerary texts, which have not yet been carefully studied.

(*c*) *Decani.*—Besides the course of the five planets, the Egyptians had noticed the rise, culmination, and setting of the stars. Among the constellations they attached special importance to those which they saw at fixed times sinking towards the horizon, disappearing, and then imperceptibly taking their original place after this disappearance. The 36 decades of the 12 months were placed under the protection of a number corresponding to these constellations when situated on the horizon. Hephæstion (4th cent. A.D.) has given in Greek a list of their names, the comparison of which with the Egyptian monuments has established greater exactness. For a long time Egyptologists thought that their invention belonged to the Theban epoch. They were found at Abydos, at the Ramesseum, at the tomb of Seti I., in that of Rameses IV., then on the sarcophagus of Nectanebo, in the temples of Edfu, Esnèh, Denderah, etc. The discovery of sarcophagi with texts of the Middle Empire has led to their recovery, with extremely curious details, as early as the Xth dynasty at least (coffin of Masahiti, and fragments of coffins of Akhmim). It seems certain to the present writer that allusion is made to them in the pre-historic formulæ of the Texts of the Pyramids. Each of the three *decani* of the month presides in turn over the decade of the head (*tapi*) of the month, that of the heart (*abi*), and that of the hind portion (*pahu*). Their variants and variations, as well as the remnants of time when the *decani* combine with the influences of the planets, laid bare to astrological research a vast region for special studies (cf. Lit. below, § VII., Daressy's recent contribution, 1909).

(*d*) *Stellar tables.*—The rôle of the *decani* is quite distinct from the checkered stellar tables noticed in the royal tombs (especially Rameses VI. and Rameses IX.). Erman (*Life in Ancient Egypt*, tr. Tirard, pp. 349–391) has explained their part very clearly, as well as the mechanism of the series of pictures, and the value of the legends. The positions of the stars, for a fixed time, and in connexion with the different parts of the body of an imaginary man supposed to contemplate them, are inscribed with respect to the configuration of the stars themselves. Unfortunately, the workmen who copied them have done so carelessly, and these tables are almost useless from the astronomical point of view. Nor is the religious nature of these strange documents very apparent. The opinion of Petrie (*PSBA* xxiv. 319), that they are simply horoscopic pictures referring to the nativity of the kings, is an ingenious way of reconciling the chronology based on the Sothic period with the contradictions presented in the tablets of the Royal Tombs; but no proof has been given of this explanation, which is too briefly stated.

2. Calendars of lucky and unlucky days.—Apart from the allusions in the religious or literary texts, the famous Sallier Papyrus and the Leyden Papyrus (i. 366) are the sources of the most valuable information. The methodical comparison with the similar tables of the Assyrians would be a fruitful study. Up to the present this has been too much neglected, most of the publications during the last fifty years limiting themselves to quoting and abridging the masterly work of Chabas, who is no longer at the height of present-day knowledge, either for translation or for commentary. The only advance made has been to point out, thanks to the Kahun Papyrus, that that sort of book existed as early as the XIIth dynasty. We have therefore another proof of the extreme antiquity of everything connected with the Egyptian calendar. It is necessary to call attention in a general way to the manner in which horoscopes are clearly connected, for each day of the calendar, with influences resulting from the chart of the sky on that day. The most striking proof lies in the importance—which till now has not been pointed out—of the division of the day into three parts, each of which is subjected to the influences which have control of the world at that moment. We may therefore have completely good days, completely bad days, or days partly good and partly bad.

The connexion is remarkable for the days on which one must not go out 'at nightfall,' or, on the contrary, 'as long as it is daylight,' or 'during the morning,' or 'at mid-day.' Each time the sign corresponding to this third of the day is marked as bad, the others remaining good.

The days are not simply good or bad, as we are usually informed. There are three degrees: the good, those which are prohibitive or purely bad, and those on which there is 'a struggle' in the world between good and evil. The facts of the celestial war by which these statements are justified are day by day put opposite this first diagnostic. Although they are deformed, as usual, by the unification caused by the Osirian legend absorbing all the old legends of the primitive gods, we can recognize the antiquity of all the facts mentioned. When events and dates are noticed, we find most

of these facts either in the temple calendars (see below) or in the pre-historic texts of the Books of the Dead. Such a work, carefully treated, may lead to the explanation of a day in connexion with some of the scenes or the mystic texts of the tombs and temples. It must be said that the popular character of collections of the type of the Sallier Papyrus has been exaggerated. It is rather the practical application which deserves such a qualifying character, although even this point is doubtful. In order to give the document its full value, we have first to make a table of its interdictions, and see to what mythological (*i.e.* stellar) facts they refer. The most frequent prohibitions are against leaving the house, going out at a certain time, travelling, sailing, undertaking a piece of work, or undertaking anything whatsoever. Speaking, singing, and sexual intercourse come next. Certain things or persons bring misfortune if they are looked at on a particular day. Prohibitions against killing or eating certain animals are equally numerous, as well as those against setting fire to or burning certain substances. The whole, at first strange and childish, may be justified in each case by the study of the astrological myths connected with corresponding episodes in the history of the gods.

The corresponding *fortunes* have to be divided into quite distinct classes. Some are *risks* from which people may escape by observing the calendar: drowning; dying from plague or fevers; losing one's life 'by encountering spirits'; being killed by a bull or a serpent into which these same spirits have entered; remaining ill for the rest of one's life; 'dying for ever' (*i.e.* with no second existence), etc. Others are inevitable *destinies*, which happen whatever is done by the person born on that day. Very seldom good (long life, riches), they usually predict death by animals, by contagion, from a wound, from the annual epidemics (fever?), by drowning, or by sudden indigestion (*sic*). The mildest of them foretold deafness or blindness. The case of the child born on a certain day, who will lose its hearing 'because that is the day on which the ears of Osiris were sealed,' shows sufficiently the kind of deductions made for each day from the examination of the corresponding mythological facts.

The whole, subsequently adapted to popular superstition, gave rise to the base applications of sorcery, and to that caricature of real astrology which has reached us from the Egyptians of the last centuries, and from the Roman world, which was infested with their ignorant juggleries. The 'on that day' (*am haru peu*) of the sorcerers' formulæ is simply a return to the notion of ancient magic—placing oneself in the calendric conditions of time and surroundings necessary to reproduce the rôle of the god or the spirit who is most influential at that moment. It is, as a matter of fact, being inspired with the universal notion applied even at the present day by a fetishist sorcerer of the Congo. If a separation was made in Egypt between the puerility of these horoscopes, or practices, and the really religious ceremony of the official cult, that separation did not exist at the beginning. It took place when the notion of the calendar allowed the priest to go further, and to put in place of simple mimetic magic the noble theory of re-commencements, with a commemorative character, and with participation on the part of the worshippers. Priesthoods which are still rudimentary, like those of the southern tribes of the Victoria Nyanza, show how processions and sacrifices may arise from primitive barbarism when the calendric observation is more or less formulated. The Egyptian race, being better placed by nature, arrived at real temple-calendars, with the immense reserve of religious and moral forces implied by their final adoption.

3. Temple calendars, festivals, ceremonies.—The really surprising number of calendar festivals had caused even the Greeks to marvel (cf. Herod. ii. 59), but it is sufficiently proved by the origin and the value of such ceremonies as have just been explained. It will be noticed that cults regulated by astronomy (especially in Mexico, where the innumerable series of festivals astounded the first conquerors) have always been remarkable for the number of festivals, and probably for the same reason as in Egypt.

On account of the numerous documents of every kind (cf. § I. above), we are still able, not only to recover a large number of these festivals, but also (although with serious difficulties in the present state of science) to form an exact and detailed idea of the ceremonies and the precise purpose which they had in view. Such an important subject cannot be treated fully in the present article (see art. FESTIVALS [Egyptian]). All that need be recalled for our present purpose is what has direct connexion with the calendar, *i.e.* with the notation of the dates of the religious year, the relation of the episodes mentioned to the ceremonies carried through on the chosen anniversaries, and the religious character which gradually evolved, through these festivals, from primitive astrology.

The great majority of these innumerable festivals have a double common character which has never been pointed out. They begin at night, and have a dramatic and warlike signification. Many, indeed, are entitled day-festivals; but in every case in which it is possible to get back to the sources, they are seen to be in reality the continuation of an original festival or rite which took place during the night—a fact which is most important for the astronomical nature of their origins (see above). As regards the inward essence of the chief ceremony, it is very seldom of a joyful character. Undoubtedly, as throughout the world, the course of centuries and popular fancies added comic episodes and burlesques to it, and the assembling of great crowds has frequently introduced noisy rejoicings (cf. Herod. ii. 48). The real foundation of the ceremony is a battle, and the official rejoicing, noted by the calendars, is not manifested until afterwards, as a consequence of the victory.

The different kinds of anniversary festivals may be divided into twelve chief classes: (1) births of the gods, (2) episodes in the life of Osiris, (3) circumnavigations and voyages of the gods, (4) wars of the gods, (5) cosmogonic anniversaries, (6) funerals of the gods, (7) births and anniversaries of the kings, (8) commemorations of foundations, (9) festivals of the sun, (10) festivals connected with the Nile and agriculture, (11) exclusively funerary festivals, and (12) *miscellanea*, or of doubtful meaning (planting of the willow, inscription of the *Ashdu* tree, erection of the obelisk, etc.). We must not be led astray by such a classification. It is absolutely artificial, optical (if one may say so), because it takes account only of external features resulting simply from the titles. In every case in which we can see the details from the monuments, it may be said that the act *par excellence* of the ceremony consists in a conflict, in which the priests and the worshippers play the different parts of a real warlike drama. (We omit the anniversaries of births, the travelling of the Amon family to Luxor and its sojourn in its houses of rest, the festivals of the opening of canals, and others of the same type.) But festivals of apparently simple rejoicing, like those perpetual journeys of the gods to visit each other (Hathor to Edfu, Horus to Denderah, Hathor to Fayyum, etc.), or of simple *exoduses* (*khâu*—ἐξοδεῖαι) of the gods round the temple, or on their sacred lake, might at first sight be classed among the series of peaceful rejoicings *par excellence*. Nevertheless, as soon as the evidence of a classic (*e.g.* Herodotus at Papremis [ii. 63 f.]) frees them from chance, or as soon as texts (as at Edfu) detail them minutely, the episode of the battle appears—all as is shown, *a priori*, in

the brief mentions of the calendar of the Palermo Stone (killing the hippopotamus, striking the Anu, binding the Barbarians, etc.). Everywhere the gods attack reptiles or crocodiles, and cleave them in two—the serpent Apopi, and the serpent Sebain, etc.; at Heliopolis, Bastit, the Divine cat, cuts off the head of the serpent; the people of Pu and Dapu rush at each other, like those of Papremis; the partisans of the gods are attacked by hostile gods, escorted by their followers. Monsters of wax, of clay, of wood, or of rope (like the serpent made of rope which Plutarch says was cut in pieces at the festivals of Osiris) are pierced with blows, lacerated, cut in fragments by the priests or worshippers. Râ 'gets rid of his enemies' at Illahun. Every year, at the same 'place of massacre,' Edfu celebrates the 'defeat of the opponents of Horus.' If the feasts of the month of Choïak (they come from Memphis and are the result of the gradual fusion of Osiris and Socharis) are taken from the calendar of Abydos, the legend of the 'good god' seems to be formed from a series of warlike anniversaries, older than the oldest history. His barques are attacked, and his enemies are overthrown and cut in pieces. On the road to Pagar and on the lake of Nadit, the train of the procession fight with each other continually. Who would have suspected this character of the Osirian festivals, with titles so unwarlike, if we had not happened to possess the evidence of a dozen inscriptions on the point? Without the frescoes of a Theban tomb (Tomb of Kheriuf), who would ever have known that an apparently peaceful date like the planting of the *Dadu* included pitched battles with sticks between the priests and the accessories? Would it ever have been suspected that at the Memphis festival of fishing, the officiant, when capturing the fish, was 'seizing the enemies'? Hundreds of other festivals are distributed throughout the year, and warn us that these dates of the ancient calendars of the Book of the Dead are speaking of real festivals when they mention 'the night on which the children of the rebellion were destroyed' (it is represented on the pre-historic 'palettes'), that on which 'the cursed are exterminated,' or on which 'the enemies of Nib er-Dzer are massacred.'

From the examples just given, we may be allowed to infer that these battles also characterized the exoduses of Anubis from Syut, of Hathor from Denderah, etc. This induction is singularly confirmed when suddenly, for a festival whose warlike character is not mentioned by a single Egyptian text, the witness of Herodotus or Plutarch shows us the representation of wars or of the slaying of monsters overcome in them. Actually, as in the Sallier Papyrus, there seems each day to have been a battle in this world. But these are fought in the temples of Egypt, now here and now there, at places fixed by legend. This is the point that must be remembered for the present study, the classification and origin of the festivals as well as their picturesque details being treated in another article (FESTIVALS [Egyptian]).

The connexion between the character of these festivals and the origin of the calendar is evident. The festivals, which are neither anniversaries nor commemorations, in our sense of the word, but re-commencements, give rise to the detail of repetition in this world of this drama of the sky, of which they are the representation. And the participation of spectators in the massacre of the evil gods, the insistence by the worshippers (especially at Abydos) on the active rôle they filled in these sacred dramas, when they 'helped their god,' show a fundamental agreement between the magical data and the calendric data as the basis of the Egyptian cult.

This character of the anniversaries of temple calendars explains also the dates when the gods travelled and visited each other. These are not simply neighbourly relations, or reminiscences of the alliances of the pre-historic tribes of the Nile Valley. Although the course of centuries gives a character of rejoicing and pilgrimage to these festivals, the real origin is the imitation of the martial acts of the mythological life of the gods, thus shown forth with great pomp. And we saw above how—at least for the most part—it was the reading of the sky that suggested the principal episodes in it.

Thus by natural consequence the unchanged character of the temple calendar from the beginning to the end of history is proved. The study of historical documents shows that, as they existed under the Memphites, so we find the festivals under the Roman dominion. The only work done by theology was to generalize for the whole of Egypt some festivals which originally were merely local. But Egyptology has accomplished thus only part of its task. The study of the pre-historic texts of the Books of the Dead and the Book of the Pyramids proves that the festivals and calendric dates of these collections appear again, with names hardly modified, in documents of the historic age, like the Palermo Stone or the stelæ of the ancient Empire, and that the whole fits into the lists of the classical calendar.

The chief importance of the anniversary date is sufficiently justified by what has already been said. (The exact dates of the principal festivals will be given in the article FESTIVALS [Egyptian].) The way of marking it in the classical epoch consists simply in the indication of the season, the month, and the day. A different method seems to have existed in Heliopolis. Its character is difficult to grasp. The present writer proposes simply as a hypothesis of his own to read as calendric dates the numbers marked in the celebrated Palermo Stone, which have always been interpreted as agrarian measurements or as the heights of the Nile. He thinks it possible to see in them notations of height taken with some very simple instrument, or more specially the height of the shadow of some arrangement like the Babylonian πόλος—perhaps even the height of an emblem like a sacred stone, the prototype of Banbonu of the Great Temple (cf. Naville, *Festival-hall*, pl. ix.). With the same restrictions he thinks that the pre-historic vases or Thinite tablets of Neggadeh and Abydos contain indications of beginning, culmination, and end of phenomena used to date the festivals represented on these tablets. The correct interpretation, however, is not yet forthcoming.

The development of the theory of the anniversary festival in the calendar seems therefore to have been briefly: (1) the idea of the influences of the stars; (2) the putting of their positions into living images in the form of beings, conflicts, travels, births, etc.; (3) the notation of corresponding myths; (4) the assimilation of the conflicts which take place on the earth with this mythology; (5) as a consequence, the assimilation of the gods or spirits of this world and their legends with the conflicts and acts of the inhabitants of the firmament; (6) the combination of the whole into a unique cycle, the dates of which are given by the appearance of the sky; (7) the artificial creation, in order to correspond with these dates, of pseudo-historical or purely legendary facts; (8) the invention of the great Osirian drama, incorporating the myths or the disconnected accounts of the local proto-history of the various parts of Egypt (if necessary, with the aid of alliterations or artificial etymologies); (9) the tendency to confuse Osiris with the Râ-sun, and to see in the legend of Osiris a symbolical figure of the struggle between the desert and the Nile; (10) the gods, combined in the latest epoch, induce symbolism, the concept of the struggle between darkness and light; and (11), as a last result, there is the struggle of moral light with the darkness of sin, the struggle between good and evil, with the defence and active obligations which it entails for the worshipper.

The living worshippers of the god are not the only persons who participate in these annals of the calendar. The dead also take part in them, and fight on their side. The explanation of the theory of death among the Egyptians will be found in art. STATE OF THE DEAD (Egyptian).

VIII. *Funerary calendar.*—1. **Festivals.**—The remarkable fixity of this calendar is attested by several thousands of monuments (not including the texts of the Book of the Dead type), from the Memphite *mastabas* to the titles of the tombs, or the stelæ of the latest epoch. From Memphis to the first cataract, every necropolis has supplied sufficient funerary calendars to draw up the inventory and to show the importance of its character. As far back as we can go at the present time (IVth dynasty), the work of unification for the whole of Egypt is completed (cf. *e.g.* the sarcophagus of Khufu-Anku). Two classes of dates and festivals appear: the first are common to all the provinces of Egypt; the second remain, throughout the course of history, local and peculiar to certain necropolises. The exegetic examination of those of the first class shows that they are the product of a list which combined festivals that were formerly peculiar to such and such a region. They began by belonging properly to the dead subjects of Socharis at Memphis, of Anubis at Syut, of Uap-Matonu at Abydos, of Hathor at Denderah, etc. The fact that as early as the IVth dynasty they are the common property of all the Egyptian dead, almost everywhere unified by the Osirian legend, is of sufficient significance to give an idea of the immense preparatory work that was necessary before the period known to us.

The chief list, identical at the beginning and at the end of history, gives: (1) the day of the year (1st Thoth), with the festival of lighting the new fire (the festival of 'lamps' of Herodotus, ii. 62), the 'service of the dead,' and the 'surrounding of the temple in procession,' a visit to the local god, in great pomp, at the dwelling-places of the dead (Beni-Hasan, Syut, Denderah, Thebes, Edfu, etc.); (2) the great festivals of the dead on the 17th, 18th, and 19th of Thoth (festival of lamentations, of the flame, and the *Uagait*); (3) the festivals of Socharis in the month of Choiak: sacred night, sacred morning, procession round the walls of the temple (originally round the sanctuary of the white wall at Memphis, then, later, in all the chapels of Socharis in Egypt). This is one of the most solemn moments in the life of the dead and in the calendar connected with it; in the Palermo Stone we find the feasts of Socharis mentioned in the whole historic series, sometimes with valuable details (cf. Revillout, *Revue Egyptol.* i. 43, with an incomplete bibliography, but full of important examples; cf. also the Kahun Papyrus of the XIIth dynasty and the very important text of the calendar of Nofir-hetep at Thebes [XVIIIth dynasty]); and (4) the festivals of the five epagomenal days. To the first group may be added the following calendric list, which is simply a table of funerary services to be offered to the dead, rather than festivals with processions or ceremonies of a mythical character: the beginning of each season, the beginning of the month, and the day of the half-month, the 4th, 5th, 6th, 17th (*sadzau*), and 30th of each month (see Munich, stele no. 3). There is no ground for asserting a relation between the monthly festivals and the moon, from the funerary point of view.

The indications of the stelæ enumerate afterwards a certain number of festivals already known to the non-funerary calendar: the rising of Sirius, the arrival of the Nile, the 'reception of the river,' the 'travels of the gods' from one town to another, visiting each other, etc.

Lastly, festivals probably common to the whole of Egypt are local in appearance, either because we have not enough documents, or because they bear different names according to the localities, although they are really identical (removal of sand, scattering of the sand, festivals 'of the mountain' or 'of the valley,' transferring of the statue to the temple). Thus at Thebes the 25th of Choiak is called *Nutirit.*

The festivals of Memphis (Exodus of Min, Assembly of Osiris Nib Dzoto), those of Beni-Hasan (great and small 'catching'), and those of Thebes (morning of Neheb-kau, festival of the two enchantresses, of the 'Assembly of Bailu,' of the 'hearing of speeches,' and of the 'opening of the chapel') are simple examples given here of the titles of local festivals. They have not yet been studied. It is probable that it will turn out that, under other names, they were celebrated throughout the whole of Egypt, and that their triple link will be found with mythology, with the corresponding formulæ in the Book of the Dead, and with the representations in the temples or the hypogæa. It seems to be already proved that these festivals, when they are mentioned, come from another part of Egypt—which presupposes a long preliminary work of fusion (cf. *e.g.* the Theban festival of Bailu, which is said to be consecrated 'to the souls of the dead of the Lord of Hermopolis').

The whole is accompanied, for the statues 'of millions of years' of deceased kings, by a complete special calendar. It is sufficient to state here that it consists chiefly of festivals of the clothing of statues, processions to the temples, and participation in the majority of the great festivals of the ordinary local calendar.

2. **Historical summary: probable formation.**—The fact that the calendar appears fully formed as early as the Memphites, and undergoes no essential change down to the end, admits only of a hypothetical explanation of the way in which it is formed: (1) by the examination of the peculiarities of the festivals; (2) by the direct or indirect mention of their origin; or, above all (3), by the archaic traces of a previous state of affairs in the Book of the Dead. The sarcophagi of the first Theban Empire are in this respect the next source of considerable discoveries. The most important at the present time are those of Babei, found by Petrie at Denderah (Cairo Museum), and those exhumed by Garstang at Beni-Hasan. As in the case of the festivals, we shall treat here only what is connected with the calendar, the rest of the funerary theory being more conveniently treated in the art. State of the Dead (Egyptian).

The faculty, which at first was restricted to those who had within them one or more Divine souls (*i.e.* to chiefs, sons and heirs of the gods), of reuniting with the gods of this earth and of sharing in the direct offering of worship, was extended to those who were capable of understanding the necessary magical prescriptions, and who had received the necessary talismans. They were then able 'to walk on good roads'—to return to this world. They could do so only once a year, when the local god at his festival came to look for them in the necropolis. They then accompanied him as worshippers (*amkhu*) or as companions (*shosu*), and, along with the living in the procession, participated in the whole drama of the festival, and then in the offering. The whole thing could take place only in the locality in which the famous mythological fact had formerly occurred, and at the time when the sky indicated the exact date when the fact should be renewed by the festival (typical examples at Syut, at Hermopolis for the festival of Bailu, at Thebes for the 'festival of the valley,' at Denderah, etc.). This festival took place in many provinces, at the time of the annual rising of the waters and at the New Year—the resurrection of all the things of the valley (*e.g.* Fayyum, Heracleopolis, Abydos, Denderah, Edfu, Assuân). But in other places it was at different dates (month of Choiak at Memphis, Pharmuti at Hermopolis, etc.). The continuance of the happiness of the dead was due to a triple series of continued actions, the benefit of which was evidently at first confined to the kings, but afterwards extended to ordinary men: (1) the introduction into the local calendar, with all its results, of the festivals of strange gods which fell on a different date, making the local

dead benefit thereby; (2) multiplying the circumstances in which each of these gods had the power of making the 'living soul' of the dead return to this earth; and (3) not restricting to a single place in Egypt the possibility of accomplishing the magical rite necessary for each day, but extending the benefit of it to all in the necropolises. This work in course of formation is seized on in texts like that of Babei, where the calendar already enumerates one hundred dates of festivals, in which, at a certain place, the dead person may take his share of such and such rejoicing of such and such a god (see also chs. xviii.–xx. of the Book of the Dead, which are very instructive on this point). The whole leads to the final possibility of communicating with the dead throughout the whole year. Then the long series of magical dates, which had become useless, was eliminated. There remains a unique calendar, general for Egypt, where the festivals simply mark the most outstanding remains of the ancient elements of formation. The final product is almost reduced to unity by the Osirian theme, which substitutes for the pre-historic *raisons d'être* of these dates explanations drawn from anniversaries of the life, death, and resurrection of Osiris. It is precisely this theological work, accomplished almost entirely in the time of the Memphites, which makes the discovery and real meaning of the original festivals so difficult. The search for these offers a large scientific reward to the person who will undertake it.

IX. *CONCLUSION.*—What has been said above may perhaps suffice to show that the calendar in Egypt played an important part in the degree of perfection reached by the evolution of religious thought in that country. If, as everything indicates, the material supplied by the gods and the concepts at the disposal of the ancient Egyptian cults was no better than that still employed by the groups of less civilized races of the rest of Africa, we must find out the reason why Egypt was able to profit more by it. And if, in a similar fashion, the organization of worship is one of the most important factors, it seems clear that the calendar, as it was instituted in that country, was one of the most powerful forces in ensuring this organization. The question leads to the search for the causes which favoured the perfecting of the calendar and gave it the form and the value which have been examined above (p. 97). The conditions of geographical and meteorological surroundings were perhaps not the only favourable elements in this first cause. They were certainly elements of the first rank.

Considering now not the causes but the consequences, we see that the calendar succeeded in identifying, dating, and, in definite mythologies, fixing, the limits of the apparent incoherence between the appearance of the perceptible world and its incessant struggles between good and evil. The intervention of man, foreseen and organized on certain fixed dates, arranged and defined relations with the gods, and multiplied the connexions with them, then the obligations towards them, at the same time as the rôle of the gods became more noble. It matters little that originally this human intervention was grossly magical; the essential fact was the possibility of man's helping the powers that were regarded as good to struggle against those regarded as evil. To define, in a gradually more elevated sense, the words 'good' and 'evil,' and to reach the duty of being morally a partisan of the good gods, was the long-protracted effort of thousands of years of Egyptian thought. The final notion of dualism, with its wholesome lesson of energy, existed in germ from the very day on which the year of the religious calendar definitely specified the rôle of each person, and the certain effects of the acts of man, in the ceaseless struggle in which he takes part.

It marked the race for ever with its stamp. Even after Egypt became Christian, it will be found that it kept this stamp and is distinguished by it from the rest of the peoples who believe in Christ. For the Copts, St. Michael and St. George on high *every day* conduct the celestial hosts to battle against the soldiers of Satan's armies. They seize them, beat them, hang them; but they do not destroy them, for 'their hour is not yet come.' In this way the Egyptians reconcile the new dogma and the ineradicable conception of the perpetual celestial battle, in which the worshipper, by his acts and prayers, comes to the assistance of his Protectors on high.

LITERATURE.—Roughly speaking, the bibliography of the Egyptian calendar exceeds a thousand publications, articles, etc., not including those dealing exclusively with astronomy, astrology, or pure chronology. A selection being necessary, there is given below a list which will be found to contain all the literature that is essential on the subject. Only a few items have been extracted from the long list of articles which have appeared in Egyptian periodicals, e.g. *ZÄ*, *OLZ*, *PSBA*, *RTAP*, and *Sphinx*. Such a bibliography, in view of the great variety of questions involved, would not be of much service if simply arranged alphabetically or even chronologically. A classification accordiog to the subject-matter has appeared advisable. We have included also a list of the *documents* properly so called, *i.e.* the list of ancient monuments published with or without translation or commentaries, but without a synthetic article on the calendar. A list of the chief ancient authors who wrote on the subject has also been added. The most important authorities have an asterisk prefixed.

I. *DIDACTIC TREATISES, ACCOMPANIED BY DOCUMENTS.*—Biot, *Année vague des Egyptiens*, Paris, 1853; Brugsch, **Nouvelles recherches sur la division de l'année des anciens Egyptiens*, Berlin, 1856, **Matériaux pour servir à la reconstruction du calendrier des anciens Egyptiens*, Leipzig, 1864, *Thesaurus*, pt. ii. 'Kalenderinschriften,' Leipzig, 1883; Chabas, *Mélanges*, Paris, 1862, 1873; Champollion, *Mém. sur les signes employés à la notation du temps*, Paris, 1831; Dümichen, **Altäg. Kalenderinschriften*, Leipzig, 1863–65; Faselius, *Altäg. Kalenderstudien*, Strassburg, 1873; Gumpach, *On the historical Antiquity of the People of Egypt, their Kalendar*, etc., London, 1863; Lepsius, **Chronologie der Aegypter*, Einleituog, Berlin, 1849; Letronne, *Nouvelles recherches sur le calendrier des anciens Egyptiens*, Paris, 1863.

II. *DIDACTIC RÉSUMÉS OF THE STATE OF THE QUESTION.*—Breasted, **Ancient Records*, Chicago, 1906–07, p. 26; Budge, **Book of Kings*, xliii–lix, London, 1908; Maspero, **Histoire*, Paris, 1894–99, i. 204–213 (with list of the most important literature down to 1893).

III. *POPULAR WORKS.*—Bénédite, *Egypte* (Guide), Paris, 1900, preface, p. 99; Breasted, *Hist. of Anc. Egyptians*, London, 1908; Budge, *A Guide to the Egyptian Collections of the British Museum*, London, 1899, p. 180, *Gods of the Egyptians*, London, 1903, i. 435, 488, 517, ii. 110; Erman, *Life in Ancient Egypt*, tr. Tirard, London, 1894, p. 350, *Egyp. Religion*, London, 1907, p. 217 ff.; Pierret, *Dict. d'archéol. égyp.*, Paris, 1875.

IV. *DIVISIONS OF THE YEAR, CYCLES, PHŒNIX AND 'HUNTI' PERIODS.*—Brugsch, *Nouvelles recherches* (see above), and *Rel. und Mythol.*, 1884, p. 671; Champollion, *Mémoire* (see above); Gardiner, *'Mesorê as the first month of the Egyptian Year,' in *ZÄ* xlii. 136; Griffitb, *'The Ancient Egyptian Year,' *PSBA* xiv. [1892] 260; Hincks, *On the Years and Cycles used by the Egyptians*, London, 1839, and *On the Various Years and Months in use among the Egyptians*, London, 1865; Mahler, *ZÄ*, 1890, p. 122; Martin, *Période égypt. du Phœnix*, 1864; Naville, **Festival-hall*, London, 1892, pp. 7, 21; Vincent, *Recherches sur l'année égyptienne*, Paris, 1865.

V. *ON THE SOTHIO PERIOD IN PARTICULAR.*—Borchardt, in *ZÄ* xxxvii. 80; Burrows, *Discoveries in Crete*, London, 1907; Fourier, *Recherches sur les sciences et le gouvernement de l'Egypte*, Paris, 1828; Krall, 'Studien,' in *SWAW* xcviii., Vienna, 1880; Lauth, *Aegypt. Tetraeteris*, Munich, 1878, *Sothis- oder Siriusperiode*, Munich, 1874; Lefébure, in *Revue Egyptol.* ix. 71; Legge, *'Is the "Pirit-Sopdou" a Heliacal Rising?' in *Recueil de Travaux*, 1909; Lesage, *Le Lever héliaque de Sothis le 16 Pharmouti*, Paris, 1860; Mahler, 'Die Apisperiode,' in *SWAW*, 1894, p. 832 ff., *'Sothis und Monddaten der alten Aegypter,' in *Actes du xiv^e Congr. Orient.* 1906; Martin, *Date historique d'un renouvellement de la période sothiaque*, Paris, 1869; Maspero, 'Notes au jour le jour,' in *PSBA* xiii. 303, and *Revue Critique*, 27th Nov. 1906; Oppolzer, *Länge des Siriusjahres und der Sothisperiode*, Vienna, 1884, *Sothisperiode und Siriusjahr*, Vienna, 1885; Rougé, in *Revue Archéol.* 1849; Sharpe, *On the Return of Phœnix and Sothic Period*, 1849; Torr, **Memphis and Mycenæ*, Cambridge, 1896, p. 57 ff.; Wiedemann, in **OLZ* iii. 322.

VI. *CALENDAR APPLIED TO CHRONOLOGY.*—Ginzel, *Handbuch der math. und techn. Chron.*, Leipzig, 1906, i. 226; Griffith, in *PSBA*, 1896, p. 99; F. A. Jones, *'The Ancient Year and Sothic Cycle,' *PSBA* xxx. 95; Lefébure, 'Principales consé-

quences de la période sothiaque,' in *Rev. Egypt.* viii.; Lieblein, **Chronologie*, Upsala, 1873, *PSBA* xxii. 352. and *ZÄ* xliv. 101; Mahler, **Die ägyp. Finsterniss der Bibel*, Vienna, 1885, *Chronol. Vergleichungstabellen*, vol. i. 'Aegypter,' Vienna, 1888, '*Études sur le calendrier égyp.* (tr. Moret, Bibl. Musée Guimet, vol. xxiv.); Meyer, 'Aegyp. Chronologie' (*Abhandl. Königl. Preuss. Akad.*), 1904, *'Nachtrage zur ägyp. Chronologie' (*Abhandl. Berlin. Akad.*), 1907; Reisner, *Naga-ed-Dêr*, i., Leipzig, 1907, p. 28; Sethe, *Beiträge* (*Untersuchungen*, iii.), 1905, p. 127. As has already been said, it is impossible to give the complete list of publications or articles on the points of detail of the calendar applied to chronology. We shall call attention merely to Brix, *ZÄ* xli. 26, 30; Borchardt, *ZÄ* xxxvii. 80, xli. 34; Legge, *Report*, etc., *PSBA* xxi. 261; Meyer, *ZÄ* xli. 93; Lefébure, *Rev. Egyptol.* ix. 71, and *Actes du xive Congr. Orient.* i. 25; Lieblein, *ZÄ* xliv. 101, and *PSBA* xxii. 352; Mahler, *OLZ* iii. 202, v. 248, viii. 6, 473, 535, ix. 94, *ZÄ* xl. 78; Sethe, *ZÄ* xli. 35 (as examples of discussions, in a single period, on chronology in connexion with a particular fact).

VII. *ON THE DECANI IN PARTICULAR.*—Brugsch, **Thesaurus*, Leipzig, 1883-91, p. 131, *Aegyptologie*, Leipzig, 1889–90, p. 329; Daressy, *'Une ancienne liste de décans égyptiens,' *Annales*, iv. [1904] 260, *Statues de divinités*, Leipzig, 1907, p. 351, 'La semaine des Egyptiens,' *Annales*, x. [1909] 21; Goodwin, *Sur un horoscope grec contenant les noms de plusieurs décans*, London, 1865; Lepsius, **Chronologie*, Einleit., Leipzig, 1849, p. 68 ff.; Romieu, *Lettres à Lepsius sur un décan du ciel égyptien*, Paris, 1870.

VIII. *ASTRONOMICAL AND STELLAR TABLES.*—Bilfinger, **Die Sterntafeln in den ägyp. Konigsgrabern*, Leipzig, 1862; Biot, *Calendrier astronomique . . . trouvé à Thèbes*, Paris, 1852; Birch, *Astronomical Observations in the xvth Century B.C.*, London, 1864; Brugsch, **Aegyptologie*; Champollion, **Mémoires* (see above), *Lettres d'Egypte*, Paris, 1833, p. 230, *Notices*, Paris, 1844, ii. 547 ff.; Lepage-Renouf, **Calendar of astronomical Observations from Tombs of the XXth Dyn.*, London, 1874; Petrie, *PSBA* xxiv. 318 (*in fine*); Rougé, 'Mémoire sur quelques phénomènes célestes,' in *Rev. Archéol.* ix. [1852], 'Texte du document astron. et astrol. découvert par Champollion à Thèbes' (*Mém. Acad. Sciences*, xxiv. [1858] 455).

IX. *ON THE ZODIAC.*—Biot, *Mémoire sur le zodiaque de Dendérah*, Paris, 1844; Carteron, *Analyse des recherches de Letronne*, etc., Paris, 1843, *Description de l'Egypte*, 'Antiquités,' Paris, 1808–28, vol. iv. (zodiac of Denderah), p. 267; Champollion, *Lettre relative au zodiaque de Dendérah*, Paris, 1829; Henley, *Zodiaque de Dendérah*, Paris, 1852; Lauth, *Zodiaque de Dendérah*, Paris, 1865; Letronne, *Observations sur l'objet des représentations zodiacales*, etc., Paris, 1824, **Analyse critique des représentations zodiacales de Dendéra et d'Esné*, Paris, 1850; Max Müller, 'Figures zodiacales,' *OLZ* viii. [1903]; Mure, *Calendar and Zodiac of Ancient Egypt*, London, 1853; Saint Martin, *Notice sur le zodiaque de Dendérah*, Paris, 1822; Testa, **Sopra due Zodiaci scoperti nel Egitto*, Pisa, 1802.

X. *ON THE EPAGOMENAL DAYS IN PARTICULAR.*—Brugsch, *'Ueber die fünf Epagomenen,' in *ZDMG* vi. [1852]; Chabas, *'Calendrier des jours fastes et néfastes,' App. (*Bibl. Egypt.* xii. 204) (Leyden Papyrus, i. 346).

XI. *STUDIES ON THE ANNIVERSARIES OF SPECIAL DATES.*—Breasted, *ZÄ* xxxvii. 126 (festival of Amon at Thebes); Brugsch, **Dict. Géographique*, Leipzig, 1877–80, *passim* (the most important series presented in alphabetical order, and more complete than the lists of his *Thesaurus*), **Drei Festkalender von Apollinopolis Magna*, Leipzig, 1877; Devéria, 'Noub, la déesse d'or des Egyptiens,' *Mémoires Soc. Antiquaires*, xxii., Paris, 1853 (for the *διάβασις* of Amon); Rougé, 'Mémoire sur quelques phénomènes,' etc., in *Rev. Archéol.* ix. [1852].

XII. *ON THE DAYS OF THE YEAR.*—Guissard, *Étude sur les jours égyp. du calendrier*, 1886; Loiseleur, *Jours egyptiens, leurs variations dans les calendriers du Moyen-âge*, 1872; Rougé, 'Mémoire,' etc. (see above).

XIII. *LUCKY AND UNLUCKY DAYS* (apart from citations or analyses in general works).—Chabas, 'Le Calendrier des jours fastes et néfastes de l'année égyptienne' (*Bibl. Egyptol.* xii. 127–235); Griffith, **Hieratic Papyri from Kahun*, London, 1899, pl. xxv.; Goodwin (in Chabas, *Mélanges*); Maspero, *Études égyptiennes*, Paris, 1886-89, i. 20; Oefele, *ZÄ* xli. 117.

XIV. *STUDIES ON THE CALENDARS OF THE VARIOUS TEMPLES.*—Dümichen, *Der grosse theban. Festkalender von Medinet-Habu*, Leipzig, 1881; Greene, *Fouilles à Thèbes*, 1855, iv.-vi. (Medinet-Habu); Brugsch, *Drei Festkalender*, Leipzig, 1877 (Edfu); Stern, *ZÄ*, 1873, p. 128; Bouriant, **Recueil*, xv. 184 (Kom-Ombo).

XV. *ON THE DECREE OF CANOPUS.*—Birch, *Bilingual Inscription at Sân*, London, 1868; Brugsch, **Thesaurus*, vi. 154; Budge, *The Stele of Canopus*, London, 1903; Chabas, *Mélanges*, ii., *ZÄ*, 1870, p. 108; Krall, **Demotische Lesestucke*, Vienna, 1903; Lepsius, **Bilingue Dekret von Kanopus*, Berlin, 1867; Martin, *Mémoires Acad. des inscr.* vii. pt. 1; Miller, *Journal des Savants*, 1883; Pierret, 'Glossaire égyptien-grec,' in *Études égyptologiques*, Paris, 1872; Reinisch-Roesler, *Zweisprachige Inschrift von Tanis*, Vienna, 1865; Revillout, **Chrestomathie démotique*, Paris, 1876–80, i. 87; Sethe, *Hierogl. Urkunden d. griech.-röm. Zeit*, Leipzig, 1904, pp. 124–152.

XVI. *PTOLEMAIC CALENDAR.*—Birch, *On an Egyptian Calendar of Philipp Aridæus*, London, 1864; Robiou, *'Recherches sur le calendrier macédonien en Egypte' (*Mémoires Acad. Inscr.* ix. [1878]); Strack, 'Kalender im Ptolemaerreich' (*Rhein. Museum f. Phil.* liv. [1898] 12, 27); Vincent, *Mémoires sur le calendrier des Lagides*, Paris, 1854, *Recherches sur le calendrier des Lagides*, Paris, 1858.

XVII. *FUNERARY CALENDARS* (only studies with commentaries, specially on these calendars).—Bénédite, *Tombeau de Néferhotpou* (XVIIIth Dyn.), v. of *Mémoires de la Mission Arch. Fr. au Caire*, 1889–1900; Budge, *Liturgy of Funerary Offerings*, 1909, p. 11 ff.; Petrie, **Denderah*, London, 1900, ch. viii. (coffin of Beb [VIth Dyn.]) 57 ff. (the chapter by Griffith) (XIth Dyn.?); Maspero, *'Les Fouilles de Petrie au Fayoum,' in *Journal des Savants*, 1900, p. 476 (XIIth Dyn.), 'Sur quelques textes,' etc., in *Bibl. Egyptol.*, *Études de Myth. et d'Arch. égyptiennes*, ii. 1893 (Xth Dyn.).

XVIII. *ANCIENT DOCUMENTS* (reproduced or written without systematic commentary. The classification is chronological. It does not include either the Texts of the Pyramids or the version of the Book of the Dead dating from the second Theban Empire).—(*a*) CALENDAR OF THE TEMPLE OF MEMPHIS (Palermo Stone).—Pellegrini, *Archivio Storico Siciliano*, new series, xx. 297. (*b*) FUNERARY MEMPHITE CALENDARS (as specimens only).—Budge, *Liturgy of Funerary Offerings*, London, 1909; Mariette, *Mastabas*, Paris, 1881-87. (*c*) TEMPLE CALENDARS OF THE FIRST THEBAN EMPIRE.—Griffith, *Hieratic Papyri from Kahun*, pl. xxv. p. 52. (*d*) FUNERARY CALENDARS OF THE FIRST THEBAN EMPIRE (as specimens only).—Griffith, *Beni-Hassan*, London, 1894, ii. 52 and pl. xii.; Garstang, *Burial Customs . . . at Beni-Hassan*, London, 1907, pl. x.; Lacau, *Sarcophages antérieurs au Nouvel Empire*, Cairo, 1904. (*e*) ASTRONOMICAL AND STAR TABLES.—Belzoni, *Narrative*, London, 1821 (stellar tables); Biot, *Calendrier* (do.); Brugsch, *Monuments*, Leipzig, 1857, pl. xix. (*decani*); Champollion, *Monuments*, Paris, 1835, pl. ccxxviii. etc. (astron. and stellar tables, chart of sky, etc.); Guilmant, *Tombeau de Ramsès IX.*, Cairo, 1907 (*decani* and star lists); Lefébure, *Hypogées royaux de Thèbes*, Paris, 1886–89 (do.); Lepsius, *Denkm.* iii, cxxxvii, ccxxvii, ccxxviii, Berlin, 1849–60 (do.); Rosellini, *Mon. del Culto*, Pisa, 1842-44, pl. lxiv. (do.). (*f*) CALENDARS ON PAPYRUS OF THE SECOND THEBAN EMPIRE.—Birch, *Select Papyri* (Sallier Papyrus iv.), 1841–60, *Facsimile of an Egyptian Hieratic Papyrus* (Harris Papyrus), London, 1876; Leemans, *Papyrus hiératique du Musée de Leide*, pl. ii. iii. (Pap. i. 346, Epagomenal days), Leyden, 1855. (*g*) PTOLEMAIC AND ROMAN TEMPLE CALENDARS.—Ahmed-Bey-Kemal, *Stèles ptolémaiques et romaines*, No. 22187, p. 182, pl. lix.-lxi. (Decree of Canopus), Cairo, 1904: Brugsch, *Thesaurus* (Pap. Roman epoch), Leipzig, 1884–91, *Matériaux*, p. xx (Calendar of Esnêh), Leipzig, 1864, *Description de l'Egypte: Antiquités*, iv. 21 (zodiac of Denderah); Morgan, *Komombos*, pl. 316 (Temple of Kom-Ombo), Cairo, 1907; Rochemonteix-Chassinat, *Le temple d'Edfou*, Paris, 1894, *passim*. (*h*) GENERAL DOCUMENTARY REPERTORIES: Brugsch, *Thesaurus* (see above), pt. 2; Dümichen, *Kalenderinschriften*, Leipzig, 1873.

XIX. *PRINCIPAL REFERENCES TO CLASSICAL AUTHORS.*—Clement, *Strom.* i. 21; Censorinus, *de Die Natali*, xviii. 10; Diodorus, i. 11, 36, 50; Hephaestion (for a first list of the *decani*); Herodotus, ii. 4, 42, 48, 59, 60, 62, 63, 88, 122, 171, etc.; Horapollo, *Hieroglyphica*; Macrobius, *Saturn.* i. 12, 16, 18; Libanius, iii. 17; Pliny, xviii. 167; Porphyry, i. 24; Plutarch, *de Iside*, xi. 17; Solinus, iv. 31; Strabo, xvii. 1, 46.

GEORGE FOUCART.

CALENDAR (Greek).[1]—**1. The day** (*ἡμέρα*, later *νυχθήμερον*).—As in English, so in Greek, the word 'day' is ambiguous, and may mean the time between sunrise and sunset, or the time occupied by one complete revolution of the earth on its axis, or, on the ancient theory, of the sun around the earth.[2] The latter is the strict meaning of *ἡμέρα*—hence the later coinage, *νυχθήμερον*, to avoid ambiguity, though in popular speech the former meaning prevailed.[3] Hence, in official reckonings, a day is a day *and a night*. It began, like the Jewish day, at twilight; *e.g.*, by Greek reckoning, July 2 begins at twilight on July 1.[4]

Divisions.—Unger thinks—we have not been able to discover on what grounds—that the Bab. division of the day into 12 hours, by means of the gnomon and sun-dial, reached Greece as early as 550 B.C. or thereabouts. In common parlance, however, *ὥρα* did not mean 'hour,' but only 'season,' till much later. The ordinary way of measuring time was, if any accuracy was required, by the water-clock (*κλεψύδρα*), while the popular divisions of time were, for the day: *ἕως* (dawn, including morning twilight), *πρωΐ*, *μεσημβρία* (midday), and *δειλή* (late afternoon),[5] to which we may add *ἀγορὰ*

[1] Abbreviations: Ung. = Unger in Iwan Müller's *Handbuch*, 1892 ff.; Farn. = L. Farnell, *Cults of the Greek States*, 1896; Gem. = Geminos of Rhodes, Teubner ed.; Mom. = A. Mommsen, *Feste der Stadt Athen*, Leipzig, 1898.

[2] There were counter-theories (see Plut. *De facie in orbe lunæ*, 923 A), but they found no favour, and were mere unsupported guesses.

[3] *e.g.* Aristoph. *Nub.* 2, *οὐδέποθ' ἡμέρα γενήσεται*; and the familiar Homeric *μέσον ἦμαρ*.

[4] *i.e.* 'civic' not astronomical twilight (see Ung.).

[5] Theophrastus, *De sig. temp.*

πλήθουσα, *i.e.* about mid-morning, and the Homeric βουλυτός, which, despite its name, indicating the end of the day's farm-work, does not seem to signify a very late hour; and, for the night: ἑσπέρα, ἀφαί (lamp-lighting), μέσαι νύκτες, ὄρθρος (the dark hour before the dawn), and cock-crow,[1] which was the labourer's hour of rising.[2] Such a division of time, though very rough, corresponded to objective natural phenomena, and to the routine of daily life, and did well enough for popular use.

2. The month (μήν).—It is a somewhat vexed question[3] whether the month or the year came first, *i.e.* whether the Greeks, of their own invention or by foreign (Babylonian?) influence, divided one year into 12 months, or whether they put 12 months together to form one year. Certain it is that both year and month, as well as the names of the seasons, occur in Homer, while Hesiod has a complete account of the reckoning of the month, and of lucky and unlucky days. The present writer's view is that both year and month, being natural divisions of time, are of native origin in Greece, and sprang up simultaneously. For, quite apart from the keen astronomical observation, aided perhaps by outside influences, which is so marked a feature of the *Works and Days* of Hesiod, the facts that it is about 30 days from one new moon to the next, and that 12 such moons bring us back to the season we started from, are common property, shared by such backward races as the N. Amer. Indians before the coming of the white man.

Divisions.—The 'moon' was divided not into quarters, but into thirds; μὴν ἱστάμενος (waxing), μεσῶν[4] (central), and φθίνων (waning). Hence the usual reckoning of the days, say of Boedromion at Athens, was (after the 1st) 2nd, 3rd, etc., ἱσταμένου; 11th, 12th, 3rd 'after the 10th' (ἐπὶ δέκα), '4th after the 10th,' etc.; 20th, and then, by a curious inversion, 10th, 9th, etc., of the wane, counting backwards, to the 29th (δευτέρα φθίνοντος); though a direct method of counting (δευτέρα μετ' εἰκάδας, . . . τριακάς) was also used. 'First tenth' and 'second tenth' were also used for 20th and 21st in Attica, while the 30th was ἔνη καὶ νέα (see below, 'Year').

Both the month and its divisions are connected with certain vague beliefs of a religious nature—or perhaps 'magical' would be a more accurate word to use. Just as with us superstitious people regard Friday as unlucky, so the Greeks[5] regarded both the 4th and the 24th as dangerous days for some enterprises; the 5th as utterly unlucky; the 16th as an unlucky birth- or marriage-day for a girl; the 14th as a good day to break in cattle, etc., and so on through the whole month; 'one day is like a step-mother, another like a mother.'[6] But especially—this is probably a belief of later origin—certain days are sacred to certain gods. Thus the 7th[7] is Apollo's birthday, the 4th is that of Hermes and of Herakles, and so with several other deities. The great festivals of the various deities were yearly, though often on the god's particular day of the month. Obviously the mere question of expense prevented a costly feast to Apollo or Zeus being celebrated monthly; but it is at least probable that the old monthly holy days were recognized to some extent in the regular temple-worship, just as every Sunday commemorates, by its position in the week, the Resurrection, although Easter Sunday occurs once only in the year.[8]

1 See Aristoph. *Nub., ad init.*
2 Lucian, *Gallus, ad init.*
3 See Ung., and contrast Mom. p. 3.
4 This term is very rare.
5 At least, Hesiod's compatriots; *Op. et Di.* 765 ff.
6 *ib.* 825.
7 *ib.* 770 ff., with Göttling's notes.
8 It must be remembered that, as the Greeks had no week, any superstitions or practices connected with days occurring oftener than once a year would naturally be monthly only.

3. The year (ἔτος, ἐνιαυτός).—Very early in the history of Greece, either by native observation or by imported science of a rudimentary kind, a smattering of practical astronomy became fairly widely diffused. Hesiod[1] indicates the beginning of the reaping-season (summer) and the ploughing-season (autumn) by the rising and setting of the Pleiades—a constellation which had attracted the attention of many primitive races[2]—and frequently makes similar observations. This, together with the observation of the equinoxes and the solstices,[3] provided them with the material for calculating a solar year. At the same time it led to endless confusion, for the lunar month was adhered to throughout: *i.e.*, whereas our (Julian) year is purely solar, and the new moon may or may not fall on the first day of any particular month, without in any way affecting our calculations of dates,[4] the Greek year was soli-lunar—almost a contradiction in terms, since the solar year is roughly $365\frac{1}{4}$ days, and the lunar month about $29\frac{1}{2}$ days. This gives a lunar year of 354 days—a discrepancy which more exact calculations, such as the Greeks of the historical period could and did make, render still more apparent.[5] But the month, with its holy days, was a fixture. To a Greek, it would seem wholly unsatisfactory to celebrate Christmas on the 25th day of the last calendar month of the year; he would think it necessary to celebrate it, nominally at least, 5 days from the end of the last moon of the year. Similarly, a New Year's day which was not a day of new moon would seem an absurdity, even if it coincided exactly with a solstice or an equinox.

'It was,' says Gem., 'the endeavour of the ancients to conduct the months in accordance with the moon, but the year in accordance with the sun. For the direction given by laws and oracles, to "sacrifice according to the ancestral rites," was interpreted throughout Greece in those terms. Now, to conduct the year according to the sun means to offer the same sacrifices to the gods at the same seasons of the year, *e.g.* always to offer the spring sacrifice in spring; which is impossible, unless the solstices and the equinoxes fall always in the same months; while conducting the month in accordance with the moon means to name the days in accordance with her phases.'[6]

Hence, despite all difficulties, the soli-lunar year was adhered to persistently in Greece proper, and even in the Middle Ages we find Byzantine pedants speaking of it as if it were still in being. Thus Tsetzes, *Posthom.* 770 (13th cent.), gives the Attic month Hekatombaion the equivalent it would have had in his day if the Attic calendar had still remained in use. Apart from this trifling, which reminds one of Bélise begging the notary to 'dater par les mots d'ides et de calendes,' we have the evidence of Julian[7] that in the 4th cent. the Roman and Egyptian solar calendars were not in use among the Greeks.

The Greek year of 12 lunar months contained, as has been said, 354 days, the months having alternately 30 days (μὴν πλήρης) and 29 days (μὴν κοῖλος). The former was regarded as the normal number, hence the last day even of a 'hollow' month was generally called τριακάς, or 30th. In Athens, however, the name ἔνη καὶ νέα ('old and new') was frequently used to denote the day which belonged half to one month of $29\frac{1}{2}$ days, and half to the next. This year, being $11\frac{1}{4}$ days too short,

1 *Op. et Di.* 383, 615.
2 Such as the Australian blacks (see Lang, *Custom and Myth*, London, 1885, 'Star-Myths').
3 The latter—ἡλίου τροπαί—are several times mentioned in Hesiod.
4 The movable date of Easter is an interesting survival of more ancient systems.
5 Gem. viii. 37 gives the lunar month as $29\frac{1}{2}+\frac{1}{33}$ days, or 29 days 12 hr. 48 min. 38 sec. nearly. The impossibility of adapting this period, for practical purposes, to the solar year is obvious. He is speaking, of course, of the 'synodic' month, from one σύνοδος, or true new moon, to the next.
6 Gem. viii. 6–10, somewhat abbreviated. The last sentence refers, as he goes on to explain, to such names as νουμηνία for the 1st of the month.
7 *Orat.* iv. 155b.

led at a very early date[1] to an attempt at reform. The years were arranged in groups of eight (ὀκταετηρίδες), containing 3 leap-years (3rd, 5th, and 8th), each of which had an extra month (μὴν ἐμβόλιμος) of 30 days. This gave a total of 2922 days; whereas the actual total of 99 lunar months is roughly 2923½ days. The next stage was to add 3 intercalary days in 2 *oktaeterides*. This in turn resulted in getting 30 days ahead of the solar year in 160 years. This was rectified by leaving out one intercalary month.

Thus, by correcting alternately for the sun and the moon, something like a reasonable system of reckoning was arrived at. Throughout Greek history we meet the *oktaeteris*, which, it would seem, they came to regard as a natural period of time, like the solar year itself. At any rate, various festivals are arranged in relation to it. Thus, the Olympian games were celebrated every four years (half an *oktaeteris*), and the Pythian at the same interval, always coming in the 3rd year of an Olympiad; the Nemean fell in the 1st and 3rd, and the Isthmian in the 2nd and 4th years of the Olympiads. From the Olympian games came the familiar system of reckoning, which enables us, from 776 B.C. onwards, to extract fairly exact dates from Greek chronological notices. The various cities, however, all had local methods of reckoning—Athens dating by its archons, Argos by the priestesses of the temple of Hera, and so on. Even the Olympiad was not exactly reckoned in Athens, but was fitted to the local calendar, by being made to begin on the 1st of Hekatombaion,[2] whereas it really began on the 18th. We mention these facts, a little out of their order, to indicate why the *oktaeteris* was so tenaciously adhered to in spite of its fundamental errors.

For it was fundamentally wrong, owing to the constitution of the year, which always consisted of alternate 'full' and 'hollow' months.[3] Averaging as they did 29½ days, they gave a lunar year of 354 days, the real length being about 354 days 8 hours; *i.e.*, the difference between 8 lunar and 8 solar years is not 90, but 87⅓ days, so that the 3 intercalary μῆνες πληρεῖς made the *oktaeteris* 2 days 16 hours too long. It would take some little time to notice this, as there was little exact science in Greece, but in the end it made itself felt—some of the festivals were clearly on the wrong days. Hence comes the bitter complaint of the Moon in the *Clouds* of Aristophanes:

> 'For,' say her messengers, the Clouds, 'she is abominably ill-treated, after all her kindnesses to you—real kindness, not just talk. . . . You calculate the days all wrong, you jumble them topsy-turvy, . . . when you ought to be sacrificing, you rack witnesses and try cases; and often, when we gods are keeping a fast, in memory of poor Memnon, or of Sarpedon, you pour out libations and laugh.'[4]

If the Moon had just cause to protest, the Sun got no better usage. The Athenian year was supposed to begin with the summer solstice; but, as its first month must begin with a new moon, it never did, unless the two events happened to coincide. So serious did the whole matter become, that we actually find in late inscriptions a double system of dating, κατ' ἔτος (in accordance with the civic year) and κατὰ θεόν (in accordance with the actual position of the heavenly bodies). The latter was the method used for dating the *prytanies*. The year, in trying to be both solar and lunar, succeeded in being neither.

[1] There are allusions to it in various myths, as that of Cadmus' 8-year penance (see Ung. for a full discussion). For a brief account of the ὀκταετηρίς, see Gem. vii. 27 ff. The inventor is said, however, to have been Cleostratus (latter half of 6th cent.); Athen. vii. 278.

[2] See below, 'Divisions of the year.'

[3] Intercalary days were not dated; they were named by the date of the preceding day, with the word ἐμβόλιμος added. Hence they could not make a 'hollow' month 'full.'

[4] *Nub.* 610 ff., with Blaydes' notes.

In order to give a clearer idea of what the Greek year was like, we append an outline calendar of the civic year at Athens. The first month (Hekatombaion) began nominally at sunset on the day of the summer solstice (end of June); actually, on the next new moon, which might be the middle of July:—

Hekatombaion, 30 days; Metageitnion, 29 days; Boedromion, 30 days; Pyanopsion, 29 days; Meimakterion, 30 days; Poseideon, 29 days. Then second Poseideon, 30 days (in leap-year only); Gamelion, 29 days; Anthesterion, 30 days; Elaphebolion, 29 days; Munychion, 30 days; Thargelion, 29 days; Shirophorion, 30 days. Next year, Hekatombaion, 29 days, and so on. In later times, Poseideon 'the second' was called Hadrianion, after the Emperor. Other States repeated the twelfth month in a leap-year; but it was always twelfth or sixth. This example shows clearly enough the continual inconveniences to which the fixed alternation of 'full' and 'hollow' months subjected the Greeks; for the average number of days in a year was frequently one too few or too many, owing to the clumsy device of the intercalary month; hence the necessity for intercalary days.

Athenian astronomers were not slow to perceive the practical and theoretical disadvantages of the *oktaeteris*, and one of them—Meton—brought forward, in the year 432 B.C., a reformed calendar which, with the later improvements of Callippus of Cyzicus (a contemporary of Aristotle) and Hipparchus of Nicæa (2nd cent. B.C.), is surpassed in accuracy only by the purely solar calendars. He arranged the years in cycles of 19, with 7 intercalary months, giving a total of 6940 days, and allotting 29 d. 12 h. 45 m. 57 s. to the average month, and $365\frac{5}{19}$ days to the average year—only 30 m. 10 s. too long. Callippus combined 4 of these cycles into one, and subtracted one day, securing an average year of 365¼ days, and an average month only 22¼ sec. longer than the actual lunar month. By a repetition of this process, Hipparchus, with a cycle of 304 years minus 1 day, attained almost absolute accuracy, but, it should be noted, still at the expense of anything like conformity with the sun; for, while the *average* year was accurate, any actual year was always 11¼ days too short, or else 18¾ days too long.[1]

But these cycles were merely theoretical; the *oktaeteris* was never, so far as we know, actually abandoned by any Greek State. Indeed, no State save Athens, for whose calendar it was calculated, could adopt Meton's cycle, and the evidence of Aristophanes (*loc. cit.*) and of late inscriptions as to double dating (see above) indicates that Athens did not. Diodorus, indeed,[2] says that 'most of the Greeks' accepted Meton's calendar; but this clearly refers only to individuals, for whose use, also, the almanacs (παραπήγματα) of which we occasionally hear[3] were constructed. The frequency of *pentaeteric*[4] feasts kept the *oktaeteris* in use. Hence, as has been already mentioned, the old imperfect calendar remained officially in use, getting farther and farther from the actual dates, until we find Macrobius equating Anthesterion (February, roughly speaking) with April.

Divisions of the year.—The Attic months have already been given. Other years, which began at the same time, were the Delian, whose months were Hekatombaion, Metageitnion, Buphonon,

[1] We omit small fractions; of course, 365¼ is a little more than the actual length of the solar year.

[2] xii. 36.

[3] *e.g.* Gem. xvii. 19.

[4] We should call them quadrennial. They came every four years, *i.e.* on the first and fifth of each period of five years, as the Greeks looked at it; hence twice in an *oktaeteris*. See, *e.g* [Aristotle], 'Αθ. Πολ. liv. 6, 7.

Apaturion, Aresion, Poseideon, Lenaion, Hieros, Galaxion, Artemision, Thargelion, and Panenos; and the Delphic (Apellaios, Bukatios, Boathoos, Heraios, Dadophorios, Poitropios, Amalios, Bysios, Theoxenios, Endyspoitropios, Herakleios, and Ilaios). Bœotia began its year at the winter solstice (January), but the order of the months is somewhat obscure. Achaia, Phocis, and Laconia began in October (autumn equinox)—the first two simply numbered their months; the Spartan calendar is not yet re-constructed. After the rise of Macedon, their year (Dios [October], Apellaios, Audynaios, Peritios, Dystros, Xandikos, Artemisios, Daisios, Panemos, Doos, Gorpiaios, and Hyperberetaios) came into use in Asia Minor; while the Ptolemys used the Egyptian solar calendar (see CALENDAR [Egyp.]), as did also some astronomers outside Egypt.

A glance at the names of the months will show that they gather around and are named after certain festivals. Thus Boedromion is 'the month of the Helpers' (βοηδρόμοι), *i.e.* the gods and heroes who give victory in battle. Accordingly, we find most of the Athenian anniversaries of victories celebrated in them (see art. FESTIVALS [Greek], 'Attic ecclesiastical calendar'). Apellaios is connected with the name of Apollo; Dios with Zeus; Lenaion with Dionysos Lenaios, 'god of the wild women'; Galaxios recalls the Athenian feast of Galaxia, held in honour of Cybele; and Hyperberetaios is 'month of the Hyperboreans,' those 'carriers round' of the sacred offerings to Apollo, whose name in ancient and modern times alike gave rise to so much false etymologizing till Ahrens' masterly explanation finally threw light on the mystery.[1]

The position of the feasts, and consequently of the months named after them, depended very largely on the season of the year; for, in the long run, nearly every Greek festival or fast has an agricultural origin.[2] By whatever name the Greek might call his months, and however he might calculate the year, he divided it, in early times, into summer (θέρος [ἄμητος], later ὡραία), and winter (χειμών); or into spring (ἔαρ), summer, autumn (φθινόπωρον), and winter.[3]

CALENDAR (Hebrew).—**I. Adaptations to meet astronomical difficulties.**—As with other peoples, the basis of the Hebrew calendar was astronomical. The year was, roughly speaking, the solar year; the month was a moon period or lunation; the week comprised very nearly a quarter of a lunation; and the day was, of course, the period of the earth's rotation on its axis. The chief difficulty arose, as in other cases, from the fact that these periods stood in no distinct ratio to each other. The true solar year was not an exact number of moons, weeks, or days. The lunation was not an exact number of either weeks or days. The week of 7 exact days, whatever its origin may have been, had become a purely conventional measure of time. As the solar year is nearly 365¼ days, and the 12 lunations over 354¼, the lunar year of 12 lunations was about 10¾ days short of the solar year. The difference was at a later period, at any rate, adjusted by the insertion, about every 3 years, of an intercalary month; and, finally, by adopting a regular cycle of years, the slight irregularities were kept within bounds (see CALENDAR [Jewish]). The 12th lunation was called Adar, the intercalary month *wĕ-Adar* ('and Adar'). Some such arrangement, though not so definitely systematized, must have been in vogue from early times. Similarly, as a lunation averages a little over 29½ days, the month must have averaged 29 and 30 days alternately, with the further occasional omission of a day.

It has sometimes been assumed that there was no system among the ancient Hebrews for determining the commencement and duration of each month, and that it was merely a question of observation, the month practically beginning when the new moon first became visible—that is, about 2 days after the real new moon, and that without any calculation of the number of days since the previous new moon. There are two very strong, if not absolutely fatal, objections to this view. (1) The Feast of the New Moon was evidently of very early and general obligation (see 1 S $20^{5.18}$, 2 K 4^{23}, Am 8^{5}, Is $1^{13.14}$). It was practically necessary that it should be known beforehand when it would occur. That this was in fact the case we know from 1 S $20^{5.18}$, where Jonathan and David act on the knowledge that the next day would be the New Moon feast. (2) The fact that, even in early times, the months were definitely distinguished and had their several names (see below, 2. A. (2)), points obviously in the same direction.

It may be further questioned whether there ever was among the early Hebrews any attempt to adapt the week of 7 days to the lunation. There is some ground for such a supposition, in the fact that in the most ancient Babylonian calendar every 7th day of the moon—the 7th, 14th, 21st, and 28th—was a *dies nefastus*, on which no public or official work could be done (Sayce, *Higher Crit.*, 1894, p. 74). The similar treatment of the 19th day has been ingeniously explained as due to the fact that it was 49 (=7×7) days after the previous new moon; but this would be true only for artificial months of 30 days. It would seem, then, that the old Babylonian month was practically a period of 4 weeks, with one or two intercalary days added at the end to make it agree with the lunation. As to whether this system was ever adopted by the Hebrews we have no direct evidence; but, were it so, its obvious inconvenience must sooner or later, as with the Babylonians, have caused the substitution of the regularly recurring conventional week of 7 days.

2. History of Hebrew calendar.—It is not unlikely that the Hebrew calendar varied considerably at different times, and possibly in different places. We can at any rate, with considerable probability, make a broad distinction between the systems prevailing before and after the Exile.

A. (1) *In pre-exilic times* the year, depending, as naturally it would with an agricultural people, on the yearly course of the crops, appears to have ended with the ingathering of the vintage, 'the end of the year, when thou gatherest in thy labours out of the field' (Ex 23^{16}). This is confirmed by the fact that the Sabbatical year (Ex $23^{10.11}$ [E], Lv $25^{1-7.18-22}$ [H]) and the year of jubile (Lv 25^{8-17} [H and P]) were natural agricultural years, sowing, pruning, reaping, and the vintage being mentioned in their order. As regards the last, the enactment that the trumpet was to be blown on the 10th day of the 7th month shows that the idea of the year beginning in the autumn survived into a time when it could be called the 7th month.

It has been contended that, while for religious purposes, depending as they did on the agricultural seasons, the year continued to begin with the autumn ploughing, the civil year, on the other hand, from about the beginning of the monarchy,

[1] See Farn. iv. 102.
[2] See FESTIVALS (Greek).
[3] See Hes. *Op. et Di.* 383 ff., with Göttling's note.

began in the spring. This view is based chiefly on the phrase, 'at the return of the year' (2 S 11^{1}, 1 K 20$^{22.\ 26}$), which is used with reference to the resumption of hostilities, and is followed in the first quotation by the curious remark, 'at the time when kings go forth.' But the first phrase, תְּשׁוּבַת הַשָּׁנָה, might mean 'at the turning-point,' *i.e.* the middle of the year—the idea being that the year moves forward to a certain point and then goes back; or what was intended may have been a year from the time of speaking (cf. Gn 18^{10}, where this is obviously the meaning of a somewhat similar phrase), and the words, 'at the time when kings go forth,' taken by themselves, merely state the obvious fact that military operations commence in the spring.

(2) During the same period the names of the months were probably adopted from the Canaanites. Two of the four pre-exilic names which occur in the OT have been found in Phœnician inscriptions—*Bul* thrice, and *Ethanim* twice (cf. *CIS* i. No. 86*a*). The four names are:

(*a*) *Ethanim* (1 K 8^{2}, where the editor, following later usage, calls it the 7th month). It is explained by *Oxf. Heb. Lex.* as 'month of steady flowings,' *i.e.* the month in which only perennial streams contain any water.

(*b*) *Bul* ('the eighth month' in 1 K 6^{38}), prob. = 'rain month.'

(*c*) *Abib* (Ex 13^{4} 23^{15} 34^{18} [JE], Dt 16^{1}), in P (*e.g.* Ex 12^{2}) the first month. The name, which means an 'ear of corn,' was no doubt derived from the fact that it was the beginning of the harvest (cf. Dt 16$^{1.\ 9}$).

(*d*) *Ziv* ('the second month' in 1 K 6$^{1.\ 37}$), 'splendour,' with reference, Gesenius supposes, to the beauty of the flowers; but it might be to the general beauty of Nature at this season, before vegetation has suffered from the summer drought.

There are, besides, in Phœnician inscriptions several other names of months which are not actually found, or at any rate with this significance, in OT, but were not improbably used by the early Hebrews. Thus we have *Marpeh*, *Pha'uloth*, *Mirzaḥ*, *Mapha'*, *Ḥir*, *Zebaḥ-shishim*. But we have no means of ascertaining definitely to what months these names belong. On the other hand, *Abib* and *Ziv* have not yet been found on any Phœnician inscription.

B. (1) *After the Exile* the religious year, at any rate, began about the vernal equinox, or, to be more exact, with the first lunation of which the full moon fell after the vernal equinox. This was at least the intention. But very probably, with the early arrangement of intercalary months, as certainly with the more systematic adoption of definite cycles at a later time, it sometimes happened that what was regarded as the first full moon either slightly preceded the equinox or was in reality the second after the equinox. The whole cycle of feasts, according to the laws of the Priestly Code, depended on this theory. The first lunation was what had been known as *Abib* (see above). The express provision that this was to be the first month of the year (Ex 12^{2} [P], cf. 13^{4} [J]) suggests what was at the time a new departure, but came to be regarded as an ancient tradition.

It is at least possible that, through Assyrian or Babylonian influence, the custom of reckoning the year from the spring for secular purposes had come into use a little before the Exile. That it was so reckoned in the record of Jehoiakim's treatment of Jeremiah's roll (Jer 36) is evident from the fact that there was a fire in the brazier in the 9th month (v.^{22}). But this by itself is not conclusive, because the record was probably taken from a biography of Jeremiah, which may well have been written in the time of the Exile, when the new custom had come in.

(2) As a rule, the months were now, for religious purposes, designated in the order of their occurrence as the first, second, third, etc. (Gn 7^{11} [P] 8^{4} [P], Lv 23$^{5ff.}$ [H], Hag 1^{1} 2^{1}, Zec 1$^{1.\ 7ff.}$). With this we may compare the similar designation of the months by their numbers, by the Society of Friends. As in the latter case, the object was probably to avoid names which had a heathen association.

For civil and historical purposes the Babylonian names of the months were now adopted. Of these, 7 only are mentioned in the OT and the Apocrypha, viz.:

Nisan (1st mo.), Neh 2^{1}, Est 3^{7}.
Sivan (3rd mo.), Est 8^{9}.
Elul (6th mo.), Neh 6^{15}, 1 Mac 14^{27}.
Kislev (9th mo.), Zec 7^{1}, Neh 1^{1}, 1 Mac 4^{52}, 2 Mac 1$^{9.\ 18}$ 10^{5}.
Tebeth (10th mo.), Est 2^{16}.
Shebaṭ (11th mo.), Zec 1^{7}, 1 Mac 16^{14}.
Adar (12th mo.), Ezr 6^{15}, Est 3$^{7.\ 13}$ 8^{12}, 1 Mac 7$^{43.\ 49}$, 2 Mac 15^{36}.

The other 5 months were: *Iyyar* (2nd mo.); *Tammûz* (4th mo.), cf. Ezk 8^{14}, where the name appears as that of a god; *Ab* (5th mo.); *Tishri* (7th mo.); *Marcheshvan* (8th mo.). It was probably not till after the destruction of the Temple by the Romans that the Babylonian names of the months were regularly employed in the religious calendar.

(3) Before the Exile, beyond the weekly festival of the Sabbath or the 7th day of the week, and the New Moon on the 1st day of the month, it is doubtful whether any sacred day or season was absolutely fixed (see FESTIVALS AND FASTS [Heb.]; cf. Dt 16 with Lv 23), unless we are to suppose that the regulations of Lv 23 [H] imply that some provisions of the kind were made at the close of the monarchy. From the Priestly Code, including H, we find that a definite religious calendar was certainly in use in the Second Temple. Thus we have, in addition to New Moons and Sabbaths, from the 14th to the 21st of the 1st month the Feasts of Passover and Unleavened Bread (Lv 23$^{5-8}$), including also the sheaf-offering on the 1st day of the week which fell within this period (Lv 23$^{10-14}$). Seven weeks after the latter, on another Sunday falling within the 3rd month, was the Feast of Weeks (Lv 23$^{15-21}$). In the 7th month were three important celebrations—the Feast of Trumpets on the 1st day (Lv 23$^{24.\ 25}$, Nu 29$^{1-6}$), the Great Day of Atonement on the 10th (Lv 16. 23$^{27-32}$), and the Feast of Booths, 15th–22nd (Lv 23$^{34-36.\ 39-43}$).

Certain other fasts, which had come to be observed during the Exile (Zec 7$^{3.\ 5}$ 8^{19}), commemorating, it is said, events connected with the siege and capture of Jerusalem, were no longer enacted by law. On the other hand, some feasts were afterwards added, viz. that of Dedication, which commemorated the re-dedication of the Temple after its defilement by Antiochus Epiphanes (1 Mac 4^{59}). This lasted for 8 days from the 25th of the 9th month (Kislev). The Feast of Nicanor, on the 13th of the 12th month (Adar), was appointed to celebrate the victory of Judas over Nicanor (1 Mac 7^{49}). The Feast of Purim, on the 14th and 15th of the same month, wa , so it was said, appointed to commemorate the vengeance taken by the Jews on their enemies, as recorded in the Book of Esther (9$^{15-32}$; but see FESTIVALS AND FASTS [Heb.]).

F. H. WOODS.

CALENDAR (Indo-Chinese).—I. *ANNAM* (Cochin-China, Annam, Tongking).—The peoples of French Indo-China, as a rule, use a calendar of Indian origin, although Chinese influence (see CALENDAR [Chinese]) is clearly seen in the calendar that is peculiar to the Annamese. There are three cycles employed by the Annamese to express their dates: the duodenary cycle, or cycle of the twelve animals (ox, tiger, hare, dragon, serpent, horse, goat, monkey, hen, dog, pig, rat), which is of Turkish origin;[1] the denary cycle, the ten 'trunks'[2] of which have the names of the five elements and the five cardinal points; the repetition of the first cycle five times, combined with six repetitions of the second, makes the great cycle of sixty years.

The year is a lunar one, and is composed of twelve months of 29 and 30 days alternately, making 354 days; to this they add a thirteenth intercalary month every three or four years arbitrarily. In a period of 19 years there are therefore seven years with thirteen months.

The first month of the year has always 29 days; in the Chinese astronomical year it begins on the 22nd of December; in the civil year, it always begins between the 20th of January and the 19th of February. The month has a regular division into three decades, but this division is being gradually superseded by the European division into weeks of seven days.

As a general practice, the Annamese name their months by successive numbers from one to twelve (first month, second month, etc.). But there is another system of names, which is employed only in the literary world: the first month is always designated by the number one (*chín nguyệt*, 'first month'); the second is the month of flowers (*hoa nguyệt*); the third, the month of peaches (*đào ng.*); the fourth, the month of plums (*mōi ng.*); the fifth, the month of cakes (*bồ ng.*); the sixth, the month of heat (*thử ng.*); the seventh, the month of melons (*qua ng.*); the eighth, the month of cinnamon (*quế ng.*); the ninth, the month of chrysanthemums (*cúc ng.*); the tenth, the month of rest (*nhàn ng.*); the eleventh, the month of the solstice (*gia ng.*); the twelfth, the month of offerings (*lạp ng.*).

The civil day begins at midnight, and contains 12 hours, each equal to two hours of our time. The last day of the month is called the 'day of darkness' (*hối nhật*)—an allusion to the waning of the moon. The Annamese night is often measured, according to the Chinese custom, by five watches: the first begins at 7 p.m., the second at 9 p.m., the third at 11 p.m., the fourth at 1 a.m., the fifth at 3 a.m.

The farmers' calendar in Annam, as in China, has, besides the four chief seasons, twenty-four smaller intermediary seasons.

An Annamese almanac indicates, in short, the current year in the great cycle and in the other two cycles; the full, incomplete, and intercalary (if there are such) months; the day of the month, with its order in the year; the name of the one of the five elements or of the twenty-eight constellations that corresponds to it; the accepted sign for lucky and unlucky days; the phases of the moon; eclipses of the sun and moon; the one of the twenty-four seasons of the year in which each month falls; the things that are permitted and forbidden on each day; and the days of civil observance. For some years now, the Chinese-Annamese almanac has also indicated the corresponding day in the European almanac.

LITERATURE.—A+B (E. Souvignet), *Variétés tonkinoises* . . ., Hanoï, 1903, 'Calendrier impérial (Hoàng lich),' pp. 217-238; L. Cadière, 'Expressions populaires [annamites] pour désigner le temps,' in *Bulletin de l'École française d'Extrême-Orient*, ii. 367.

II. *CAMBODIA*.—In Cambodia there are in use three eras of Hindu origin, and three cycles that come from China.

1. Eras.—There is a religious era, or 'era of the Buddha' (Khmer *práḥ pŭt sakrăć*=Skr. *buddha-śakarāja*), dating from the death of the Buddha (543 B.C.), which is commonly used in religious writings; a political or 'great era' (Khmer *mahà sakrăć*= Skr. *mahāśakarāja*), still used in the editing of

[1] See Edouard Chavannes, 'Le Cycle turc des douze animaux,' in *T'oung-pao*, series ii. vol. vii. No. 1.

[2] In accordance with Chinese ideas, the denary cycle is regarded as having ten 'heavenly trunks,' the twelve 'earthly branches' of which form the duodenary cycle.

[3] Skr. *samṛddhi*='completion.'

royal annals, which is the Hindu era named after *śaka* and beginning A.D. 78; a civil or 'lesser era' (Khmer *čol sakrāč* = Pāli *chullasakarāja*), employed by the Khmers in everyday actions, transactions, and correspondence, which is of astronomical origin, and dates from A.D. 638.

2. Cycles.—The principal cycle is that of the twelve animals (see above, I.), with names as follows: *čūt*, 'rat'; *chlau*, 'ox'; *khāl*, 'tiger'; *thās*, 'hare'; *rōn*, 'dragon'; *msāñ*, 'serpent'; *momi*, 'horse'; *mome*, 'goat'; *vok*, 'monkey'; *rokā*, 'cock'; *čha*, 'dog'; *kŏr*, 'pig.' The names of these animals are not Khmer, but seem to belong to some dialect of the south of China. This cycle, repeated five times, is combined with a secondary cycle of ten years, the years in which are distinguished by means of ordinal numbers borrowed from Pāli. In other words, the series of the twelve animal-names (the principal cycle), repeated five times in succession in the same order, gives a period of sixty years, which is divided into six decades (secondary cycles). It is the same system as the one brought by China into Annam, except that the denary cycle is not named in the same way. The foregoing table gives an idea of the composition of the Cambodian cycle.

3. Year and months.—The Cambodians have a lunar year. It contains twelve months, of 29 and 30 days alternately, with the following Indian names: (1) *čět* (Skr. *chaitra*); (2) *pisāk* (Skr. *vaiśākha*); (3) *čes* (Skr. *jyeṣṭha*); (4) *āsāth* (Skr. *āṣāḍha*); (5) *srāp* (Skr. *śrāvaṇa*); (6) *photrabŏt* (Skr. *bhādrapada*); (7) *āsŏč* (Skr. *āśvayuja*); (8) *kātĕk* (Skr. *kārttika*); (9) *măkosĭr* (Skr. *mārga-śirṣa*); (10) *bŏs* (Skr. *pauṣa*); (11) *măkh* (Skr. *māgha*); (12) *phālkŭn* (Skr. *phālguna*).

The months are divided into two periods of fifteen days: the period of the waxing moon (clear fortnight), and the period of the waning moon (dark fortnight). The Buddhists of Cambodia keep the eighth and, more especially, the fifteenth day of each of these periods as holidays.

The year begins in *čět* (March–April); but although the New Year festivals are celebrated in this month, it is the custom not to begin the year until the month of *pisāk* (April–May), or sometimes even *măkosĭr* (Nov.–Dec.), in memory of the death of the Buddha. As the Cambodian year has only 354 days in all, an intercalary month is inserted every three or four years by the *horas*, or royal astrologers, by doubling the month of *āsāth* (June–July); hence there is a first and a second *āsāth* (*prathomosāth*, *tŭtiyāsāth* = Skr. *prathama°*-, *dvitīya-āṣāḍha*). A period of nineteen years thus contains seven years with thirteen months.

4. Days.—The names of the days are also of Indian origin: *thňai*[1] *ātit* (Skr. *āditya*), 'Sunday'; *t. čăn* (Skr. *chandra*), 'Monday'; *t. aṅkār* (Skr. *aṅgāraka*), 'Tuesday'; *t. pŭt* (Skr. *budha*), 'Wednesday'; *t. prahas* (Skr. *bṛhaspati*), 'Thursday'; *t. sŏk* (Skr. *śukra*), 'Friday'; *t. sau* (Skr. *śanaiśchara*), 'Saturday'; no day is a holiday in itself.

5. Hours.—The Cambodians divide the day into two parts of twelve hours each: the part from 6 a.m. to 6 p.m. is day, and that from 6 p.m. to 6 a.m. is night. In Cambodia, from 6 to 7 a.m. is 1 a.m., 7 to 8 a.m. is 2 a.m., 11 to 12 mid-day is 6 a.m., mid-day to 1 p.m. is 1 p.m., 1 to 2 p.m. is 2 p.m., 5 to 6 p.m. is 6 p.m. The hour is divided into *bāt*, each of which is equal to five minutes. The night is sometimes divided into four watches (*yām*; Skr. *yama*, 'watch') of three hours each: the first from sunset to 9 p.m., the second from 9 p.m. to midnight, the third from midnight to 3 a.m., and the fourth from 3 a.m. till day time, *i.e.* 6 a.m.

[1] *Thňai* = 'day.'

6. Seasons.—The Cambodians have three seasons (*rodov*, *khè*): (1) rainy season (*rodov phlieu*, *khè prăh vosā* [= Pāli *vassa*]); (2) cold season (*rodov roṅār*, *khè romho' i*); (3) dry or warm season (*rodov prăn*, *r. kdau*).

7. Almanac.—The name given to the almanac in Cambodia is *mahāsaṅkrān* (Skr. *mahāsaṃkrānti*, 'great transit'). The Skr. expression *saṃkrānti* is used to designate the passing of one sign of the zodiac into the next sign; as the 'great transit' is the one that marks the beginning of the new year, the derivation of the Cambodian expression is obvious.

'The *horas*, or royal astrologers, arrange the Cambodian calendar year by year. For each month it gives the relation of the days of the week to the 1st, 8th, and 15th days of the waxing moon (*ko't*), to the 1st and 8th days of the waning moon (*roč*), and to the last day of the month (*khe dāč*). It is followed by a public notice giving various information on the beginning of the year, and rules connected with the position of the different orders of the State, with the temperature, rain, harvests, rise of the river, prices of commodities, eclipses of the moon, and, lastly, fixing the initial day of the *vassa*, or retirement of the religious, during the rainy season.'

L. Finot (see Lit. below), from whom these details are borrowed, adds that the basis of the Cambodian almanac is Hindu, and that the very language it employs is a witness to the deep and persistent influence of Indian science.

LITERATURE.—G. Jeanneau, 'Notice sur le calendrier cambodgien,' in *Annuaire de la Cochinchine*, 1870; 'Un Almanach cambodgien,' tr. Ph. Hahn and L. Finot in *Revue Indo-Chinoise*, Hanoi, 1904, pp. 138-143; Moura, *Vocabulaire français-cambodgien et cambodgien-français*, Paris, 1878, pp. 15-17.

III. *CHAMPA.*—It is probable that in ancient times the Chams, like their neighbours the Khmers, had a calendar of Hindu origin, but they have lost it and have also completely forgotten the *śaka* era (A.D. 78) which their ancestors employed in inscriptions. Nowadays they simply use the Chinese-Annamese calendar for the needs of daily life, the only difference being that their year starts in April–May.

1. Cycles.—(1) *Sexagenary cycle.*—The Chams adopted the Chinese-Annamese sixty-year cycle.

(2) *Duodenary cycle.*—This is the cycle used for naming and calculating the years. The twelve year-names are borrowed from animals, but—a peculiarity which is worthy of remark—they are also the names employed in ordinary everyday language. The names of the twelve years are: (1) *tikuh*, 'rat'; (2) *kabav*, 'buffalo'; (3) *rimaun*, 'tiger'; (4) *tapaiy*, 'hare'; (5) *nāgarai*, 'dragon'; (6) *ulā anaih*, 'little serpent'; (7) *asaih*, 'horse'; (8) *pabaiy*, 'goat'; (9) *kra*, 'monkey'; (10) *mānuk*, 'hen'; (11) *asău*, 'dog'; (12) *pabwĕi*, 'pig.'

(3) *Eight-year cycle.*—There is another Cham calendar[1] based on the eight-year cycle, called *windu* by the Javanese, and probably introduced into Champa by Musalmān missionaries from Java. In Java, the Javanese-Musalmān civil year is lunar, and it originated from the Indian luni-solar year; hence it differed somewhat from the real Arabian lunar year. Efforts were made to bring these years back to correspondence, and the means employed was the *windu*, or cycle of eight years. We need not enter into details here, but it may be noticed that in Java the years of the *windu* have the following Malaysian names: *alip*, *'ehe*, *jim awal*, *je* or *dze*, *dāl*, *be*, *wāu*, *jīm ahir*, and are represented by the Arabic letters: *a*, *h*, *j*, *dh*, *d*, *b*, *w*, *j*. The Chams have the same names slightly modified: *aliah*, *hak*, *jimaval*, *ci*, *dal*, *bak*, *wau*, *jimahir*, and represent them by the same letters, though sometimes substituting *h* for *h*, and *z* for *dh* in their calendars and often putting the figures 1, 4, 6, etc., meaning 1st, 4th, 6th day, under the

[1] A phototypic reproduction of a perpetual Cham calendar will be found in the present writer's article, 'Les Chams musulmans de l'Indo-Chine,' in *Revue du monde musulman*, April 1907, No. 6, p. 175.

Arabic names of the days *ahad*, *arbā'*, *sabt*, etc., instead of writing out the days of the Cham week in full.

As the Chams combined their 12-year cycle with the *windu*, or 8-year cycle, the years in which are designated by letters, it follows that three 8-year series and two 12-year series two series was covered, in theory, by means of an embolismic year, and more simply by adopting the corrections of the Chinese-Annamese calendar.

Predictions based on coincidences of years and days, analogous to the *aṅgara-kasih*[1] of the Javanese, take place among the Chams. If, for instance, the cycles of the 'rat' and the 'pig' coincide in

brought round a coincidence of the first two terms of the series, namely, *tikuḥ*, 'rat,' and *aliaḥ* (=*alif*), *a*.

The discrepancy that had arisen between the

[1] A coincidence regarded as of good augury in a month is that of *aṅgara* (Skr. *aṅgāraka*), 'Tuesday,' a day of the seven days' week, with *kliwon*, the last day of the Malayo-Polynesian week. The months with no *aṅgara-kasih* are unlucky.

[2] Referring to the body of Muhammad.

year and days, there will be a great number of births that year, and flocks and herds and rice in abundance: under the opposite conditions the year will be unlucky.

2. **Months.** The Cham year, whether full or incomplete, is divided into twelve lunar months; it begins in April-May. The first ten months are simply distinguished by numbers, while the last two have special names of Indian origin.

The Banī, or Musalman, Chams borrowed the names of their lunar months from the Arabs with slight alterations. The lunar months of both peoples, which have alternately 30 days (full month) and 29 days (incomplete month), are divided into two fortnights, according as the moon is waxing or waning—the second fortnight sometimes counting fifteen, sometimes fourteen days; but, owing to complications which are not easy to explain, the days of the months of the Brāhmanist Chams do not coincide with those of the Musalmān Chams. Official documents are dated according to the days of the Annamese month.

3. **Days.**—The Chams have our week. The names of the seven days correspond exactly to ours, are of Sanskrit origin, and are borrowed from the planets. The Musalmān Chams, especially in Cambodia, sometimes use the names of the days of the Arabian week with modifications.

(*a*) Week of the Brāhmanist Chams: 1. *adit* (Skr. *āditya*), 'Sunday'; 2. *som* (Skr. *soma*), 'Monday'; 3. *aṅar* (Skr. *aṅgāraka*), 'Tuesday'; 4. *but* (Skr. *budha*), 'Wednesday'; 5. *jip* (Skr. *jīva*), 'Thursday'; 6. *śuk* (Skr. *śukra*), 'Friday'; 7. *sanćar* (Skr. *śanaiśchara*), 'Saturday.'

(*b*) Week of the Musalmān Chams: 1. *āhat* (Arab. *al-aḥad*); 2. *òśsanai* (Arab. *āl-ithnain*); 3. *asalasak* (Arab. *ath-thalāsā'*); 4. *rośbaū* (Arab. *al-arbā'*); 5. *kemis* (Arab. *al-khamīs*); 6. *jumat* (Arab. *al-jūm'a*), 'day of Assembly'; 7. *sabat*, *śòttò* (Arab. *as-sabt*), 'Sabbath day.'

4. **Hours.**—The day is divided into twelve hours, each equal to two hours of our time. One text even says that a day and night contain eight hours (each). The hours are reckoned from the first cock-crow; those between sunset and sunrise are called 'night hours,' and correspond to the five watches of the night.

The hour again is divided into eight parts, each equal to our ¼ hour. The time is told by means of expressions like 'the cock crows' = 1 a.m.; 'the cock jumps to the ground' = 2 a.m.; 'the sun is risen' = 6 a.m.; 'the sun is a perch above the horizon' = 6.30 a.m., etc. The twelve hours of the day are also reckoned by giving each the name of one of the animals of the cycle—*tuk tikuh*, 'hour of the Rat'; *tuk kabav*, 'hour of the Buffalo'; *tuk rimauṅ*, 'hour of the Tiger,' etc.

5. **Mystical speculations of the Chams concerning the calendar.** According to the mystical speculations of the Musalmān Chams, which are adopted also by the Brahmanist Chams, each year of the cycle comes from a part of the body of Muhammad. The year of the Rat, *e.g.*, comes from the left ear, the year of the Buffalo from the left nostril, the year of the Tiger from the right ear, etc. Allah created the year of the Serpent first of all; among the months Ramadān was first, among the days *jumat*, 'Friday.' The first three days of lunation are presided over by the three favourite wives of Muhammad. The seven days of the week come from the seven parts of the Prophet's body; the first four Muhammadans—Ubakar (Abū Bakr), Umar ('Umar), Uthamön ('Uthmān), and Ali ('Alī)—are the angels of Allāh's glory and the four *imāms* of the cardinal points. The watches of the night or day are male or female. Of the hours of day the first comes from Allāh; the second from Muhammad; the third from Gabriel; the fourth from 'Alī; the fifth from Phwatimöh (Fāṭima); the sixth from Ḥasan; the seventh from Ḥusain; the eighth comes back to Allāh. The thirty days of the month come from the thirty teeth of Adam; the upper jaw is the origin of the fifteen days of the waxing moon, the lower jaw gives the fifteen days of the waning moon. Adam's other two teeth are the seats respectively of Lord Muhammad and Lord 'Alī, etc. The root of all these speculations must lie in Islām.

Months of Brāhmanist Chams.		Months of Musalmān Chams.	
1. *bulan sa*	First month.	1. *muharròm*	(Arab. *muḥarram*), Muḥarram.
2. *bulan duā*	Second month.	2. *sakphwòr*	(Arab. *ṣafar*), Safar.
3. *bulan klāu*	Third month.	3. *rabī ul awal*	(Arab. *rabī'u 'l-awwal*), Rabī' I.
4. *bulan pak*	Fourth month.	4. *rabī ul ahir*	(Arab. *rabī'u 'l-akhir*), Rabī' II.
5. *bulan limö*	Fifth month.	5. *jamòdi lula*	(Arab. *jumādā 'l-ūlā*), Jumādā I.
6. *bulan nam*	Sixth month.	6. *jamòdi ahir*	(Arab. *jumādā 'l-ukhrā*), Jumadā II.
7. *bulan tijuh*	Seventh month.	7. *rajap*	(Arab. *rajab*), Rajab.
8. *bulan dalapan*	Eighth month.	8. *saban*	(Arab. *sha'bān*), Sha'bān.
9. *bulan salapan*	Ninth month.	9. *ramòvan*	(Arab. *ramaḍān*), Ramadān.
10. *bulan sapluh*	Tenth month.	10. *śaphwòl, sakval*	(Arab. *shauwāl*), Shauwāl.
11. *bulan puaś*	Puaś (Skr. *pauṣa*).[1]	11. *dul kāidah*	(Arab. *dhū'l-qa'da*), Dhul-qa'da.
12. *bulan mak*	Mak (Skr. *māgha*).	12. *dul huji*	(Arab. *dhū'l-ḥijja*), Dhul-ḥijja.

Cabaton, *Nouvelles Recherches sur les Chams*, Paris, 1901, p. 93 ff., also 'Les Chams musulmans de l'Indo-Chine française,' in *Revue du monde musulman*, vol. ii., April 1907, No. 6; E. M. Durand, 'Notes sur les Chams,' in *Bulletin de l'École française d'Extrême-Orient*, July-Dec. 1907, p. 332 ff.

IV. *LAOS.*—The Laotians have a calendar very like that of the Siamese, which is also the calendar of the Khmers, and is of Indian origin (see above, II. [Cambodia], and CALENDAR [Siamese]).

1. **Eras.**—These are the same as among the Siamese and the Cambodians.[1]

2. **Cycles.**—The Laotians give to the animals of the duodenary cycle names very like those adopted by the Siamese, and not belonging to the everyday language. The names they use to denote the years of the denary cycle are ordinal numbers from Pāli.

3. **Years and months.**—The Laotian year is lunar, begins in December, and contains twelve months of 29 and 30 days alternately. In a series of three years, the first has 354 days, the second has 355 days, and the third is a compensating year with thirteen months = 384 days. It is the duty

[1] Cf. the Malaysian *būlan puwāsa* (= Skr. *upavāsa*), 'the month of fasting,' 'the fast of Ramadān'

[1] Laotian, which is a Tai dialect like Siamese, bears so close a resemblance to the latter that the art. CALENDAR (Siamese) may be referred to for the technical expressions.

of the *bonzes* to arrange the calendar so that the festivals shall fall at their proper seasons, and to determine how many days the intercalary month is to have. This is done without fixed rules, and according to the necessities of the case.

The months have no special names, but are merely numbered in order from one to twelve, as in Siam. The month is divided into two periods of fifteen days; the eighth, and especially the fifteenth, day of each period of the waxing or waning moon is a holiday; hence the growing custom in Laos of reckoning by weeks.

4. **Days.**—These are the same as among the Siamese and Cambodians: 1. *văn* (=day) *thit* (Siam. *văn athĭt*); 2. *văn čan* (Siam. *v. čăn*); 3. *văn khañ* (Siam. *v. ănkhan*); 4. *văn phut* (Siam. *v. phŭt*); 5. *văn păhat* (Siam. *v. pra:hăt*); 6. *văn suk* (Siam. *v. sŭk*); 7. *văn sau* (Siam. *v. săo*). *Văn thit* (Sunday) always appears four times every month; a day is sometimes added and sometimes omitted, in order to make the eighth and fifteenth days of the waxing or waning moon always fall on a Sunday.

5. **Hours.**—The Laotians, like the Khmers and Chams, reckon their hours by dividing the day into two parts of twelve hours each: from 6 a.m. to 6 p.m. is day, and from 6 p.m. to 6 a.m. is night. Mid-day corresponds to the end of the sixth hour of the day; midnight to the end of the sixth hour of the night. This is the Siamese system; formerly the day (from sunrise to sunset) was divided into eight *niam* of 1½ hours' length, and mid-day corresponded to the fifth *niam*. A *niam* was equal to ten *bat*, or about nine minutes of our time: a *bat* was equal to ten *nathi*, and a *nathi* almost equal to five and a half seconds of European time.

LITERATURE.—*Gouvernement général de l'Indo-Chine: Notice sur le Laos français*, published at the command of Paul Doumer, Governor-General of Indo-China, by the governing staff of Laos, under the direction of Lieut.-Col. Tournier, Resident Superior, Hanoï, 1900, pp. 186–188; Pionnier, 'Notes sur la chronologie et l'astrologie au Siam et au Laos,' *Anthropos*, iii. 489–507.

V. *NORTHERN TONGKING.*—There is a mass of little known ethnic groups, more numerous than important, ranged on the borders of Tongking and China, China and Laos, and Laos and Burma, which are classed together in French Indo-China under the administration of the military territories of Tongking and, in the case of a very small portion, under that of Northern Laos. These people seem reducible to a few ethnic groups: Tibeto-Burman, South Mongolian, and Indonesian. We may mention the Tais or Pou-Tais (divided generally into white, black, and red) and Nöa-Tais; the Pou-Ön, the Yun; the Man, the Mo, the Pa-Teng, the Kö-Lao, the Lolos, etc. They all use the Chinese or Laotian calendar more or less according to locality. Alongside of, and a degree below, these mixed peoples of the frontiers of Tongking are several semi-savage groups, possibly aboriginal, called by their neighbours of Annam, Cambodia, and Laos respectively *mọi*, *phnoṅ*, or *khā*, i.e. 'savages.' These peoples, who are slowly tending to disappear, are continually being driven back into the mountains and uncultivated parts of the country by the forward progress of the more civilized races surrounding them, and have scarcely begun to be the object of serious study. They have the various names of Bahnars, Sedangs, Jarais, Kalangs, Churus, Rongaos, Bolovens, Lovés, Samrés, Pors, Kuy Dek, etc. They do not seem to have a fixed calendar; all their computation of time is oral, empirical, and purely agricultural, based on the return of the principal seasons of rain and drought, and the sowings and harvests that bring round the return of certain rites. The year is lunar, the day is divided into several parts, according to the position of the sun or to the various occupations, and the time is told by means of such expressions as 'at the first, *or* second, cock-crow,' 'sunrise,' 'sunset,' 'when children go to bed,' 'after a first sleep,' 'the time of smoking a pipe,' 'the time of cooking rice,' etc.

LITERATURE.—E. Lunet de Lajonquière, *Ethnographie du Tonkin septentrional* . . ., Paris, 1906 (an important place is given in this volume to the partly unpublished works of Commandant Bonifacy); Bonifacy, 'Les Groupes ethniques du bassin de la Rivière Noire,' in *BSAP*, 5th July 1907, and 'Monographie des Máns, Dai-Ban, Côc ou Sừ'ng,' in *Rev. indochinoise*, 1908, Nos. 84–85; Dourisboure, *Dict. bahnar-français*, Hongkong, 1889.

A. CABATON.

CALENDAR (Japanese).—The Japanese have several ways of reckoning the days, months, years, and other periods. They have both solar and lunar time; Japanese, Chinese, and Occidental time; two national calendars, and several special periods; so that they have literally 'a time for everything,' and, in some cases, they are very particular to do a certain thing on 'time.' Of the two Japanese calendars, one reckons from the mythological founding of the Japanese Empire by Jimmu Tenno in 660 B.C., and is known as *kigen* (history-beginning); and the other is the system of special periods called *nengō*.

1. In the old style of reckoning, the years were named according to the twelve signs of the Chinese zodiac, taken in conjunction with the ten 'celestial stems' (*jikkan*), obtained by dividing into two parts each of the five elements (wood, fire, earth, metal, water). These elements are known in Japanese as *ki*, *hi*, *tsuchi*, *ka* (for *kane*), and *mizu*; and the subdivisions are called *e* (or *ye*) and *to*, of which the former is said to represent the active element and the latter the passive element. Rein's explanation is as follows: 'They [the Japanese] distinguish accordingly (with special Chinese signs) *ki-no-ye*, wood in general, and *ki-no-to*, worked wood; *hi-no-ye*, natural fire (of the sun, volcanoes), and *hi-no-to*, domestic fire; *tsuchi-no-ye*, raw earth, and *tsuchi-no-to*, manufactured earth; *ka-no-ye*, native metal, and *ka-no-to*, worked metal; *mizu-no-ye*, running water, and *mizu-no-to*, stagnant water.' This will all be made clear by reference to the table on p. 115.

2. The lunar year was divided into 12 months of 29 or 30 days each, and thus contained only 354 or 355 days; but this discrepancy from the solar year was made up by adding to certain years of every lunar cycle an intercalary month of varying length. An intercalated year contained 383 or 384 days. The months were named numerically, as follows:

Ichigatsu	First Moon
[or *Shōgatsu*	True Moon].
Nigatsu	Second Moon.
Sangatsu	Third Moon.
Shigatsu	Fourth Moon.
Gogatsu	Fifth Moon.
Rokugatsu	Sixth Moon.
Shichigatsu	Seventh Moon.
Hachigatsu	Eighth Moon.
Kugatsu	Ninth Moon.
Jūgatsu	Tenth Moon.
Jūichigatsu	Eleventh Moon.
Jūnigatsu	Twelfth Moon.

The months had also poetical, but no less practical, appellations, as follows:

1. *Mutsuki* (Social month), *Umutsuki* (Birth month), or *Tara-zuki* (Eldest-son month).
2. *Kisaragi* (Putting on new clothes).
3. *Yayoi* (Great growth).
4. *Uzuki* (Hare month), or *Mugi-aki* (Wheat harvest).
5. *Satsuki* (Early moon).
6. *Minazuki* (Waterless month [period of drought]).
7. *Fumizuki* (Rice-blooming month, or Composition month).
8. *Hatsuki* (Leafy month), or *Tsukimi-zuki* (Moon-viewing month).[1]
9. *Nagatsuki* (Long moon), or *Kikuzuki* (Chrysanthemum month).

[1] Or *Ina-agari-zuki* (Month when the rice comes up), or *Momijizuki* (Red-leaves month).

10. *Kannazuki* (Godless month),[1] or *Koharu* (Little Spring).[2]
11. *Shimotsuki* (Frost month), or *Yogetsu* (Sunny month).
12. *Shiwasu* (Finishing-up month), or *Gokugetsu* (Last moon).

The appropriateness of these names will be more evident if one bears in mind that the New Year of the lunar calendar begins from 3 to 6 weeks later than January 1.

3. The four seasons of spring, summer, autumn, and winter were recognized; and there were 24 periods[3] of 14 or 15 days each, which to a great extent indicated the weather, and which the farmer carefully followed in planning his labours. These were as follows, beginning in February, about the time of the beginning of the New Year (Old Cal.):

1. *Risshun* (Rise of Spring) 2. *Usui* (Rain Water)	February.
3. *Keichitsu* (Awakening of Insects) 4. *Shumbun* (Vernal Equinox)	March.
5. *Seimei* (Clear and Bright) 6. *Koku-u* (Cereal Rain)	April.
7. *Rikka* (Rise of Summer) 8. *Shōman* (Little Filling)	May.
9. *Bōshu* (Grain in Ear) 10. *Geshi* (Summer Solstice)	June.
11. *Shōsho* (Little Heat) 12. *Taisho* (Great Heat)	July.

SYNOPSIS OF THE SEXAGENARY CYCLE.

Names of the constellations in the Sinico-Japanese zodiac.	Wood.		Fire.		Earth.		Metal.		Water.		Names of our corresponding constellations.
	Ki-no.		*Hi-no.*		*Tsuchi-no.*		*Ka[ne]-no.*		*Mizu-no.*		
	e.	*to.*	*e.*	*to.*	*e.*	*to.*	*e.*	*to.*	*e.*	*to.*	
Rat (*ne[zumi]*)	1		13		25		37		49		Aries.
Ox (*ushi*)		2		14		26		38		50	Taurus.
Tiger (*tora*)	51		3		15		27		39		Gemini.
Hare (*u[sagi]*)		52		4		16		28		40	Cancer.
Dragon (*tatsu*)	41		53		5		17		29		Leo.
Serpent (*mi*) [*hebi*]		42		54		6		18		30	Virgo.
Horse (*uma*)	31		43		55		7		19		Libra.
Goat (*hitsuji*)		32		44		56		8		20	Scorpio.
Monkey (*saru*)	21		33		45		57		9		Sagittarius.
Cock (*tori*)		22		34		46		58		10	Capricornus.
Dog (*inu*)	11		23		35		47		59		Aquarius.
Boar (*i*) [*ui*]		12		24		36		48		60	Pisces.

13. *Rissha* (Rise of Autumn) 14. *Shosho* (Limit of Heat)	August.
15. *Hakuro* (White Dew) 16. *Shubun* (Autumnal Equinox)	September.
17. *Kanro* (Cold Dew) 18. *Sōkō* (Frost Fall)	October.
19. *Rittō* (Rise of Winter) 20. *Shōsetsu* (Little Snow)	November.
21. *Taisetsu* (Great Snow) 22. *Tōji* (Winter Solstice)	December.
23. *Shōkan* (Little Cold) 24. *Daikan* (Great Cold)	January.

4. In Old Japan the week was unknown; and it was not until the present era [Meiji] that the *ichi-roku*, or holidays on the 'ones' and 'sixes' of each month,[4] were introduced. This was speedily abandoned for the week system, with Sunday as an official holiday, and with names adapted from the Occidental names, as follows:

Nichiyōbi[1]	(Sun-day) = Sunday.
Getsuyōbi	(Moon-day) = Monday.
Kwayōbi	(Mars-day) = Tuesday.
Suiyōbi	(Mercury-day) = Wednesday.
Mokuyōbi	(Jupiter-day) = Thursday.
Kinyōbi	(Venus-day) = Friday.
Doyōbi	(Saturn-day) = Saturday.

There was, moreover, another division of the month more or less common even at the present day. By it each month is divided into three periods, called *jun*, of about ten days, known as *jōjun*, *chūjun*, and *gejun* (upper, middle, and lower decades).

5. The days of each month were named, not only in numerical order, but also according to the sexagenary tables mentioned above in connexion with the names of the years in 'a cycle of Cathay.' And the latter names were perhaps more important than the numerical ones, because, according to these special names, a day was judged to be either lucky or unlucky for particular events.

6. The hours were named both numerically and zoologically. The first plan was as follows:

Kokonotsu-doki (ninth hour)	11 p.m.–1 a.m. and 11 a.m.–1 p.m.
Yatsu-doki (eighth hour)	1–3 a.m. and p.m.
Nanatsu-doki (seventh hour)	3–5 a.m. and p.m.
Mutsu-doki (sixth hour)[2]	5–7 a.m. and p.m.
Itsutsu-doki (fifth hour)	7–9 a.m. and p.m.
Yotsu-doki (fourth hour)	9–11 a.m. and p.m.

With reference to this old-fashioned way of marking the hours, we quote further words of explanation from Chamberlain's *Things Japanese* (p. 470):

'Why, it will be asked, did they count the hours backwards? A case of Japanese topsy-turvydom, we suppose. But then why, as there were six hours, not count from six to one, instead of beginning at so arbitrary a number as nine? The reason is this: Three preliminary strokes were always struck, in order to warn people that the hour was about to be sounded. Hence, if the numbers one, two, and three had been used to denote any of the actual hours, confusion might have arisen between them and the preliminary strokes—a confusion analogous to that which, in our own still imperfect method of striking the hour, leaves us in doubt whether the single stroke we hear is half-past twelve, one o'clock, half-past one, or any other of the numerous half-hours.'

[1] The Shinto gods (*kami*), except Ebisu (god of wealth), who is deaf and does not hear the summons, were all supposed to leave the other parts of the country and to assemble in 'annual conference' in their ancestral home of Idzumo. And as the gods had thus neglected their usual business of watching over the people, it was not considered of any use to offer prayers or sacrifices, and that month was called *kami-naki-tsuki*, or *kami-na-zuki*, or *kanna-zuki*.

[2] Corresponding to 'Indian summer.'

[3] There were also 72 periods, more minute.

[4] 1st, 6th, 11th, 16th, 21st, 26th, 31st.

[1] These names are directly derived from the names of the planets.

[2] In reckoning the hours, a distinction was sometimes made between the morning and evening, as follows: *ake-mutsu* (6 a.m.) and *kure-mutsu* (6 p.m.).

We may add that this style of computation is based on multiples of 'nine' ($1 \times 9 = 9$, $2 \times 9 = 18$, $3 \times 9 = 27$, $4 \times 9 = 36$, $5 \times 9 = 45$, $6 \times 9 = 54$), and in each case the 'tail' figure of the product was chosen as the name of the hour (9, 8, 7, 6, 5, 4).

The second plan, based upon the heavenly menagerie, was as follows:

1. Hour of the Rat,	11 p.m.–1 a.m.
2. ,, ,, ,, Ox,	1–3 a.m.
3. ,, ,, ,, Tiger,	3–5 a.m.
4. ,, ,, ,, Hare,	5–7 a.m.
5. ,, ,, ,, Dragon,	7–9 a.m.
6. ,, ,, ,, Serpent,	9–11 a.m.
7. ,, ,, ,, Horse,	11 a.m.–1 p.m.
8. ,, ,, ,, Goat,	1–3 p.m.
9. ,, ,, ,, Monkey,	3–5 p.m.
10. ,, ,, ,, Cock,	5–7 p.m.
11. ,, ,, ,, Dog,	7–9 p.m.
12. ,, ,, ,, Boar,	9–11 p.m.

By both of these systems, each 'hour' was 120 minutes in length; but it was also divided into *jōkoku* and *gekoku* (upper and lower *koku*), each of which was thus equivalent to 60 minutes.

There is also a division of the *night* into watches (*kō*), five in number, as follows:

Shokō, First Watch—Fifth Hour, 7–9 p.m.
Nikō, Second Watch—Fourth Hour, 9–11 p.m.
Sankō, Third Watch—Ninth Hour, 11 p.m.–1 a.m.
Shikō, Fourth Watch—Eighth Hour, 1–3 a.m.
Gokō, Fifth Watch—Seventh Hour, 3–5 a.m.

7. Festivals and holidays demand some attention in connexion with the calendar.

The *go-sekku*, or five festivals, were, and are, carefully observed, although their dates have been changed to fit the new solar calendar. They fell on the first[1] (or, as some say, seventh) day of the first month, the third day of the third month, the fifth day of the fifth month, the seventh day of the seventh month, and the ninth day of the ninth month. They have various names, of which the most general are those made from the names of the months, such as *Shōgatsu-no-Sekku* (First Moon's Festival), etc. But these names are not so commonly used as more specific ones, which describe more or less particularly the nature of the festival. For instance, the festival of the Third Month is well known as *Jōmi-no-Sekku* (the Girls' Festival), or *Hinamatsuri* (Dolls' Festival); that of the fifth month is the famous *Tango-no-Sekku* (the Boys' Festival), or *Nobori-no-Sekku* (Banner Festival); that of the seventh month is commonly called *Tanabata-no-Sekku* (Festival of the Star Vega); while that of the ninth month is called *Chōyō-no-Sekku* (Indian Summer Festival), or *Kiku-no-Sekku* (Chrysanthemum Festival). Moreover, the Girls' Festival is also called *Momo-no-Sekku* (Peach Festival), and the Boys' Festival is called *Shōbu-no-Sekku* (Sweet Flag Festival).[2]

The national holidays are as follows:

Shihōhai	January 1.
Genji-sai	January 3.
Kōmei Tennō Sai	January 30.
Kigen-setsu	February 11.
Shunki Kōrei Sai	(about) March 21.
Jimmu Tennō Sai	April 3.
Shūki Kōrei Sai	(about) September 24.
Kanname Sai	October 17.
Tenchō-setsu	November 3.
Niiname Sai	November 23.

Shihōhai means 'four-sides-worship,' *i.e.* from the four points of the compass, or from all sides. *Genji-sai* means 'first-beginning-festival.' *Tenchō-setsu* is the Emperor's birthday. *Kigen-setsu* was originally a festival in honour of the ascension of Jimmu, the first Emperor, to the throne, and was thus the anniversary of the establishment of the Old Empire; but it is now observed also as the celebration of the promulgation of the Constitution (Feb. 11, 1889), and is thus the anniversary of the establishment of the New Empire. The *Jimmu Tennō* Festival, on April 3, is the so-called anniversary of the death of the Emperor Jimmu. The *Kanname* Festival in October celebrates the offering of first-fruits to the ancestral deities, and the *Niiname* Festival in November celebrates the tasting of those first-fruits by the Emperor. The Spring and Autumn Festivals, in March and September, are adaptations of the Buddhist equinoctial festivals of the dead, *Higan*, and are especially observed for the worship of the Imperial ancestors. The Emperor Kōmei was the father of the present Emperor, Mutsu Hito, and reigned from 1847 to 1867. The 16th of January and July were and still are special holidays for servants and apprentices. The 17th of each month is a regular holiday for Tōkyō barbers.

[1] Originally so established in the reign of the Emperor Uda (A.D. 888–897).

[2] See also the present writer's *Japanese Floral Calendar*, and J. Conder's elaborate paper in *TASJ*, vol. xvii. pt. ii. pp. 1–96.

Another special occasion is that known as *Setsubun*, which directly marks the end of winter and indirectly the end of the year. Theoretically, the two should correspond, but they do so only once in a few years. And yet *Setsubun* is a kind of 'New Year's Eve' and is an important festival. It is the time when beans are scattered around in every house to scare away the devils, and the following formula is also supposed to be effective:

O-ni wa soto:[1] *Fuku wa uchi*,
'Out with the devils: In with good fortune.'

This is also the occasion when 'each person present eats one more [bean] than the number of the years of his age.' The food eaten then is known as *azukimeshi*, and consists of red beans mixed with rice. This was likewise eaten in olden times on the 1st, 15th, and 28th of each month, which were the 'three days' (*sanjitsu*) then regularly observed as holidays. For a fuller description of *Setsubun*, see Hearn's *Glimpses of Unfamiliar Japan*, vol. ii. pp. 498–503; and for interesting notes on the New Year's Festival, see pp. 493–498 of the same volume.

8. A few words of explanation of the system of *nengō* may be interesting. Those eras do not regularly, but only occasionally, correspond with the reigns of the Emperors, because 'a new one was chosen whenever it was deemed necessary to commemorate an auspicious or ward off a malign event.' But hereafter the era will correspond with the reign of an Emperor. The names of some of these eras are quite famous, like the Elizabethan or the Victorian Era in English history. As the first era was a time of great reforms, it is known as the Taikwa Reformation; the Engi era, in the tenth century, is celebrated for important legislation; the Genroku era, in the seventeenth century, was 'a period of great activity in various arts'; and the Tempō era, of recent days, was 'the last brilliant period of feudalism before its fall.' This name was also given to the large 8-*rin* piece coined in that era. The Wadō era, in the fourteenth century, was so named on account of the discovery of copper; and the second era, Hakuchi, commemorates a 'white pheasant' presented to the Emperor. The present era is known as Meiji, which means 'enlightened rule.' The names of these periods are formed by the various combinations, more or less appropriate, of 68 Chinese words of good omen.

9. An explanation is necessary concerning the Japanese method of reckoning, which is 'inclusive.' Moreover, in the case of ages, the computation was made from New Year's Day, which thus became a kind of national birthday, as the birthday of the individual was not considered of sufficient importance. Thus a child born on the last day of a year would be considered two years old on the first day of the next year, because he had lived in both of these years. Therefore, in case of inquiring a person's age, it would be very important to know whether the reply gave 'Japanese years' or full years. Ignorance or forgetfulness of this

[1] But in shipping and express companies it is unlucky to repeat the first stanza, because *o-ni* may mean 'honourable freight,' or 'baggage.'

distinction has often led to mistakes, and quite serious ones, in the case of historical records, chronicles, and genealogical tables. The inclusive reckoning must also be carefully noted in such expressions as 'ten days ago,' 'ten days later,' 'for ten days,' etc., which may mean what Occidentals would express by 'eleven days.'

There is now, of course, considerable confusion between the old and the new calendars, of which the latter is official, but the former is popular and still observed in country districts. This confusion naturally leads to some ludicrous anachronisms. For instance, the 7th day of the 1st month (O.C.) was known as *Nanakusa* ('Seven Herbs'), because the people were wont to go out into the fields and gather seven certain kinds of vegetables for use on that day; but January 7 is too cold and too early. In some cases, however, the old day is retained, no matter whether it fits the new calendar or not.

LITERATURE.—Clement, 'Japanese Calendars,' in *TASJ*, vol. xxx. pt. 1 *; Bramsen and Clement, 'Jap. Chron. Tables,' *ib.* vol. xxxvii. suppl.; Rein, *Japan*, 2 vols., Leipzig, 1881–86; Chamberlain, *Things Japanese*^{5}, London, 1905; Inouye, *Sketches of Tokyo Life*, Tokyo, 1897; Tamura, *Japanese Bride*, New York, 1893; Griffis, *The Mikado's Empire*^{2}, New York, 1883, *Honda, the Samurai*, Boston, 1890; Hearn, *Glimpses of Unfamiliar Japan*, Boston, 1894, *Japanese Miscellany*, Boston, 1901, *Shadowings*, Boston, 1900; Mrs. Harris, *Log of a Japanese Journey*, Meadville, 1891, *Official History of the Empire of Japan*, Tokyo, 1893, *The Japanese Months*, Tokyo, 1898; Hachihama, *Superstitious Japan* (in Japanese), Tokyo; Clement, *Japanese Floral Calendar*, Chicago, 1905; J. ERNEST W. CLEMENT.

CALENDAR (Jewish). — I. **Historical.** — The Exile in Babylon had considerable effect upon the calendar used by the Jews, as upon so many other features of their religious life. It was during the Exile that they became acquainted with the names of the months which they retain to the present day, and to which a Bab. origin is actually assigned by the Talmud (Jerus. *Rōsh Hashshānā*, I. fol. 56*d*, l. 13 from bottom). Our earliest authority for these names is now the Assuan Papyri (ed. Sayce-Cowley, London, 1906), which make mention of the following months: Ab (Pap. F), Elul (A, H), Tishri (G), Kislev (B, C, D, E, J), and Shebaṭ (K). In the later discovered papyri edited by Sachau (Berlin, 1907) we find, further, Tammūz (*Document* i. l. 4. 19) and Marcheshvan (*ib.* l. 30; *ib.* ii. l. 28). Of the former group the post-exilic books of the Bible mention Elul, Kislev, and Shebaṭ, and in addition furnish the names Nisan (Neh 2^{1}, Est 3^{7}), Sivan (Est 8^{9}), Ṭebeth (2^{16}), and Adar (3^{13} etc.). But the older practice of distinguishing the months by numbers must have remained in force alongside of the new nomenclature, and accordingly we find such expressions as 'in the first month, which is the month Nisan' (Est 3^{7}), or simply 'in the first month' (3^{12}). This is the case likewise in 1 Mac., where we find τοῦ μηνὸς τοῦ ἐννάτου οὗτος ὁ μὴν χασέλευ (4^{52}), and also τοῦ μηνὸς τοῦ πρώτου (9^{3}), etc. (cf. Schürer, *GJV*^{3} i. 32). A complete list of the twelve months—Iyyar being added to the foregoing names—is given in the so-called *Megillath Ta'ănith* ('Roll of Fasts'), which probably dates from the beginning of the 1st cent. A.D. (cf. Schürer, i. 745; *JE* viii. 427). The name of the 13th, or intercalary, month is first met with in the Mishna (*Mĕgillā*, i. 4; *Nĕdārim*, viii. 5), occurring there as אדר שני ('second Adar'). In the Mishna, too, the number of days in a lunar year is fixed at 354, and in a solar year at 364 (cf. esp. *Tosefta Nazir*, i. 3, ed. Zuckermandel, Pasewalk, 1880, p. 284, l. 5); but this would, of course, apply only to common years.

As regards the intercalary month, it has been maintained, especially by Mahler (cf. Schürer, i. 748, n. 2), that, as the Babylonians had an intercalary cycle of 19 years, this may well have been adopted by the Jews. But the investigations of Oppert (*ZDMG* li. 138) and Weissbach (*ib.* lv. 195) have shown the futility of the assumption.[1] The Assuan Papyri yield ample proof of the fact that at the time after the Exile no such fixed cycle was in use among the Jews, and this would appear to be true also of the Talmudic period.[2] An eight-year cycle (*oktaeteris*) is probably referred to in the Book of Enoch (74^{13-16}), and Sextus Julius Africanus (early 3rd cent.) says that both the Greeks and the Jews intercalate three extra months every eight years (cf. Poznański, *JQR* x. 156); but the statements are somewhat indefinite (Schürer, i. 751). Explicit mention of the nineteen-year cycle is first made in post-Talmudic writings (see below).

In two pseudepigrapha which date probably from Maccabaean times, viz. the Book of Enoch (*loc. cit.*) and the Book of Jubilees (ch. 6), it is assumed that the year consists of 364 days, *i.e.* 52 complete weeks.[3] In each case the reckoning is by solar years, but it is hardly likely that this method was in general use at that time. It is recorded by David b. Merwān al-Mikmāṣ (or al-Muḳammeṣ), a writer of the 9th cent., that the Sadducees observed months of 30 days, *i.e.* solar months (Poznański, *REJ*, vol. l. p. 19). This testimony, however, adds the disadvantage of obscurity to that of lateness. It finds no support in Talmudic sources.

Records dating from the closing years of the Second Temple inform us that the time of new-moon was fixed on the evidence of observers who declared that they had descried the crescent in the sky. This would imply that no one knew beforehand whether the month was to have 29 days (hence called 'defective,' חסר) or 30 days ('full,' מעובר or מלא; cf. Bornstein, *op. cit.* 26 ff.). The regulation of the month was probably at first in the hands of the priests,[4] and was afterwards committed to the Sanhedrin. Similarly, a leap-year was decided upon only when required, the main factor in the question being the state of the young crops, as it was desired that the Passover

* From which some of the material here used is taken by permission.

[1] Also the hypothesis that this cycle was observed in ancient Babylonia, as held by Winckler, Jeremias, and others, must be unequivocally rejected (cf. Kugler, *Sternkunde und Sterndienst in Babel*, Münster, 1907 ff., ii. 192; Ungnad, in *OLZ*, 1910, p. 66). Moreover, to judge from the data collected by Kugler (i. 212), the regular employment of a nineteen-year cycle cannot be attributed to the Babylonians till the Seljūk era, by which time the influence of Greece may well have been making itself felt (see also Schurer, i. 748).

[2] In reference to the calendar of the Assuan Papyri, see Schürer and Ginzel in *Th Lz* xxxii. (1907), nos. 1 and 3; Gutesman, *REJ* liii. (1907) 194; Bornstein, *The Chronological Data of the Assuan Papyri* [in Heb.], Warsaw, 1909; and Westberg, *Die bibl. Chronologie nach Flavius Josephus*, Leipzig, 1910, p. 103 ff. Belléli (*An independent Examination of the Assuan and Elephantine Aramaic Papyri*, London, 1909) assumes that the dates given in these papyri must in all respects harmonize with the cycle of either eight or nineteen years, and then, finding this to be so in neither case, he maintains that the papyri are spurious—a most preposterous conclusion. It is related in the Talmud (*Sanhedrin*, 12*a*) that Aḳiba (first half of 2nd cent. A.D.) reckoned three successive years as intercalary—a fact which proves the non-existence of any intercalary cycle at that time. The same thing took place among the Karaites, who relinquished the method of computing the calendar for that of observing the moon (see below), as is attested by Levi b. Yefeth (beginning of 11th cent.; cited in Pinsker, *Liḳḳuṭe Ḳadmoniot*, Vienna, 1860, ii. 90).

[3] According to Epstein (*REJ* xxii. 11; *Eldad ha-Dani*, 1892, p. 156 ff.), the Book of Jubilees has a twofold determination of the year: the civil, with 12 months, eight of which had each 30 days, and four 31 days; and the religious, with 13 months of 28 days. But the theory has not yet been finally confirmed.

[4] See Zuckermann, *Materialien zur Entwick. der altjud. Zeitrechnung im Talmud* (Breslau, 1882), p. 7. This work contains a careful and exhaustive compilation of the data supplied by the Talmudic literature with reference to the method of determining both the ordinary and the intercalary month

should coincide with the earing of the corn (חרש האביב);[1] the intercalary month was therefore always an Adar. It was not till a later day that the position of the sun was also taken into account (תקופה, *tequfa*; cf. *Tosefta Sanh.* ii. 7). This procedure was continued after the destruction of the Temple, though we are informed that the Patriarch Gamaliel II. (*c.* 100 A.D.), when examining the first observers of the crescent moon, made use of drawings of the lunar phases (*Rōsh Hashshānā*, ii. 8). He is also said to have fixed the duration of the month at 29½ days, ⅔ of an hour, and 73 parts of an hour, but the last two terms are undoubtedly a late interpolation (cf. Schwarz, *Der jüd. Kalender*, Breslau, 1872, p. 20; Slonimski, *Yesōde ha-'Ibbūr*³, p. 34). In course of time less and less attention was paid to the evidence of observers, and various devices of computation were increasingly resorted to, though the Patriarch and his council still continued to fix the time of new moon in the traditional way. This constituted, in fact, one of the strongest elements of cohesion amongst the Jews of the Dispersion, and, as a special prerogative of Palestine, it was most jealously guarded. An attempt made by the Babylonian Jews to free themselves in this regard from the domination of Palestine proved altogether abortive (cf. the story about Ḥananya the nephew of Joshua b. Ḥananya [1st half of 2nd cent.] in the Jerus. *Nĕdārim*, viii. 13 fol. 40 *a*, l. 30, etc.; also Bacher, *Die Agada der Tannaiten*, i.² [Strassburg, 1903], 385).

At first the beginning of the month was announced to the various communities by fire-signals, but, as the Samaritans and Boethusæans would sometimes deceive the watchers by false signs, the tidings were afterwards conveyed by special messengers (*Rōsh Hashshānā*, ii. 2). As the messengers, however, could not always reach the communities outside Palestine in time to announce whether new moon would fall on the 30th or the 31st of the old, these outlying groups of Jews kept on the safe side by observing their festivals both on the day appointed by the Scriptures and on the following day, the latter thereby acquiring the name יום טוב שני של גליות ('Second feast-day of the Diaspora'). The Day of Atonement, however, was celebrated on the 10th of Tishri only, and thus formed an exception to the rule (but cf. Jerus. *Ḥallā*, i. 1, fol. 57*c*, l. 14).

In the period of the Amoraim, of whom some were resident in Palestine, and others in Babylonia (3rd–5th cent.), we hear with increasing frequency of calculations and regulations for the calendar. One of the most eminent workers in this field was Samuel, 'the astronomer' (first half of the 3rd cent.), who taught in Babylonia, and who, it appears, sought to systematize the calendar, but was unable to carry out his design (Schwarz, *op. cit.* p. 32, n. 1). He is said to have drawn up a calendar available for 60 years (*Ḥullin*, 95*a*), and was the first of his nation to maintain that the year consists of 365¼ days (*'Ērûbîn*, 56*a*), though he was still unaware of other essential principles of the calendar (*Rōsh Hashshānā*, 20*b*). One by one, however, these principles were adopted, though the general practice remained somewhat capricious in its adhesion thereto (see, *e.g.*, Zuckermann, *op. cit.* 46). One of the Palestinian Amoraim, Simon by name (*c.* 300 A.D.), speaks of 'calculators of the calendar' (אילין דמחשבין; Jerus. *Sukkā*, iv. 1, fol. 54*b*, l. 17; cf. Zuckermann, p. 61); while another, Huna b. Abin (middle of 4th cent.), enjoined that, in deciding upon an intercalary month, regard should be had exclusively to the position of the sun (*tequfa*; *Rōsh Hashshānā*, 21*a*), etc. Political occurrences and the constantly increasing despotism of Rome simply forced the Jews to devise a means of determining the times of new moons and feasts independently of eye-witnesses. It is even recorded that during the campaign of Gallus (from A.D. 351 onwards), who dealt very harshly with the communities in Palestine, an intercalary month was inserted after Ab instead of Adar (*Sanhedrin*, 12*a*; cf. Graetz, *Gesch. d. Juden*, 1868–78, iv. note 31). It is also stated by Jose, an Amora who lived about this time, that the Feast of Purim (celebrated on 14th Adar) must never fall upon a Sabbath or a Monday, as in that case the Day of Atonement would fall upon a Friday or a Sunday—a contingency which on many grounds was forbidden (Jerus. *Mĕgillā*, i. 2, fol. 70*b*, l. 23). By that time, therefore, the sequence of months from Adar to Tishri must have been precisely laid down. Jose is also reported to have sent a fixed order of festivals to the communities of the Diaspora (Jerus. *'Ērûbîn*, iii. end fol. 24*c*, l. 24). These various items, however, form but the rudiments of a continuous calendar.

Such a continuous calendar, according to a tradition that goes back to Hai Gaon († 1038), was constructed by the Patriarch Hillel II. in A.D. 359 (or, according to another version, 500, though by this time the day of Patriarchs was past). But the tradition, which stands quite alone, is confronted with grave objections. Of these the following two are of special weight: (1) The supposed calendar is never referred to in the Talmud, which received its final redaction at the end of the 5th cent. A.D. Nothing whatever is said there about the length of the month or the nineteen-year cycle, or anything else of the kind. (2) It is psychologically improbable that the Patriarch would of his own initiative divest himself of his highest privilege, and likewise of his most powerful means of influence amongst the Jewish communities both in Palestine and beyond it. Moreover, from the early post-Talmudic age we have dates which cannot be reconciled with the regular calendar in use to-day.[1] In point of fact, everything goes to indicate that the calendar, like all other productions of the kind, passed through a developing series of forms, and that it assumed its final shape in the schools of the official representatives of Judaism (called Geonim) in Babylonia.[2] To the period of the Geonim, say the 7th and 8th cents., likewise belong two tractates relevant to the subject. One of these is entitled *Pirḳe de Rabbi Eliezer*, and contains almost all the elements of the modern calendar (caps. 6–8), but it shows so many instances of self-contradiction that we must assume the presence of various interpolations (cf. also Zunz, *Gottesdienstliche Vorträge*², 1892, p. 287 ff.). The other, *Baraitha de Samuel* (*ed. princeps*, Salonica, 1861), is wholly engaged with astronomy, and yields a single date, 776 (beginning of cap. v.; cf. below, and *JE* ii. 520), but says nothing at all about regulations for the calendar.

In the 7th and 8th cents., again, Judaism in the East was disturbed by the rise of various sects, many of which refused to recognize the existing calendar. One of its outstanding assailants was Anān b. David, the founder of Karaism (2nd half of 8th cent.), who abandoned the method of computation, as being repugnant to Scripture, and reinstated that of lunar observation (see art.

[1] Cf. the story told of Gamaliel I. (at a time, therefore, when the Temple was still in existence) in *Tosefta Sanhedrin*, ii. 6 (p. 417 f.).

[1] One such date is the year 506, and another the year 776; cf. Bornstein, מחלקת רב סעדיה גאון ובן מאיר (Warsaw, 1904), p. 18.

[2] The first to indicate Babylon as the birthplace of the Jewish calendar was Th. Reinach (*REJ* xviii. 90 ff.), but the grounds on which he builds are false. Conclusive proof of the view that the continuous calendar had its origin in Babylonia during the post-Talmudic period is furnished at the earliest by the proceedings of Ben Meir (see below), the inferences therefrom having been drawn by the present writer (*JQR* x. 152 ff.), and then elaborated by Bornstein in the treatise just cited.

KARAISM). It is said, however, that in taking this step 'Anān simply wished to make a concession to the predominant power of Islām, and thus ingratiate himself with the Khalif (cf. Poznański, *REJ* xliv. 167). He is also said to have maintained that the intercalary month might be inserted as legitimately after Shebat as after Adar (Ḳirḳisāni, *Kitab al-'anwār*, ed. Harkavy, p. 313, l. 7; al-Birūni, *Chronology of Ancient Nations*, ed. Sachau, Leipzig, 1876-78, p. 59 [Arab. text] = p. 69 [Eng. tr.]). One of 'Anan's successors, Benjamin al-Nahawendi (9th cent.), states that there are two kinds of months: religious or lunar months of 29 or 30 days, which serve to fix the dates of feasts and fasts, and civil or solar months of 30 days. In order to allow for the residual five days (he ignores the odd hours altogether), he proposes that a month be intercalated every six years, so that after a cycle of 42 years (7×6) the months will again begin on the same day (cf. Poznański, *REJ* l. 19). That the 1st of the month, or the feast-day, should always coincide with the same day of the week—as would be possible only if the year contained an integral number of weeks, or 364 days—was a desideratum also of the sect of Maghāriya ('cave-dwellers'), whose period remains unascertained, and the Okbarites, whose founder, Meswi al-Okbari, lived in the latter part of the 9th cent. (*REJ*, *loc. cit.*). Jehuda the Persian, another heretic of that age, affirms that the Jews had always reckoned by solar months (*ib.*). The importance attached to the recognition or repudiation of the then existing calendar may be gauged by the fact that the official circles of Judaism were free to intermarry with the Isawites,[1] who actually recognized Jesus and Muhammad as prophets, but not with the Karaites, the ground of distinction being simply that the former received the calendar while the latter did not (*JQR* x. 159).

Against all these sectaries and heretics a stand was made by the Gaon Saadya b. Joseph al-Fayyūmi (892–942). In order to safeguard the existing system of calendar, he broached the remarkable theory that it was of immemorial antiquity, and that months and festivals had always been determined by calculation. He maintained that observation of the moon was introduced only in the time of Antigonus of Socho (3rd cent. B.C.), as heretics had arisen who questioned the accuracy of the calculations, and that this step was taken simply to show that calculation and observation were in perfect accord (see *REJ* xliv. 176).[2] It was an easy matter for the Karaites to quash this theory by means of data from the Talmud (cf. Poznański, *JQR* x. 271; also *The Karaite Literary Opponents of Saadiah Gaon*, London, 1908, *passim*), and the majority of Rabbinical authorities had likewise to admit that Saadya's contentions were absurd.

The last great controversy regarding the validity of the now universally recognized calendar broke out in 921. In that year, Ben Meir, a character otherwise unknown, made his appearance in Palestine, claiming to be a descendant of the Patriarchs. He sought to restore the prerogative of the Holy Land in the fixing of new moons and festivals, the means to be employed, however, being no longer observation but calculation. He proceeded to modify one of the most important regulations of the calendar. It had been laid down that, if the conjunction of sun and moon which marks the beginning of Tishri took place after noon on a particular day, the statutory beginning of that month should be transferred to the day following, and that, if the latter happened to be Sunday, Wednesday, or Friday, on none of which Tishri could legally begin (see below), a delay of two days should be made. Now, Ben Meir professed to have a tradition to the effect that the month of Tishri is to begin on the day of conjunction, save only in the case where that event takes place 642 parts of an hour after midday—the hour comprising 1080 parts (see below). On this principle the variation in fixing the months and festivals might amount to one or even two days. A case in point occurred in the years 921–923, and a cleavage between the Palestinian and the Babylonian Jews was the result. This dispute is referred to by the Karaite Sahl b. Maṣliaḥ (end of 10th cent.; see Pinsker, *Likkute Kadmoniot*, ii. 36) and the Syrian Elia of Nisibis (*Frag. syr. u. arab. Historiker*, ed. Baethgen, Leipzig, 1884, p. 84), neither of whom, however, mentions Ben Meir by name. The Jewish exilarch of the day invoked the aid of the young but erudite Saadya al-Fayyūmi, who disputed the position of the innovator with complete success. The definite interval selected by Ben Meir, viz. 642 parts of an hour, is, no doubt, traceable to the fact that, while the Jewish calendar was based upon the meridian of Babylonia, Ben Meir and his predecessors reckoned from that of Palestine. Now, in Palestine the year began with Nisan; in Babylonia, with Tishri. But the particular new moon of Nisan which formed the starting-point of the Palestinian reckoning fell on a Wednesday at nine hours of the day and 642 parts of an hour. When this number was transferred to Babylonia the fractional part was dropped, and hence the variation introduced by Ben Meir.[1] In any case, the controversy shows that the Jewish calendar had its origin in Babylonia during the period of the Gaons; and this conclusion is abundantly confirmed by other facts, which will be further discussed below, in the systematic part. But even Ben Meir never ventured to propose a return to the method of lunar observation.

The sole adherents of the latter were the Karaites, who had reverted in all respects to the ancient practice of determining the time of new moon by observation, and intercalating a thirteenth month when required by the state of the crops, *i.e.* the ripening ears (*'Abīb*). One of the earliest of that sect, Daniel al-Ḳumisi, held, indeed, that all recourse to astronomical calculation was mere cloud-peering and star-gazing, quoting against it Dt 18[10] (Harkavy, *Studien u. Mitteilungen*, VIII. i. 189), and his example was followed by nearly all the Karaites. Only if the atmospherical conditions rendered observation impossible was it allowable to resort to approximative calculations (Heb. דקרבה, cf. Bornstein, *Chronological Data*, p. 38). Not till the 14th cent. did they accept the nineteen-year cycle, and even then only for regions far away from Palestine, such as Byzantium, the Crimea, Poland, etc. In Egypt, for instance, as late as the 17th cent., we still find the practice of intercalating a supplementary month as necessity required (cf. Gurland, *Ginze Israel*, Lyck, 1865, i. 5). But the Karaites, scattered as they were in various countries, fell into confusion in the matter, and celebrated the same festival on different days. They were thus compelled gradually to fall back upon the expedient of calculation, and to construct astronomical tables for the purpose. One of the first to draw up such tables was Elia Bashiatchi of Constantinople

[1] The founder of this sect, 'Abu 'Isā al-Isfahāni, arose *c.* 700 A.D., and adherents were still to be found in the 10th cent. (cf. Poznański, *JQR* xvi. 770).

[2] A second theory was advanced by Maimonides († 1204), viz. that the method of calculation was always known, but could be legally resorted to only if the method of observation were abandoned, *i.e.* if there should no longer be a Sanhedrin in Palestine (see Bornstein, *op. cit.* 151).

[1] The first to call attention to this matter was Bornstein in the monograph already cited. The strictures of Epstein (*Haggóren*, v., 1906, 118–142) are incompetent. Cf. also Joffe in the Heb. Encyc. *Osar Israel*, *s.v.* 'Ben Meir' (iii., New York, 1909, p. 100 ff.).

(† 1490), whose book was called *Adderet Eliyahu* (*ed. princeps*, Constantinople, 1531). A thorough-going reformer appeared in Isaac b. Salomo of Chufut-Kale, in the Crimea (1755–1826), who, in his *Or ha-Lebāna* (Zitomir, 1872), maintained that perpetually repeated observations were unnecessary. He takes as his starting-point the new moon of Tishri 1779, when the so-called limits of visibility, *i.e.* the sum of the elongation and the arc of vision (*arcus visionis*), amounted to 13° 7′, and makes this the minimal limit, so that the day for which that particular result is given by calculation is thereby constituted the beginning of the month. He lays it down as a necessary condition that the moon shall not set before the sun. His followers, however, have discarded even the latter provision, and, in fact, take into account only the elongation, whose minimal limit is fixed at a little over 4° (cf. Jehuda Kokizov,[1] *Binā la-'Ittīm*, ii., Odessa, 1879, p. 2 ff.). Among the Karaites of the present day, accordingly, the determination of new moons and festivals depends wholly on the interval between conjunction and sunset, thus approximating—in theory—very closely to the method of the Rabbanites. In practice, however, the difference in the dating of festivals may amount to one or even two days. Nor do the modern Karaites recognize the so-called *dehiyoth*, 'displacements' (see below).

2. System and principles.—The Jewish calendar now in use is based upon a luni-solar system. The months are lunar, but provision is made for a periodic adjustment with the solar year. This is effected by the device of intercalating a month seven times in a cycle of 19 years, viz. in the 3rd, 6th, 8th, 11th, 14th, 17th, and 19th years (see below). As in all calendars of this type, the day commences with sunset, but the calendar day is reckoned from 6 p.m., and comprises 24 successive hours. The hour is divided into 1080 *halaqim*, 'parts,' the *heleq* being thus equal to 3⅓ seconds. This division is presupposed in works referring to the above-mentioned controversy between Ben Meir and Saadya (A.D. 921), but its origin is assigned to the sons of Issachar, who are said to have pursued the study of astronomy.[2] The number 1080 was fixed upon probably because it has many different sets of factors (Schwarz, *op. cit.* p. 48). Now, as the days of the week are distinguished in Hebrew not by names but by ordinal numbers, any definite point of time is commonly indicated by three numbers, specifying day, hour, and *heleq* respectively. Thus, *e.g.*, 3 d. 17 h. 480 p. (Heb. ג"י"ז ח"ף) signifies Tuesday, 11 h. 26′ 40″ a.m. In one particular instance, viz. the so-called *tequfa* of R. Adda—to be mentioned later—the *heleq* itself was divided into 76 *rega'im*.

The duration of the synodical month, *i.e.* the interval between one conjunction (*molad*) and the next, is 29 d. 12 h. 793 p. (כ"ט י"ב תשצ"ג)=29d. 12 h. 44′ 3″ 20‴. But, as the calendar month must have an integral number of days, it has either 30 days (never 31), and is then called 'full' (מלא or מעובר), or 29 (never 28), in which case it is called 'defective' (חסר). In the calendar now in use the months Nisan, Sivan, Ab, Tishri, and Shebat are always full, while Iyyar, Tammūz, Elul, Ṭebeth, and Adar are always defective. Marcheshvan and Kislev may be both full or both defective; or, again, Marcheshvan may be full and Kislev defective.[3]

In order to ascertain the exact time at which a year begins, it is necessary first of all to fix the conjunction which ushers in its first month, Tishri. This again involves the selection of a definite point from which the reckoning shall proceed. Now, as the world, according to a Talmudic tradition (*Rōsh Hashshānā*, 11*a*), was created in the month of Nisan, and as the recognized era is reckoned from that event, an attempt was made to calculate the date of the conjunction which began the first Nisan of history, the result thus arrived at being 4 d. 9 h. 642 p., *i.e.* Wednesday, 3 h. 35′ 40″ after midnight. The conjunction fixing the first Tishri could then be determined in two ways. One was to calculate half a year backwards from Nisan, giving the result 2 d. 5 h. 204 p. (בהר"ד); such was the practice in Palestine, and the formula thus found is that in general use. The other method was to calculate the date of the conjunction beginning the following Tishri, with the result 6 d. 14 h. (ו"יד)—the formula used in the Bab. schools (Bornstein, *Mahloket*, p. 112). The imaginary conjunction is called 'the *molad* of nothing' (*molad tohu*). Accordingly, if the conjunction of any particular month has been ascertained, it is an easy matter to fix that of the month following, as the date already known needs but to be supplemented by 29 d. 12 h. 793 p., or, as the four complete weeks may be eliminated without affecting the result, 1 d. 12 h. 793 p. (א"ב תשצ"ג), which gives what is called the 'character' of the month.

Now the year comprises 12 × 29 d. 12 h. 793 p., or 354 d. 8 h. 876 p., and a leap-year 13 × 29 d. 12 h. 793 p., or 383 d. 21 h. 589 p. But as the year, like the month, must have an integral number of days, an ordinary year has either 354 or 355 (but sometimes, as we shall see below, 353), and a leap-year 383 or 384 (sometimes also 385).[1] Hence, if the date of the conjunction of Tishri in any given year is known, we have simply to eliminate the complete weeks, *i.e.* 350—or 378—days, and then add, for a common year, 4 d. 8 h. 876 p. (ד' ח' תתע"ו), and, for a leap-year, 5 d. 21 h. 589 p. (ה' כ"א תקפ"ט). These two sets of numbers are called 'remainders' (יתרונות), and each forms the 'character' of its kind of year.

In order to fix the beginning of the year, *i.e.* the 1st of Tishri, the date of its conjunction must be calculated. But four possible cases may thus occur, the New Year being delayed by one or even two days. These four contingent delays (*dehiyoth*) are as follows:

1. The New Year cannot begin on a Sunday, or a Wednesday, or a Friday (לא אד"ו ראש). The last two days were excluded because otherwise the Day of Atonement (the 10th of Tishri) would fall on a Friday or a Sunday. As early as the Talmudic period, however, the Day of Atonement, for various ceremonial reasons, was not observed on the day immediately before or after the Sabbath (*Rōsh Hashshānā*, 20*a*). The Sunday, again, was excluded because otherwise the so-called Palm-day (*Hoshāna Rabba*, the 22nd of Tishri) would also fall upon a Sunday—a concurrence likewise prohibited on ritual grounds (*Ṣukkā*, 43*b*).[2] In such contingencies, therefore, the New Year is transferred to the following day.

2. Similarly, the New Year must begin a day later when the conjunction takes place after 12 o'clock noon, *i.e.* after 18 hours of the calendar day, the reason being that the crescent of the new moon is not visible on that evening. A conjunction of this character is called 'old *molad*,' and the rule bearing upon it is already given in the Talmud (*Rōsh Hashshānā*, 20*a*). But, if

---

[1] A Karaite, still [1910] living (see Poznański, *Die karäische Literatur der letzten 30 Jahre*, Frankfort, 1910, p. 10).

[2] Cf., *e.g.*, the passage from the *Sefer 'Ibrônot* given in Schwarz, p. 21, n. 2. The tradition regarding the astronomical knowledge of the sons of Issachar was derived from 1 Ch 12[32]. Saadya Gaon appealed to the same verse as an evidence of the high antiquity of the continuous Jewish calendar, and was on this account assailed by the whole Karaite school (cf. Poznański, *The Karaite Literary Opponents of Saadiah Gaon*, p. 39).

[3] We cannot well say why these two months in particular should vary in this way. It may have seemed desirable, however, to regulate exactly the months from Nisan to Tishri inclusive, so that the dates of the festivals might be easily ascertained; the irregularities could then be confined to the two months which follow immediately after Tishri.

[1] The reason for placing the limit lower in the case of the common year, and higher in that of the leap-year, was probably that the numbers 353 and 385 respectively approximate more nearly to the actual duration than do the numbers 356 and 382.

[2] The reasons for which the variation was made were thus of a ritual character in every case, as Geiger (*Jüd. Ztschr.* vi. 141 ff.) has rightly recognized. The attempts that have been made (so already Maimonides; cf. Schwarz, p. 54 ff.) to give an astronomical explanation of the variation must be regarded as too artificial.

the following day be a Sunday, a Wednesday, or a Friday, the New Year is delayed by two days.

3. If in any year following upon a common year the conjunction of Tishri takes place at or after 3 d. 9 h. 204 p. (ג' ט' ר"ד), the New Year cannot begin on that day or on the following day—Wednesday (by 1)—and in that case is delayed till Thursday. For, if 3 d. 9 h. 204 p. be added to the 'remainder' of a common year, *i.e.* 4 d. 8 h. 876 p., the result is 7 d. 18 h. As the Tishri of the following year, however, must not begin on Saturday (by 2) or Sunday (by 1), it would have to be delayed till Monday. But in that case the current year would have 356 days, which exceeds the statutory limit.

4. If the conjunction of Tishri in any year following upon a leap-year takes place at or after 2 d. 15 h. 589 p. (ב' ט"ו תקפ"ט), the New Year must be transferred to the Tuesday. For, if from these figures, or rather from 7 d. + 2 d. 15 h. 589 p., *i.e.* 9 d. 15 h. 589 p., the 'character' of a leap-year, viz. 5 d. 21 h. 589 p., be subtracted, the result is 3 d. 18 h. The Tishri of the previous year must, therefore, have begun on a Thursday, as Tuesday is excluded by (2), and Wednesday by (1). But if the current year were made to begin on Monday, the previous (embolismic) year would have only 382 days, which falls short of the lower statutory limit.

The duration of any particular year, *i.e.* the number of days in it, may accordingly be determined as follows: Calculate the date of the conjunction of Tishri, and also of the Tishri in the year following, allow for the 4 *dehiyoth*, and observe whether the year—if an ordinary year—has 353, 354, or 355 days, or, again—if a leap-year—whether it has 383, 384, or 385 days. If the number be 353 (or 383), the months of Marcheshvan and Kislev are both defective, and the year itself is in that case also called a 'defective' one (חסרה, abbreviated ח). If it has 354 (or 384) days, Marcheshvan is defective and Kislev full, the year being then designated as 'regular' (כסדרה, abbr. כ). Finally, if the number be 355 (or 385), Marcheshvan and Kislev are both full, and such a year is called 'complete' (שלמה, abbr. ש). Hence, as the first days of all the other months are determined on antecedent grounds, the complete sequence of festivals and seasons is now known. It is also usual to specify the day of the week on which the Passover begins, and the symbol employed is combined with symbols for New Year's Day and the length of the year in order to indicate the *qebia'* of the year. Thus, for example, the *qebia'* בחג signifies that New Year begins on Monday (ב = 2nd day of week), that the year is defective (ח = חסרה, *i.e.* Marcheshvan and Kislev with 29 days each), and that the Passover begins on Tuesday (ג = 3rd day of week). It may be shown without difficulty that there can be only 14 types of yearly calendars, 7 for common years, and 7 for leap-years.[1]

For common years: בחג, זחא, גכה, הכז, בשה, השא, זשג.

For leap-years: בחה, החא, זחג, גכז, בשז, השג, זשה.

But the *qebia'* of a year can also be determined without calculating when the ensuing Tishri shall begin. All that is necessary is to take cognizance of the extreme 'limits' (גבולים) within which the conjunction of Tishri must fall. It must then be noted whether the year is a leap-year (Group I.) or a common year; and if the latter, whether it immediately precedes (Group II.) or immediately follows (Group III.) a leap-year, or, finally, occurs between two leap-years. The various items have been set forth in a table, as given below.

The use of this table may be explained by an example. The *qebia'* בח denotes a year which begins on a Monday (ב) and has 353 days (ח = חסרה, 'defective'). The earlier limit is 7 d. 18 h., for, if the conjunction takes place after 12 o'clock noon on Saturday, the New Year cannot begin on Saturday (*dehiya* 2) or Sunday (*dehiya* 1), but must be delayed till Monday. If the year under consideration be a common year, as, *e.g.*, in Groups II.–IV., the following year will begin after 353 days, *i.e.* on a Thursday. But this, again, is permissible only if the conjunction of the corresponding Tishri takes place at or before 5 d. 17 h. 1079 p. Now, if we subtract from this formula the 'remainder' of a common year, or 4 d. 8 h. 876 p., the result is 1 d. 9 h. 203 p. But if this 'limit' be exceeded, *i.e.* if the difference amount to 1 d. 9 h. 204 p. or more, the conjunction of the following Tishri will take place at 5 d. 18 h. In that case, however, the following year will not begin before Saturday (by *dehiyoth* 1 and 2), *i.e.* after 355 days, and the year under consideration would then be 'complete' (ש). Its *qebia'* would thus be no longer בח, but בש. Hence the 'limits' for בח in a common year are, on one side, 7 d. 18 h., and, on the other, 1 d. 9 h. 204 p.

The term *tequfa* ('course of the sun') signifies the moment at which the sun arrives at the equinoctial or solstitial point, or, in other words, the mean beginning of one of the four seasons. Thus we have *tequfat Nisan* (beginning of spring), *tequfat Tammūz* (beginning of summer), *tequfat Tishri* (beginning of autumn), and *tequfat Ṭebeth* (beginning of winter). The interval between two *tequfoth* was fixed in the 3rd cent. A.D. by the Amora Samuel (see above) at 91 d. 7½ h., the starting-point of the enumeration being made to coincide with the beginning of Nisan, and the first *tequfa* of the series fixed exactly at 4 d. 0 h. (Tuesday, 6 o'clock p.m.), 7 d. 9 h. 642 p. (ז' ט' תרמ"ב) before the conjunction of the new moon of Nisan. This interval is precisely one quarter of the Julian year. The first *tequfa*, however, moves forward every successive year by 7½ h. × 4 = 1 d. 6 h., which in 28 years amounts to 1 d. 6 h. × 28 = 5 weeks, so that, after a period of 28 years, the first *tequfa* falls on the same day of the week and at the same instant of time as before. This period was therefore called the 'solar cycle' (*maḥzōr ḥamma*) or the 'great cycle' (*maḥzōr gādōl*). Now, according to Samuel, the length of the solar year is 4 × 91 d. 7½ h., or 365¼ days. But it was observed that this did not quite agree with the astronomical facts, and accordingly we find still another *tequfa*, named after Rabbi Adda, which gives 365 d. 5 h. 997 p. 48 rg. (*ḥeleq* = 76 *rega'im*), or 365 d. 5 h. 55′ 25·44″, as the length of the year, and places the first *tequfat Nisan* only 9 h. 642 p. (ט' תרמ"ב) before the conjunction. This corresponds very closely with the Ptolemaic year, in which the odd seconds are given sometimes as 10, sometimes as 12. But although the figures of the Rabbi Adda are nearer to the facts than those of Samuel, yet they too

QEBI'OTH.

Group.	Year of Cycle.	בח	בש	גכ	הכ	הש	זח	זש
I.	3. 6. 8. 11. 14. 17. 19	7 d. 18 h.	1 d. 20 h. 491 p.	2 d. 18 h.	3 d. 18 h.	4 d. 11 h. 695 p.	5 d. 18 h.	6 d. 20 h. 491 p.
II.	2. 5. 10. 13. 16	7 d. 18 h.	1 d. 9 h. 204 p.	2 d. 18 h.	3 d. 9 h. 204 p.	5 d. 9 h. 204 p.	5 d. 18 h.	6 d. 9 h. 204 p.
III.	1. 4. 9. 12. 15	7 d. 18 h.	1 d. 9 h. 204 p.	2 d. 15 h. 589 p.	3 d. 9 h. 204 p.	5 d. 9 h. 204 p.	5 d. 18 h.	6 d. 0 h. 408 p.
IV.	7. 18	7 d. 18 h.	1 d. 9 h. 204 p.	2 d. 15 h. 589 p.	3 d. 9 h. 204 p.	5 d. 9 h. 204 p.	5 d. 18 h.	6 d. 9 h. 204 p.

[1] See the detailed proof in Schwarz, p. 62 ff.

[1] These limits were at a very early date grouped in the so-called 'four gates' (*Arba'ah She'arim*), corresponding to the four days of the week—Monday, Tuesday, Thursday, and Saturday—on which alone the New Year could begin. So far as we know, the earliest writer to apply the method was Saadya Gaon; cf. Poznański, *REJ* xl. 87, and Bornstein, *Maḥloḳet*, p. 99.

show an error, as the precise length of the year is only 365 d. 5 h. 48′ 48″.

The earliest known reference to the '*tequfa* of R. Adda' under that designation is made by Isaac b. Baruch Albalia of Cordova (A.D. 1035–1094; cf. Abraham b. Ḥiya's *Sefer ha-'Ibbûr*, iii. 4), but the period it indicates is already referred to by al-Bīrūni (Arab. text, p. 183 = Eng. tr. p. 163). He states that, when the Jews wish to determine the year *precisely* (اذا دققوا), they reckon its length as 365 d. $5\frac{3}{4}\frac{1}{7}\frac{1}{8}\frac{1}{4}$ h., which corresponds exactly with the *tequfa* of R. Adda. But this *tequfa* must go still further back, as it agrees with a date (776) mentioned in the *Baraitha* of Samuel (see above).[1] Moreover, the intercalary system in common use among the Jews, of which we shall treat presently, could never have been framed except on the basis of R. Adda's—not Samuel's—*tequfa*.[2] In all probability, therefore, its duration was calculated about the 8th cent. A.D., *i.e.* at the period in which the Jews in the East began to study astronomy, and became acquainted with the Almagest.[3]

As already indicated, the Jewish year is a composite arrangement. Its months are lunar, but from time to time an extra month is intercalated in order to effect an adjustment with the solar year. This was done even before the establishment of the continuous calendar. It was regarded as a matter of special importance that the month of Nisan should not begin before its *tequfa* (beginning of spring), and a second Adar was intercalated as required; but at that time nothing was as yet known of a regular and periodic intercalation, recurring according to definite rules. Such an arrangement was in all probability first introduced along with the continuous calendar itself, when the Metonic cycle was adopted. It had been observed that 235 lunar months are equal to 19 solar years. But, as 235 ÷ 19 gives the quotient 12, with 7 as remainder, an additional month, a second Adar, was intercalated 7 times in the period of 19 years, which was called the 'little cycle' (*maḥzōr qāṭān*). But while, according to the majority of scholars, the leap-years of both the Metonic and the Callippic system are the 2nd, 5th, 8th, 10th, 13th, 16th, and 18th years of the cycle (cf. *JQR* x. 161), in the Jewish calendar they are the 3rd, 6th, 8th, 11th, 14th, 17th, and 19th (as in the Heb. formula גו"ח אדז"ט). The most probable explanation of the Jewish order is that the position of the heavenly bodies at the time when the intercalary system was instituted did not require the supplementary month till the 3rd year of the cycle, then the 6th, 8th, etc.; and, as has been said, exact astronomical calculations show that this sequence is in harmony with the *tequfa* of R. Adda. We have also information to the effect that there were other intercalary systems in operation, viz. בה"ז יגו"ח (2. 5. 7. 10. 13. 16. 18), אדו"ט בה"ז (1. 4. 6. 9. 12. 15. 17), and גה"ח אדו"ט (3. 5. 8. 11. 14. 16. 19). But all these are in reality forms of the normal sequence, the variation depending simply on the particular year of the cycle with which the intercalation begins. Thus, if the figures of the first formula be increased by 1, those of the second by 2, and those of the third by 3, the result in each case is the ordinary formula.[1] Hence we ought to speak, not of different intercalary series, but of different mnemonic formulæ.

The length of the year as fixed by the *tequfa* of Samuel (= the Julian year of 365¼ days) is not an exact measure of the 19-year cycle, as in that period it shows an aggregate excess of 1 h. 485 p. But even the *tequfa* of R. Adda, which was adapted to this cycle, does not fully agree with the facts, as the exact duration of the year is 365 d. 5 h. 48′ 48″, not 365 d. 5 h. 55′ 25·44″. Thus, while 235 lunar months are equivalent to 235 × 29 d. 12 h. 793 p. = 6939 d. 16 h. 595 p. = 6939 d. 16 h. 33′ 3⅓″, 19 (true) solar years amount only to 6939 d. 14 h. 27′ 12″, the former quantity being in excess by 2 h. 5′ 5⅓″. In 1000 years the cumulative error is 4·6 days, and in 2000 more than 9 days. But this discrepancy was simply left out of account.

The 'remainder' of a common year, as already stated, is 4 d. 8 h. 876 p., and that of a leap-year 5 d. 21 h. 589 p. But in the cycle of 19 years (12 common and 7 leap-years) the conjunction of the *molad* of Tishri moves forward by 2 d. 16 h. 595 p. (ב' י"ו תקצ"ה), and in 13 such cycles (13 × 2 d. 16 h. 595 p. =) 34 d. 23 h. 175 p., or by discarding the complement of full weeks, 6 d. 23 h. 175 p., which falls short of an additional week by only 905 p. Ignoring the odd parts (such fractions having in many cases no influence upon the determination of the months), we have thus a cycle of (13 × 19 =) 247 years, after which the *qebi'oth* of the years might recur. But they can never recur exactly, as it sometimes happens that even a single part (*ḥeleq*) alters the *qebia'*; thus, *e.g.*, 17 h. 1079 p. + 1 p. is a so-called 'old *molad*.'[2] An exact repetition of *qebi'oth* would ensue, in fact, only after 36288 19-year cycles, or 689472 years—a period of no practical use. A perpetual Jewish calendar that would be serviceable in any real sense is thus out of the question.

A partial approximation to such a calendar, however, is furnished by the so-called 'Table of the 61 beginnings' (לוח בעל ס"א ראשים),[3] which exhibits the *qebi'oth* of a complete 19-year cycle. As we saw above, there are 7 varieties of *qebi'oth*, and, therefore, in a cycle (7 × 19 =) 133. But in actual practice it is found that 72 of these combinations

[1] It is here stated, at the beginning of Section V., that 'sun and moon and years of release and *tequfoth* were readjusted' in A.M. 4536, and that *tequfat Tishri* (of A.M. 4537) took place on Tuesday, towards the end of the day, and 2 hrs. before the conjunction of the month of Tishri, which occurred at the beginning of Wednesday (= Tuesday, 6 p.m.). This was the 17th of September, A.D. 776. The *tequfa* of Samuel, however, fell 6 d. 11 h. later, *i.e.* on the 24th of Sept. 3 a.m. Now, if we calculate the *tequfat Nisan* of the Creation by the measurement of R. Adda, we get 4 d. 13 h., which differs from his *tequfa* by 13 h. only. This has been duly emphasized by Bornstein (*Maḥloḳet*, p. 22).

[2] As the Feast of the Passover could not take place before the beginning of the *tequfat Nisan* (beginning of spring), *i.e.* the 26th of March, then, according to Samuel's *tequfa*, an intercalary month would already be required at the end of one year, and thereafter at successive intervals of 3, 3, 2, 3, 3, 3 years. This intercalary sequence would not be the ordinary one (גו"ח אדו"ט, see below), but בה"ח יגו"ט. A similar system is found among the Samaritans, who, in fixing the Passover, take account only of the *tequfa*, and had thus, during the 16th cent., the intercalary sequence בה"ז יגו"ח.

[3] The earliest known Jewish astronomer, Mashallah, lived in the reign of the Khalif al-Manṣūr (A.D. 754–775; cf. Steinschneider, *Die arab. Literatur d. Juden*, 1902, p. 15). Here, therefore, we find a corroboration of our theory that the constant calendar of modern Judaism is of relatively late date. The calculation of conjunctions, for instance, cannot have been finally established even as late as A.D. 776, for, according to the *Baraitha* of Samuel, the conjunction of Tishri in that year took place at 4 d. 0 h.; while, according to the modern reckoning, it did not occur till 4 d. 3 h. 363 p. This fact is of great importance in the history of the Jewish calendar (cf. Bornstein, *loc. cit.*).

[1] Such apparently dissimilar intercalary series are given by Joshua b. 'Alan (9th or 10th cent.; see the bibliography at the end), al-Bīrūnī (ed. Sachau, p. 55 [text], p. 64 [tr.]), Hai Gaon († 1038) in Abraham b. Ḥiya, p. 97, and Isaac Israeli (in an ancient *Baraitha* in *Yesôd Olâm*, iv. 2). Al-Bīrūnī says that the first two series were in use among the Jews of Palestine (اهل الشام: not of Syria, as Sachau translates), while the third was the universally received order, and emanated from the Jews of Babylonia (اهل البابل: not Babylonians, as rendered by Sachau). Cf. also *JQR* x. 107 ff.

[2] The above computation is said to have been made by the Gaon Naḥshon b. Ṣadoq (last quarter of 9th cent.), who, it is also stated, instituted a corresponding cycle, called *'Iggul*. This *'Iggul* is first mentioned by Abraham b. Ezra († 1067) (cf. *Shene ha-Meoroth*, ed. Steinschneider, Berlin, 1847, p. 1), though without the name of its originator. This is given for the first time by Joseph b. Shemtob b. Jeshu'a of Turkey, who published the *'Iggul* in his *Sheêrith Josef*, a work on the calendar, composed in 1489 and issued at Salonica in 1521 (cf. Steinschneider, *Bibliotheca Mathematica*, 1894, p. 102, where mention is made also of the Lat. tr. of the *'Iggul* by Seb. Münster).

[3] First mentioned by Isaac b. Joseph Israeli in his *Yesôd Olâm* (composed 1310), iv. 10.

recur, so that there remain only (133 − 72 =) 61 possible forms, which are duly calculated and set forth in tables (cf. *e.g.* Schwarz, p. 79).

There exist also formulæ and tables for synchronizing Jewish dates with the Julian and the Gregorian calendar, with which devices, however, we cannot deal here, and must simply refer to the books and tables cited at the end of this article. A formula for assimilating Jewish dates with the Muhammadan reckoning has recently been devised by A. Frankel (*Ztschr. f. mathem. u. naturwissensch. Unterricht*, 1908, pp. 598–605; *MGWJ*, 1909, pp. 736–743).

3. Eras.—After the return from the Exile the Jews reckoned by the years of the Persian kings. This is the practice in the newly discovered papyri of Elephantine (ed. Cowley-Sayce, and also Sachau), and in the post-exilic books of the Bible (*e.g.* Hag 1[1], Zec 1[1,7], Dn 9[1], Ezr 1[1] etc.). Subsequently they made use of the era of the Seljûks, or the so-called 'contracts-era' (*minyan shetaroth*), which began in the autumn of 312 B.C., and is first cited in 1 Mac. (cf. *e.g.* 1[10]). This era was in use among the Jews in the East till the 16th cent., and is still observed by them in Yemen (cf. Saphir's 'Travels,' *Eben Sappir*, i. 62*b*). During the period of independence under the Maccabees, dates were indicated by the year of the reigning prince, and a national epoch was found in the year when Judæa gained its freedom under Simon (1 Mac 13[42]; cf. Schürer, i.[3] 242), *i.e.* 170 ær. Sel. = 143–142 B.C. After the Jews lost their independence and their national rulers, they probably reckoned by the years of the Roman governor or consul. The Book of Jubilees fixes its dates by jubilee periods of 49 years divided into 7 year-weeks of 7 years each, but it is unlikely that this method was ever followed in practical life. The Talmud, however, may possibly allude to such an era in *Sanhedrin*, 97*b* (cf. Isr. Lévi, *REJ* i. 110).

After the destruction of the second Temple, dates were reckoned from that event (*Le-ḥorban ha-bayit*; cf. *Seder Olam*, cap. 30, *Abôdâ Zârâ*, 9–10), as also, especially in documents, by the years of the reigning Emperor, or perhaps of the eponyms (see Bornstein, *Maḥloḳet*, p. 65); both methods were in vogue in Palestine, and the former also in Southern Italy (Ascoli, *Iscrizioni inedite*, nos. 24–33). In Babylonia, on the other hand, and generally throughout the Diaspora in the East, the Jews continued to use the era of the Seljûks, which, as said above, is still observed in some districts. In the Talmud, moreover, in the tractates just cited, the era of the Creation (*Li-bri'ath 'olâm*; in a later epoch it is called *Li-yeṣira*) is mentioned, but it was not used in ancient times, except, at most, in learned works (*e.g.* the *Baraitha* of Samuel), nor do we know when it was adopted. Rühl's conjecture (in *Deutsche Ztschr. fur Geschichtswissenschaft*, 1898, p. 185; referred to in *JE*, *s.v.* 'Era'), that the introduction of this era was coincident with the change from the 8-year to the 19-year cycle, which is said to have taken place between A.D. 222 and 276, conflicts with the view advanced here regarding the gradual development and relatively late establishment of the continuous calendar among the Jews, and, what is more, it is at variance with historical facts, as nothing is known of this method of dating even in Talmudic times (cf. Harkavy, *Altjüd. Denkmaler aus d. Krim*, p. 161). In Europe it is first met with in epitaphs in the catacombs of Venosa, dating from 822 and 827 (Ascoli, *op. cit.*, nos. 25, 31); thereafter we find it used by Sabbataj Donnolo, also of Southern Italy, in the year 925 (cf. his *Commento sul Libro della Creazione*, ed. Castelli, p. 3); likewise in a document, of date 1034, from Kairwan (*JQR* xvi. 576). The beginning of this era coincides with the year 3760 B.C., but its accuracy was questioned in the 16th cent. by Azaria de Rossi in his *Meor Enayim* (*ed. princ.*, Mantua, 1574). The well-known Karaite Firkowitch professes to have discovered another mundane era in epitaphs from the Crimea; this begins 151 years before the ordinary Jewish era, *i.e.* in 3911 B.C., but is undoubtedly spurious (cf. Harkavy, *op. cit.* 152). An era reckoned from the captivity of Samaria, which is assumed to have begun in 596 B.C. (*Le-galuthenu*), and found in similar epitaphs, which are said to date from the years A.D. 6, 30, 55, 89, and 369 (Firkowitch, *Abne Zikkaron*, nos. 1–4 and 25), is likewise a fabrication, as is conclusively shown by Harkavy (p. 144 ff.). In recent times the Zionists also have adopted the era of *Le-galuthenu*; but in this case the term denotes the destruction of the second Temple, which they assign to A.D. 70.

LITERATURE.—A complete catalogue of works upon the Jewish calendar will be found in the relative passages of Steinschneider, 'Die Mathematik bei d. Juden' (*Bibliotheca Mathematica*, 1893–1901; *Abhandl. zur Gesch. d. Mathematik*, ix. 473–483; *MGWJ*, 1905–1907). The oldest surviving treatise is that of Joshua b. 'Alan (9th or 10th cent.), preserved in a work (ed. Harkavy, in *Haggôren*, iv. 75–79; cf. Poznański, *Ztschr. f. hebr. Bibliog.* vii. 130–131) of Ben Mashiaḥ, a Karaite (1st half of 10th cent.). The calendar was dealt with in Saadya Gaon's lost Arab. work, *Kitâb al-'ibbûr*; see, most recently, Poznański, *loc. cit.* xii. 122, no. 27, and Marx, *REJ* lviii. 299. The first complete and systematic account that has come down to us is that given in al-Bîrûnî's *Chronology of Ancient Nations* (ed. Sachau, Leipzig, 1878; Eng. tr., London, 1879), chs. vii. xiv. The earliest Jewish writer on the subject in Europe was Ḥasan ha-Dayyan of Cordova (fl. 972); three works on the calendar are attributed to him, but survive only in a few quotations. The treatise of Isaac b. Baruch ibn Albalia of Cordova (1035–1094) is also lost, but fairly large quotations therefrom are found in the work of Abraham b. Ḥiya of Barcelona (beginning of 12th cent.), whose *Sefer ha-'Ibbûr* (ed. Filipowski, London, 1851) is one of the most important on the subject. A short treatise bearing the same name was composed by Abraham ibn Ezra (1092–1167; ed. Halberstam, Lyck, 1874); Moses Maimonides (1135–1204), at the age of 23, wrote a small monograph entitled *Ma'amâr ha-'Ibbûr* (*ed. princ.* 1489; Germ. by Dunner, *Die älteste astronom. Schrift d. Maimonides*, Wurzburg, 1902), which, however, is of little value; but the relative section of his *Religious Code* (*Hilchoth Qiddush ha-Ḥodesh*; Germ. trs. and edd. by Hildesheimer [1881], Mahler [1889], Baneth [1898–1903]) is of eminent value. A work dealing with principles, *Yesôd Olâm*, was written in 1310 by Isaac b. Joseph Israeli in Toledo (*ed. princ.*, Berlin, 1777; critical ed., Berlin, 1846–48; the section dealing with the literary history [apart], ed. Weikert, Rome, 1901). The *She'erith Josef* (Salonica, 1521, 1568) of Joseph b. Shemṭob b. Jeshu'a, written in 1489, has already been mentioned. The following also deserve notice: Seb. Münster, *Kalendarium Heb.* (Basel, 1537), which contains an anonymous Heb. work upon the calendar with Munster's Lat. tr.; Issachar ibn Sausan, *Tiḳḳun Issachar* (*ed. princ.*, Constantinople, 1564); Eliezer b. Jacob Belin, *'Ibronoth* (Lublin, 1614–15), and Scaliger, *de Emendatione Temporum* (3rd [best] ed. 1629).

The following works, from the 19th cent. and later, are worthy of note: Ideler, *Handb. d. math. u. techn. Chronologie*, i. (Berlin, 1825) pp. 477–583; L. M. Lewisohn, *Gesch. u. System d. jüd. Kalenderwesens* (Leipzig, 1856); Slonimski, *Yesôde ha-'Ibbûr* (*ed. princ.*, Warsaw, 1853, 3rd [last] ed., Warsaw, 1889); A. Schwarz, *Der jud. Kalender historisch u. astronomisch untersucht* (Breslau, 1872); J. Lurie, *Matematitcheskaja teorja jewrejskaho kalendarja* ('Mathematical Theory of the Jewish Calendar,' in Russian, Mohilev, 1887; cf. Bornstein in the *Hakkerem*, i. 317–336); S. B. Burnaby, *Elements of the Jewish and the Muhammadan Calendars* (London, 1901), pp. 1–364; Schürer, *GJV* i.[3] (Leipzig, 1901) 745–760; C. Adler and M. Friedländer, art. 'Calendar,' in *JE* (iii. [1902] pp. 498–508); A. Kistner, *Der Kalender d. Juden* (Carlsruhe, 1905).

Tables for synchronizing Jewish dates with the Christian era, and for other purposes, as also calendars for prolonged periods, have been framed by the following: Isidore Loeb, *Tables du Calendrier juif depuis l'ère chrétienne jusqu' au xxx^e siècle* (Paris, 1886), which likewise gives the older literature; Sossnitz, *'Idân Olamîm* (Warsaw, 1888); E. Mahler, *Chronol. Vergleichungstabellen*, etc., Heft ii. (Vienna, 1889) pp. 69–140; M. Simon, *200-jahriger Kalender zur Umwandlung des jud. Datums*, etc. (for A.D. 1781–2000, Berlin, 1889), and *12[illegible] jahriger Parallel-Kalender d. jud. u. christl. Zeitrechnung* (for 800–1996, Berlin, 1895); B. Zuckermann, *Anleitung u. Tabellen z. Vergleichung jud. u. christl. Zeitangaben* (Breslau, 1893); E. Jusué, *Tablas de reduccion del computo hebraico al christiano y vice-versa* (Madrid, 1904); Schram, *Kalendariographische u. chronologische Tafeln* (Leipzig, 1908), etc.

Special questions relating to the calendar and its history are dealt with by the following (names in alphabetical order): Azaria de Rossi (†1584) in *Maṣref la-Kesef* (ed. Filipowski, London, 1854); L. Bendavid, *Zur Berechnung u. Gesch. d. jud. Kalenders* (Berlin, 1817), refutation by M. Kornick, *Dabar be-'itto* (Breslau, 1817); A. le calendrier juif (Paris, 1883); D. Oppenheim, in *MGWJ* v. 412–419; H. M. Pineles, *Darka shel Tora* (Vienna, 1861, pp. 211–262); Th. Reinach, in *REJ* xviii. 90–94; A. Schwarz, in *MGWJ* xxxii. 375–383; M. Steinschneider, in *Hayyôna* (ed. S. Sachs, i. [Berlin, 1851] pp. 17–35), and in Brann's *Jüd. Volkskalender* (1895–96); B. Zuckermann in *MGWJ* v. 182–186, etc.

SAMUEL POZNAŃSKI.

CALENDAR (Mexican and Mayan).—The ancient Mexicans and Mayas, as well as the Zapotecs, who inhabited the tract of country lying between these peoples, represented the same general type of civilization, and used a calendar essentially the same in character. We are more conversant with this calendar than with any other of their institutions; and, especially in regard to the Mexican and Mayan hieroglyphics, where it plays a commanding part as a medium of divination, it forms in reality the basis of all our knowledge. For its reconstruction we are indebted mainly to the researches of E. Seler and E. Förstemann, but we possess as yet no conclusive answers to the following vital questions: (1) To what shall we trace the *tonalamatl* (Mex. 'book of days') of 260 days, which, in conjunction with the solar year of 365 days, forms the foundation of the calendar? (2) Was provision made for intercalations in the solar year? (3) How are the dates of the Dresden Mayan MS[1] and the Mayan monuments to be adjusted to our own chronology?

1. The tonalamatl, one of the two main constituents of the calendar, consists of 260 days, reckoned by means of 20 distinct symbols of days in combination with the numbers 1 to 13. The peculiar nature of the arrangement may be learned from the accompanying table, as found in the Mexican Codex Borgia[2] and the related hieroglyphics. (For the sake of convenience the order of sequence is given here as from left to right and downwards, instead of from right to left and upwards, as in the original. The Roman numbers represent the several day-symbols.)

TABLE I.

1	2	3	4	5	6	7	8	9	10	11	12	13
I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII	XIII

II	III	IV	V	VI	VII	VIII	IX	X	XI	XII	XIII	XIV
VIII	IX	X	XI	XII	XIII	XIV	XV	XVI	XVII	XVIII	XIX	XX

This arrangement of five superincumbent ranks of day-symbols also preponderates in the Mayan hieroglyphics, but there the *tonalamatls* are not transcribed in full, and begin with any of the 52 columns.

The names of the day-symbols are represented in the hieroglyphics by pictures, and have come down to us in the following sequence:—

MEXICAN.		MAYAN (YUCATAN).	
I. Cipactli	crocodile (?).	Imix	female breast (?).
II. Eecatl	wind.	Ik	wind.
III. Calli	house.	Akbal	night.
IV. Cuetzpalin	lizard.	Kan	copious (?).
V. Coatl	serpent.	Chicchan	biting snake.
VI. Miquiztli	death.	Cimi	death.
VII. Maçatl	stag.	Manik	that which hurries along.
VIII. Tochtli	rabbit.	Lamat	?
IX. Atl	water.	Muluc	that which is heaped up.
X. Itzcuintli	dog.	Oc	?
XI. Oçomatli	monkey.	Chuen	monkey.
XII. Malinalli	a herb.	Eb	row of teeth.
XIII. Acatl	reed.	Been	worn out.
XIV. Ocelotl	jaguar.	Ix	?
XV. Quauhtli	eagle.	Men	maker.
XVI. Cozcaquauhtli	great hawk (sarcorhamphus papa).	Cib	perfumery.
XVII. Olin	motion.	Caban	what is exuded (?).
XVIII. Tecpatl	flint.	E'tznab (E'tz)	hard (?)
XIX. Quiauitl	rain.	Cauac	storm.
XX. Xochitl	flower.	Ahau	king, sun.

Were we to compare the names and symbols current in Mexico with those of the other Mayan dialects, the correspondence in meaning, so far recognizable from the above lists, would be rendered clearer still.

This period of 260 days is most probably to be explained as the equivalent of nine lunar revolutions, especially as the days of the *tonalamatl* are conjoined—often continuously—with representations of nine gods, the so-called 'Lords of the night,' who may thus be regarded as the original deities of the nine lunar months; nine revolutions of the moon, however, may well represent the approximate duration of pregnancy.[1] Then, as the numerical system of these peoples was based upon 20, the number of days in a *tonalamatl* may be represented as thirteen twenties. This explanation seems more probable than any other that has been advanced. (1) The factor 13 has been derived from the period during which the moon was actually observed to wax or wane; but this would not yield a continuous reckoning, as it ignores the interlude of invisibility at new moon. (2) The number 260 has been explained as indicating the period of visibility of the planet Venus as an evening star. The actual period of visibility, however, whether as a morning or as an evening star, amounts only to some 243 days. (3) The *tonalamatl* has been derived from the fifty-two-year cycle, since $52 \times 365 = 20 \times 13 \times 73$. But to regard it as the subdivision of a longer period fails to do justice to its primordial character, as it forms the basis of the calculation of the solar year, and must therefore have been in force before the latter.

2. The solar year.—There was no serial enumeration of *tonalamatl* periods, and it was impossible to distinguish one *tonalamatl* from another, as the continuous representation of dates by means of cipher and symbol resulted simply in an exact repetition after every 260th day. Nor were the solar years of 365 days (Mex. *tonalpoualli*, 'numbering of days') enumerated from any particular starting-point. Nevertheless, in a prolonged succession of *tonalamatls* it came about that, during a period of 52 solar years (Mex. *xippoualli*, 'numbering of years'), a particular day of the *tonalamatl*, discriminated by a particular combination of cipher and symbol, coincided with the beginning of the year, thus rendering it possible to distinguish one year from another. As the *tonalamatl* contained $13 \times 20 = 260$ days, and the year had $18 \times 20 + 5 = 28 \times 13 + 1 = 365$

[1] ed. Forstemann (2nd ed. 1892).
[2] ed. Duc de Loubat, fol. 1 f.

[1] Zelia Nuttall, 'The Periodical Adjustments of the Ancient Mexican Calendar,' *American Anthropologist*, vi. 495, 500.

days, any given entry in the former moved forward upon the annual reckoning by five symbols and one cipher. Only 4 of the 20 symbols, therefore, coincided with New Year's Days, while the ciphers could vary 13 times; whence it follows that the *tonalamatl* provided distinctive combinations for the first days of $4 \times 13 = 52$ successive years. But the New Year's Days fell, not, as might be expected, on the days indicated by the *tonalamatl* symbols I (Cipactli), VI (Miquiztli), XI (Ocomatli), and XVI (Cozcaquauhtli), but upon XIII (Acatl), XVIII (Tecpatl), III (Calli), and VIII (Tochtli), and thus the fifty-two-year cycle may be represented as follows:

1	XIII	XVIII	III	VIII
2	XVIII	III	VIII	XIII
3	III	VIII	XIII	XVIII
4	VIII	XIII	XVIII	III
5	XIII	XVIII	III	VIII
6	XVIII	III	VIII	XIII
7	III	VIII	XIII	XVIII
8	VIII	XIII	XVIII	III
9	XIII	XVIII	III	VIII
10	XVIII	III	VIII	XIII
11	III	VIII	XIII	XVIII
12	VIII	XIII	XVIII	III
13	XIII	XVIII	III	VIII

Similarly, in the Dresden Mayan MS and the Mayan monuments the years begin in regular order with days XIII (Been), XVIII (E'tznab), III (Akbal), and VIII (Lamat), while in historical times, according to tradition, the years were reckoned in the order: IV (Kan), IX (Muluc), XIV (Ix), and XIX (Cauac).[1]

As the *tonalamatl* datings, however, were simply repeated after 260 days, and could not therefore definitely fix a particular day even *within* the year, the system was supplemented by a division of the year into 18 twenties, with 5 residual days. We give here the usual enumeration of these periods of twenty days, but it should be stated that the Mexican and the Mayan lists did not synchronize:

Mexican.	Mayan (Yucatan).
1. Atl caualo or Quauitl eua.	1. Pop.
2. Tlacaxipeualiztli.	2. Uo.
3. Toçoztontli.	3. Zip.
4. Ueitoçoztli.	4. Zo'tz.
5. Toxcatl.	5. Tzec.
6. Etzalqualiztli.	6. Xul.
7. Tecuilhuitontli.	7. Yaxkin.
8. Ueitecuilhuitl.	8. Mol.
9. Miccailhuitontli, or Tlaxochimaco.	9. Ch'en.
10. Ucimiccailhuitl, or Xocouetzi.	10. Yax.
11. Ochpaniztli.	11. Zac.
12. Teotl eco.	12. Ceb.
13. Tepeilhuitl.	13. Mac.
14. Quecholli.	14. Kankin.
15. Panquetzaliztli.	15. Muan.
16. Atemoztli.	16. Pax.
17. Tititl.	17. Kayab.
18. Izcalli.	18. Cumku.

These 18 'months' (Mayan, *uinal*) are followed by the five residual days (Mex. *nemontemi*, 'supernumerary'; May. *xma kaba kin*, 'days without name') at the end of the year.

At the time of the conquest, according to Sahagun, the beginning of the first (Mexican) month, Atl caualo, coincided approximately with that of our February,[2] and this would harmonize with the succession of Nature-festivals assigned to the several months, and necessarily associated with the seasons of the year. The first (Mayan) month, Pop, began about the middle of our July.[3] But, as no intercalations were made—so far as known—for relatively short periods, the reckoning fell behind by one day in four years. This being duly allowed for, the statement that the Mayan year began with the 1st of Pop has been authenticated and found correct, while the earlier notices of Atl caualo as the first month of the Mexican year do not accord with our calculations. According to these, in fact, the Mexican year began with the 1st of Toxcatl,[1] *i.e.* at the beginning of May, when the sun in his northern journey passed through the zenith, and was revived by the sacrifice of his human counterpart. But if we may argue from the fact that there was among the Mayas a festival covering the five residuary days at the close of the year, that people likewise must at some earlier period have begun their year with other months, viz. Yaxkin and Pax—two dates, that is, in force at the same time, and separated from each other by 180 days.[2] Allowance having been made for the neglected intercalary days, the beginning of the Mexican year—the 1st of Toxcatl—synchronizes with our reckoning as follows:

Year 1 Acatl. ......4th May 1519-1520.
Year 2 Tecpatl......3rd May 1520-1521.
Year 3 Calli.. ..... . 3rd May 1521-1522,
etc.[3]

Although, as has already been said, there is nothing to show that the calendar was adjusted by means of intercalary days, the statements of the early writers having proved to be altogether illusory, yet, as the sequence of the Nature-festivals must have corresponded with that of the months, it is absolutely certain that the discrepancy was compensated for in some way. As yet, however, the hieroglyphics have yielded no quite incontrovertible evidence to show that the Mexicans gave any theoretical recognition to the difficulty.[4] This also holds good of the *katun*-periods of the Mayas, with which we are now to deal, and in connexion with which we shall discuss the problem of synchronism in fuller detail.

3. The Katun-periods of the Mayas.—The Mexican calendar was quite inadequate for any term beyond 52 years, as after that period the characterization of dates began simply to recur, and there was no successive enumeration of the 52-year cycles. The Mayas, however, had a supplementary reckoning by means of *katun* (periods of 20×360 days), the subdivision of 360 days being called a *tun* ('stone'). These periods were designated according to the days on which they severally began, and, while this first day always coincided with the same one of the 20 day-symbols, viz. *Ahau*, its numerical coefficient increased by 11 in every successive *katun*, as $\frac{20 \times 360}{13} = 553 + 11$. It was therefore possible to discriminate 13 such periods by prefixed numerals as follows: 13 (Ahau), 11, 9, 7, 5, 3, 1, 12, 10, 8, 6, 4, and 2. Chronological references that pass beyond the resultant cycle (*c.* 13×20 years) do not merit serious regard. The calculations of Seler,[5] which are based upon the identity of 2 Ix, 1 Pop with 14th July 1543, yield the following synchronism:

Katun.	Year.	First Day of Katun.	Date of the Julian Calendar.
8 Ahau	11 Ix	7 Ch'en	29th January 1436
6 Ahau	5 Ix	7 Zo'tz	15th October 1455
4 Ahau	11 Muluc	12 Kayab	3rd July 1475
2 Ahau	5 Muluc	12 Ceh	19th March 1495
13 Ahau	12 Muluc	12 Yaxkin	5th December 1514
11 Ahau	6 Muluc	12 Uo	22nd August 1534
9 Ahau	12 Kan	17 Muan	9th May 1554
7 Ahau	6 Kan	17 Yax	24th January 1574
5 Ahau	13 Kan	17 Tzec	16th October 1593

[4] Seler (iii. 199 f.) has made an attempt to prove intercalations in the hieroglyphics.

[5] *Op. cit.* i. 583 f.

In the Dresden MS and upon the monuments—especially the stelæ of Copan (Honduras), Quirigua (Guatemala), and Palenque (Chiapas)—eras of still longer duration are referred to by simple enumeration of the days that had elapsed from a certain mythical date indicated by the expression 4 Ahau, 8 Cumcu. But as the terminating date that is to be fixed is likewise specified by the day of the *tonalamatl* and the year, it is plain that the sum of the simply enumerated days will represent the period lying between the termini. Here the figures carry us beyond a total of $9 \times 20 \times 20 \times 360$ days, *i.e.* more than 9×20 *katuns*, or 9 cycles, or 3550 $\times 365 + 250$ days. But the dates of the monuments themselves all fall within the following or 10th cycle, and are all embraced within a span of little more than 350 years, or—if we also take into account the most extreme dates in the Leyden nephrite plinth (from the frontier of Honduras and Guatemala), which belong to the 9th cycle, and in the stele fragments from Sacchaná (Guatemala)—560 years. Unfortunately, however, this chronology cannot be brought into relation with our own, for the simple reason that, as already noted, in Yucatan during historical times the years were designated by a different series of day-symbols.

4. The Venus-period.—Both in Mexican and in Mayan MSS the periodic time of the planet Venus is indicated by means of the *tonalamatl* symbols and the dates of the month respectively. Leaves 46–50 of the Mayan MSS in Dresden exhibit 5 such revolutions of 584 days each, which, corresponding approximately to the sum of the two periods of visibility and the intermediate intervals, are severally divided into stages of 90, 250, 8, and 236 days.[1] In the Codex Borgia, foll. 53–4, however, there is noted, along with other Venus-periods, one of $5 \times 13 = 65$ revolutions.[2] Now 5 revolutions amount to $5 \times 584 = 8 \times 365$ days; and 65 revolutions to $65 \times 584 = 2 \times 52 \times 365$ days, *i.e.* twice the Mexican cycle of 52 years. Then, as $\frac{584}{20} = 29 + 4$, and $\frac{584}{13} = 44 + 12$, the symbol and cipher of the *tonalamatl* move forward upon each successive revolution of Venus by 4 and 12 days respectively, so that the first day of each revolution will recurrently coincide with only 5 of the 20 day-symbols, thus:

THE 65 VENUS-PERIODS.

1	I	XIII	V	XVII	IX
13	V	XVII	IX	I	XIII
12	IX	I	XIII	V	XVII
11	XIII	V	XVII	IX	I
10	XVII	IX	I	XIII	V
9	I	XIII	V	XVII	IX
8	V	XVII	IX	I	XIII
7	IX	I	XIII	V	XVII
6	XIII	V	XVII	IX	I
5	XVII	IX	I	XIII	V
4	I	XIII	V	XVII	IX
3	V	XVII	IX	I	XIII
2	IX	I	XIII	V	XVII

The Venus-period, however, was not used for determining dates.

CALENDAR (Muslim).—Although the era of Islām begins with the 15th (16th) of July A.D. 622 (Buḫāri, iv. 248 f.), the lunar year, peculiar to the Muslims, was not established till the year A.H. 10. When Muhammad in that year (A.D. 631) made his last pilgrimage to Mecca (*ḥijjat-al-wadā'*), and in a solemn address (*ḫutba*) enlightened his following of believers concerning the essentials of Islām, he arranged, among other matters, that the year should consist of 12 lunar months of 29 (28, 30) days each, and that intercalation (*nasī'*) was to be forbidden (Qur'ān, ix. 36 ff.; Ibn Hishām, p. 968; Vakidi-Wellhausen, p. 431; Buḫāri, ii. 212, 9 f.). Four months, Dhū-l-qa'da, Dhū-l-ḥijja, Muḥarram, and Rajab, were to be inviolable (*ḥurum*), *i.e.* were not to be disturbed by internecine warfare (Qur'ān, ix. 36; Buḫāri, vi. 224, 3 f.). It is evident from this arrangement alone that the Arabs, or, more accurately, the Meccans, had had a more or less perfect solar year. This assumption finds support also in the names of the months, which in part indicate clearly certain definite seasons of the year—a situation, in the case of a changeable lunar year, evidently out of the question. If we take the etymology of the names together with historical, literary, and climatic data, we shall have the following arrangement of the pre-Islāmic year:

The two *Jumādā* months indicate the real winter, from about the middle of Dec. till the middle of Feb. Then the two *Rabī'* months, which signify etymologically the *grazing* season, must indicate the time of year when the herbage of the desert and the steppes, springing up after the autumn rains, affords the herds of the nomads a glorious relief from the summer's discomforts; *i.e.* from the middle of Oct. to the middle of Dec. In agreement with this, the month *Ṣafar* (Sept.-Oct.) is the transition from the height of summer to autumn. The preceding month, with which the year begins, reveals its character in its name *al-Muḥarram*; it is the *sacred* month, in pre-Islāmic times sacred perhaps on account of the harvest and the vintage, with which the Hebrews (Ex 23[16] 34[22]) also connected a festival. Instead of *Muḥarram-Ṣafar*, one may also say 'the two Ṣafars'; so that for the first half of the year we have not 6 months, but 3 double months. Proceeding from *Jumādā*, the etymologically obscure months *Rajab*, *Sha'bān*, and *Shauwāl* must include, respectively, Feb.-March, March-Apr., and May-June. *Ramaḍān*, suggesting *heat*, indicates the coming of the warmth of summer (April-May). The month *Rajab* was, before Islām, and has remained in Islām, a holy month. Perhaps the original reason for this is that it designated the springtime and the firstborn. Ewald and W. Robertson Smith were right in seeing in it a parallel to the Hebrew *pesaḥ*; *Rajab* and *Sha'bān* together are called also *ar-Rajabāni*. The names of the two last months, *Dhū-l-qa'da* and *Dhū-l-ḥijja*, indicate the time of rest and of pilgrimage. The Islāmic festival of sacrifices is celebrated in the latter month (cf. FESTIVALS [Muslim]). The pagan festival that lies at the basis of it had probably some solar significance. This is indicated by the Islāmic name (*aḍḥā*, etc.), which in itself has nothing to do with the sacrificial animal, and also by the part which the *Shaiṭān* plays in it, for *shaiṭān* meant originally the heat of the sun ($\sqrt{}$*shyṭ*), though in Islām it became identified with Satan. It is important to note that the Arabs, like the Hebrews, began their year in autumn and always celebrated spring and autumn festivals.

Besides the above-mentioned names of months, there have come down to us also some archaic ones which have a local significance; cf. Lane's *Lex.*, 1863–89, iv. 1612b, *s.v.* 'Shahr'; Ideler, *Handbuch der Chronologie*, ii. 495 (following Golius). In Islām such names of months as are not distinguished by I or II usually received pious epithets, as: *al-Muḥarram al-ḥarām*;

Safar al-ḥair, 'the bringer of good,' euphemistically, because it was held to be the month of ill-luck; *Rajab al-fard*, 'the isolated,' because it stood apart from the other holy months, or *R. al-aṣamm*, 'the deaf,' because it heard no clash of arms (?); *Sha'ban al-mu'aẓẓam* or *ash-sharif*; *Shauwal al-mukarram*. The names used in the Maghrib (western North Africa) differ from those elsewhere, in that the months there are named after the Islamic festivals: 'Ashūrā = Muḥarram; Shāye' 'Ashura = Safar; al-Mulud = Rabi' I; Shāye' al-M. = R. II; 'Id al-Fiṭr = Shauwal; Bain al-a'yād (between the Festivals) = Dhū-l-qa'da; al-'Id al-Kabir = Dhu-l-hijja. It is noteworthy that the custom of reckoning three double months in the first half of the year (see above) has been there preserved.

The Arabs adopted the week (cf. FESTIVALS [Muslim]) from the Jews and Christians. Besides archaic names for the days of the week, they generally use the designations that are current in the Christian Church (F. Rühl, *Chronologie*, p. 58); *i.e.* from Monday to Thursday = days II–V; Sunday = I; Friday is called *al-jum'a*, 'the meeting' (for worship); Saturday = *as-sabt*, the Sabbath.

Moreover, the Arabs had and still have more general designations for the seasons, based on the constellations, rain, and temperature. But these names change according to the country and the climate (cf. Lane's *Lex.* iii. 1254, *s.v.* 'Zaman'; A. Socin, *Dīwān*, 1900, i. 291).

If what has been said above makes it quite certain that the Arabs once knew a solar year, it is just as indubitable that they originally and locally followed the lunar reckoning down to the time of Islām. The old Hebrew custom, as well as the traces of moon-worship among all the Semites, makes this quite probable. Especially may be cited the ritual expressions *hallala, ahalla* (Heb. *hillēl*, 'to praise' [God]), which is explained by *hilāl*, 'new moon,' 'crescent.' Moreover, Muhammad could not have ventured to establish an institution of such weighty consequences if he had not found a popular basis for it. There has been much speculation as to the reasons why this step was taken by him. These can hardly have been other than religious. As we have seen, the heathen festivals were connected with the solar year. Further, the nomadic Arabs observed the stars closely, and explained natural phenomena by their influence. Through a radical separation from these conditions, Muhammad wished to draw the believers away from Nature to his God (Allāh) as the creator, causer, and preserver of all things (*Lisān al-'Arab*, i. 172, *s.v.* 'Nau'). While the Christian Church did not succeed in doing away with the 1st of January as the beginning of the year, which day it condemned as 'antiquus error,' Muhammad accomplished this, although with disastrous consequences. So patent are the evils of a purely lunar year whose length varies (cf. FESTIVALS [Muslim]), owing to primitive methods of observation and determination of the new moon, that efforts to correct them have never ceased from the beginning to the present day.

Apart from the determination of the times of prayer, there lies in this the main cause why astronomy so flourished among the Muslim peoples. The festivals, which have thus been detached from their natural bases, run now through all the seasons of the year; and in about 33 solar years the Arabic year returns to its starting-point. The era was formed by Friday (Thursday) the 16th (15th) of July, 622 A.D., *i.e.* the 1st of Muḥarram of the year in which Muhammad finished his *Hijra* (emigration) from Mecca to Medina. Of this beginning Ideler says: 'The 15th is to be accepted when it is a matter of astronomical observations, but the 16th when it is a matter of bringing about an agreement between the cyclic reckoning, the appearance of the moon, and the popular Arabian calendar.' A new month begins when two trustworthy Muslims have observed (*ar-ru'ya*) the crescent moon (*hilāl*) in open field or on mountains and notify this to the authorities, the Ḥakim or the Qāḍī. The day is reckoned from one sunset (*maghrib*) to another. The days of the month are counted either consecutively or in the same way as in the mediæval *consuetudo Bononiensis*, which took its origin in upper Italy in the 8th cent. A.D. and spread from there to France and Germany (cf. Du Cange, *Glossarium*, *s.v.* 'Mensis'; Rühl, *Chronologie*, p. 75 f.; Wright, *Arab. Gram.*³, 1875, ii. § 111; Caspari, *Arab. Gram.*⁵, 1887, § 476).

As a remedy for the vague duration of the purely popular lunar year of the Muslims, the astronomers have established a cyclic year, which has been adopted also by historians. The months are reckoned alternately as 30 and 29 days. The ordinary year contains 354 days. The intercalation, which in pre-Islamic times was attended to by the Fuqaim, a clan of Kinana, is now carried out in the following fashion: In a cycle of 30 years, the years 2, 5, 7, 10, 13, 16 (15), 18, 21, 24, 26, 29 add a day to their last month. Such a year is called *sana kabīsa*, but the common year *sana basīṭa*. As in this case scholars, so also many enlightened rulers of Islām, endeavoured, in the face of the prohibition of the Prophet, to substitute for the purely lunar year a solar year that would meet better the needs of the peasantry, the collecting of taxes, and the administration of the State. In this connexion may be mentioned the efforts of the Fāṭimid al-'Azīz, about 366 A.H., whose reform lasted until 501; further, the efforts of the 'Abbāsid Khalif aṭ-Ṭā'i' (ruling 363–381 A.H.), whose reform continued even under the Ottomans; of the Seljūq Malik Shāh, about 471 A.H., who reformed the old Persian calendar with the help of the well-known poet 'Omar Ḫayyām and other astronomers; several attempts under the Īl-Ḫāns, the Persian Mongols, and the partial reform by the Ottoman Government in the 19th century. In Egypt, at present, the Gregorian calendar is used for non-religious purposes. Frequent use is also made of the Coptic calendar in Egypt, and of the old Greek calendar in Syria. Among the Berbers of the Maghrib the Julian names of the months have remained in use down to the present day.

Since the 18th cent. efforts have been made to prepare for scholarly purposes a concordance of the Islamic and European chronologies. It was after an attempt in *L'Art de vérifier les dates* (1821–44) that Ideler first fixed astronomically the relation between the two systems. The tables published by Wüstenfeld in 1854, and the numerous reprints of them, make a knowledge of Islāmic lunar dates accessible now to all. The Genevan physicist and numismatist Fr. Soret has laid down a very handy formula for converting the one date into the other (*Lettres sur la numismatique musulmane*, 1864, p. 34 ff.): Given the year of the Hijra (A), if we wish to know the Christian year (X) the formula is $A - \frac{3A}{100} + 622 = X$.

K. VOLLERS.

CALENDAR (Persian).—The ancient Iranian calendar falls into two distinct categories—the Old Persian and the Avesta—which differ from each other in important respects, although the former system, dating, at least, from the period of the Achæmenians (*q.v.*), shows certain tendencies which were later fully developed in the Avesta reckoning of time.

1. The Old Persian calendar was divided into twelve **months**, but the names of only nine of these are known, and their exact sequence is a matter of doubt. The Old Persian inscription of Darius at Behistūn records the names as follows: Garmapada ('footstep of heat'), Thūravāhara ('mighty spring'), Thāigarci ('garlic-gatherer' [?]), Bāgayādi ('homage to the deities'), Adukani ('digging of the canals'), Āthriyādiya ('worship of the fire'), Anāmaka ('nameless'), and Viyakhna ('ice-free' [?], 'assembly-month' [?]), to which the New Elamitic version (iii. 43) adds Markazanash (Old Persian **Margazana*, 'brood of birds'). It is clear, from a comparison of the Old Persian and Babylonian versions of the Behistūn inscriptions, that Thūravāhara 30 corresponded to Īyyar (April–May) 30, Thāigarci 9 to Sīvan (May–June) 9, Āthriyādiya 26 to Kislev (November–December) 26, Anāmaka 27 to Ṭebeth (December–January) 27, and Viyakhna 14, 22 to Adar (February–March) 14, 22. Several divergent orders of the Old Persian months have been proposed, particularly by Rawlinson, Oppert, Unger, Justi, and Prašek (and King and Thompson), whose sequences are thus tabulated by Ginzel, *Hdbch. d. mathemat. und techn. Chronologie*, i. (Leipzig, 1906) 276:—

BABYLONIAN.	OLD PERSIAN				
	RAWLINSON.	OPPERT.	UNGER.	JUSTI.	PRAŠEK.
Nīsan	Bāgayādi	Garmapada	Thūravāhara	Thūravāhara	......
Īyyar	Thūravāhara	Thūravāhara	Thāigarci	Thāigarci	Thūravāhara
Sīvan	Thāigarci	Thāigarci	Adukani	Adukani	Thāigarci
Tammūz	Adukani	......	Margazana	......	Garmapada
Āb	Garmapada	......	Garmapada	Garmapada	......
Elūl	......	......	......	......	......
Tishrī	......	Bāgayādi	Bāgayādi	Bāgayādi	Bāgayādi
Marcheshvan	Margazana	Adukani	......	......	Adukani
Kislev	Āthriyādiya	Āthriyādiya	Āthriyādiya	Āthriyādiya	Āthriyādiya
Ṭebeth	Anāmaka	Anāmaka	Anāmaka	Anāmaka	Anāmaka
Shebaṭ	......	Margazana	......	Margazana	Margazana
Adar	Viyakhna	Viyakhna	Viyakhna	Viyakhna	Viyakhna

Of all these series, Oppert's seems the most probable to the present writer, who has abandoned the view expressed by him in Geiger-Kuhn's *Grundriss der iran. Philologie*, ii. (Strassburg, 1904) 677.

The date at which the **year** began is as uncertain as the order of the months. Oppert suggests that it commenced with Bāgayādi (September–October), which is admitted by all to have corresponded with the Babylonian Tishri. This would, of course, correspond with the beginning of the Hebrew civil year (cf. Ex 23^{16} 34^{22}), and might receive a certain degree of support from the name of the month, 'homage to the deities.' It seems far more probable, however, that the year actually began with Garmapada (or, according to Justi, with Thūravāhara), corresponding to Nisan (March–April). This would make the commencement of the old Persian year harmonize with both the Avesta and the Babylonian systems, as well as with the Hebrew sacred year (cf. Ex 12^{18}).

The days of the month were numbered, instead of named, as in the Avesta calendar, except that the last day of the month was termed *jiyamna*, 'diminishing,' 'ending.' There were, apparently, thirty days in each month, as in the Avesta and the early Babylonian calendars. The year contained 365 days, as is shown by the only reference in any classical author to the Iranian calendar: 'Magos trecenti et sexaginta quinque iuvenes sequebantur puniceis amiculis velati, diebus totius anni pares numero: quippe Persis quoque in totidem dies descriptus est annus' (Quintus Curtius, III. iii. 10). Nothing is known of any method of intercalation employed in the Old Persian calendar.

2. The Avesta calendar is much better known than the Old Persian, although the Avesta writings themselves contain no formal list of months. *Āfrīngān* iii. 7–11, it is true, gives the names of five months and five days, and both the *Sīrōzas* give the names of the thirty days of the month; but the most reliable source for the month-list is the Pahlavi literature, which is supplemented to a certain extent by Perso-Arabic writers and a few Byzantine chronologists. Thus *Būndahišn* xxv. 20 (tr. West, *SBE* v. 97) states that 'the auspicious month Fravartīn, the month Artavahišt, and the month Horvadat are spring; the month Tīr, the month Amerōdat, and the month Šatvairō are summer; the month Mitrō, the month Āvān, and the month Ātarō are autumn; the month Dīn, the month Vohūman, and the month Spendarmat are winter.' The days of the month were named as follows: Aūharmazd, Vohūman, Artavahišt, Šatvairō, Spendarmat, Horvadat, Amerōdat, Dīn pa Ātarō, Ātarō, Āvān, Xūršet, Māh, Tīr, Gōš, Dīn pa Mitrō, Mitrō, Srōš, Rašnū, Fravartīn, Vāhrām, Rām, Vāt, Dīn pa Dīn, Dīn, Art, Āštāt, Āsmān, Zamyāt, Māraspend, and Anīrān (cf. *Būndahišn* xxvii. 24; *Shāyast lā-Shāyast* xxii.–xxiii.; and the *Mādigān-ī Sī-rōz*, tr. Darab Peshotan Sanjana, in Karaka, *History of the Parsis*, London, 1884, i. 134–144). This order, both of months and of days, receives abundant confirmation from the Arabic al-Bīrūnī (*Chronol. of Ancient Nations*, tr. Sachau, London, 1879, p. 52 f.), Mas'ūdī (*Prairies d'or*, ed. Barbier de Meynard and Pavet de Courteille, Paris, 1861–1877, iii. 413 f.), Ulugh Beg (*Epochae celebriores*, ed. Gravius, London, 1650, pp. 23–26, 101 f.), and al-Farghani (*Elementa Astronomica*, ed. Golius, Amsterdam, 1669, p. 4), as well as from the Greek Isaac Argyrus and Theodorus Meliteniotes (Gray, *Byzant. Ztschr.* xi. 470), and from a MS said by Burton (*Λείψανα veteris linguae Persicae*, Lübeck, 1720, p. 6; cf. Lagarde, *Gesam. Abhandl.*, Leipzig, 1866, pp. 229–232) to have been used by him at Lambeth, although all trace of it is now lost.

The problem of the origin of the names of the Avesta months is a difficult one. Kuka (*K. R. Cama Memorial Volume*, Bombay, 1900, pp. 54–73) and Gray (*AJSL* xx. 194–201) have sought explanations from divergent points of view, the former maintaining that the Avesta year originally began with Dīn, which was primarily the first month of spring (falling gradually behind because of the lack of a system of intercalation, until, by the time of the composition of the *Būndahišn*, Fravartīn had become the commencement of spring); and the latter holding to the *Būndahišn*, and endeavouring to trace a borrowing from the Babylonian system on the part of the Iranians. While the arguments of Kuka have certain points in their favour, his fundamental assumption is doubtful. The entire evidence at our disposal makes Fravartīn (March–April) the first month of the

year, and the parallels with the Babylonian calendar, which Kuka practically overlooks, are too striking to be ignored. For a full elaboration of the position here taken, reference may be made to the study of Gray noted above, in which the name of the month Fravarṭin is interpreted as referring to the ghosts of the righteous dead; Arṭavahišt as the re-vivification of the earth after its death in winter (cf. *Dīnkarṭ* VII. xxx. 14, VIII. xxxvii. 14, IX. xxx. 14); Horvadaṭ as the vernal rains preparing for the coming harvest; Tīr as the month of the rising of the dog-star; Amerōdaṭ as the vegetation of harvest time; Šatvairō as the month either of new ploughing, or, more probably, of building; Mitrō as the sun month (cf. Shamash as the guardian of Tishri, the seventh Babylonian month); Āvān as the rains of autumn; Ātarō as the fire which protects against the cold winter; Dīn possibly in defiance of Ahriman, who created winter; Vohûman as the first-born of Dīn = Ormazd; and Spendarmaṭ as a fertility-deity of early spring. (For the naive etymologies of a Parsi *rivayat*, see Unvala, in *Spiegel Memorial Volume*, p. 202 f.)

3. In each Avesta month, followed by the Armenian system, there were thirty **days**, each named as noted above, and preserving, for the first seven days, the regular order of Ormazd and the Amshaspands, which was violated in the series of month-names, perhaps for the reasons just noted. The fact that the first, eighth, fifteenth, and twenty-third days of each month are named in honour of Ormazd has led some to suppose that the Avesta recognizes a sort of **week**. Of this there is no evidence whatever. It has been shown, however, by Nadershah (*Cama Memorial Volume*, pp. 246–249) that this order of names of the days rests upon *Yasna* xvi. 3–6, and that it comprises four groups, containing respectively the Amshaspands, the seven planets, moral objects, and religious objects, each headed by the supreme god Ormazd, the entire group primarily representing the twenty-seven lunar mansions (cf. Ginzel, *op. cit.* pp. 70–77). To the end of the year, which thus comprised 360 days, were added five Gāthā-days, each sacred to one of the five great divisions of the Gāthās: Ahunavaiti, Uštavaiti, Spenta Mainyu, Vohu Xšathra, and Vahištōišti (cf. al-Bīrūnī, *op. cit.* pp. 53–54, 383; Ginzel, *op. cit.* p. 287). To allow for the quarter-day thus lost each year, a month was intercalated every 120 years.

4. The Avesta **year** was primarily divided into a summer (*ham*) of seven months and a winter (*zayan*, *zyam*) of five (gloss to *Vendīdād* i. 3; *Būndahišn* xxv. 7). Spring and autumn seem not to be recognized in the Avesta. In later times, however, the year was divided into spring (*vahār*), summer (*hāmīn*), autumn (*pātīz*), and winter (*zamistān*), each of three months (*Būndahišn*, xxv. 20). The Avesta itself, on the other hand, has a division of the year into six unequal parts, called *gāhanbārs*, which, though later interpreted as celebrating the six periods of creation (*Būndahišn*, xxv. 1), were doubtless originally popular festivals.

The *gāhanbārs* were as follows: *maiδyōizaremaya*, 'mid-spring' (corresponding theoretically to May 1–5), *maiδyōišema*, 'mid-summer' (June 31–July 4), *paitišhahya*, 'grain-bringing' (Sept. 12–16), *ayāθrima*, 'home-coming' (Oct. 12–16), *maiδyāirya*, 'mid-year' (Dec. 31–Jan. 4), and *hamaspaθmaēdaya*, of uncertain meaning (Mar. 15–20): slightly varying days are given by others, depending on the day taken as the first of the year—March 8 or 15 (as by Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, coll. 1118 f., 838, 160, 1117, 1776, and Ginzel, *op. cit.* p. 285). The *gāhanbārs* accordingly fell at varying intervals, so that *maiδyōizaremaya-maiδyōišema* = 45 days, *maiδyōišema-paitišhahya* = 60 days, *paitišhahya-ayāθrima* = 75 days, *ayāθrima-maiδyāirya* = 30 days, *maiδyāirya-hamaspaθmaēdaya* = 80 days, and *hamaspaθmaēdaya-maiδyōizaremaya* = 75 days. Perhaps the best explanation of the *gāhanbārs* is that of Cama (*Actes du vi. Congr. Internat. des Orientalistes*, iii. 583–592), who combines the twofold division of the year into a winter of five months and a summer of seven, and four seasons of three months each. The first, second, and fifth *gāhanbārs*, according to Cama, fell in mid-seasons, *i.e.* in the middle of the spring of three months, the summer of seven months, and the winter of five months: while the third, fourth, and sixth *gāhanbārs* fell at the ends of seasons, *i.e.* at the end of the spring of three months, the summer of seven months, and the winter of three months. It may also be noted in passing that attempts have been made, as by Nadershah (*op. cit.* pp. 267–270), to establish a double year, one (*sareô*) commencing with the vernal equinox and the other (*yār*) with the autumnal equinox. This, however, is extremely doubtful.

5. The **day** was divided into five parts, called *gāhs*. These were *hāvani*, 'time of preparation of the haoma' (dawn to noon), *rapiθwina* (noon to 3 p.m.), *uzayeirina*, 'afternoon' (3 p.m. to twilight), *aiwisrūθrima aibigaya*, of uncertain meaning (twilight to midnight), and *ušahina*, 'dawn' (midnight to dawn). In winter, however, *rapiθwina* was omitted, and *hāvani* was extended from dawn to the middle of the afternoon. The **night**, in like manner, was divided into four parts, which were also included in the *gāhs*. These were (*Frāhang-ī-ōīm*, ed. Reichelt, Vienna, 1900, p. 36; Jamaspji and Haug, *An Old Zand-Pahlavi Glossary*, Stuttgart, 1867, pp. 42, 76–77) *hū frāšmōdāiti*, 'sunset' (sunset to darkness), *erezaurvaēsa*, 'turning of darkness' (darkness to midnight), *ušām sūrām*, 'holy dawn' (midnight to grey dawn), and *raocanhām fragati*, 'coming forth of light' (grey dawn to sunrise).

6. The Avesta year, as here outlined, is the ideal one. In the course of time the dates gradually fell behind, both in the normal method of reckoning, and as a result of the neglect of intercalation in consequence of the troublous times which followed the downfall of the Sasanians on the death of Yazdagird (A.D. 651). In the very earliest period, according to al-Bīrūnī (*op. cit.* 13), the Persian year contained but 360 days, one month being intercalated every six years, and two months every 120 years.

According to Persian tradition, moreover, the entire system of intercalation dates from the period of Zoroaster (*ib.* p. 55; *Cama Memorial Volume*, p. 235 f.). Seventy years before the death of Yazdagird, two months were again intercalated, despite the five epagomenal days of each year, one as the necessary proceeding, and the second 'with regard to the future, that no other intercalation might be needed for a long period' (*ib.* p. 38; cf. pp. 12, 54). The position of the intercalated month varied. Shah Khulji, quoted by Hyde (*Historia religionis veterum Persarum*, Oxford, 1700, p. 203 ff.), states that the first month intercalated was put after Fravartīn, the second after Arṭavahišt, and so on, until after the lapse of 1440 years the intercalated month should normally come again after Fravartīn. By the time of Shah Khulji, Ulugh Beg (*Epochæ cel.* p. 23), Kutb-ad-dīn (*ap.* Hyde, p. 205), and al-Bīrūnī (*op. cit.* 53), the five epagomenal days, and, by implication, the intercalated month, came after Āvān. No attempt was made to correct the confusion of the Persian year until the reign of the Seljūk sultan Jalāl-ad-dīn Malik Shāh (A.D. 1073–1092), who re-established the old system firmly, taking as the first of Fravartīn, the New Year, March 15, 1079, and placing the epagomenal days in their original position at the end of Fravartīn. This reformed era, known as the 'era of Jalāl-ad-dīn,' still remains in force among the Zoroastrians. There is, however, a sectarian division among the Parsis of India (although not among the Zoroastrians of

Persia), since, after the Persians lost their independence, they failed, for some reason, to make the proper intercalation, whereas those Zoroastrians who sought refuge in India had, according to tradition, made this intercalation while still in Khorasan. The Shahinshai sect, which claims that intercalation is allowable, is, therefore, one month ahead of the Kadmis, who regard intercalation as merely political in origin, not religious. This difference is of importance as affecting the religious festivals, each sect denying the validity of the feasts of the other. The divergency was formerly the cause of bitter dissensions, which are now, happily, appeased (see Karaka, *Hist. of the Parsis*, i. 105–117).

7. The reduction of dates of the 'era of Jalāl-ad-dīn' to those of the Christian era is somewhat involved, and varies by a day, unless the precise name of the day of the original calendar be given. If tables (noted in the Bibliography) be not at hand, the following method may be used (see Ginzel, *op. cit.* p. 302 ff.). Multiply the *expired* year of the 'era of Jalāl-ad-dīn' (not the one of which the date is given) by 365·242535. Add to the product the sum of days of the *unexpired* year plus 393812 (the sum of days from 1st Jan. A.D. 1 to 15th March A.D. 1079, the beginning of the 'era of Jalāl-ad-dīn'). Divide the sum by 1461 (the days in a four-year cycle, A.D.). Multiply the quotient by four, and add the remainder, reduced from days to years, months, and days of the Christian era. The result will be the corresponding date A.D. Conversely, to reduce dates A.D. to the 'era of Jalāl-ad-dīn' (usually termed A.Y., *i.e.* Anno Yazdagirdis), divide the *expired* year A.D. by four, and multiply the quotient by 1461. Add to the product the number of days in the *unexpired* year A.D., and subtract from this sum 393812. Divide the remainder by 365·242535, the quotient being the years A.Y. Reduce the remainder to months and days A.Y., and the result will be the corresponding date A.Y. which is desired.

8. Mention may be made in passing of two documents giving exact equivalents for dates A.Y. and A.D. The first of these is an anonymous Byzantine author (ed. Scaliger, *Canones isagogicae*, Paris, 1658, p. 314 f.; Petau, *de Doctrina Temporum*, Paris, 1703, ii. 213; Gray, *Byzant. Ztschr.* xi. 471 f., and *Avesta, Pahlavi, and Ancient Persian Studies in Honour of . . . Sānjana*, Bombay, 1904, p. 174 f.), who states that in A.D. 1443 (= A.Y. 812) Tīr 17 corresponded to March 11, Mitrō 20 to June 12, Dīn 24 to Sept. 14, and Fravarṭīn 18 to Dec. 12. The other text is an Oriental chronicle-table for A.D. 1687 (*Ephemerides Persarum per totum annum*, ed. Beck, Augsburg, 1695), which shows that in that year Fravarṭīn 1 of the Old Avesta calendar = Mitrō 22 of the 'era of Jalāl-ad-dīn' = Sept. 28, etc., thus indicating that between A.D. 1443 and 1687 the calendar had fallen behind two months.

9. The influence of the Iranian calendar was far-reaching. Not only were the Cappadocian month-names borrowed *in toto* from the Avesta-Pahlavi system (Benfey and Stern, *Ueber die Monatsnamen einiger alten Völker*, Berlin, 1836, pp. 76–120; Lagarde, *op. cit.* pp. 258–264), but many of the names of the months in the Armenian (given by Dulaurier, *Recherches sur la chronologie arménienne*, Paris, 1859, pp. 10–14), Chorasmian, and Sogdian (al-Bīrūnī, *op. cit.* pp. 56 f., 82 f.; cf. *SBAW*, 1907, p. 465) menologies were taken from the Zoroastrian calendar, while sporadic borrowings may be traced in the month-names of Albania (given by Dulaurier, p. 167, Azaria of Julfa [early 17th cent.], *op. cit.* p. 115 ff.), Seistan (al-Bīrūnī, p. 52 f.), Bukhārīk (Bokhara [?]; al-Bīrūnī, p. 82 f.), and Qubā (a large city of Farghana, near Shash; *ib.* p. 82 f.). Those month-names of these various calendars which seem to show Zoroastrian influence (the Old Persian system here plays no part, unless Marquart, *Philologus*, lv. 235, be right in explaining the Armenian name of the eleventh month, Margac, as a loan-word from the Old Persian *Margazana*), are as follows, summarized from Gray, 'On Certain Persian and Armenian Month-Names as influenced by the Avesta Calendar,' in *JAOS* xxviii. [1907] 331–344:

1. Fravarṭīn = Chorasmian Nāusārjī (this, like the four following names, representing the Avesta **nava-sareδa*, 'new year'), Sogdian-Bukhārīk Nūsard, Armenian Navasard, Albanian Navasardus, while the Seistanian Kavāδ may represent the Avesta hero Kavāta, the legendary founder of the Kayanian dynasty, whose home was in Seistan (*Yasht* xix. 65 ff.; cf. Geiger, *Ostiranische Kultur*, p. 411; Azaria of Julfa's Šams is borrowed from the Arabic *šams*, 'sun'). 2. Arṭavahišt = Chorasmian Ardūšt (the Sogdian Fadī Nūsard may be for Avesta **paiti-navasareδa*, 'after the new year'). 3. Horvadaṭ = Chorasmian Harudāδ (the Sogdian Nīsan and Azaria of Julfa's Šbat' are loan-names from the Hebrew calendar). 4. Tīr = Chorasmian Jīrī, Seistanian Tīrkyānūa (uncertain vocalization), Armenian Trē (if the Albanian Yilē be connected with Albanian *ul*, *ūl*, 'star' [cf. Meyer, *Etymologisches Wörterbuch der albanesischen Sprache*, Strassburg, 1891, p. 460], it may possibly be a reminiscence of the Zoroastrian name of this month). 6. Amerōdaṭ = Chorasmian Hamdād (Azaria of Julfa's Gamar is the Arabic *qamar*, 'moon'). 6. Šatvairō = Chorasmian Axšarīrvarī (the vocalization, except for the *matres lectionis*, uncertain, as in many of these names). 7. Mitrō = Qubān Mihr, Armenian Mihekan (Azaria of Julfa, probably through retrogression of the calendar, has T'ir = Tīr), Chorasmian Fīγ (Turfān Baγ(a)kānj) = Baγa, 'god,' *i.e.* Mithra. 8. Āvān = Sogdian Abānj. 9. Āṭarō = Chorasmian Arū (read, with some of the variants, Adū), Armenian Ahekan (Lagarde, p. 9; Hübschmann, *Armenische Grammatik*, Leipzig, 1897, i. 95; Azaria of Julfa has Hamir = Arabic *amīr*, while the Sogdian Fūγ (Turfān Būγīj) represents a dialectic development of the Avesta *baγa*, 'god'). 10. Dīn (Avesta *daθušō* '[month] of the Creator') = Chorasmian Rīmažd (the Sogdian Masāfūγ, 'great god,' is clearly a reminiscence of the Avesta name of the month, while Azaria of Julfa's Aram is the eponymous hero of Armenia, and the Bukhārīk Sīvan the Hebrew Sīvan, calendrical retrogression again playing a part). 11. Vohūman = Chorasmian Ašman (cf. al-Bīrūnī, p. 384; the Seistanian Karsn—uncertain vocalization—may represent the Karsna of *Yasht* xiii. 106, 108, who may, perhaps, be the eponymous hero of the Qāren dynasty which played an important part in the Arsacid and Sasanian periods [Darmesteter, *Le Zend-Avesta*, ii. 686, note 212]). 12. Spendarmaṭ = Chorasmian Asbandārmajī (the Armenian Hrotic̣ is a loan-name from the Pahlavi **fravarṭakān*, 'the [five epagomenal days] dedicated to the Fravashis,' Hübschmann, p. 184 f.; Lagarde, p. 163).

The correspondences in the names of the days between the Zoroastrian and the Chorasmian and Sogdian calendars are as follows: 1. Aūharmazd = Chorasmian Rīmažd, Sogdian Xarmažd. 3. Arṭavahišt = Chorasmian Ardūšt, Sogdian Ardāxūšt. 4. Šatvairō = Chorasmian Axšarīvarī, Sogdian Xastšūr. 6. Spendarmaṭ = Chorasmian Asbandārmajī, Sogdian Shandārmaδ. 6. Horvadaṭ = Chorasmian Harūdāδ, Sogdian Radad (?). 7. Amerōdaṭ = Chorasmian Hamdāδ, Sogdian Mardad. 8, 15, 23. Dīn = Chorasmian Daδū, Sogdian Dast. 9. Āṭarō = Chorasmian Arū (read Adū), Sogdian Ataš. 11. Xūršēṭ = Chorasmian Axīr, Sogdian Xvīr. 12. Māh = Chorasmian Māh, Sogdian Māx. 13. Tīr = Chorasmian Jīzī, Sogdian Tiś. 14. Gōš = Chorasmian Tūšt, Sogdian Tuš. 17. Srōš = Chorasmian Asrūf (read Asrūš (?)]), Sogdian Sruš. 18. Rašnū = Chorasmian Rašn, Sogdian Rasn. 19. Fravarṭīn = Sogdian Frūδ. 21. Rām = Chorasmian Rām, Sogdian Rāmn. 22. Vāṭ = Chorasmian and Sogdian Vāδ. 24. Dīn = Chorasmian Dīnī, Sogdian Dīn. 25. Arṭ = Chorasmian Arjūxī (cf. Nöldeke, *SWAW* cxvi. 418, note 4), Sogdian Arδx. 26. Āštāṭ = Chorasmian Aštāδ, Sogdian Astāδ. 27. Āsmān = Chorasmian Asmān, Sogdian Samn. 28. Zamyāṭ = Sogdian Rāmjīd (read Zāmjīd). 29. Māraspānd = Chorasmian Marasband.

The Sogdians likewise gave special names to each of the five epagomenal days (al-Bīrūnī, p. 67), and the Chorasmians had names for the six *gāhanbārs* (*ib.* p. 225, cf. p. 425 f.), while the Armenians, it has been suggested (Dulaurier, p. 13), also did so originally; but the exact meanings of the appellations, even when compared with their corresponding terms in the Zoroastrian calendar, are uncertain. According to al-Bīrūnī, moreover, both these nations, like the Armenians and Albanians (Dulaurier, pp. 115 ff., 167), placed the epagomenal days at the end of the year, as in the early Avesta calendar, instead of violating this custom, as in the middle period of the Avesta system. The Chorasmians had, in addition, a series of eras, first from the commencement of their colonization of the country, 980 years before Alexander the Great; then from the coming of Siyavush ben Kai Kaus to Chorasmia, ninety-two years later; and, finally, according to the reigns of sovereigns.

The Avestan custom of naming the days of the month also existed among the Armenians (Alishan, *Ancient Faith of the Armenians* [in Armenian], Venice, 1895, p. 143 f.). Although the majority of these names are Christian or geographical, Zoroastrian influence is evident in at least five: Mihr, the eighth day (corresponding to the seventh month and the sixteenth day of each month in the Zoroastrian calendar); Aramazd, the fifteenth day (corresponding to the first day of each month in the Zoroastrian calendar); Anahit, the nineteenth day (corresponding to the Iranian goddess Anāhita); Npat, the twenty-sixth day (corresponding to the Indo-Iranian water-deity Apām Napāt, but confused with the Armenian mountain called Npat); and Vahagn, the twenty-seventh day (corresponding to the twentieth day of each month in the Zoroastrian calendar) [cf. above, vol. i. p. 802]. Six of the Iranian names here considered were even borrowed, through their Sogdian forms, as planet names in Chinese (*SBAW*, 1907, p. 459), these being, in Can-

tonese pronunciation: Mit (Sogdian Mir, 'Mithra'), Mok (Sogdian Max, 'Mah'), Wẹn-hon (Sogdian Wunxān, 'Bahram'), Tit (Sogdian Tīr, 'Tir'), Wun-mut-si (Sogdian Wurmažd, 'Ormazd'), and Na-k'it (Sogdian Nahi, 'Anāhita').

It should also be noted that an attempt was made by Yazdagird III. to give both the months and days of the Zoroastrian year entirely different names, but his innovations soon met the oblivion they richly merited (Hyde, *Historia religionis veterum Persarum*, pp. 195–200).

10. In conclusion, the comparative table given below[1] may serve to elucidate the mutual correspondences of the ideal Babylonian, Old Persian, Avesta, and Julian months.

LITERATURE.—The principal literature on the Iranian calendar, together with the chief references to the original texts, is given by **Gray**, 'Der iranische Kalender,' in Geiger-Kuhn, *Grundriss der iran. Philologie*, ii. 675–678, Strassburg, 1904. Older works of importance, there overlooked, and later treatises are **Ulugh Beg**, *Epochae celebriores*, ed. Gravius, London, 1650, *Ephemerides Persarum per totum annum*, ed. Beck, Augsburg, 1695; **Usener**, *Ad historiam astronomiae symbola*, Bonn, 1867 (valuable for Byzantine texts on the Persian calendar); **Gray**, 'Zu den byzant. Angaben uber den altiran. Kalender,' in *Byzant. Ztschr.* xi. 468–472, 'Medieval Greek References to the Avestan Calendar,' in *Avesta, Pahlavi, and Ancient Persian Studies in Honour of . . . Sānjana*, Bombay, 1904, pp. 167–175, 'The Origin of the Names of the Avesta Months,' in *AJSL* xx. 194–201, 'On Certain Persian and Armenian Month-Names as influenced by the Avesta Calendar,' in *JAOS* xxviii. 331–344; six studies in the *K. R. Cama Memorial Volume*, Bombay, 1900: **Bharucha**, 'Pāzend and English Versions of a Chapter of the Pahlavi Dinkard, relating to the Solar and Luni-Solar Years in the Zoroastrian Religion,' pp. 12–28; **Kuka**, 'An Enquiry into the order of the Parsi Mooths and the Basis of their Nomenclature,' pp. 54–73; **Karkaria**, 'The Parsi and the French Revolutionary Calendars,' pp. 146–153; **Unwala**, 'Two Persian Passages about the Kabiseh (Intercalation),' pp. 235–238; **Desai**, 'The Persian Year,' p. 241 ff.; and **Nadershah**, 'The Zoroastrian Months and Years with their Divisions in the Avestaic Age,' pp. 244–273; two studies in the *Spiegel Memorial Volume*, Bombay, 1908, by **Unvala**, 'A Few Parsee Festivals (Jashans) according to an Old Parsee Manuscript,' p. 201 ff., and **K. R. Cama**, 'The Zoroastrian Calendar,' p. 230 ff.; **Marquart**, *Philologus*, lv. 234 ff., and Supplementband, x. [1907] 198–215; **F. W. K. Müller**, 'Die "persischen" Kalenderausdrücke im chinesischen Tripiṭaka,' *SBAW*, 1907, pp. 458–465; **Inostrancev**, *Sasanidskie Etyudy*, St. Petersburg, 1909, pp. 82–109; **Ginzel**, *Handbuch der mathematischen und technischen Chronologie*, Leipzig, 1906, i. 275–309. Comparative chronological tables of the Persian and Christian eras are given in the edition of Ulugh Beg noted above, and in **Schram**, *DWAW*, mathematische Klasse, xlv. 328–331, Vienna, 1882, and *Kalendariographische und chronologische Tafeln*, Leipzig, 1908, pp. xxi–xxiii, 159, 173–181.

LOUIS H. GRAY.

CALENDAR (Polynesian).—The calendrical development of the islands of the Pacific was considerably higher than that of Africa, with which, however, it offers more than one analogue. In the western portion much influence has been exercised by higher civilizations. This is especially clear in Java, where the Muhammadan lunar year of 354 days is reckoned according to the Indian *śaka* era (beginning with A.D. 78): the month, with Muhammadan names, is divided, in Indian fashion, into a 'light' and a 'dark' half; seven days of the week bear two sets of names, one being Muhammadan and the other Indian; and one of the two systems of intercalation is Arabic, while the other is Turkish (for details, see Ginzel, *Handbuch der mathematischen und technischen Chronologie*, Leipzig, 1906, i. 414–418).

A cycle of 210 days is formed by 30 seven-day weeks, each of which is ruled by an ancient Javanese deity and has its own name: *Sinto, Landĕp, Wukir, Kurantil, Tolu, Grumbreg, Warigo, Wariga-gung, Julung-wangi, Sungsang, Galungan, Kuningan, Lankir, Mondhosio, Julung-pujat, Pahang, Kuruwelut, Marakeh, Tunbir, Madhan-kungan, Maktal, Wuye, Manahil, Prang-bakat, Bolo, Wugu, Wayang, Kulawu, Dhukut*, and *Watu-gunung*; and this cycle (*wuku*) is divided, for purposes of divination, into periods of 10, 9, 8, 6, 4, 3, 2, and 1 days. Side by side with the *wuku* is the *pasar*, or market-week, of 5 days—*Pahing* (or *Pa*), *Pon, Wagē, Kaliwon*, and *Legi* (or *Manis*)—which finds a parallel in the Yoruba week (see above, p. 64[a]), and which is also observed by the non-Muhammadan Lampong of Sumatra. The days of the *pasar* are combined with the seven-day week of the *wuku* (*Buddha-Kaliwon, Respati-Manis, . . . Buddha-Pahing, Respati-Pon*, etc.), so that, after the thirty-fifth combination, the initial point (*Buddha-Kaliwon*, etc.) is again reached. Six of these periods coincide with a *wuku*, and twelve give the *wuku* year of 420 days, an astrological year.

Besides this lunar year, the Javanese have the solar year, which is divided into 12 *mangsas* (Skr. *māṃsa*, 'time' [a meaning found only in the native lexicographers, not in Skr. literature]), which vary in length: *Kasa* (41 days), *Karo* (23 days), *Katiga* (24 days), *Kapat* (25 days), *Kalima* (27 days), *Kanem* (43 days), *Kapitu* (43 days), *Kawolu* (26 days), *Kasanga* (25 days), *Kasadasa* (24 days), *Desta* (23 days), *Sada* (41 days), this year of 365 days being that determined, after much previous irregularity in reckoning, by Sultan Paku Buwana VII. and beginning 22 June 1855. Every 4 years *Kawolu* is given an extra day for intercalation; and it is this solar year which is the one indigenous to Java. The native Javanese day has only general divisions into early dawn, dawn, sunrise, forenoon, etc., but the five Muhammadan hours of prayer and the Indian astrological divisions are also kept.

The lunar year is observed by the inhabitants of the Tennger range in S.E. Java. This has 12 months (alternately 29 and 30 days in length), or 354 days, but in each last year of its five-year cycle a month of 30 days is intercalated. This *windu*, or cycle, accordingly has 1800 days, thus corresponding almost precisely to the Indian *yuga*, which consists of 5 years or 1830 days. In other respects the usual Javanese system is closely followed; and the same statement holds good of the neighbouring island of Bali, except that here intercalation is more irregularly performed, normally taking place at the expiration of 64 months, of which 30 have 29 days, while 34 have 30, this total of 1890 days corresponding to 9 Javanese *wukus* of 210 days each, and also to 5 Indian years of 378 days each (on this Indian year, cf. Ginzel, *op. cit.* p. 322). It is especially noteworthy that both in the Balinese and in the Javanese *mangsas* the first ten names, already listed, are based on the Javanese ordinals, while the last two (*Desta* or *Yesta*, and *Sada, Sodha*, or *Aśada*) are borrowed from the Skr. month-names *Jyeṣṭha* and *Āṣādha* (approximately May–June and June–July).

[1]

BABYLONIAN.	OLD PERSIAN.	AVESTA.	JULIAN.
Nisan	Garmapada	Fravartīn	March–April
Iyyar	Thūravāhara	Artavahist	April–May
Sivan	Thāigarci	Horvadat	May–June
Tammūz	......	Tīr	June–July
Āb	......	Amerōdat	July–August
Elūl	......	Šatvairō	August–September
Tishrī	Bagayādi	Mitrō	September–October
Marcheshvan	Adukani	Āvān	October–November
Kislev	Athriyādiya	Ātarō	November–December
Tebeth	Anāmaka	Din	December–January
Shebaṭ	Margazana	Vohūman	January–February
Adar	Viyakhna	Spendarmat	February–March

This may imply that the Bali-Javanese year originally had only 10 months (cf. Ginzel, *op. cit.* p. 425)—a curious phenomenon which is recorded for the Gilbert Islands by Hale (*U.S. Exploring Expedition, Ethnography and Philology*, Philadelphia, 1846, p. 105 f.), and is seen also among the Maori and possibly in the Caroline Islands, although, as Gerland (*Anthrop. der Naturvölker*, Leipzig, 1860–77, vi. 72 f.) well urges, all these cases of alleged ten-month years may be based on error. At the same time, one involuntarily thinks of the Roman tradition that previous to Numa, who added Jan. and Feb., the year consisted of only ten months (cf. Plutarch, *Vita Numæ*, xviii. f., and see below, p. 134[a]).

With diminishing influence from Hinduism and Muhammadanism goes a decrease in the calendrical skill of the Malayo-Polynesian and allied peoples. This comes out clearly in the case of the Sumatran Lampong and Achinese (the latter having an elaborate system of synchronizing the lunar year with the season by *kenongs* evidently borrowed from the Indian *nakṣatra* year [see Ginzel, *Hdb. d. math. u. tech. Chron.* pp. 428–430]), as contrasted with the pagan Battak, even though the latter show, in their names of the days of the month, reminiscences of the Indian names of the seven-day week (cf. the list given by Ginzel, *op. cit.* p. 427). Yet these Battak, though they reckon their months from new moon to new moon, have no real era, but compute extra-annually by *remis* of from 9 to 12 years, while they do not even have a fixed period for the beginning of each year. The Battak year is essentially a terrestrial one, as contrasted with the lunar, solar, or luni-solar year, being determined by terrestrial phenomena such as the monsoons, the growth of vegetation, etc., though observations are also made of the Pleiades, Orion, Scorpio, and Venus. None of the Sumatran peoples are acquainted with the hour; the day receives, as already noted for Java, only general subdivisions for early afternoon, late afternoon, sunset, midnight, etc.

In Melanesia the system of reckoning time is most primitive. The standard of measure is, of course, the moon, but there is no indigenous concept of the year; *tau* or *niulu*, commonly used for 'year,' properly connoting only 'season' (as the '*tau* of the yam,' the banana having no *tau*, since it is in fruit throughout the year).

'It is impossible to fit the native succession of moons into a solar year; months have their names from what is done and what happens when the moon appears and while it lasts; the same moon has different names' (Codrington, *Melanesians*, Oxford, 1891, p. 349). For example, the moons of the year on Mota, of the Banks Islands group, may be given as follows: *Magoto qaro* ('fresh grass,' corresponding to April), *Magoto rango* ('withered grass'), *Nago rara* ('face of winter,' the *rara*, or erythrina, flowering in the cold season), *Tur rara* ('fullness of winter'), *Kere rara* ('end of winter'), *Un rig* or *Un gogona* ('little or bitter palolo,' a few of these annelids appearing at this full moon), *Un lava* ('great palolo,' the annelid appearing on the reef in immense numbers on one night at full moon, this serving in part as the beginning of a new year, especially as the yam is harvested during this moon), *Un werei* ('rump of the palolo'), *Vule wotgoro* ('moon of shooting up' [of the reeds into flower]), *Vusiaru* (when the wind beats the casuarina trees on the cliffs), *Tetemavuru* (when the hard winds detach fragments from the seeded reeds), and *Lamasag noronoro* ('rattling of dry reeds').

In the Caroline Islands a phenomenon is found, which is, in a sense, characteristic of the Pacific calendar, and which outside this region occurs only in the Armenian and Persian systems (see above, pp. 70, 128)—the naming of the days of each month or moon. In Ponape, for example, the names of the 27 days of the moon are as follows (Christian, *Caroline Islands*, London, 1899, p. 387 f.): *Ir, Lel-eti, Chanok, Chanok-en-komóni, Chanok-en-komána, Epenok-omur, Epenok-omoa, Chau-pot-mur, Chau-pot-moa, Arichau, Chutak-ran, Eü, Aralok, At, Arre, Echil, Apang, Alim, Aon, Eich, Aual, Malatuatu, Takai-en-pai, Aro-puki, Olo-pua, Olo-mal*, and *Mat* (similar lists for Lamotrek, the Mortlock Islands, Yap, and Uleai are given by Christian, *op. cit.* pp. 392–395). In Ponape, moreover, as elsewhere in the Carolines, the month is divided into 3 parts: *Rot* ('darkness,' 13 days), *Mach* ('new moon,' 9 days), and *Pul* ('waning moon,' 5 days). The number of months in the Caroline year is 12 (in Lamotrek, for example, *Sarabol, Aramaus, Tumur, Mai-rik, Mai-lap, Seuta, Lahk, Kū, Ul, Alliel, Mán*, and *Ich*); and Freycinet's record of only 10 (*Voyage autour du monde*, Paris, 1827–29, ii. 105)—*Tungur, Mol, Mahelap, Sota, La, Kuhu, Halimatu, Margar, Hiolikol*, and *Mal*—was probably based, as he himself suspected, on erroneous information, especially as each *maram* ('moon,' 'month') possessed but 30 days. In the Ladrones the same explorer (*op. cit.* p. 380) found 13 lunar months (*pulan*) in the year (*sakkan*): *Tumeguini, Maino, Umotaraf, Lumuhu, Magmamao, Mananaf, Semo, Tenhos, Lumamlam, Fagualu, Sumongsugn, Umadjanggan*, and *Umagahaf*; and in the same group Chamisso ('Bemerkungen auf einer Entdeckungsreise,' *Gesammelte Werke*, Cotta ed. iv. 285) found time reckoned by days and moons, but in the Carolines by nights and moons.

Throughout Polynesia time was reckoned by the moon, from 28 to 30 nights forming the month, of which there were, as occasion required, 12 or 13 in the year. This year (or, rather, annual season, for the concept 'year' was scarcely known in its strict sense in Polynesia) began at various periods corresponding to our May, June, March, late December, etc., while the names of the months varied from island to island, and even within the same island (cf. Ellis, *Polynesian Researches*[2], London, 1832–36, i. 86–89; for further details, with abundant references to older literature, see Gerland, *op. cit.* p. 71 ff.).

In Tahiti, where the year (*tàoo*) began about March, the months (*marama, malama*) bore, according to Forster (*Observations made during a Voyage round the World*, London, 1778, p. 504 f.), the following names (cf. the slightly divergent list in Hale, *op. cit.* p. 169 f., where lists for Samoa and Hawaii are also recorded): *O-porore-o-mòoa, O-porore-o-moòree, Moorehà, Oohee-eiya, Hooree-àma, Tàowa, Hooree-erre-èrre, O-te-àree, O-te-taì, Warehoo, Wæahou, Pipìrree*, and *A-oo-noonoo*. Each month had 29 days, all with individual names, special names also being borne by each of the six divisions of the day and the six of the night. In Lakemba, in the Fiji group, the 11 months recorded by Hale (*op. cit.* p. 68)—*Sesē-ni-ngasáu-lailai* ('little reed-flower,' corresponding to Feb.), *Sesē-ni-ngasáu-levu* ('great reed-flower'), *Vulai-mbotambota* ('moon of scattering' [the fallen leaves]), *Vulai-kelikeli* ('moon of digging'), *Kawakatangāre, Kawawakā-lailai, Kawawakā-levu* (these three referring to the growth of the yam), *Mbalolo-lailai* ('little palolo' [for the allusion, cf. preceding col.]), *Mbalolo-levu* ('great palolo'), *Nunga-lailai* ('little nunga' [a sort of fish]), and *Nunga-levu* ('great nunga')—recall by their grouping the seasonal nomenclature of the oldest Indian months—*Śukra* ('bright'), *Śuci* ('burning'); *Nabhas* ('cloud'), *Nabhasya* ('cloudy'); *Tapas* ('warmth'), *Tapasya* ('warm'); etc. (Ginzel, *op. cit.* p. 316). In Rotuma Island, belonging to Fiji, we find a 'monsoon year' of 6 moons, the months being repeated semi-annually on account of the regular blowing of westerly and easterly winds: *Ōipapa* (March, September), *Taftáfi, Hāua, Kasépi, Fōson-hāu*, and *Aθapuána* (Hale, *op. cit.* p. 169).

With this may perhaps be compared the Nicobarese custom of reckoning by the south-west monsoon (*sho-hong*, May–Oct.) and the north-east monsoon (*fūl*, Nov.–April), two *shom-en-yuh*, or monsoon half years, making approximately a solar year. At the same time, the *kāhēs* (new moons) are named consecutively throughout the year, not re-

peated semi-annually as in Rotuma (see, further, Ginzel, *op. cit.* p. 431 f.). In the Society Islands the year (*matahiti*) was similarly divided into half-years according to the position of the Pleiades: *Matarii i nia* ('Pleiades above' [the horizon]), and *Matarii i raro* ('Pleiades below' [the horizon]). Here again the nights of each lunar month, which were, as necessity required, 12 or 13 in number, and had 30 days each, were named individually, while various seasons (as *Tetau*, 'autumn'; *Te-tau-miti-rati*, 'time of high sea'; and *Te-tau-poai*, 'season of drought and scarcity') were also recognized. Ellis (*loc. cit.*) further states that, while the Society Islanders were unacquainted with hours or weeks, they 'marked the progress of the day with sufficient accuracy, by noticing the position of the sun in the firmament, the appearance of the atmosphere, and the ebbing and flowing of the tide.' In like fashion the Hawaiians began their year when the Pleiades rise at sunset. During five months, beginning with *Kaelo* (Jan.), war might be waged, but peace was enjoined during the remainder of the year. Similarly in Tahiti, according to Wilkes (*Narrative of U.S. Exploring Expedition*, Philadelphia, 1850, iv. 42 f.), the first three months were for war; during the fourth the *opelu* was tabu, and in the fifth it was caught; the two moons following were for taxing; the eighth was devoted to prayers, games, and merriment; the ninth contained the annual feast for the payment of taxes; in the tenth the idols were carried about, and taxes were demanded; the eleventh was for the offerings to the dead and the catching of the *boneta*; and the twelfth for the fishing of the same fish. Elsewhere each month had analogous divisions. Thus, in Hawaii,

'during each month there were four tabu periods of two nights and one day each, dedicated severally to each of the four great gods. All their religious rites, as well as their fishing, planting, etc., were regulated by the moon' (Alexander, *Brief Hist. of the Hawaiian People*, New York, 1891, p. 49 f.).

In New Zealand the year also began with the rising of the Pleiades. According to Maori tradition, this year (*tau*, lit. 'season') originally contained only ten months, until Whare-patari, a magician, taught the people better (cf. the curiously parallel tradition of Numa, above, p. 132[a]), after which they had the customary Polynesian number of 12 or 13: *Te-tahi* (June), *Te-rua*, *Te-toru*, *Te-wha*, *Te-rima*, *Te-ono*, *Te-whitu*, *Te-waru*, *Te-iwa*, *Te-ngahuru*, *Te-ngahuru-tahi*, *Te-ngahuru-rua*, and *Te-ngahuru-tahi-aralua* (Shortland, *Traditions and Superstitions of the New Zealanders*[2], London, 1856, pp. 219–222). These months had the following names for their days (Tregear, *Maori-Polynesian Comparative Dict.*, Wellington, 1891, p. 666, where similar lists are given for Hawaii, Tahiti, Rarotonga, and the Marquesas): *Whiro* (from *whiri*, 'twist,' 'plait,' because on this first night the moon looks like a twisted thread), *Tirea* (cf. *tirau*, 'peg,' 'stick'), *Hoata* ('long spear'), *One*, *Okoa* (cf. *oko*, 'wooden bowl or other open vessel' [?]), *Tamatea-kai-ariki*, *Tamatea-ananga*, *Tamatea-aio*, *Tamatea-whakapau*, *Huna*, *Ari-roa*, *Mawharu*, *Maurea*, *Atua-whakahaehae*, *Turu*, *Rakau-nui*, *Rakau-matohi*, *Takirau*, *Oika*, *Korekore*, *Korekore-turua*, *Korekore-piri-ki-Tangaroa*, *Tangaroa-a-mua*, *Tangaroa-a-roto*, *Tangaroa-a-kiokio*, *O-Tane* (sacred to Tane), *O-Rongo-nui* (sacred to Rongo), *Mauri*, *O-Mutu*, and *Mutuwhenua* (cf. *mutu*, 'brought to an end').

In Australia, as one would expect, the lowest degree of calendrical development in the Pacific region is found. Here, in the words of Spencer-Gillen[a], p. 25 f.,

'time is counted by "sleeps" or "moons," or phases of the moon, for which they have definite terms: longer periods they reckon by means of seasons, having names for summer and winter. They have further definite words expressing particular times, such as morning before sunrise (*ingwunthagwuntha*), . . . day after to-morrow (*ingwunthairpina*), . . . in a long time (*ingwuntha arbarmaninga*).'

The citation of additional data from the remainder of the Pacific world would scarcely add new principles to the Polynesian calendar, which may be described, from the evidence already presented, as a system of lunar months (or 'moons'), 12 or 13 to what we should call a year (a concept developed only imperfectly, if at all, by the peoples under consideration), usually named according to the natural phenomena, the occupations, or the religious festivals connected with them, and—in many places subdivided into two or three periods of unequal length—having from 28 to 30 days, only roughly divided into parts (anything corresponding to the hour being quite unknown), but normally named each with a special designation—the latter being, in fact, the most striking superficial characteristic of this entire system of the reckoning of time.

LITERATURE.—Abundant references, in addition to those mentioned in the art., may be found in Waitz-Gerland, *Anthropol. der Naturvolker*, Leipzig, 1860–77, v. a, 125, b, 86, vi. 71–74, 613–615, 763 f.; Ginzel, *Handbuch der mathemat. und techn. Chronologie*, Leipzig, 1906, i. 414–432, 449.

LOUIS H. GRAY.

CALENDAR (Roman).—The ordering of time at Rome was always a matter of religious importance, and, as we may conjecture with confidence, was also from the first in the hands of religious authorities. The reason of this is to be found in the nature of Roman religious ideas. In the life of the *gens* and family on the land, before the city-State came into being, each agricultural operation had a religious side, since the *numen* or *numina* concerned with it had to be propitiated at the right time in order that they might be of service to the husbandman or might abstain from injuring him. The proper times for agricultural operations and the rites concerned with them were learnt only from the nature of the season, and from the motions of the heavenly bodies, without (as we must suppose) any systematic arrangement of them in an *annus*, or ring of the solar year. When city life began, it was naturally found necessary to have a more exact measure of this *annus* and the religious events included in it. Agriculture was still the economic basis of the life of the people; and in keeping up the agricultural religious rites within the city it was convenient, if not absolutely necessary, to fix them to particular days. This was, beyond doubt, the origin of the earliest calendar of which we know anything. In this all religious festivals are permanently fixed in date (*feriæ stativæ*); only a very few, which did not concern the State as a whole, but certain component parts of it, *e.g.* the *pagi* (Paganalia, Compitalia), and the *lustratio* of the *ager Romanus*, which had to be celebrated on the land itself, remained unfixed (*feriæ conceptivæ*).

The process of fixation is entirely lost to us. It was part of that transition from rural to city life of which we have no record, and of which archæology as yet hardly affords us a glimpse. When we begin to know anything about the Roman city-State, it is already a well-developed organization, provided with a calendar based mainly on the needs of the old agricultural life, but showing distinct signs of military and legal activity. The year, or *annus*, to which this calendar applied was probably a lunar year; its length (354 days, 8 hours, 48 minutes) nearly coincides with a lunar year of 12 months. It was itself divided into 12 months, of which March, May, July, and October had 31 days, and the rest 29, except February, which had 28. All the months had thus an odd number of days, except the last, which was mainly devoted to the care or cult of the dead, following here the world-wide superstition, especially pre-

valent in Italy, that odd numbers are lucky, even numbers unlucky. This principle held good in the calendar throughout Roman history, and all religious festivals (with two exceptions, which can be accounted for) were fixed on days of odd number.

There was, indeed, a tradition, mentioned by Censorinus (*de Die Natali*, ch. xx.), and attested, according to him, by Varro and other writers (see also Ovid, *Fasti*, i. 27 ff.; Macrobius, *Sat.* i. 123; Plutarch, *Vita Num.* xviii. f.), of a year of ten months, called the year of Romulus, which began with March and ended with December, the period between December and March being left undivided. Of such a ten-month year there are traces in Roman life, but they are not concerned so much with religion as with legal matters, such as the payment of debts and the calculation of interest. Mommsen's conjecture may be regarded as still holding the field, that it was adopted at a later period for purposes of business, to avoid the confusion which would arise, as we shall see directly, from the varying length of successive years, caused by intercalation (see his *Röm. Chronol.* p. 48 ff.). We may at any rate leave it out of account in this article. We may be fairly sure that it was not this year, but that mentioned above, ascribed by the Romans to Numa (Censorinus, xx. 4), which was the frame in which the religious festivals were fixed.

The year of 12 months = about 354⅓ days must inevitably soon have called for modification. Being 11 days short of the solar year, it must before long have got out of harmony with the seasons, thus causing discrepancy between them and the dates of the religious festivals which marked agricultural operations. Such discrepancy would cause *religio*, or scruple and anxiety about the right relations between the citizens and the *numina* on whom they were dependent. The necessary adjustment was probably one of the earliest difficulties which called into existence the body of experts in religious law, who throughout Roman history had charge of the calendar, viz. the *pontifices*, and who were doubtless originally advisers of the *rex* in matters of this kind (see ROMAN RELIGION [Second Period]). Some knowledge was necessary of the methods of adjusting the solar principle to a lunar year, and it probably came from Greece (see above, p. 106 f.). There may have been a succession of such adjustments, the last of them dating from the Decemvirate, 450 B.C. (Macrob. i. 13, 21); but the Roman year, as we know it in historical times (which lasted till the revision of the calendar by Julius Cæsar), was based on a cycle of four years, of which the first had 355 days, the second 377 (obtained by an intercalation of 22 days after 23rd February [Terminalia]), the third 355, and the fourth 378. The whole number of days in the cycle was 1465, or about one day too many in each year; and the work of intercalation and occasional adjustment fell again to the *pontifices*, who, as is well known, neglected or misunderstood it, so that in the time of the late Republic the calendar was constantly out of harmony with the seasons, and all relation was lost between religion and agricultural operations.

The final adjustment was, therefore, a somewhat violent one: Cæsar and his astronomer Sosigenes extended the year 46 B.C. to 445 days, and started afresh on 1st Jan. 45 with a cycle of four years of 365 days each, to the last of which an extra day was added after the Terminalia. This cycle produced the solar year under which we still live, needing only an occasional adjustment. It brought no change in the dates of the religious festivals. Ten days were added to the old normal year of 355 days, but they were all placed at the end of months, viz. two at the end of January, August, and December; and one at the end of April, June, September, and November, so that the festivals remained, as might have been expected from Roman conservatism, even under Cæsar as dictator and pontifex maximus, exactly in the same positions which they had always occupied.

All the surviving fragments of the Roman calendar date from 31 B.C. or later, and thus represent it as revised by Cæsar (see art. ROMAN RELIGION). After that revision the official year began with the month of January, and in fact, since 153 B.C., the consuls had entered on office on the first day of that month. But it is certain that the old religious year began with March, which marks the season when all living things, man included, break into fresh activity, and which bears the name of the deity who represented at once the agricultural and the military activity of the community. The names of the second and third, and probably of the fourth month—Aprilis, Maius, Junius (mensis)—indicate the processes of Nature, viz. opening, increasing, and maturing. After this the months are named according to their order, Quinctilis (July) being the fifth after March, and so on to December. The interval between December and March was occupied by two months, Januarius and Februarius, the first of which seems to be named after the ancient deity of entrances and beginnings, Janus, perhaps indicating the natural opening of the *annus* after the winter solstice; the second takes its name from the word *februum*, an instrument of purification (see Paulus, 85, ed. Müller; Ovid, *Fasti*, ii. 19; Varro, *de Ling. Lat.* vi. 13), apparently because the festivals of the month, *e.g.* the Parentalia and Lupercalia, called for the use of such instruments. Like the Lent of the Christian calendar, this was the period in which the living were made ready for the civil and religious work of the coming year, and in which the yearly duties to the dead were performed.

The internal arrangement of each month had originally been based on the phases of the moon, and this system was maintained, for convenience of reckoning, long after all relations between these phases and the calendar had been lost. The two chief points in a lunar month are the first appearance of the moon's crescent (*Kalendæ*), and the full moon (*Idus*); between the two is the point when the moon reaches the first quarter, which is an uncertain one. It originally was the duty of the *rex*, afterwards of the *pontifices*, as soon as the new moon was discerned, to let it be known whether the first quarter was to be reckoned for the fifth or the seventh day after the Kalends (Varro, *Ling. Lat.* vi. 27), and whether the Ides were to be on the 13th or the 15th day of the month. The Ides were always on the eighth day after the first quarter, which was called *Nonæ*, according to the Roman method of counting a period so as to include both the day on which it began and that on which it ended (*Nonæ* is thus the ninth day before the Ides). All Kalends were sacred to Juno, whose connexion with the moon is beyond question (Wissowa, *Rel. und Kult. der Römer*, p. 116).

Owing to the uncertainty about the date of the Nones, there were no other religious festivals in the interval between Kalends and Nones, with the exception of the obscure Poplifugia on 5th July, nor were the Nones sacred to any particular deity. But the Ides were sacred to Juppiter as the supreme deity of the light of heaven, for on that day the two great heavenly bodies supplied continuous light during the twenty-four hours. On the Nones the *rex*, and, in the Republican period, his successor in certain religious duties, the *rex sacrorum*, announced the dates of the festivals of the month. These festivals are fully dealt with, and their religious significance explained, in art. ROMAN RELIGION. Here it will suffice to note that, like the Kalends, Nones, and Ides, they are all, with one or two exceptions which admit of a possible explanation, fixed on

days of odd number, *i.e.*, as noted above, on lucky days. This superstition is in many instances discernible also in their position with regard to each other. Where a festival occupies more than one day in a month, an interval of one or three days elapses between each celebration, making the whole number three or five. Thus Carmentalia occur on 11th and 15th Jan.; Lemuria on 9th, 11th, and 13th May; Lucaria on 19th and 21st July. In August and December we find traces of an arrangement by which different festivals, which seem to have some connexion with each other, are arranged on this principle; *e.g.* in August six festivals, all concerned in some way with the fruits of the earth and the harvest, occur on 17th, 19th, 21st, 23rd, 25th, and 27th. It has recently been suggested that *e.g.* these are arranged round one central festival, the Volcanalia on Aug. 23, which gives some kind of colouring to the rest (see von Domaszewski in *ARW* x. [1907] p. 333 ff.); and that, where this principle does not hold, we may see traces of an older system unaffected by the superstition. But, on the whole, there do not seem to be sufficient grounds for this ingenious conjecture.

A principle of greater importance for the life of the Roman people is that whereby the days of each month were divided, so to speak, between the human and the divine inhabitants of the city. In the ancient so-called calendar of Numa, distinguishable by the large capitals in which it is reproduced in the surviving calendars of the Julian era (see ROMAN RELIGION [First Period]), a letter is prefixed to each day in each month. Where this is the letter N (or NP, of which the meaning is practically the same, though its origin is uncertain [Wissowa, *op. cit.* 371]), it means that the day is made over to the gods (*nefastus dies*), and that to perform civil business on it would be a violation of *fas*, i.e. of that which is allowable under the *ius divinum*. The letters F and C, on the other hand, i.e. *fastus* and *comitialis*, indicate that such performance will be *fas*, i.e. religiously permissible. Of the 355 days of the original Roman normal year, 109 belonged to the Divine, 235 to the human, inhabitants of the city; the remaining 11 were divided between the two. Of these 11, 8 are marked EN, i.e. *endotercisus*, or 'cut into two parts'; the morning and evening being *fastus*, while the interval between the slaying of the victim and the placing of the entrails on the altar (*porrectio*) was *nefastus* (Varro, vi. 31; Macrob. i. 16. 3; and the note in the *Fasti Prænestini* for 10th Jan., believed to be the work of Verrius Flaccus). The letters Q.R.C.F. (*quando rex comitiavit fas*) occur on 24th March and 24th May, and also indicate a division of the day into sacred and profane (Fowler, *Roman Festivals*, p. 63). So, too, does the Q.St. D.F. (*quando stercus delatum fas*) of 15th June; for the explanation of this expression see Varro, vi. 32 (Fowler, *op. cit.* p. 146 ff.).

This brief account will have been sufficient to show that, as was said at the beginning of this article, the Roman calendar was based on the religious ideas of the Roman people, and mainly on the root-idea of the essential difference between the sacred and the profane, or that which legally belonged to the gods and that which belonged to man. For this reason it was in fact a part, and originally the most important part, of the *ius divinum*, or religious law, which was itself a part of the law of the State (*ius civile*); and the word by which it was known, *Fasti* (*anni Romani*), i.e. *dies fasti*, indicates that its main object was to set apart the days sacred to the deities from the days on which the citizens might go about their legal or other business. For this reason, too, the control of it was in the hands of a priestly authority, viz. the *pontifices*, after the abolition of the kingship; and for some two hundred years after that event it remained matter of their knowledge only, until the publication of the *Fasti* by the curule ædile Cn. Flavius in 304 B.C. (Livy, ix. 46). As the collegium of *pontifices* was, during this period, filled up by co-optation, it is easy to see how powerful a political influence that priestly authority must have exercised. The publication of the *Fasti* was in fact a most important step in the emancipation of the Romans from what threatened to become at one time a hierarchical oligarchy. Even after the publication, the fact that the *pontifices* had the charge of the rectification of the calendar by intercalation gave them the means of interfering unduly in political matters; and it was not until the period of the Empire, when, from 12 B.C. onwards, the Emperor was always pontifex maximus, that the calendar finally ceased to be an instrument of aristocratic intrigue and corruption.

LITERATURE.—Apart from the ancient authorities quoted above, of which the most important is Censorinus, *de Die Natali*, ch. xx., and the fragments of the calendar of the Julian era, collected with a commentary by Mommsen in vol. i. of *CIL*², p. 297 ff., the following works may be mentioned as necessary for the study of the subject: Th. Mommsen, *Röm. Chronol. bis auf Cæsar*, Berlin, 1859; A. Bouché-Leclercq, *Les Pontifes*, Paris, 1871, pp. 113 ff., 227 ff.; J. Marquardt, *Röm. Staatsverwaltung* (ed. Wissowa, Leipzig, 1885), p. 281 ff.; H. Matzat, *Röm. Chronol.*, Berlin, 1883–84. Succinct accounts will be found also in Smith, *Dict. of Gr.-Rom. Ant.*³, London, 1890, vol. i. p. 340 ff.; and in the Introd. to the *Roman Festivals of the Period of the Republic*, London, 1899, by W. Warde Fowler. The introduction to H. Peter's edition of the *Fasti* of Ovid (Leipzig, 1874) also contains a useful account. On all points connected with the religious aspect of the calendar, reference should be made to G. Wissowa, *Religion und Kultus der Römer*, which appeared in 1902, *i.e.* later than any of the works mentioned above.

W. WARDE FOWLER.

CALENDAR (Siamese).—As a result of the constant intercourse between Cambodia and Siam, and of their having the same religion and civilization, the Siamese calendar is almost exactly the same as that of the Khmers (see CALENDAR [Indo-Chinese], II.). As in Cambodia, so in Siam three eras of Hindu origin are used, along with three cycles of Chinese provenance.

1. **Eras.**—The three eras usually employed by the Siamese are the following: (1) the religious era, or the era of the Buddha (*phŭtthăsăkkărăt* = Skr. *buddhaśakarāja*),[1] which begins at full moon, May 543 B.C.; (2) the great era (*mahăsăkkărăt* = Skr. *mahāśakarāja*); this is the Hindu *śaka* era, established in A.D. 78, which used often to be employed in official and historical documents; (3) the lesser era (*chŭlăsăkkărăt* = Pāli *chullasakarāja*), beginning with the year 638 B.C., and whose exact commencement has been fixed by the astronomer Dominic Cassini. This is the civil era, which has not yet been supplanted in everyday usage by the new era (see below, §7).

In addition to these three eras, only two of which—the religious and the lesser—are in current use, the present king, wishing to give his country a calendar in agreement with the European calendar, introduced a new era, on 1st April 1889, called *răttănăkōsinsŏk*, or *rătănă kosinthără* (or *kōsin săkărăt*) (Skr. *ratnakośendraśakarāja*), 'era of Indra's casket of pearls.' It begins at the time when the capital of Siam, formerly established at Ayuthia, was transferred to Bangkok, *i.e.* 1st April 1781.

We may mention, in passing, two eras that are met with in the astrological writings of the Brahmans. The one, called *ŏn ya:na:sŏnti*, begins in 643 B.C., *i.e.* 100 years before the religious era; the other, called *xa:nathĭp*, starts 86 years before the same era, *i.e.* in 629 B.C.

2. **Cycles.**—These are the same as in Cambodia.

[1] This era is also called *phŭtthăsătsănăkan*, 'era of the religion of the Buddha.'

The following are the names of the animals of the duodenary cycle (the Siamese do not, any more than the Khmers, give them native names): *xuĕt*, 'rat'; *xălu*, 'ox'; *khar*, 'tiger'; *tho*, 'hare'; *ma:rōng*, 'great dragon' or 'dragon'; *ma:sĕng*, 'little dragon' or 'serpent'; *ma:mia*, 'mare' or 'horse'; *ma:mĕ*, 'goat'; *vŏk*, 'monkey'; *ra:ka*, 'cock'; *cho*, 'dog'; *kŭn*, 'pig.'[1] These words bear a very close resemblance to those used by the Khmers to denote the twelve animals of the cycle, and probably they have the same linguistic origin.

As happens among the Chinese, Annamese, and Cambodians, the duodenary cycle is combined five times with the denary cycle. These two cycles, called minor cycles, when counted concurrently and repeated as often as is necessary—in such a way that the last year of the denary cycle coincides with the last year of the duodenary, a coincidence which occurs at the end of 60 years—form the major cycle.

The years of the denary cycle are denoted by ordinal numbers borrowed from Pāli: *ĕkasŏk* (P. *ekasaka*), 1st year; *thôsŏk* (Skr. **dosaka*), 2nd year; *trisŏk* (P. *trisaka*), 3rd year; *chăttŭsŏk* (P. *chatusaka*), 4th year; *bĕnchasŏk* (P. *pañchasaka*), 5th year; *xósŏk* (P. *chhasaka*), 6th year; *săttasŏk* (P. *sattasaka*), 7th year; *ătthasŏk* (P. *aṭṭhasaka*), 8th year; *nă:vasŏk* (P. *navasaka*), 9th year; *sămrĭtthĭsŏk* (Skr. *samṛddhiśaka*), year of completion, last year.

3. Year and months.—The Siamese year is lunar; the months have twenty-nine and thirty days (or rather 'nights') alternately, and are generally denoted by ordinal numbers: *du'en nŭ'ng*, 'first month'; *d. song*, 'second month'; *d. sám*, 'third month,' etc. They have also Indian names: (1) *chĭtra:màt* (Skr. *chaitra*; P. *chitto* [Siam. *màt* = Skr. *māsa*, 'month']); (2) *vĭsákha:màt* (Skr. *vaiśākha*; P. *vesākho*); (3) *xètha:màt* (Skr. *jyeṣṭha*; P. *jeṭṭho*); (4) *asátha:màt* (Skr. *āṣāḍha*; P. *āsāḷho*); (5) *savăna:màt* (Skr. *śrāvaṇa*; P. *sāvaṇo*); (6) *phŏthraba:màt* (Skr. *bhādrapada*; P. *poṭṭhapādo*); (7) *asŭxa:màt* (Skr. *āśvayuj*; P. *assayujo*); (8) *katĭka:màt* (Skr. *kārttika*; P. *kattiko*); (9) *mĭkhosĭra:màt* (Skr. *mārgaśīrṣa*; P. *māgasiro*); (10) *busoja:màt* (Skr. *pauṣa*; P. *phusso*); (11) *makha:màt* (Skr. and P. *māgha*); (12) *phokhŭna:màt* (Skr. *phālguna*; P. *phagguno*).

The months with 29 days (odd: 1st, 3rd, 5th, etc.) are called *du'en khât*, 'defective months'; those with 30 days (even: 2nd, 4th, 6th, etc.) have the name of *d. thuèn*, 'complete months.'

Each month is divided into two fortnights: the clear fortnight, or fortnight of the waxing moon (*khàng khŭ'n*, 'waxing moon'), from new moon to full moon; and the dark fortnight (*khàng rĕm*, 'waning moon'), from full to new moon. In official and exact writings, these fortnights are often divided into *sŭk pòkos* (Pāli *pakāso*, 'light,' 'lustre'), 'bright half'; and *kala pòkos*, 'dark half,' as also takes place in India.

As regards the practice of beginning the year in *Vĭsákha* (April–May), of adding an intercalary month every two or three years so that seven intercalary months are introduced in a period of 19 years, and of increasing by a supplementary day the month preceding the commencement of the *vasso*, or Buddhist retreat, *i.e.* towards July, everything takes place exactly as in Cambodia. The intercalary year, which is called *pi a:thĭka:màt* (Skr. *adhikamāsa*, 'intercalary month'), has 384 days or 13 months; it makes the agreement of the lunar and solar years possible by bringing the rotation of the seasons into regularity.

[1] Several official documents employ Pāli names for these animals: *mūsiko, usabho, vyaggho, saso, nāgo, sappo, asso, eḷako, makkaṭo, kukuṭo, soṇo, sūkaro.*

4. Days.—In Siam, as in Cambodia, the names given to the days are Indian in origin: *văn athĭt* (Siam. *văn*, 'day'; Skr. *āditya*), 'Sunday'; *văn chăn* (Skr. *chandra*), 'Monday'; *văn ăngkhan* (Skr. *aṅgāraka*), 'Tuesday'; *văn phŭt* (Skr. *budha*), 'Wednesday'; *văn pră:hăt* (Skr. *bṛhaspati*), 'Thursday'; *văn sŭk* (Skr. *śukra*), 'Friday'; *văn sâo* (Skr. *śanaiśchara*), 'Saturday.'

5. Hours.—The hours (*nalĭka* = Skr. *nāḍikā*) are divided into hours of day (*mông*) and hours of night (*thŭm*). The hour is subdivided into 10 *bât*, the *bât* into 6 (formerly 4) *nathi* (Skr. *nāḍikā*, '60th part of the sidereal day,' or Indian hour), the *nathi* into 60 *vĭnathi* (Skr. *vināḍī*, '$\frac{1}{60}$ *nāḍikā*'), or 15 *phexanathi*. But this old method of measuring hours is giving way more and more to the European system of the hour equal to 60 *mĭnĭt* (Eng. 'minute'); the word *bât*, besides, has now got the current meaning of 'quarter of an hour, 15 minutes.' The day-hours are from 6 a.m. to 6 p.m.; the night-hours, from 6 p.m. to 6 a.m., form four watches, or *jam* (cf. Khmer *yām*), each of three hours' duration.

6. Seasons.—There are three seasons (*ra:du*, *rŭdu* = Skr. *ṛtu*): (1) *ra:du ron*, the warm season, from March to the middle of May; (2) *ra:du fŏn*, the rainy season, from May to the end of October; (3) *ra:du náo*, the cold season, from November to February. In the literature we find also the following names for these seasons: (1) *khĭmhănta:ra:du* (P. *gimhāna*, 'warm season'); (2) *va:sănta:ra:du* (P. *vasanto*, 'spring'); (3) *hĕmanta:ra:du* (P. *hemanto*, 'cold season').

7. The new era.—As we have seen, the new era, or *răttănakŏsĭnsŏk*, in use in Siam is based on the European era. The names of the months are taken from the signs of the zodiac. The list is as follows: (1) *mesajŏn* (Skr. *meṣa*, 'Aries'), April; (2) *phrŭtsaphakŏm* (Skr. *vṛṣa*, 'Taurus'), May; (3) *mĭthŭnajŏn* (Skr. *mithuna*, 'Gemini'), June; (4) *kărăkădakhŏm* (Skr. *karka*, 'Cancer'), July; (5) *sĭnghakhŏm* (Skr. *siṃha*, 'Leo'), August; (6) *kănjajŏn* (Skr. *kanyā*, 'Virgo'), September; (7) *tŭlakhŏm* (Skr. *tulā*, 'Libra'), October; (8) *pru'tchĭkajŏn* (Skr. *vṛśchika*, 'Scorpio'), November; (9) *thănvakhŏm* (Skr. *dhanu*, 'Sagittarius'), December; (10) *măkărakhŏm* (Skr. *makara*, 'Capricornus'), January; (11) *kŭmphaphăn* (Skr. *kumbha*, 'Aquarius'), February; (12) *mĭnakhŏm* (Skr. *mīna*, 'Pisces'), March.[1] This solar, or rather stellar, year begins in April, and, as in Cambodia, the passing of one sign of the zodiac into the next that marks the beginning of the new year is called *mahásóngkránt* (= Skr. *mahāsaṃkrānti*, 'great passage').

LITERATURE.—S. de La Loubère, *Du royaume de Siam*, Paris, 1691, vol. ii. pp. 74–80, 142; J. B. Pallegoix, *Dict. siamois-français-anglais*, revised by J. L. Vey, Bangkok, 1896, pp. 24 ff., 47 ff.; F. J. Wershoven, *Lehr- und Lesebuch der siam. Sprache*, Vienna, 1892; *Elements of Siamese Grammar*, with appendixes by O. Frankfurter, Bangkok, 1900; Ed. Lorgeou, *Grammaire siamoise*, Paris, 1902, p. 153 ff. F. K. Ginzel, *Handbuch der mathematischen und technischen Chronologie*, Leipzig, 1906, i. 409–413.

ANTOINE CABATON.

CALENDAR (Slavic).—Of all the Indo-Germanic calendars, that of the Balto-Slavs was unquestionably the least developed. Yet, for this very reason, it possesses a peculiar interest, for it is well known that the pagan Balto-Slavs preserved in many respects the most primitive conditions of Indo-Germanic times (cf. art. ARYAN RELIGION, *passim*). If we seek for analogical, though of course entirely independent, parallels outside the Indo-Germanic region, we may perhaps find them among some of the Polynesian peoples (cf. CALENDAR [Polynesian]), while within the

[1] The terminations *khŏm* (Skr. *gama*, 'going'), *jŏn* (Skr. *yāna*, 'going'), *phăn* (Skr. *bandha*, 'binding'), mean 'to enter into conjunction.'

Indo-Germanic race much may be gleaned from the Teutonic calendar (*q.v.*).

1. There appears to be no record of anything like an **era** among the Balto-Slavs, or any system of enumerating by a series of years. Nevertheless, the **year** and the **seasons** were well known. The year was named *godŭ* (lit. 'time' [cf. Miklosich, *Etymolog. Wörterb. der slav. Sprachen*, Vienna, 1886, p. 64 f.; Berneker, *Slaw. etymolog. Wörterb.*, Heidelberg, 1908 ff., pp. 316–318) among the Slavs, and *metas* (lit. 'time' [cf. Old Pruss. *mettan*, 'year,' Albanian *mot*, 'year,' 'weather,' Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, p. 390]) among the Lithuanians. At least four seasons have distinct names.[1]

Spring bears the name *vesna* in O. Church Slav. (cognate with Skr. *vasanta*, Gr. *ἔαρ*, 'spring,' Lith. *vasarà*, 'summer,' Skr. *vas*, 'shine,' etc. [see Schrader, pp. 258, 394]), and also, as in Slovenian, Czech, and Polish, the name *yar* (cognate with Eng. *year* [Miklosich, p. 100; Schrader, pp. 258, 395]). Summer was *lěto* (connected probably with Lith. *lytùs*, Lett. *lītus*, 'rain,' or possibly with Anglo-Sax. *Liđa*, 'June-July' [cf. CALENDAR (Teutonic); and see Schrader, p. 782; Miklosich, p. 167]) in O. Church Slav., *vasarà* in Lith., and *dagis* (cf. Lith. *dàgas*, 'harvest,' Skr. *nidāgha*, 'heat,' 'summer,' *dah*, 'burn,' Goth. *dags*, 'day' [Schrader, pp. 782, 845]) in O. Prussian. Autumn was *yesenĭ* in O. Church Slav., *assanis* in O. Pruss. (both cognate with Goth. *asans*, 'summer,' O.H. Germ. *aran*, 'harvest'), and *rudŭ* (cognate with Lith. *rùdas*, 'reddish-brown' [because of the colour of the leaves]) in Lith. (Schrader, p. 367). Winter was *zima* in O. Church Slav., *žiemà* in Lith., *sima* in Lett., and *semo* in O. Pruss. (all cognate with Skr. *hemantá*, Gr. *χειμών*, Irish *gam*, 'winter' [Schrader, p. 958]); and a special name for the season immediately preceding winter is implied in the Czech word *podzimí* and the Sloven. *prědzima*, 'pre-winter' (Schrader, p. 367).

2. It is in their names for the **months** (O. Church Slav. *měsęci*, 'moon,' 'month,' Lith. *mėnesis*, *mėnu*, 'moon,' 'month' [other Balto-Slavic words are given by Miklosich, p. 195], all cognate with the Indo-Germ. term for 'moon') that the Balto-Slavs display a wealth of nomenclature that is paralleled only by such primitive calendars as the Teutonic and Polynesian. To this subject a most valuable study has been contributed by Miklosich, in his 'Slavonische Monatsnamen' (*DWAW* xvii. [1868]), in which he makes a sixfold classification, though only the first four classes concern us here, the month-names based on religious feasts being without exception of Christian origin among the Balto-Slavs, and those derived from numerical sequence (such as Goth. *Fruma Jiuleis*, 'November' [lit. 'first Yule-month']) not being represented in the Balto-Slavic calendar. The remaining four groups are: from plants, from animals, from natural phenomena, and from the operations of agriculture. These month-names, however, did not apply to months in the strict sense of the term until after the Roman period. Originally they denoted merely general seasons of the year, as is obvious both from their meanings and from the fact that the same name is given by different Balto-Slavic peoples to different months, sometimes separated by a considerable interval of time.

The length of the Balto-Slavic month is quite uncertain; though perhaps there is some survival of primitive conditions in the practice of the modern Huzuls, who in many places reckon 30 days to all their months except the last (March), which has 33, their year thus having 363 days (Kaluzniacki, *Archiv fur slav. Philologie*, xxvii. 271). But among large numbers of the Balto-Slavic peoples calendrical reckoning is still in a most backward state; and the writer is informed by Mr. Hermann Rosenthal, Chief of the Russian Department of the New York Public Library, that he has seen in northern Russia the walls of a peasant's hut covered with notches made to indicate the passage of the days.

Some idea of the richness of Balto-Slavic nomenclature for the months may perhaps be gained from the following selection from the study of Miklosich just mentioned, the arrangement here being in the ordinary sequence of the Julian calendar, instead of according to etymological derivation, as in Miklosich.

January: O. Church Slav. *Prosinicĭ*, Sloven. *Prosinec*, Croat. *Prosinac* ('time of increasing day-light'); Sloven. *Sečen*, Serb. *Syečani* ('[wood-]cutting time'); Sloven. *Zimac*, Lett. *Zēmas mēnesis* ('winter month'); Czech *Hruden* ('clod month'), or *Leden* ('ice time').

February: O. Church Slav. *Sěčenu*, Bulg. *Sečka*, Croat. *Sičen* ('[wood-]cutting time'); Little Russ. *L'utyi*, Pol. *Luty*, Huz. *Lutyi* ('rigid [with cold]'); Czech *Únor*, *Ounor* ('melting or breaking up [of ice]'); Russ. *Bokogrěi* ('side-warming' [the cattle leaving their stalls to warm themselves in the open air]); Lith. *Kovĭnis* ('month of jackdaws').

March: O. Church Slav. *Suchyi*, Sloven. *Sušec*, Croat. *Sušac* ('dry month' [when land can be ploughed]); O. Church Slav. *Lŭzuyek*, Bulg. *Lazu*, Serb. *Ozuyak* ('treacherous'); Lith. *Karvelĭnis mĕnu*, Lett. *Baloschu mēnesis* ('dove month' [when the doves go from the woods to the fields]); Sloven. *Brězen*, Little Russ. *Berezozol* ('month of the birch tree').

April: O. Church Slav. *Brězinŭ*, Little Russ. *Berezen*, Huz. *Berezeni* ('month of the birch tree'); O. Church Slav. *Berezozolŭ* ('shedding birch sap'); Lith. *Sùltekis* ('flowing of birch sap'); Lett. *Sulu mēnesis* ('month of birch sap'); Croat. *Cvitani* ('flower month'); Czech *Duben* ('oak month'); Serb. *Travanī* ('grass month'); Lith. *Geguzĭnis* ('cuckoo month').

May: O. Church Slav. *Travĭnĭ*, Little Russ. *Traveń*, Huz. *Traveni*, Czech *Tráven* ('grass month'); Sloven. *Cvĕten* ('flower month'), *Sviban* ('cornel month'), and *Žoltopušnik* ('yellow month'); dialectic Russ. *Murŭ* ('grass month'); Upper Sorb. *Rozovc* ('rose bloom'); Ruthen. *Yareć* ('spring month'); Lith. *Berzelis* ('birch month'); Lett. *Sēyu mēnesis* ('seed month').

June: O. Church Slav. *Izokŭ* ('grasshopper time'); Sloven. *Prašnik*, Upper Sorb. *Smaznik*, Lith. *Pūdimo menu*, Lett. *Papu-s mēnesis* ('fallow month'); Sloven. *Bobor cvĕt* ('bean bloom'), *Klasen* ('ear month'), *Mlěčen* ('milk month'); Sloven. *Lipan*, Serb. *Lipani* ('linden month'); Sloven. *Rozen cvĕt*, Czech *Ruzen* ('rose bloom'); Bulg. *Crŭvenik*, Little Russ. *Cerven* ('time for gathering the *Coccus polonicus*' [for the preparation of a red dye]); Bulg. *Sěnokos* ('hay month'); Serb. *Svibinĭ* ('cornel month') and *Črěšnyarŭ* ('cherry month'); Lith. *Sēyĭnis* ('seed month'); Lett. *Zēdu mēnesis* ('month of flowers').

July: O. Church Slav. *Srupĭnŭ*, Sloven. *Srpen*, Serb. *Srpani* ('sickle time'); O. Church Slav. *Črŭvĭnŭ* ('time for gathering the *Coccus polonicus*'); Russ. *Sĕnozornik*, Lett. *Sēnu mēnesis* ('hay month'); Serb. *Žar*, Bulg. *Gorešnikul* ('hot month'); Lower Sorb. *Žňoiski* ('harvest month'); Serb. *Lipštak*, Little Russ. *Lypeć*, *Lypeń*, Lith. *Lĕpos mĕnu*, Lett. *Lēpu mēnesis* ('linden month').

August: O. Church Slav. *Zarevŭ* ('beginning of bellowing' [of stags, etc.]); Russ. *Zorničnikŭ*, Croat. *Zrilivoća* ('ripening'); Little Russ. *Serpeń*, Czech *Srpen* ('sickle time'); Sloven. *Kolovoz* ('time for going with waggons'); Upper Sorb. *Žńeńc*, Lower Sorb. *Yacmański*, Lith. *Piūmenė*, Lett. *Labbibas mēnesis* ('harvest month'); Little Russ. *Kyren* ('fly month'); Lith. *Rugpiutė*, Lett. *Rudzu mēnesis* ('rye month'); Lith. *Degĕsis* ('hot month'); Lett. *Suńu mēnesis* ('dog month').

September: O. Church Slav. *Vrěsinĭ*, Little Russ. *Veresń*, Pol. *Wrzesień*, Czech *Vresen*, Lett. *Silu menesis* ('heather month'); O. Church Slav. *Ryuyinŭ*, Serb. *Ruyan*, Czech *Zari*, Lith. *Ruyis* ('rutting month'); Russ. *Osenĭ*, Sloven. *Yesenik* ('autumn month'); Sloven. *Kimavec* ('fly month'); Slovac. *Hruden* ('clod month'); Little Russ. *Babyne l'ito*, Pol. *Babie lato* ('old woman's summer'); Little Russ. *Šiven* ('seed month').

October: O. Church Slav. *Listopadŭ*, Serb. *Listopad*, Huz. *Padolyst*, Lith. *Lapkristīs*, Lett. *Lapu menesis* ('month of falling leaves'): Little Russ. *Zolten*, Lith. *Rudujīs*, Lett. *Rudens mēnesis* ('yellow month'); Sloven. *Vinotok*, Lower Sorb. *Viński myasec* ('wine month'); Russ. *Gryaznikŭ* ('time when the roads become usable'); Sloven. *Obročnik* ('hoop month').

November: O. Church Slav. *Grudinŭ*, Russ. *Grudenĭ*, Huz. *Hrudeni* ('clod month'); Sloven. and Pol. *Listopad*, Little Russ. *Lystopad* ('month of falling leaves'); Serb. *Studeni* ('cold month').

December: O. Church Slav., Russ., Little Russ. *Studenŭ*, Pol. *Styczeń* ('cold month'); Czech *Vlčnec*, Upper Sorb *Vyelči mĕsac*, Lett. *Vilku menesis* ('wolf month'); Little Russ.

[1] The contention of Schrader, pp. 394–397, that the Indo-Germanic peoples knew of only three seasons, seems to the writer scarcely proven, especially as the theory is based solely on the *argumentum e silentio* (cf., further, Hirt, *Indogermanen*, Strassburg, 1907, pp. 512, 749).

Trusym, Lett. *Putenu mēnesis* ('month of snow drifts'); Serb. *Prosinac*, Czech *Prosinec*, Huz. *Prosynec* ('time of increasing daylight'); Sloven. and Croat. *Gruden*, Lith. *Gródìnis* ('clod month'); Russ. *Solnovorotŭ* ('[winter] solstice'); Lower Sorb. *Zymski* ('winter month'); Lith. *Sausis* ('dry [frost] month'), and *Sėkis* ('[wood-]cutting time').

It will be obvious, from the examples just given, that many month-names are applied by the Balto-Slavs to different months of the Julian calendar. Thus, the 'birch month' may be March (Sloven. *Brězen*), April (O. Church Slav. *Brězinŭ*), or May (Lith. *Berzēlis*); the 'flower month' may be April (Croat. *Cvitani*), May (Sloven. *Cvěten*), or June (Lett. *Zēdu mēnesis*); the 'yellow month' may be May (Sloven. *Zolto-pušnik*) or October (Little Russ. *Zolten*); and the 'clod month' may be September (Slovac. *Hruden*), November (Huz. *Hrudeni*), December (Lith. *Gródìnis*), or January (Czech *Hruden*).

3. The Balto-Slavic calendar originally had nothing corresponding to the week, the names for which properly mean 'Sunday' (O. Church Slav. *Nedělya*, Lith. *Nedėlė* [lit. 'day on which nothing is done'], O. Pruss. *Sawaite* [perhaps a loan-word from Gr. σάββατον]). The days of the week, which here begins with Monday, were numbered, in conformity with ecclesiastical usage, instead of being named, as in the Teutonic and other calendars. Thus the Lithuanian designations of the days of the week, which are here perfectly typical of the whole Balto-Slavic system, are as follows: Sunday, *Nedėlė* ('day on which nothing is done'); Monday, *Panedėlis* ('day after Sunday'); Tuesday, *Utárninkas* ('second day'); Wednesday, *Seredà* ('heart' [*i.e.* middle of the week]); Thursday, *Ketvergas* ('fourth day'); Friday, *Pētnyczia* ('fifth day'); Saturday, *Subatà* ('Sabbath'). For further details, see Schrader, pp. 963–965; Miklosich, 'Christliche Terminologie der slav. Sprachen,' in *DWAW* xxiv. [1876], pp. 19–21, where it is held that the Balto-Slavs borrowed their calendar through the Germanic peoples in Pannonia.

4. The Balto-Slavs divided their day (O. Church Slav. *dĭnĭ*, Lith. *dēnà*, cognate with Skr. *dína*, 'day' [for further cognates, see Berneker, p. 253 f.]) into at least four parts: dawn, morning (Lith. *auszrà*, O. Pruss. *angstainai*; cf. Schrader, p. 559); noon (Lith. *piētūs*; cf. Schrader, p. 2); evening (O. Church Slav. *vecerŭ*, Lith. *vãkaras*, O. Pruss. *bītai*; cf. Schrader, p. 1 f.); and night (O. Church Slav. *noštĭ*, Lith. *naktìs*; cf. Schrader, p. 569); and they were early acquainted with some sort of hour, as shown by O. Church Slav. *casŭ*, 'hour' (properly 'time'; cf. the cognate O. Pruss. *kīsman*, 'time,' Alban. *kohε*, 'time,' 'weather' [for further cognates, see Berneker, p. 137]).

Among the Russian peasants certain days receive special names. Thus Jan. 16 (the Feast of St. Peter's Chains in the Eastern Church) is called 'Peter Half-Food,' because by that time half the winter store of food has been consumed; Jan. 18 (the Feast of SS. Athanasius and Cyril) is 'Athanasius Break-Nose' (the cold then being so intense as to freeze the nose stiff); Jan. 22 (the Feast of St. Timothy) is 'Timothy Half-Winter'; Feb. 2 is 'Meeting Day' (when winter and summer are supposed to meet); Apr. 12 is 'Take the Waggons out'; May 2 is 'Nightingale Day'; June 13 is 'Buckwheat Day' (this grain then being sown), etc. Many foreign words receive folk-etymologies in this connexion, as when Russ. *Martŭ*, 'March' (a loan-word from Lat. *Martius*) is thus associated with *maritĭ*, 'to burn' (of the sun), because in that month the sun begins to burn the earth (for abundance of further examples, see Afanasiev, *Poetič. vozzr. Slavyan na prirodu* ['Poetic Views of the Slavs on Nature'], Moscow, 1869, iii. 670–675).

The months and seasons play some part in Slavic folk-tales. According to a White Russian tradition, spring is a young and most beautiful maiden; summer, a sensually lovely woman; autumn, a lean and elderly man, three-eyed, and with unkempt and bushy hair; and winter, an aged man, with white hair, a long grey beard, barefooted and bareheaded, clad in white, and bearing an iron club (Krek, *Einleitung in die slavische Literaturgeschichte*[2], Graz, 1887, p. 519, with a reference to Afanasiev, *op. cit.* iii. 676–682).

A folk-tale 'of the twelve months,' of rather exceptional interest in this connexion, is recorded by Wenzig, *Westslaw. Marchenschatz*, Leipzig, 1857, pp. 20–26. A certain woman had a daughter named Holena, as hateful in soul as in body, and a stepdaughter named Marushka, as good as she was beautiful. In the depths of the ice-month (December), Marushka was compelled by Holena, under threat of being killed if unsuccessful, to fetch her violets. After much wandering, Marushka saw a light in the distance, and, following this, she 'comes to the top of the hill. Here a great fire burns, about the fire are twelve stones, on the stones sit twelve men. Three were grey-bearded, three were younger, three were still younger, and the three youngest were the handsomest. They spoke not; they looked silently into the fire. The Ice-Month sat at the head; he had hair and beard white as snow. In his hand he held a staff.' Marushka conducted herself with the utmost respect for these personages, and, on learning of her quest, 'the Ice-Month rose, went to the youngest month, put the staff in his hand, and said: "Brother March, sit at the head." March took his seat at the head, and swung the staff over the fire. On the instant the fire flamed higher, the snow began to melt, the trees dropped down buds,' and at the bidding of March, Marushka plucked the violets for which she had been sent, after which she politely thanked the months and returned to her wretched home. Soon, however, the cruel Holena sent her out again, this time for strawberries. Now it was June, the *vis-à-vis* of the Ice-Month, to whom the staff was given. A third time Marushka was sent for apples, and the Ice-Month gave the staff to September. By this time Holena, angered beyond measure by Marushka's success in her impossible tasks, herself set forth; but she displayed the utmost insolence to the months, whereupon 'the Ice-Month frowned and swung the staff over his head. Instantly the heaven was darkened, the fire burned low, snow began to fall as though a feather-bed were shaken out, and a biting wind blew through the wood,' all causing the death of the wicked Holena, and ultimately of her equally evil mother, while Marushka 'lived happily ever afterward.'

In this story the hill is plainly the sky; the fire is the sun, which is warmer or cooler according to the various months of the year; and perhaps there may be a covert moral that the powerful seasons are to be treated with respect, or disaster will follow.

LITERATURE.—This has been given in the course of the article, and further references may be found in Krek, *Einleit. in die slav. Literaturgesch.*[2], Graz, 1887, pp. 510–520.

LOUIS H. GRAY.

CALENDAR (Teutonic).—For the earliest and fullest account which we possess of any native Teutonic calendar we are indebted to Bede's treatise, *de Temporum Ratione* (ch. 15). Bede says that in former times the Angli calculated their months according to the course of the moon, whence the name (A.-S. *mónaþ*, from *móna*).[1] The months individually bore the following names:

Jan. *Giuli.*	May, *Thrimilci.*	Sept. *Halegmonath.*
Feb. *Solmonath.*	June, *Lida.*	Oct. *Winterfylleth.*
Mar. *Rhedmonath.*	July, *Lida.*	Nov. *Blotmonath.*
Apr. *Eosturmonath.*	Aug. *Weodmonath.*	Dec. *Giuli.*

The meaning of these names was as follows. The months called *Giuli* derived their name *a conuersione solis in auctum diei*, since one preceded the solstice and the other followed it. *Solmonath* denoted 'month of cakes,' which they used to offer at that time to their gods. *Rhedmonath* and *Eosturmonath* derived their names from two goddesses, *Rheda* (*Hreð*?) and *Eostre* (*Eastre*), to whom sacrifices were offered in these months. *Thrimilci* was so called because at that time the cattle were milked thrice a day, 'for such was once the fertility of Britain, or of Germany, from whence the English nation came to Britain.' *Lida* (*Liða*) meant *blandus siue nauigabilis*; *Weodmonath*, 'month of tares,' which were then most abundant; *Halegmonath* was *mensis sacrorum*. *Winterfylleth* might be rendered by the coined word *hiemiplenium*. *Blotmonath* denoted *mensis immolationum*, because they then devoted to their gods the live stock which they were going to slaughter.

The year began on Dec. 25, and that night (probably the preceding night) was called *Modraniht* ('night of the mothers'), on account (so

[1] Reference may also be made to the Anglo-Saxon menology of the Vercelli MS (ed. Wülker, *Bibliothek der angelsächsischen Poesie*, Leipzig, 1894, ii. 282–293).

Bede suspected) of certain ceremonies which they observed. In ordinary years three months were reckoned to each season; but when there was an intercalation—it is not stated how often this took place—the extra month was added to summer. Such a year was called *Thrilidi*, because the name Lida was then borne by three months. Another and more customary division of the year was into two seasons, winter and summer, calculated according to the relative length of the nights and days. The first month of winter (*Winterfylleth*) acquired its name, which was a compound of 'winter' and 'full moon,' from the fact that winter was reckoned to begin from the full moon of that month.

Some modern writers have taken exception to this account, on the ground that it presents an impossible combination of solar and lunar reckoning. The explanation, however, may be that the solar reckoning had begun to encroach on the other before the adoption of Christianity. Originally the year may have begun with the interlunium nearest to the winter solstice. The word *Giuli* is clearly related to the A.-S. name for Christmas, *Geohhol*, *Géol*, 'Yule.' In a fragment of a Gothic calendar, dating probably from the 6th cent., we find *Naubaimbair*: *fruma Jiuleis* (*i.e.* 'the first Jiuleis'), which is the exact Gothic equivalent of the same word. Here also the name seems to have been given to more than one month (*aftuma Jiuleis*, 'the second Jiuleis,' probably being the name of Dec.), though apparently these months were Nov. and Dec., instead of Dec. and Jan.—a discrepancy which is due probably to the difficulty of equating lunar months with divisions of the Roman (solar) year.

Later English authorities show comparatively few variations from the list of month-names given by Bede. Dec. and Jan. are distinguished as *se ǽrra Géola* and *se æftera Géola* respectively, as in Gothic; and a similar distinction is made between the two months called *Liða*. We find also *Hlyda* for March, *Séarmónaþ* ('dry-month') for June, *Hærfestmónaþ* ('harvest-month') and *Rugern* (probably 'rye-harvest') for September, and *Iulmónaþ* (Yule-month') for December.

The earliest Continental reference is a passage in Einhard's *Vita Caroli Magni* (ch. 29), where Charlemagne is said to have fixed German names for the months. Before his time they were called partly by Latin and partly by native names. The authorized list was as follows:

1. *Wintarmanoth.*	5. *Winnemanoth.*	9. *Witumanoth.*
2. *Hornung.*	6. *Brachmanoth.*	10. *Windumemanoth.*
3. *Lenzinmanoth.*	7. *Hewimanoth.*	11. *Herbistmanoth.*
4. *Ostarmanoth.*	8. *Aranmanoth.*	12. *Heilagmanoth.*

For *Hornung* we find in later times *der kleine Horn*, and so also *der grosse Horn* for January. The name is probably connected with O. Norse *hiarn*, 'frozen snow.' *Ostarmanoth* corresponds to the Anglo-Saxon name for April, but *Herbistm.* and *Heilagm.* to the two Anglo-Saxon names for September. *Lenzinm.*, *Winnem.*, *Brachm.*, *Hewim.*, *Aranm.*, *Witum.*, and *Windumem.* appear to mean 'spring-month,' 'pasture-month,' 'fallow-month,' 'hay-month,' 'reaping-month,' 'wood-month,' and 'grape-gathering-month' respectively.

Among German-speaking peoples in later times the Latin names appear to have been almost exclusively used for March, April, May, and August, in many districts also for January. The other names in common use were: for Jan. *Hartmonet* ('sharp-month') and several others; for Feb. *Hornung*, etc., and *Sporkel*, the latter word probably being borrowed from mediæval Latin *spurcalis*, 'Shrove Tuesday,' in allusion to the merriment, often very questionable, which characterized this day, especially as the *Indiculus Superstitionum* (8th cent.) has a notice *de Spurcalibus in Februario*. For June we find *Brachmanet*, *Brachot*, or 'second May' (*ander Meije*, etc.); for July *Houmanet*, *Houwot*, or *Hundemaen*; for Sept. *Herbest*, or 'second August' (*ander Ougest*, etc.); for Oct. *Winmanet* ('wine-month'), *Herbest*, or *ander Herbest*; for Nov. *Wintermanet*, *erste Winterm.*, *dritte Herbest*, *Louprise* ('fall of the leaf'), *Wolfm.*, *Halegm.* etc.; for Dec. *Wintermanet*, *ander Winterm.*, *Hartm.* etc.

Concerning the form of calendar which prevailed in Germany in heathen times we have no definite information; but the fact that several of the above names are applied to different Roman months perhaps suggests that they originally denoted lunar months.

The month-names used in the Netherlands, both now and in the past, differ somewhat from the German. The following are the commonest varieties: (1) *Louwmaand* (meaning doubtful), *Hardm.*; (2) *Sprokkelmaand*, *Sporkel*, *Sille* (the latter unexplained); (3) *Lentemaand*; (4) *Grasmaand* ('grass-month'); (5) *Bloeimaand* ('blossom-month'), etc.; (6) *Zomermaand* ('summer-month'), *Braakm.* etc.; (7) *Hooimaand*, etc.; (8) *Oogstmaand*, etc.; (9) *Herfstmaand*, *Evenmaand* ('oats-month'?); (10) *Wijnmaand*, etc.; (11) *Slagtmaand* ('slaughter-month'), etc.; (12) *Wintermaand*, etc. The modern Frisian names practically all agree with the Dutch.

The native month-names used in Denmark are as follows: (1) *Glugmaaned* ('window-month'?); (2) *Blidemaaned* ('cheerful-month') or *Göjemaaned* ('giant-month'); (3) *Tormaaned* ('winter-month'); (4) *Faaremaaned* ('sheep-month'); (5) *Mejmaaned*; (6) *Sommermaaned* or *Skærsommer* ('bright summer'); (7) *Ormemaaned* ('worm- or snake-month'); (8) *Hömaaned* ('hay-month') or *Höstmaaned* ('autumn-month'); (9) *Fiskemaaned* ('fish-month'); (10) *Sædemaaned* ('sowing-month') or *Ridmaaned* ('riding-month'?); (11) *Vintermaaned*; (12) *Julemaaned* ('Yule-month').

In Sweden we find: (1) *Thore* ('giant-month'); (2) *Göja* ('winter-month'); (3) *Blidemånad*, *Blida*; (4) *Vårant* ('spring-work'); (5) *Mai*; (6) *Midsommer*; (7) *Hömanad*, *Hoant* ('hay-making'); (8) *Skördemånad*, *Skortant* ('reaping-work'); (9) *Höstmånad*; (10) *Blotmånad*, *Slagtmånad* (cf. the A.-S. and Dutch names for Nov.); (11) *Vintermånad*; (12) *Julmånad*.

In Norway a peculiar and apparently archaic calendar has continued in use down to the present time. The first three months are called respectively *Torre* ('giant'), *Gjo* ('winter'), and *Krikla* or *Krine* (the latter two unexplained). For the 4th and 5th months we find only the name *Voarmoanar* ('spring-months'); for the 6th and 7th, *Sumarmoanar*; for the 8th and 9th, *Haustmoanar*; for the 10th and 11th, *Vinterstid*; for the 12th, *Jolemoane* or *Skammtid* ('short-time'). All these months are lunar. *Jolemoane* is said to denote the lunar month in which Yule (Christmas) falls, provided that it lasts until Jan. 6; otherwise the name is applied to the following lunar month. The Norwegian year is divided into summer and winter. The former begins on Apr. 14, which is called *Sumarmaal*, and the latter on Oct. 14, called *Vetternætter*. This arrangement can be traced back to early times.

In Iceland the first month has always been called *Thorri*, the second *Gói*, the third usually *Einmánaðr* (supposed to mean 'one month' before the beginning of summer). After this there is much variation. *Sáðtið* (seed-time') varies between 3 and 4, *Eggtið* ('egg-time') and *Stekk tið* ('fold-time' or 'lambing-time') between 4 and 5, *Sólmánaðr* ('sun-month') between 5 and 6. We find also: (4) *Gaukmánaðr* ('cuckoo-month'), *Harpað* (unexplained); (5) *Skerpla* (unexplained); (6) *Sel-*

mánaðr ('mountain-pasture-month'); (7) *Heyannir* ('hay-making'), *Miðsumar*; (8) *Trimánaðr* ('double-month'?), *Kornskurðmán.* ('reaping-month'); (9) *Haustmán.*; (10) *Gormán.* ('slaughter-month'?); (11) *Frermán.* ('frost-month'), *Ylir* (supposed to mean 'howler,' but perhaps identical with the Anglo-Saxon *Giuli*); (12) *Hrútmán.* ('ram-month'), *Jólmán.*, and *Mörsugr* ('marrow-sucker'?). The majority of these names can be traced back to the 13th cent.; but, with the exception of the first two or three, they do not seem to have been much used.

The Icelandic months are not lunar, but they do not really correspond to ours. The year contained 364 days, *i.e.* exactly 52 weeks, and was divided into winter and summer, the first three and last three months being included in winter and the rest in summer. Each month contained 30 days, except the third month of summer, which had an additional 4 days, known as *Aukanætr*. The beginning of the fourth month, *i.e.* the beginning of summer, fell always on a Thursday, between Apr. 9 and 15 (O.S.), while the beginning of winter fell always on a Saturday, between Oct. 11 and 18. These dates were called respectively *Sumarmál* and *Vetrnætr* (the Norw. *Sumarmaal* and *Vetternætter*), though in each case the name was applied to the first three days. 'Midsummer' proper was the beginning of the fourth month of summer, and fell always on a Sunday, between July 13 and 20, while 'midwinter' was the beginning of Thorri, and fell always on a Friday, between Jan. 9 and 16. Every five or six years, a whole week, called *Sumarauki*, was intercalated after the *Aukanætr*, i.e. immediately before 'midsummer.' The usual method of dating was by the number of the week in summer or winter.

An attempt has recently been made to show that this peculiar calendar is merely a modification of the Julian, determined by greater convenience in the reckoning of Easter. The number of dates on which Easter could fall was reduced thereby from thirty-five to five, while the beginning of summer coincided with the mean date for Thursday in Easter week. It is likely enough that Church influence did contribute towards the fixing of this date, but the assumption on which the theory as a whole mainly rests, viz. that the Northern peoples could not have known the week before they adopted Christianity, can hardly be admitted. According to native tradition, the *Sumarauki* was invented by a certain Thórsteinn Surtr shortly after the middle of the 10th cent., at a time when it was found that the year of 364 days, which was already in use, did not really coincide with the solar year. The week may very well have been adopted quite early in Icelandic history as the standard division of the year, in place of the lunar month. Such a change is probably to be ascribed to the isolation of the settlers, and the difficulty which they consequently found in determining or agreeing as to when intercalation should take place according to the lunar system.

In spite of the great variety of names shown by the above lists, there is yet an appreciable number of cases in which several Teutonic peoples agree in using the same term. These are, as a rule, derived from occupations peculiar to certain periods of the year, *e.g.* 'hay-month,' 'harvest-month,' 'slaughter-month.' Again, there is no doubt that some names have become obsolete in certain countries. Thus in some parts of Sweden the marsh-marigold is called *trimjölksgräs*, which points to the former existence of a month-name corresponding to the A.-S. *Thrimilci*. It has also been suggested that the A.-S. name *Liða* may be related to Old Church Slavic *lěto*, 'summer.' If so, it must be very ancient.

The most important case of agreement, however, is that of Goth. *Jiuleis*, A.-S. *Giuli*, and perhaps Icel. *Ylir*; for, though this word is clearly related to A.-S. *Geohhol*, *Géol*, O. Norse *Jól*, it is certainly not a recent derivative from it. The etymology of the whole series of forms is quite obscure, but there is no reasonable ground for doubting the antiquity of a midwinter festival among many, if not all, of the Teutonic peoples. Procopius, writing in the middle of the 6th cent., says (*Goth.* ii. 15) that the inhabitants of Thule (*i.e.* Scandinavia) were for forty days in winter without the light of the sun. When thirty-five days had passed, it was their custom to send messengers to the mountains, and, as soon as they heard from them of the sun's return, they began to celebrate the greatest of their festivals. This story as it stands is difficult to credit, for such a phenomenon could, of course, occur only in the extreme north of the peninsula; but, at all events, it gives evidence for the existence of a festival about the end of the first week in January, *i.e.* at precisely the same time as we find the Yule festival in later days. Apart from the sagas, we should notice especially a passage in the *Chronicle* of Thietmar of Merseburg (i. 9), where it is stated that the great nine-yearly festival at Leire (in Sjælland) took place about the time of Epiphany.

Other festivals were doubtless held at various seasons in the year, and the assumption that uniformity prevailed everywhere is neither necessary nor probable. In the North, however, we hear frequently of two specially important festivals, one at the beginning of summer or 'towards summer,' the other at the beginning of winter. The former may have coincided with the great festival at Upsala, which, according to a scholion (No. 137) in Adam of Bremen's *History*, took place every nine years about the vernal equinox, though this cannot be regarded as quite certain. The latter was doubtless held at 'the winter nights' (*Vetrnætr*) in October. We hear also of religious festivals among the heathen Old Saxons about this time, and the A.-S. name *Winterfylleth* seems rather to suggest something of the same kind. Tacitus (*Germ.* 11) says that the ancient Germani usually held their tribal gatherings either at the full moon or at the new moon, and in another passage (*Ann.* i. 50) he mentions a religious festival which seems to have taken place at a full moon in autumn. It is held by many scholars that the Teutonic year originally began at this time; and, though incapable of actual proof, the view has much in its favour, especially as the ancient Gauls also appear to have begun their year in the autumn.

As regards the interdependence between the festivals, Icelandic custom fixed an interval of ninety days (which points to the lapse of three full lunar months) between *Vetrnætr* and 'midwinter' (the old Yule), whereas the English year would seem to have begun at the third new moon after the beginning of winter. This accounts for the difference between the two midwinter festivals, if we are to suppose that *Vetrnætr* was originally a mean date for the third full moon before the solstice, corresponding to the A.-S. *Winterfylleth*. The Scandinavian Yule may have been shifted from the solstitial new moon to the following full moon, in consideration of the obviously greater convenience which the latter would present in northern latitudes; but this, of course, can be regarded only as conjectural.

CALF.—See BULL.

CALIFORNIA.—Fundamentally the religion of the Indians of California is very similar to that of savage and uncivilized races all the world over. Like all such peoples, they cherished animistic notions, attributing life, intelligence, and especially supernatural power, virtually to all things. Nor did they lack the beliefs and practices of shamanism, which is founded on the conception that certain men, through communication with the animated supernatural world, have the power to accomplish what is contrary to, or above, the events of ordinary experience. As elsewhere, belief in shamanistic powers circled mainly around disease and death, which were generally believed to be not only dispelled but entirely caused by shamans.

In common with the other American Indians, those of California made dancing, always accompanied by singing, a conspicuous part of nearly all their public ceremonies. They differed from almost all other tribes of North America in exhibiting a much weaker development of the ritualism and symbolism which are perhaps the most distinctive feature of the religion of the Americans as a whole. Practically all the approaches to a system of writing devised in North America, whether in Mexico, Yucatan, or among the tribes of the United States and Canada, are the direct outcome of a desire for symbolic religious expression. The California Indians, however, are remarkably free even from traces of this graphic tendency, alike in their religion and in the more practical aspects of their life. In many parts of North America there is a considerable amount of fetishism, not of the crass type of Africa, but rather as a result of over-symbolism. This fetishistic tendency is very slightly developed in California, and that in spite of—or, as an Americanist would more properly say, on account of—the generally rude and primitive condition of culture. By contrast, as actions and visible symbols are here a less important means of religious expression, words, both spoken and sung, are of greater significance.

As an ethnographic province, the greater part of California plainly forms a unit. Two portions of the present political State, however, were sharply distinguished from the remainder in point of culture during the native period, and these must usually be kept apart in all matters that concern ethnology and religion. One of these distinctive culture areas comprises the extreme N.W. corner of the State, in the drainage of the lower Klamath and about Humboldt Bay. The other consists of what is usually known as Southern California, extending from the Tehachapi Pass and mountains in the interior, and from Pt. Concepcion on the coast, southward to the Mexican boundary. The culture of the small N.W. area was in every way, and that of the larger Southern province at least in some respects, more highly organized and complex than that of the still larger and principal Central region, which comprised at least two-thirds of the State, and which, if such a selection is to be made, must be considered as the most typically Californian.

The religious practices of the Indians of California fall into three well-marked divisions: (1) such observances as are followed and executed by individuals, although their perpetuation is traditionary and tribal—that is to say, *customary observances*; (2) individual practices resting upon a direct personal communication of an individual with the supernatural world—in other words, *shamanism*; (3) observances and practices which are not only the common property of the tribe by tradition, but in which the entire tribe or community directly or indirectly participates—in other words, *ceremonies*. After discussing these three divisions of their religious practices, we shall conclude with a fourth section on their mythology.

1. Customary observances.—These are as strongly developed here as farther north along the Pacific slope. This W. coast region thus differs as a whole from the interior and E. parts of the continent, where such observances are usually a less conspicuous feature than tribal ceremonies. By far the most important of the observances in California are those relating to death. Next come those connected with birth and sexual functions. Beliefs and practices centring in the individual's name are of importance particularly in so far as they are connected with the customs relating to death. There are also restrictions and superstitions as to food.

Death was considered to bring defilement, and almost everywhere entailed purification ceremonies. In the N.W. region these were particularly important, and among such tribes as the Hupa and Yurok the observance of this purification, the most essential part of which was the recitation of a formula, was the most stringently exacted religious custom. The method of disposing of the dead varied locally between burial and cremation, cremation being practised over at least half of the State. Air-burial and sea-burial have nowhere been found. Mourning, which consisted primarily of singing and wailing, began immediately upon the occurrence of death, and continued for about a day, although it was sometimes longer protracted by the nearest relatives of the deceased. Among some tribes this mourning commenced with full vigour some time before impending death, often during the full consciousness of the patient and with his approval. Mutilations on the part of the mourners were not practised to any great extent, except that the hair was almost universally cut more or less, especially by the women. Mourning observances were almost always carried further by women than by men. Among some tribes of the Sierra Nevada the widow did not speak from the time of her husband's death until the following annual tribal mourning ceremony. Except in the case of the N.W. tribes, who possessed more elaborately constructed dwellings of wood, the house in which a death had occurred was not used again but was burned. Objects that had been in personal contact or associated with the deceased were similarly shunned and destroyed. The name of the dead was not spoken. Even the word which constituted his name was not used in ordinary discourse, a circumlocution or newly coined word being employed. It is certain that this stringently observed custom has been a factor in the marked dialectic differentiation of the languages of California. In N.W. California even the accidental mention of the name of the dead could be compensated for only by the payment of a considerable sum. Some property and food were buried with the corpse. The idea that the articles were for use in the world of the dead was not so strong a motive for such acts as the feeling that the objects had been defiled by association with the dead, and the desire to express sincerity of mourning.

On the whole, the immediate observances of death pale in importance before the annual public mourning ceremony, which is everywhere, except in the N.W. region, one of the most deeply-rooted and spectacular acts of worship.

Observances connected with *sexual functions*, including birth, are next in importance after those relating to death. The menstruating woman was everywhere regarded as unclean, and was excluded especially from acts of worship. Not infrequent was the conception that she contaminated food, especially meat. Among many tribes she was excluded from the house and confined to a menstrual hut. Her refraining from all but the most necessary activity was sometimes deemed essential. All these observances were greatly intensified at the time of a girl's first menstruation, a condition for which most of the languages of California possess a distinctive word. The girl at this period was thought to be possessed of a particular degree of supernatural power. One of the injunctions most strongly laid upon her was not to look about her. She kept her head bowed, and was forbidden to see the world and the sun. Some tribes covered her with a blanket. Many of the customs in this connexion most strongly resembled those of the North Pacific coast, *e.g.* the prohibition against the girl's touching or scratching her head with her hand, a special implement being furnished for the purpose. Some form of public ceremony, often accompanied by a dance and sometimes by a form of ordeal for the girl, was practised nearly everywhere.

Religious customs connected with *birth* consisted in part of observances before the birth of the child, in part of observances after birth, and especially of restrictions imposed on one or both of the parents after its birth. Practices affecting the child itself, or the mother before its birth, related in great part to food. The newly-born child was usually washed, often repeatedly. The mother after a birth was regarded as more or less defiled. Either the mother was, or both father and mother were, usually inhibited from activity for some time after a birth. The *couvade* in its strict form, with restrictions imposed entirely upon the father to the exclusion of the mother, does not seem to be found.

In N.W. California there is a special development of *spoken formulæ*, whose content is little else than a myth, and which not only constitute the basis and essential element of public ceremonies, but are connected with almost all customary observances. To such an extent had these formulæ grown into the mind of these Indians as being what is most sacred and most efficacious in all aspects of religion, that they partly supplanted shamanism. Not only purification from death and other defilement, but luck in hunting and fishing, and success in felling trees and making baskets, in the acquisition of wealth, in short, in the proper achievement of every human wish, were thought to be accomplished by the proper knowledge and recitation of these myth-formulæ.

2. Shamanism.—Shamanism, the supposed individual control of the supernatural through a personally acquired power of communication with the spirit-world, rests upon much the same basis in California as elsewhere in North America. In general, among uncivilized tribes, the simpler the stage of culture the more important the shaman. There is thus a contrast between the rude, simple-minded Indians of California and those of the Plains and of the South-West, where the supremacy of the shaman is rather obscured by that of the priest conversant with ceremonies.

The most common way of acquiring shamanistic power in California, as in so many other parts of the world, is by *dreaming*. A spirit—be it that of an animal, a place, the sun or other natural object, of a deceased relative, or an entirely unembodied spirit—visits the future medicine-man in his dreams, and the connexion thus established between them is the source and basis of the latter's power. This spirit becomes the guardian-spirit or 'personal.' From it he receives the song or rite, and the knowledge, which enable him to cause or remove disease, and to do and endure what other men cannot. In California, with a few special exceptions, the custom of having an animal as guardian-spirit does not seem so prevalent as elsewhere. Occasionally it is the ghost of a person who has once lived, usually a relative. Perhaps more frequently it is merely a spirit as such, not connected with any tangible embodiment or form. In certain regions the *waking vision*, or *trance*, is recognized as a means of acquiring shamanistic power. A person is in a wild desolate place, perhaps hunting. Suddenly there is an appearance before him. He becomes unconscious, and while in this state receives his supernatural power (cf. also COMMUNION WITH DEITY [Amer.]). On his return to his people he is for a time demented or physically affected. The concept of a guardian-spirit is much less clearly defined among the N.W. tribes, with whom the possession of 'pains'—the small material but supernatural objects which cause disease—rather than of true spirits, seems to be what is generally associated with shamanistic power. The majority of the shamans here, and those supposed to be most powerful, are women.

In parts of Southern California also the idea of the guardian-spirit does not seem to be well developed. Here the method of acquiring shamanistic power is almost exclusively by dreams. Among the Mohave, myths and not a personal meeting or communion with an individual spirit constitute the subject of the dreams. The Mohave shamans believe that they were present at the beginning of the world, before mankind had separated into tribes. They were with the great leader and semi-creator Mastamho. They saw him singing, blowing, and rubbing over the body of a sick man, and from him they thus learned the actions and speeches which constitute their power. The Mohave universally speak of having dreamed these scenes, but also state that they dreamed them before birth; in other words, that they were present in spirit form at the beginning of the world, at the time when all power, shamanistic and other, was established and allotted. It is obvious that, with this conception as the basis of their whole religion, there is but little room among them for any beliefs as to guardian-spirits of the usual kind. Of course nothing limits the shaman to one spirit, and among many or most tribes, such as the Maidu, a powerful medicine-man may possess a great number.

Frequently in Central and N.W. California there is some more or less public ceremony at which a new shaman is, so to speak, initiated before he exercises his powers. The body of initiated shamans do not form any society or association, nor do they otherwise appear to act in concert. The ceremony is rather an occasion that marks the first public appearance of the novice, in which he receives for his own good, and presumably for that of the community also, the assistance of the more experienced persons of his profession. This ceremony is usually held in the ceremonial chamber, and is accompanied by dancing. The efforts of the older shamans are directed towards giving the initiate a firm and permanent control of the spirits, which have only half attached themselves to him, and which are thought to be still more or less rebellious.

A special class of shamans, found to a greater or less extent probably among all the Central tribes, are the so-called *bear-doctors*—shamans who have received power from grizzly bears. Not only can

the bear-shamans assume the form of bears, as they do in order to inflict vengeance on their enemies, but it is believed that they can be killed an indefinite number of times when in this form, and each time return to life. The *rattlesnake-doctor*, who cured or prevented the bite of the rattlesnake, was usually distinct from other medicine-men. Among the Yuki, his power, like that of the rattlesnake, was associated with the sun; among the Maidu, with the thunder. Among the Yokuts the rattlesnake-shamans annually held a public ceremony designed to prevent rattlesnake bites among the tribe. On this occasion they displayed their power over the snakes by handling them in a manner analogous to that of the Hopi, and by even allowing themselves to be bitten. *Rain-doctors* were much looked up to in the southern half of California.

As everywhere else, the practice of shamanism in California circles about disease and death. It is probably more narrowly limited to this phase than in almost any other portion of North America. That the medicine-men who could cure disease were also those who must cause it, unless it were the direct consequence of an infraction of some religious observance or prohibition, was an almost universal belief. The killing of medicine-men was therefore of frequent occurrence. Among some tribes, as the Yokuts, the medicine-man who had lost several patients was held responsible for their death by their relatives. Among the Mohave also, murder seems to have been the normal end of the medicine-man. In the N.W. region the shaman who failed to cure was forced to return the fee which he had received in advance.

Disease, as among most primitive peoples, was usually held to be caused by small material objects which had in a supernatural way been made to enter the body. Their determination and extraction was the principal office of the medicine-man, and, as elsewhere, extraction was most frequently accomplished by sucking. In certain regions, especially the South, the tubular pipe was brought into requisition for this purpose. The disease-causing object might be a bit of hair, a stick, an insect or small reptile, a piece of bone, deer sinew, or almost any other material. In N. California it was not an ordinary physical object working mischief by its mere presence in the body, but an object itself supernatural and called a 'pain.' These 'pains' are variously described, frequently as being sharp at both ends, clear as ice, and possessing the power of moving. In some cases two classes of medicine-men were distinguished, one diagnosing, the other treating the patient. Sucking is not always resorted to. The Mohave blow or spit over their patients and stroke or knead their bodies. Medicines and drugs are but little used, and in a manner that gives no opportunity for their physiological efficacy. Four or five drops—the number varying according to the ceremonial number of the tribe—of a weak decoction may be given to the patient or even applied to him only externally. Tobacco is employed to a considerable extent by shamans, but is of equal importance in other aspects of religion.

3. Ceremonies.—Apart from such public observances as the shaman-initiation, menstrual-dance, and victory-celebration, which, while generally participated in, are performed primarily for the benefit of individuals, the ceremonies of the California Indians which are of a really public or communal purpose and character fall into three classes: (1) mourning ceremonies; (2) initiation ceremonies connected with a secret society; and (3) a more varied group of dances and other observances, all of which have as a common aim the benefit either of the community or of the world at large, as, for instance, when they cause a good crop of acorns and natural products, make the avoidance of rattlesnake bites possible, or prevent the occurrence of disease, earthquake, flood, and other calamities.

(1) Of these three classes the *mourning ceremonies* are at least as important as the others, and by far the most distinctive of the State as an ethnographic province, although neither they nor the secret society are found in the specialized N.W. area. The mourning ceremonies are absent also from the Athapascan, Yuki, and Pomo tribes in the coast region as far south as the Bay of San Francisco, but outside of this strip in the N. coast region they are universal in the State. Among the Maidu they are usually known as 'burning,' among the Miwok as 'cry'; among the Yokuts they have been called 'dance of the dead,' and among the Mohave and Yuma 'annual.' These ceremonies are usually participated in by a number of visiting communities or villages. They last for one or more nights, during which crying and wailing, sometimes accompanied by singing and exhortation, are indulged in, and find their climax in a great destruction of property. While those who have recently lost relatives naturally take a prominent part, the ceremony as a whole is not a personal but a tribal one. Among the Yokuts, and probably other tribes, it is immediately followed by a dance of a festive nature, and usually there is a definitely expressed idea that this general ceremony puts an end to all individual mournings among the participants. Participation in the ceremony is sometimes obtained by producing a membership-string or necklace, the receipt and the return of which are both marked by payments or presents. Among the Maidu the purpose of the burning of property is to supply the ghosts of the dead with clothing, property, and food. In some cases images are made to represent the dead, and are burned with the property offered.

(2) *Initiation ceremonies*, which result in something analogous to a secret society, are found in the whole State with the exception of the N.W. region and the agricultural tribes of the extreme S.E. There are usually no paraphernalia or insignia of a society, no degrees or ranks, no membership or other organization, nor is there the definite purpose of an actual society. In so far as a society may be said to exist, its principal purpose and its only public function is the initiation of boys as new members. To a certain extent the initiates are regarded as a class or council having a more or less indefinite authority over religious matters affecting the community. The precepts imparted to the initiates, other than ritualistic knowledge, seem to be of the most general kind. In many ways this initiation may be regarded as a puberty ceremony for boys, corresponding to the first-menstruation ceremony of girls. Among the Yokuts of Central California and in S. California the initiation was accompanied by the drinking of toloache or jimson-weed, the stupor and visions produced by which were regarded as supernatural. In S. California boys were made to undergo severe tests of pain and endurance at the initiation ceremony.

(3) The public ceremonies other than mourning and initiation observances, in other words the *tribal dances* of California, differ entirely in the three culture regions, which must therefore be considered separately.

(*a*) In the Central area these dances were mostly held in the large assembly house, and either lasted for a number of nights or consisted of a series of successive dances extending over a considerable period. Some of the dances were named after animals, and in these there was usually some

imitation of the actions of animals. Actual masks were never employed. In the Sacramento valley and adjacent region there was some impersonation of mythical characters, as of the creator Taikomol among the Yuki, and of the mythical Kuksu among the Pomo and others. There seems to have been nothing corresponding to an altar. The dancers were painted, but crudely and with simple symbolism. An important character in most ceremonies was the clown or buffoon, part of whose duties was to caricature the more serious performance.

The exact nature and relation of the various dances of most of the tribes of the Central region are very little known. Probably a typical example is furnished by the Maidu of the Sacramento valley, who declare that their ceremonies were obtained from their neighbours the Wintun. Among the Maidu the ceremonies were performed in winter, and constituted a series of fifteen or more distinct dances, coming for the most part in a definite order. These, so far as known, are the following: Hesi, Luyi, Loli, Salalu-ngkasi, Duck, Bear, Coyote, Creeper, Turtle, Aloli-ngkasi, Yokola-ngkasi, Moloko-ngkasi, Deer, Aki, Hesi. The majority of these dances were performed by men, but some by women only. Each has its characteristic paraphernalia. At least some of these seem to represent mythical characters. Farther to the south, among the Yokuts of the Tulare basin, such ceremonies do not seem to have been practised. Here the majority of the public ceremonies, like the rattlesnake ceremony which has been mentioned, are of the nature of shamanistic performances.

(*b*) In N.W. California the more important ceremonies can be held only at certain spots, and the performance of the same ceremony always varies somewhat in different localities. The performers do not represent mythological or other characters, and do not imitate animals. The essential religious portion of the ceremony consists in the recital of a sacred formula. These formulæ relate specifically to the exact locality at which the dances are held, and therefore vary considerably from spot to spot. The public portions of the ceremony, such as the dancing, are practically dissociated from this purely religious element. The dancers are mostly young men, without any knowledge of the ceremony other than of the simple dance-step and songs. The paraphernalia which they wear belong neither to them nor to the priests, but to wealthy men of the tribe, to whom the occasion is an all-important opportunity for the display of their wealth, which consists in large part of the dancing regalia, the possession of which is the chief condition of their social prominence. The most important ceremonies are the deer-skin dance and the jumping dance, the former held at six or eight, the latter at a somewhat larger number of places. The purpose of both dances is the good of the world, earthquake and disease being prevented and a food supply ensured by their performance.

(*c*) In S. California such ceremonies as partake of the nature neither of mourning nor of initiation rites are conspicuous by the prominence of the myth element. They consist essentially of long series of songs, occupying one or more nights, which recount, in part directly, but more often by allusion, a myth. In some cases dancing by men or women accompanies the singing, but this is never spectacular. Being only ceremonial recitations of myths, these ceremonies are not attached in their performance to specific localities; when dancing regalia are used, they are of the simplest character; nor is there opportunity for either altar or ritual. The predominance of the mourning element in the ceremonies of this region is further shown by the fact that among some tribes, as the Mohave, these singing ceremonies, besides being performed independently, are also continued for many hours at every death.

The *ceremonial chamber* has a distinctive character in each of the three culture areas. In the Central region it is a large, circular, dome-shaped structure, partly underground and with a covering of earth. It serves also as a place of assembly, and probably, at least at times, as a sudatory, whence its popular name of 'sweat-house.' In the N.W. the sweat-house is quite small, always entirely underground, and its roof consists of boards without a covering of earth. It is used primarily for sweating, and is the regular sleeping-place of all adult males. It is not used for public ceremonies except in the case of the dance at the initiation of shamans. In the South the ceremonial structure is not a house, but either a mere enclosure of brush, as among the Mission tribes, or a simple shade of brush on upright posts, as among the Mohave. This type of ceremonial structure is also found in the southern part of the Central region among the Yokuts.

4. Mythology.—In mythology an important difference between the three culture areas again appears. The N.W. mythologies are characterized primarily by a very deeply-impressed conception of a previous, now vanished race, which, by first living the life and performing the actions of mankind, was the producer of all human institutions and arts, as well as of many of the phenomena of nature. Second in importance are myths dealing with culture-heroes, more or less of the trickster type familiar from so many other parts of North America. In Central California, on the other hand, there is always a true creation of the world, of mankind, and of its institutions. The conception of the creator is often quite lofty, and tricky exploits are not usually connected with him. Often there is an antithesis between this beneficent and truly Divine creator and a second character, usually the coyote, who in part co-operates with the creator, but in part thwarts him, being responsible for the death of mankind and other imperfections in the scheme of the world. In the northern half of the Central region the creator is generally anthropomorphic; if not, he is merged into one personage with the coyote. In the southern half of the Central region the creators seem always to be animals, with the dignified and wise eagle as chief. The comparatively elaborate and consistent creation-myths of Central California are ethnographically of significance, on account of the scanty development of such myths among the American Indians in general. The myths of the Central region, not directly concerned with creation, are mostly stories of adventure, of much the same type as European folk- and fairy-tales. They do not explain the origin of phenomena except in a casual, isolated way, and are only very rarely of ceremonial import. In S. California there are no real creation-myths. The various animate and inanimate existences in the world are believed to have been born from heaven and earth as the first parents.

The great bulk of the S. California origin-myth consists of a history of mankind, at first as a single tribe, and later centred in the tribe which tells the story. In the successive experiences of this group of people, which are accompanied by more or less journeying, the world is gradually brought to its present stage, and all the institutions of mankind are developed. The people are under the guidance of one or two great leaders—at least one of whom always dies or departs after giving his beneficent directions. The thoroughly

Pueblo and S.W. character of such myths is obvious. They are usually followed to a greater or less extent by migration legends, recounting the wandering and conflicts of different tribes or clans. The plots of the remaining myths are not very different in essence from the adventure stories of the Central region, but are both much longer and more elaborate, and at the same time distinctively ritualistic, forming as they do the basis or framework of the singing ceremonies which have been described.

The world is usually regarded as surrounded by water, sometimes as floating upon it. It is often secured by four or five pillars, ropes, or other supports. Beyond where earth and sky meet there is often another land. The dead sometimes go below, sometimes above, sometimes across the ocean to the west, and sometimes to the more or less distant parts of this earth. The entrance to the world of the dead is pointed out by some tribes. People who have temporarily died have been there and have returned to describe it. Dances constitute the principal occupation of the dead. No ideas of future rewards and punishments, based on conduct in this life, have been found; and if any exist, they must be but scantily developed. As in other parts of the world, there are occasional ideas of transmigration of souls into animals, but these are nowhere systematically worked out or of any religious importance.

CALL, CALLING (*καλεῖν, κλῆσις*).—**1. The Biblical data.**—In the NT and in Christian theology 'call' and 'calling' are technical terms to denote God's efficacious summons to individuals to partake of the redemptive blessings to which they have been appointed in His eternal purpose (Ro 8^{28}). The Divine call is the act in which the Divine election (*q.v.*) is revealed and realized. Those whom God calls to salvation He has previously elected; those whom He elects He proceeds to call. For this specific use of the word 'call,' which meets us constantly in the Epistles, and, above all, in those of St. Paul, there are suggestions in the OT, in the employment of it to denote a Divine summons to a particular task or privilege or vocation—a summons which is not to be distinguished from a Divine command or decree, as in the call of Abraham (Gn 12^{1}; cf. He 11^{8}), of Moses (Ex 3^{10}), of Isaiah (Is 6^{9}), of the people of Israel (Is 42^{6} 48^{12}). In the NT the word continues to be used in the sense of the summons of an individual to a particular duty or vocation (Ac 13^{2}, Ro 1^{1}, 1 Co 1^{1}), and St. Paul still recognizes a peculiar calling of the Jews as a people, of which God will never repent (Ro 11^{29}). But in their technical employment 'call' and 'calling' have reference, not to a particular duty or life-task, but to a place in the Divine Kingdom (1 Th 2^{12}); not to an inheritance of national privilege, but to the enjoyment of personal saving blessings that are proffered not to the Jews only, but also to the Gentiles (Ro 9^{24}, 1 Co 1^{24}).

When we look more closely at the Christian's calling as it is set forth in the NT, we notice the following characteristics. It comes from God Himself (1 Co 1^{9}), and for this reason it is described as a 'high calling' (Ph 3^{14}), a 'heavenly calling' (He 3^{1}). It comes to men through the revelation of God in Christ (Ph 3^{14}, 1 P 5^{10}), and is mediated to the individual by the message of the gospel (1 Th $2^{12f.}$, 2 Th 2^{14}). It is not conditional upon human works or merit, but is the outcome solely of God's eternal purpose and grace (Ro 8^{28}, 2 Ti 1^{9}). In the strict use of the word, the call is always an effectual call. The 'called' (*κλητοί*) and the 'elect' (*ἐκλεκτοί*) are co-extensive and interchangeable terms (Ro 8^{28}, 1 Co $1^{24ff.}$, 1 P 2^{9}, 2 P 1^{10}, Rev 17^{14}). In the Gospels, it is true, we have the saying of Jesus (Mt 22^{14} [20^{16b} is probably spurious, cf. RV]), 'Many are called (*κλητοί*), but few chosen (*ἐκλεκτοί*),' in which 'called' has a wider reference. It seems evident, however, that our Lord in this utterance is not using either *κλητοί* or *ἐκλεκτοί* in the technical way in which, mainly through St. Paul's influence, they came to be employed as theological correlatives. The preceding parable shows that in this verse the 'called' are all to whom the general invitation of the Divine love comes, while the 'chosen' are those who accept the invitation (v.[10]) and also show themselves worthy of it (vv.[11-13]). This saying of Jesus justifies the distinction familiar in the old theology between the *vocatio externa* and the *vocatio interna*—the outward and the effectual call (cf. the Westminster Assembly's *Larger Catechism*, QQ. 67, 68). There is a Divine invitation to the privileges of the Kingdom which is free and universal in its scope (Mt 22^{9}, Ac 2^{21}, Ro 10^{13}, 1 Ti $2^{3.4}$)—an invitation which men may either accept or refuse. But, apart from this verse in the Gospels, the soteriological use in the NT of 'call,' 'calling,' 'called,' appears to restrict the words to the sense of an effectual call—a call that issues in salvation.

The fact that this 'high calling of God in Christ Jesus' (Ph 3^{14}) is co-extensive with election and predestination (Ro 8^{28-30}) does not obviate the necessity of human conditions to its being realized. The primary condition is faith, which responds to God's call and grasps the offer of His grace therein conveyed (1 Th 2^{13}, 1 Co 1^{21}). The next is the moral and spiritual effort involved in the very nature of the calling as a holy calling (2 Ti 1^{9}), a calling to be saints (Ro 1^{7}, 1 Co 1^{2}). The Christian must 'press on toward the goal unto the prize of the high calling of God in Christ Jesus' (Ph 3^{14}). He must give diligence to make his calling and election sure (2 P 1^{10}). The existence of these human conditions does not contradict the truth that the Divine call rests upon a previous election and predestination. God's eternal purpose of salvation must include all the elements, together with all the conditions, which enter into the process of realizing it; and so must leave room for the exercise of that moral freedom to which the NT bears constant testimony, and of which men are assured by their own moral consciousness. Yet, on the other hand, it must be borne in mind that even these conditions are themselves conditioned. Christians work out their own salvation because God Himself is working in them both the willing and the working (Ph $2^{12.13}$). It is His Spirit that disposes them to respond to His call, that puts saving graces into their hearts, and so stirs up, increases, and strengthens those graces, 'as that they more and more die unto sin and rise unto newness of life' (*Larger Catechism*, Q. 75). St. Paul sums up this aspect of the matter when

he says, 'Faithful is he that calleth you, who also will do it' (1 Th 5[24]).

2. The historical development.—The starting-point here is provided by Augustine, whose doctrine of the absoluteness of predestinating grace led to a distinction between 'election' and 'vocation'—between a Divine decree which issues in salvation, and a summons to repentance and conversion which comes through the gospel and especially through the Church as the depository of grace. Ordinarily the elect would receive the call through contact with the historical revelation in Christianity, but in the sovereignty of the Divine grace this might be dispensed with (*de Prædest.* ix. 17). On the other hand, it was only in the case of the elect that the call could issue in salvation (xviii. 37). Thomas Aquinas, who in his theological scheme adhered very closely to Augustine's teaching on predestination and grace, regarded the call as the means employed by God for giving effect to His sovereign choice (*Summa Theol.* i. Q. 23, art. 2), and distinguished between the *vocatio exterior*, which comes through the preacher, and the *vocatio interior*, which is a Divinely implanted impulse towards the good (*Sentent.* iv. dist. 17, Q. 1. artt. 1, 2). See also art. GRACE (Rom. Cath. doctrine of). In the post-Reformation theology, Lutheran scholasticism (of which Calovius and Quenstedt may be taken as types) represented the Divine vocation as inaugurating the process of salvation. A distinction was made between the *vocatio generalis*, which comes through the revelation of nature, and the *vocatio specialis*, which comes through the Christian gospel, especially as mediated by the word and sacraments of the Church. The *vocatio specialis* was further defined as *seria*, *efficax*, and *universalis*. It was *seria* as being real and earnest; *efficax*, inasmuch as the Spirit Himself is working inherently in the word, so that, where men do not resist and refuse, conversion is sure to follow; *universalis*, as coming to all men alike without distinction of time or place (Seeberg, *PRE*[3], ii. 658). The last quality was specified in the interest of the desire to avoid that appearance of arbitrariness in the exercise of the Divine sovereignty which is suggested by the withholding of the special call from so many individuals and peoples. It was assumed that as a matter of fact the offer of the gospel had actually been made to the whole world at three different points in human history: first, when the *Protevangelium* was announced to Adam; next, in the days of Noah; finally, during the age of the Apostles, by whom the gospel was supposed to have been carried throughout the whole inhabited world (cf. Hodge, *Syst. Theol.*, 1872, ii. 645). That the knowledge of God's way of salvation and free invitation to accept it has since been so widely lost, is thus to be attributed not to the Divine purpose, but to the ingratitude and sin of man (Quenstedt, *Syst. Theol.*, 1685, III. v. 1).

In the Reformed theology as represented by Calvin, the call is that in which the Divine election is first realized (*Instit.* III. xxiv. 10). A distinction is drawn, however, between two different kinds of call. There is an external call made through the preaching of the word, which is universal, not in the impossible sense that it is absolutely world-wide, but as being addressed without distinction to every one who hears it. There is, further, a special or internal call, whereby, through the operation of the Holy Spirit, the word preached is implanted in the heart as a seed of life (*ib.* 8). For Calvin the call is effectual, not, as for the Lutheran theologians, because the word carries within it an inherent converting potentiality, but because, through the power of the Holy Spirit working *ab extra*, it actually effects conversion (*ib.* 1, 2). This is the view of 'effectual calling' which was adopted by the Westminster Assembly and is set forth in the *Confession of Faith* (ch. x.), the *Larger Catechism* (Q. 67), and the *Shorter Catechism* (Q. 31).

J. C. LAMBERT.

CALVINISM.—By Calvinism is understood in this article the system of theological belief specially associated with the name of John Calvin, and embodied in substance in the Confessions and Catechisms of that section of the Protestant Church known as 'Reformed,' in distinction from the Lutheran. Calvinism might also be taken to include the system of ecclesiastical polity (Presbyterian) outlined by Calvin, and very generally found associated with his type of doctrine in Churches that have adopted the latter. Since, however, this connexion of doctrine and polity is by no means universal, it will be sufficient to consider polity only so far as it is a manifest outgrowth from the doctrinal principles. It will be found, as we proceed, that historically Calvinism has been associated with many forms of Church government and order. In the English Reformation, *e.g.*, Calvinistic doctrines were allied for a time with Episcopalianism; so in Ireland; Calvin's doctrines moulded the Puritan theology; they were largely taken over into Congregationalism, and ruled it till recent times; there have been, and are, Calvinistic Baptists and Methodists. Presbyterianism itself exhibits many modifications. The *differentia* of Calvinism, therefore, must be sought not in polity but in doctrine.

Two things have to be borne in mind in judging rightly of Calvinism: (1) The first is that, while Calvinism has, to a greater extent than any other system, a unity of view arising from the presence of a great central, controlling idea, there is little in its particular doctrines, taken by themselves, peculiar to Calvin. Its predestination doctrine, *e.g.*, generally regarded as its most characteristic feature, is at least as old as Augustine; it was upheld by most of the greater schoolmen (for Britain, cf. A. F. Mitchell, *The Westminster Assembly*, pp. 326 ff., 346); it was maintained by Luther and Zwingli as stoutly as by Calvin himself. For the rest, its doctrines of the Trinity and of the Person of Christ are those of the Ecumenical Councils, and its Evangelical doctrines—including the Atonement and Justification by Faith, without works or merits of the sinner's own—are in the main the common heritage of Protestantism. What Calvin did was to mould these doctrines into a logically articulated system, under the guidance of the great determining thought of God's absolute sovereignty in the worlds both of nature and of spirit, and to give them a form fitted to exercise the strongest influence on both intellect and will, in the individuals and peoples accepting them. (2) The second thing to be kept in view is that Calvinism, in its historical course, has, without abandoning its fundamental principles, undergone large doctrinal modifications. It has proved its vitality in the different shapes it has assumed in different countries, and under new conditions. Calvinism, as time has shown, is not immobile, but is, in some respects, the most plastic of all systems; hence its power of indefinite expansion, its capacity of throwing out new shoots and of adjusting itself to changing environments, and its ability to assimilate new ideas. It is not enough, accordingly, in de-

picting Calvinism, to expound the Calvinism of Calvin himself; it must be shown how his type of doctrine has worked itself out in subsequent developments.

1. **John Calvin and his influence.**—Our sketch may properly begin with a brief account of Calvin himself, from whom, distinctively, the system takes its name. The place deservedly assigned to the commanding personality of Luther in connexion with the 16th cent. Reformation should not blind us to the fact that the spiritual movement which bears this name had not one origin, but several distinct origins. Lefèvre in France and Zwingli in Switzerland were preaching a pure Gospel before Luther's name had been heard of (on Lefèvre, cf. Doumergue, *Jean Calvin*, vol. i. bk. ii. ch. 2). Distinct in origin, the streams were kept still further distinct in their after-flow by the disputes which early arose between the German and the Swiss Reformers on the subject of the Sacraments. Luther had, properly speaking, no successor. At a later period the Swiss and the French Reformations found a point of meeting in Calvin, who, a Frenchman by birth, and a Swiss in virtue of his world-famed connexion with Geneva, fitly represented both.

John Calvin was born on 10th July 1509, at Noyon, in Picardy, where his father, Gerard, was procurator-fiscal and secretary to the bishop of the diocese. He was trained for the Church, and through his father's influence obtained, when only twelve years of age, a chaplaincy in Noyon Cathedral. In 1523 he proceeded to the University of Paris. There for four years he studied Latin, Logic, and Philosophy. By his father's wish, as he tells us in the Preface to his Commentary on the Psalms, he was then withdrawn from the study of Philosophy and put to the study of Law. Leaving Paris, he accordingly repaired first to Orleans, then to Bourges, and applied himself with incredible industry to his new study. At Paris he must have been perfectly aware of the new doctrines that were being taught; but it was not till a later time that, after many spiritual struggles (cf. his answer to Cardinal Sadolet), he was brought, as he expresses it (Pref. to Psalms), by 'a sudden conversion' to a subdued and teachable frame of mind. Considerable influence seems to have been exerted on his mind by his kinsman, Olivetan, a disciple of Lefèvre, and a future translator of the Bible into French, who directed him to the study of the Scriptures. The precise date of Calvin's conversion is uncertain. Some place it as early as 1529, while Calvin was yet at Orleans or Bourges, others as late as 1532, after the publication of his first work—a commentary on Seneca's *de Clementia*. His father had died in 1531. But whenever or however the change was brought about, its effects were immediate on the young scholar's plans of life. His place was thenceforward with the friends of the Reformation. Not yet, indeed, had Calvin any thought of mixing with public affairs; but the retirement he desired seemed to flee from him. His friends sought him out, so that, as he says, 'all my retreats were like public schools.' At Paris he taught, preached, and evangelized, and in 1533, according to some authorities, composed for Nicholas Cop, Rector of the University, an inaugural address, the boldly outspoken, evangelical sentiments of which roused a storm of disapprobation. At Poitiers he formed a small congregation. He finally betook himself to Basel, where, in 1536, an event took place which raised him at once to a foremost position of influence among the Reformers. This was the publication of the *Institutes of the Christian Religion*.

The *Institutes* of Calvin is one of those epoch-making books, like Newton's *Principia* in science, or Kant's *Kritik* in philosophy, the interest of which is enduring. Hitherto no book had appeared which took commanding rank as an exhibition of the doctrines of the Reformed Churches in their systematic unity and connexion. Melanchthon's *Commonplaces* hardly served the purpose. Yet this was a work requiring to be done, both as a satisfaction to the mind of the Church, and in order that the Reformation might have something to oppose to the great and compact systems of the Middle Ages. Calvin undertook the task, and accomplished it with decisive success. Albrecht Ritschl has spoken of the *Institutes* as 'the masterpiece of Protestant theology.' Originally Calvin had contemplated nothing higher than the preparation of an elementary manual of doctrine. A fresh outbreak of persecution in France led him to give to the book the grander form of a vindication of his wronged brethren. Prefixed to it is a preface, addressed to Francis I., which is justly regarded as one of the *chefs d'œuvre* of literature. This being the purpose of the book, the spirit that pervades it, as one can imagine, is anything but a dry compendium of 'dogmas.' Its motive gives it the dignity of an eloquent *Apologia*.

The book, as originally published in 1536, was a small work, which subsequent editions enlarged to four or five times its original size. The additions made to it gave it architectural completeness, but wrought no change in its essential contents. The plan (in the final edition of 1559) is simple, following the order of the Creed. The first book treats of the knowledge of God the Creator, the second of the knowledge of God the Redeemer, the third of the work of the Holy Spirit. Here Calvin treats of faith and repentance, of free justification, of the sanctification of the believer, and, towards the close of the book, he unfolds his doctrine of eternal election to salvation, with its logical counterpart, in his view—the reprobation of the wicked. It ought to be noticed that, however fundamental this doctrine is in Calvin, it is brought in, not at the head of his system, as it is, *e.g.*, in the scheme of the Westminster Confession, but rather as a corollary from what has been shown of the dependence on Divine grace of all that is good in man. The fourth book treats of the Church, of Church government, of the Sacraments, and of the province of the civil ruler.

The sensation produced by the publication of the *Institutes* was immense. The book was speedily translated into the languages of Europe, and passed through innumerable editions. As an evidence of its popularity, it may be mentioned that versions of it exist in modern French, Italian, Spanish, Dutch, German, English, and even in the language of Hungary, in Greek, and in Arabic.

Calvin's name could no longer be hid, but the thought of entering upon public life was as far from him as ever. It was as if by accident—the result of a *detour* occasioned by war—that, late in Aug. 1536, he entered Geneva, intending to remain only a single night. As it proved, with the exception of a short interval of banishment, he never again quitted it. The city had revolted against its bishop, and, under the preaching of Farel, a pupil of Lefèvre, had accepted the Reformation. Everything, however, was in a state of disorganization, and Farel, feeling deeply his own inability to cope with the elements of disturbance, waited on Calvin, whose presence in the city he had discovered, and adjured him to come to his help. This 'fearful obtestation' Calvin declares he was powerless to resist, and so commenced his connexion with Geneva. The task he undertook proved trying in the extreme. His reforming activity went out in the three directions of the Church (in conjunction with Farel, he drew up a short Confession of 21 Articles), of education, and of the reform of public morals. Above all, he claimed and exercised the right of excluding notorious evil-livers from the Lord's Table. This brought him into collision with the party known as the 'Libertines,' and led in 1538, after many disturbances, to his banishment from the city. The next three years were spent in tranquilly ministering to a congregation of French refugees in Strassburg. Here was laid the foundation of his series of Commentaries; here also he married. Geneva meanwhile was in chaos, and the cry soon arose to bring Calvin back. After much pressure he consented, and on 13th Sept. 1541 re-entered the city amidst general enthusiasm. There was now introduced a complete remodelling of Church and State on theocratic principles—the model constitution figuring itself to his mind as one in which the two powers do not remain apart, but are united for mutual support and for the attainment of common ends.

It is not necessary to follow in detail Calvin's after career and work in Geneva. Libertinism reared its head again in 1546, this time in connexion with pantheistic and atheistic doctrines, breathing a fierce hatred of Christ, and associated with free-love licentiousness. The struggle was long and severe, and Calvin's influence for some years sank to the lowest ebb. In 1555, however, the opposition wrought its own overthrow, and from that time the city had rest. It was in 1553, when this conflict was at its keenest, that Servetus came to the city, relying, there is reason to think, on Calvin's enemies for protection and support. The unhappy sequel is familiar. It was at Calvin's instance that Servetus was arrested, and proceedings against him were instituted. The Council, however, bitterly hostile at the time to Calvin, took the trial out of his hands, and conducted it on their own responsibility. Before coming to a decision, they took the opinion of the other Swiss Churches of Berne, Zurich, Schaffhausen, and Basel. The replies were unanimous in condemnation of Servetus, and he was adjudged to the flames. Calvin admitted the justice of the capital sentence, but with his colleagues did his best to induce the Council to substitute a milder form of execution. 'It is to him, notwithstanding,' says Rilliet, 'that

men have always imputed the guilt of that funeral pile which he wished had never been reared.'

The nine years that remained to Calvin from 1555 was the period of the triumph of his principles. Even more than before, acting on the conviction that the State has one sphere and the Church another, he withdrew from political business, and devoted himself to spiritual labours. The distrust of him by the Council seems to have cleared away, and people and Senate cordially supported him in his efforts. Under his influence Geneva became an asylum for the persecuted, and many persons of rank, learning, and piety found refuge within its walls. Calvin's reputation in Europe was yearly rising. His Commentaries and theological writings gained him renown: among his correspondents were kings, nobles, and persons of the highest positions in all countries; his advice was sought on matters small and great. In 1559 the famous Academy of Geneva was erected. In the train of culture and pure moral living came the arts. The city had trials, but steadily rose to influence. In the midst of all, Calvin was sometimes very poor. 'That which made the strength of that heretic,' said Pius IV. after Calvin's death, 'was that money was nothing to him.' His health, too, was undermined by serious maladies, and in his closing years he was never free from pain. He died on 27th May 1564, universally lamented.

Calvin was not without faults. His disposition tended to severity, though the story that, when young, his schoolmates fastened on him the nickname of 'the Accusative' is shown to be a fable (Doumergue, i. 74 f.). He specially blames himself for impetuosity of temper, and begs forgiveness of those whom he may have wounded by harsh and uncharitable expressions. He lacks Luther's geniality, rich overflowing humour, and human many-sidedness. But he is Luther's equal in unbending loyalty to conscience, and in greatness of intellect is incontestably his superior. The three powers that appear in him in almost naked severity are intellect, conscience, and will. Yet Calvin, as many tender friendships show, was not cold. He had a genuine appreciation of poetry and music, and the remarkable range and acuteness of his mind appear in his Commentaries, which anticipate the best works of their class in their freedom from prejudice and in their honest desire to ascertain the exact sense of Scripture. His system, as we shall presently see, was, in a very real sense, the reflexion of his own mind—severe, grand, logical, and daring in the heights to which it ascends, yet humble in its constant reversion to Scripture as its basis. Its influence on posterity has been yet more remarkable. It passed through the Creeds into the thoughts of men, moulded the life of nations, became the soul of Puritanism in England, of Republicanism in Holland, of the Covenanting struggle in Scotland, of democratic institutions in America, identifying itself in every land to which it went with the undying principles of civil freedom (cf. the remarkable series of testimonies to Calvin's greatness in Schaff's *Swiss Ref.* i. 272–275).

2. System of Calvinism.—From the man we turn now to the system, sometimes spoken of simply as Calvinism, sometimes more generally as the Theology of the Reformed Church. And here it is necessary in the first place to arrive at some clear conception of the *principle* on which the system depends, and from which it derives its distinctive character and unity. There is general agreement that the theology of the Reformed Church is more objective in character than that of the Lutheran, is less anthropological, and leans more directly on God and His words than on the experience of faith in man. This, however, is at best a formal distinction, and drives us back on the search for a deeper fundamental principle. That principle, probably, most would be disposed to find, with Principal Cunningham, in the doctrine of absolute predestination (cf. *Reformers and the Theology of Reformation*, pp. 121, 424); but even that doctrine does not carry us to the ultimate basis of Calvinism, or express its regulative principle with sufficient generality. On the other hand, the view of Schweizer, which finds the contrast between the Lutheran and the Reformed Churches in the fact that the former was 'anti-Judaic' in its protest against the theory of work-righteousness in the Church of Rome, and the latter 'anti-pagan' in its protest against all creature-worship and idolatry as corruptions of pure Christianity (cf. Hastie, *Theology of the Reformed Church*, pp. 34, 146), is too wide. Schweizer came nearer the mark when, following Schleiermacher, he defined the theological principle of the Reformed Church as 'the consciousness . . . of the absolute dependence of man upon God alone in all that pertains to his religious life and to the salvation of his soul' (Hastie, p. 144). Baur observed that this was still too anthropological, and widened it to 'the idea of the absolute causality of God, as the one and only principle that determines and causes all things absolutely and unconditionally, by and of itself' (*ib.* p. 147). Similar to Baur's, but taking in the twofold aspect of nature and grace, is J. H. Scholten's formulation of the principle as 'the recognition of God's absolute sovereignty in the natural and moral worlds, and especially the absolute sovereignty of His free grace as the only ground of human salvation' (*ib.* p. 157). The defect of these definitions is that they seem to leave little place for human freedom, which yet, as will be found, has very real recognition in the Reformed Theology (predestination is no *fate*). Nevertheless they touch the essential point, that the Reformed Theology, comprehensively considered, affirms the entire dependence of all things in nature and grace, in their being, ordering, and capacity for good, on God (cf. further, on the principles of Calvinism, and the working of it out in its different relations, A. Kuyper, *Calvinism*). We are next to see how this principle is developed in the leading parts of the theological system.

(1) The first word in Calvinism is *God*, and it is important to observe how God Himself is conceived of by Calvin and his followers. It is contended by Calvin in the *Institutes* that a knowledge of God is naturally implanted in the mind of man, and that the Creation also is a glorious revelation of the essential attributes of God. But man is blinded by his state of sin, and needs the fuller revelation given in Holy Scripture. The character of God displayed in Scripture is presented summarily in the disclosure of His name in Ex 34[6f.] ('The Lord, the Lord God, merciful and gracious,' etc.). 'Moreover, the perfections thus enumerated are just those which we saw shining in the heavens, and on the earth—compassion, goodness, mercy, justice, judgment, and truth' (*Inst.* bk. i. ch. x. 2). Loving-kindness is united with judgment and righteousness. In a later book of the *Institutes* Calvin connects redemption with this general character of God.

'God,' he says, 'who is perfect righteousness, cannot love the iniquity which He sees in all. All of us, therefore, have that within which deserves the hatred of God. . . But as the Lord wills not to destroy in us that which is His own, He still finds something in us which in kindness He can love. For, though it is by our own fault that we are sinners, we are still His creatures; though we have brought death upon ourselves, He had created us for life. Thus, mere gratuitous love prompts Him to receive us into favour,' etc. (bk. ii. ch. xvi. 3).

(2) The Creation depends absolutely and continuously on God, who fosters and guides it by His secret inspiration (*immanence*: 'I admit, indeed, that the expression, "Nature is God," may be piously used, if dictated by a pious mind' [bk. i. ch. v. 5]); yet God is in no way to be pantheistically identified with His works (*transcendence*). The world He has made God unceasingly rules by His providence in pursuance of a purpose (*teleology*). Here first we enter the sphere of foreordination, though not yet that of special predestination. Dr. Hastie states the doctrine unexceptionably:

'The fundamental idea of the Reformed Theology is that the world, in all its parts and processes and stages and forms of

life, is the outcarrying in time of one Divine plan, conceived in the eternal reason of the Godhead and realized by Creative power and wisdom and love. . . . The dominant idea of the Reformed system is therefore the relation of the Divine purpose in eternity to its execution in time; and its point of view is universally purposive or teleological' (*op. cit.* p. 162 f.).

This, however, requires a little elucidation for the avoidance of misconceptions. It is a misconception, first, if it is supposed that this inclusion by Calvinism of all acts and events in the sphere of the Divine purpose is tantamount to the doing away with, or denial of, the reality of the operation of second causes—especially of human freedom. The contrary is the case. The operation of second causes is constantly presupposed, and, where necessary, insisted on (cf. Calvin, *Inst.* bk. i. ch. xvii. 3, 4, 5, 6, 9, etc.). Freedom of will also, as a natural endowment of man, is carefully guarded. The purpose, or 'decree,' of God is executed, not in disregard of causes, or by overriding the nature of causes, but, as the *Westminster Confession* puts it in the chapter on 'Providence,' 'according to the nature of second causes, either necessarily, freely, or contingently' (ch. v. 2). Events take place, that is, in the case of necessary (natural) causes, necessarily; in the case of free causes, freely; in the case where one event depends contingently on another, in that order of dependence. If it be urged, as it sometimes is, that, in reality, however it may be in words, freedom in man is rendered nugatory by such all-embracing 'foreordination,' this points to a second misconception, on which a few words must now be said.

No one can reasonably question that the Reformed Theology affirms in clearest language the reality of human freedom (as a natural endowment), and of man's responsibility for his voluntary actions (cf. Calvin against Pighius on Free Will, and *Inst.* bk. i. ch. xv. 8: 'To this [intellect] He has joined will, to which choice belongs. . . . In this upright state, man possessed freedom of will, by which, if he chose, he was able to obtain eternal life. . . . Adam, therefore, might have stood if he chose, since it was only by his own will that he fell,' etc.; cf. bk. ii. ch. i. 10). The *Westminster Confession* is again studiously explicit on this point. In ch. iii. 1, on 'God's Eternal Decree,' it is declared that 'God . . . did . . . freely and unchangeably ordain whatsoever comes to pass: yet so as thereby neither is God the author of sin, nor is violence offered to the will of the creatures, nor is the liberty or contingency of second causes taken away, but rather established'; in ch. ix. 1, on 'Free-Will,' it is laid down that 'God hath endued the will of man with that natural liberty, that it is neither forced, nor by any absolute necessity of nature determined, to good or evil' (see also the passage on 'Providence' above, from ch. v.).

How then is the apparent paradox or, as it may seem to some, contradiction resolved? We do not urge that 'freedom' itself is a notion which requires careful analysis, and is not off-hand to be identified with arbitrariness, lawlessness, or incalculableness, which would conflict as fatally with God's foreknowledge as with His purpose (some, as Rothe, Martensen, and Martineau, with the older Socinians, think they can save man's freedom only by surrendering God's foreknowledge of free actions). But two considerations may help to throw light on the Calvinistic point of view. (*a*) The first is that freedom, view it as one may, is only one factor in the complicated web of human life. There is always the other and concurrent factor of external Providence. Man has the decision of what he will do in a given situation, but only in a limited degree does he *create* the situation. To a certain extent, of course, he makes or unmakes his circumstances, but never wholly. In every case there is an admixture, generally a preponderance, of causes over which he has no control. He did not, *e.g.*, choose his own parents, his station in life, the course of events that brought him into contact with this one and that one, gave him his opportunities, led to his relationships, etc. This evidently cuts very deeply. At every point we are touched by forces we did not make, while the slightest change at any point in outward Providence would alter the whole complexion of the future for all the individuals affected, and for those coming after them. In this power, then, of creating or modifying the external situation, Providence is seen entering as an essential factor in the shaping of the lives of men. Had Joseph, *e.g.*, not been sold by his brethren into Egypt, not only would a particular act not have been done, but the whole line of Joseph's volitions in that country would have been cut off, and a totally different series of volitions would have taken their place, with what different results to Joseph himself, to Israel, and to the world!—(*b*) But, next, on the Divine side, what *are* human volitions, prior, if we may so speak, to the Divine plan which takes them up as elements into the future course of the world? Obviously, to a Divine prescience, only *possibilities.* But of this infinity of possibilities which lie before the Creative Mind, who but God shall determine which shall be permitted to emerge as *actualities*? Here, as the *Westminster Confession* says, the liberty and contingency of second causes is not taken away, but established, for it is only by Divine decree that these are permitted to enter and operate as causes in the actual world at all. From this Eternal point of view there seems no evading the conclusion that the ultimate responsibility for the plan of the world must rest with the infinitely wise Creator. Even evil cannot enter, or run its mischievous course, save as, in infinite wisdom, He has resolved to allow it.

(3) This raises the last important question in the Calvinistic view of Providence, viz. the relation of Providence to *sin.* Sin, it is consistently held, springs from the will of the creature. What, then, is God's relation to the sinful act? Is it enough in this connexion to speak, as is frequently done, of 'permission'? It might seem so; yet reflexion, probably, will convince us of the inadequacy of this conception. We say, and truly, that God permits sin. But (*a*) how should such an act have been there at all to permit, since the slightest change in the course of God's providence would have prevented its emergence? And (*b*) Scripture and reason alike teach that sin is not only permitted by God, but is manifoldly bounded, regulated, and overruled by Him, in subserviency to His holy ends. Sin is not simply permitted to enter, and then done with; once it has entered, it brings with it a train of consequences. It lies with God in His providence, in this view, not simply to permit sin, but in His wisdom to say when, where, and how sin in humanity shall be permitted to break out; in what forms, along what lines, in what persons, to what heights, it shall be allowed to develop; and how its results, when these arise, shall be disposed of. The *Westminster Confession*, again, states the doctrine in admirably guarded terms thus:

God's 'almighty power, unsearchable wisdom, and infinite goodness . . . manifest themselves in His providence' in relation to sin, 'not by a bare permission, but such as hath joined with it a most wise and powerful bounding, and otherwise ordering and governing of them, in a manifold dispensation, to His own holy ends; yet so as the sinfulness thereof proceedeth only from the creature, and not from God, who, being most holy and righteous, neither is nor can be the author or approver of sin' (ch. v. 4).

(4) *Man* is viewed by Calvinism as made, a pure being, in his Creator's image, but now as *fallen*

and corrupted through his voluntary defection from the good. This corruption of nature proceeds from the first parents of the race to all their posterity, man's natural gifts, as Calvin phrases it after Augustine, being corrupted by sin, and his supernatural gifts withdrawn (*Inst.* bk. ii. ch. ii. 12). In regard to the question how the fault of one should render all guilty (ch. i. 5), Calvin seems to favour what later was called in theology the theory of 'mediate' imputation, viz. that the members of Adam's race are condemned, not directly for Adam's sin, but on the ground of their own pollution, so that he can say (cf. ch. i. 5, 6, 7, and especially 8):

'Being thus perverted and corrupted in all the parts of our nature, we are, merely on account of such corruption, deservedly condemned by God, to whom nothing is acceptable but righteousness, innocence, and purity. This is not liability for another's fault. . . . Hence Augustine, though he often terms it another's sin (that he may more clearly show how it comes to us by descent), at the same time asserts that it is the individual's own sin, and the Apostle most distinctly testifies that "death passed upon all men, for that all have sinned" (Ro 5^{12}); that is, are involved in original sin and polluted by its stain.'

The question is still not answered—On what ground is the posterity of Adam condemned to this pollution? Calvin would probably say—through the natural constitution of the race, in which, germinally, all were originally in the one. In its doctrine of hereditary corruption, universal depravation, and complete loss of spiritual freedom on the part of man, Calvinism takes over almost unchanged the doctrine of Augustine. Yet this doctrine of human depravity also, as Calvinism apprehends it, needs to be guarded against serious misconceptions. It is by no means the case that the doctrine of 'total depravity' (*i.e.* depravity of man in *all* the parts or faculties of his nature) is held by Calvin to imply that every human being is as bad as he can be, or that there are not wide distinctions of character among men, or that there are not natural virtues, capabilities even of splendid achievement, among the heathen or others who are yet unregenerate. Some of the most interesting sections in Calvin are those in which he illustrates these very truths (cf. *Inst.* bk. ii. ch. ii. 12–17, 22, 23, ch. iii. 3, 4; bk. iii. ch. xiv. 2, etc.). These virtues and endowments he explains partly through what remains of the natural image of God in man, partly through restraining grace preventing the full development of corruption, but especially through a work of God's Spirit bestowing gifts on men in all spheres of existence.

We give only two specimens of his language on a subject which is treated with great fullness. 'Therefore,' he says, 'in reading profane authors, the admirable light of truth displayed in them should remind us that the human mind, however much fallen and perverted from its original integrity, is still adorned and invested with admirable gifts from its Creator. If we reflect that the Spirit of God is the only fountain of truth, we shall be careful, as we would avoid offering insult to Him, not to reject or contemn truth wherever it appears. In despising the gifts, we insult the Giver' (bk. ii. ch. ii. 15). 'First, then, I deny not, that whatever excellent endowments appear in unbelievers [in French ed. 'in the life of infidels and idolaters'] are Divine gifts. Nor do I set myself so much in opposition to common sense as to contend that there was no difference between the justice, moderation, and equity of Titus and Trajan, and the rage, intemperance, and cruelty of Caligula, Nero, and Domitian; between the continence of Vespasian and the obscene lusts of Tiberius; and (not to dwell on single virtues and vices) between the observance of law and justice and the contempt of them' (bk. iii. ch. xiv. 2; he goes on to argue that these 'virtues of whatever kind, are Divine gifts'; cf. Kuyper, *Calvinism*, p. 159 ff.).

Still, these virtues, or 'images of virtue,' though God is pleased to visit 'with many temporal blessings those who cultivate virtue' (*ib.*), lack the root of true godliness, and in no way possess the character of spiritual righteousness, such as alone is truly well-pleasing to God. Neither in knowledge nor in righteousness can man of himself attain to salvation.

(5) The Calvinistic doctrine of *Christ as Mediator* follows, in respect of the Person of the Redeemer, the lines of the older theology, and need not be dwelt on. Enough here to say that Calvinism, on this head, separates itself from Lutheran speculations on the 'ubiquity' of Christ's humanity, as a result of the *communicatio idiomatum*, and, generally, from the later Lutheran theories of 'Kenosis.' Its Christology is more sober and practical, if perhaps tending, on the other side, to hold the Divine and the human in Christ too severely apart. On the doctrine of Atonement, again, original Calvinism had little that was distinctive, though this became a fruitful subject of discussion at a later time. Calvin, despite his strong emphasis on the doctrine of election, keeps himself clear of theories of a limited Atonement, and, with slight exceptions (cf. Com. on 1 Jn 2^2), suggests no limitation of the universal expressions in regard to the scope of Christ's propitiatory death (cf. Com. on Jn 3^{16}).

Cunningham admits that this is true, with the exception of one ambiguous passage, which he cites (*Refs. and Theol. of the Ref.* p. 396: 'It is true that we do not find in Calvin's writings explicit statements as to any limitation in the object of the Atonement, or in the number of those for whom Christ died'); but he argues that the topic was not then a distinct subject of controversy, and that Calvin had no occasion to take it up, though his other doctrines logically implied it. It cannot be overlooked, however, that the limitation of the Atonement was a leading point with Augustine, whom Calvin is continually quoting; his silence, therefore, if he really held this doctrine, is doubly strange. It is certain, however, as Cunningham says (p. 395), that Beza, Calvin's coadjutor and successor, held the doctrine of a limited Atonement, or, as it is called, of 'particular redemption'; and this doctrine, as a supposed corollary from the doctrine of election, came early to prevail in the stricter schools of Calvinistic orthodoxy. Still, even by the Synod of Dort such wide admissions were made of the intrinsic, infinite sufficiency of Christ's sacrifice, as the ground of the universal offer of the Gospel to men, that, as Schaff says, the difference between the two views became very much a question of words (*Creeds*, i. 521: 'After such admissions the difference of the two theories is of little practical account'). This Synod may be quoted as exhibiting the general Calvinistic view:

'The death of the Son of God is the only and most perfect sacrifice and satisfaction for sin; is of infinite worth and value, abundantly sufficient to expiate the sins of the whole world. . . . Moreover, the promise of the Gospel is that whosoever believeth in Christ crucified shall not perish, but have everlasting life. This promise, together with the command to repent and believe, ought to be declared and published to all nations, and to all persons promiscuously and without distinction, to whom God out of His mere good pleasure sends the Gospel. And, whereas many who are called by the Gospel do not repent or believe in Christ, but perish in unbelief; this is not owing to any defect or insufficiency in the sacrifice offered by Christ upon the cross, but is wholly to be imputed to themselves' (artt. III. V. VI. on 'The Death of Christ'; cf. Schaff, iii. 586; Mitchell, *Westm. Assembly*, p. 386; Cunningham, *Hist. Theol.* ii. 331; C. Hodge, *Syst. Theol.*, 1872, ii. 544 ff.).

(6) The crux of Calvinistic doctrine is reached when we come to *the application of redemption.* We may here pass by the treatment of such topics as faith, repentance, justification, etc., in which there is little, essentially, to differentiate the Calvinistic position from the Lutheran, and fix attention at once on that which gives Calvinism its distinctive character, viz. its view of the work of the Spirit of God in conversion (generally treated under 'vocation,' or 'effectual calling'), and, as connected with this, and in a manner arising out of it, its doctrine of unconditional predestination. Calvin's predestination doctrine has, as already noted, close resemblance to Augustine's; yet there are important differences which should be noticed. Augustine, it must not be forgotten, was a Catholic Churchman of a very pronounced type—the bishop (cf. A. Kuyper, *Calvinism*, p. 55); Calvin was as strongly a Protestant, repudiating the claim of the Church to come between the soul and God, and emphasizing the general priesthood of believers (*ib.* p. 56). From this followed certain consequences for doctrine. First, regeneration is for Augustine an act effected through baptism; for Calvin, it is effected through the agency of the word and spirit of God. Next, Augustine's doctrine of predestination was necessarily crossed by his doctrine of

baptismal regeneration. If all baptized persons are regenerate, it plainly follows that regeneration alone cannot be made a test of election. The regenerate person may fall from baptismal grace, and finally be lost. For Augustine, therefore, the test of predestination to life, or of election, was found, not in regeneration, but in *perseverance*. The elect have given to them the grace to persevere. Calvin entirely separates himself from this view. Regeneration is a spiritual work wrought in the souls of the elect, and of them alone. The elect persevere, but the seed of their perseverance is already implanted in them in regeneration. The sacramentarian element is completely purged out from this doctrine.

There is one more distinction. Augustine, with justice, confines predestination to salvation; it is, in every case, predestination to *life*. The word is thus synonymous with election. Calvin, on the other hand, speaks boldly of a *twofold* predestination—a predestination to salvation and a predestination to destruction (cf. bk. iii. ch. xxi. 5, etc.: 'The predestination by which God adopts some to the hope of life, and adjudges others to eternal death, no man who would be thought pious ventures simply to deny'). The majority of later Calvinists have preferred to follow Augustine's more cautious and Scriptural usage. Even in Calvin, however, as in the Calvinist Creeds, it will be seen below that there is an essential difference—another point on which there is great misconception—between the Divine decree as it relates to the salvation, and as it relates to the destruction, of men. The term 'unconditional' may be applied to it in both aspects, inasmuch as, in Calvin's system, the will of God must contain in itself the last reasons of all that is, and even the passing by of the unsaved, however mysterious, must be traced back to an origin in the eternal Divine will. But in another sense there is a conditionality in the rejection of men which does not apply to their salvation. Men are saved, in Calvin's view, by an act of absolutely free, unmerited grace on God's part, without regard to good works (these are the fruit of grace, not the cause of it); men, on the other hand, are never condemned, save on the ground of their own sin. Calvin strongly urges this (cf. *Inst.* bk. iii. ch. xxiii. 3, 8, 9, etc.: 'Wherefore, let us in the corruption of human nature contemplate the evident cause of condemnation (a cause which comes more closely home to us), rather than inquire into a cause hidden and almost incomprehensible in the predestination of God' [*ib.* xxiii. 8]). For the present it may be sufficient to quote the emphatic words of the Synod of Dort:

The Synod denounces it as a calumny against the Reformed Churches to assert that they hold 'that God, by a mere arbitrary act of His will, without the least respect or view to any sin, has predestinated the greatest part of the world to eternal damnation, and has created them for this very purpose; that in the same manner in which the election is the fountain and cause of faith and good works, reprobation is the cause of unbelief and impiety' (cf. Schaff, *Creeds*, iii. 596; Mitchell, *Westm. Assembly*, p. 386; Cunningham, *Hist. Theol.* ii. 430). The *Westminster Confession* also, in speaking of the foreordination of a part of mankind to dishonour and wrath, is careful to insert the words 'for their sin' (ch. iii. 7).

While in order of thought, in Calvinism, the Divine predestination logically precedes the call to salvation, and so properly belongs to the doctrine of God, under the head of the Divine purpose or decree ('if you want to understand this you have to go back from predestination to God's decree in general. . . . Belief in predestination is nothing but the penetration of God's decree into your own personal life; or, if you prefer it, the personal heroism to apply the sovereignty of God's decreeing will to your own existence' [Kuyper, *Calvinism*, p. 148]), the doctrine, practically, has its real root in the conviction of the sovereignty of the grace of God in personal salvation (cf. Hastie, *op. cit.* pp. 165 f., 235 ff.). Augustine and Calvin are here at one. The work of renewal being viewed by both as, in the nature of the case, *wholly* of God,—a work of grace from first to last,—the doctrine of predestination is simply the assertion that what God does in time in the salvation of the believer, He willed to do in eternity.

'It is the salvation of the believer viewed, if we may so say, *sub specie æternitatis*. . . . Thus regarded,—whatever speculative difficulties may attend it,—it is simply the expression of an experience which lies at the root of all genuine Christian consciousness, viz., that in this matter of personal salvation, the last word is always grace, not nature; that it is not *our* willing and running which has brought us into the kingdom of God, but *His* mercy; that it is He who first enkindled in us the desire after Himself, who drew us to Himself, who bore with us in our waywardness and resistance to His Spirit, who step by step overcame that resistance, and brought us finally into the number of His children; and that all this was no *afterthought* of God, but an eternal counsel of His love which has now effectuated itself in our salvation. This is the *religious* interest in the doctrine of predestination which gives it its abiding value. As a religious experience, no one would think of questioning that the fundamental attitude of the Christian spirit is one which ascribes *all* to grace in its salvation; that any thought of a divided claim—of a partitioning out of so much to God, and so much to self—is abhorrent to sound Christian feeling' (Orr, *Progress of Dogma*, p. 152 f.).

It is in accordance with the above view that, as already said, Calvin treats of predestination not in bk. i. of his *Institutes*, but in bk. iii., after an exposition of the work of the Holy Spirit in the soul, and its effects. It is also in this connexion with the doctrine of efficacious grace (the 'Effectual Calling' of the theologians) that predestination ought, in justice, to be considered. The doctrine of the effectual operation of the Spirit in regeneration, accordingly, may be called the pivot of Calvinism in a soteriological relation. Man's will, being wholly disabled for spiritual good by sin, can be restored to freedom and goodness only by an omnipotent act of God's grace. Such a conception has obviously 'election,' or 'predestination' to life, as its necessary correlate. It is important, however, for the avoidance of objections, to understand again precisely what this doctrine means. When, *e.g.*, Divine grace in the work of human renewal is spoken of as 'irresistible' (*i.e.* as certainly effectuating its result), one is apt to feel as if human freedom were overborne or annihilated. But that is by no means the intention, nor is it really the effect of the doctrine. Grace is certainly not 'irresistible' in the sense that the natural will cannot resist grace; for that is what, in the Calvinistic view, it is constantly doing (cf. Cunningham, *Hist. Theol.* ii. 408 ff.). When Calvin, with Augustine, speaks of efficacious grace, what he has in view is not a grace which overpowers the will, or puts any foreign force or pressure upon it, but a grace which *renews* the will, and restores it to its true freedom—which so acts upon it that it *freely* chooses the good. With this we may compare Augustine, *Rebuke and Grace*, 17, 38:

'The freedom of the will is defended in accordance with the grace of God, not in opposition to it; because the human will does not attain grace by freedom, but rather attains freedom by grace. . . . Because by the Holy Spirit their will is so much enkindled that they therefore *can*, because they so *will*, they therefore so *will*, because God works in them to *will*.' The writer of art. 'Pelagius' in Smith's *DCB* (iv. 295[a]) is therefore wrong when he says: 'The Augustinian theory made the action of grace entirely independent of the will; it was an irresistible power which forced the will.'

As little does 'efficacious grace' mean that God can or does override the laws of human nature which He has Himself ordained, or converts by a sheer act of power, without the use of appropriate means. What is meant is that God can use *such* means, can *so* deal with the individual in Providence and grace, can bring him under *such* outer and inner discipline, as, in harmony with, nay, through the laws of human freedom, to overcome his resistance. If it be asserted that, even when grace has done its utmost for a soul, there is still a possibility of re-

sisting it, Calvin, with Augustine, would reply that there is a higher freedom still—that in which even the desire to resist the good is overcome, and which therefore *certainly*, but none the less freely, chooses God (cf. Orr, *op. cit.* p. 151).

(7) The doctrine of *predestination* in Calvinism is hard and difficult enough, but it has a deeper philosophical and religious basis than many apprehend (Hastie's *Theol. of Ref. Church* is specially valuable here; cf. also Kuyper's *Calvinism*), and many of the objections to it certainly rest on misconception. This is true, for instance, of the common objection that it represents predestination as a perfectly *arbitrary* act of God—the decree of a will acting on no ground but its own good pleasure. God's own 'good pleasure' is the ground assuredly, but not in the sense of arbitrariness. God's sovereignty is upheld as a truth, the evidences of which are abundantly manifest in nature, as in grace; but, while it is contended that the ultimate reasons of God's determinations in the government of the world and in salvation are to us inscrutable, it is none the less maintained that they are assuredly the outcome of an eternal wisdom, righteousness, and love. Calvin upholds this as strongly as any one.

'We give,' he says, 'no countenance to the fiction of absolute power, which, as it is heathenish, so it ought justly to be held in detestation by us. We do not imagine God to be lawless (*exlex*). . . . The will of God is not only free from all vice, but is the supreme standard of perfection, the law of all laws'; only, 'the procedure of Divine justice is too high to be scanned by human measure, or comprehended by the feebleness of human intellect' (bk. iii. ch. xxiii. 2, 4; cf. Cunningham, *Hist. Theol.* ii. 450).

Further, while the reasons of God's election to salvation are declared to be inscrutable, it is held fast that the ground of His condemnation of others is their corruption and sin (ch. xxiii. 3). Thus the Divine justice is thought to be vindicated in the passing by of the unsaved.

Just here, however, the supreme difficulty arises for the Calvinistic doctrine of predestination and reprobation. *Justice*, in some sense, may be vindicated on the lines of Augustine and Calvin, but not *love*; for, if God *could* save, why did He not? Why leave any to perish? Probably these questions can never be satisfactorily answered, even with the admission of inscrutability, without a double transformation of the doctrine, while still conserving its essential Calvinistic basis. (*a*) Election must be removed from the purely individual basis and treated more organically. This does not mean that election is not still individual, *i.e.* personal, but means that it is now viewed in connexion with a developing purpose or plan of blessing, to which the election of the individual is related as means. Abraham, *e.g.*, was chosen, but it was for the blessing of the whole world (cf. Orr, *op. cit.* pp. 167 ff., 292; Hastie, *op. cit.* p. 262 ff.). (*b*) Sovereignty must be interpreted in terms of God's character as love, rather than love in terms of sovereignty. Love, indeed, can work out its designs only by gradual stages, and in harmony with righteousness, and with the laws of human nature and freedom. Still, love, in the light of the Christian revelation, must be viewed as lying behind the whole plan, and as marking out the end of it. In the carrying out of its aims, nations and individuals have their gifts bestowed on them (as Lange says, election presides at the making of its object, as well as at the using of it), are prepared for service, and in due season are called to their task. Yet this election of God is never disjoined from its place in the context of God's whole purpose, which, in its largest scope, embraces the widest possible blessing for humanity (cf. Orr, *op. cit.* p. 292 ff.).

(8) The *Church polity* which springs from the scheme of Calvin, as now expounded, is necessarily one which lays stress on the equality of all believers before God, even while recognizing special gifts bestowed on individuals for service in His Church. The Church invisible is the body of the elect as these stand before the eye of God; the Church visible is the company of professing believers, locally distributed, and organized on the principles of God's word. Calvin went further here than Luther, or even Zwingli. 'With him Scripture alone had authority. Neither traditions nor observances, however authorized by custom, were spared; unless they could stand the proof, they fell beneath the sword of God's word' (Henry, *Calvin*, i. 368).

The ministerial office has two branches—pastors and teachers. The former includes the whole office as exercised in particular Churches in the ministry of the Word, the sacraments, and discipline; the latter is confined to the work of instruction (*Inst.* bk. iv. ch. iii. 4). In the constitution and government of Churches three permanent offices are recognized: those who exercise the ministry of the Word, called indiscriminately bishops, presbyters, and pastors ('on the authority of Scripture, which uses the words as synonymous' [*ib.* ch. iii. 8]); elders, or lay presbyters, who share with the pastors in the government ('By these governors I understand seniors selected from the people to unite with the bishops in pronouncing censures and exercising discipline' [*ib.* ch. iii. 8]); and deacons, entrusted with the care of the poor. The system thus, as Schaff says, 'rests on the principle of ministerial equality, and the principle of lay-representation by elders or seniors in the government of the Church' (*Creeds*, i. 462). The mode of appointment might vary, but, whoever had the power of nomination, ministers were regarded as legitimately called only 'when those who may have seemed fit are elected on the consent and approbation of the people' (*Inst.* bk. iv. ch. iii. 15). Calvin's principles were only imperfectly carried out in the 'ordinances' of his own city Geneva, and Calvinistic doctrine, as before said, has been associated with very diverse systems of Church government. The genius of Calvinism, however, is Presbyterian, and the scheme is perhaps seen in its greatest purity in the (old) French and Scottish Churches, and in America.

3. **Development of Calvinism.**—In its historical development doctrinal Calvinism has passed through many phases, some of which are alluded to below in the notices of Calvinism in the different countries. Three leading points may here be glanced at. Calvinism after Calvin's death became more scholastic, and tended in certain quarters to extreme forms, which, as inevitably, provoked reactions.

(1) A dispute which developed among Calvin's immediate followers is that known as the *Supralapsarian* and *Sublapsarian* (on its special history, see artt. under these heads). The controversy relates to what is termed 'the order of the Divine decrees' (order in thought, not in time), viz., whether, in electing some to eternal life and reprobating others, the decree of God is to be regarded as *preceding* or as *following* the consideration of man as fallen. The very statement of the question shows in how abstract and transcendental a region the discussion moves, and how great is the peril of falling into error through overbold speculation. On the former supposition—the *Supralapsarian*—the decree of election or reprobation comes first, then the fall of man (or of angels) is decreed as a means of accomplishing that end. Calvin never went so far as this, strong as his language sometimes is, but always viewed election as from a 'mass' already in condemnation, while, of course, recognizing that the fall of man

also was embraced in the providence of God. Beza separated himself from Calvin on this point, but the great majority of Calvinists have always preferred the milder—or *Sub*lapsarian view. The latter is the view taken by the Canons of the Synod of Dort in the Arminian dispute.

(2) A second important controversy, or group of controversies, emerging in Calvinist circles, but likewise distinguishing the more rigorous Calvinism from Arminianism, relates to the question of the *universality* or the *limited character* of Christ's Atonement. This also is, in form, a question of the order of the decrees. Did God first elect a certain portion of mankind to salvation, and then give His Son to die for them to redeem them? Or did He first decree to provide an Atonement of infinite efficacy for mankind, viewed as fallen, without restriction, and then elect those who should be actually brought to faith and participation in Christ's salvation? It might be shown that underlying both forms of the question there is a mistaken conception of the nature and aims of election. But, apart from this, it has been seen that the question becomes very much one of words when, irrespectively of the order of decrees, it is admitted that Christ's sacrifice has an infinite sufficiency, and is the ground of a universal proclamation of mercy to mankind. Arminianism contended for the universality of the Atonement, but with denial also of particular election (see ARMINIANISM). Calvin himself, as we saw, did not suggest limitation in the Atonement. The controversy assumed a somewhat acute form in the 17th cent. through the advocacy, in the writings of Moses Amyraut of Saumur (works from 1634 to 1662; see AMYRALDISM), of the view of 'hypothetical universalism,' *i.e.* the doctrine of unlimited atonement, with particular application, in God's sovereign purpose, to the elect. This mediating view, though warmly combated in Geneva and other centres of Calvinistic orthodoxy, was officially condoned in the French Church, and has since had many able supporters. Richard Baxter in England upheld it; the younger Edwards in New England adopted it; Ralph Wardlaw in Scotland, and Albert Barnes, the commentator, in America, with many more, contended for it. The whole trend of the discussion on the Atonement in recent times has passed into such different phases, that little, comparatively, is now heard of this question, so long a touchstone of purity in Calvinistic faith, and little disposition is shown on any side to deny the love of God to the whole world in the gift of His Son for its salvation (cf. the Declaratory Acts of the Presbyterian Churches in Scotland, England, and America; on the controversy in its older phases, see Cunningham, *Hist. Theol.* ii. 323 ff.; Schaff, *Creeds*, i. 480 ff., 772).

(3) A third influential development in Calvinistic theology is in the doctrine of *the Covenants*, usually associated with the name of Cocceius, in Holland. The leading ideas of the Federal Theology, however, are of much earlier date. Apart from Scottish (Rollock) and Anglo-Dutch (Amesius) writers, as early as 1570, Olevianus, one of the compilers of the Heidelberg Catechism, had published a work treating of the eternal covenant between God and believers. The *Westminster Confession*, which is based on the contrast of a 'covenant of works' and 'covenant of grace,' appeared in 1647, a year before the publication of the work of Cocceius on the subject. Cocceius, however, undoubtedly gave the idea a systematic development which raised it to a place of importance in theology which it had not formerly occupied. A still better known work on the Covenants is that of Witsius (cf. Mitchell, *Westm. Assembly*, p. 371 ff.; Schaff, *Creeds*, i. 773 f.; on the value of the doctrine, see Hastie, *op. cit.* p. 191 ff.). See COVENANT THEOLOGY.

4. Calvinism in different countries.—Much space would be required to trace the history of Calvinism in the different countries which received it, and the kind of influence it has exercised on each; but a few notes may be given. In general it may be claimed for Calvinism that its influence has been an elevating and invigorating one. Abasing man before God, but exalting him again in the consciousness of a newborn liberty in Christ, teaching him his slavery through sin, yet restoring his freedom to him through grace, and leading him to regard all things in the light of eternity, it contributed to form a grave but very noble and elevated type of character, and reared a race not afraid to lift up the head before kings.

Froude may well ask 'how it came to pass that, if Calvinism is indeed the hard and unreasonable creed which modern enlightenment declares it to be, it has possessed such singular attractions in past times for some of the greatest men that ever lived. And how—being, as we are told, fatal to morality because it denies free will—the first symptom of its operation, wherever it established itself, was to obliterate the distinction between sins and crimes, and to make the moral law the rule of life for States as well as persons . . . why, if it be a creed of intellectual servitude, it was able to inspire and sustain the bravest efforts ever made by man to break the yoke of unjust authority ('Calvinism,' in *Short Studies*, 2nd ser.). Many similar testimonies might be quoted (cf. Kuyper, *Calvinism*, pp. 8–10), but we cite only two, less frequently noted. Writing of the Dutch struggle for independence, Motley says: 'It would be ridiculous to deny that the aggressive, uncompromising, self-sacrificing, intensely believing, perfectly fearless spirit of Calvinism had been the animating soul, the motive power of the great revolt. For the Provinces to have encountered Spain and Rome without Calvinism, and relying on municipal enthusiasm only, would have been to throw away the sword and fight with the scabbard' (*John of Barneveld*, i. 331). Morley, again, taking Frederic Harrison to task in the *Nineteenth Century* (Feb. 1892) for omitting Calvin from his 'New Calendar of Great Men,' declares: 'To omit Calvin from the forces of Western evolution is to read history with one eye shut. To say that Hobbes and Cromwell stand for the positive results of the intellectual revolution in Protestant countries, and that Calvin does not, is to ignore what the Calvinistic churches were, and what they have done for moral and social causes in the old world and in the new. Hobbes and Cromwell were giants in their several ways, but . . . we cannot but see that, compared with Calvin, not in capacity of intellect, but in power of giving formal shape to a world, Hobbes and Cromwell are hardly more than names writ in water.' Morley then quotes from the *Essays* of Mark Pattison (ii. 31) a striking passage concluding, 'Calvinism saved Europe.'

Calvinism has found acceptance chiefly among the Latin and Anglo-Saxon races, while Germany has remained predominatingly Lutheran. Yet the Reformed Church gained an important foothold in Germany also, which it has never since lost. Its presence in all the countries into which it travelled has been marked by the rise of Creeds, or, more properly, Confessions.

(1) In *Switzerland* the Reformation had received its democratic and severely Scriptural character from Zwingli and other Reformers before the advent of Calvinism. The principal pre-Calvinistic Confessions are the *First Confession of Basel* (1534; still in use in Basel) and the *First Helvetic Confession* (1536; 'the first Reformed Creed of national authority'). After Calvin's death, in 1566 came the *Second Helvetic Confession*, composed by Bullinger—'the most widely adopted, and hence the most authoritative, of all the Continental Reformed symbols, with the exception of the Heidelberg Catechism' (Schaff, *Swiss Ref.* i. 222). It is in strictness a Zwinglian Symbol, but transfused with Calvin's influence. Its tenth chapter treats of predestination, but strikingly declares that we must believe in the love of God to the world, as attested in Jn 3[16]. More local in interest are three documents drawn up by Calvin himself—the *Catechism of Geneva* (1541), the *Consensus of Zurich* (1549), and the *Consensus of Geneva* (1552; polemical). In the Genevan Catechism predestination is not mentioned; the Genevan Consensus, on the other hand, is devoted to that doctrine.

(2) It has already been mentioned that the Reformation in *France* was indigenous. Calvin, however, did much to forward the movement (congregation formed at Poitiers, 1534; 'Calvin's grotto'), and it was under his influence and that of Beza that the French Church was, later, organized. Despite severe persecution, the adherents of the Reformation numbered some 400,000 in 1558. The first National Synod was held at Paris in 1559, when the Church was formally organized by the adoption of the *Gallican Confession of Faith* (drafted by Calvin), and of an order of discipline on the Calvinistic model (cf. Quick, *Synodicon*, 1692, vol. i.). The Church continued to hold national Synods (29 in number) till 1660, when their meetings were prohibited by Louis XIV., and in 1685 came the Revocation of the Edict of Nantes. Not till 1872 was the 30th Synod held, when a new and simpler declaration of faith was adopted (cf. Schaff, *Creeds*, i. 498 ff.). Calvinism spread into the Waldensian Church, and the Waldensian Confession of 1655 is based on the Gallican Confession of 1559 (on literature on the Reformation in France, cf. Schaff, *Swiss Reformation*, ii., Appendix).

(3) *Germany*, as we have said, was naturally Lutheran; but the views of the Swiss Reformers gained favour in certain of the free Imperial cities, four of which (Strassburg, Constance, Memmingen, and Lindau) presented at the Diet of Augsburg in 1530 a separate Confession, known as *the Tetrapolitan.* At a later period a mild Calvinism gained the ascendancy in the Palatinate and in Brandenburg. The chief Reformed Symbol is the justly celebrated *Heidelberg Catechism*, drawn up at the instance of the pious and tolerant Frederick III., Elector of the Palatinate, on the basis of drafts by two young divines of the Reformed persuasion, Ursinus and Olevianus. It obtained in 1562 the approval of a Synod at Heidelberg: hence its name. No other catechism has ever had such popularity. It does not obtrude the Calvinistic peculiarities: the doctrine of election, *e.g.*, is incidentally implied in a few of the questions rather than expressly stated (cf. Schaff, *Creeds*, i. 529 ff.). Brandenburg also had its Confessions, which subsisted till the Union of the Lutheran and Reformed Churches in Germany in 1817.

(4) *The Netherlands* first received the Reformation in the Lutheran form, enduring severe persecution, but later, as exiles from other countries flocked into the cities, a change took place, and the Calvinistic or Reformed type became predominant. A Church gradually shaped itself, with the *Belgic Confession* and the *Heidelberg Catechism* as its acknowledged Symbols. The Catechism has just been spoken of. The Belgic Confession, composed by Guido de Brès in 1561, was based on the Gallican Confession of 1559. It was revised in 1562, and soon after was publicly adopted by Synods of the Reformed Church (1566, 1568, 1574, 1577, etc.), and finally by the great Synod of Dort in 1619. Its Calvinism, like that of the Heidelberg Catechism, is mild in character. The new faith was the inspiring power in the heroic struggle which ended in the proclamation of the Independence of the Seven Provinces in 1581. While, however, Calvinism was the avowed faith of the Church, there were always those who maintained a protest against its doctrines, especially its doctrine of predestination. Calvinists themselves were partly to blame for the reaction, owing to the extreme lengths to which some carried their views (see SUPRALAPSARIANISM). Ultimately the smouldering opposition found utterance in the teachings of Arminius and the Remonstrants (see ARMINIANISM). The controversy that ensued led, after much acrimonious disputation, to the Synod of Dort (1618–19), the decisions of which have already been adverted to. Holland subsequently became the chief home of the Covenant theology. The 'Modern' School in Holland has departed far enough from Calvinism, but the Free Churches have revived it as the basis of their Constitution (cf. Kuyper, *Calvinism*).

(5) Doctrinally, the *English* Reformation was deeply influenced by Calvinism. Henry VIII., indeed, prohibited Calvin's books (1542), but even then and in succeeding reigns the English Reformers were strongly Calvinistic in sympathy. 'It is not too much to say,' observes Schaff, 'that the ruling theology of the Church of England in the latter half of the 16th and the beginning of the 17th cent. was Calvinistic' (*Creeds*, i. 604; cf. Cunningham, *Refs. and Theol. of Ref.* p. 168 ff.). This is sufficiently evidenced by the Elizabethan Articles, the Lambeth Articles, and the Irish Articles (see below). The Dean of Chichester, librarian to King Edward VI., wrote to Bullinger in 1552, while the Anglican Articles were under consideration: 'The greater number among us, of whom I own myself to be one, embrace the opinion of John Calvin as being perspicuous and most agreeable to Holy Scripture' (Cunningham, *op. cit.* p. 181). The Thirty-nine Articles are themselves moderately Calvinistic. The soul of English Puritanism was its Calvinism. Neal (in Schaff, i. 703) defines a Puritan as 'a man of severe morals, a Calvinist in doctrine, and a Nonconformist to the ceremonies and discipline of the Church, though not totally separated from it.' Later, the Church of England came to be predominantly Arminian and, until the Tractarian Movement, latitudinarian.

(6) It will be questioned by none that the *Scottish* Reformation was Calvinistic from its beginning. The *Scottish Confession* of 1560 'exhibits a clear, fresh, and forcible summary of the orthodox Reformed faith, as then held in common by the Protestants of England, Switzerland, France, and Holland' (Schaff, i. 683). Though 'decidedly Calvinistic,' it is free from the extreme statements of some forms of later Calvinism. This native Symbol was superseded in 1648–49 by the *Confession of Faith drawn up by the Westminster Assembly*, 1643–46. A. F. Mitchell has conclusively proved (*Minutes of Westminster Assembly*, p. xlvi ff.; *The Westm. Assembly*, p. 380) that its famous ch. iii. 'Of God's Eternal Decree' closely, and in part verbally, follows Art. III. of the Irish Articles of Archbp. Ussher (1615). Its place in the forefront of the Confession, and its exceptionally strong and imperfectly qualified statements, give an aspect of severity to the Confession as a whole, and create stumbling-blocks at the outset—which is to be regretted. The chapter itself is an attempt at compromise between 'Supralapsarian' and 'Sublapsarian' modes of statement—only with the result, however, of introducing inconsistency into the total presentation. In recent years means have been taken, in both British and American Churches, to soften its offensive harshness by 'Declaratory' Acts and Statements. With the Westminster Confession are usually associated the Westminster *Larger* and *Shorter Catechisms*—the latter the best known popular Calvinistic manual.

(7) Congregationalism in *New England* was originally Calvinistic, but, with Jonathan Edwards, underwent modification, giving rise to the type of doctrine known distinctively as 'New England Theology.' This modified orthodox Calvinism in many essential particulars. Its ramifications may be traced in Fisher's *Hist. of Christian Doctrine*, 1896, p. 394 ff.

From the side both of philosophy and of science, with their accompaniment in enlarged Biblical knowledge, new influences have entered into theo-

logy in most countries during the last century, which have had the effect of largely transforming all doctrinal schemes. Christianity is increasingly apprehended more from its human, ethical, and spiritual sides, and the tendency is to withdraw interest from the transcendental and speculative aspects of doctrine. This naturally affects Calvinism in an especial degree. The perennial elements of truth in Calvinism will no doubt survive, but it may be questioned whether it will ever occupy so dominant and exclusive a place in the future as it has done in many periods of the past.

LITERATURE.—Th. Beza, *Vie de Calvin*, 1564 (republished, with expansions by Colladon, in 1565, and again in 1575); J. H. Bolsec, *Hist. de la vie, mœurs, et actes de Calvin*, 1575 (from Rom. Cath. side, but disfigured by bitter party-spirit, and wholly devoid of historical value); P. Henry, *Das Leben Calvins* (3 vols.), 1835–44; T. H. Dyer, *Life of John Calvin, compiled from authentic Sources*, 1850; E. Stähelin, *Johannes Calvin; Leben und ausgewahlte Schriften* (2 vols.), 1863; Pierson, *Studiën over Joh. Kalvijn*, 1881, and *Nieuwe Studien over Kalvijn*, 1885; R. Stähelin, art. 'Calvin,' in *PRE*[3]; Ad. Zahn, *Studien über Joh. Calvin*, 1894; E. Doumergue, *Jean Calvin: Les hommes et les choses de son temps* (5 vols.), 1899 ff. Cf. also P. Schaff, *Hist. of the Creeds of Christendom*, 1877, and *The Swiss Reformation* (2 vols.), 1893; W. Cunningham, *The Reformers and the Theology of the Reformation*, 1866, and *Historical Theology* (vol. ii.), 1864; A. F. Mitchell, *Minutes of Westminster Assembly*, 1874, and *The Westminster Assembly*, 1883; W. Hastie, *The Theology of the Reformed Church*, 1904; T. M. Lindsay, *Hist. of the Reformation*, ii. (1907); A. Kuyper, *Calvinism*, 1898. The best and most reliable edition of Calvin's works is that contained in the *Corpus Reformatorum*, vols. xxix.–lxxxvii. (Bruns. 1860–1900). A good edition of the *Institutes* is that by Tholuck (2nd ed. 1846, re-edited by Baur, Cunitz, and Reuss, in 2 vols., 1869), new tr. by H. Beveridge (Edinb. 1879). For further literature, see Erichson, *Bibliographia Calviniana* (Berlin, 1900).

JAMES ORR.

CAMBODIA.—The present kingdom of Cambodia, the remnant of the ancient Khmèr empire, is bounded on the W. by the Gulf of Siam and the kingdom of Siam, on the N. by Laos, on the S. by French Cochin-China, and on the E. by the Annamese empire.[1] Its area is more than a third of that of France, and it has a population of 1,500,000 inhabitants, three-fourths of whom are of the Khmèr race, the other fourth representing Chinese, Annamese, Cham, and Malay elements, not to mention several aboriginal races: Phnông, Samrè, Kuy, Pohr, Jarai, Radè, etc. The Cambodians reckon also that there are about 500,000 of their race scattered throughout Cochin-China and Siam.

1. Origin.—The origin of the Cambodians, or Khmèrs, as they call themselves, is obscure; it seems probable that they belong to the family of Mōn-Khmèr races, to which their language undoubtedly belongs. They also bear the strong impress of Hindu civilization.

2. History.—What is known with far greater certainty about the glorious past of the Khmèrs is that, as far back as in the 10th cent., they possessed a huge empire, extending from the Gulf of Bengal to the China Sea, divided into sixty governments, conquered after fierce conflicts with the Chams, Laotians, and Siamese, and mentioned with respect by the Chinese annalists. Their splendid capital, Angkor-Thom, 'Angkor the Great,' in the province of Siem Reap (recently reunited to Cambodia), was undoubtedly built in the end of the 9th cent., and completed during the first half of the 12th cent. by the erection of the wonderful temple of Angkor Wăt.[2] The ruins of its monuments give evidence to this day of culture and artistic gifts so incompatible with the intellectual apathy of the Khmèrs, that some scholars are inclined to think that the grandeur of their empire was due to a Hindu colony which governed the country from the 8th to the 14th century.

In the 13th cent. the Khmèr empire began to decline, under the attacks, first of the Siamese, and then of the Annamese. Continual civil wars, caused by anarchy in the royal family, hastened its decadence. At the end of the 18th cent., reduced to a few provinces, it was the vassal of both Siam and Annam. The French intervention, in 1862, secured peace for it; and since then, by retrocession from Annam or Siam, several lost provinces have been given back to it.

[1] In the language of the natives, the name of Cambodia is *srŏk Kampućā* (*Kambuja*) or *srŏk Khmèr* (*srŏk* = 'country,' 'kingdom').

[2] *Wăt* in Khmèr (Siamese *văt*) means 'Buddhist monastery.' In the transcription of Khmèr words we have followed, as far as possible, that of Finot (see Literature). The consonants have almost the same sounds as in the usual Sanskrit transliteration. It is the same with the vowels, with the exception of *ă*, which = *ea*, and o', which = German *ö*.

3. Physical appearance and modes of life of the people.—Of average height, and well-built, strong, and vigorous, appearing to the observer either slender, with straight nose, or thick-set, with flattened nose and Mongolian aspect (two types which survive in Cambodia like the persistence of two different races), the Khmèr, in spite of his dark colour and his large, slightly almond-shaped eyes, is a fine specimen of humanity. The women are smaller, and as a rule have beautiful figures. Very proud of their nationality, ceremonious, careless, even thoughtless, but gentle, patient, very hospitable, yet never allowing a stranger to take up his abode inside their houses, very hard working and patient in rural districts, of disconcerting apathy everywhere else, sincere, honest, and disinterested, in the opinion of travellers who have loved them least, these Cambodians are, nevertheless, capable of great internal solidarity, are very gentle and affectionate in their family life, with great love for their princes and their traditions, pious even to superstition, but having the greatest tolerance for others.

The men wear a *sampŏt*—a piece of cloth rolled between the legs and round the loins so as to form wide breeches—and, very often, a straight buttoned jacket. The women also wear the *sampŏt* (and sometimes, in the provinces far removed from the capital, a petticoat, or *languti*, forming a skirt), and a tunic tight at the waist and wrists and open at the breast. Very often the place of this tunic is taken by an accordion-pleated scarf, of a bright colour, which leaves the back and the arms uncovered.

Both men and women wear their hair cut like a brush, or very short and pushed back. They are quite ignorant of savage mutilations. In the country the women still continue to have large holes pierced in their ears, in which they wear wooden or metal studs; this custom shows a tendency to disappear completely.

The Cambodians prefer to live in the plain, on the banks of their great river, the Mekhong, and its chief tributaries, or by the side of the Tonlé Sap—the name given to the large fresh-water lake—and the arm which joins it to the Mekhong. Their huts, built on piles, are often large and well kept. The furniture is clean and very simple, however rich the owner may be, except perhaps at Phnom Pénh. The building of houses involves special rites. When the Cambodians go to the forest to cut down the wood for the supporting pillars of the roof, the tree chosen must fall flat to the earth, without coming into contact with any obstacle, either during its fall or on the ground. If it met with any obstacle it would be abandoned, as being likely to bring misfortune. The sorcerer determines the site, the orientation, and the day propitious for the building. The holes for the foundation pillars are not dug until a sacrifice has been offered to the spirit of the earth, as if to beg his pardon for encroaching upon his domain. The pillars are set up while the sorcerer looks on, and are covered at their upper ends with cloth amulets, in order to drive away the evil spirits that might still be dwelling in the wood. The central pillar is fixed first, to the sound of musical instruments. Doors, windows, and steps must all be odd in number. Women must not enter a house in process of construction; they would bring misfortune to the future inhabitants. *Bonzes* come and bless the house when it is almost finished. On its completion, first of all a cat is put into it, then the owner appears, laden with pieces of furniture. Before he crosses the threshold, a friend, purposely stationed there to intercept him, asks him where he comes from. He replies that, when coming from Laṅkā (Ceylon) he was shipwrecked and cast upon the shore, and, being homeless, he has come, with all that he has managed to rescue, to take up his abode in this house, which is not inhabited. After this little comedy he need not fear the evil spirits.

The Cambodian house, which is nearly always surrounded by an orchard, has never more than one storey. In fact, a Khmèr would never consent to live under anybody—a custom which is so deep-rooted that no one has the right to put even a handcuffed prisoner under the raised floor of a house. It may be for a similar reason that the Cambodians do not allow any person to pass his hand over, or lay it on, their heads. In the case of an adult, this familiarity is a serious insult; such a caress given to a child may bring misfortune.

The ladder which serves as the entrance to the house is, at its inauguration, bound with cotton thread. This ladder is supposed to be given into the charge of the male spirits, while the females inhabit the interior of the hut. In the evening, when the ladder is drawn up, so that the house may be isolated during the night, the last rung must be left sticking out, so that the guardian spirits may take their stand on it, and prevent ghosts or hostile spirits from entering. The rungs of this ladder are always odd in number; the ladder used for exhuming the dead being the only one that has an even number of rungs. Worn-out rungs must not be disdainfully thrown away or put in the fire. When a ladder breaks during a marriage ceremony the celebrations are continued; but the marriage is not consummated the same day, else the risk is incurred of seeing one of the newly-married pair die within the year.

The Cambodians, like almost all the races of the Far East, are extremely frugal, their chief food being rice. Fresh or salt fish, tuberous and leguminous plants, and sometimes pork, are also eaten. This tasteless fare is highly seasoned by means of *prahŏk*, a condiment of fermented salt fish, the sickening smell of which is most disagreeable. The Cambodians drink water or tea, very seldom alcohol. They use tobacco and chew betel; the use of opium is a vice confined to a few of their rich mandarins. It should also be mentioned that the Khmèrs eat fruit without waiting until it is ripe.

The Khmèrs, being of sedentary and rather lazy habits, confine themselves chiefly to cultivating the products which their

country readily offers: they are mostly fishermen and farmers, hunters and woodcutters. They cultivate a good many varieties of rice,[1] catch enormous quantities of fish, to be consumed fresh, salted, or fermented, and extract yearly about 3,000,000 kilogr. of palm-sugar.[2] Their industry and commerce are not very brisk; but they weave silk and cotton materials which are very harmonious in colouring and design, they are very clever silver-smiths, and they manufacture splendid canoes out of single tree-trunks.

4. **Religious beliefs.**—The Cambodians, although very religious, are absolutely tolerant. At the present day the official religion of the Khmèrs is Siṅhalese Buddhism. Their sacred books are written in Pāli, the language that they call *Bàlĕi Mokoth* (= *Pāḷī Magadha*, 'Pāli of Magadha'). They have preserved manifest survivals of ancient Brāhmanism, and ritual practices which are undoubtedly aboriginal.

i. BUDDHISM.—It seems now to be generally agreed that the Buddhism of the North was introduced into Cambodia between the 5th and 7th centuries. From the 7th to the 13th cent., tainted by Śaivism, it struggled hard everywhere against Brāhmanism, which was the official cult of the Khmèrs. It seems to have triumphed at the beginning of the 14th cent., but probably did not implant indestructible roots in the hearts of the Khmèrs until towards the 15th cent., through the introduction of the Pāli canon and the doctrine of the South, which completely supplanted that of the North. We need not repeat here what is said elsewhere under art. CEYLON BUDDHISM.

(1) *Clergy.*—Although the Buddhism of Cambodia is that of Ceylon, it does not follow that its clergy recognize the supremacy of the Ceylon Church; they regard it as the seat of the perfect doctrine, and sometimes send monks to be taught in Kandy or Colombo, but admit no other connexion.

The chief official of Buddhism in Cambodia is the king, who is its temporal head as well as the most devout worshipper. He can neither alter its doctrine nor confiscate its property. The heads in spiritual matters are two monks: the *somdaé práḥ*[3] *saṅghrāč* (=Skr. *saṅgharāja*), 'the king of the assembly of monks,' who appoints superiors to the monasteries on the 'right,' and the *lòk práḥ sòkŏn*, 'Lord Bishop,' who nominates superiors for the monasteries on the 'left.' Each superintends a monastery, and they rule almost equal parts of the kingdom. The second is inferior to the first, but is not at all dependent upon him, and never consults him. Under them are the elected provincial superiors, the abbots or heads of monasteries. The members of this hierarchy possess purely disciplinary power, and are in no way subordinated to each other.

The teaching of the young is entirely in the hands of the monks, or *bonzes*, who are called *lòk saṅ*, 'lords of the assembly' (*saṅgha*). They teach children from six to eight years of age. A boy at the age of twelve is received into intimate communion as a 'disciple' (Khm. *samne* = Pāli *samaṇera*), and may then wear the yellow robe. On reaching his twenty-first year, if he can give certain moral, physical, and social guarantees, he may be ordained by a chapter of at least twenty monks, and then receives the name of *phik* (Pāli *bhikkhu* = Skr. *bhikṣu*, 'mendicant'). Any monk may leave the Order, after obtaining permission from his superior, who can never prevent his final withdrawal, except for a short time.

The *bonzes* in Cambodia enjoy great privileges; they are exempted from public work, military service, and taxes—in a word, from all civil duties. They cannot raise actions at law, and they give witness only by conventional signs. In cases of crime or very serious fault (fornication, use of fermented drinks, etc.), the monastery hands the offender over to the secular power. The life of the *bonzes* is occupied with prayer and the instruction of the young. They subsist by means of voluntary alms, and take only two meals a day, between sunrise and midday. Very gentle, tolerant, and, as a rule, pure in their lives, they are much respected, and no one would dare to prepare a meal without laying aside a share for them.

The name of *dón či*, 'religious women,' 'nuns,' is given to certain girls or married women, who, after a form of taking of vows, wear white clothes, and live near the monasteries, in the most saintly way possible, rendering such services to the monks as can be performed outside the monasteries. Some widows, in order to show their deep sorrow, even submit themselves to this life for three years, which calls forth great regard for them.

(2) *Monasteries, temples, and pagodas.*—These are far from equal in magnificence to the Brāhmanical temples of the ancient Khmèrs. The only stone temples, and the most beautiful ones, are some rather small, ancient Brāhmanical temples which have not been used as such for centuries. The monastery (*wăt*) is nearly always in the middle of a park planted with *Ficus religiosa* and other large trees. Behind the pagoda there are small thatched cells, or *koth* (Skr. *kuṭī*), where the monks live; in front is the *sàlà* (Pāli *sālā* = Skr. *śālā*, 'hall'), a public hall which is used both as a meeting-place for monks and people and as a shelter for travellers. The pagodas, properly so called (*práḥ vihār* = Skr. *vihāra*, 'monastery'), or temples containing a statue (frequently a huge one) of Buddha, are built on small terraces or rectangular platforms, supported by thick walls, and especially by strong inside pillars of carved wood, and feebly lighted by a few narrow windows. They are especially distinguished by the elegance and lightness of their storeyed or sloping roofs, the corners of which end in a finial in the shape of the reared-up tail of a serpent or dragon. Some pagodas, and particularly that of Udong, are covered with earthenware painted with fine artistic effect. The entrance, with very few exceptions, is on the eastern side. The interior of the pagoda is adorned with mural paintings representing various legendary scenes, and contains a profusion of European petroleum lamps hung near the altar of the Buddha, whose statue is gilded. A wooden pulpit, supported by *garuḍas*, completes the furniture of the pagoda.

Besides the temples there are sometimes *ćetĕiy* (Pāli *chetiya* = Skr. *chāitya*, 'monument,' 'shrine'), large bell-shaped structures of dried brick which contain the ashes of great and saintly people.

ii. BRĀHMANISM.—Brāhmanism, which prevailed in Cambodia for such a long time, could not disappear without leaving material and moral survivals, in the first rank of which we must mention the ruins, sometimes very magnificent, of the ancient temples (Angkor Wăt, Angkor Thom, etc.), the remains of Brāhmanical statues, the *liṅgas* which are still found in Buddhist temples, and the caste of *bakus*, or *prâm* (= Skr. *brāhmaṇa*), also called *barohĕt* (Skr. *purohita*, 'household priest').

(1) *Bakus.*—Although it is still difficult to give a satisfactory etymology of the word *baku*, it seems certain that the *bakus*, are direct descendants of the ancient Brāhmans. The title *barohĕt* (*purohita*) marks their functions as palace-chaplains. The caste of *bakus* includes from nine hundred to a thousand male persons. Obliged formerly to marry only among themselves, the *bakus* at the present day may marry a woman of any race whatever, but they do not readily marry outside their caste. Although they are Buddhists like

[1] The Annamese have names for eighty-nine varieties.

[2] Produced by the *tnŏt* (*Borassus flabelliformis*, Murray).

[3] *Práḥ* (Burm. *bhurāḥ*, Cham *bara*, Jav. *bra*, Siam. *phraḥ*; cf. Skr. *vara*) is an honorific title placed before the names of divinities and kings.

the other Cambodians, they are distinguished from them by certain observances and real privileges, the relics of their former power. They still render a very marked cult to Viṣṇu and to Śiva, and have not the same scruples as the *bonzes* about killing any animal, or causing it to be killed. On the other hand, they are bound to perform all sorts of purifications; they cannot touch any cooking or table utensil without covering their hands with a cloth to avoid defilement, and they do not willingly eat of any dishes except those prepared at their homes, unless they have made sure that the person who has prepared them has been well purified previously. The *bakus* wear their hair long, and, rather than give up the custom, they prefer never to become officials. Forty years ago all *bakus* were exempted from taxes and public works; gradually the kings cut down these privileges for the good of their treasury. In case of misdemeanour or crime, *bakus* may be brought only before their peers. In the case of a capital crime, the *baku* is not executed, but is exiled to a distant province under supervision; if he is sentenced to the chain, he receives it from the head of the caste, and suffers his term of imprisonment in the house of one of the other *bakus*.

The *bakus* are exempted from the law which adjudges as perpetual servants of the king all the twins born in the kingdom, and, if any one of them dies childless, his property goes to the corporation, and not, as is usual, to the royal treasury. They may marry princesses. One of their chiefs in the burlesque festival of *măkh* (=Skr. *māgha*), the 11th lunar month, which corresponds to Jan.-Feb., used to become king of Măkh, and for three days enjoyed the semblance of royalty, and the very appreciable privilege of receiving the revenues of the kingdom during that time. Norodom (=Skr. *Narottama*), the predecessor of the present king, did away with this curious custom, but the seven or eight great dignitaries of the *bakus* still receive annually all the traditional presents—buffaloes, rice, etc.—from one of the great provinces of the kingdom. There is a belief deeply rooted in the popular mind, although not inscribed in any act, that, in the case of extinction of the direct royal line, the *bakus* have a right to the throne in preference to distant members of the royal family. The *bakus* claim that these privileges are nothing in comparison with those which they formerly enjoyed. The *bakus* are obliged to take charge, in turn, of the Brāhmanical statuettes, and the palladium of Cambodia (the *Prăh Khan*)—the sacred sword preserved in a building adjoining the royal palace. They are all qualified to share in this, but whereas the majority among them practise agriculture or commerce in order to live, their seven or eight chiefs, with pompous titles of Sanskrit origin, are the *barohĕts* (*purohita*), or royal chaplains, and the only real priests of Cambodia.

It is the *bakus* who offer the lustral water in sea-shells to the king during the great New Year festival, and, in his absence, themselves wash the Brāhmanical idols. It is they who, during the coronation-festivals, at the cutting of the fore-locks of princes, and at the great water-festivals, play the principal part. They also present the lustral water to the king on the occasion of the celebrations of his birthday. In case of war, they perform on the king the ritual aspersion of 'water of victory,' some drops of which they throw also on each army corps to ensure their success; they follow the king in the field, carrying with them the sacred sword, the gift of Indra, and the Brāhmanical idols. This explains how the worshipped weapon happened on two occasions (1812 and 1840) to fall into the hands of the conquering Annamese. They also consecrate the water of the oath which every mandarin must drink when entering upon his duties and at the coronation of every new sovereign.

Being the guardians of all purity, the *bakus*, standing at the top of a specially constructed platform, at every official entry of a new white elephant into Phnom Pénh, sprinkle it with lustral water, in order to purify it from the defilements of the forest. When one of the king's wives becomes pregnant, the *bakus* come and put a gold chain, the gift of the king, round her neck, and recite charms over it. It will then preserve her from the accidents of pregnancy. The new mother keeps this chain ever afterwards, as a sign of honour and fertility.

(2) *Âcârs* (Skr. *ăchārya*, 'teacher').—Below the *bakus* we might rank the *âcârs*, who very often take their place in the midst of the family for the cutting of the fore-lock, and who are lay-devotees, versed in theology and traditions, irreproachable in their mode of life, and held in veneration by the people for their knowledge and their holiness.

iii. POPULAR RELIGION. — Although all the Cambodians are very much attached to Buddhism, a very pure and very strict religion is not to be expected of them. The mass of the people, besides the cult which they render to the Buddha, worship Brāhmanical relics preserved by the *bakus* or kept in certain pagodas, without realizing what the words imply. All their superstitious piety is directed in the first place to the good or evil spirits and genii who animate all space. Under Buddhist names, so far as the *bonzes* and the very small minority of learned men (who try to identify these genii with the *prĕt* [=Skr. *preta*], 'ghosts,' the *yăkkh* [=Pāli *yakkha*, Skr. *yakṣa*], 'ogres,' the *râc sĕi* [=Skr. *rāja siṁha*], 'fabulous lions,' the *krŭth* [=Skr. *garuḍa*], 'mythical birds,' and the *nâk* [=Skr. *nāga*], 'fabulous serpents' of India) are concerned, the people unconsciously perpetuate the aboriginal cult—primitive Animism. It is this religion of very inferior ideas that dominates their whole daily life.

(1) *Nâk tà*.—In the first rank of good spirits must be placed the *nâk tà*, who seem to be local tutelary divinities, set apart, the Khmèrs say, by Prăh In (Indra) to guard a particular portion of land, or a certain mountain, river, or tree. According to some, the *nâk tà* would correspond to the Hindu *pitṛis* (*manes*). They dwell in the fine old trees which nobody would dare to cut down, and which are called *unsà srŏk*, 'the trunks, the roots of the country.' There is always one for each province, and sometimes one for each village. It is under the canopy of their foliage that the people come to worship the spirit, who can take the most diverse forms—a stone, a strangely shaped root, the ruins of a Brāhmanical statue, etc. The *nâk tà* are involved in cases of serious illness, epidemics, prolonged drought, or too heavy rainfalls. The oblations which they love are of three kinds: offerings of living animals, which, in the name and presence of the *nâk tà*, are given their liberty; offerings of food; and sacrifices of living animals. In the last case the buffalo or ox chosen is slaughtered in the midst of a large assembly of the people, who terminate the festival with a meal and rejoicings. At the installation of a governor in his new province a buffalo is always sacrificed to the *nâk tà*. In this case the animal is killed with great cruelty, its neck being sawn for a long time, as the duration and intensity of its bellowing are signs of prosperity for the new governor.

In former times the *nâk tà* had to be honoured by more cruel offerings, for in certain provinces of Cambodia, about 1840, it was the custom to sacrifice to them those who had been condemned to death. And even at the present day, persons who have been condemned to death are executed in the presence of the *nâk tà* of the province to which they belong; they thus become offerings to the spirit as well as victims punished for their misdeeds. In this there is very probably a reminiscence of human sacrifice.

(2) *Ârăk*.—Alongside of the *nâk tà* we find the *ârăk* (=Pāli *arakkha-devatā*, 'tutelary deities'), good spirits, or tutelary genii, who dwell in trees or in houses, and take special care of individuals. The *ârăk* seem to be the human ancestors, as the *nâk tà* are the Divine ancestors. The *ârăk* of the family is nearly always a relative or friend long dead, who has constituted himself the protector of the group loved by him. He is the best and the

most precious of the *dôn tà* (=ancestors, in the sense of grandfathers) of his *protégés*. The *àràk* is invoked especially in cases of illness, as this is almost always, in the eyes of the Khmèrs, the work of evil spirits. Then a *kru* (=Skr. *guru*, 'spiritual preceptor') is called in, *i.e.* a sorcerer, male or female, who gets into close communion with the *àràk* of the sick person, causes him to become incarnate in himself, and, armed with his power, asks who is the evil spirit that is torturing the patient. Then, to the sound of songs and a small band, he exorcizes it by spraying rice-wine that he has in his mouth over the patient in very minute drops. The patient is also slightly pricked or gashed, in order to chase away his tormentor. Every year, in Jan.–Feb.–March, a great festival in honour of the *àràks* takes place. It is called *lö'ṅ rôṅ*, 'the exaltation of the shed.'[1] To this feast the *kru* gathers all his pupils, *i.e.* all the clients cured by him, and in their presence he proceeds to call up all the *àràks*, and becomes possessed by these spirits, with much stamping and a fit of hysterics, which is apt to infect his audience. Blossoms from the frangipani tree (*Plumeria alba*, Linn.) are offered to the *àràks*. Many of the Cambodians have really no other cult than that of their *àràk*.

(3) *Prāy, khmôc prāy.*—*Nāk tà* and *àràk* have a hard task in combating the evil spirits, or *prāy*. Perhaps the most dreaded are the *khmôc prāy*, 'wicked dead,' and, among these *khmôc*, women who have died in childbed. These, hidden in the trees, frighten people by laughing and by throwing stones, and try to make them mad, or to kill them. The woods are also inhabited by elves, who are supposed to cause incurable diseases among men.

(4) *Bĕisać.*—The Cambodians must also beware of people who have died a violent death, the *bĕisać* (=Pāli *pisācha*, Skr. *piśācha*, 'goblin'), famished souls, stripped of everything, who return from the hells to demand food, and, if any one refuses to pay heed to them, take revenge by inflicting all sorts of evils on him. They are appeased by the placing of rice and other food for them among the brushwood, while the *prāy* will not accept offerings unless they are laid on a winnowing fan.

(5) *Smĕr.*—There are also terrible wer-wolves, male and female, known by the name of *smĕr*. Sometimes these are, according to Aymonier,[2] 'men who, as the result of certain magical incantations, are endowed with special powers and properties, *e.g.* being able to swallow dishes. In order to deprive these wer-wolves of their power it is necessary to strike them with a hook on the shoulder.' Sometimes they are women, who, after being rubbed, voluntarily or involuntarily, with oil consecrated by a sorcerer, lose their reason and flee to the woods, where, after seven days, they change into wild tigresses, unless a man skilled in sorcery, and rubbed with the same oil, gives them a knock on the head with a bar, while repeating magical words, and brings them back to reason.

(6) *Sorcerers, sorceresses, and soothsayers.*—The popular religion of the Khmèrs, by its very character, implies belief alike in magic, astrology, and the most minute performances in order to find out whether the apparently simplest action in daily life does not run the risk of being unlucky. Wizards and soothsayers are the indispensable priests of the popular religion of the Cambodians. A distinction is drawn between the sorcerer-soothsayers, *àp thmòp*, who foretell destinies and days, sell philtres and charms, and make use of spells either from wickedness or avarice, and the medicine-sorcerers, or *kru* (=Skr. *guru*), who add to these many gifts those of curing and exorcizing, and thus being able to counteract the wicked power of the *àp thmòp*. These two kinds of offices may be filled indifferently by sorcerers or sorceresses (*mè thmòp*). To cause a person to fall ill, or die, they have several processes: by means of incantations they transform a buffalo skin and some grains of rice, or some shavings of wood, into a huge black beetle, or into worms which enter the stomach of the victim, cause him to become ill, and kill him, unless a more skilful sorcerer intervenes to save him. Areca nuts, and certain *pratāl*, or tubers, after conjurations by the sorcerer, also cause a slow and most painful death to the person who touches them. Two human skulls, whose upper parts have been removed, placed one upon the other (top to top), and secretly laid (after certain incantations) under the bed of a man who is perfectly well, have equally disastrous results. The sorcerers also cast spells over people by means of a little wax figure which they prick with a needle at the spot where they wish to affect the person against whom they have a grudge. On the other hand, they sell protective amulets and love-philtres, or *khnòe*, small phials of baked earth filled with consecrated oil, which secure the favour of the king, success at play, or with women, for the man who is rubbed with it.

(7) *Ghouls or sorceresses.*—Lastly, there are the *srĕi àp*, a kind of ghouls or sorceresses, some of whom become so involuntarily, and others as a result of studying magic. At night their heads, accompanied only by the alimentary canal, wander about to feed on excrements, in search of which they will even look among the intestines of people who are asleep. Recognizable by their bloodshot and haggard eyes, these ghouls can throw a spell over any one by merely wishing it, and on this account they are dreaded far more than the sorcerers. If a *srĕi àp* is denounced in a village, either the authorities condemn her to a penalty —exile or death according to the gravity of her alleged misdeeds—or the inhabitants of the village themselves destroy her. The same fate was formerly shared by some of the *thmòp*.

5. Medicine.—It is natural that in the state of mind above described the doctor in serious cases is always the *kru* (=Skr. *guru*), or sorcerer-doctor. As regards the doctor, properly so called, or *kru pĕt*, his whole science is summed up in the knowledge of simples, the combination of medicines, and the recitation of *mantras* ('charms') at the time of administration. His medicine books are merely treatises similar to the ancient *Antidotaries*, including, besides a few clinical references, a great many very complicated formulas of medicaments, followed by their method of administration and preparation, according to the symptoms of the various kinds of diseases. Medical skill is generally transmitted from father to son, but sometimes practitioners instruct in their art intelligent young men, who then become their disciples. Like the Chinese, they attach great importance to the examination of the pulse in the diagnosis of diseases, and think that the latter are due to the evil winds that circulate through the whole system of mankind. Their medicines are borrowed from all countries, but consist chiefly of vegetable species. Various kinds of *Strychnos*, the *Cannabis indica*, the *Datura*, the gamboge, the rayed aniseed (*Illicium anisatum*), etc., are extensively used. The horn of a stag or a rhinoceros, an elephant's tooth, pangolin scales, etc., are supposed to be efficacious in smallpox and certain fevers. Bezoars and gall-stones are reputed febrifuges. The medicines vary according to the part of the body where the disease starts, the build of the person, and the day on

[1] This festival is always held in a temporary shed, specially built for the purpose.
[2] In *Cochinchine française*, xvi. 183.

which he is to drink the potion. In a case of dysentery, one is advised to cut the bark of the *pŏn* (?) on the tree itself, at a height a little above that of the navel of the invalid. In heart disease a decoction of the heart of ebony wood and iron wood, or a decoction of ivory and ploughshare, is prescribed. Eagle-wood is regarded as being especially pleasing to the spirits. In external maladies the part affected is rubbed with it; in internal, the sides of the vessel containing the potion to be drunk. Massage, pinching the skin, and the use of moxas are extensively resorted to. Surgery is not practised. In fractures, co-aptation is never attempted; but care is taken simply to keep the dislocated limb in place by ingenious splints of straight bamboo blades covered with carefully kneaded potter's clay. Before administering any medicine whatever, the physicians invoke *Dhanvantari*, the physician of the gods. The doctor is never paid until after a cure, and he almost invariably receives five arms' lengths of white calico, four betel leaves, some areca, four handfuls of cooked rice, and a wax-candle stuck on a slice of bamboo-trunk.

(1) *Smallpox.*—All that is done is to place some amulets beside the patient, and lay him on banana-leaves near which a fire is kept burning. Care is taken to avoid speaking of itchiness, mats are not shaken before him, so that he may avoid scratching himself, and a white linen cloth is laid beside him to make his pustules whiten by sympathetic magic. The medical formularies do, indeed, include remedies for the different stages and accidents of smallpox, but they are seldom employed.

(2) *Phthisis.*—Consumptives are never cremated, but buried, with a piece of broken earthenware on their faces, so that the evil spirit which is in them may not pass to their children. They are not exhumed in order to be burned until several years have elapsed, and then only if none of their heirs has suffered from the terrible disease.

(3) *Births.*—These take place with the help of matrons. In cases of difficult delivery a special potion is administered, and areca, betel, prepared betel-quids, and fragrant joss-sticks are offered to the 'god of medicine,' after which the midwife recites *mantras*. If a woman dies without being delivered during the 7th, 8th, or 9th month of pregnancy, this is believed to be due to the vengeance of the *prāy*; she and her fetus become dreaded ghosts. When a miscarriage takes place, the sorcerer is hurriedly called. He puts the fetus in an earthenware jar, and, armed with a sword in his right hand, with which he threatens the jar in order to prevent the evil spirit of the fetus from coming out, goes to the nearest stream, pronounces imprecations, breaks the jar with a blow of the sword, and leaves everything in the water. Usually, however, the sorcerer makes a pretence of this ceremony, hides the fetus, which is supposed to be animated by a spirit as intelligent as it is powerful, roasts it over a fire isolated by seven cotton threads stretched round the hearth, coats it with soot and varnish, and sews it into a little bag which he will always carry with him. Henceforward he will succeed in all his enterprises, and in cases of danger his *kŏn prāy*, 'son of the spirit' (the name given to the fetus prepared in this way), who considers him now as a father, saves his adoptive parent by his warnings. The adoptive father is obliged merely to give a few grains of rice at each meal to the spirit, who otherwise would take flight, thinking himself badly treated. This belief has such a strong hold on the mind of the Cambodians, that sometimes, we are told, sorcerers, or simply bold men, come, three days after the burial, to the grave of a woman who has died with child, to demand from her and take the fetus which is still in her womb, in order to make a *kŏn prāy* of it by means of the above-mentioned ceremony.

Faith in the supernatural power of the fetus led formerly, and apparently still leads (but only in quite exceptional cases, which are rightly regarded as crimes punishable by law), to unnatural acts. The power of the fetus is specially great when it is the first child of a couple married for the first time. In order to get possession of such a fetus, the husband used to ask his wife, as if in jest, about the fifth or sixth month of pregnancy, for the possession of the future child. If the woman entered into the joke, and replied, without thinking, 'It is yours,' the husband would lead the unfortunate woman to a secluded spot and kill her in order to get the fetus, which, when cooked and blackened as by the sorcerer, rendered him henceforward invulnerable and successful in his smallest undertakings. This detestable practice must have been fairly widespread, for, even at the present day, in a case of first pregnancy, the parents of the woman, with whom as a rule the young couple live, anxiously and constantly watch the shortest absence of the future mother.

6. Astronomy and astrology.—At one time astronomy was held in great honour in Cambodia, where special experts, the *nāk hòra* (Skr. *horā*; cf. Gr. *ὥρα*), 'astronomers,' 'soothsayers,' determined the solar and lunar eclipses, noted the variations of temperature, and fixed the calendars. At an early period these studies took the form of astrology, and treatises on this subject are plentiful in Cambodia. At the present day, *hòras*, headed by two respected and well-remunerated chiefs, are connected with the royal palace, and each year compose a calendar or *sànkran* (Skr. *saṅkrānti*, 'passage of the sun or other planetary body from one zodiacal sign to another'), including—besides the usual particulars, such as eras, eclipses, etc.—predictions about rain and fine weather, or the returns of the crops, etc. The Khmèrs apply to them to learn the best time for a marriage, the naming of a child, a journey, the building of a house, the success of an enterprise, illness and its issue, the sex of an unborn child, the next betrothal, war and peace, rain and fine weather, etc., all of which the *hòras* determine quite readily by consulting tablets similar to the Malay *kotikas*. Moreover, by means of formulæ and prayers, they can prevent the evil effects which they foretell. Among the common people the *hòras* are called *kru mòl*, 'the teachers who see,' for, independently of the official astrologers of the king's palace, there are other *hòras* scattered throughout the whole kingdom.

The belief in lucky and unlucky days exists in Cambodia as in the neighbouring countries. Friday, for instance, is regarded by everybody as a particularly lucky day for putting on new clothes for the first time, or finishing a piece of work which has been begun; this day is chosen for cutting the thread of a woven piece of cloth.

Eclipses are attributed, as in India, to Rāhu;[1] hence the expression *ra* (=*rāhu*) *čăp čăn*, 'the monster is seizing the moon'='there is an eclipse of the moon.' At the time of an eclipse, monks and *bakus* assemble at the royal palace, where, in anticipation of a possible catastrophe, which an eclipse may produce, the king is purified and gives abundant alms. On the other hand, shaving a child's top-knot of hair at this time ensures good fortune for him. Pregnant women render worship to Rāhu, to prevent their future children from being deformed or weakly. In the same way, if an eclipse occurs, the pillars which have been set up for the building of a house must immediately be placed on the ground and covered so as to be hidden from the eclipse. If they were used without this precaution, misfortune would follow.

7. Superstitions and various beliefs.—(1) *Natural objects.*—The Cambodians ascribe powers either beneficent or dangerous to almost all natural ob-

[1] This belief is general in the Far East.

jects; hence the reverence and fear which they inspire, and the complicated rites and practices to which they give rise.

Dew (*ansò'm*) is supposed to be vivifying. During the dry season, fog predicts an epidemic. Reviling the wind would cause ulcers, tumours, or humps. Pre-historic objects of stone or bone (Khm. *kàm rüntăh*, 'thunder-bolts') are regarded as bringing good fortune, especially flint axes, which are carefully preserved in the house. Trees whose roots spread under the house bring bad luck to it. When one wishes to get in marriage a virgin, and not a licentious woman or a widow, he must offer buds to the Buddha, and not full-blown flowers on which the bees have already alighted. The first fruit of a tree must never be gathered, for fear it should bear no more, and the people should be careful not to beat down the next crop with a thin bamboo pole, lest henceforth the tree may produce fruit as thin as the pole. Indian hemp (*kănčhà*) must be gathered with laughing and jesting, and feigning the intoxication it is to cause, in order to preserve its full power. The cotton-plant (*krabas*) and the bamboo (*rosĕi*) should always be planted far from the house; else, as soon as they have grown higher than the hut, they would like, in order to show their gratitude, to serve as funeral cushion and matting for those who planted them. So the young people always leave the work of planting them to an old man, who puts below what he has just planted a piece of jar or earthenware and says to the tree: 'Do not think of taking me until this potsherd has rotted!' The tamarind (*ampil*) and the frangipani tree (*čompĕi*) possess powerful virtues, so it is unlucky to see them growing too near the house. A stick of tamarind-wood allows its owner to wander fearlessly during the night under the protection of the *prăy*. A box, or the finger-board of a musical instrument, made from the heart of a tamarind or frangipani tree, serves to gain the love of women and the favour of the king. A knife-handle made from the wood of a tamarind which has grown near a house would lead the *prăy* of the tamarind to devour the fetus in the womb of the mistress of the house, and to make all her pregnancies miscarry. So married men keep this tree at a distance from their houses. The *koki* (*Hopea dealbata*, Hance), the king of trees, must be planted only by kings or *bonzes*. When others carry off a cartload of this precious wood, they must first invoke the spirits, and light some sweet-scented rods on the beam of the cart.

Although the tiger (*klà*) is very much dreaded by the Cambodians, who believe his whiskers to be a strong poison, and regard his appearance in a village as a sign of coming epidemics, the elephant (*damrĕi*) is greatly revered, especially the white elephant (*damrĕi sa*), which is considered as an unrivalled bringer of good fortune—an idea which is held also by neighbouring peoples, since, at the time when Cambodia was the vassal of Siam and Annam, it had to give to its two suzerains all the elephants of that colour caught in its territory. The French intervention has secured for it the free disposal of these venerated animals. The Khmèrs, like the Malays of Java, absolutely refuse to kill the monkey (*svà*) or to eat its flesh; they show great displeasure on seeing it hunted by Europeans. The *khtiň pos*, 'serpent bison' (*Bos gaurus*, H. Smith), is considered to be very redoubtable. The Khmèrs think that it feeds on serpents, which it kills by squirting its saliva on them. A ring made from a *khtiň's* horn is an antidote against reptiles' bites. Care must be taken, however, not to gather the hairs of its head, which sting as dangerously as serpents. The bones of a hare (*tonsài*) which has died a natural death are used in the preparation of powerful spells. Buffaloes (*krabĕy*) and oxen (*kò*) which, on entering or leaving their field, scrape up the earth, and throw it in the direction of the field, foretell good fortune for their master; but if they throw it in the opposite direction it is a sign of adversity, and the master must get rid of them. The goose (*kàňan*) should be reared only by well-to-do people. To the poor it would bring an increase of wretchedness. Little chickens with curly feathers (*mān čĕ*) should be reared only by a man who, without apparent cause, has lost several children, by way of a preservative for the coming children; or by a man in intimate relationship with the *àrăk*, in order to be offered in sacrifice to them. The kite (*khlèň*) hovering over a house signifies misfortune, and warns the family to abandon it. The same thing is foretold by the entrance unawares of the little palm-tree rat (*Sciurus palmarum*, *kòm-pròk*). When a large butterfly (*mè ambò*) comes flying into a house, it is a bad omen; a grasshopper (*kandóp*), on the other hand, on the thatch of the roof foretells a piece of luck. The crow (*kaèk*), according to the direction of its cry, foretells the return of an absent one, or a reverse of fortune. Cranes (*krăl*, *ronăl*) flying and crying in a flock above a village denote that there will soon be some love-escapades among the girls. The cry of the *ula slĕk* ('screech-owl'), a nocturnal bird of prey, and that of the *khlèň srak* (*Strix flammea*) foretell death.

(2) *Various objects.*—A winnowing-fan cannot be made by an unmarried man without bringing him misfortune. The person who carelessly sits down on a winnowing-fan will later lose his way in the woods. Although cracked metal objects, *e.g.* gongs, must never be kept in the house, but have to be thrown away, a curse would fall on the person who threw a worn-out cauldron among the rubbish below the house; it must be hung up in the house or thrown into the river. A pillow which has become useless must also be committed to the water, for it is a powerful vehicle of misfortune. A broken hearthstone meets with the same fate. On the other hand, when there is a storm or an excessive rainfall, a knife is placed among the cinders on the hearth. Any one who, when in a foreign country, negligently throws away rubbish, such as a piece of an old worn-out garment, lays himself open to reverses. Again, when one is abroad, the water with which the mouth is rinsed must be swallowed, or it will facilitate the attack of evil spirits. To veil the face, even inadvertently, with white cotton, like the dead, or the condemned at the place of execution, is to draw down very grave misfortunes. Instruments of torture, stocks, fetters, irons, etc., must never be put away in a house or shed, but must be left in the open air under a tree; and the executioner, after beheading a man, must quickly turn away his eyes, lest some day he be overtaken by the same fate. When a hunter wishes to secure a good bag, he must, before setting his net for wild animals, hold a traditional dialogue with a tall tree, on the north side of which he places his net. He himself, of course, utters both questions and answers, as he seeks for the tree's permission to take some of its flock. Then he places an offering of bananas at the foot of the tree, sets the trap, and returns home, taking care not to shake or break any big branches on the way. If, however, the net remains empty, the hunter takes off his clothing and pretends to hang himself, as if by mistake, in the meshes of the net which he has just set. After this his hunting is sure to be successful.

The following is a similar superstition. In May, on the day he proposes to begin ploughing, the farmer invites a few friends to his house. He puts his oxen to the plough in front of the house, after placing on a piece of white cotton beside it a brass bowl containing water, betel, boiled rice, fish brine, a boiled chicken, and a bottle of rice-spirit. He sets a portion of this food at each of the four corners of the plough, and invokes the ghosts of his ancestors in these words: 'Hasten, all ye departed ancestors, give us prosperity on this occasion. Through your protection, may our oxen and buffaloes escape all diseases, and our ploughmen all shocks.' The old men in the company now drink the rice-spirit, the young ones eat the food, and then work goes forward without mishap.

During harvest, a reaper must not use a sickle whose handle is made from the horn of a domestic animal, such as a cow or a buffalo, as these have already borne their share of toil and fatigue in ploughing. Any one who neglects this rule will bring trouble on himself. When the proprietor of a stable means to castrate a bull or a buffalo, he must first warn the animal by telling it not to think that he performs this operation capriciously, but with good reason, and then beg it not to bear him a grudge either in this or in any future life. The operation is preceded by a sacrifice to *Prăḥ Pisnukar* (Skr. *Viśvakarman*), the spirit of all industries. Immediately after the operation, two men throw to each other, over the animal, first a pumpkin and then a cock three times each, saying: 'Be as big as this pumpkin, and return to your stable regularly in the evening; be as fleet as this cock, and know your dwelling-place as he does.' If the pumpkin or the cock falls to the ground during these motions, this presages the death of the animal in question.

(3) *Metamorphosis.*—The Khmèrs, like the Annamese, believe in the transmutation of species and in metamorphosis. Thus the fresh-water tortoise (*kanthài*) may spring from a heap of worms which have collected during rain. Sometimes the snake (*antŏň*) is born from hindweed (*tròs*), which grows beside water, and can then change itself into a *skàr*, a kind of brown weasel. The Cambodians believe also that nocturnal birds, such as choughs, owls, screech-owls, are born from the four material substances of the dead—blood, flesh, bone, impurities. We have already noticed [§ 4. iii. (5)] that certain women, after being rubbed with oil from a magic vial, are changed in seven days into tigresses.

8. Festivals.—Indolent, gay, careless, and very religious, the Cambodians are extremely fond of festivals. Most of these assume to-day a distinctly Buddhist character, although it is possible to find in some of them quite a different origin, doubtless aboriginal.

(*a*) The following are the chief periodical religious festivals:—

(1) *Thvò' bŏn čŏl čhnam*, 'Festival of the entrance into the year,' takes place in the first month of the Cambodian year (15th March–15th April). The festival lasts three or seven days; it recalls the New-year festivals of the West.

On the first day the pagoda undergoes a thorough cleansing both outside and inside. Then eight *phnom*, or heaps of sand, are raised in honour of the *devata* (Khm. *tépoda*), or protecting deities. On the second day the faithful flock together, dressed in their best clothes, and laden with fine sand, sweet-smelling joss-sticks, and tapers. They make an offering of the wands and tapers to Buddha in the temples, and then march in procession round the pagoda, scattering their sand on each of the *phnom*. The whole night is spent in singing, playing, and dancing within the precincts, so that they may be able to keep watch over the mounds, as in the popular estimation any damage done to them would lead to great misfortunes by driving away *tépoda* or *tévodas*. On the third day the women come, carrying provisions and kitchen utensils, and install themselves in the enclosure, not of the pagoda this time but of the monastery, to prepare the presents destined for the

monks, and the dishes for their own families to consume. From eight until eleven o'clock in the morning, set prayers are said by the *bonzes* in the brilliantly illumined pagoda, before all the functionaries and the people. When these are performed, the *bonzes* come outside to receive the presents of the laity, and, after offering the first of their rice to the animals and birds, partake of a meal in public, which lasts for a quarter of an hour. The laity eat and play all afternoon in the enclosure. On this day, too, the rich give large alms to the poor. In the evening the statue of Buddha is washed, and so are the *bonzes* and *âčârs*; in the houses the children and grandchildren respectfully wash their parents and grandparents. In pious households all sexual relations are broken off during the first three days of the year. For the first seven days no living being or animal may be killed, no business matter concluded, all insults or controversies must be avoided, neither lies told nor hardness shown to any one, if the year is to be well begun, and therefore stand a good chance of also ending well.

(2) *Thvö' bŏn bambuos phikkh*, 'Festival of the ordination of a monk' (Pali *bhikkhu*); (3) *Thvö' bŏn bambuos nĕn*, 'Festival of the ordination of a novice'; (4) *Thvö' bŏn săn prăh*, 'Festival of the erection of a statue to Buddha'; or *Thvö' bŏn bŏ'k prăh nĕt prăh*, 'Festival of the opening of the sacred eyes of *Prăh*' (=Buddha). These ceremonies may take place only during the 2nd, 3rd, and 4th months of the ordinary year, and also during the 5th month of an intercalary year, that is to say, from 15th April to 15th July, or else from 15th April to 15th August.

The first two festivals may last from three to nine days, with feasting and games at the expense of the parents of the candidate, who himself takes only a very passive part in the proceedings, which end in his ordination. The candidate, dressed in white or else in his best clothes, rides in great pomp on horseback, preceded by an orchestra and shaded by a parasol of honour, right through the village from his own house to the monastery amid the joyful cries of the crowd, in spite of the army of *Măra* (=*Māra*), Buddha's enemy, symbolized by a few masked figures, who try to stop him on the way. After the *pratăksĕn* (Skr. *pradakṣiṇa*), or sunwise circumambulation of the whole gathering round the temple, and a last intervention of *Măra* and his followers, the candidate enters and takes his place in front of the statue of Buddha, facing the ordainer, who addresses to him the ritual questions, gives him the customary advice, and consecrates him. The festival for erecting a statue to Buddha also lasts three days, the first being employed in making an enclosure round the statue and in pretending to shave it and to 'open' its eyes with two long needles. The other two days are specially devoted by the people to the worship of the statue. This festival, being somewhat rare, always attracts many of the faithful and devout.

(5) A still rarer festival is the *Thvö' bŏn banćŏh semà*, 'Festival for the burying of the *semà*,' which recalls the laying of the foundation-stone of a church in the West. It is held only on the occasion of the erection of a new pagoda, or the building of a new monastery. These *semà*, or carved stones, which serve as the evidences of the inauguration ceremony, are nine in number. One of them, the *semà kel*, 'buried *semà*,' is placed in a hole in the ground four cubits deep, in front of the principal altar inside the pagoda, into which the believers have first thrown new clothing, jewels, gold, musical instruments, hair, parings of nails, and even a few drops of their blood.

The feast lasts at least three days, during which the crowd eat, sing, and rejoice, after making the necessary offerings of food to the *bonzes*. On the last day, at an auspicious time determined by the *âčâr*, the *bonzes* begin to pray; and nine men, at a signal from the *âčâr*, place the *semà kel* in its hole, and cover it up amid cries of joy from the crowd. As soon as this is performed, several other men go to place outside the pagoda the eight *slĕk semà*, or 'leaves of *semà*'—stones carved and often hollowed out to form niches, in which the faithful light sweet-scented sticks. These stones are placed at the four corners, and at the middle of the four sides of the pagoda, to form the pillars of the invisible rampart which will defend the pagoda from evil spirits and demons. The expression 'eight leaves of *semà*' recalls an ideal lotus-flower, of which the *semà* buried within the pagoda would be the heart (*alabastrum*), and the *slĕk semà* the petals. These last also represent the eight regions of space.

(6) *Thvö' bŏn ćŏl prăh vosà*, 'Festival of the beginning of the *vosà*' (=Pali *vassa*, 'rainy season' or 'season of retreat'), takes place about 1st July, and is a time of fasting, meditation, and prayer, lasting three or four months. The faithful bring to the monks cuttings of cloths, and an enormous candle which has to burn incessantly during the whole time of retreat, under the care of the monks.

(7) *Thvö' bŏn kan bĕn* (Skr. *pinda*, 'ancestral cake'), 'Festival of the customary *pinda*,' is the festival of the *nåk ta*, considered as the ancestors of the Khmèrs. They are presented with offerings of food.

(8) *Thvö' bŏn phćŭm bĕn*, 'Festival of re-union round the *pinda*, or cake, offered to the ancestors,' is the occasion when the faithful bring to the pagoda cakes and delicate foods, which, placed round the altar of Buddha with candles and sweet-smelling rods, rejoice the *don ta*, or ancestors of the family, and call down benedictions and prosperity upon its members.

(9) *Thvö' bŏn ćĕñ prăh vosà*, 'Festival of the end of the season of retreat,' is celebrated fifteen days after the preceding, that is to say, about the end of September. It consists of offerings of rice to the *bonzes* and the launching on the river of little rafts, made from the trunk of the banana tree, laden with provisions, zinc coins, and some lighted candles, and leaving them to follow the course of the water, after saying to the ancestors, who are believed to have their places on them: 'Go to the country, to the fields you inhabit; to the mountains, under the stones that serve you for houses; go! return!' whereupon the souls of the dead regain their mysterious dwellings.

(10) *Thvö' bŏn hè kak tăn* (Skr. *dāna*, 'generosity'), 'Festival of the procession of the abounding gifts (to the priests),'[1] one of the most picturesque ceremonies of Cambodia, lasts only one day for each monastery.

All the inhabitants of the province or village, headed by their chiefs and decked in their most beautiful clothing, proceed to carry to the pagoda the numerous and varied presents which the governor has bought with the money of the faithful. These presents—parasols, piastres concealed in a candle, fans, stuffs, fruits, etc., are carried on litters; shaded by a parasol, and preceded by an orchestra, they lead the procession. Behind come the governor and the mandarins with all the insignia of their rank, then the women, in hierarchical order, all grouped behind the *prapon thom*, 'the chief wife,' of the governor.

(*b*) Two Buddhist festivals have still to be noticed:—

(11) *Thvö' bŏn hè phka*, 'Festival of the flowers,' is the pilgrimage which a family, or more usually a whole village or district, makes to some famous pagoda to offer flowers, fruits, provisions of all sorts, and yellow cloth on bamboo hand-litters. The village visited would be dishonoured if it did not immediately provide an abundant feast and rejoicings in honour of its pious guests.

(12) *Thvö' bŏn nimont lŏk saṅkh ćĕk oi sampŏt sa*, 'Festival to invite (*nimont*=Pāli *nimantana*, 'invitation') the monks to a distribution of white cloth,' may take place any time during the year; before accepting the cloth, the *bonze* spreads it out on the heads of the donors and sometimes of all their relatives, at the same time repeating prayers conferring great blessings on them. Those who are too poor to make an offering of their own try at least at this time to touch the cotton cloth in order to share in the blessing pronounced.

(*c*) Festivals of Brahman origin are the following:—

(13) *Thvö' bŏn ańkăm bŏk sampăh prăh khè*, 'Festival of paddy pounded to render homage to the moon,' is celebrated in the 8th month of ordinary years, and the 9th of intercalary years, sometimes in the monastery, but more frequently in the village.

Each housewife broils and pounds a bowl of glutinous rice (*Oryza glutinosa*, Linn.). This bowl is exposed to the rays of the moon in the midst of trays laden with cakes and fruits, amongst which there must be one or two coco-nuts. On some matting on the ground is laid a cushion covered with five cubits

[1] Or better, *Thvö' bŏn hè kathĕn* (Pāli *kaṭhina*, 'robe made for a Buddhist priest within a single day and night'), 'Festival of the procession of gifts of clothing to the monks.'

of white cotton cloth, on which is placed a young banana-leaf rolled up to resemble a hare's ears. Two posts are fixed three cubits from one another, and with them is connected a horizontal stick, furnished with five areca leaves, five betel leaves, some flowers, five bees'-wax candles, and five sweet-scented sticks. At the end of each post are attached horn-shaped bags made from banana leaves, called 'horns of plenty.' Between 11 p.m. and midnight the women and girls, kneeling on the ground, thrice raise their hands, joined together, as high as their faces, towards the bright moon. Then, one after the other, they go and kneel on the cushion, take up the leaf shaped like a hare's ears, and salute the moon three times, saying: 'To-day is the full moon of the month of *kràdĕk* (Skr. *kārttika*, Oct.-Nov.); to-day, in every family, they do as we do. We invite all the divinities of heaven to come and take their share of these bananas, of this glutinous rice, crushed and cooked by us: come and drink of the water of these coco-nuts and protect us; grant that we may be happy during this life, and that our possessions may increase in our hands.' When they have finished, the head of the family takes a lighted candle and lets the wax which runs down drop into a vase full of water. The drops, more or less numerous, falling into the water will foretell rains, and, accordingly, more or less abundant harvests; so the whole family watches the operation with an anxious curiosity. Then the young men convey the presents offered to the divinities to the mouths of the maidens, and soon the whole gathering is eating and laughing and praising the moon.

(14) Mention may also be made of the *bŏn phĕk tĭk saĉa*, 'Ceremony of the drinking of the water of the oath'; the *bŏn ĉrat práḥ aṅkāl*, 'Ceremony of the opening of the furrow'; and the anniversary of the birth of the king. The eighth day of each moon, waxing and waning, and the day of full moon of each month are also feast days (*bŏn sĕl*).

(15) The 'Festival of the cutting of the top-knot' (Pāli *Chūlā-kantana-maṅgala*) is common to the Cambodians, the Siamese, and the Laotians of the countries bordering on Cambodia and Siam, and is compulsory on girls and boys of all ranks in their 9th, 11th, 13th, or 15th year (never during an even year), and marks their transition from childhood. Without it boys cannot enter monasteries as novices. Of Brāhman origin, this custom has become an essential rite of the Buddhists. It is preceded in the first month after the birth of each child by a shaving, without any pomp, of all the hair, called *kòr săk prĕi*, 'shaving of the wild hair.' This shaving is followed by many others, in which care is taken to leave a little tuft of hair on the top of the head; this tuft is usually rolled on a valuable pin, and surrounded with a little crown of white flowers, giving a most charming effect. It is this tuft which must be shaved with such ceremony. Only 77 or 78 days in the whole year are favourable for this operation, and the particular day is fixed by the *hòra* or the *àĉàr*.

The ceremony usually takes place in May, and for princes assumes great splendour. It lasts as a rule four days, the first three days being spent in preparatory prayer. At the same time, in the court of honour at the palace, an artificial mountain is built, made of painted wood and cardboard, with grass and branches of shrubs stuck on to imitate vegetation.[1] Two paths, oriented the one to the east and the other to the west, for the king, who officiates, lead to the top of the mountain. Round the mount are trays laden with offerings dedicated to Viṣṇu, the Devatās, and the Buddhas. At the top of the mountain, on a little platform, a light pavilion of cloth, closed in by silken curtains, screens a vat and an arrangement for spraying water, which will allow a rain of Mekhong water to fall on the neophyte at the desired time. A consecrated cotton thread isolates this pavilion, and preserves it against the attacks of evil spirits. On the other hand, in the throne-chamber, at the very foot of the throne, a couch of carved wood, covered with embroidered silk, is erected for the king; then, a little to the right and in front of the throne, a large carpet is spread out, with a flat cushion for the hero of the festival. Just opposite, a trunk of a banana tree, covered with a fine piece of silk and having an enormous ring set with diamonds at its summit, symbolizes mount Meru. Golden trays laden with fruits are placed round this mount. Twelve *bonzes*, with their superior, pray without ceasing in the hall, but it is four *bakus* who officiate along with the king. Inside the hall, round the central pillars, there is another cord, made of eight threads of red cotton, which passes round an altar of Śiva, and ends in a sort of crown placed on white cotton cloth.

About five o'clock on each of these three evenings there is a very brilliant procession, in which the candidate is borne in great state in a palanquin lavishly ornamented with gold, surrounded by all the functionaries and court ladies, to make the *pradakṣiṇa* round the palace. Each time the *bakus* go in front of him, sounding a conch to frighten away the evil spirits, and he descends from his portable throne and takes his seat on the carpet, leaning on the little pillow set opposite the *bonzes*, with the *bakus* on his left hand. The king, who follows him, does not ascend his throne, but takes his place on a cushion in the middle of the hall. Then the prince makes to the king, the *bonzes*, the altar of Śiva, and Mount Meru a salutation which recalls the *añjali* of the Hindus. The *bonzes* recite formulas in Pāli, which those present repeat in a low voice. After some rather lengthy prayers the king and prince withdraw to their apartments, and the *bonzes* to their pagodas, with presents from the king. On the fourth day this procession takes place in the morning, when the prince in his gilded palanquin, dressed in golden brocade, and preceded by the king, enters the throne-room. The *bonzes* bless the preservative cord, and the *bakus* sound the conch to keep away the evil spirits. Then the *bonzes* recite the most important of their prayers while the *bakus* undo the prince's hair, divide it into three locks in honour of the *Trimūrti* (triad of Brahmā, Viṣṇu, and Śiva), and tie each lock round a golden ring; the king, armed with a pair of golden scissors, cuts the three locks, and pretends to give the first stroke of the razor; the *bakus* make a pretence of giving another, and the shaving is finished by a barber. At the last stroke of the razor the *bakus* again sound the conch, and the *bonzes* repeat a text in Pāli. After this ceremony the whole assembly goes to the court beside the structure representing a mountain. The recipient, clad in white cotton, along with the king in a white muslin mantle, mounts to the pavilion, where, from the spray placed at the top of the mountain, he receives on his head, shoulders, and body a heavy shower of Mekhong water (the name signifies 'the mother of waters'). Then the king pours on his head five jug-fulls—in memory of the five rivers which descend from the Himālayas—of perfumed lustral water, and a crown of raw cotton is placed on his head. He must wear it conscientiously for three days.

The festival terminates with great banquets which the king gives to all his functionaries, and the receiving of presents—rolls of piastres and bars of silver—which these functionaries give to the young prince. On the occasion of the cutting of the top-knot, whether of the high or of the lowly, the hero of the festival receives presents from all his friends and relatives. Those which are presented to a prince, the son of a king, are carefully inscribed with the names of the donors, so that the king may be able to give them equally valuable gifts when they themselves celebrate a similar ceremony. The prince on this occasion receives a new name, which is inscribed on a leaf of gold, but which he will never bear in ordinary life.

(16) A water-festival, *Lŏi práḥ tip*, 'Festival of boating games,' a kind of regatta, is held every year at Phnom-Pénh, in October, when the waters of the Mekhong begin to abate. Only the *bakus* play a prominent part, and the king invokes *Práḥ hàm Sramŏt*, 'the god of the seas' (Varuṇa?), asking him to keep the overflowing Mekhong within bounds so that it may fertilize and enrich the country.

The festival is held on the right bank of the river facing the royal wharf. A huge raft bearing a big shed decorated with rich draperies is built for the king and his court. All the rich royal canoes and nearly all the vessels of the whole kingdom are there, freshly painted and beflagged, and filled for the most part either with spectators or with competitors for the regatta. The racing boats, of a special shape, are drawn up at a fixed place, ready to go. The festival lasts three days and three nights, with no respite except in the mornings. The regattas take place to the sound of royal music and the guttural cries of the rowers, excited by the jovial bantering song improvised by a sailor standing up in the boat. The number and the rapidity of the barques give quite a fairy aspect to the river. The signal for each race is given by a *baku* dressed in green, who, followed by the canoes, goes in a boat, a sword in each hand, and cuts a strip of black leather, an object held sacred by all, placed between two canoes. He makes three attempts at it, as though full of fear of committing a sacrilege, murmurs a prayer in Sanskrit, cuts the cord, and hurriedly departs. While the race-boats are taking their flight, amid innumerable cries, the chief of the *bakus* offers the king and all the members of the royal family a conch containing some of the water of the river, with which they all perform purifying ablutions. After nightfall, the people launch on all sides tiny rafts of banana-wood, furnished with lighted candles and offerings to the spirits and ghosts, which illuminate the whole river. The night is spent, on board the royal raft as well as on the other boats, in feasting, games, and music.

9. Organization of family life.—(1) *Relation of the sexes.*—The organization of the family in Cambodia is strongly knit, and their morals are stricter than those of most other peoples of the

[1] This represents Mount Kailāsa in the Himālayas, which, as we know, is the heaven of Śiva.

Far East. As soon as the boys have undergone the cutting of the top-knot, if they are going to be educated or to become novices, they sleep in the monastery. Afterwards, until their marriage, they pass the night in the *sāla*, or common house. Until they are of marriageable age the girls are called *prohmocàrĕi* (= Pāli *brahmachārī*, 'chaste'), and are looked upon as brides of *Pràḥ En* (= Indra). With the first signs of puberty they take the name of *kramŭm*, 'young girl,' and they 'go into the shade' (*col melŏp*). The relatives tie cotton thread round their wrists, and offer a sacrifice to the ancestors to announce the event to them. On the same day, to the north-east of the house, they plant a banana tree, the fruit of which may only be eaten by the young girl or sent to the monks.

To behave herself correctly and according to tradition, the young girl must not now allow herself to be seen by any strange man, nor must she look on any man even by stealth; like the monks, she must abstain from food from midday onwards, eat only rice, salt, coco-nuts, peas, sesame, and fruit, but neither fish nor flesh of any kind; she must bathe only after dark when no one can see her, and never without her sisters or friends; she must work only in the house, and never go out even to the pagoda. This strict retreat lasts only for a few days among the poor, sometimes for years among the rich. It is interrupted only by the occurrence of an eclipse. Then the 'maiden in the shade,' like the pregnant woman, puts an areca knife and a little box containing lime in the knot of her *sampŏt*, lights candles and sweet-smelling sticks, and goes out to worship Râhu, the monster who causes the eclipse: he will crown her desires with good fortune. She then returns to her retirement. The 'coming out of the shade' (*čĕñ melŏp*) is marked by the *bonzes* coming to the house to repeat prayers, and by a banquet. It often ends in another ceremony preparatory to marriage, at which they 'do the teeth' (*thvò' thmeñ*). This is presided over by an *àčàr*, who spreads white cotton cloth on the ground, and places eight bits of straw on it in the directions of the eight points of the compass; in the middle a coco-nut porringer, a shuttle, a small cup of *samrit* (bronze alloyed with a little gold and silver), and a metal model of a boat are covered with as many measures of paddy (fetched by the *àčàr* himself from the granary of the house) as the years of the girl's age. She sits down on the well-arranged heap, an old couple mix up the lacquer for her teeth in front of her, while seven young boys encourage them by singing and pretending themselves to pound. This lacquer is then applied to the teeth of the young girl, who is required to preserve it until the morning. After a series of jokes and fun from the boys, who imitate the exorcisms of the *prăy*, and a banquet, the young girl goes out in the morning three times to worship *Pràḥ Atit* (Skr. *āditya*), the rising sun. Her teeth are then covered with lampblack, and she does reverence to the domestic altar, and henceforth is ready for marriage.

It can be understood that under these conditions seduction is rare; or, if a case occurs, abortive potions help to hush up the matter. But, as a general rule, Cambodian girls are very reserved, go out little, and conduct themselves well. Boys and girls usually marry when about sixteen. Marriage between too close relatives is forbidden; it is allowed between first cousins only when the father and mother of the bridegroom are older than those of the bride. The incestuous union of a brother and sister, even when born of different mothers, is forbidden, under penalty of a heavy fine or confiscation of goods, and obligatory separation. Formerly, the incestuous couple were beaten with rods, tied to a raft, and abandoned to the mercy of the river, where they soon died of hunger; for no one would consent to help them out of pity. The king alone, who in Cambodia is above the law, may marry his aunt or even his half-sisters.

(2) *Marriage.*—A marriage is often arranged by the parents without the young people being acquainted with each other, but is scarcely ever carried out without their consent. Three female intermediaries from the home of the boy go to that of the girl and sound the relatives, with becoming deliberation and circumlocution. If the signs are favourable, new official intermediaries of a more exalted character come to make the official demand, and bring the presents of the suitor on trays. The girl has been approached beforehand, and her silence is taken for a formal acquiescence. After inquiry has been made into the parentage of both young people, if the omens are favourable, they are officially betrothed. The fiancé, who has not yet put in an appearance, is now brought to live with his future parents-in-law to 'do service' (*thvò' bamro'*). He has to sleep in the kitchen, carry the water and the wood, and be under the command of the parents of the girl, who, in return, is expected to prepare his food and his betel. This stage lasts only a few months in the case of people in easy circumstances, for fear of a too speedy pregnancy; one or more years with the poor, who often have two or three children before marriage. For, on the other hand, marriage in Cambodia is a very onerous affair. The obligatory betrothal presents include 100 areca nuts, 200 betel leaves, a pound of gambier, a gourd of wine, a pound of tobacco, not to mention the building of a new cottage, near that of the young girl's parents, to shelter the young couple. The presents of the marriage proper, always borne, according to the ancient custom, by the bridegroom, are fixed at 5 piculs (±300 kilogr.) of pork, 50 hens, 30 ducks, 100 bottles of rice-wine, 30 special cakes, not to speak of jewels, cloths presented to the fiancée, and a sum of money called *khàn slà*, 'presenting the areca and the betel,' which, under the name of a marriage present to the bride, is in reality handed over to her father. The fiancé must also give to the girl's mother the *pràk snăp tik dòh*, 'price of the mother's milk, the nursing indemnity,' along with a bouquet of areca flowers; to his own parents, on the last day of the marriage, huge wax candles; besides the innumerable traditional gratuities, however humble, to be distributed on this occasion. On the other hand, the young man who has undertaken all these expenses and has gone to 'serve' with his future parents-in-law runs the risk of being sent away in disgrace and without any compensation, as guilty of a lack of respect—a charge easily incurred if he does not manage to please them and his fiancée. He therefore tries above all to win her good-will and favour in order to escape a costly repudiation, which would, in addition, make him ridiculous in the eyes of the village. The matter is usually easy enough, the betrothed having, in the eyes of the public and even of the law, the same rights as husband and wife. The fiancé who has seduced his bride can never withdraw; he who withdraws without cause is condemned to a heavy fine and the loss of his betrothal expenses. The fiancée cannot without infamy be sought by another suitor; in case of flagrant infidelity, she suffers the punishment of an adulteress. On the other hand, the children of a betrothed couple are considered legitimate. Only the parents of the young girl are affected by such proceedings, which make it impossible for them to send away their future son-in-law if he displeases them. If they send him away without cause they themselves will be held responsible for an indemnity, and have to give back the betrothal presents.

Marriage by capture takes place in Cambodia when the parents of the young girl refuse their consent and the lovers agree. The young man is free from blame after the abduction, when he has made his apologies to his parents-in-law.

The law allows three legitimate wives, besides concubines; the masses, however, through poverty, are monogamous. Only one of the wives, the *prapŏn thom*, 'the chief wife,' enjoys authority and the prerogatives of the legitimate wife. She also is the only one who is married with a complicated ceremony. Polyandry, although very rare, is tolerated, and appears to the Cambodians odd rather than scandalous.

Religious intervention is very seldom invoked at weddings in Cambodia. When it does happen to occur, which is about once in four occasions, it is

continued to prayers and the sprinkling of holy water on the two young people by the *bonzes*. Nor does the civil law meddle with marriage. It remains a purely domestic ceremony. Marriage, we have seen, cannot take place between too near relatives. It may be celebrated at any time of the year except during the three months' retirement of the monks.

A special shed is built near the home of the fiancée, with a roof of foliage, and hung on the inside more or less richly with red draperies. On the morning of the marriage day the bridegroom, dressed in his best, goes in state to the house of the bride, and sits at her right hand, both on one mat. All the guests surround them, with areca flowers in their hands. The bridegroom himself, after bowing three times, offers one of the flowers to each member older than himself of the bride's family, beginning with the father and the mother. They lay the flowers they have received on plates in front of them, and on these the young man's parents place a sum of money varying according to the degree of the person: usually 9 *damlĕṅ* (about 20 fr.) for the father, 7 for the mother, etc. Then the *čaṅ dai*, 'binding of the hands,' takes place; the parents of the two pass a bracelet of 7 threads of untwisted cotton on the wrist of each of the pair, the relatives and friends do the same on the fingers, and at the same time offer them presents, which are often very rich: jewels, cloths, animals, slaves, land. After this the parents, holding a lighted candle, walk three times round the bride and bridegroom, who, along with the old ladies, go into the house to change their gala dresses for more simple costumes, before they serve the wedding breakfast to their guests. When the feast begins, the guests are grouped by sexes, and placed in order of rank, of relationship, and of age. The long and sumptuous meal is preceded by prayers to their ancestors, who receive as an offering the first of each dish. The ceremony ends with the *phsàm dammek*, 'the union in the same bed,' in the conjugal house. Respected matrons arrange the nuptial sleeping-mat, and present the newly-married pair with the cakes or rice-balls, a portion of which each places in the mouth of the other, to show henceforth their unity; the matrons lightly knock the heads of the husband and wife together, saying, 'Be united and happy,' and leave them. For a second or third wife, or when a man marries a widow, the marriage ceremony is confined to a hearty feast. Members of the royal family are married by the *bakus*, who sprinkle them with holy water.

(3) *Divorce.*—Divorce exists in Cambodia, but is seldom put into practice. It is nearly always demanded by the wife. In the case of separation by mutual consent, the wife gives up to the husband the wedding presents she received, and all that he possessed at the time of their marriage. If there are children, everything is considered common property; the husband receives two-thirds and the wife the remaining one-third. The children, if they are of tender years, are entrusted to the wife, to return in the end to the husband, or else they are divided, or, if they are grown up, are allowed to choose for themselves. If the divorce is demanded only by the wife, she is liable to pay double the amount spent by the husband on the marriage, and can claim only her dowry and one-third of all goods acquired since the marriage. But, as a rule, unions in Cambodia are lasting: the wives have a keen sense of duty, and the husbands have a great regard for their wives, and spare them too hard work—which contrasts very favourably with the loose and selfish marriages of the Annamese. Widows may marry quite honourably if they cremate their first husband properly and preserve their widowhood for three years.

(4) *Birth.*—The Cambodian wife, who, without great outward authority, is well treated in her home, is accorded very particular attention during pregnancy. The confinement always takes place without the aid of a doctor, but with the intervention of expert matrons, who employ empirical manœuvres, accompanied by the recitation of *mantras* and by sacrifices. The vigorous constitution of the Cambodian mother does the rest. The umbilical cord is not cut until after the issue of the placenta. The child is immediately washed and wrapped in swaddling-clothes. The mother is bathed in warm water, a warm oval stone is placed on her abdomen, and she is laid on a camp-bed, under which a fire is kept burning for the space of from 9 to 30 days. The wood with which the fire is fed differs according as the child is the first-born or not. A cotton thread blessed by a *kru* or an *àčàr* surrounds the room, to preserve it from evil spirits. The mother suckles her child until the age of three or four, not without stuffing it at the same time with rice and bananas, which is the cause of the enormous abdomen which marks all Indo-Chinese children. At six months the child receives the name of a flower, an animal, a mineral, or some other object. At the cutting of the top-knot this name is exchanged for a new one. Patronymic names are unknown in Cambodia.

The birth of twins is considered unlucky, as also is that of albinos, dwarfs, and deformed infants. These unfortunate children, except when the offspring of *bakus*, become, from their very birth, life-long slaves of the king.

Adoption takes place with extreme facility in Cambodia, and to it is joined the custom of concluding a friendship, which binds the contracting parties closely together and ends only with death. They mix a few drops of the blood of each with a little water, and divide and drink this, after pronouncing the oath to be brothers for ever; such are the rites of the compact. Cf. art. BROTHERHOOD (artificial).

(5) *Disposal of the dead.*—Cremation is the general custom in Cambodia, but the ceremony, which among the very poor takes place immediately after death, is among the rich often deferred, for various reasons, for several months or even years. In the latter case they either bury the body and leave it to be exhumed at the desired time, or they preserve it in the house. To preserve the body they pour a certain quantity of mercury into the mouth and place the body in a coffin of hard wood hermetically sealed, except for a small hole to which is fixed a bamboo tube which carries out of the house the gases that are formed. Some devout Buddhists, however, order their flesh to be cut into small pieces to feed the birds of prey. King Ang Duong ordered this to be done with his body when he died, about the end of 1859.

As soon as an invalid enters on his death-agony the *bonzes* are called, in order to repeat the prayers for the dying. Until the actual moment of death all present repeat in a loud voice, the patient joining in as long as he has the strength, '*Arahaṅ! arahaṅ!*' 'the saint! the just one!' (Pāli *araham* = 'the saint,' 'one who has attained final sanctification'). When the last breath has been drawn, the children of the dead man close his eyes and mouth, and wash the body with holy water. If, in default of direct heirs, this pious duty is performed by a slave, he is henceforth free. Then a small ingot of gold or silver is put in the dead man's mouth; small squares of gilded paper are applied to the orifices of his face; and he is clothed in white. His hands are joined, and in them is placed a rolled-up banana-leaf containing three betel leaves, a candle, and three sweet-smelling sticks. The body is placed in a wooden coffin, more or less costly according to the fortune of the deceased, and is kept in position by sawdust, cotton, paper, and pounded guava leaves in such a way that it cannot move. On the neck of the corpse is placed a white cotton collar, which communicates with the outside by a long cord, attached to a band of cotton, and passing between the coffin and its lid. Then the family, the servants, and slaves go into mourning—that is, they shave their heads and put on white clothes. Every day, at the usual meal-times, trays laden with food are brought near the coffin, beside which is a tray with a betel-box and a change of clothing for the deceased. The whole day a number of *bonzes* remain beside the coffin in prayer, with their hands on the white band which communicates with the deceased's collar.

They usually proceed with the cremation after

three days. The coffin is carried from the death-stricken house to the pyre, on a huge hearse with a fringed canopy laden with garlands of leaves and flowers. Four *bonzes* take their places, standing on the hearse at the four corners of the coffin, which is covered with flowers, ornamented with figures cut out of gold paper, and furnished, where the head is, with lighted candles and burning scented sticks. Just in front comes a child, the son or grandson of the deceased, carried on a palanquin, his forehead adorned with a band of plaited bamboo, to which is fastened the cotton cord from the coffin. After the burning of the body this child receives the dress of a novice from a *bonze*, quite near the pyre. If the deceased has no direct male descendant, a slave may fill this rôle, and receives his liberty through this fact of entering into the monastic order. This palanquin is often preceded by another covered with a yellow parasol, and bearing a *bonze*. In front of all goes an *àcàr* on foot, holding a white banner called 'flag of the soul' (*tŏṅ pràḥ lĭṅ* [Skr. *liṅga*, 'sign']). From the handle of this flag hangs a pot full of uncooked rice. In a wallet which he carries the *àcàr* has put all that is required for preparing betel-quids. Behind the hearse there generally walk a small orchestra, a young girl throwing small pieces of money to the poor, hired mourners, the family, and friends. Except in the case of kings and princes, who are burned in a special construction called a *mén*, the dead, as a rule, are burned in a building which bears the name of *phnom yŏṅ*, 'mountain of deliverance.' After the thrice-repeated *pradakṣina* round the cremation catafalque, or *phnom yŏṅ*, the coffin is placed on it, and left there for three days. The family and friends establish themselves in the vicinity under leafy shelters. The coffin is placed open on its pyre, the face of the dead man is washed for the last time with coco-nut milk; and then the *àcàr* walks three times round the pyre, swinging a lighted torch so as to set fire to it. At the first crackling of the flame the young 'conductor of the soul' is consecrated, and the music plays. When the combustion seems sufficient, the *àcàr*, his assistants, and the others present extinguish the fire by throwing jars of water on it. The rice, cooked in a pot on the funeral fire, and the betel-box are put near the ashes of the body. Out of the ashes the *àcàr* and his assistants fashion a human form, which they carefully place facing in the direction which appears most suitable. Over this figure, which is covered with white cotton cloth, the *bonzes* recite prayers, and all present prostrate themselves. Then each one begins to look among the ashes for the bones that remain; these bones are washed with holy water, placed in a cloth bag, or an urn of porcelain or some precious metal, and then buried in the neighbourhood of a pagoda, or piled up near a *Ficus religiosa*; or, in the case of rich persons, they are placed in small structures of masonry called *cetĕiy*, built on a piece of consecrated ground. Prisoners abandoned by their family, and people who have died through violence, suicide, accident, or assassination, are buried, not burnt. The two last are not long in appearing on earth again in the form of some dreadful ghost. The body of a criminal is abandoned to birds of prey, unless the relatives buy and bury it.

(6) *Mourning.*—Mourning consists in shaving the head every fortnight, dressing in white, wearing no jewels or ornaments, and fasting once a week, on *thṅai sĕl* (Pāli *sīla*), which is equivalent to our Sunday. Mourning is worn only for persons who are older or are in a higher position than oneself. Mandarins and functionaries wear it for the king until the cremation, which is sometimes put off for years. Children and grandchildren, whether by birth or adoption, wear mourning for their parents and grandparents for three years; the widow wears it for her husband for the same length of time; brothers and sisters wear mourning only for their elders; nieces, nephews, and cousins wear it only until the cremation. Parents, grandparents, and widowers do not wear mourning for children, grandchildren, and wives respectively.

(7) *Ghosts.*—All Cambodians believe in the appearance of ghosts who issue from the decaying dead body; when there is no putrefying matter left, the apparitions cease, the human remains being changed into nocturnal birds of evil omen.

(8) *Festival of the dead.*—A solemn festival in honour of the dead is held in September—the *phcŏm*, 'reunion,' 'assembly'—when all souls have the right to leave their Hades and come to enjoy the offerings which the Cambodians never fail dutifully to prepare for them.

10. Political and judicial organization.—(1) *Government.*—At the head of the political organization of Cambodia stands the king, absolute sovereign and by right of birth possessor of all life and lands in his kingdom. Indeed, his power is limited only by the rivalries or intrigues of his troublesome relatives; the audacity of certain great functionaries, who at one time showed a great inclination, for their own interests, to lean upon the Siamese or the Annamese; or by revolt on the part of his subjects. The king governs with the help of a council of five great mandarins, who are chosen by himself, and who have no power except what is accorded them by the good sense, favour, or laziness of the king. The order of succession to the throne of Cambodia is badly established and variable: it is in the male line, but sometimes from father to son, sometimes from brother to brother, in order of birth. Women may be and have been called to the throne. If there is no heir belonging to the royal family, the mandarins, says a very credible tradition, may call one of the *bakus* to the throne.

The coronation celebrations, and those at the cremation of a high personage in the royal family, are the most superb to be seen in Cambodia. Coronation celebrations are continued for eight days, the last being occupied with the actual crowning. This ceremony is purely political, not religious, except in its first part, when the chief of the *bakus* pours on the king's head the so-called lustral water of investiture, while the *bonzes* pray. Then the *bonzes* disappear, and if the *bakus* remain and take a very active part in the ceremony, it is less in the rôle of unconscious representatives of the ancient Brāhman religion than as trustees of the traditions of a glorious past. On the coronation day, all the functionaries, high and low, hand over their resignations to the new king, who reinstates them the next day, after they have taken the oath of fidelity. It is worthy of notice that, when the newly crowned king returns to his palace, he is accompanied by a group of female followers, one carrying his parasol, another his sabre, a third his betel-box—in short, everything he needs for daily use. Another group follows, carrying a cat (the first living creature to be introduced into a house before it is inhabited), rice, ivory, a rhinoceros' horn, a gourd, haricots, grains of sesame—all the symbols of abundance and well-being. All services within the palace are performed by women. The Khmèrs have a profound and respectful attachment to their kings.

(2) *Society.* Cambodian society next to the king is no longer made up of castes but of classes, very clearly defined and often very exclusive: (*a*) the royal family (*Pràḥ Voṅsà*—Skr. *vaṁśa*, 'race,' 'lineage'); (*b*) the *Pràḥ Voṅ* (Skr. *vaṁśa*); (*c*) the *bakus* and *bonzes*; (*d*) free men; and (*e*) slaves.

(*a*) The royal family includes relatives to the fifth degree, and persons who have gained this position by marriage with princesses nearly related to the throne. On account of polygamy, it forms a veritable population, exempt from taxes and compulsory service, and provided, according to their quality, with incomes and titles more or less considerable. Their possessors too often abuse the spirit of loyalty of the Khmèrs, in order to oppress them and put themselves above the law, but are, at the same time, directly and very effectively dependent on the king, their chief and absolute master. The importance of the princes of the royal family is in direct proportion to their intrigues or their popularity.

The following is the order of rank of these personages: the *appayôrāc̄* (Pāli *upayuvarājā*, 'vice-heir-apparent'), king who has abdicated, preserving the right to a six-storeyed parasol; the *opparāc̄* (Pāli *uparājā*, 'viceroy'), second king, and often heir-apparent, who must be content to be shaded with a parasol of only five storeys; the *práḥ vorrācini* (Pāli *vararājinī*, 'chief queen'), the queen dowager, mother of the king; the *ak mohesĕi* (Pāli *aggamahesī*, 'first queen') the queen, first wife of the king and mistress of the harem, who usually owes her title more to high birth than to favour. These positions of dignity may be vacant for want of the personages themselves or because the king wills it so. All, according to a pre-determined order, are possible successors to the throne.

(*b*) The *Práḥ Voṅ* are descended from the royal family, but more distantly related. From their illustrious origin, they retain the privilege of being designated 'Práḥ' and of paying fewer taxes than the king's other subjects. Otherwise they live just like them.

(*c*) The *bonzes* and the *bakus* have already been discussed [§ 4. i. (1) and ii. (1)].

(*d*) The free men (*prei ṅā*) furnish the functionaries of all degrees.

(*e*) Slaves are divided into (*a*) slaves for debt, and hence redeemable; and (*β*) slaves who are irredeemable, comprising prisoners of war, former rebels not put to death, and unfortunate savages who have almost always been kidnapped on the frontiers. The children of irredeemable slaves are themselves slaves from their birth until the end of their lives. Slavery, although of a mild form, owing to the moderate character of the Khmèrs, has none the less been till recently the open sore of the country, and has tended to augment the general apathy and economic mediocrity.[1]

(3) *Civil law.*—In theory, individual property does not exist in Cambodia, the king being the possessor of all the territory. The legality of this theory is affirmed by certain legal provisions. Thus, in the case of large successions without direct heirs, the king inherits all or part of the goods; all land not cultivated for three years returns to him; when expropriating land either for the general good or for his own particular advantage, if he gives an indemnity, it is of good-will, not of necessity. But, as a matter of fact, individual property is perfectly recognized in Cambodia: any individual who, subject to certain formalities, asks the king for a piece of land from the public ground, which represents four-fifths of the whole territory, obtains it without difficulty. If after three years he has brought it under cultivation, and transformed it into rice-fields or meadows, and if he continues to cultivate it, it belongs to him. He may let it, sell it, transfer it by gift, or leave it to his children, always on condition that he pays the taxes which are levied on all land in the kingdom. It cannot be taken from him except when he fails to make use of it, or when, after cultivating it, he abandons it for three years. Private property consists of the moveable and immoveable possessions which the husband and wife brought with them at the time of their marriage, and of which, in the event of a dissolution of the marriage, each claims his or her own, after dividing the common gains. By a very Asiatic extension of paternal rights, children are considered the property of the father, who may, if he wishes, sell them while they are minors. Except in case of extreme misery, Cambodians very seldom avail themselves of this right.

(4) *Law of inheritance.*—This varies according as the husband has had one wife or more. In a monogamous household the surviving parent has the guardianship of the children, and the administration and the usufruct of all the property. The children inherit without distinction as to sex, but the eldest and the youngest always receive a double portion—the one because he has had to carry his brothers, the other because he has had to rejoice his parents' old age. Children by adoption enjoy the same rights as children by birth. Usually, too, children who have taken part in the cremation of their parents reap some special benefit.

(5) *Penal law.*—The Khmèr penal law is extremely rigorous in theory, and boasts no fewer than some twenty ways of inflicting death, with or without ingenious tortures. In practice, the penalty of death is reserved for usurpers, rebels, those guilty of high treason, and repeatedly convicted offenders. In the first case, the condemned man's head is cut off and exposed in the middle of the market-place, while the body is quartered and placed at the four cardinal points of the royal palace. In the last, the head is cut off and placed on the end of a piece of bamboo firmly fixed in the ground. The body is given back to the family if it is claimed, or is left to be buried by the police. Incorrigible elephant thieves are crushed by elephants. This terrible punishment is, of course, rarer than the offence. At one time thieves were punished by death, mutilation, slavery, or confiscation of goods; to-day they are liable to a penalty varying with the offence; in cases of insolvency, this may take the form of selling the offender into slavery. The general tendency is for the judges to commute the barbarous punishments of former days into profitable fines, which are divided amongst the judges themselves, the royal treasury, and the plaintiff or prosecutor, if there is one. Any one who cannot pay the fine imposed is sold as a slave. In cases of accidental homicide there is a sort of *wergeld*, varying with the quality and condition of the person killed. The woman taken in adultery is marched for three consecutive days through the town, her face covered with a basket of plaited bamboo, red flowers in her ears, forming a collar, and on her head, avowing in a loud voice her fault and her repentance. This march may be exchanged for a fine levied on the personal property of the woman and her lover, part of which is handed over to the husband, unless he is proved to have been a consenting party to the infamy of his wife. The fine varies with the position of the woman in the household; the 'chief wife' is more heavily punished than the mere concubine or any other wife. The husband is entitled to kill offenders taken *in flagrante delicto*, but on the strict understanding that he kills them both. The punishment of rape is a fine which varies decreasingly according as the victim is a married woman, a young girl, a widow, or a slave. The seducer may be put to death by the young girl's parents, if he is caught *in flagrante delicto* and is acting without their implied acknowledgment; but no proceedings are taken against a seducer, failing a complaint by the victim or her parents. The penalty varies with the condition of the person seduced, and according as there has been pregnancy or not. The gravest case is pregnancy followed by death in child-bed. Abduction is

[1] The new king of Cambodia, Sisovath (Skr. *Śrī Svasti*), who ascended the throne in 1904, has abolished slavery, which had, indeed, been greatly ameliorated since the arrival of the French in the country.

punishable by a fine in proportion to the condition of the female carried off, the distance covered, and the natural obstacles, rivers, or mountains crossed. Sexual intercourse with animals meets with ignominious punishments, such as having to feed on the grass of the fields, or to lap water from the boiling of rice. As a rule, the punishments are simply punitive and do not involve degradation: a functionary who has served a term of imprisonment for breach of trust resumes his duties freely. Legal proceedings in Cambodia are slow, involved, and expensive. Accused and accusers have the right of being represented at the tribunal by a kind of advocate called the 'shoulder of the case' (*smà kedèi*). Liberation on finding sureties is frequently practised. A crime may be proved either by witnesses or ordeals.

(6) *Ordeals.*—The principal judicial tests still in use are the following: -(*a*) Water: both parties dive, and the one who rises first is guilty; or they swim across the arm of a river, and the last to arrive is guilty. (*b*) The test of the molten tin, into which the accused must plunge a hand without being burned. (*c*) Burning coals, over which he must walk without hurting his feet. There are other tests quite as illusory, but much milder. Very often the judge does not hesitate to order the suspected person to be tortured, in order to obtain either his confession of a crime or the names of his accomplices. The greatest scourge of Cambodian justice is not its laws, but its judges—functionaries who are often unjust because they are ignorant and greedy. Having paid a large sum to the royal treasury before entering on office, they set about recouping themselves, at the expense of litigants, by a sad misuse of justice. There is, indeed, a law which enacts that an unjust or ignorant judge shall receive a sentence equal to double that which he has wrongly inflicted, not to mention the chastisements reserved for him in the after life. But those who ought to apply this law are only too often so deserving of the same treatment that they dare not make use of it.

ANTOINE CABATON.

CAMBRIDGE PLATONISTS.—The title 'Cambridge Platonists' has come to be applied to a school of philosophical divines—members, for the most part, of two colleges, Emmanuel and Christ's—who flourished at Cambridge between the years 1633 and 1688. The names with which this article is properly concerned are those of Whichcote (1609–83), Culverwel († 1651), Smith (1618–52), Cudworth (1617–88), and More (1614–87), all resident teachers at Cambridge within the period mentioned; but, in so far as the influence of their teaching made itself felt outside, some other names, belonging to this period and to the time after, must also be noticed—Glanvill, Norris, Cumberland, Shaftesbury, Clarke, and Berkeley, representing the religious and philosophical aspect of this influence; and Taylor, Stillingfleet, Burnet, Patrick, Rust, Tillotson, and Fowler, representing its ecclesiastical and political aspect.

The first thing which the student of a school of religious and philosophical thought must always see to is that he realizes the social environment in which the thought of the school lived and moved; study of the mere equipment of the thought, apart from the use to which that equipment was put, is idle. And no student has more need of this *caveat* than the student of the 'Cambridge Platonists.' They are writers—especially the three greatest of them, Smith, Cudworth, and More—whom one is peculiarly tempted to read without thinking of 'social environment,' without troubling oneself about the state of England in their time. There grows upon one, as one reads them, the sense of a cloistered piety and learning cultivated apart in some paradise such as Henry More made for himself in his lifelong home at Christ's; and one is too apt to be impatient, as of something irrelevant, when one is asked to remember where this paradise was—that it was in the England of the Civil War, the Commonwealth, the Restoration, the Revolution, the England of Laud, of the Covenant and Westminster Assembly, of the New Model, of the St. Bartholomew's Day Ejectments. But this is exactly what it is most necessary to remember. The question which a scientific study of the Cambridge Platonists must make it its chief object to answer is exactly this: how were these cloistered lives related to that troubled world without?—for it was certainly not by mere accident that these lives found their peace in that stormy time.

Burnet, who met Cudworth and More when he visited Cambridge in 1663 as a young man, and who, throughout his whole subsequent career, was in sympathy with the ecclesiastical position of the Cambridge school, describes its members generally in the following terms (*Hist. of My Own Time*, Oxford, 1823, i. 323 ff.):

'All these, and those who were formed under them, studied to examine farther into the nature of things than had been done formerly. They declared against superstition on the one hand, and enthusiasm on the other. They loved the constitution of the Church and the liturgy, and could well live under them: but they did not think it unlawful to live under another form. They wished that things might have been carried with more moderation. And they continued to keep a good correspondence with those who had differed from them in opinion, and allowed a great freedom both in philosophy and in divinity: from whence they were called men of latitude. And upon this men of narrower thoughts and fiercer tempers fastened upon them the name of Latitudinarians. They read Episcopius much. And the making out the reasons of things being a main part of their studies, their enemies called them Socinians. They were all very zealous against popery. And so, they becoming soon very considerable, the papists set themselves against them to decry them as atheists, deists, or at best Socinians.'

From this account, the result of contemporary observation, we gather (1) that these 'men of latitude' took up a position midway between the Puritans (the early upbringing of most of them had been Puritan) and the Prelatists of their time—that they occupied, in respect to these extremes, what another contemporary account (S. P.'s *Brief Account of the new Sect of Latitude-Men: together with some Reflections on the New Philosophy*, 1662) describes as 'virtuous mediocrity'; and (2) that it was deliberately on a philosophical basis that they founded the position which they took up—a position from which they advocated toleration and comprehension even where considerable differences of religious opinion and practice, not only outside, but within the Church of England, were concerned.

Turning to their writings, we find this philosophical basis of their advocacy of toleration and comprehension fully and clearly set forth in their doctrine of the place of Reason in Religion.

Truth, they tell us, is Natural and Revealed, and reason is the faculty which apprehends and judges both kinds. It is the same reason which, on the one hand, apprehends the truths of morality and of natural science, and, above all,—for 'God is most knowable of anything in the world' (Whichcote, *Select Sermons*, ed. 1698, p. 112),—the truths of Natural Religion, that God exists, and is good and wise; and, on the other hand, apprehends, in addition to the truths contained in our 'natural knowledge of God,' the truths contained in the 'revelation of His will,' which is made to us in the Scriptures. And these truths of Revealed Religion reason finds no less 'reasonable' than those of Natural Religion.

'Our Reason is not confounded by our Religion, but awakened, excited, employed, directed, and improved' (Whichcote, *op. cit.* p. 298).

The Scriptures are, indeed, we are told, exactly suited to our reason. They offer, in the plainest way, matter upon which we can employ our reason with the greatest profit to our lives, and with the surest guarantee, from that faculty itself, that we are not deceived. At the same time, by the very prominence which the Scriptures give to this matter, so suitable to reason, so capable of engaging it where its employment is most useful and least likely to lead us astray, they make it evident to us—the more evident, the more truly 'rational' our study of them is—that a *minute* employment of reason in religion, about things not plainly included in the matter to which prominence is given, is unprofitable, and, indeed, even irrational. Such a procedure brings with it no universally acceptable guarantee of its own correctness, and so divides those who fall into it from one another, one minute reasoner making this non-essential, or, it may be, extraneous, matter all-important in religion, another, that, and so on, while that which is essential, that about which all would be of one mind, if they used their reason in the way religion requires, is left out of sight.

To the two opposed parties of their day—Puritans and Prelatists—the 'men of latitude' said: 'Unite on the broad common ground of that which is essential in religion, and agree to differ about things that are non-essential. That which is essential is contained in the Scriptures, and is so plain that you cannot miss it if you employ your reason in the right way, each man for himself, upon the Scriptures.' It is here that we come down to the bed-rock of the philosophical basis on which the Cambridge school founded their doctrine of toleration and comprehension: it is because *God* is, from the very first, its true object that man's reason marks securely, in the end, that which is *essential* in the revelation of God's will as contained in the Scriptures. The improvement of man's reason, then, by employment in the fields of science and of moral conduct, and, above all, by employment about the truths of Natural Religion, without the light of which the principles of science and conduct cannot be seen at all, is a process by which man grows in knowledge of that which is most knowable, of God—a process by which he becomes more and more 'like unto God,' till the perfection of reason is reached in that 'Divine sagacity,' as More calls it (Pref. General to *Collected Works*, ed. 1662, p. ix), that 'nativity from above,' as Whichcote calls it (*op. cit.* p. 350), which makes a man, at last, a sure judge of what is essential in the teaching of the Scriptures.

It was a charge commonly brought against the school that they preached mere morality, and ignored the importance of 'articles' of religious belief. Their teaching on the subject of 'Divine sagacity' is their answer to this charge. The morality which they preach is 'morality' which the moral agent's sense of the real presence of God, as a vital principle central in his soul, has transformed into piety—it is the condition of one who 'imitates God' in 'the holy and virtuous life,' and so 'knows' Him; and, knowing Him, can interpret His revelation of Himself made in the Scriptures, and get hold there of the *essential* 'articles' of religion.

So much for the way, peculiar to themselves, in which the Cambridge Platonists held the doctrine that the Scriptures are to be interpreted by the reason of each man. This doctrine itself reached them by two streams of influence, each of which was, otherwise also, of great importance in determining the outlook, and equipping the thought, of the school—the one having its source in Arminianism (*q.v.*), which had appeared in Holland towards the end of the previous century, the other proceeding from the Italian Renaissance of the century before.

In England, Arminianism found a footing towards the end of the 16th century. The distinctive tenet with which it opposed the Calvinistic doctrine of predestination had, indeed, to contend against great odds, for at this time, in England, Calvinism was widely spread among the people, and was already entrenched in the Articles of the Church; but the temper of Arminianism, what may be called its 'Humanism,' especially as shown in the substitution of the psychological for the dogmatic way of interpreting the Scriptures, commended itself more easily to educated minds. It was, after all, the temper which Colet and Linacre, and other English friends of Erasmus, and Erasmus himself—resident during various periods in England, and notably, from 1511 to 1514, at Cambridge, where he was Lady Margaret Professor of Divinity and occupied rooms in Queens'—had already recommended, by their example and teaching, to students, in England, of the ancient classical and Christian writers. The Universities—and perhaps Cambridge especially—were thus prepared to receive the new Arminian Humanism; and the clergy of the Church of England at these places of learning were, more than others, exposed to its influence. As a matter of fact, when we reach the times of Charles I., we find that Arminianism—so far, at least, as opposition to Calvinism was concerned—had become widely diffused among the clergy of the Church of England, the Dissenters, together with a large number of the lay members of the Church of England, remaining Calvinists. That the Cambridge 'men of latitude' should 'read Episcopius much,' as Burnet tells us they did, that they should be on the side of the psychological, against the dogmatic, interpretation of the Scriptures is, therefore, just what the vogue of Arminianism in the Church of England at this time would lead us to expect from divines at home in a university which was otherwise—in letters and natural science—showing itself singularly receptive of Humanism.

The other influence operative in forming the Cambridge view of the method of Scripture interpretation can be traced back to the 'Platonic Academy,' which flourished, during the latter half of the 15th cent., at Florence, and especially to the work, in it, of Marsilio Ficino. His Latin translations from the newly-recovered Greek, and his commentaries, gave Plato and Plotinus to Italy and then to Europe, and substituted, for the skeleton to which the Church and her schoolmen had reduced the system of Aristotle, what was everywhere welcomed as a living philosophy. It was a philosophy in grasping the inward sense of which the men of the Renaissance, become so curious of new things, found a new thing which arrested their attention beyond all else, namely, a bit of vivid personal experience. It was not the sober ethical and political philosophy, and the logic, of Plato that interested Ficino and his Platonists very much; their chief interest was in the other—the mystical—side of Plato's teaching, especially as apparent in his doctrine of 'Eternal Beauty,' object of Philosophic Love, set forth in the *Symposium* and elsewhere. Hence it was that Ficino and his Platonists went eagerly on from Plato to Plotinus, in whose writings they found fuller satisfaction than in Plato's of their craving for vivid personal experience, and discovered a philosophy which offered, not so much propositions to be apprehended, as moments to be lived. Ecstasy, immediate contact with the One, union of self with God—this was the formula in which the new philosophy of the Platonic Academy (set forth by Ficino as a philosophy in perfect concord with Christian faith) was wholly included. The *Enneads* of Plotinus, translated into Latin by Ficino and printed at Florence in 1492, were first printed in Greek at Basel in 1580, and were being studied at Cambridge by 1633, if not earlier.

Burnet tells us that Whichcote, who began to teach at Emmanuel in 1633, 'set young students much on reading the ancient philosophers, chiefly Plato, Tully, and Plotin' (*Hist. of My Own Time*, i. 321), and Whichcote's pupil Smith, and the rest of the school, certainly show intimate knowledge of the Greek text of the Neo-Platonic philosopher, and bear ample testimony to the profound influence which he exercised upon them. It was the doctrine, or experience, of ecstasy—understood by them, however, not as an occasional and temporary state of religious exaltation, but rather as habitual con-

centration of affection, will, and understanding upon God, 'because of His own loveliness, excellency, and beauty' (Whichcote, *op. cit.* p. 213) it was the Plotinian doctrine, or experience, of ecstasy, thus understood, that the Cambridge Platonists put in the very centre of their Christian philosophy. It became, in their teaching, equivalent to 'justification by faith,' to the 'sanctification' of men's souls by means of a 'vital efflux' from God upon them, making them partakers of His life and strength (Smith's *Select Discourses*, Worthington's ed., 1660, p. 312)—it appeared as 'nativity from above' (in Whichcote's phrase), as 'Divine sagacity' (in More's phrase), the crowning gift of God bestowed only upon those who practise the ἄσκησις of a holy and virtuous life. The influence of Plotinus thus modified profoundly, even transformed, in the Cambridge Platonists, the notion of Scriptural interpretation with which mere Arminianism opposed the Calvinistic and other dogmatic interpreters. The Arminian teaching carried the Cambridge Platonists only thus far—that the reason of the good man, of the man in earnest about the holy and virtuous life, is the faculty by which the Scriptures are to be interpreted, and the essentials of religious doctrine and practice distinguished broadly (as they are never distinguished by the reason of the mere theologian) from the non-essentials. But the Cambridge Platonists could not rest with this. Reason must be sublimated into 'Divine sagacity' by the real presence of God in the soul. The interpreter of inspired Scriptures must be himself inspired.

It may be asked why Christian experience alone was not accepted by them as warrant for this far-reaching conclusion—why they appealed, in support of it, also to pagan experience and philosophy. The answer is, briefly, that for them the religious faculty is reason, which, though informed by the immediate presence of God, is still man's reason. Religion is 'reasonable,' and, especially on that part of it distinguished as 'Natural Religion' (which, indeed, is the foundation of Revealed Religion [see Whichcote, *op. cit.* p. 87 f.]) much light is thrown by philosophy, by the best thoughts of the best men, of all ages and faiths, who have employed their reason about the soul, the world, and God. These divines, then, naturally mixed Religion and Philosophy. Even the mediæval Church, although holding no brief for human reason, had recognized it in Aristotle as ancillary to Catholic belief. But the Cambridge Platonists, as Christian Humanists, held a brief for reason in religion, and were very specially and strictly concerned to show that reason had not failed man, even outside the Christian dispensation, in his endeavour after religion.

How seriously they regarded the obligation upon them to bring the philosophy of the Greeks and Romans into evidence, may be judged from the mass of classical erudition which cumbers the pages of most of them—especially of Cudworth and More. It is an uncritical, pre-Bentleyan erudition which—to take one curious instance of its general character—not only accepts, but dwells on and elaborates, the notion of the Mosaic origin of all that is good in Greek philosophy, especially in the teaching of the Pythagoreans and of Plato (described as *Moses Atticus*)—a notion which, it may be thought, stultifies the appeal, undoubtedly intended and made, to that philosophy as witnessing to the truths of Natural rather than of Revealed Religion.

But, after all, the distinction between Natural and Revealed Religion was not one to be very clearly defined by those who, on principle, mixed Religion and Philosophy, as the Cambridge Platonists did. Although there were some truths which plainly belonged to the realm of Natural Religion, there were others which belonged indeed to the realm of Revealed Religion, inasmuch as without the revelation contained in the Scriptures we should not have known them at all (*e.g.* that the Godhead is undivided Trinity, and that we are justified by faith in Jesus Christ), but yet were to be detected, by those who already had them through revelation, as also obscurely appearing in the philosophical systems of men who had walked merely by the light of Nature—the 'candle of the Lord,' as Culverwel calls it. Thus we find the Cambridge school making much of the 'Trinity' of the Neo-Platonists; and we have seen that they connected the ecstasy of Plotinus with that 'nativity from above' in which their Christian experience realized the meaning of the doctrine of justification by faith in Jesus Christ. In fact, when they appeal to the Platonic or Neo-Platonic philosophy, they take little account of the distinction between Natural and Revealed Religion: perhaps because Plato, as being *Moses Atticus*, records revealed truths; but also for the deeper reason that revealed truth, limited by them to the essentials of religion which 'Divine sagacity' marks off from non-essentials, is, after all, only natural truth raised to a higher power, as it were—natural truth, no longer regarded from without as the object of theological science, but become the inward experience of one who has 'found religion.' The ecstatic condition of union with God described by Plato and Plotinus seemed, to the religious minds of men like Smith and More, to be an experience essentially the same as that of the man 'in whom Christ liveth'—the man for whom alone 'revealed truth' has vital meaning. In ecstasy, then, the Christian Religion and the Platonic Philosophy are mingled with each other, and that so intimately that the distinction between Natural and Revealed Religion seems to vanish in the result.

While their interpretation of the Platonic philosophy is thus as psychological, and as expressive of personal experience, as their interpretation of the Scriptures, their interpretation of ancient philosophy other than Platonic, notably of the atomic philosophy of Democritus, is not psychological, but dogmatic. The Platonic philosophy they found no difficulty in interpreting in the light of their own religious experience—they felt no temptation to read the dogmas of theological science into a philosophy which tallied so well with that experience. Their interpretation, accordingly, of this philosophy is good. But ancient philosophy other than Platonic, tallying with no personal religious experience of their own, they interpreted badly, reading into it the natural science of their day. So we find them (1) comparing the atomic philosophy of Democritus closely with the mechanical philosophy of Descartes; and then, as the former is obviously 'atheistic,' while it is necessary to show that the latter, though closely resembling the former, is not 'atheistic,' (2) arguing back to a common source of both—to a theistic Mosaic atomism, which Democritus perverted into atheism, but Descartes has revived in its original purity (see Cudworth's *Etern. and Immut. Morality*, bk. ii. ch. 4). Similarly the revolution of the earth and the other planets round the sun—the greatest discovery of the modern mechanical philosophy—was already known to the Pythagoreans, and to Numa Pompilius, who, indeed, symbolized it by making the temple of Vesta circular with a fire in the centre; but they had derived their knowledge from the Jews, who had it by Kabbalistic tradition from Moses (see More's Append. to *Defence of the Philosophick Cabbala*, ch. 6, p. 126, ed. 1662). Thus in Democritus and the Pythagoreans was found the authority of Revelation for the methods and results of modern science. There could not be a greater contrast than that between the childish exegesis of the Cambridge School, where, on the one hand, a philosophy, like that of Democritus, is concerned, which appeals, not to their personal religious ex-

perience, but to their acquaintance with modern science, and, on the other hand, their illuminating exegesis of a philosophy, like that of Plato and Plotinus, into which they read, not their modern science, but rather, as it were, themselves.

The Cartesian philosophy has been incidentally mentioned; it is now time to consider it as one of the most important factors in the environment of the Cambridge Platonists—as the body, to quote More's phrase (Preface General to *Collected Works*, p. xviii), of which Platonism is the soul. This philosophy, so eminently rational, doubting all that rests on any authority except that of 'clear and distinct ideas,' making its ideal the explanation of the world according to mechanical principles mathematically expressible, naturally recommended itself to all those who, like the Cambridge 'men of latitude,' were contending for reason against authority. Cartesianism was, indeed, itself only a product of the Humanistic Renaissance, the air of which such men breathed everywhere, at this time. Thus we find Spinoza, who in his close association with the Remonstrants and Collegiants was in the same atmosphere, also naturally attracted by this rational philosophy of clear and distinct ideas, and writing his earlier works under its strong influence. Humanism, we must remember, not only gave new life to the study of classical literature and ancient philosophy, and was instrumental in bringing about great alterations in religious doctrine and practice, but was also the renaissance of Natural Science. Linacre, Harvey, Gilbert, Bacon, Galileo, Descartes, and many others were as truly products of Humanism as Ficino, Pico della Mirandola, Aldus, Erasmus, Colet, and Montaigne.

The mechanical philosophy of Descartes, then, was quite naturally adopted by the Cambridge School—with certain reservations, as we shall see. Smith, his friend Worthington tells us, was chiefly instrumental in introducing the study of it at Cambridge. Culverwel, More, and Cudworth made large use of it, and important letters passed between More and Descartes in 1648, which were printed in More's *Collected Works* (1662), and specially referred to in his Preface General to that edition. But the Cambridge Platonists, we can see, felt themselves placed in a somewhat awkward dilemma in regard to the Cartesian philosophy. They were bound, as Humanists, to adopt it, for its mechanical principles were those in the light of which the Natural Sciences were making such notable advances at this time—advances to culminate ere long in the mathematical and physical discoveries of Newton, who was already in 1665 a graduate of Cambridge, and in 1669 Professor of Mathematics, although the publication of the *Principia* was to be delayed for many years.

The 'men of latitude,' then, were bound to accept the philosophy of Descartes, but could not conceal from themselves that it might easily be abused in the cause of 'materialism and atheism'—in fact, was being widely so abused, especially by those who had fallen under the growing influence of the writings of Hobbes. So, in order to divert the tendency of the Cartesian philosophy from materialism and atheism to the support of religion and a spiritual theory of the world, it was necessary, they felt, to insinuate into its very substance, as it were, another philosophy of an entirely different kind. This was their philosophy of the 'plastic principle,' or 'soul of nature'—an immaterial principle, spiritual, but unconscious, which pervades the universe, and, like the Platonic *anima mundi*, or the Aristotelian φύσις, is the immediate and immanent cause of all the beautifully contrived processes and products of the organic and inorganic worlds. Descartes, indeed, posits an immaterial spiritual substance—God—as First Mover of the world; but leaves Him afterwards out of account: for the movements of the world, although started by Him, are explained as going on according to their own necessary mechanical laws; and it is an easy step, from this position, to dispensing with God altogether, and recognizing only those laws. So, into the Cartesian complex of mechanical laws, to be retained merely as a system of bare *quantities* lending themselves conveniently to exact computation, must be infused the vital *quality* of the 'plastic principle.' Thus, through the lieutenancy of a spiritual, though unconscious, principle, God penetrates the world with His beneficent organizing activity, instead of remaining outside, a mere Force, while within, not He, but Necessity, rules. The argument for God's wisdom and goodness, 'from design in Nature,' which Cartesianism, by the prominence which it gives to mechanically necessary laws, invalidates, or even destroys, is thus rehabilitated by the theory of a 'plastic principle.' We can now regard those laws as so many quantitative expressions of a vital quality with which God continually inspires Nature in order to the accomplishment, through her, of His ends. Teleology is grafted upon the mechanical philosophy—we can infer Divine wisdom and goodness, not merely existence and power (see Cudworth's *Intell. Syst.*, ed. 1845, i. 274 ff.). As for the other cardinal doctrine of religion, beside that of the existence of a wise and good God—the immortality of the soul—it also rests on the theory of the 'plastic principle.' No finite soul can exist without a material vehicle, and it is the 'plastic principle' present in a soul which moulds matter—terrestrial, aërial, or ethereal—into a vehicle suitable to that soul's condition here on earth, or, after the death of this body, as a ghost in the air, or as a blessed spirit in the ether of heaven. Without the vehicle-building power of the 'plastic principle' within them, souls must perish, or, at least, pass into a state of eternal unconsciousness. Stories of ghosts appearing, and of witches transforming themselves into hares, are recorded—with especial *empressement* by More (in his *Immortality of the Soul*, and *Antidote against Atheism*)—as evidence of the survival of the soul after terrestrial death, and of the continuance of its vehicle-building plastic power, whereby it moulds an aërial body in place of the discarded terrestrial body, and—such is the force of habit—an aërial body resembling that terrestrial body, so that we can tell 'whose ghost it is' when a deceased person thus appears to us in his aërial body.

The 'demonology' of the Cambridge Platonists is a topic which no estimate of their intellectual and religious position can omit to take serious account of. They shared in the popular superstitious beliefs of their time: but that is not so astonishing as the deliberation and ingenuity with which they used both Stoic physics and the current scientific notions of their own day for the establishment of these beliefs, in the interest of religion. More (assisted later by his Oxford friend Glanvill, the author of *Sadducismus triumphatus*, 1682) goes further than the others in this direction; while Smith, judged by his Huntingdon Sermon (*Select Discourses*, 1660, Disc. 10), is the sanest of them. It is difficult for us to comprehend how these enlightened men should have given themselves so deliberately to superstition; but perhaps, after all, it is not more difficult to understand than that 'Cudworth, Newton, and Locke should all have concentrated their interest upon a literal interpretation of an obscure vision in Daniel' (Tulloch, *Rational Theology in England in the 17th Century*, ii. 212).

There were other things in Descartes which the Cambridge Platonists did not like. His distinction between matter as 'extended substance' and spirit as 'substance without extension' they denounced as tending to atheism—More, in the Preface to his *Divine Dialogues* (1668), eventually receding from the friendly position of his *Letters* to Descartes (1648), and charging that philosopher himself with actual atheism. Spirit, both Cudworth and More argue, has extension, for extension is not necessarily material. If spirit were without extension, God

would be nowhere, instead of being everywhere. Space is extension, but not the extension of matter: therefore, unless there is extension of Nothing, space must be the extension of Spirit. In infinite space we have the extension of infinite Spirit (see Cudworth's *Intell. System*, iii. 232, ed. 1845). This notion is one of the most interesting in the metaphysics of the Cambridge School, and was associated in their minds with the victory of the Copernican over the Ptolemaic system of the heavens (see More's *Philosophical Poems*, p. 409, ed. 1647).

Another point on which we find the Cambridge divines insisting against Descartes is that the distinction between True and False, Right and Wrong, depends, not, as he teaches, on the will of God, but on the eternal nature of things, or law of the ideal world: the distinction is 'essential,' not 'arbitrary' (see Cudworth, *Intell. Syst.* ii. 533). This law of the ideal world, logically prior to the will of God, as being the rule, or rather system of rules, according to which that will is always exercised, is equivalent to the τόπος νοητός of Plato, and the Divine σοφία of his later followers. The Cambridge divines thus correct Cartesianism in this instance by means of the Platonic doctrine of Ideas, as they correct it elsewhere by means of the Platonic *anima mundi*, or 'plastic principle.' And the use which they make here of the doctrine of Ideas is as important in its bearing on their epistemology as it is on their theology, or philosophy of religion, and on their ethics. In accordance with this doctrine, knowledge is explained as man's participation in the mind of God by means of the Ideas, or *eternæ rationes rerum*, which are at once His thoughts, from which, by act of His will, sensible phenomena are produced, and at the same time the mental forms in us, by the activity of which we take hold of these phenomena, and organize them into a rational experience. Here epistemology and theology are one, as they are in the kindred philosophy of T. H. Green. This theologico-epistemological use of the doctrine of Ideas, made by the Cambridge Platonists generally, is perhaps most clearly exemplified in the writings of More's Oxford correspondent and warm admirer, John Norris of All Souls, who, adopting the language of Malebranche, speaks of knowledge as 'seeing things in God' (*Reason and Religion*, 1689, pp. 187-194). In ethics, the doctrine of Ideas was used by the Cambridge divines mainly against Hobbes, whose philosophy they regarded with genuine alarm. If Cartesianism is the matter out of which—with certain rejections—the plastic power of Platonism, the soul of their philosophy, moulds a body for itself, Hobbism is the poison which kills philosophy body and soul.

Against the 'materialism and atheism' of Hobbes the arguments brought by the Cambridge Platonists were those which we have seen them using against Descartes, so far as that philosopher seemed to them to be dangerously defective or erroneous in his teaching about God and the soul. But their contention that the distinction between Right and Wrong is essential, not arbitrary, directed against the Cartesian conception of God, admitted—they at once saw—of extended use against Hobbes's conception of political sovereignty; and so we find them vigorously combating that conception with this same well-tried Platonic weapon. Further, since the counterpart of Hobbes's morality-making absolute 'sovereign'—whether monarch or assembly—is his 'subject' wholly actuated by self-regarding motives, to meet this side, or aspect—the 'subject' side—of Hobbes's political theory, we also find them armed, and with a weapon peculiarly their own, their employment of which gives them a most important, though imperfectly recognized, place in the history of English Moral Philosophy. It is to the psychological observation of the Cambridge Platonists that English Moral Philosophy primarily owes the conception of 'a naturally good temper,' or of 'fellow-feeling,' which Shaftesbury undoubtedly got from them, and handed on to successors who made it a cardinal point of moral theory. Shaftesbury first printed his *Inquiry* in 1699, and in the Preface which he wrote in 1698 to his edition of Whichcote's *Sermons* a passage occurs which makes it plain that it was the Cambridge Platonists who not only originated, but gave, once for all, definite direction—the direction which it always retained—to that movement of reaction against Hobbes which may be said to constitute English Moral Philosophy as evolved throughout the 18th and the first half of the 19th century.

To Whichcote and his school—Cumberland being with them—belongs the credit of having put 'a naturally good temper,' or 'fellow-feeling,' in the position of paramount importance which it has ever since occupied in English Moral Philosophy. Hobbes, while it must be admitted that he made it quite clear that the public good is the end—here he was misunderstood by his critics—maintained that the 'sovereign' (monarch, or assembly, with *carte blanche*) is the only judge of the means towards this end; the Cambridge Platonists, followed by Shaftesbury and a succession of moralists down to J. S. Mill, maintained, against Hobbes, that the means to the public good are such only as the people—not the 'sovereign' wielding uncontrolled power, but the 'subjects' united by fellow-feeling—when consulted from time to time, themselves determine. And this was the doctrine which Locke afterwards made popular.

There are, doubtless, important differences between the philosophy of the Cambridge Platonists and that of Locke; but, so far as political theory is concerned, the differences are quite superficial. The Cambridge Platonists are as entirely with him on the political question of the 'liberty of the subject' as they are on the religious question of toleration. Locke's friendship with Cudworth's daughter, Lady Masham, is an episode in the history of philosophy which those who look beneath the surface of those times, while they do not attach too much significance to it, cannot but regard with sympathy.

Their attitude to Hobbes and his influence thus exhibits the position of the Cambridge School more clearly than anything else in their philosophy. We see how firmly and consistently they hold by the maxim of Humanism—that the judgment of the well-instructed and virtuous man is to be trusted in religion, morals, and politics. In these branches they are for reason against authority, for social feeling against self-regarding motives, for religious toleration and comprehension against sectarianism of Puritan and Prelatist, for the easy liberty of the subject, under a system of fair representation, against autocracy whether of monarch or of assembly—in short, they are against *centralization*, either in religion or in politics, whereby the judgment of the private man is suppressed in the one case, and his reasonable freedom of action in the other: that is, they are in favour of personal religion, and of individual initiative in the common work of effecting the public good. The ready-made religion which the political superior supplies to his subjects in Hobbes's polity is not religion, for it is not personal; and, on the civil side, the measures taken by that superior do not really conduce to the public good, for they exclude all initiative on the part of subjects united by fellow-feeling in the task of working out a common end. It was, of course, in personal religion that the Cambridge divines were chiefly interested; and the fact that Hobbes, by divorcing reason and religion, made personal religion impossible, was, doubtless, a ground for opposing him which came home to them with peculiar intimacy. And our

admiration of their courage is increased when we consider that in fighting Hobbes for rational religion against authoritative religion, for personal religion against official religion, they stood almost alone. Puritans and Prelatists alike were on the side of authoritative and official religion the religion of Protestant Confession, or of Catholic Church. The influence of Bacon, too, as well as that of Hobbes, was against the Cambridge divines; almost everybody in England said, or implied, that reason and religion must be kept apart. The Cambridge divines stood almost alone in maintaining that theology and the Christian life require the independent application of the private man's reason to the problems of religion, natural and revealed. These are problems, they maintained, which admit only of a personal solution within the Christian experience of each man.

We must now make brief mention of some contemporaries, not belonging strictly, or at all, to the Cambridge School, but either sharing their views independently or influenced by them.

The greatest of these is **Jeremy Taylor**. He entered Caius in 1626, the year after Milton entered Christ's. He became Fellow of Caius in 1633, but in 1636 migrated to All Souls', Oxford, where he came within reach of the influence of Falkland and his Great Tew set, including Chillingworth, whose *Religion of Protestants* was published in 1637. This influence, tending in the same direction as that of Whichcote, who was beginning to be well known about the time Taylor left Cambridge, was, we must believe, one of the causes which produced the *Liberty of Prophesying*, published in 1647. At any rate, this work is a plea for reason in religion, and for toleration and comprehension (see Tulloch, *op. cit.* i. 384).

The next name that should be mentioned is **Stillingfleet**. By 1690, as Bishop of Worcester, he had hardened into orthodoxy, and was ready for his attack upon Locke; but in his earlier days his sympathy was with the Cambridge School. During all the seven years he was at St. John's, Cambridge (1648–55), Whichcote's Trinity Church Lectures were going on; and in 1659, the year before the Restoration, Stillingfleet published his *Irenicum*, written entirely in the spirit of Whichcote's teaching, and urging men to sink their religious differences, even to the extent of trying to find common ground on which Presbyterians and Episcopalians might be united in one Church. The Restoration, however, put an end to that idea; and Stillingfleet, we must suppose, suffered disillusion. It was scarcely in the spirit of the Cambridge Platonists that he carried on his polemic with Locke.

As Taylor urged Latitudinarian views upon England at the time of the Civil War, and Stillingfleet at the end of the Commonwealth, when men were prepared for the Restoration, so **Burnet**, standing closer to the Cambridge School than either, was one of those chiefly instrumental in giving practical effect to these views in the settlement of affairs, civil and ecclesiastical, which followed the Revolution of 1688. As we have seen, he visited Cambridge in 1663, when a young man, making there the acquaintance of Cudworth and More. The 'notions of the Latitudinarians,' then imbibed, brought Burnet into much trouble afterwards, till, at the Revolution, in 1688, he became Bishop of Salisbury, and, during his long tenure of 25 years, found it possible to give some effect to them.

Patrick, whom Burnet mentions in his *Autobiography* and in his *History of My Own Time*, was a Fellow of Queens', Cambridge, when Smith, also a Fellow of that College, died in 1652, and he preached the funeral sermon appended to Worthington's edition of Smith's *Select Discourses* (1660). Patrick, as this rather florid, but evidently sincere, encomium shows, was an enthusiastic admirer of Smith; and, in his various preferments, ending with the See of Ely, must be regarded as one of those who helped to keep Latitudinarian principles before the country.

Rust, educated at St. Catherine's, became Fellow of Christ's in 1649, and was a friend of More. Soon after the Restoration, at the invitation of his friend Jeremy Taylor, he went to Ireland, where he was ordained, and, after many preferments, succeeded Taylor as Bishop of Dromore in 1667. Among other works he published, in 1683, *A Discourse of the Use of Reason in Matters of Religion . . . against Enthusiasts and Deists.*

Tillotson, who appears in Burnet's list of 'men of latitude,' was closely allied with the Cambridge School, and preached the sermon at Whichcote's funeral.

Fowler was the author of *Principles and Practices of certain moderate Divines of the Church of England abusively called Latitudinarians, in a Free Discourse between two intimate Friends*, published in 1670, which, together with Burnet's records and S. P.'s *Brief Account*, is our principal authority for the impression which the Cambridge divines made on their contemporaries. He became Bishop of Gloucester.

Turning now from public men to philosophical writers who shared independently, or were influenced by, the doctrine of the Cambridge School, we find six names standing out prominently: Glanvill, Norris, Cumberland, Shaftesbury, Samuel Clarke, and Berkeley.

Glanvill (1636–80) was of Oxford. His *Vanity of Dogmatizing* (1661) is a philosophical piece entirely in the spirit of the Cambridge Platonists; and his later work on witchcraft (*Sadducismus triumphatus*) was produced in collaboration with More.

Norris was also of Oxford; he entered Exeter College in 1676, and became Fellow of All Souls' in 1680. In 1683–84 he had a correspondence with More which he published in 1688, the year after More's death. His *Reason and Religion* was published in 1689, the year he left Oxford for a country living and married. In 1701 and 1704 he published, in two parts, *The Theory of the Ideal and Intelligible World.* His philosophy closely resembles that of Smith and More: by grasping the Eternal Ideas man enters into the mind of God —this is Malebranche's 'seeing things in God'; and it is in 'ecstasy' that a man so enters into the Divine mind. The ecstatic habit can be cultivated; and *Reason and Religion*, with its 'Contemplations,' each followed by an 'Aspiration,' is a practical Devotional Treatise, 'written,' as its author tells us in the preface, 'for the use of the *Learned Reader*, who, perhaps, needs as much to be assisted in his devotion as the more ignorant.' While Norris is thus a close follower of the Cambridge divines in philosophy, he apparently had not much sympathy with their ecclesiastical position. At any rate, in 1692 he became Rector of Bemerton near Salisbury, in Burnet's diocese—a poor man with a growing family, he complains, but with no hope of preferment from his Bishop. He was, it would seem, a strong Anglican and Tory, opposed to Nonconformists and Whigs.

Cumberland entered Magdalene College, Cambridge, in 1648, and became Fellow in 1656. He was thus a contemporary, during his residence at the University, of the leading members of the Cambridge School. In 1661 he was Rector of Brampton in Northamptonshire. In 1672 he published his *de Legibus Naturæ*, and in 1691 he was made Bishop of Peterborough by William III. In the *de Legibus Naturæ* he opposes Hobbes with

arguments similar to those used against him by Cudworth and More; and, with Whichcote, dwells especially on good-nature, or social feeling. 'Obligation to the exercise of the moral virtues,' he maintains, 'flows immediately from hence, that such actions are enjoined by the Law of Nature, which, in its ultimate form, is Benevolence to all Rationals,' although he adds (what Whichcote and his school would have put otherwise): 'and the sanction of that law is briefly deduced from the consequences which attend such a Benevolence, at the appointment of the Author of Nature.' Whichcote, with the approval of Shaftesbury, insists most strongly on the natural, not arbitrary, connexion between virtue and reward, vice and punishment: we are punished for our sins, not because God so wills and appoints it, but because sin naturally produces misery. This difference between Cumberland and the Cambridge School does not, however, as it happens, amount to much; it does not affect Cumberland's attitude towards the common enemy, Hobbes, and it is to be accounted for by the difference between the juridical technique of a writer deeply influenced by Grotius, and the Platonic technique of the Cambridge School.

We have already seen how considerable **Shaftesbury's** debt is to Whichcote and his followers, and need only add now that Shaftesbury also owed something to Cumberland's insistence on the notion of the public good as the object of benevolence. We assist here at the birth of Utilitarianism, which, in one form or another, has ever since held the field in England.

Samuel Clarke was an important man in his day; but his *Boyle Lectures* (1705-6) are wearisome reading now. He has nothing new or suggestive to say. His system is, in skeleton, that which the 'men of latitude' had brought forth in living flesh. Obligation to virtue is laid upon us by our reason apprehending 'the eternal fitness of things'; but this 'eternal fitness' Newton's pupil looks at with the eye not of the Platonic mystic but of the pure mathematician.

In Berkeley's *Siris* (1744) the Cambridge philosophy for the last time is embodied concretely in a single work—and in a work which might almost have been written, a century earlier, by Henry More. Its immediate object is to press the claims of tar-water as a panacea. Tar, the exudation of the pine, contains the vital virtue of the universal soul of Nature in a concentrated form. From tar-water, so informed, Berkeley 'soars very high,' on Platonic wings, up into the metaphysics of religion and morals.

To sum up: the Cambridge Platonists hold their place in an 'Encyclopaedia of Religion and Ethics' on four main grounds: (1) They present the idea of 'personal religion' in a very impressive way, and with great sincerity. (2) They were preachers of religious toleration and comprehension, at a time when everything seemed to be against the prevalence of these ideas. (3) They gave direction to English Moral Philosophy by supplying Shaftesbury and his followers, down to the Utilitarians of the 19th cent., with the notions of 'good-nature' and 'fellow-feeling,' as dispositions relative to the 'public good.' (4) On the other hand, their use of the Platonic doctrine of Ideas, in theology and epistemology, presents them as contributing also to the idealistic side of English Moral Philosophy. T. H. Green's 'reproduction of the Eternal Consciousness in my consciousness' bears close comparison with the Cambridge tenet—'participation of man's mind in God's mind through apprehension of the *æternæ rationes rerum*.' Comparison of Green with the Cambridge divines makes it clear that his philosophy is a phase of Christian Platonism.

LITERATURE.—J. Tulloch, *Rational Theology and Christian Philosophy in England in the Seventeenth Century*, Edin. 1872, gives the fullest and most connected account of the 'Cambridge Platonists' and their religious environment. The present writer wishes to acknowledge many obligations to this standard work, as well as to the *DNB*. Westcott's paper on 'Whichcote' in his *Religious Thought in the West*, London, 1891, is illuminating; and Inge in his *Christian Mysticism*, London, 1899, deals briefly, but in a sympathetic and suggestive way, with the teaching of the School. Campagnac's Introduction to his *Cambridge Platonists* (selections from Whichcote, Culverwel, and Smith, Oxford, 1901) is a good piece of work, which the student will find useful. Mention may also be made of Symon Patrick, *Works*, including his 'Autobiography,' ed. with Introduction, by Alex. Taylor, Oxford, 1858.

J. A. STEWART.

CAMEL.—I. In Arabia.—The camel is the animal essential to Bedawi life. On account of its meagre demands, its endurance, and its swiftness, it is the usual vehicle for long journeys across the desert. Camel-rearing is one of the most important arts with the Bedawin, and tribes vie with each other for the honour of producing the finest camels. The breed of *mahrīs*—a name now used to designate saddle-camels—was introduced by a tribe of South Arabia, the B. Mahra. As a general rule, the male is the pack-animal (*rākib*), and the female the mount (*radīf*).

The words used in ancient Arabia for the chief actions in the process of harnessing camels have come down to us, but they are not in entire agreement with modern terminology. The Arabic language has quite an extensive vocabulary reserved for the camel itself. Besides epithets which do duty as names of the camel, and general words like *jamal* (which has, through κάμηλος, spread into the languages of Europe), *'ibil*, *ba'īr*, and *nāqa*, Arabic has a large number of words to designate the animal according to its age and its economic rôle. The word *māl* appears to have meant 'camels' before acquiring the meanings of 'large cattle' and 'moveable property' (cf. Lat. *pecus*, *pecunia*). The designation, 'ship of the desert,' applied to the camel, seems strange when we think of the exclusively inland life of the Bedawin, and was apparently unknown to ancient poetry (see, however, Jacob, *Altar. Beduinenleben*, p. 61 f.), but it exists in modern poetical works of quite a Bedawi type, *e.g.* in the following lines given by Musil (*Arab. Pet.* iii. 253): 'What thinkest thou of this ship without mast? How it moves on! It is the female camel of the chief, which is ridden by a gallant cavalier.' The explanation of the phrase seems to be as follows: the root *rkb*, conveying the idea of 'bestriding an animal,' gave rise to the word *markar*, with the sense first of 'mount' (horse or camel), then of 'ship'; and by a sort of backward play of words the idea of 'ship' has come to displace that of 'camel.' Besides, the form of the classic palanquin of the desert, the *doli*, has always called up to the minds of travellers the image of a barque.

In the ancient literature of Arabia, just as in practical life, the camel has a pre-eminent position, both alongside of the horse and before it. There is not a single poet of the desert but sings the praises of his camel and, by a play of imagination that is something of a shock to Western minds, compares his mistress to it, often carrying the analogy to minute details. Snouck Hurgronje (*Mekka*, 1888, ii. 188) recalls the cry of women lamenting a dear husband: 'O my son, my eye, my camel,' interpreting it in the sense of 'O thou who wast my help in supporting life's burden.' This precious animal is what the generous host offers as a feast to a hungry traveller. The legendary host of ancient Arabia, Ḥatim at-Ṭa'i, found a means of making this gift, after his death, to the Yemenite chief who fell asleep near his tomb. The camel is also the most perfect sacrifice that the Bedawi can present to his gods. But, besides offering it as a

victim, round which a small social, family, or tribal group sat at table in a ritual feast, the Bedawī also consecrated his camel as a living offering to the pre-Islāmic deities; and Nilus, writing in the 5th cent. A.D., has described a heathen Arab camel-sacrifice in considerable detail (summarized, from *PG* lxxi. 612 ff., in art. ARABS [ancient], vol. i. p. 665ᵇ). Owing to the prohibition contained in the Qur'ān (v. 102), traditionists have furnished valuable though contradictory details on certain pre-Islāmic usages relating to the camel. The words *sā'iba* and *waṣīla* meant camels which had had ten young ones and had therefore become *ḥarām*, i.e. sacred. After this no one was allowed to mount them or milk them; they were tabu, under the protection of the god. Their last offspring was generally sacrificed and eaten in a solemn feast, from which women were usually excluded. The name *sā'iba* was also given to the camel which a man in a position of danger—*e.g.* in the course of an adventurous razzia—promised to consecrate to a sanctuary if his hopes of success were fulfilled. The *sā'iba* was *ḥarām* for everybody except the guardians of that temple in whose sacred enclosure (*himā*) it passed the rest of its life. The same treatment was given to the stallion with a numerous posterity, the *hāmī*. If these sacred animals wandered from the *himā*, they had to be led back with due veneration. They were easily recognized by the mark (*wasm*) stamped on a conspicuous part of their body by means of a red-hot iron. Similar marks distinguished the victims destined for sacrifice. Although this custom had a religious significance which roused the opposition of Muhammad, the Prophet retained the practice of putting an external mark on the animals destined for the solemn sacrifice made by pilgrims at Minā on the 10th of Dhū'l-ḥijja. The camels have a collar formed by two sandals hung on a grass rope. But the marking of flocks, and of camels in particular, was not confined to those beasts consecrated to a deity; in ceremonies beginning with a sacrifice, and with the object of protecting a flock from epidemics, and at annual gatherings, which they held at a fixed time, the Bedawīn used to mark all the young beasts with a tribal and individual *wasm*. In this way the owner, besides performing a religious act, obtained a practical means of recovering lost or stolen animals. The marking of camels, which is attested by the earliest Arabic literature, and, in various regions, by rock-pictures, the date of which it is difficult to determine, is still a living custom; its economic importance is paramount. But the hospitable and religious sacrifice of camels is tending to disappear, the victims nowadays being less valuable animals.

It is impossible to fix with certainty the antiquity of the camel in the Mediterranean countries. According to arguments derived from texts, it was introduced into Syro-Palestine at the time of the Judges, and into Egypt with the Assyrian conquest. Its introduction into North Africa we must, with René Basset, carry back to the time of the Arabian conquest.

The camel plays an important rôle in Musalmān history. We learn from the Qur'ān (vii. 71-77, xi. 64-71) that Allāh sent a prophet named Ṣāliḥ to the B. Thamūd to preach the worship of the true God; he consecrated a female camel to Him, according to the rites which have been discussed above, and threatened a terrible judgment on any one who should prevent the animal from pasturing freely on the land of Allāh. The B. Thamūd were obstinate in their idolatry, and, disregarding the tabu of the holy camel, they hamstrung and killed it, as a punishment for which they were destroyed by fearful storms.

The war which, according to the Arab traditions, raged for forty years between the B. Bakr and the B. Taghlib, and which is called the War of Basūs, originated in the slaying of the camel Sarāb and its young one by Qulaib b. Rabī', chief of the B. Taghlib.

It is well known that the battle in which 'Alī met his chief adversaries, 'Ā'isha, Ṭalḥa, and Zubair, near Baṣra in Jumād-al-Awwal, A.H. 36 (Nov. 656 A.D.), received the name of the Battle of the Camel. In the last hours of the combat the palanquin of 'Ā'isha, borne on a camel specially bought for the purpose, served as the centre for the final resistance of the vanquished. The historians tell us of the groups of warriors, small tribes, or fractions of tribes, who came up in turn to surround the 'Mother of Believers,' and in turn disappeared in the confusion of flight; sixty warriors seized the camel's bridle in their hands, and perished or lost the use of the hand. Finally, to stop a fratricidal struggle, a rally of the last defenders who were fighting under 'Alī's standards succeeded in hamstringing the camel, and so put an end to the combat. Now, all this description, down almost to its very details, is the same as that derived from modern observation of Bedawī life: when they are setting out to fight, the daughter of the chief, in bridal attire and wearing heavy jewellery, mounts the *dolī*, and, standing upright in it, takes part in the fight. Surrounded by faithful followers, she is the rallying-point of the riders, in the successive movements of sudden charge and rapid flight that compose the whole strategy of the desert. She stimulates the warriors of her tribe by her presence and her impassioned words of encouragement, and it is round her camel, fallen prostrate on its hamstrung legs, that they offer their last struggle.

LITERATURE.—Jacob, *Altarabisches Beduinenleben*, Berlin 1897, p. 61 f.; Lefébure in *Actes Cong. Orient*, 1905, pt. ii. sec. vii. p. 24; Flamand, *ib.* p. 63; René Basset, *ib.* p. 69; Jaussen, *Coutumes*, Paris, 1907, p. 269; Musil, *Arabia Petræa*, Vienna, 1908, iii. 253. GAUDEFROY-DEMOMBYNES.

2. **In OT and Talmud.**—The camel is mentioned with great frequency in the OT as belonging to the rich and as a beast of burden (for data see, for example, *HDB* i. 344 f.; *EBi* i. 633-636; *PRE*³ ix. 729-731; *JE* iii. 520 f.); but here it has, of course, no religious significance, although it was unclean, and might not be used for food (Lv 11⁴, Dt 14⁷; on various theories regarding this prohibition, cf. *PRE*³ xxi. 746). In later times the camel came to figure in proverbs, of which the best known are naturally the two quoted by our Lord: 'It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God' (Mt 19²⁴ and parallel passages),[1] and 'to strain at a gnat, and swallow a camel' (Mt 23²⁴).

The Talmud also contains several proverbs about the camel. For instance, "In Media the camel can dance on a bushel-basket" (*Yeb.* 45*a*), meaning that in Media everything is possible; "as the camel, so the burden" (*Soṭa* 13*b*); "the camel asked to have horns, so his ears were cut short" (*Sanh.* 106*a*); "there are many old camels who must bear the burdens of the young ones" (*ib.* 52*a*) (Krauss, in *JE loc. cit.*).

3. **Among the Iranians.**—Outside Arabia, it is among the Iranians that we find the chief allusions to the camel. Zarathushtra beseeches Ahura Mazda to grant him 10 mares, a stallion, and a camel (*Yasna* xliv. 18); camels are classed among sacrificial animals (*Vendīdād* xxii. 3), and are part of the riches of Airyaman (*ib.* xxii. 20); while to him who has offered a perfect sacrifice the personification of Benediction (*āfriti*) comes 'in the form of a camel of prime quality, most rutting in intense rut' (*Pursišnīhā* xxxii., ed. Darmesteter, *Le Zend-Avesta*, Paris, 1892-93, iii. 66). To the Iranians the camel was evidently the most valuable of all

[1] The Talmud (*Berakhoth* 55*b*, *Baba meẓi'a* 38*b*) has a similar proverb, except that 'elephant' is substituted for 'camel' and the NT saying recurs in the Qur'ān (vii. 38).

the larger kind of cattle, for *Vendidād* ix. 37 prescribes that

'a priest thou shalt purify for a pious benediction; the country-lord of a country thou shalt purify for a male camel of prime quality; the district-lord of a district thou shalt purify for a stallion of prime quality; the village-lord of a village thou shalt purify for a bull of prime quality; the house-lord of a house thou shalt purify for a cow that is with calf' (cf. also *Vendīdād* vii. 42, xiv. 11).

The camel is vividly described in *Yašt* xiv. 11–13 as the fourth of the ten incarnations of Vereθraγna, the god of victory, but the passage has no particular religious value as regards the animal under consideration.[1] It is more interesting, in this connexion, to note that, according to Strabo (p. 733), an apple or a bit of camel's meat was eaten just before the consummation of marriage, doubtless with reference to the salacity of the animal, to which the Avesta repeatedly alludes. In the Avesta, *uštra*, 'camel,' not infrequently forms a component of proper names (Justi, *Iran. Namenbuch*, Marburg, 1895, p. 515), as Frašaoštra, 'having camels that press forward'; Vohuuštra, 'possessing good camels'; and foremost of all—Zaraθuštra, the great Iranian reformer himself.[2]

4. In India.—Here the camel is a relatively unimportant animal, and in the earlier period *uṣṭra*, the Indian counterpart of the Avesta *uštra*, 'camel,' meant 'buffalo' (Spiegel, *Arische Periode*, Leipzig, 1877, pp. 49, 51). The main habitat of the camel in India is Rajputāna (Lassen, *Ind. Alterthumskunde*, Leipzig, 1858–74, i.[2] 349), and in northern India 'the bones of the camel are very useful for driving off insects from a sugar-cane field, and buried under the threshold keep ghosts out of the house. Pliny says that a bracelet of camel's hair keeps off fever' (*PR* ii. 36). The camel figures, however, to some extent in Sanskrit proverbs. Some of these represent the animal in an unfavourable light, as greedy, stupid, etc. 'A camel in a garden looks only for thorns'; 'a camel will trample down a screwpine [a bush noted for its fragrant flowers] to get at thorns'; and to touch a camel or an ass is even more polluting than to touch a dog, a cock, or a Chāṇḍāla [a member of the lowest Hindu caste]; but, on the other hand, the camel receives praise for its perseverance in getting sweet fruit from unusual places (Böhtlingk, *Ind. Sprüche*, St. Petersburg, 1870–73, Nos. 1548, 2885, 6597, 6216). In modern India the camel is occasionally found as a *dramatis persona* in folk-tales from the north (Swynnerton, *Indian Nights' Entertainment*, London, 1892, pp. 15–17, 34–36, 269 f., 310 f.; Crooke and Rouse, *Talking Thrush*, London, 1899, pp. 33–35, 43–46).

5. In Africa and in Europe.—The camel is not indigenous in Africa and Europe, and it plays a rôle of no religious importance. In the latter continent it has never had any real economic value, though its name in various forms (on these, see especially Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, pp. 404–406) is found in every European tongue.

LITERATURE.—Hommel, *Die Namen der Säugetiere bei den südsemit. Völkern*, Leipzig, 1879, pp. 141–46; Hahn, *Haustiere und ihre Beziehung zur Wirtschaft des Menschen*, Leipzig, 1896, p. 220 ff.; Geiger, *Ostiran. Kultur im Altertum*, Erlangen, 1882, pp. 356–61. Reference may also be made to the bibliographies appended to the various encyclopædias mentioned in the text.

LOUIS H. GRAY.

[1] The Pahlavi *Dinkart* IX. xxiii. 21. (tr. West, *SBE* xxxvii. 224) preserves a tradition that Vāc, the (good) wind-god, was temporarily transformed into a camel by Kai Khūsrōi, who then rode him over vast distances.

[2] On the suggested explanations of Zoroaster's name, see especially Jackson, *Zoroaster*, New York, 1899, pp. 12–14, 147–149; Justi, *op. cit.* p. 381; a worthless guess of Husing and Hoffmann-Kutschke, that Zaraθuštra stands for *zauθra-rastra*, alleged to mean 'having sacrificial shrubs [for the *haoma* sacrifice],' is still seriously advanced by Prášek, *Gesch. der Meder und Perser*, Gotha, 1906–10, ii. 122 f., who ignores Bartholomae, *Zum altiran. Wörterbuch*, Strassburg, 1906, p. 240.

CAMISARDS.

CAMISARDS.—'Camisards' is the name given to those Protestants of the Cevennes who for several years resisted by force of arms the attempts made by the government of Louis XIV. to convert them to Roman Catholicism. The word is doubtless derived from *camisa*, a dialectic form of *chemise*; and its use in this connexion arises either from the practice of fighting in white shirts or blouses, or from an incident at the siege of Montauban in 1629, when such a blouse was used as a signal. The word *camisade* appears in early military French as the equivalent of 'night-attack.'

Geographically, the name 'Cevennes' is given to the long, curving line of broken ridges extending nearly from Lyons to Narbonne, which marks the edge of the central table-land of France, where it breaks down eastward to the basin of the Rhône. Locally, however, 'the name is limited to a tangle of schist ridges and deep-cleft ravines constituting that portion of the arc which is between the Coiron and the limestone plateau of Larzac' (Baring-Gould, *Book of the Cevennes*, 1907, p. 2). This 'inextricable network of mountains and deeply furrowed valleys' is drained by the rivers Allier and Lot, Ardèche and Gardon, and represents to-day the upper parts of the Departments of the Loire, and the Lozère, the Ardèche and Gard. In the 17th cent. the population of this bleak highland district was prevailingly and intensely Protestant, and had already offered a stubborn resistance to the repressive measures that went before the Edict of Nantes.

The immediate cause of the troubles and the hostilities in the Cevennes was the exterminating policy of Louvois against the Protestants, which was set free from any legal trammels by the Revocation of the Edict of Nantes in 1685. That Edict, reluctantly granted by Henry IV. in favour of the Protestants who had raised him to the throne, had itself fallen far short of their claims and rights as citizens. But for many years before its revocation it had been so administered, and so disregarded, that the situation of the Protestants was already very hopeless. The condition of affairs is thus described by Jean Claude in a letter to the Marquise de Regnier (1685):

'The severities which are practised in France are of such a kind that human nature is no longer able to resist. If it were possible to foresee a termination of them, one might resolve to face them, and death would be a motive for constancy, instead of a temptation. But the horrors that are practised, inconceivable in themselves, not only have no end, but go on increasing, and are of such a kind that we are bound to fall either into despair, or into frenzy and an entire loss of reason, or into apostasy.'

This situation became even more acute after the Revocation. The first blow was the banishment of the Protestant clergy, of whom six or seven hundred quitted France. The next was the prohibition of emigration for the Protestant laity. Then followed the wholesale demolition of Protestant churches, imprisonment and torture for those who refused to conform, and the galleys for thousands of those who resisted. Louis XIV. had allowed himself to be persuaded that the Revocation would not cost a drop of blood. Before its work was done, 12,000 Protestants had been executed in Languedoc alone, and at least half a million had quitted the country, taking with them much of its best blood, its best character, and its highest industrial skill.

The administration of the Decree in Languedoc was committed to Lamoignon de Bâville, a man of unflinching severity against the Protestants, though by no means a blind admirer of the Catholic clergy. He continued to govern the province for thirty-three years, at the end of which he had crushed Protestantism, but almost depopulated the country. The resistance in the Cevennes divides itself into two periods, the first from 1686 to 1698, when it was mainly passive, the second from 1700 to 1709, when it was marked by fierce outbreaks of active warfare, one of which lasted for eighteen months. The banishment of the pastors and the prohibition of public worship drove the people to private assemblies and the ministrations of lay preachers.

Among the latter, who were known as 'predicants,' François Vivens and Claude Brousson (formerly an advocate at Toulouse) were specially conspicuous. Bâville, vigorously assisted by the Duc de Noailles and the Marquis de la Trouse, turned the soldiery loose upon these assemblies, slaying and hanging the worshippers and arresting the predicants. Many of the latter were executed, burnt alive, or broken on the wheel; many more, with thousands of their followers, were shipped off to the galleys. What that meant of shame and torture may be learnt from the narrative of Jean Bion, himself a Catholic chaplain on one of the ships. It was always open to the Protestants to escape by recanting, and large numbers gave way under the terror of persecution, but many still remained firm. Their endurance was largely fortified, and their enthusiasm inflamed, by the writings and correspondence of Pierre Jurieu, the learned antagonist of Arnauld, Bossuet, and Bayle, who, from his place of exile in Rotterdam, and chiefly by means of his 'Pastoral Letters,' exercised an immense influence over the Protestant remnant in France. His prophecies of speedy deliverance, based on his interpretation of the Apocalypse, raised the hopes of the people. The prediction of Claude was verified. Many of the Protestants of Languedoc, avoiding renunciation of their faith, fell into frenzy. An infectious ecstasy seized people of all ages and of both sexes. They heard supernatural voices. They spoke with tongues. Children of the tenderest years were the subjects of most extraordinary manifestations. Quite uneducated persons gave utterance, when 'seized by the Spirit,' to prophecies in the purest French. Many of these prophecies were taken down, and a long series of them, uttered by Elias Marion, is printed in *A Cry from the Desert*. Animated by such enthusiasm, the resistance was maintained over a period of ten years, and it was not until the capture and execution of Brousson broke the heart of the people that Bâville could claim even a partial and temporary success.

The death of Brousson was followed by a year or two of comparative calm; but it might be thought that Bâville foresaw the outbreak that was to come, seeing that he kept his troops busily employed in constructing a network of roads, practicable for cannon, throughout the whole district. The flame of enthusiasm was kindled anew by the ecstatic utterances of a travelling sempstress from Dauphiné. It spread like wildfire through the Cevennes, though Bâville did his utmost to extinguish it. At last the people were goaded into open war. A chief object of their execration was the Abbé du Chayla, the arch-priest of the Cevennes, in whose prisons at Pont Montvert in the Lozère many Protestants suffered unspeakable tortures. Under the leadership of one Séguier, a body of the Camisards attacked his house, delivered his prisoners, and slew him (1702). Bâville inflicted terrible reprisals, but the spirit of the peasants was roused to fury, and for some two years they sustained an open war with the armies of the king. Calling themselves 'les enfants de Dieu,' and their camp 'le camp de l'Eternel,' they regarded themselves as God's instruments for the destruction of 'Babylon and Satan,' the Roman Church and priesthood. Their principal leaders were Laporte, Roland, and Cavalier—the latter but a youth of seventeen, who had been a baker's apprentice. The number of fighting men probably never exceeded four thousand; but their methods of guerrilla warfare, and their knowledge of their own rocky fastnesses, compelled Bâville to collect from 40,000 to 60,000 men to hold them in check. Shocking cruelties were perpetrated on both sides. A great tract of country was devastated and almost depopulated. The issue of successive engagements varied. At length Montrevel was superseded in the command of the army by Marshal Villars, whose more diplomatic methods met with better success. He offered an amnesty, freedom of conscience, and the right to leave the country, to such as chose to accept it. These terms were accepted by Cavalier and some of his followers. He himself quitted France, and, after serving with credit in Italy and Spain, entered the British army, where he rose to the rank of Major-General, and died as Governor of Jersey (1740). Others of the Camisards, many of whom thought that Cavalier had betrayed the cause, attempted to carry on the struggle; but after the fall of Roland, the most chivalrous of their leaders, their powers of combination and resistance were broken; and, except for a fruitless rising instigated by Abraham Mazel in 1709, the Camisard movement was at an end.

For a brief time the Camisards constituted a small English sect known as French Prophets, and in their land of refuge showed forth their most unlovely and fanatical traits. They claimed to be able to prophesy and to work miracles, advocated communism of property, and asserted that the Messiah was about to establish His kingdom with terrible doom for the wicked. They gained a considerable following even among the English, but their meetings became so disorderly that legal proceedings were required to check them. Finally, in 1708, they overreached themselves by claiming that one of their number, Thomas Emes, would rise from his grave on May 25 of that year; but the resurrection did not take place, and the resnltant disillusionment brought about the speedy decay of the sect.

LITERATURE.—Apart from the general histories of the Church in France, the following works may be specified out of the copious literature: (A) PROTESTANT: Benoist, *Hist. de l'édit de Nantes*, 5 vols., Delft, 1693–95, esp. the last volume, which has a useful appendix with lists of prisoners in the galleys, and a collection of the edicts against the Protestants; Jean Claude, *Les Plaintes des Protestans*, etc., Cologne, 1686, new ed. 1885; Cavalier, *Memoirs of the War of the Cevennes*, London, 1712 [to be used with caution]; *A Cry from the Desert*, with preface by John Lacy, London, 1707; Misson, *Le Théâtre sacré des Cevennes*, London, 1707; Jurieu, *Lettres pastorales*, Rotterdam, 1686–89; Elias Marion, *Evangelical Warnings* (with verbatim report of his prophecies), London, 1707; Antoine Court, *Hist. des troubles des Cevennes*, Villefranche, 1760; Peyrat, *Hist. des pasteurs du désert*, Paris, 1842; Frostérus, *Les Insurgés protestants sous Louis xiv.*, Paris, 1868; Bonnemère, *Hist. de la guerre des Camisards*, Paris, 1869; Blanc, *De l'Inspiration des Camisards*, Paris, 1859; *Mélange de literature historique et critique sur tout ce qui regarde l'état extraordinaire des Cévennois*, London, 1707; Coquerel, *Hist. des églises du désert*, Paris, 1841; *Bulletin de la Société de l'histoire du Protest. français*; Baird, *The Huguenots and the Revocation of the Edict of Nantes*, 1895.—(B) CATHOLIC: Fléchier, *Lettres choisies avec relation des fanatiques*, Paris, 1715; Brueys, *Hist. du fanatisme de notre temps*, Utrecht, 1709–13; Louvreleuil, *Le Fanatisme renouvelé*, Avignon, 1704–07; *Mémoires de Bâville*, Amsterdam, 1734; *Mémoires de Villars*, The Hague, 1734; de la Baume, *Relation de la révolte des Camisards*, Nîmes, 1874.—(C) FOR THE FRENCH PROPHETS: Bulkeley, *Answer to several Treatises lately published on the Subject of the Prophets*, London, 1708; 'Hughson' (pseudonym of Edward Pugh), *Copious Account of the French and English Prophets*, London, 1814.

CAMPANOLOGY.—See GONGS and BELLS.

CAMPBELLITES.—See DISCIPLES OF CHRIST.

CANAANITES.—The name Cana'an first appears in the Tell el-Amarna letters under the forms *Kinaḫni* (כנען) and *Kinaḫḫi* (כנע) as a designation of the lands at the eastern end of the Mediterranean, which we include to-day under the names of Syria and Palestine. In Egyptian inscriptions of the XIXth dynasty the name is always found with the article *p'-K'-n'-n'* (Breasted, *Ancient Records of Egypt*, iii. 88, 617, iv. 219; Müller, *Asien*, 205 ff.), and is a general term for the Asiatic dominions of Egypt. In the OT it has commonly the same wide scope. What 'Canaan' means, and whether the name of the race is derived

from the land, or that of the land from the race, are unsettled questions. In this article 'Canaanite' will be used as a general designation of the pre-Israelite inhabitants of Palestine. The religion of the later Canaanites, who were contemporary with the Hebrews, will be discussed in art. PHŒNICIANS.

A. *SOURCES OF INFORMATION.*—**1. Excavations in Palestine.**—Since 1890 more or less extensive excavations have been carried on in the mounds of Palestine, and these have shed a flood of new light upon the religious beliefs and practices of the ancient Canaanites.

In 1890 Petrie made an exploratory survey of the mound of Tell el-Ḥesy, the Biblical Lachish (Petrie, *Tell el-Ḥesy*, 1891). Between 1891 and 1893 Bliss excavated about one quarter of this mound (Bliss, *A Mound of Many Cities*, 1894). In 1898 Bliss and Macalister ran exploratory trenches into the mounds of Tell Zakariyâ (Azekah?), Tell eṣ-Ṣâfi (Gath?), Tell Judeideh, and Tell Sandaḥannah (Bliss-Macalister, *Excavations in Palestine*, 1902). From 1902 down to the present time Macalister has been excavating in a very thorough fashion the great mound of Jezer, the Biblical Gezer (Macalister, *PEFSt*, 1902–9, *Bible Side-lights from the Mound of Gezer*, 1907). In 1902–3 Sellin excavated Tell Ta'annek, the Biblical Taanach (Sellin, *Tell Ta'annek*, 1904), and in 1903–5 Schumacher excavated Tell el-Mutesellim, the Biblical Megiddo (Schumacher, *Tell el-Mutesellim*, 1908).

All these mounds contain remains dating from the earliest period of Palestinian history. They show that a homogeneous civilization prevailed in the land prior to the Hebrew conquest, and they give a fairly complete idea of the religion of the aborigines.

Mention should also be made of the Tell el-Amarna tablets, a collection of nearly 300 letters sent by petty kings of Canaan to the Pharaohs Amenophis III. and Amenophis IV. (*c.* 1400 B.C.), which were discovered in 1887 at Tell el-Amarna in Egypt. These were written in Canaan, and therefore properly come under the head of Palestinian archæology. One letter of this series was found at Lachish, and four letters of the same period have been discovered by Sellin at Taanach. All are rich in allusions to religious beliefs and rites, and contain a large number of theophorous names of persons and places (see Winckler, *KIB* v. [1896]; Knudtzon, *BASS* iv. [1899] pp. 101–154; *Vorderasiat. Bibliothek*, ii. [1907 ff.]).

2. Babylonian inscriptions.—The evidence is now abundant that the Amorites entered Babylonia at the same time as they entered Palestine, and that the founding of the so-called First Dynasty of Babylon was a result of their invasion (Meyer, *Gesch.*[2] i. 2, pp. 465, 544 ff.). In contract-tablets of this period an immense number of proper names of a Canaanitish-Hebrew type make their appearance; and, as these are nearly all theophorous, they throw much light upon the religious conceptions of the Amorites (see Ranke, *Early Bab. Personal Names of the Hammurabi Dynasty*, 1905). Besides this, the Babylonian inscriptions of about 2000 B.C. contain a number of direct statements in regard to the religion of *Amurru*, or the 'Westland,' which stood at that time under Babylonian rule.

3. Egyptian inscriptions.—From the earliest days the Egyptians interfered in the politics of Canaan, and in their records names of Canaanite gods occur, either independently or compounded with the names of places or persons. Canaanite colonies also settled in Egypt, and introduced their gods into that land. When the Egyptians became a conquering power under the XVIIIth and XIXth dynasties, they had no war-gods of their own, and consequently they extensively adopted the deities of their warlike Semitic neighbours. During the New Empire, Semitic fashions and Semitic religion made great progress in Egypt, and hosts of Canaanites were settled in that country either as slaves or as officials. The result is that the Egyptian records, particularly of the New Empire, contain many references to the religion of Canaan (see Müller, *op. cit.* 309–318).

4. The Old Testament.—The OT contains numerous statements, mostly in the form of prohibitions, concerning the religion of the race which Israel dispossessed. It also discloses survivals of Canaanitish ideas. The Hebrews did not exterminate their predecessors, but mingled with them, and adopted their civilization. The language which we call Hebrew is the language of the glosses to the Tell el-Amarna letters, and Is 19[18] calls it 'the language of Canaan.' It differs little from the dialect spoken by the Phœnicians. The place-names of the Israelites were nearly all derived from the earlier inhabitants, and many of them are found in the Egyptian inscriptions and in the Tell el-Amarna letters. So far as they contain the names of gods, they may be used unhesitatingly for the history of the pre-Israelitish period. The OT also informs us that Israel served the *b^e'ālim*, and worshipped in their high places; accordingly, it is probable that most of the sanctuaries of later times were survivals of ancient Canaanite holy places. It is certain also that the sacred traditions of these shrines were learned by Israel from the Canaanites, and were gradually transformed to accord with the genius of the religion of Jahweh. The Book of Genesis contains many evidences of a fusing of two strands of tradition, a Hebrew and a Canaanite, corresponding to the fusing of the two races; and, so far as the Canaanite elements can be disentangled, they are useful for reconstructing the religion of Israel's predecessors (see Paton, 'The Oral Sources of the Patriarchal Narratives,' *AJTh*, 1904, p. 658). Many rites of the religion of Israel, particularly those connected with the planting of grain, the reaping of crops, and the celebration of harvest festivals, must have been derived from the earlier inhabitants of the land.

5. The Phœnician religion.—The Phœnicians were the lineal descendants of the Canaanites; hence it is natural to look among them for survivals of primitive Canaanite religion, and to interpret obscure phenomena of earlier times by the later Phœnician religion.

From these various sources we must now seek to re-construct the religion of the ancient Canaanites.

B. *THE PRE-SEMITIC ABORIGINES.*—The earliest archæological remains in Palestine belong to the Palæolithic age. These have been found in small numbers, and have never been adequately described. From them it is impossible to draw any conclusions in regard to the race or the religion of the people who produced them. Neolithic remains are more numerous, and furnish a better basis for historical conclusions. The excavations that for the last seven years have been carried on by the Palestine Exploration Fund at Gezer have disclosed in the lowest level of the mound a series of caves in the soft limestone rock that were once occupied by Neolithic men. As the marks on the walls show, these caves were excavated with tools of bone, stone, or wood; and in them only bone and dressed-stone implements have been found. They must belong to a period from 3500 to 3000 B.C., because they are three feet below the level in which scarabs of the XIIth Egyptian dynasty first appear (*PEFSt*, 1902, p. 347; 1903, p. 12; 1903, pp. 317–321; 1905, p. 309 f.; 1907, p. 186; 1908, pp. 213–217). Similar caves were found by Sellin under the mound of Taanach, although in this case they contained no remains. Other caves in all parts of Palestine doubtless date from the same early age, but no thorough investigation of them has thus far been made.

This race was in the habit of burning its dead; and for this purpose fitted up one of its caves at

Gezer as a crematory, cutting a chimney up through the solid rock, in order to secure a good draught (*PEFSt*, 1902, p. 347 ff.). The floor of this cave was covered to a depth of a foot with the ashes of human bodies. In this stratum a sufficient number of fragments of bones were found to permit a re-construction of the ethnological type. None of the individuals exceeded 5 ft. 7 in. in height, and most were under 5 ft. 4 in. From the shape of the skull and from other indications it may safely be inferred that these people did not belong to the Semitic race (see the report of Macalister, *PEFSt*, 1902, p. 353 ff.). The same conclusion may be drawn from the fact that they burned their dead, since cremation was not a Semitic custom. From the circumstance that they deposited food and drink with their dead, it may be inferred that they believed in some sort of immortality, and that they practised ancestor-worship.

Around the entrance to this cave, and in the floors, sides, and entrances of other caves, an immense number of so-called 'cup-marks' are found. These are melon-shaped depressions formed by rotating a hard stone upon the soft surface of the rock. They vary from the size of a thimble to that of a barrel, and are often arranged in complicated patterns (*PEFSt*, 1902, p. 361; 1903, pp. 124, 316 ff.; 1904, pp. 35, 112, 197; 1905, p. 310; 1908, p. 213). It is clear that most of them cannot have served any utilitarian purpose, particularly when placed on vertical surfaces; and the fact that they are constantly associated with menhirs, dolmens, cromlechs, and altars seems to indicate that they have a religious significance (see Spoer, *ZATW*, 1908, p. 271 ff.). Herodotus (ii. 106) states that he saw in Syria pillars on which γυναικὸς αἰδοῖα were cut. These correspond to the menhirs, found in all parts of Palestine, and evidently intended to represent phalli on which cup-marks are engraved. They show, apparently, that the cup-marks were symbols of a female deity worshipped by these aborigines, and that they were intended to represent either the inverted breast, or, as Herodotus says, the γυναικὸς αἰδοῖα. These symbols were multiplied for magical purposes around dwelling-places, just as crosses are multiplied on Christian buildings. From them we may perhaps infer that the chief divinity of the pre-Semitic Canaanites was a mother-goddess, and that they were still organized on the matriarchal tribal basis. From the fact that nearly equal numbers of male and female bones were found in the crematory, it may be concluded that polyandry was not practised.

It was natural that a people dwelling in caves should think of their deity as also inhabiting one. Traces of such a sanctuary seem to be found at Gezer. In the central valley, which lies between the two summits of the mound, a rock-surface about 90 ft. square has been unearthed, which is covered with 83 cup-marks, varying in size from a few inches to 6 ft. in diameter. Two of these, measuring 3 ft. in diameter, are surrounded with small standing stones set on end and cemented together with clay. Another, 2 ft. 3 in. in diameter, has cut from its bottom a passage, too narrow to admit a full-grown man, which leads to a cave beneath the rock-surface. In this cave a large number of pig-bones were found, which suggests that the rock-surface above was a place of sacrifice, and that the blood and portions of the victims were poured down through the passage into the *adytum* below. The same cave is provided with a concealed entrance, which may have served some priestly purpose; and two other caves, with cup-marks in their floors, in the immediate vicinity evidently form part of the same complex (*PEFSt*, 1903, pp. 317–321; 1904, pp. 111–113). Similar rock-cut high places with caverns beneath them, dating apparently from the earliest period, have been discovered at Taanach (Sellin, *op. cit.* 34) and at Megiddo (Schumacher, *op. cit.* 156). All three sanctuaries bear a close resemblance to the Qubbet eṣ-Ṣaḫra in the Ḥaram at Jerusalem, with its rock-surface and underground passages. Cup-mark areas with small circles of standing stones have also been found at Tell Judeideh and at Tell eṣ-Ṣâfi (Bliss-Macalister, *op. cit.* 194 ff.; Vincent, *Canaan*, p. 92 ff.).

The only other evidences of the religion of the Neolithic aborigines are amulets found in their caves. A few phallic emblems have been discovered, but these are not so common as in the later Semitic levels (*PEFSt*, 1902, p. 342; 1903, p. 22; 1904, p. 112). Along with them, in larger numbers, are found small stone rings (*PEFSt*, 1903, p. 23; 1904, p. 113; 1904, p. 120). These cannot be spindle-whorls, as was at first conjectured, since undoubted spindle-whorls are found along with them. It seems more likely that they are feminine symbols (analogous to the cup-marks) that were worn on the person as amulets (cf. the objects depicted by Schumacher, *op. cit.* 52). In the ashes of the crematory at Gezer a rude terra-cotta figure of a man's head was found (*PEFSt*, 1902, p. 358; 1904, p. 19). There is nothing to indicate that this was an idol. This race apparently stood upon a lower religious level than that of image-worship.

C. *THE SEMITIC CANAANITES.* — From the Egyptian records it is clear that, at least as early as 2500 B.C., Palestine was occupied by a Semitic race which exterminated the earlier inhabitants (Meyer, *op. cit.* i. 2, p. 389). From contemporary Bab. records it appears that this race was called *Amurru*, the Amorites of the OT (Meyer, *ib.* 465).

I. THE PANTHEON.—(*a*) *General names for the gods.*—Can. religion bore a close resemblance to the religion of the pre-Muhammadan Arabs and of the Semites in general (see ARABS, SEMITES). It was a complex system of polydæmonism and polytheism, in which everything that could do something, or was believed to be able to do something, was deified. Personal names of the gods were commonly avoided, and they were called by titles that expressed their power or authority.

1. El.—The most general designation of a divinity was *el* (Heb. אֵל, 'god'), which probably means 'power' (from the root אול, 'be strong'). It is frequent in Amorite names of the 1st dynasty of Babylon (Ranke, *op. cit.* 99 ff.). In Palestine it occurs as early as 1500 B.C. in the list of cities conquered by Thutmose III.

The place-names compounded with *el* are *Y(a)-'-q(e)-b-'-a-ra'* =Jacob-el (Thutmose, No. 102; *MVG*, 1907, p. 27; Egyptian makes no distinction between *l* and *r*); *Y(a)-sha-p-'(e)-ra*, perhaps=Joseph-el, or Jesheb-el, in any case a compound with *el* (Thutmose, No. 78; *MVG*, 1907, p. 23); *Ma-sha-'-(e)-ra*= Mishal in Asher, probably also a wrongly vocalized *el*-compound (Thutmose, No. 39; *MVG*, 1907, p. 16); *Ha-r-'(e)-ra*=Har-el, 'mount of a god' (Thutmose, No. 81; *MVG*, 1907, p. 24).

In the Amarna letters *el* occurs frequently in names of persons, e.g. *Batti-ilu* (Winckler, 51. 20; 125. 3, 28); *Milki-ilu* (163. 27, etc.)=*Ili-milki* (179. 36); *Yabni-ilu* (218); *Shabi-ilu* (126. 26).

From the time of the XXth dynasty we meet *Raui-'(e)ra*, possibly=Levi-el (Müller, *Egypt. Researches*, p. 49); *'(E)-ry-m* =El-ram, an inspector under Ramses III. (Breasted, *Records*, iv. 221); *Bk-n-wr-n-r'*=Beknur-el, the chief of police under Ramses IX. (Breasted, iv. 253); *Bk-wr-n-r*=Bekur-el, the wife of Seti I.; *B'-dy-r'*=Bed-el, the king of the Canaanite city of Dor in the time of Ramses XII. (Breasted, iv. 278); *W'-r'-k'-ty-r'*= Berket-el, a rich shipowner of Sidon in the time of Ramses XII.; *M-k'-m-rw*=Makam-el, a Syrian prince of the same period (Breasted, iv. 279).

All the place-names compounded with *el* in the OT are probably survivals of Canaanite nomenclature. These are *El-'ale* (Nu $32^{3.37}$, Is 15^{4} 16^{9}, Jer 48^{34}); *El-ḳosh* (Nah 1^{1}); *El-tolad* (Jos 15^{30} 19^{4}); *El-teḳe* (Jos 19^{44} 21^{23}); *El-teḳon* (Jos 15^{59}); *Arb-el* (Hos 10^{14}); *Ari-el*, perhaps an ancient name of Jerusalem (Is $29^{1.2.7}$); *Jabne-el* (Jos 15^{11}); *Jezre'-el* (Jos 15^{56} and oft.); *Jiphtaḥ-el* (Jos $19^{14.27}$); *Jeḳabṣe-el* (Neh 11^{25}); *Joḳthe-el*

(Jos 15^{38}, 2 K 14^{7}), *Jirpe-el* (Jos 18^{27}); *Migdal-el* (Jos 19^{38}); *Ne'i-el* (Jos 19^{27}); *Penu-el* (Gn 32^{31} etc.); *Kabșe-el* (Jos 15^{21}, 2 S 23^{20}, 1 Ch 11^{22}).

In none of these cases was *el* understood as 'God' in a monotheistic sense, or even in a monarchical sense; nor was it the name of an individual deity, as it became later among the Hebrews. It was generic, and denoted the particular divinity who dwelt in a place, or whose activity was recognized in the name of a person. Any one of the innumerable gods or dæmons might be called by this title.

2. Ba'al.—When an *el*, or 'power,' was regarded as the 'proprietor' of a city or sanctuary, he was known as *Ba'al*. Here also no one god was meant, but every superhuman being, from the lowest sort of local dæmon to the highest Nature-god or tribal god, might become a *ba'al* by establishing a relation with a particular holy place (see BAAL). *Ba'al*-names are common in the Amorite period in Babylonia, *e.g.* in the Obelisk of Manishtusu (Hoschander, *ZA*, 1907, pp. 285–297; Ranke, p. 72). Through Semitic settlers and captives, and through borrowing of Asiatic cults, many of the *be'ālim* of Canaan became naturalized in Egypt during the period of the XVIIIth and XIXth dynasties, being identified either with Set or with Montu. The name *ba'al* is regularly used with the article in Egyptian, as in Can.-Heb., which shows that it is in no sense a proper name, but only an appellative (see Breasted, iii. 46, 140, 147, 154, 200, 271, iv. 25, 27, 36, 42, 44, 48, 57, 61, 63, 140). From these passages it appears that the Canaanitish *be'ālim* were regarded by the Egyptians as primarily gods of storm and of war.

A *Ba'alat Zaphon*, the feminine counterpart of the Biblical *Ba'al Zaphon*, appears at Memphis in the time of Ramses II. (BAAL, ii. 288b). The daybook of a frontier official in the time of Merneptah records *Ba'alat-remeg* and *Shem-ba'al* as names of Canaanites who had passed that way (Breasted, iii. 271). A butler in the time of Ramses III. bore the name of *Mahar-ba'al* (Breasted, iv. 213). The king of Gebal in the time of Ramses XII. was *Zakar-ba'al* (Breasted, iv. 279). Müller adds the names of *Ba'al-ram* and *Savf-ba'al* (*Asien*, 309). *Ba'al-ram* appears as a proper name in one of the letters discovered at Taanach (Sellin, *op. cit.* 113). (For additional evideoce of the use of the name *ba'al* in ancient Canaan, see BAAL, ii. 290b.)

When the deities were viewed in relation to their worshippers, they were called by various names of kinship and authority, like human heads of families and rulers. Such names are *'amm* or *dâd*, 'father-uncle'; *ab*, 'father'; *aḥ*, 'brother'; *melek*, 'king'; *dan*, 'judge.' In none of these cases is the title to be understood as the name of an individual god. Any *el* or *ba'al* might become a 'father' or 'uncle' or 'king' by being worshipped by a particular group of people; consequently all these epithets are just as indefinite as are *el* and *ba'al*.

3. 'Amm.—One of the oldest of these titles is *'amm*, 'father-uncle,' which dates from a polyandrous stage of social organization, when the child did not know its father, but only a group of husbands of the mother, any one of whom might be either father or uncle. Under such circumstances the chief divinity of the tribe could not be known as 'father,' but only as *'amm*, or 'father-uncle' (see 'AMM).

Proper names compounded with this epithet are common during the period of Amorite supremacy in Babylonia: *e.g.* *Bali'ami*, *'Ami-ilu*, *'Ama-Sin* (Obelisk of Manishtusu); *'Ammurabi*, or *Ḥammu-rabi*, the sixth king of the 1st dynasty; *Dur-'ammi* (King, *Ḥammurabi*, iii. p. lxv); *'Ammi-ditana*, one of the kings of the 1st dynasty; *'Ammi-saduga*, another king of the same dynasty; *Zimri-ḥammu* (*Cun. Texts*, iv. 1*a*, line 8); *Yashdi-ḥammu* (*ib.* 2, line 21) (see Ranke, 65, 85; for proof of the West Semitic origin of names of this type see Zimmern, *KAT*³ 480). In the Egyptian tale of Sinuhe (*c.* 1970 B.C.) the shaikh of Upper Tenu in Palestine bears the name *'Ammue'nshi* (= עמיאנשי; Breasted, i. 238). In the Amarna letters we meet *'Ammi-ya* (Winckler, 119. 11; 120. 15, etc.), the name of a district; *'Ammu-nira*, king of Beirut (96. 29; 128. 130); *Ḥamuniri* (71. 15, 66, 69; 91. 53, 133). In the list of Thutmose III. (No. 43) occurs *Y(a)-b-ra-'a-mu*, i.e. Jible'am (Jos 17^{11} etc.). The other names of places compounded with *'amm* in the OT are doubtless all of Canaanite origin, since *'amm*-formations belong to the earliest period of the Semitic languages. These are *Jokde-'am* (Jos 15^{56}), *Jokme-'am* (1 K 4^{12}), *Jokne-'am* (Jos 12^{22} etc.), *Jorke-'am* (1 Ch 2^{44}), *'Am-'ad* (Jos 19^{26}).

4. Dâd.—Similar in meaning to *'amm* is *dâd* (Heb. דוד), 'paternal uncle' (primarily 'beloved'). It occurs in West Semitic personal names as early as the Obelisk of Manishtusu, e.g. *Bil-dada* (C. xi. 4; cf. C. xvii. 1), *Dada waqar* (*Cun. Texts*, ii. 3–43, 4). It appears perhaps in the name of the Egyptian commissioner *Dudu* in the Amarna letters (Nos. 44, 45, 52). The name of the city, *Ash-dod*, may also be compounded with this divinity (cf. *Ash-bel*). *Dâd* lingers in Heb. names of persons, e.g. *El-dad* (Nu 11^{26}), *Eli-dad* (Nu 34^{21}), *Dod-jahu* (2 Ch 20^{37}), *Bil-dad* (Job 2^{11} etc.), and the name is applied to Jahweh in Is 5^{1}, perhaps also in Am 8^{14}, according to the text of the LXX.

5. Abu.—When fraternal polyandry gave place to polygamy and children knew their fathers, then the chief god of the clan was known as *abu*, 'father.' This stage of social development had already been reached by the Amorites. Proper names compounded with *abu* are common in tablets dating from the period of the Amorite Ist dynasty of Babylon. Two of the kings of this dynasty are *Abi-eshu'a* and *Sumu-abi*. Other names of this period are *Abi-ramu* (= Abram), *Abi-araḥ*, *Abi-ilu*, etc. (see Ranke, 58). In the famous fresco on the tomb of Khnumhotep of the time of Sesostris II. (*c.* 1900 B.C.), one of the Asiatics there represented bears the name *'(A)b-sh-(a)* i.e. *Abi-shai* or *Abishua*. In the patriarchal tradition of Gn 20^{2} the king of Gerar bears the name *Abi-melek*, and in Gn 14^{2} the king of Admah is *Shin-ab*. In the Tell el-Amarna letters (149–156) we find *Abi-milki*, king of Tyre.

6. Aḫu.—Another frequent title of deities in ancient Canaan was *aḫu*, 'brother,' 'kinsman.' Amorite names of this type appear in Babylonia as early as the Obelisk of Manishtusu (Scheil, *Textes élam.-sém.*), e.g. *Aḫu-ṭabu* (A. xv. 14), *Aḫu-issap* (C. xvii. 3), *Aḫu-patan* (D. xi. 12), *Aḫu-shumu* (B. i. 7; C. v. 3); *Ali-aḫu* (A. x. 25) (see Hoschander, *ZA*, 1907, pp. 260–265). In documents of the Ḫammurabi period we meet a large number of names of this formation (see Ranke, 62 ff.).

7. Melek.—*Melek*, 'king,' is not a Bab. title of divinities. Nevertheless, forms compounded with *malk* occur in the Obelisk of Manishtusu (Scheil, *op. cit.* 41 ff.), doubtless as names of Amorite settlers in Babylonia. In *Cun. Texts*, xii. 34, *Malik* appears in a list of foreign gods. In the Amarna letters there are several compounds with *melek*, e.g. *Abimilki*, king of Tyre (nos. 149–156); *'Abdi-milki* (77. 37; 252); *Ili-milki* (102. 36; 151. 45), or *Milkili* (163. 27, etc.); *Milk-uru* (61. 53; 69. 85; 53. 43). The place-names *'Emeq-ham-melek* (Gn 14^{17}, 2 S 18^{18}), which has probably come down from Canaanite times, and *Yad-ham-melek* in the list of Sheshonk (Breasted, iv. 351), may contain this title of deity. See, further, AMMONITES.

8. Adon, 'master,' which is so frequent as a designation of deities in the OT and in Phœnician inscriptions and proper names (see Lidzbarski, *Nordsem. Epig.* 152 f.; *KAT*³ 398, n. 2), appears in the Amarna letters in *Adunu*, the name of the king of 'Arqa (79. rev. 2; 119. 10).

9. Dan, 'judge,' is a common Semitic epithet of gods. In Assyrian it is a title of Shamash, the sun-god, and is found in the names of the king *Ashur-dan* and the general *Dayan Ashur*. In the Amarna letters it appears in *Addu-dan* (163. 37) and *Addu-dayan* (239–240). It survives in the Heb. place-names *Dan* (Gn 14^{14} etc.) and *Mahaneh-dan* (Jg 18^{12}), and probably in the tribal name *Dan*, which bears the same relation to the personal names *Dani-el* and *Abi-dan* as the clan-name *Ram* bears to *Jeho-ram* and *Abi-ram*, or as *Jacob* and

Joseph bear to the place-names *Jacob-el* and *Joseph-el* in the list of Thutmose III.

10. **Ḳôsh**, 'lord,' is found in the place-names *Ka-su-na* (List of Thutmose III., No. 37; *MVG*, 1907, p. 16) = *Kishôn* (Jg 4^{7} etc.) and *El-ḳôsh* (Nah 1^{1}). This title survives in Heb. in the personal name *Ḳôsh-Yahu* (1 Ch 15^{17}) and *Bar-ḳôs* (Ezr 2^{53}, Neh 7^{55}), also in the Edomite royal names *Ḳaush-malak* (*KIB* ii. 21) and *Ḳaush-gabri* (*KIB* ii. 239). In later times *Ḳosh* became the standing title of the national god of the Edomites.

11. **Addar**, 'noble,' as a title of deities, may perhaps be inferred from the Pal. place-names *Addar* (Jos 15^{3}) = *Ḥazar-addar* (Nu 34^{4}), and *Adoraim* (2 Ch 11^{9}), both of which are mentioned in the list of Sheshonk I. (Breasted, iv. 350, 353), and *'Aṭaroth-addar* (Jos 16^{5} 18^{13}). Cf. the names compounded with *adur* in Bab. (*ZA*, 1907, p. 256).

12. **Shem.**—A curious anticipation of the late Jewish use of *shem*, 'name,' as a substitute for Jahweh is found already among the Amorites in the use of *shumu*, or *shem*, as a title of divinities. This is seen as early as the Obelisk of Manishtusu (B. i. 7; C. v. 3) in the personal name *Aḫu-shumu*, 'name is a brother' (*ZA*, 1907, p. 264). It appears in the names of two of the kings of the Ist dynasty of Babylon, *Sumu-abi* and *Sumu-lâ-ilu*, and also in such names as *Sumu-ramu*, *Sumu-atar*, etc. (see Ranke, 151). In the Amarna letters we meet *Shumu-Addu*, *i.e.* Shem-Hadad, prince of Shamhuna (no. 220), *Shum-Adda* (11. 13; 221); cf. the Heb. name *Shemu-el*, Samuel.

13. **'Elyon**, 'high,' is preserved in Gn $14^{18ff.}$ as the title of the god of the Canaanite priest-king Melchizedek. According to Philo Byblius (*ap.* Euseb. *Praep. Evang.* i. 36), this name was in use among the Phœnicians. It also survived among the Hebrews as a title of Jahweh.

(*b*) *Nature-gods.*—Having now enumerated the general titles of divinity, we proceed to investigate the individual deities of the Canaanites. Here, as among all the other Semites, the powers of Nature held a conspicuous place.

1. **Shemesh, or Shamash**, 'the sun.'—Shamash is mentioned along with Belit and the other gods as one of the chief divinities of Gebal in the Amarna letter, Winckler, No. 87. 65. In No. 156. 6 he is coupled with Adad, the storm-god. In other passages he is spoken of as the source of human life and joy (144. 11; 149. 52; 150. 21). Several place-names compounded with *Shemesh* in the OT bear witness to the ancient prevalence of his worship; e.g. *Beth-Shemesh*, 'house of the sun,' in Judah (Jos 15^{10} etc.) = *'Ir-Shemesh*, 'city of the sun' (Jos 19^{41}); also in Naphtali (Jos 19^{38}), and in Issachar (Jos 19^{22}); *'En-Shemesh*, 'spring of the sun' (Jos 15^{7} 18^{17}). Synonymous with *Shemesh* is Ḥeres, which is found in *Har-Ḥeres*, 'mount of the sun,' a city of the Amorites (Jg 1^{35}), and *Timnath-Ḥeres*, 'territory of the sun' (Jg 2^{9}). It so happens that none of these names occurs in the Egyptian records or in the Amarna letters, but there is no reason to doubt that they belong to the Canaanite period.

2. **Yārēaḥ**, 'the moon,' is not mentioned as an object of worship in the pre-Israelitish period; the names *Sin* and *Sin-ai* seem, however, to attest the antiquity of the moon-cult under its Bab. form. The native Can.-Heb. name is found, apparently, in *Yᵉrēḥô*, Jericho (so Jerome, *OS*, 78. 6; the older comm.; Siegfried-Stade, *Heb. Wörterb.*; Sayce, *Early History*, p. 250). Lebānāh, 'the white,' one of the names of the moon, seems to be found in the place-names *Libnah* and *Lebonah*; and Ḥadāshāh, 'the new moon,' in the town of that name (Jos 15^{37}). *Bit-arḫa* (Knudtzon, *Amarna*, 83. 29) seems to be the same as *Beth-yerah*, 'house of the new moon.' The worship of the moon prevailed among the Hebrews down to a late date (Dt 4^{19} 17^{3}, 2 K 23^{5}, Jer 8^{2}, Job 31^{26}), and was universal in other branches of the Semitic race; it cannot, therefore, have been lacking among the Canaanites. Star-worship also was probably not absent, although no traces of it have survived, unless it be in the place-name *Kᵉsîl*, 'the constellation Orion' (Jos 15^{30}). The name *Beer-sheba*, 'well of the Seven,' may also be connected with the cult of the Pleiades.

3. **Ẓaphon**, 'the north,' or Ba'al Ẓaphon, 'owner of the north,' appears in the place-name *Ẓapuna* (Amarna 174. 16) and *Ẓaphon* in Gad (Jos 13^{27}, Jg 12^{1}). It occurs also in the feminine form *Ba'alat Ẓaphon* as a deity worshipped at Memphis (*Sallier Papyrus*, 4, 1 rev.) (see BAAL, ii. 288^{b}).

4. **Addu, Adad, or Hadad**, was the storm-god of Canaan. *Ad-da-ad* appears written phonetically in the list of gods, K. 2100 (see Bezold, *PSBA* xi. p. 174 ff.), with the added remark that this name is used especially in Amurru (the Amorite land). This god entered Babylonia at an early date with the Amorite settlers, and there became synonymous with Ramman, 'the thunder' (Zimmern, *KAT*^{3} 442 ff.; Jastrow, *Rel. Bab.* i. [1905] 146 ff.). In the time of the Amorite Ist dynasty he occupied a conspicuous position. In the conclusion of the Code of Ḫammurabi, where the king pronounces curses upon those who shall abrogate his laws (xliii. 64), he says:

> 'May Adad, the lord of abundance, the ruler of heaven and earth, my helper, deprive him of the rain from heaven and the water-floods from the springs! May he bring his land to destruction through want and hunger! May he break loose furiously over his city and turn his land into a heap left by a whirlwind!'

In Amarna 149. 13 f. he is described as the god 'who utters his voice in heaven, so that the whole land trembles at his voice' (cf. 150. 7).

His name occurs more frequently than any other as an element in personal names in the Amarna letters, e.g. *A-ad-du* (Winckler, 125. 17), *Ad-da-ya* (163. 37, etc.), *Yapti'-Ḫa-da* (217a. 6, cf. p. 414), *Rib-Ad-di* (53. 1) = *Rib-Ḫa-ad-di* (83. 1), also written ideographically *Rib-IM* (54. 2), *Shum-ad-da* (11. 18) = *Shumu-Ḫa-di* (223. 1). Whether the ideogram *IM* in other names such as *Amur-IM*, *'Abd-IM*, *Natan-IM*, *Yapa-IM*, *Yapaḫi-IM*, *IM-dayan*, *Mut-IM*, and *IM-maḫir* is to be read *Addu* or *Ba'al* is doubtful (see BAAL, ii. 290^{b}). In any case it is certain that *Addu* had become the chief *ba'al* of Canaan, and that the Egyptians thought mostly of him when they spoke of the *ba'al* (see above, C. I. (*a*) 2). In the OT the name survives in the personal name *Hadad* (Gn 36^{35}, 1 K 11^{14}) and in the place-name *Hadad-rimmon* (Zec 12^{11}).

In early Bab. inscriptions this god frequently bears the ideographic title *MAR-TU*, which, according to an Assyr. interlinear version (Reisner, *Hymn.* p. 139, lines 143, 145), is to be read *Amurru*, 'the Amorite'—a name given with reference to his foreign origin. He bears also the title *KUR-GAL*, 'great mountain,' and is called 'lord of the mountain,' which seems to indicate that he had become the *ba'al* of Lebanon, the region in which his worshippers dwelt (Jensen, *ZA* xi. 303 f.). In Aramaic endorsements on Bab. documents of the Persian period, both *MAR-TU* and *KUR-GAL* are rendered by אור, i.e. *Amurru* (Clay, *Bab. Exp. Univ. Penn.* x. 7, xiv. viii, also *Studies in memory of W. R. Harper*, i. 301, 304, 311, and *Amurru, the Home of the Northern Semites*, 1909). On Bab. seal-cylinders he is represented holding a boomerang (the thunderbolt) in his right hand, and a spear (the lightning) in his left hand, occasionally as standing on a stag or a wild goat. These attributes identify him with the storm-god (see E. Meyer, *Sumerier u. Semiten* = *ABAW*, 1906); the goddess Ashera is regarded as his consort (Reisner, 139) as well as the consort of Ramman = Addu (Sayce, *ZA* vi. 161). There is no reason, accordingly, to doubt that *Amurru* is merely a title of Addu (see Zimmern, *KAT*^{3} 443, 447; Meyer, *Gesch.*^{2} 466 ff.).

5. **Resheph**, 'the lightning,' is hardly more than a variant of Addu. Under this name the god was early adopted from the Canaanites by the Egyptians. A text of Ramses III. reads: 'The officers

are mighty like Resheph. . . . His name is a flame, the terror of him is in the countries' (Breasted, iv. 22). A city in Egypt bore the name of 'House of Resheph' (*TSBA* iii. 424). On the Egyptian monuments he is represented with Semitic features, armed with shield, club, and spear, wearing a tall conical cap, around which is a fillet bearing a gazelle's head. The type does not differ much from the representations of Amurru-Hadad (see the figures in Muller, *Asien*, p. 311; *Egypt. Researches*, p. 33; Spiegelberg, *OLZ*, 1908, col. 529). Resheph continued to be worshipped by the Phœnicians down to the latest times (see Lidzbarski, *Handbuch*, 15t, *s.v.*, also *Ephemeris*, i. 150 f.; Baethgen, *Beiträge*, 50 ff.). He survives also in the place-name *Rashpuna* (Rost, *Tiglat-Pileser III., Annals*, 126; *Smaller Inscriptions*, i. 5, iii. 1). A Phœnician seal of the 14th or 15th cent. (Ménant, *Glypt.* 204 f.) depicts him in a manner similar to the Egyptian representations. In the OT *resheph* is the lightning-stroke of Jahweh, with which He inflicts pestilence and death (Dt 32^{24}, Ps 78^{48}). Synonymous with Resheph was **Barak**, 'lightning,' which appears in the place-name *Benê-Berak* (Jos 19^{45}), and the personal name *Barak* (Jg 4^{6} etc.). Closely connected is **Reseph**, 'thunderbolt,' which occurs in the Phœnician compound name מלקרתרשף (Cook, p. 361), and in the name of Saul's concubine *Rispah* (2 S 3^{7}).

6. **Sharabu** and **Birdu**, 'heat' and 'cold,' appear in Bab. lists of gods as the Amorite names for corresponding Bab. divinities (Zimmern, KAT^{3} 415).

7. **Selem**, 'darkness,' is a well-known deity in Arabia and in Babylonia. He appears in the Amarna letters in the place-name *Baru-ṣilim* (Winckler, 71. 64, 67), and in the OT in the mountain *Ṣalmon* (Jg 9^{48}) and the town *Ṣalmonah* (Nu 33^{41}).

8. **Uru**, 'light,' seems to be found in *Uru-salim*, Jerusalem, in the Amarna letters; also in *Milk-uru* (Winckler, 61. 53. 69. 85, 52. 43), with which should be compared *Uru-milki*, king of Gebal in the Annals of Sennacherib, ii. 50. Personal names compounded with *Ur* or *Or* are common in later Heb. and Phœnician. According to Clay, *Uru* is used as a synonym of *Amurru* in Bab. texts.

9. **Sheol**, 'the under world,' seems to have been personified as a deity by the ancient Semites, to judge from the proper names *Methu-shael*, *Mishael*, *Sha'ul* (Saul). Hence the place-name in the list of Thutmose III., No. 110, *Ba-ti-sha-'-ra*, which can hardly be regarded as a Babylonianizing writing of *Beth-el* with inserted *sha*, may be *Beth-She'ol* (see Müller, *MVG*, 1907, p. 29); and *Gibeath-She'ul* (1 S 11^{4} 15^{34}, Is 10^{29}), which in 1 S 10^{5}, apparently, is called 'the hill of God,' may have derived its name from the god of the under world rather than from the historic king of Israel (H. P. Smith, *Harper Memorial*, i. 61).

10. **Dagon** appears in Babylonia as early as 2150 B.C. in the names of the kings of the dynasty of Isin—*Idin-Dagan* and his son *Ishme-Dagan*,—also in the name of one of the early *patesis* of Assyria, *Ishme-Dagan*. This deity is not Old Babylonian, but was first brought in by the Amorite invaders. A Canaanite in the Amarna letters (Winckler, Nos. 215, 216) bears the name *Dagan-takala*. The town *Beth-Dagon* appears in a list of Ramses III., itself copied from an earlier original (Müller, *Egypt. Research*, p. 49). It is the same as *Beth-Dagon* in Judah of Jos 15^{41}. There was another *Beth-Dagon* in Asher (Jos 19^{27}). The oldest and most probable etymology of this name is that of Philo Byblius, who connects it with *dagan*, 'corn'; Dagan was thus a sort of Semitic Ceres.

11. **Worship of animals.**—The early Canaanites, like most primitive races, worshipped animals, partly on account of their superior strength and cunning, partly because of their utility, and partly because of their adoption as totems of clans. In later days these animals were subordinated to the great gods as attributes or symbols. Clay images of cows and bullocks, and human figures with the heads of these animals, have been found in large numbers in all the mounds of Palestine (see Macalister, *PEFSt*, 1903, p. 41; 1904, p. 331; 1907, p. 245; Sellin, *Tell Ta'annek*, p. 107). The worship of Jahweh under the form of a bullock, and the use of the title אביר, 'bullock,' as a name of Jahweh by the later Hebrews, are doubtless survivals of this cult. Images of horses are also found in the mounds (*PEFSt*, 1903, p. 41), and the place-name *Ḥazar-susah*, 'court of the mare' (Jos 19^{5}), also suggests this cult. Sacred horses at Jerusalem are mentioned as late as the time of Manasseh (2 K 23^{11}), and the Phœnician name עבדססם, 'servant of the horses,' occurs (*CIS* i. 1, p. 95). Bronze figures of serpents, and serpent-heads as amulets, have been found both at Gezer and at Taanach (*PEFSt*, 1903, pp. 42, 222, 1906, p. 119; Sellin, *op. cit.* 112). The goddess 'Ashtart is often represented holding serpents in her hands. One of the towns of the Calebites in later Judæa bore the name *'Ir-naḥash*, 'serpent-town,' and the cult of a bronze serpent in Jerusalem lasted down to the time of Hezekiah (2 K 18^{4}). Figures of fishes are found at Gezer in different levels (*PEFSt*, 1902, p. 342; 1903, p. 39).

The Heb. place-names *Beth-car*, 'house of the lamb'; *Beth-lebaoth*, 'house of the lions'; *Beth-nimrah*, 'house of the leopard'; *Beth-ḥoglah*, 'house of the partridge,' are similarly formed to *Beth-el*, *Beth-Dagon*, *Beth-Shemesh*, and may point to primitive Canaanite cults of animals at these places. Other animal place-names that may have religious meaning are *Aijalon*, 'stag-town' (Jg 1^{35} 12^{12}), mentioned also in the Amarna letters (Winckler, 173. 20, 180. 57); *Humṭah*, 'lizard' (Jos 15^{54}); *Ḥazar-shual*, 'court of the fox' (Jos 15^{29} 19^{3}); *Ṭelaim*, 'lambs' (1 S 15^{4}); *Laish*, 'lion' (Jg 18^{27}, Is 10^{30}), occurring already in the list of Thutmose III. (No. 31); *'Eglon*, 'calf' (Jos 15^{39}); also *'En-'eglaim*, 'spring of the two calves' (Ezk 47^{10}); *'En-gedi*, 'spring of the kid' (Ezk 47^{10}); *'En-haq-qore*, 'spring of the quail' (Jg 15^{19}); *'Ophrah*, 'young gazelle' (Jg 6^{11}, Jos 18^{23}); and *'Ephron* (Jos 15^{9}, 2 Ch 13^{19}), occurring already in the list of Thutmose III. (No. 54; Muller, *MVG*, 1907, p. 18; *OLZ* vi. 229); *'Arad*, 'wild ass' (Jg 1^{16}); *'Eṭam*, 'vulture' (2 Ch 11^{6}, 1 Ch 4^{32}); *'Aḳrabbim*, 'scorpions' (Nu 34^{4}); *Parah*, 'cow' (Jos 18^{23}); *Ẓor'ah*, 'hornet' (Jg 13^{2}); *Ḥamor*, 'ass,' occurs as the name of a Canaanite (Gn 34^{2} etc.), and *Piram*, 'wild ass,' as the name of the Canaanitish king of Jarmuth (Jos 10^{3}). See BAAL, vol. ii. p. 287.

12. **Other Nature-deities.**—Besides the gods just enumerated, there was an immense number of nameless numina that presided over all sorts of physical objects, and were known as their *be'ālim* (see BAAL, vol. ii. p. 291).

(*c*) *Ancestor- and hero-worship.*—The Semitic Canaanites believed in the continued existence of the dead, and practised sacrificial rites in their honour. At Gezer the Amorites used as burial places the caves that had previously been occupied as dwellings by their non-Semitic predecessors. Around the walls of these caves, in small stone enclosures, the nobility were buried. The common people were piled one upon another in the middle of the caves. With the dead were placed food and drink, clothing, ornaments, weapons, seals, scarabs, amulets, and small figures of domestic animals, all of which were designed to supply the needs of the soul in its journey to the other world. In the earlier period the dead were usually deposited in the contracted position of an unborn child, possibly to express the thought that death is birth into another life. Flat benches and altar-like structures in the burial-places suggest the performance of sacrificial rites, and this theory is confirmed by the presence of bones of animals and of infants in connexion with adult burials. Cup-marks found in the caves also attest the existence of religious practices (see *PEFSt*, 1902, p. 351 ff.; 1903, pp. 14 ff., 23, 396, 323; 1904, pp. 119 ff., 324; 1905, pp. 32, 79, 307; 1907, p. 191; 1908, pp. 187, 203). Similar

remains have been found by Sellin at Taanach and by Schumacher at Megiddo.

Certain place-names in Palestine also suggest the cult of the dead, e.g. *Obhoth*, 'ghosts' (Nu $21^{10f.}$ $33^{43f.}$); *'Emeq-rephaim*, 'valley of the shades' (Jos 15^{8} etc.). The graves of the patriarchs, which were reverenced by the Hebrews in later times, were probably survivals of ancient Canaanitish sanctuaries, *e.g.* the grave of Abraham and Sarah at Hebron (Gn 23^{19} 25^{9}), of Rachel at Ephrath (Gn $35^{19f.}$), of Deborah at the oak of weeping (Gn 35^{8}), of Jacob at Abel-mizraim (Gn 50^{11}), of Joseph at Shechem (Jos 24^{32}). Names of the formation Jacob-el, Joseph-el, Jabne-el, Jezre-el, Jiphtaḥ-el, Jeḳabṣe-el, Joḳthe-el, Jirpe-el (see above, C. 1. (*a*) 1) are properly names of persons. Their use as names of places can be explained only by an ellipsis of *beth*, 'house of,' as in Ba'al-maon over against Beth-ba'al-ma'on. All of these names, accordingly, point to a cult of real or assumed ancestors at their supposed places of burial (see von Gall, *Altisr. Kultstätten*, pp. 65, 129). A number of these names occur already in the Egyptian inscriptions, and all of them probably go back to Canaanite times. For other forms of ancestor-worship among the Hebrews that may be derived from the Canaanites, and that at least help to interpret the facts just adduced, see ANCESTOR-WORSHIP (Hebrew), vol. i. p. 444.

(*d*) *Departmental deities.*—Besides Nature-gods and deified ancestors, the Canaanites had numerous divinities who presided over various aspects of human life or over abstract qualities. Conspicuous among these were—

1. **'Ashtart**, the 'Ashtoreth of the OT and the Astarte of the Greeks. The etymology of her name is obscure, but her function is clear. She was the goddess of sexual love and of reproduction (for the archæological and literary evidence of the early existence of her cult in Canaan see 'ASHTART, 5). One of her epithets was Kadesh (cf. *ḳdēshā*, 'temple harlot'), and under this name she is often mentioned in Egyptian texts (Müller, *Asien*, 315; *Egypt. Res.* 32). In monuments of the XIXth dynasty she is depicted in un-Egyptian fashion facing straight forward, standing on a lion, naked, or clothed in a skin-tight garment, holding in one hand a lotus-blossom and in the other a serpent, to typify both the charm and the peril of her cult. Usually she is grouped in a triad with Resheph and the ithyphallic Min. Similarly in a Bab. text (Reisner, *Hymn.* p. 139, lines 143, 145) she appears as the consort of Amurru-Hadad-Resheph. In all the mounds of Palestine large numbers of terra-cotta 'Ashtart plaques, six or seven inches in length, have been discovered, and also moulds in which these were manufactured. They are limited to the later period, when the land was under Egyptian rule (*PEFSt*, 1904, p. 118; Sellin, *Tell Ta'annek*, p. 106). The commonest type of 'Ashtart figures bears a close resemblance to the Egyptian representations described above (see the drawings in Bliss-Macalister, pl. lxvi. 10–16, lxviii. 1, 2; Clermont-Ganneau, *Arch. Res.* ii. 242; Vincent, *Canaan*, 161 ff.). A second type, which is most frequent at Taanach (Sellin, 106), depicts her with a tall striated head-dress, necklace, anklets, and girdle, with her hands held to her breasts. This suggests rather Bab. influence. A third type has horns like the Egyptian Hathor (*PEFSt*, 1903, p. 225). A fourth type has a bird-like beak and huge earrings (Sellin, fig. 113). Here perhaps Cypriote influence is to be detected. Still a fifth type recently discovered at Gezer (*PEFSt*, 1909, p. 15) represents the goddess with a veil, like the statue discovered by Oppenheim at Tell Halaf (*Das alte Orient*, x. 1). This seems to reveal Hittite influence. In Taanach, Sellin found 19 'Ashtarts, but not a single Ba'al. The same proportion holds true of the other mounds, and shows that 'Ashtart must have occupied an altogether unique position in the esteem of the ancient Canaanites.

2. **'Anath.**—The etymology and meaning of her name are obscure (perhaps from ענה in a transitive sense, 'afflict,' 'conquer'). That she has anything to do with the Bab. goddess *Antum*, the consort of Anu, is extremely doubtful: (1) because the reading *Antum* is uncertain; (2) because this goddess plays an unimportant part in early Bab. religion; and (3) because in Canaan this name has the initial guttural ע, which is not found in Babylonian. 'Anath was widely worshipped in the Semitic world, and there is no reason to doubt that she was a primitive Semitic divinity. The place-name *Anati* in the Amarna letters (Winckler, 125. 43) probably contains her name. *Beth-'Anath* in Naphtali is mentioned in the list of Thutmose III. (No. 111), also in a list of Seti I. (Müller, 195; cf. Jos 19^{38}, Jg 1^{33}), and there was another *Beth-'Anath* in Judah (Jos 15^{59}). *'Anathoth*, near Jerusalem, was also named after her (Jer 1^{1}), and the father of Shamgar, judge of Israel, was called *'Anath*, according to Jg 3^{31} (? cf. 5^{6}). Her cult had penetrated to Egypt as early as the reign of Thutmose III. (Müller, *Asien*, p. 313). A team of horses belonging to Seti I. bore the name ''Anath is satisfied' (Breasted, *Anc. Rec.* iii. 43). One of the dogs of Ramses II. was called ''Anath is protection' (Breasted, iii. 201). In one of his inscriptions Ramses III. says: ''Anath and 'Ashtart are his shield' (Breasted, iv. 62). On the Egyptian monuments 'Anath is represented in profile, holding a shield and spear in her right hand, and a club in her left hand. By the Egyptians she was evidently regarded as a war-goddess. Her name occurs down to late times in Phœnician inscriptions (see Baethgen, *Beitr.* p. 52).

3. **Edom**, 'maker,' whose worship is attested by the names *'Obed-Edom* (2 S 6^{10}) and עבראדם (*CIS* i. 367), appears in the place-name *Sha-ma-sha '(E)-tiu-ma*=Shamash-Edom, in the list of Thutmose III. (No. 51; Müller, *MVG*, 1907, p. 18); also, perhaps in *Udumu* (Amarna, Winckler, No. 237), *Adam* (Jos 3^{16}), and *Admah* (Gn 10^{19} $14^{2.8}$, Dt 29^{23}, Hos 11^{8}). In an Egyp. magical text we meet 'Resheph and his wife Edom' (Müller, p. 315), which shows that Edom was also construed as feminine.

4. **Aven**, 'strength,' is perhaps present as the name of a deity in *Beth-Aven*, 'house of strength' (cf. *Beth-el*, *Beth-Shemesh*; Jos 7^{2} 18^{12}, 1 S 13^{5} 14^{23}). In Hos 4^{15} 10^{8} it appears as a sanctuary.

5. **Bezeḳ**, 'scattering' (?), seems to be a Divine name in the place-name *Qir-Bezeḳ* in a list of Ramses III. (Müller, *Eg. Res.* p. 49), and in the name of the Canaanite king, *Adoni-Bezeḳ*, 'my lord is Bezeḳ' (Jg 1^{5-7}).

6. **Gad**, 'fortune,' is a well-known Semitic deity (see ARABS, vol. i. p. 662; BAAL, vol. ii. p. 290). His cult survives in the place-name *Migdal-Gad* (Jos 15^{37}), and also probably in the tribal name *Gad*.

7. **Gil**, 'joy,' must be a god in the woman's name *Abi-Gil*, which cannot be translated 'father of joy,' but must be translated 'joy is a father.' The place-name Gilo(n) (Jos 15^{51}, 2 S 15^{12}) may also be named after him.

8. **Ḫiba** (etymology unknown) appears as a god in the name of the king of Jerusalem in the Amarna letters, 'Abd-Ḫiba, 'servant of Ḫiba.'

9. **Chemosh** (etymology unknown) appears perhaps in the place-name *Michmash*, 'place of Chemosh.'

10. **Muth**, 'death,' was a deity among the Phœnicians (Euseb. *Praep. Evang.* i. 38), and appears also in the Heb. personal name *Aḥi-moth*, 'death is a brother' (1 Ch 6^{25}). It may be found in the place-name *'Az-maweth* (Ezr 2^{24}, or *Beth-'az-maweth*, Neh 7^{28}), 'death is strong'; perhaps also in *Jar-muth*, a Canaanitish city (Jos 10^{3} etc.), and *Jeri-moth* (1 Ch 7^{7} etc.). This seems more likely than that we have here the Egyptian deity Muth. None of the other Egyptian deities obtained such a foothold in Canaan that towns were named after them, and it is not probable that this happened to this relatively obscure goddess.

11. 'Azar, 'help,' appears as a god in such proper names as *Abi-'Azar*, ''Azar is a father,' *Eli-'Azar*, or '*Azari-el*, ''Azar is god.' Hence the name of the famous *maṣṣeba Eben 'ezer*, which was probably a survival from Canaanitish days, should apparently be translated 'stone of 'Ezer.'

12. 'Esau, 'maker' (cf. 'Edom'), was worshipped by the Phœnicians, according to Philo Byb. (Euseb. *Praep. Evang.* i. 35), who calls him *Usoos*. He seems to have been regarded as a rough huntsman, like 'Esau of Hebrew tradition. It is probable that he was known to the early Canaanites, although his name does not occur in any of our sources. His feminine counterpart '*A-ši-ti*—עשתי seems to be found in Egypt (Müller, 316). The picture of her on a rock in the desert near Redesieh (Lepsius, *Denkmaler*, 138) represents her as a wild huntress on horseback, brandishing a shield and spear. In a votive inscription of the XVIIIth dynasty, according to Ebers, '*A-ši-ti* of the sand is named along with Kadesh.

13. Palet, 'deliverance,' appears as the name of a god in the place-name *Beth-Palet* (Jos 15[27], Neh 11[26]), as well as in several Heb. personal names.

14. Sid, 'hunter,' or 'fisher,' perhaps identical with Agreus, 'the hunter,' or his brother Halieus, 'the fisher,' in Philo, ii. 9, appears as a god in such Phœnician personal names as '*Abd-Ṣid*, *Yaton-Ṣid*, *Han-Ṣid*, and in the compound Divine names *Ṣid-Melqart* and *Ṣid-Tanit*. The antiquity of his cult is proved by the name of the city *Ṣid-on* (Meyer, *Gesch.*[2] ii. 1, p. 392).

15. Sedeq, 'righteousness,' is a god in the personal name *Ben-Ṣedeq* (Winckler, *Amarna Let.* 125. 37), also in *Adoni-Ṣedeq* (Adonizedek), the Canaanite king of Jerusalem (Jos 10[1. 3]). He survives in the Phœn. personal names *Ṣedeq-Rimmon* and *Ṣedeq-melek*.

16. Shalem, 'peace,' is well attested as a Phœnician deity (Sidon, 4; *CIG* 4449; *CIS* 15; see Lidzbarski, *s.v.*; Winckler, *KAT*[3] 224). He appears also frequently in Heb. proper names such as *Abi-Shalom*, *Shalmi-el*, etc. His worship in ancient Canaan seems to be established by the name of the city *Jeru-salem* (in the Amarna letters *Uru-salim*), which may mean either 'city of Shalem,' or 'Uru is Shalem,' and also by the sanctuary Jahweh-Shalom (Jg 6[24]). In the Amorite period in Babylonia he appears as *Shulmanu*, whose name was used frequently in compounding the names of later Assyrian kings, *e.g.* *Shalman-ezer*.

17. Jahweh.—Whether Jahweh was known to the Amorites in Canaan and in Babylonia is a hotly-debated question.

The facts are these: In Neo-Babylonian documents from Nippur, Jewish names occur in which an initial *Jehô* is represented by *Jâḫû*, e.g. *Jahu-natanu*=Jeho-nathan (Clay, *Business Documents of the Murashû Sons*, p. 19). In the same documents final *Jahu* or *Jah* is represented by *Jama*=*Jawa*, e.g. *Abi-jawa*=Abi-jah, *Aḫi-jawa*=Ahi-jah. The long list of names of this sort given by Clay (*Light on the Old Testament*, p. 244) leaves no doubt of the identity of *Jawa* with Heb. *Jah*. In Assyrian, initial *Jeho* is represented by *Jau*, e.g. *Ja-u-ḫa-zi*=Jeho-ahaz, *Ja-u-ba'di*=Jeho-abad, so also *Ja-u-a*=Jehu. At the end of names *Jahu* or *Jah* is also represented in Assyr. by *Jau*, e.g. *Ḫa-za-ki-a-u*=Hezekiah, *Na-ad-bi-ja-a-u*=Nedabiah, *Az-ri-ja-a-u*=Azariah. Now, in documents of the 1st dynasty of Babylon, where Amorite names are so common, we find *Ja-u-u(m)-ilu* (*Cun. Texts*, iv. 27), which, after the analogy of the Assyr. names just given, seems to represent Jo-el, 'Jahweh is God'; and in documents of the succeeding Kassite period we find *Ja-u-ba-ni*, *Ja-u-a*, *Ja-a-u*, *Ja-ai-u*, and the feminine *Ja-a-u-tum* (Clay, *Documents from the Temple Archives of Nippur*). *Jau-bani* is a name of the same type as *Ea-bani*, 'Ea is my maker,' or *Ilu-bani*, 'a god is my maker,' and it is difficult to translate it in any other way than 'Jahweh is my maker.' This is the belief of Delitzsch (*Babel u. Bibel*, p. 46), Sayce, Hommel (*ExpT*, ix. 522, x. 42, xi. 270), and Winckler (*KAT*[3] 66 n.). Its correctness is questioned by Zimmern (*KAT*[3] 468), Daiches (*ZA*, 1908, p. 125 ff.), and Meyer (*Gesch.*[2] ii. 1, p. 546). Whether *Ja-PI-ilu* (*Cun. Texts*, viii. 34) and *Ja-'PI-ilu* (*ib.* vii. 20), which occur in documents of the Ḫammurabi period, are to be read *Ja-wi-ilu*, and identified with *Ja-um-ilu*, as Delitzsch, Sayce, Hommel, and Winckler think, is more doubtful; still it is not impossible.

Coming now to Canaan, in one of the tablets of the Amarna period discovered at Taanach the name *Aḫi-ja-mi* or *Aḫi-ja-wi* occurs (Sellin, *Tell Ta'annek*, p. 115). It looks as though we must connect this with the later Bab. spelling of Jewish names in which *Jah* is represented by *Ja-ma* (*Ja-wa*). Some names beginning with *Jah* occur in the Amarna letters, and may possibly be Jahweh-compounds. Furthermore, in place-names of Canaan in the early Egyptian inscriptions *Jah* occurs at the end of words in the same manner as in later Heb. formations. In the list of Thutmose III. (No. 97) the name *Ba-ti-ya-ā* occurs, which can be read only Beth-Jah (cf. *Bithiah*, 1 Ch 4[18]). This is precisely the same sort of formation that is found in the list of Shishak: *Ha-ni-ni-'ā* (No. 95), *Sha-na-y-'ā* (No. 115), *Ba-bi-y-'ā* (No. 118), where the presumption is that these are Heb. names ending in *Jah* (Muller, *Asien*, pp. 162, 312; *MVG*, 1907, p. 26). Jastrow (*JBL*, 1894, pp. 191–227) tries to explain *Jah* in these forms, and in Heb. names, not as the Divine name Jahweh, but as only an emphatic afformative. Delitzsch (*Paradies*, p. 159) regards *Jah* as originally a different deity from *Jahweh*. Both of these theories are difficult in view of the facts that *Jah* and *Jahu* interchange at the ends of names, and that formations ending with *Jah* increase in Heb. history in the same proportion as formations beginning with *Jeho* (Gray, *Heb. Prop. Names*, p. 162). In Gn 22[14] Mori-jah is explained as though it were a Jahweh-compound. This shows at least the feeling of the ancient Hebrews that *Jah* at the end of names was Jahweh. Muller and Sellin suggest that names of this sort may be due to early settling of Hebrews in Canaan; but the tradition that Israel first came to know Jahweh through Moses is well attested by the facts that no names compounded with Jahweh are found in national tradition before the time of Moses, and that names of this sort are exceedingly rare before the time of David.

On the whole, the evidence seems favourable to the idea that Jahweh was known to the Amorites in Canaan and in Babylonia as early as 2000 B.C. If this be so, it is easy to see why he was worshipped by the Kenites, from whom the knowledge of him passed to Israel (see, further, art. JAHWEH).

(*c*) *Bab. gods in Canaan.*—It is now known from the Bab. inscriptions that between 3000 and 1700 B.C. Palestine stood almost constantly under Bab. influence. The depth of the impression that Bab. civilization left at this time is shown by the fact that in 1400 B.C., after Canaan had been 200 years under Egyptian rule, its people still used Babylonian for correspondence with the Pharaoh and with one another. The mounds also contain abundant evidence of the influence of Bab. art (see Paton, *Early Hist. of Syria and Palestine*, p. 49 ff.). It is not surprising, therefore, that Bab. religion exerted a profound impression upon ancient Canaan, and that many of the gods of Babylonia were adopted in that land.

1. Sin.—The cult of the moon-god under his Bab. name Sin is proved by the names Sin-ai and the Desert of Sin, perhaps also by שנאב, the name of the Canaanite king of Admah (Gn 14[2]; cf. Jensen, *ZA* vii. 177). On the cult of the moon in the desert see von Gall, *Altisr. Kultstatten*, p. 2.

2. Ramman-Rimmon was the Bab. equivalent of the Amorite Adad (the root *ramânu*, 'roar,' 'thunder,' occurs only in Bab.), but he was introduced into Canaan as a separate deity. *Giti-Rimûni* occurs in the Amarna letters (Winckler, 164. 45)=*Gath-Rimmon* (Jos 19[45] 21[24f.], 1 Ch 6[54 (69)]). We find also *Rimmon-pereẓ* (Nu 33[19]), the cliff of *Rimmon* (Jg 20[45-47] 21[13]), the spring of *Rimmon* (Jos 15[32] 19[7]), *Rimmon* in Zebulun (Jos 19[13], 1 Ch 6[62 (77)]), and *Hadad-Rimmon* (Zec 12[11]), which is specially interesting because of its identification of Adad with Ramman.

3. Nin-ib.—The god whose name is written ideographically *NIN-IB* has lately been shown to be represented in Aram. translations by אנושת (Clay, *Bab. Exp. Univ. Penn.* x. 8 f.; *JAOS* xxviii. 135 ff.; *Studies in Memory of W. R. Harper*, i. 287 ff.). This, he thinks, should be read *En-mashti*=*En-marti*, the Sumer. equivalent of *Bel-amurru*, 'lord of the Amorite.' In this case *NIN-IB* would be a god of the West who had migrated to Babylonia; but the equivalence with *En-marti*

is very doubtful, and the name seems to be too old in Babylonia to have come in with the Amorites (see Jastrow, *Rel. der Bab. u. Ass.* i. 57). More plausible is the pronunciation *En-nammashti*, 'lord of the creatures' (Hrozný, *RS*, 1908, p. 339 ff.), in which case this is a genuine old Bab. divinity. He appears in the Amarna letters in the place-name *Bit-NIN-IB*, near Gebal (Winckler, 55. 31), and near Jerusalem (183. 15), also in the personal name *'Abd-NIN-IB* (53. 39), in all of which cases it is possible that he is merely the Bab. equivalent of some native Can. deity.

4. **Anu**, the Bab. sky-god, is perhaps found in *Anaharath* (Jos 19[19]), which appears already in the list of Thutmose III. (No. 52) as *('E)-nu-ḥ(e)-r-tu*; also in *Ben-Ana* (Amarna, 125. 35).

5. **Laḥmu**, the god of fertility, is perhaps found in *Beth-lehem* (so Tomkins, Sayce). *Beth-ephrath*, 'house of fertility,' which is found as an explanatory gloss in Mic 5[1] (LXX), seems to confirm this view. That Bethlehem was the seat of a regular cult is evident from 1 S 20[5f. 29], where David is said to have gone to Bethlehem to perform the annual sacrifices of his clan.

6. **Nabu, Nebo**, the patron god of Borsippa, the scribe of the gods, appears in the town Nebo in Moab (Nu 32[3. 38]), also *Nebo* in Judah (Ezr 2[29] 10[43], Neh 7[33]), and Mount *Nebo* in Moab (Nu 33[47], Dt 32[49] 34[1]).

7. **Nergal**, the war-god, is found on a seal-cylinder of Canaanitish workmanship, discovered in the Amarna level at Taanach, which bears the inscription, 'Atanaḥili, son of Ḥabsi, servant of Nergal.' In this case the possibility must be reckoned with that Nergal is the Bab. equivalent of a native deity, but in any case it gives an interesting evidence of the syncretism that was going on in Canaan during this period (Sellin, *Tell Ta'annek*, pp. 27, 105). Nergal is also mentioned in the letter of the king of Alashia (Cyprus) (Winckler, 25. 13, 37). A tablet containing the myth of Nergal and Eresh-kigal was found among the tablets at Tell el-Amarna.

8. **Sheba'**.—In the Bab. pantheon there is a deity *Sibitti*, 'the Seven,' who is identified with the Pleiades. 'The Seven' are also a group of evil demons that are often mentioned in incantations (Zimmern, *KAT*[3] 413, 459). The worship of *Sheba'*, 'seven,' in Palestine is shown by the woman's name *Bath-Sheba'*, daughter of Sheba', and by several other OT personal names. The place-name *Be'er-Sheba'* is most naturally explained with reference to this cult.

Seals representing various Bab. divinities have been found in the Amorite levels at Gezer, and one tablet commonly called the 'Zodiacal tablet,' found in debris contemporary with the Amarna letters, bears the emblems of a large number of the Bab. gods (*PEFSt*, 1907, pp. 245, 263; 1908, pp. 26 ff., 78, 186, 208, 245). In the light of this evidence we may safely infer that the Amorites were familiar with the Bab. religion, and that many Bab. gods won an established place in their pantheon. Many of the Bab. elements in the later Heb. religion were probably learned by the Hebrews from the Canaanites.

(*f*) *Egyptian divinities in Canaan.*—During the Neolithic period there is no evidence of Egyptian intervention in Palestine, but in the earliest Semitic period such intervention began. King Snofru of the IVth dynasty (*c.* 2900 B.C.) brought cedar-wood from Lebanon (Breasted, *Anc. Rec.* i. 66). Under Pepi I. of the VIth dynasty, Palestine was invaded by an Egyptian army under the leadership of Una (Breasted, *op. cit.* i. 142 f.). The excavations at Gezer show that Egyptian influence was strong there at least as early as 2500 B.C., and this influence continued throughout the entire history of this city (*PEFSt*, 1903, p. 309). Scarabs of every dynasty from the VIth onward have been found in the various levels, and are an important aid in determining the chronology of the mound. A funerary statue, bearing an Egyp. inscription of the VIth dynasty, has also been found at Gezer (*PEFSt*, 1903, pp. 36, 125). From the period of the XIIth dynasty a burial-cave has been discovered, containing a number of interments that are thoroughly Egyptian, with the exception of embalming (*PEFSt*, 1905, p. 316; 1906, p. 122). A stele and a statuette of the XIIth dynasty have also been unearthed (*PEFSt*, 1904, p. 121; 1906, p. 122). The traces of early Egyptian influence in Taanach and Megiddo are less numerous; still they are not wanting. The seal-cylinder of the Ḥammurabi period, discovered by Sellin at Taanach, bears also Egyptian emblems—an interesting evidence of the meeting in Palestine of the two great civilizations of antiquity. Under dynasties XVIII.–XIX. (1600–1200 B.C.) Canaan was almost continuously under Egyptian rule, and its civilization received a strong Egyptian impress. A large Egyp. hieroglyph of the XIXth dynasty indicates the existence of an Egyp. temple or palace at Gezer (*PEFSt*, 1908, p. 200). At Tell esh-Shihab, near Damascus, there is a votive stele of Seti I. (*PEFSt*, 1904, p. 78). At Sa'adiyeh, east of the Sea of Galilee, is a monument of Ramses II. (*ZDPV* xiv. p. 142), and at the mouth of the Nahr el-Kelb, near Beirut, are inscriptions of several Egyp. kings. In view of these facts, it is not surprising that Egyp. religion found considerable acceptance in ancient Canaan.

1. **Hathor**, the Egyptian goddess of love, was early identified with 'Ashtart, as is shown by the artistic representations of this goddess. She has frequently the horns and other attributes of Hathor (see above, p. 182). The Ba'alat of Gebal was represented in precisely the same manner as Hathor, with the solar disk between two horns (Meyer, *Gesch.*[2] ii. 1, p. 394), and in Egypt she was known as the Hathor of Gebal (Müller, *Asien*, p. 314).

2. **Bes**, the ugly dwarf-god, was more popular in Canaan than any other Egyptian deity. Numerous images of him are found in the mounds at all levels (*PEFSt*, 1903, p. 122; 1904, p. 288; Sellin, *Tell Ta'annek*, p. 105).

3. Other Egyptian figures, supposed to represent **Ptah, Osiris, Sebek**, etc., have been found in single specimens (*PEFSt*, 1903, pp. 48, 122; Sellin, *Tell Ta'annek*, p. 107).

4. **Scarabs** were used as amulets in Canaan as in Egypt, and were buried with the dead. They have been found in large numbers (*PEFSt*, 1902, p. 365; 1903, pp. 21, 390; 1904, pp. 20, 224; 1905, pp. 186, 188; 1907, p. 266; Sellin, *Tell Ta'annek*, p. 111).

5. **Amon-Re**, the patron of Thebes, and the chief god of the empire so long as Thebes was the capital, received much compulsory service in Canaan during the period of the Egyptian supremacy. After his victorious campaigns, Thutmose III. gave three cities in Northern Syria to Amon (Breasted, *Anc. Rec.* ii. 223). In the Amarna letters (Knudtzon, 59. 9) the people of Tunip say: 'The gods and the (wooden) *mutashshu naprillan* of the king of Egypt dwell in Tunip.' Rib-Addi of Gebal invokes Amon as 'the god of the king' (Winckler, 54. 4). In another letter he couples him with the Ba'alat of Gebal (Winckler, 67. 5). Amon also occurs in one of the tablets from Taanach (Sellin, *Tell Ta'annek*, p. 119). In other cases Amon was identified with the native sun-god Shamash. Thus Rib-Addi combines Shamash with the Ba'alat of Gebal in the same manner in which he combines Amon (Winckler,

87. 62 ff.). Similarly, when Abimilki of Tyre calls the Pharaoh Shamash, he is thinking of Amon (Winckler, 150. 6 ff.). One Canaanite bears a name compounded with Amon, namely, *Amanhathi* (Winckler, 131). Ramses III. records the building of a temple in Zahi, in Syria, where there was a great statue of this god, to which the people of Syria brought their presents (Breasted, *Anc. Rec.* iv. 123). It was also customary for the Pharaoh to send an image of Amon to one of his friends in Canaan upon whom he wished to confer honour. Thus, in the reign of Ramses XII. (*c.* 1100 B.C.), Hrihor, the high priest of Amon at Thebes, sent a certain Wenamon to carry an image called 'Amon of the Way' to Gebal, and to bring back thence cedar wood (Breasted, *Anc. Rec.* iv. 278 ff.). Incidentally it is mentioned that the forefathers of the king of Gebal had spent their days sacrificing to Amon (p. 283). This king of Gebal had a butler called Pen-Amon (p. 284). The cult of Amon never took a strong hold upon the affection of the Canaanites, for he was identified in their minds with the exactions of the Egyptian government. So soon as Egyptian authority was relaxed, his worship died out, and it has left no traces in any of the place-names of the land. The report of Wenamon shows clearly how Amon had lost prestige in Canaan by the time of the XXth dynasty.

6. The cult of the Pharaoh.—In Egypt the Pharaoh was worshipped as an incarnation of Amon-Re, and in the palmy days of Egyptian rule this dogma was enforced in Canaan. The image of the king was set up in certain cities alongside of that of Amon, and on stated occasions the Syrian princes were required to pay homage to it (Winckler, 51. 9 f.). The worship of the king seems to have consisted chiefly in the burning of incense; hence, when a beleaguered town wished to surrender, it signified this by holding up a lighted censer on its battlements (Müller, *Asien*, p. 305). One of these censers found at Megiddo is depicted in the frontispiece of Schumacher's *Tell el-Mutesellim*. The writers of the Tell el-Amarna letters address the king as 'my lord, lord of the lands, my father, my sun, the sun of heaven, the sun of the lands, my god, the breath of my life.' Occasionally they append 'son of Shamash' as a translation of the Egyp. title 'son of Re,' with the absurd result that the Pharaoh is entitled both 'sun' and 'son of the sun.' These were conventional formulas that the Canaanites did not take at all seriously, and the moment that Egyptian rule was relaxed the worship of the Pharaoh ceased along with that of his father Amon-Re.

II. THE SANCTUARIES OF CANAAN.—(*a*) *Holy cities.*—A large number of places in Canaan show by the meanings of their names that they were set apart as sanctuaries.

Thus, in the annals of Thutmose III., we meet *Ḳadesh*, 'the sanctuary' (No. 1) = Amarna *Ḳidshi*; *Hosah*, 'asylum' (No. 3) = Amarna *Ḫazi*; *Ṭibḥath*, 'sacrifice' (No. 6) = *Ṭubiḫi* (Amarna 127); *'Nō-r-p-'a*, 'healing-place' (No. 29), cf. *Jirpe-el* (Jos 18^{27}); *Akshaph*, 'sorcery' (No. 40); *Hekalayim*, 'two temples' (No. 89). In the Amarna letters we meet in Northern Syria *Bit-arḫa*, 'house of the new moon' (Knudtzon, 83. 29); *Bit-NIN-IB* (Winckler, 55. 31); *Bit-tiri*, 'house of the turtle-dove' (?) (Winckler, 82. 12); *Bur-Selem*, 'the well of Selem' (Winckler, 71. 64, 67); *Ṣiduna*, Sidon (from the god Sid); in Palestine west of the Jordan, *Ajaluna*, 'stag-town' (Winckler, 173. 20); *Bit-NIN-IB* (Winckler, 183. 15); *Uru-salim*, 'city of Shalem'; in Palestine east of the Jordan, *Ashtarti* (Winckler, 142. 10, 237. 21).

Many place-names in Israel show by their meaning, or by something connected with them, that they are survivals of ancient Can. sanctuaries. Such are *Beer-Sheba*, 'the well of the Seven'; *Hebron*, 'alliance'; *Carmel*, 'garden,' in Judah, where a feast occurred (1 S 25$^{2-7}$) and where there was a standing-stone (1 S 15^{12}); *Beth-'Anath*, 'house of 'Anath' (Jos 19^{38} etc.); *Kirjath-je'arim*, or *Ba'al Judah* (Jos 15^{9}), where the ark was long deposited (1 S 6^{21}, 2 S 6^{2}); *'En-shemesh*, 'spring of the sun' (Jos 15^{7} 18^{17}); *Migdal-Gad*, 'tower of the god of fortune' (Jos 15^{37}); *Beth-Leḥem*, 'house of Laḥmu'; *Beth-Dagon*, 'house of Dagon' (Jos 15^{41}); *Jabne-el*, 'a god builds,' apparently the name of a deified ancestor (Jos 15^{11}); *Ba'al-perazim*, 'Ba'al of the clefts' (2 S 5^{20}); *Ba'al-hamon* (Ca 8^{11}); *'Emeḳ ha-elah*, 'valley of the sacred tree' (1 S 17^{11}); *Jezre-el*, 'a god sows,' apparently a deified ancestor (Jos 15^{56}); *Nebo*, named after the Bab. god Nabu (Ezr 2^{29} 10^{43}); *Ir-naḥash*, 'city of the serpent' (1 Ch 4^{12}); *'Emeḳ-rephaim*, 'the valley of the ghosts' (Jos 15^{8}); *Gilgal*, 'the stone circle' (Dt 11^{30} etc.); *Mispah*, 'a place of worship for the Israelites' (1 S 7^{6} 10$^{17ff.}$); *Ramah*, 'the height,' where sacrifice occurred (1 S 9^{12}, cf. Hos 5^{8}); *Gibeath-ha-elohim*, 'the hill of God' (1 S 10^{5}); *Ba'al-tamar*, 'Ba'al of the palm-tree' (Jg 20^{33}); *Gibeon*, 'the height,' where there was a great high place (1 K 3^{4}); *'Anathoth*, 'the 'Anaths,' where a family of priests was settled (1 K 2^{26}, Jer 1^{1}); *Nob*, where there was a temple and a priesthood of Jahweh (1 S 22$^{9ff.}$); *Ba'al-hazor*, 'Ba'al of the enclosure' (2 S 13^{23}); *Beth-el*, 'house of the god'; *Timnath-ḥeres*, 'precinct of the sun' (Jg 2^{9}); *Ba'al-shalisha* (2 K 4^{42}); *Shiloh*, where there was a temple of Jahweh (1 S 1^{9} ^{24}); *Shechem*, where there was a holy tree, 'the oak of the diviner' (Gn 12^{6}, Dt 11^{30}), a holy stone (Jos 24^{26}), and an altar (Gn 12^{7} 33^{20}); *'Ophrah*, 'young gazelle,' where there was a holy tree and a holy stone (Jg 6); *Pir'athon*, where was shown the grave of the hero 'Abdon (Jg 12^{15}); *'Ayyalon*, 'stag-town,' where there was a grave of the hero 'Eylon (Jg 12^{12}; note the identity of the consonants in the name of the hero and of the place); *Jiphtaḥ-el*, 'the god opens' (Jos 19$^{14.27}$), apparently the name of a tribal hero; *Gibe'ath ham-moreh*, 'hill of the oracle' (Jg 7^{1}); *Ḳedesh*, 'the sanctuary' (Jg 4^{11}, 1 Ch 6$^{57 (72)}$); *Shamir*, 'guardian,' the burial-place of the hero Tola' (Jg 10^{1}); *Migdal-el*, 'tower of the god,' (Jos 19^{38}); *Beth-shemesh*, 'house of the sun' (Jos 19^{38}, 1 S 6$^{14.18}$), called also *Ir-shemesh*, 'city of the sun' (Jos 19^{41}); *Ne'i-el*, 'trembling (?) of the god' (Jos 19^{27}); *Timnah*, 'the sacred precinct' (Jg 14^{1} etc.); *Ba'al-Gad* (Jos 11^{17} etc.); *Dan*, 'the judge,' where there was a temple (Jg 18^{30}); *'Ashtaroth*, 'the Astartes,' probably to be read as a singular *'Ashtart* (Jos 13^{31}) = *Be'eshtarah*, or *Beth-'Ashtart* (Jos 21^{27}); *Ẓaphon*, 'the north' (Jos 13^{27}); *Mizpah*, 'the watch-tower,' connected with the legends of Jacob and Laban (Gn 31), and a place of assembly for Israel (Jg 11^{11}); *Maḥanaim*, where the angels of God appeared to Jacob (Gn 32$^{2.3}$); *Penuel*, 'face of the god' (Gn 32^{31}); *Goren ha-aṭad*, where Jacob was buried (Gn 50$^{1-11}$); *'Aṭaroth*, whence Mesha carried away 'the altar of its beloved,' *i.e.* its god (*Mesha Inscr.* line 20); *Ba'al-Pe-or* (Nu 25$^{3-5}$ etc.); *Nebo*, named after the Bab. god Nabu (Nu 32^{3} etc.); *Beth-Ba'al-Me'on* (Jos 13^{17}); *Bamoth-ba'al*, 'high places of the Ba'al' (Nu 22^{41}, Jos 13^{17}); *Naḥali-el*, 'brook of the god' (Nu 21^{19}); *Shiṭṭim*, 'the acacias,' where Israel was seduced to Moabite rites (Nu 25^{1}, Hos 9^{10}). In all these cases it is probable that we are dealing with ancient Can. sanctuaries that were appropriated more or less completely by the Israelites to the service of Jahweh.

(*b*) *Sacred natural objects.*—The sanctity of the places that have just been mentioned was due in most cases to the presence in them of some awe-inspiring natural object in which the deity was believed to manifest his presence. Such were springs, trees, mountains, and caves. All of these holy objects that we meet in the OT were doubtless an inheritance from the Canaanites (see BAAL, vol. ii. pp. 285–288, where full lists are given). The sanctuary at Sinai seems to have been a cave (Ex 33^{22}, 1 K 19^{9}); so also at Hebron (Gn 23^{9}). In Gezer a cave was reverenced by the primitive Neolithic inhabitants, and retained its sanctity as part of the high place down through Semitic times (*PEFSt*, 1903, p. 24).

(*c*) *High places.*—In connexion with such holy objects, sacred enclosures, known as *bāmōth*, 'high places,' were established. In the earliest times these were open to the sky, being merely fenced off from the adjacent territory by walls or lines of stones. The high place at Tell eṣ-Ṣâfi was rectangular in form. At the two ends there were small chambers, and on one side was the entrance (Bliss-Macalister, *Excavations*, fig. 9). Most of the sanctuaries of Canaan were of this simple type, and remained so throughout the entire Israelitish period. No certain traces of covered temples have been discovered in the excavations; nevertheless, it is certain that such temples existed in the larger cities. We have noticed already the one that Ramses III. built for Amon Re in Zahi, and in the letter of Rib-Addi of Gebal (Winckler, 71. 59) we read: 'Let not the king, my lord, neglect the city, for there is much silver and gold in it; great will be the spoil in its temple (*bit-ilanishi*) it it is captured.' The mention of 'gods,' *i.e.* images, that have been

carried off from other places also suggests that there must have been houses in which these images were kept. A small terra-cotta model from Gezer represents a deity seated within a covered edifice (*PEFSt*, 1908, p. 22). The OT alludes frequently to the high places of the Canaanites, mostly in commands to destroy them. The equipment of the high places consisted of—

1. **Maṣṣēbôth**, or standing-stones.—In all Semitic lands the most primitive and the most persistent symbols of the deity were the *maṣṣēbôth*, or standing-stones (see MASSEBA). Tall, slender stones were phallic emblems and represented male divinities, while small conical stones depicted the female breast and represented female divinities (see 'ASHTART, 4; Spoer, *ZATW*, p. 286). The OT frequently refers to these as used by the Canaanites, and commands that they shall be destroyed lest they seduce the Israelites to worship strange gods (Ex 23[24] 34[13], Lv 26[1], Dt 7[5] 12[3]). These prohibitions date from a late period. In early times Israel appropriated the *maṣṣēbôth* of its predecessors, and dedicated them to the service of Jahweh. A large number of these sacred stones are mentioned in the earlier writings of the OT (see BAAL, vol. ii. p. 287). They were probably inherited from the earlier inhabitants of the land. In the list of Thutmose III. (No. 11) we meet *Kirjath-neṣib*, 'town of the standing-stone' (Müller, *OLZ* ii. 138). The excavations have revealed such pillars in the high places of all the cities. At Tell eṣ-Ṣâfi there were three standing-stones within the sacred enclosure (Bliss-Macalister, fig. 9). At Gezer there was an alignment of eight huge stones. The second stone in the line from N. to S. is much smaller than the rest, and has been worn smooth by rubbing, kissing, or sacrificing upon it. It was evidently the most sacred object in the temenos, and the conjecture is reasonable that it was the symbol of the mother-goddess 'Ashtart, whose plaques are found in such large numbers in all levels of the mound. She was the analogue of the ancient Semitic matriarch. Consequently the seven tall stones in the line must represent male divinities who were regarded as the polyandrous consorts of 'Ashtart (see *PEFSt*, 1903, p. 25 ff., 287; 1904, pp. 118, 196; Macalister, *Bible Side-Lights*, p. 57 [a photograph of the stones is given on p. 51]). The enormous number of phallic emblems found in the strata covering the floor of the high place prove that it was devoted to the cult of the reproductive forces of Nature (*PEFSt*, 1903, p. 36). Two pillars surrounded with cup-marks were found by Sellin in the high place at Taanach (*Tell Ta'annek*, p. 104). Pillars with cup-marks upon them were discovered by Schumacher at Megiddo (*Tell el-Mutesellim*, pp. 105 ff., 125 ff., 163 ff.). These pillars, unlike those at Gezer, are artificially hewn, and hence should perhaps be classified as *ḥammānîm* rather than *maṣṣēbôth* (see BAAL, vol. ii. p. 287).

2. **Asherim.**—The *ăshērîm*, or sacred posts, were indispensable accessories of Canaanite high places (see art. POLES). The Hebrews adopted these from the Canaanites along with the *maṣṣēbôth*, and they were used in the cult of Jahweh down to the Deuteronomic reformation. After that time an effort was made to destroy them (Ex 34[13], Dt 7[5] 12[3]). At an early date 'Ashtart was confused with her symbol, so that Ashera was used as a proper name. She appears in Babylonia, in connexion with the Amorite migration, in tablets of the Ḫammurabi dynasty. In one inscription set up in honour of Ḫammurabi by a certain Ibi-Ashratum, she appears as 'Ashratum, bride of the king of heaven, mistress of luxury and splendour, dwelling in the mountain, the merciful one who reverently supplicates her husband' (Hommel, *Aufs. u. Abh.* p. 211 ff.). In a seal published by Sayce (*ZA* vi. 161) she is coupled with Ramman in the same manner as 'Ashtart is coupled elsewhere; and in a hymn she is associated with Amurru, the equivalent of Ramman (Reisner, *Hymn.* p. 139). In Babylonia, Ashera is regarded as a goddess of the desert, or of the west-land (Zimmern, *KAT*[3] 432). *Abd-Ashirta*, 'servant of Ashera,' is mentioned in the Amarna letters more frequently than any other person. In one letter (Winckler, 40. 3) he calls himself '*Abd-Ash-ta-[ar]-ti*, i.e. 'servant of 'Ashtart,' which shows the equivalence of the two names. In one of the tablets from Taanach (Sellin, p. 113) we read: 'If the finger of the goddess Ashirat shall indicate, let one observe and obey.' The *ăshērîm*, being made of wood, have not survived in any of the mounds of Palestine.

3. **Altars.**—In the most ancient high places there were probably no altars. The *maṣṣēbā* served both as idol and as altar. Subsequently a separate stone or a mound of earth was set apart for purposes of sacrifice. In the high place of Gezer no altar was found, but a hollowed block of stone standing near one of the pillars may have been used to receive blood or offerings (*PEFSt*, 1903, p. 31). At Taanach, in the lowest Semitic level, Sellin found a rock-hewn altar with cup-marks and a drain for carrying off the blood (Sellin, pp. 34, 103). A similar rock-altar was found by Schumacher at Megiddo (*Tell el-Mutesellim*, p. 155 ff.). In both of these cases remains of sacrifices and religious emblems found on the spot leave no doubt as to the character of the stone blocks. The altars of the Canaanites are mentioned repeatedly in the OT (Ex 34[13], Dt 7[5] 12[3], Jg 2[2]), and it is probable that the famous altars which the Israelites traced back to patriarchal times were derived from their predecessors (Gn 12[7f.] 13[4.18] 22[9] 26[25] 33[20] 35[1ff.]).

4. **Images.**—Images were not a part of the equipment of most of the high places, for in early times the *maṣṣēbā* served both as idol and as altar. The OT mentions *maṣṣēbôth*, *ḥammānîm*, *ăshērîm*, and altars, as found in the Canaanite high places, but rarely images (Jg 6[25], 2 Ch 14[3-6] 34[4-9]). Nevertheless, idols were in use in the larger cities. In an Amarna letter (Winckler, 105. 27) Rib-Addi of Gebal writes to the Pharaoh: 'If no troops are at hand, then send ships that may fetch us alive to my lord along with the gods.' Here evidently images are meant. In another letter (Winckler, 138 rev. 18 ff.) Akizzi of Qatna writes: 'O lord, thy fathers made Shamash, the god of my father, and put their name upon him. But now the king of the Hittites has carried off Shamash, the god of my father. Let the king know, accordingly, how it stands with the god; and if Shamash, the god of my father, is to return to me, then let the heart of my lord care for him and give gold for Shamash, the god of my father, as thy fathers have done, and let my lord put his name upon Shamash along with the former one.' This shows that in this period, as in later times, idols were taken prisoners of war, and that conquerors were in the habit of carving their names upon them (cf. *KIB* i. 26 f.; ii. 62 f., 130 f.).

Images such as might have been used for public worship have not been found in any of the mounds of Palestine. The 'Ashtart plaques, which have been excavated in such numbers, were apparently not meant for worship, but for presentation as gifts to the goddess, like the votive figures that have been discovered at the Argive Heræum, Delos, and other ancient Greek sanctuaries. The fact that they are always broken shows that, when they had accumulated in too great quantities, they

were destroyed by the priests in order to prevent their being used again. Apart from these, and the little figures of deities imported from Egypt, representations of gods in human form are rare in Canaan. It is uncertain whether the few statuettes that have been found are really idols (*PEFSt*, 1907, p. 246; 1908, p. 23; Schumacher, *Tell el-Mutesellim*, p. 51; Vincent, *Canaan*, ch. iii.). Evidently fetish stones continued to be the chief symbols of the great gods down to late times. Figures of animal gods are more common (see above, p. 181).

III. RELIGIOUS RITES OF THE CANAANITES.—

1. Animal-sacrifice.—*Maṣṣēbôth* and altars imply the existence of sacrifice. We must suppose that the *zebaḥ*, or sacrificial meal, as it was practised among the Arabs, Hebrews, and other Semites, existed also in Canaan. Animals that were regarded as proper for food were brought to the sacred stone or altar and were slain upon it, and the blood was poured out at the base of the stone. Parts of the animal were then given to the god by throwing them into a pit, or by burning; and other parts were eaten by the worshippers in a meal of communion. The report of Wenamon speaks of a daily sacrifice offered in the fortress of Zakar-ba'al, king of Gebal (Breasted, *Anc. Rec.* iv. 280 f.). Direct evidences of animal-sacrifices are not frequent in the mounds, since the eating of the animals resulted in the scattering of their skeletons. Nevertheless, accumulations of bones in the strata near all the high places make it evident that among the Canaanites, as among the early Hebrews, every slaughter was at the same time a sacrifice (cf. *PEFSt*, 1902, p. 32).

2. Infant-sacrifice. — Traces of infant-sacrifice are much more clear. In the Canaanite levels of all the mounds, jars containing the bones of new-born infants have been found in large numbers, buried beneath the floors of the high places, under the corners and thresholds of houses, and in other places where sacrifice would naturally occur (Petrie, *Tell el-Hesy*, p. 32; *PEFSt*, 1902, pp. 303, 352; 1903, pp. 32 ff., 121; 1904, p. 119; 1906, pp. 63 f., 117 f., 159; Sellin, p. 35; Schumacher, p. 18). With these infants were deposited small jars containing food and drink. In some instances the bones showed signs of burning, but usually this was not the case. The jars were often filled with fine sea-sand. It is evident that first-born infants were sacrificed in honour of the mother-goddess, the giver of children. Such rites were common among all the Semites (see AMMONITES, vol. i. p. 391); it is not surprising, therefore, to find them among the Amorites.

3. Sacrifice of adults was not so common as sacrifice of children; still it was occasionally practised. In several cases the upper halves of bodies have been found in tombs, while the lower halves are missing. The analogy of rites in other parts of the world leads to the conjecture that these are cases of sacrifice (*PEFSt*, 1903, pp. 17 ff., 51; 1908, p. 186). The skull of a man was found in the high place at Gezer (*PEFSt*, 1903, p. 225; 1904, p. 118). In a bank of hard earth near the high place a number of human bones were found (*PEFSt*, 1903, p. 317). The head of a girl was also found near the standing-stones (*PEFSt*, 1907, p. 268). Foundation-sacrifices of adults, buried under the corners of buildings, are frequent in all the mounds (*PEFSt*, 1903, p. 224; 1904, p. 391; 1905, p. 198; 1908, p. 186; *MNDPV*, 1905, p. 10).

4. Lamp and bowl deposits. — In the period contemporaneous with Egyptian rule in Canaan, deposits of lamps placed between two bowls begin to occur under the corners or thresholds of houses, in positions where formerly sacrificed infants were buried. It is clear that these are intended as substitutes for child sacrifice. The lamp, the symbol of life, takes the place of the life of the child. In a few cases both the sign and the thing signified are deposited together. Lamp and bowl deposits become increasingly frequent in the upper Canaanite and Israelite levels, and jar burials decrease in the same ratio, until, about the time of the Exile, jar-burials cease altogether and only lamp and bowl deposits remain (*PEFSt*, 1903, pp. 10 f., 228, 299, 306 ff.).

5. Incense.—It is known from the Egyptian inscriptions that incense was offered to the Pharaoh (Müller, *Asien*, p. 305), and there is no doubt that it was also presented to the gods. In the annals of Thutmose III. it is often mentioned as part of the tribute from Canaan (see Breasted, *Anc. Rec.*, Index, *s.v.* 'Incense'). The town *Lebonah*, 'frankincense' (Jg 21[19]), is mentioned already in the list of Thutmose III. (No. 10). Incense-burners have been found in the mounds (Schumacher, *Tell el-Mutesellim*, frontispiece).

6. Libations must also have been offered, but it is difficult to tell which of the vessels found in the mounds were used for this purpose. A sherd of the Israelite period from Lachish (Bliss, p. 102) bears apparently the inscription לְהַסֵּךְ, 'for making libation.'

7. Music. A large rattle was found in the temple enclosure at Gezer (*PEFSt*, 1903, p. 46). Similar ones have been discovered at Lachish (Bliss, pp. 117, 120), and at Taanach (Sellin, p. 19). It is conjectured that they were used in the cult, like the sistra of the Egyptians, to mark time in the chanting of hymns. Musical instruments were part of the spoil carried away from Canaan by the Egyptians; and two Egyptian instruments, the *ken'noru*, or 'lyre,' and the *nataḳi*, or 'castanet,' have Semitic names, and were probably derived from Canaan. The presence of musical instruments implies the existence of song, and song implies a development of poetry. If there was secular song, there was doubtless also song in the service of the gods, as in Egypt and Babylonia. Such poetic effusions addressed to the Pharaoh as we meet in the letters of Yabitiri, governor of Joppa (Winckler, No. 214), or of Abimilki, king of Tyre (Winckler, 149), would scarcely have been possible, if the scribe had not been familiar with hymns to the gods. The long influence of Bab. civilization in Canaan also makes it probable that the psalm-type of composition had already found its way into that land.

8. Amulets, designed to protect the wearer against evil influences, were worn by the Canaanites in all periods. The most common type was the so-called 'Horus-eyes,' derived from Egypt, and intended to protect the wearer against the evil eye (*PEFSt*, 1903, p. 213; Breasted, *Ancient Records*, Index, *s.v.* 'Eye-amulets'). For other types of amulets see Vincent, *Canaan*, p. 176 f., and artt. CHARMS AND AMULETS.

9. Divination.—In one of the cuneiform letters from Taanach we read: 'If the finger of the goddess Ashirat shall indicate, let one observe and obey' (Sellin, p. 113). This shows that soothsaying was practised at sanctuaries, as in later Israel. The existence of oracles is further established by the names of many Canaanitish holy places: *e.g.* *Akshaph*, 'divination' (Jos 11[1] etc.); '*En-mishpat*, 'the spring of decision,' at *Kadesh*, 'the sanctuary'; the terebinth of *moreh*, 'the oracle' (Gn 12[6f.] 13[18]); the terebinth of *me'onenim*, 'the diviners' (Jg 9[37]); *Gibe'ath ham-moreh*, 'hill of the oracle' (Jg 7[1]).

10. Priests.—Sanctuaries and oracles imply the existence of priests who guarded the shrines and cultivated the means of divination, like the old

Arab *kahanat* and the old Heb. *kôhănîm*. In a letter of Rib-Addi of Gebal to the Pharaoh (Knudtzon, 83. 52), mention is made of a certain 'Ummahnu, whose husband is Ishkuru, handmaid of the Ba'alat.' Evidently she was a priestess of the great goddess of Gebal. Akizzi of Qatna complains of the Hittites that they have burned the city and carried away its gods and its *mu-ti* people. From the connexion *mu-ti* can hardly mean anything else than 'priests.'

11. Prophets.—The report of Wenamon (c. 1100 B.C.) relates of the king of Gebal: 'Now while he sacrificed to his gods, the god seized one of the noble youths, making him frenzied, so that he said, Bring the god hither! Bring the messenger of Amon! . . . Now, while the frenzied youth continued in frenzy during the night, I found a ship bound for Egypt' (Breasted, *Anc. Rec.* iv. 280). This shows that the ecstatic prophets of Ba'al and Ashera that we meet in later Heb. history were no new thing among the Canaanites (1 K 18[19]).

Of other Canaanite religious institutions we have no direct evidence, and can only draw inferences from the analogy of the Hebrews and of other Semitic peoples. In all probability the ritual of the Canaanites did not differ greatly from that of Israel in the pre-prophetic period.

LITERATURE.—See the bibliographies under 'AMM, 'ASHTART, and BAAL, and, in addition, Petrie, *Tell el-Hesy* (1891); W. M. Müller, *Asien und Europa nach altägypt. Denkmälern* (1893); Bliss, *A Mound of Many Cities* (1894); Winckler, *Die Thontafeln von Tell-el-Amarna* (=*KIB* v., 1896 [Eng. tr. *The Tell-el-Amarna Letters*]); Trampe, *Syrien vor dem Eindringen der Israeliten* (1898); von Gall, *Altisr. Kultstatten* (1898); Paton, *The Early History of Syria and Palestine* (1901); Bliss-Macalister, *Excavations in Palestine during the years 1898–1900* (1902); Macalister, 'Reports on the Excavation of Gezer,' *PEFSt*, 1902–9; Maspero, *Hist. anc. des peuples d'orient* (1904 ff.); Sellin, *Tell Ta'annek* (1904); Lagrange, *Études sur les religions sémitiques* (1905); Ranke, *Early Bab. Personal Names from the published Tablets of the so-called Hammurabi Dynasty* (1905); W. M. LEWIS BAYLES PATON.

CANDLE.—The root of this word appears in the Lat. *candēre*, 'to shine'; the term itself is directly derived from *candēla*, an old word in Latin speech, having apparently the same meaning. It came in with Christianity, and has held a prominent place in our literature ever since, owing doubtless to the use of candles in religious and superstitious customs, and the figurative and symbolical associations of thought connected with this use. The importance of the term in English speech is well shown in Murray's *OED*. Here we shall confine attention to religious and ecclesiastical usage.

The use of artificial lights in religious ceremonies and observances is not by any means confined to the Christian Church; it has been characteristic of religious customs far into antiquity, and is not to be explained by considerations of utility alone. It springs from a sense of the symbolism inherent in Nature and in the powers and energies of the visible world. The human mind has a deep presentiment of a world behind and above the senses, and naturally sees in the more striking phenomena of the world the images and symbols of things unseen. Light is the most ethereal of all material things, fulfilling as it does so many beneficent functions in the world, and has long been consecrated in the sphere of religion as a symbol of Deity, of Godlike qualities and powers, of truth, purity, holiness, of that which enlightens and purifies the soul. In the Biblical sphere light in its highest sense is given to man in Revelation and in the institutions of religion, in which the ideas of the former are embodied. Of this, the golden candlestick in the tabernacle and the temple was a symbol, since it suggests generally the light which shone upon the world through law and prophecy, and in the ordinances of religion. Similarly, Christ calls Himself the 'light of the world,' and He charges His people to be like the candle which gives light 'unto all that are in the house' (Mt 5[15]). See small type below.

With the rise of gospel light upon the world, the types and symbols of the former dispensation were no longer required; and the NT nowhere enjoins the use of symbols even for its central and essential conceptions. The Church itself is the 'light of the world' (Mt 5[14]), and her light should be such as to render material symbols of it needless and superfluous. Yet it is likely enough that the need which has created Christian art would soon come to be felt, whenever men realized the essential beauty of the Christian conceptions, and the idea of the Church as the light of the world would be the first to call for symbolic and artistic expression.

It may be noted by the way that the word 'candle' has all but disappeared from the English Bible. The RV of 1888 has allowed it only in two places (Jer 25[10], Zeph 1[12] [text, but marg. 'lamps']). Why it should remain in these two solitary instances is quite a puzzle to the reader, since *nēr*, the common Heb. term for 'lamp,' stands in the text, and is so rendered in all other passages. It seems pretty certain that *nēr* must mean not 'candle,' but 'lamp,' since the *lamps* of the golden candlestick were fed with sacred oil. It seems probable also that λύχνος in the NT means 'lamp.'

Lamps (λύχναι, *lucernæ*) were early in use among the Greeks and Romans, as also among more Eastern peoples, though earlier instruments of light (tapers, torches, candles) of various materials and make may have continued among the poor. Numerous specimens of lamps have been preserved, some highly ornamental. In more primitive times, lights were readily obtained from splinters of pine or other resinous wood. These and other combustible substances, steeped in oil or tallow and fastened together with bark, could be used as torches. We read also of torch-cases of metal or clay, which, filled with suitable materials, could produce a bright and steady flame. None of these proved so convenient for ready and general use as the primitive candle, which consisted of a wick of oakum or of the dried pith of reeds or rushes, steeped in wax or tallow. Besides its greater convenience, it could be subjected to artistic treatment in the moulding to adapt it for scenic effect; in consequence of which, doubtless, its supremacy as a religious symbol was finally established.

We may take it as established beyond dispute that there was no ceremonial use of candles or lamps in Christian worship or in churches for the first three centuries. Up to that time the spiritual simplicity of worship as well as the strong antagonism to heathen customs which characterized the early days still continued, and found expression in occasional protests against the corrupting effect of heathen customs.

Tertullian (A.D. 200) inveighs in various places against the burning of lamps and the hanging of wreaths in porches in honour of the gods. Lactantius (A.D. 300), in exposing the folly

of heathen worship, exclaims: 'They kindle lights to Him as though He were in darkness.' 'If they would contemplate that heavenly light which we call the sun, they would at once perceive how God has no need of their *candles*.' 'Is that man therefore to be thought in his senses who presents the light of *candles* and *torches* to Him who is the author and giver of light?' 'But their gods, because they are of the earth, are in need of light that they may not be in darkness; and their worshippers, because they have no taste for anything heavenly, are recalled to the earth even by the religious rites to which they are devoted. For on the earth there is need of light, because its system is dark. Therefore they do not attribute to the gods a heavenly perception, but rather a human one' (*Div. Instit.* bk. vi. ch. 2).

Such protests, however, soon proved unavailing against the full tide of heathen custom which now began to enter the Church. With the conversion of Constantine and the Imperial recognition of Christianity, the new religion found ready nominal acceptance; but many of the old customs continued under new names and different sanctions. We hear first of the ceremonial use of lights at festivals in the dedication of churches and at the tombs of the martyrs.

Paulinus of Nola (A.D. 407) thus describes the feast of St. Felix, to whom his church was dedicated: 'Lights are burned, odorous with waxed papyri. They shine by night and day; night is radiant with the brightness of the day, and the day, itself bright in heavenly beauty, shines yet more with the light of countless lamps.' Jerome fully acknowledges the prevalence of the custom, which he excuses on the ground of the ignorance and simplicity of laymen or superstitious women, though evidently he sympathizes with it. He states that throughout the East 'candles are lit at the reading of the Gospel in full sunshine, not on account of the darkness, but as a token of joy' (*Ep. ad Ripar.*).

From the 4th cent. onwards and down through the Middle Ages, the custom is not only fully established, but is held in the greatest honour. Candles are burnt everywhere in the worship and on all high occasions, in festal services and processions, at baptisms, marriages, and funerals. They stand on the altar, they are placed in front of images and shrines, they are offered as votive offerings to God and to the saints, with prayer for recovery from sickness or for other benefits. There is hardly any service or ceremony by night or day which can be observed without them.

Some contend that the rapid spread of the custom is explained by supposing that it was simply the continuance of an earlier practice when Christian worship was observed in the darkness of the night, or in places like the catacombs from which the daylight was excluded. 'The necessary lights of one period became the ceremonial lights of the next' (Smith, *DCA* ii. 991). This supposition seems improbable and unnecessary. Heathen customs, religious symbolisms, the obvious attractions of artistic display, and scenic effect, together with the universal drift towards externalism and superstition—all these combined offer sufficient explanation.

In relating the origin of the festival of Candlemas (*q.v.*), originally a commemoration of our Lord's meeting with Simeon and Anna in the temple (Lk $2^{27.28}$), but afterwards celebrated in the West at the Feast of the Purification (*Candelaria*), an old writer (Jacob de Voragine, collector of the *Golden Legend*) affirms that this festival succeeded to and continued an earlier custom. 'Since it is difficult,' says he, 'to relinquish custom, the Christians converted to the faith from among the nations found it difficult to abandon this heathen practice, and so Pope Sergius changed it into something better, that the Christians, in honour of the blessed mother of the Lord, might on this day (Feb. 2) enlighten the whole world with lighted candles and wax tapers which had been blessed' (*PRE*³, art. 'Lichtmesse'). This was pre-eminently the Feast of Candles, in which candles were solemnly blessed and distributed among the people, who marched with them afterwards in procession through the city. The Christian reference of the ceremony was to the words of Simeon: 'a Light to lighten the Gentiles.' The higher reference of the custom is seen in the prayer offered in the consecration of the candles: 'Lord Jesus Christ, Son of the living God, Thou true light which lightens every man who cometh into the world, we pray Thee to bless these candles, that, wherever they are lighted, our hearts, enlightened by the invisible fire and purity of the Holy Ghost, may be freed from all blindness of sin and vice, and that after the dark and dangerous pilgrimage of earth we may enter into everlasting light.' Candles so blessed were thought to be a sure protection from many superstitious fears, a shield from thunder and lightning, blighting of the fields, diseases of cattle and other evils, especially the wiles of the devil.

It should be freely admitted that the higher reference of the custom and the Christian symbolism embodied in it were generally kept in view, and occasionally explained and enforced by the clergy. It was enjoined that the candles should be of wax alone, and not of tallow or other substances. 'The fragrant wax, the labour of the bee which dies when its work is accomplished, has mystic significance. It is drawn from the best juices of plants, and has the highest natural worth as a material for offerings.' The symbolism also might vary with the occasion. 'The baptism candle denoted the splendour of good works which open the door to the heavenly wedding-feast; the bride's candle, purity and sincerity of heart; the grave candle, the everlasting light of heaven which the dead enjoy; the Easter candle, the light of the world which breaks the power of death; the burning lights on the altar denote the Church, the light of the world' (*PRE*³, *loc. cit.*).

Yet it is patent to all that the custom has been the source of wide-spread and debasing superstition. This is strikingly seen both within the ranks of the clergy, where the observances were subject to prescribed rules, and among the people at large, where, as among the Russian peasantry at the present day, a consecrated candle is a charm for every evil they can think of. The minute prescriptions to regulate their use on ordinary and high occasions were calculated to induce false and superstitious conceptions among an ignorant or poorly educated clergy, and many old popular delusions which originated in these customs are hardly yet extinct.

At the Reformation the use of candles was abolished in all the Reformed Churches. They are still to be seen on the altar in Lutheran Churches, where they are retained as a symbol; also in many Anglican Churches.

A. F. SIMPSON.

CANDLEMAS.—I. Name.—'Candlemas' is the old English name for the Festival of the Blessed Virgin Mary on Feb. 2, which is called in the English Prayer Book 'The Presentation of Christ in the Temple, commonly called The Purification of Saint Mary the Virgin.'

There is early witness to its use—in the Anglo-Saxon Chronicle under the year 1014: King Swegen ended his days '*to Candelmaessan iii Nonas Februarii*'; in a metrical Homily of 1325: 'The first nam es Candelmesse, The tother Maryes clensing esse, The thred Cristes meting es cald' (*Metr. Hom.* 155); in Arnolde, *Chron.*, under date 1521: 'Candylmas day next after, the Kynge and the sayd Duke of Burgoyn bare theyr Candyls.' L'Estrange writes under date 1655: 'February the 2nd (you may if you please call it Candlemas night) had been time out of minde celebrated at Court with somewhat more than ordinary solemnity' (Murray, *OED*, *s.v.* 'Candlemas').

The name is not peculiar to England. In France, it was formerly called 'la Candelière'; to-day it is 'la Chandeleur.' In Italy it is called 'Candelora' or 'Candelara.' Villani in his *Chronicle of Florence* (vi. 33), under date 1248, records the expulsion of the Guelfs by Frederic II. 'la notte di Santa Maria Candelaia.' The Danes used the term 'Kendelmess' (Olaus Wormius in *Fasti Danici*), and the Germans call it 'Lichtmesse,' or 'Missa luminum' (du Cange, *Glossar. ad Script. Med. et Inf. Lat.*, *s.v.* 'Candelaria').

The name is derived from the custom of carrying candles, torches, and tapers in the solemn processions on this day—a custom which is attested by Bede in the early part of the 8th century:

'Sed hanc lustrandi consuetudinem bene mutavit Christiana

religio, cum in mense eodem (*i.e.* Februario), die S. Mariae plebs universa cum Sacerdotibus ac Ministris, hymnis modulatae vocis per Ecclesias, perque congrua urbis loca procedit, datosque a Pontifice cuncti cereos in manibus gestant ardentes' (Bed. *de Ratione Temp.* c. 10, *ap.* du Cange, *loc. cit.*).

This description of the Candlemas procession and the reference to the Festival of the *Ypapanti Domini*—the Greek title of the Festival—in the *Martyrologium* of Bede are the earliest witnesses to Candlemas in this country (*DACL* ii. 640).

Baronius in his *Martyrologium Romanum* says that in the oldest codices the Festival has a variety of names: 'Festum Simeonis et Annae,' 'Presentatio,' 'Occursus,' 'Purificatio,' and, among the Greeks, 'Hypapante' or 'Hypante.' This last title was also used in the West, and is equivalent to the word 'Occursus.' It also witnesses to what was perhaps the original thought of the Festival, the coming of Christ to the Temple, which is the note struck in the *Invitatorium* in the Roman Breviary: 'Ecce venit ad templum sanctum suum Dominator Dominus; Gaude et laetare Sion, occurrens Deo tuo.'

2. **Origin.**—This has been until lately the subject of considerable difference of opinion. Baronius refers to the statement in the *Historia Miscella*, which here rests on the authority of Paulus Diaconus (*ob.* 799):

'Anno decimoquinto Imperii Justiniani (541), mense Octobre, facta est mortalitas Byzantii. Et eodem anno Hypapante Domini sumpsit initium, ut celebraretur apud Byzantium, secunda die Februarii mensis' (Muratori, *Rerum Ital. Script.* I. i. 108).

He also refers to the statement of Georgius Cedrenus, a later authority, whose *Compendium* goes down to the reign of Michael VI. Stratioticus (1057). Cedrenus records the institution of the Festival under the reign of Justin (*Hist. Compend. in Hist. Byzant.*, tom. vii., Ven. 1729), and the combined witness of the *Historia Miscella* and of Cedrenus is sufficient authority for recognizing the institution of the Festival at Constantinople on Feb. 2, either under Justin or under his successor Justinian—in either case probably through the influence of the latter.

But the discovery of the *Peregrinatio Silviae* by Gamurrini in a MS at Arezzo (Gamurrini, *S. Silviae Aquit. Peregrinatio ad loca sancta*, Rome, 1887), now known to be the *Peregrinatio Egeriae* (Dom Férotin, Paris, 1903), has thrown new light on the early recognition of the Festival. The pilgrimage took place *c.* 385. The Festival of the Presentation was celebrated in the Church of the Anastasis at Jerusalem with great pomp. It was called the *Quadragesimae de Epiphania*. There is the procession such as is described by Bede three centuries later. Priests and bishops preach on the Presentation, and the dominant note is that of the 'Hypapante,' the 'Occursus,' the 'Festum Simeonis et Annae' of Baronius (cf. Duchesne, *Origines*[3], p. 499).

The transference of the Festival from 14th to 2nd Feb. was due to the institution of the Festival of Christmas (*q.v.*) on Dec. 25. This was unknown at Jerusalem in 385. Chrysostom refers to the Festival of Christmas in 386, as having been introduced into Antioch about 375. It is a Festival of the Latin Church (Duchesne, p. 258). And the forty days of the Purification according to the Law would lead to the institution of the Festival of the Presentation on Feb. 2. It was perhaps under the influence of the traditions of the Latin Church of the Danube Provinces that Justinian, whose home was in Dardania, between Old Servia and Macedonia, introduced the Festival into Constantinople. Evans has pointed out 'the loyal adherence to Western orthodoxy and the See of Rome' which was shown by the Dardanian bishops (*Antiquarian Researches in Illyricum*, pts. iii.–iv. p. 133, Westminster, 1885). The inference is that the Festival was kept in Illyricum and in the Church of the Danube at the close of the 5th century.

There is no evidence to show at what date the Festival was first held at Rome. Baronius states that it was instituted by Pope Gelasius (492–496) as a check to the heathen Festival of the Lupercalia (*Mart. Rom.* p. 87), but the statement rests on no evidence (see *DCA* ii. 1141). Batiffol (*Hist. du Brév. rom.* 134) says that the only Festival observed in early days in honour of the Blessed Virgin at Rome was the Octave of Christmas, Jan. 1. The four Festivals of the Nativity (Sept. 8), the Annunciation (March 25), the Falling Asleep or Assumption (Aug. 15), and the Purification (Feb. 2), are not attested earlier than the time of Pope Sergius (687–701). The statement of the *Liber Pontificalis*, as Baronius points out, does not necessarily go beyond the order of the Litany or Procession from S. Adriano to S. Maria Maggiore (Anast. Bibl. lxxxv.; Murat. *Rer. Ital. Script.* III. i. 150).

There is an earlier witness in Gaul, in a sermon of Eligius of Noyon (*ob.* 665), in which mention is made of the candles ('de eo mysterio cereorum' [Baronius, *Mart. Rom.*]). Whatever may be inferred from these scant references, there is witness for the observance of the Festival in Jerusalem in 385, in the Danube Province *c.* 500, in Constantinople in 542, in Gaul *c.* 650, and in Rome *c.* 700. It is in keeping with the traditions of Rome that it should be the last to witness to a Festival which had apparently already been established in the more Celtic provinces beyond the Alps.

3. **Threefold character.**—The Calendars and Service Books of the Church throw light on the threefold character of the Festival—as a Feast of our Lord, a Feast of the Blessed Virgin Mary, and a Feast of Lights.

The earliest liturgical reference is in the *Gelasian Sacramentary*, the earliest MS of which dates from the end of the 7th century. The Vatican MS has the title 'in Purificatione Sanctae Mariae,' the Rheinau MS 'Sancti Simonis,' the St. Gall MS 'Sancti Simeonis,' and the edition of Gerbert, perhaps from the lost Zürich MS, 'Yppapanti' (Wilson, *Gel. Sacr.* p. 166). This is evidence that the name of the Festival was not as yet fixed, and that beyond the Alps the prominent thought was the Feast of the Presentation. The titles 'S. Simeonis' and 'Yppapanti' agree with the notice in the *Liber Pontificalis*.

The *Gregorian Sacramentary* represents the use at Rome at the close of the 8th century. The first part of it (Murat., cols. 1–138) is the Sacramentary sent by Hadrian to Charles the Great, between 784 and 791 (Duchesne, p. 120; Wilson, *Missal of Robert of Jumièges*, p. xli). The Festival is entitled *Yppapanti ad S. Mariam*. The first Collect is 'Oratio ad Collectam ad S. Adrianum.' Then, as a title to the Collect for the day, is the note 'Missa ad Sanctam Mariam Majorem.' The Collect is that of the English Prayer Book and the Roman Missal, a Collect of the Presentation. The 'Collecta ad S. Adrianum,' with its prayer 'Erudi, quaesumus, Domine, plebem tuam,' is the prayer for the Litania at S. Adriano instituted by Pope Sergius (Murat. *Sacr. Greg.* p. 22). It is to be noted that the Preface for use 'in Purificatione Sanctae Mariae' from the Vatican Codex and the Codex Othobonianus (*ib.* 273,297) is the Preface '*V.D. . . . Deus quia per incarnati*,' the Preface for Christmas Day. This is still the rule in the Roman Missal, and it is the link which joins Candlemas to Christmas.

The Saint-Amand MS of the Roman *ordines* is an important witness to the Candlemas Procession at Rome. It is a MS of the 8th cent., and is therefore of the same age as the *Gregorian Sacramentary*. At early dawn there was a gathering, or *collecta*, at the church of S. Adriano in the Forum. All the diaconal regions and all the titular parishes were represented, and with lighted candles awaited the Pope at the church. It was a meeting of the 'plebs,' on the very site of the Comitium, in

the Curia, where in bygone years the *Comitia tributa* had assembled. The choice of S. Adriano for this *collecta* is therefore not without importance in the history of the Festival at Rome, and the *oratio ad Collectam* must certainly be read in connexion with the traditions which probably still hung round this old meeting-place: 'Erudi, quaesumus, Domine, plebem tuam' (Murat. *Sacr. Greg.* p. 22). The Pope and the deacons vested themselves in black (*vestimentis nigris*). The Procession was then formed. Seven crosses were borne, probably at the head of the seven 'diaconiae'; then came the priests and subdeacons; last of all, the Pope with the deacons. Two lighted candles were carried before him.

Thus the Procession left the Forum for the church of S. Maria Maggiore. On nearing the atrium the Pope bade the choir sing the Litany again three times. 'Et ipsa die non psallitur *Gloria in excelsis Deo*.' The black vestments and the hushing of the *Gloria* lent a special note of solemnity to this service. It gives grounds for thinking that there is something in the suggestion of Baronius that the Festival was introduced into Rome to counteract the Festival of the Luperealia (Duchesne, App. p. 479).

The earlier Service Books of the Middle Ages still give emphasis to the idea of the Presentation of Christ. It is in the later Service Books that the Purification of the Blessed Virgin Mary takes a more prominent place. In the Metrical *Martyrology* of Oengus the Culdee (*c.* 800), it is noted as 'The reception of Mary's Son in the Temple, sure, inestimable' (Whitley Stokes, *Mart. of Oengus*, Henry Bradshaw Society, vol. xxix., 1880, p. 58).

The *Leofric Missal* represents the use of the English Church before the Conquest. The earliest part of the Missal (Leofric A), *c.* 900–950, reproduces the order of the *Gregorian Sacramentary*, with, however, the Epiphany Preface instead of the Preface: 'Deus . . . quia per incarnati.' The Festival has the title 'Purificatio Sanctae Mariae' (Warren, *Leofric Missal*, 1883, p. 70). The second part (Leofric B) is a calendar of the date 975–1000. The 'Purificatio Sanctae Mariae' is distinguished by F as one of the Greater Festivals (*ib.* p. 24). The Third Part (Leofric C) is of the date of Leofric, Bishop of Exeter (1050–1072). There are several prayers which belong to the Candlemas Procession, and enter into the later Service Books.

These prayers and antiphons illustrate the three aspects of Candlemas. It is a Feast of Lights, in which there is a Blessing of Fire and a Blessing of Light, in honour of Him who is the Light of the World, a Light to lighten the Gentiles. It is a Feast of the Presentation, or Festival of Simeon, who is mentioned in more than one of the prayers. It is a Feast of the Blessed Virgin: 'genetricis tuae, cujus hodiae festa percolimus' (*Leofric Missal*, pp. 203, 204).

The *Missal of Robert of Jumièges*, Bp. of London (1044–1050) and Archbishop of Canterbury (1051–1052), is evidence of English use in the early years of the 11th century. The date of the MS is 1008–1025, or perhaps 1013–1017 (H. A. Wilson, *Missal of Robert of Jumièges*, H.B.S. vol. xi. p. xxiv). The title in the Calendar is 'Purificatio Sanctae Mariae' (*ib.* p. 10). The prayers for the Blessing of the Fire and Candles and the prayers for the Mass are both in the *Sanctorale*. The Blessings come immediately after the Collect for the Festival of St. Bridget on Feb. 1, and as there is a leaf wanting in the MS before the *ad Missam* of the Purification, Wilson thinks it possible that the candles were blessed on St. Bridget's Day. 'Leofr. A has no mass for S. Brigid's Day' (*ib.* p. lviii)—a fact which is important in its bearing on the customs of Candlemas Eve.

The antiphon is much fuller than in Leofric C, and has reference to Holy Simeon as well as the Blessed Virgin. It is a witness to the older name of the Festival. The prayers *ad Missam* are those of the *Gregorian Sacramentary* and the *Leofric Missal*, substituting a Special Preface instead of the old Christmas Preface. The Preface 'V.D. . . . Deus. In exultatione' has not been traced. Two passages give its character:

> 'Dives in suo, pauper in nostro. Par turturum vel duos pullos columbarum vix sufficit sacrificio caeli terreque possessor. Grandevi Symeonis invalidis gestatur in manibus a quo mundi rector et dominus predicatur. . . . salvator.'

It is probably of Gallican origin (*ib.* p. 160). The character of the antiphons and the Preface suggest that the European or Gallican type, as distinct from the Roman type, gave emphasis to the idea of the Presentation and the Meeting with Simeon and Anna. 'The Purification' was the title derived from Rome.

The *Benedictional of Archbishop Robert*, a MS written at Winchester towards the end of the 10th cent., has the rubric 'Oratio ad candelas benedicendas in Purificatione Sanctae Mariae' (Wilson, *Benedictional of Archb. Robert*, H.B.S. vol. xxiv. p. 35). This is the only form given, and it is followed by the Episcopal Benedictions in the Mass.

The later Candlemas rites are to be studied in the *Westminster Missal*, a MS of the date 1362–1386 (Wickham Legg, H.B.S. vols. i., v., xii.). The Mass is on p. 760. The whole of the Service except the Sequence emphasizes the Presentation. The Sequence is in honour of the Blessed Virgin.

The blessing of the candles is on p. 619, and is ordered after Terce. The candles, together with the special *candela rotunda*, are placed in readiness before Terce, in front of the high altar. The abbot enters, and the choir sing the responsory, 'Gaude Maria virgo cunctas hereses sola interemisti,' with the verse 'Gabrielem archangelum,' which is said to have been composed by a blind cantor, and sung first at the Pantheon (Batiffol, *Hist. du Brév. rom.* p. 134). Its reference to 'hereses' and to the 'judeus infelix qui dicit christum ex Joseph semine esse natum' is archaic. The Collect *Deus qui salutis* is the old Gregorian Collect for Jan. 1—the ancient Roman Festival of the Blessed Virgin.

The *candela rotunda*, which is to be specially consecrated, is then lighted, the cantor beginning the antiphon 'Venit lumen tuum,' which is an Epiphany antiphon at Lauds in the *Sarum Breviary*. Then follows the Blessing of the Light, after which the candles are sprinkled with holy water and censed, the cantor beginning the antiphon 'Hodie beata virgo Maria puerum Iesum praesentavit.' The candles are next distributed, and they, together with all the lights of the church, are to be lighted *de lumine benedicto*—the large *candela rotunda* which has been specially blessed with the old form of the *Benedictio ignis*.

The Candlemas Procession at Westminster Abbey in the 14th cent. emphasized the Blessing of the Light, the Presentation of Christ, and, in the ancient responsory, the Virgin Birth.

The Candlemas Procession in the Monastery at Evesham in the 13th cent. differed from the Westminster use (Wilson, *The Evesham Book*, H.B.S. vol. vi. p. 57). A procession was formed *usque in cryptam*, where the Blessing of the Fire and of the Candles took place, perhaps at the altar of St. Mary 'in cryptis.' This is a relic of the older Benedictine use, which ordered that the blessing should take place 'extra propriam ecclesiam.' When they reach the crypt, the abbot precedes and stands near the candles while the antiphon 'Gabrielem' is sung. The abbot then blesses the fire in the thurible, after which the candles and tapers are blessed. The abbot next sprinkles

the candles with holy water and censes them, and then says 'Dominus vobiscum' and the Collect 'Erudi, quaesumus, Domine, plebem,' the *oratio ad Collectam S. Adriani* of the *Gregorian Sacramentary*. The abbot then goes to his place, whereupon the precentor receives the candle prepared for the abbot, and lights it from the fire in the thurible. The *cereus ornatus*, probably the *magnus cereus qui dicitur mariale* in the Westminster MS Benedictional at Oxford, is borne before the abbot, and the procession is re-formed and passes through the cloisters to the church. The *cereus ornatus* is then placed '*super candelabrum* juxta altare.' The candles have to be carried during the Mass.

In the Salisbury Processional of 1445 (Chr. Wordsworth, *Salisbury Ceremonies and Processions*, p. 100), the large candle which was borne before the bishop weighed six pounds. The Lincoln candle weighed a stone.

There is an important comparative table of the Blessing of the Candles in Legg's edition of the *Westminster Missal* (pt. iii. pp. 1431-1432), which presents many of the chief differences as well as the points of agreement.

The later rites at the Procession, the Mass, and the Hours may be found in the Roman and Sarum Missals, and the Roman and Sarum Breviaries. In the Roman rite, where the priest is vested in a violet cope, there is no Blessing of the Fire, but the candles after being blessed are distributed, and the *Nunc Dimittis* is sung with the antiphon 'Lumen' after every verse. The Sarum Missal (ed. Dickinson, p. 696) also omits the Blessing of the Fire.

The Breviary Service of the Roman rite reflects the old character of the Festival. The antiphons at Vespers are those appointed for the Circumcision, the ancient Roman Festival of the Blessed Virgin, and at Matins the Invitatory is 'Ecce venit ad templum.' It is to be noted that the *Te Deum* is sung to-day where *Gloria in Excelsis* was omitted in the 8th cent. *ordo* of Saint-Amand. At second Vespers the antiphon to *Magnificat* is 'Hodie beata virgo Maria puerum Iesum praesentavit.' The Lections all refer to the Presentation.

The *Sarum Breviary* (ed. Wordsworth, p. 131) has some variations. The Ninth Response, not displaced by the *Te Deum*, is the ancient 'Gaude Maria, . . . Gabrielem,' and at second Vespers the responsory is 'Gaude, gaude, gaude, Maria.' It is noted that according to the Sarum Use the Festival cannot be transferred.

The Festival is observed with characteristic variations in the Ambrosian and Mozarabic rites. In the 11th cent. Sacramentary of Bergamo of the Ambrosian rite, it appears in the Calendar as the Purification (*DACL* i. 1399). In the Breviary the *Resp. in choro* at the First Vespers is 'Suscipiens Iesum in ulnis,' with the verse *Nunc Dimittis*; the Psallenda is 'Senex puerum portabat'; the third Collect is 'Erudi'; and the *Antiphona ad Crucem* is that of the Circumcision, 'Venite et videte in Bethlehem Regem'—another link which joins Candlemas to Christmas. This antiphon is repeated only five times, whereas at the Feast of the Circumcision (Jan. 1) it is repeated seven times.

The Mozarabic rite has preserved the Blessing of the Fire. The *ordo ad benedicendum candelas* is in the Mozarabic Missal (ed. Lesley, Rome, 1754, p. 300). The fire is struck from flint: 'Et sculpatur novus ignis cum silice et ex lavone.' *The Benedictio ignis* is that of Leofric C, while the Preface is that of the Sarum Missal, with some very slight differences, its presence in the Mozarabic and Sarum Missals showing the community of rite in the West in the earlier ages of the Church.

The antiphon 'Lumen' is sung after each verse of the *Nunc Dimittis*. Then follows the Blessing of the Light after the sprinkling of the candles. The Collect differs from the Roman, referring to Simeon and the 'Lumen ad revelationem gentium.' The 'oratio ad pacem' has a reference to purification: 'Domine Iesu Christe . . . in te impleta omnia ostendisti: dum in te vero Deo et homine: et purificatio secundum legem exprimitur: . . . Adesto plebi tue ad te ex purificatione venienti, et presta incrementum muneris.' Is this a link with the Roman purifications of the month of February? The *Inlatio* is of special interest, since it is identical with the *Inlatio* of the Circumcision, and yet has an allusion to Simeon and Anna and the Presentation in the Temple. Is it to be inferred that in earlier days the Presentation was observed at the octave of Christmas but was transferred to Candlemas to meet the needs of the Church to check the February traditions of heathendom—the sacred fire in the West, the lustrations in Rome?

4. Relation of the Feast of Candlemas to the early heathen festivals.—The following points stand out prominently in the liturgical evidence: the Blessing of the New Fire is emphasized in the Evesham use and the Mozarabic rite; the carrying of the candles is associated with the 'Lumen ad revelationem gentium'; and the idea of purification is preserved not only in the title of the Festival, but in the *oratio ad pacem* of the Mozarabic rite. This liturgical evidence is supported by the evidence of folk-lore.

The Blessing of the New Fire, which, according to the Mozarabic rite, must be newly struck out of the flint, may perhaps link the Festival of Candlemas with the rites of Celtic heathendom. The Celtic year began on Nov. 1, which the Church consecrated to All Saints. The 1st of May marked the beginning of summer, and the Beltane fires of May 1 compare with the Samhain fires of Nov. 1 (Rhŷs, *Celtic Heathendom*, p. 518). The Church consecrated May 1 to the Apostles. The 1st of August is the great feast of the sun-god, the Lughnasadh Fair or Lammas Day, which the Church took over in honour of St. Peter. The day was also marked in old time by its fires.

The 1st of Feb. was the fourth great Festival of the Celtic year (Chambers, *Book of Days*, Aug. 1; for further details, cf. FESTIVALS [Celtic]). Vallancey in a quotation from Cormac's *Glossary* says:

> 'In his time [*i.e.* the 10th cent.] four great fires were lighted up on the four great festivals of the Druids; viz. in February, May, August, and November' (Brand, *Popular Antiquities*, ed. Bohn, 1848, vol. i. p. 349).

It is not difficult to connect the Blessing of the Fire with the ancient fires of Feb. 1; and the Scotch custom of the Candlemas Bleeze or Blaze (*Book of Days*, Feb. 2) was probably derived from the sacred fires lighted on Feb. 1, which is still dedicated to St. Bridget or St. Bride. Her sacred fire was still guarded at Kildare in the time of Giraldus Cambrensis (Wood-Martin, *Elder Faiths of Ireland*, 1902, vol. i. p. 279). St. Bride has entered into the heritage of the Goidelic Brigit, a Minerva who presided over the three chief crafts of Erinn (Rhŷs, *Celt. Heathendom*, p. 75). Candlemas is connected with St. Bride by two traditions of Scotch custom. One of these is described by M. Martin in his 'Description of the Western Islands of Scotland,' 1716 (Pinkerton's *Voyages*, iii. 613):

> 'The mistress and servants of each family take a sheaf of oats and dress it up in women's apparel, put it in a large basket, and lay a wooden club by it, and this they call Briid's Bed; and then the mistress and servants cry three times, "Briid is come, Briid is welcome." This they do just before going to bed' (Brand, *op. cit.* i. 50).

There is another version from the MSS of John Ramsay of Ochtertyre (*Scotland and Scotsmen in 18th Cent.*, ed. A. Allardyce, Edin. 1888, vol. ii. p. 447). The custom, according to Ramsay, was associated with the night before Candlemas, thus

linking the Candlemas Festival with the older Festival of Feb. 1. A bed was made of corn and hay near the door. When it was ready, some one went out, and called three times: 'Bridget, Bridget, come in; thy bed is ready.' One or more candles were left burning near it all the night. Frazer (*GB*[2] i. 223) speaks of this as a representation of the revival of vegetation in spring, and it is this which links the folk-lore of St. Bridget with the myth of Persephone (Seyffert, *Dict. of Class. Antt.*, tr. Nettleship and Sandys, 1906, *s.v.* 'Persephone').

There is another early instance of the association of St. Bridget with Candlemas in Maxwell's *Bygone Scotland* (p. 153):

'30th Jan. 1510. It is ordanit that on Candlemas Day, as is the yerlie ryt and custom of the burgh, in the honor of God and the Blissit Virgin Mary, there shall be the processioun of craftsmen, twa and twa togidr, socialie, als honourabily as they can. And in the offering of the Play, the craftsmen sal furnyss the Pageante; . . . wobstaris and walcaris, Symeon, goldsmiths, the three Kingis of Cullane; the litstaris, the Emperor; . . . the tailyours, Our Lady Sanct Brid and Sanct Elene . . .'

'Our Lady Sanct Brid' here takes an important place in the Candlemas pageant, and it therefore seems reasonable to associate the Blessing of the Fire on Candlemas Day with the ancient Fire of St. Bridget.

The Carrying of the Candles has also its early associations, which were taken up by the Church in honour of Him who came to be the Light of the World, 'Lumen ad revelationem gentium.' The myth of the rape of Persephone has reference to the changes of the seasons. 'In spring, when the seeds sprout up from the ground, she rises to her mother [Demeter]' (Seyffert, *op. cit.* p. 472). Both she and her mother Demeter are represented with a lighted torch (*ib.* 473, 178). The Eleusinian Mysteries were celebrated in honour of Demeter and Persephone, and the return of Persephone to the light was celebrated at the Lesser Mysteries, which were held in the month Anthesterion, which corresponds roughly with February. In these Mysteries the carrying of torches was a marked feature in the rite. The Scotch custom of calling for Bridget on Candlemas Eve, and the solemn carrying of candles at Candlemas, are only different methods of giving expression in folk-custom and religion to the ancient myth of the spring return of Persephone. Baronius accepts the principle of consecrating pagan mysteries to the glory of Christ:

'Putamus usum illum superstitionis Gentilium sacris ritibus expiatum, ac sacrosanctum redditum, in Dei Ecclesiam esse laudabiliter introductum' (*Mart. Rom.* p. 88).

The idea of purification is emphasized in the *oratio ad pacem* of the Mozarabic rite. Baronius regarded this as being the immediate cause of the introduction of the Festival into Rome. He refers to the treatise of Gelasius against the Senator Andromachus on the abuses of the Lupercalia, which was held at Rome on Feb. 15th (*ib.* 87), and he gives the letter in full in his *Annals* (*sub ann.* 496). It was a festival favoured by the women of Rome, who looked for virtue from the thongs cut from the skins of the goats sacrificed to Juno Februalis. The whole purpose of the Festival was purification (Varro, vi. 3, 55). February thus became the month of purification, and the Festival itself was a red-letter day for the women of Rome. It is certainly not an accident that Candlemas Day was called in the North of England 'the Wives' Feast Day,' and it was an inspiration of the Church to consecrate the February Festival to the honour of the Blessed Virgin Mother of our Lord: 'Gaude, gaude, gaude, Maria.' Nor was it an accident that the Candlemas Procession at Rome was representative of the whole city, and gathered at the church of S. Adriano, the ancient Curia on the Forum of Rome, the meeting-place of the 'plebs.' It is this to which allusion is made in the Collect 'Erudi, quaesumus, Domine, plebem tuam . . . gratiae tuae lumen concede.'

5. The Candlemas customs did not altogether die out in England with the Reformation. Peter Smart, a Prebendary of Durham, in 1628 alludes to the practice of Cosin, Bp. of Durham:

'On Candlemass Day last past, Mr. Cozens, in renuing that Popish ceremonie of burning Candles to the honour of our Ladye, busied himself from two of the clocke in the afternoone till foure, in climbing long ladders to stick up wax candles in the said Cathedral Church' (Brand, *op. cit.* i. 47).

George Herbert in his *Country Parson* (1675) speaks of an 'old custom of saying, when light is brought in, "God send us the light of Heaven"; and the parson likes this very well.' In a note to the *Gentleman's Magazine* of 1790, a gentleman visiting Harrogate said that at Ripon, a few years before, 'on the Sunday before Candlemas, the collegiate church, a fine ancient building, was one continued blaze of light all the afternoon from an immense number of candles' (Hone, *Every-Day Book*, ed. 1830, vol. i. p. 205).

Herrick in his *Hesperides* alludes to the customs of Candlemas, which was still the end of the Forty Days of Christmas:

'Down with the Rosemary, and so
Down with the Baies and Misletoe:
Down with the Holly, Ivie, all
Wherewith ye drest the Christmas Hall:
That so the superstitious find
No one least branch there left behind:
For look how many leaves there be
Neglected there (Maids, trust to me),
So many Goblins you shall see'
(Brand, *op. cit.* i. 49).

Sir Thomas Browne sums up Candlemas weather in the proverb,

'Si Sol splendescat Maria purificante,
Major erit glacies post festum quam fuit ante'
(*ib.* 50).

This proverb is best Englished in the Scotch lines:

'If Candlemass Day be dry and fair,
The half o' winter's to come and mair;
If Candlemass Day be wet and foul,
The half o' winter's gane at Yule'
(Chambers, *Book of Days*, i. 214).

Box might take the place of holly at Candlemas:

'Down with the Rosemary and Bayes,
Down with the Misleto;
Instead of Holly, now up-raise
The greener Box (for show)'
(Herrick, in Brand, p. 49).

And the old idea of the continuity of the Sacred Fire and Light is shown in the burning of the Christmas Brand and its preservation till the coming Christmas:

'Kindle the Christmas brand, and then
Till sunne-set let it burne;
Which quencht, then lay it up agen,
Til Christmas next returne.

Part must be kept wher-with to teend
The Christmas Log next yeare;
And where 'tis safely kept, the Fiend
Can do no mischiefe (there)'
(*ib.* p. 50).

The 'teending,' or lighting, of the Christmas Log with the Christmas Brand laid up from Candlemas, is an echo of the sanctity of the Sacred Fire. These customs and rites show the continuity in folk-lore and religion of the earliest religious ideas. To quote George Herbert, 'Light is a great blessing, and as great as food, for which we give thanks: and those that think this superstitious neither know superstition nor themselves.'

THOMAS BARNS.

CANNIBALISM.

i. **Origin of cannibalism.** — 1. Cannibalism, anthropophagy, or man-eating, is a custom which at once inspires horror in the civilized mind. But, though the present range of the practice is somewhat restricted, it was much wider within even recent times, and there is every probability that all races have, at one period or another, passed through a cannibalistic stage, which survived occasionally in ritual or in folk-custom, or was remembered in legend or folk-tale. Even now extreme hunger will drive members of the most civilized races, as well as those peoples who live always on the borders of starvation, to the practice, however much they may instinctively abhor it. But there is every reason to believe that such abhorrence was not originally instinctive, but arose through a variety of causes, so that, in the beginning, man-eating may have been as natural to primitive men as is the eating of animal-flesh to ourselves. The word 'cannibal' is derived from *Carib.* When Columbus visited Cuba he heard of the 'Canibales' (Caribs) as man-eaters. At Hayti they were called 'Caribes'—the difference being caused by the interchange of *l*, *n*, and *r* in American languages. The name of this particular man-eating people was then extended as a popular term for all man-eaters, or for any bloodthirsty race, the Spaniards erroneously connecting it with Sp. *can*, and Lat. *canis*, 'a dog.' By the end of the 16th cent. the word was in common use as a generic term; *e.g.* Bonner is called a cannibal by Foxe (*Acts and Mon.* iii. 739), and Shakespeare makes Queen Margaret call her son's murderers 'bloody cannibals' (*3 Hen. VI.* Act v. Sc. 5, line 61). 'Anthropophagy' is directly derived from ἀνθρωποφάγος, while 'man-eater' was already in use as a Teutonic feminine appellation (*mannætta*) for both male and female sorcerers (Grimm, *Teut. Myth.* 1081).

2. *Cannibalism among animals.* — Among the lower animals eating of their own kind occurs as an habitual or occasional practice with most of the carnivores, feline and canine, and with some rodents, the young or weak falling victims to the rapacity of the others. This has been noted mainly in the case of captive animals, but in some cases also among animals in their wild state. With very few exceptions, *e.g.* the horse, animals seem to show no shrinking from the dead of their own kind. When, however, we come to the higher apes, no evidence of their eating their own kind is yet forthcoming, and some have inferred from this that man's immediate precursor as well as primitive man himself was not a cannibal. Some, indeed, have gone so far as to deny that the higher apes and even primitive men were carnivores. It is quite certain, however, that most, if not all, of the higher apes in a wild state eat small and possibly large mammals, while in captivity they show no distaste for flesh food. Though mainly frugivores, they are by no means exclusively so, and all of them seem to be omnivorous in their tastes and habits. As to primitive man, the argument appears to be based mainly on the form of his teeth, which indeed differ but slightly from those of modern men who are omnivorous. He could quite well have eaten flesh food as we do, without possessing the teeth of a carnivore, which tears its food with its teeth in order to consume it. The analogy of the lower savages, who are by no means exclusively vegetarians, and many of whom devour flesh greedily, tends to show that primitive man, like the men of the Quaternary period (the refuse of whose food shows strong flesh-eating propensities), was not a plant- or fruit-eater exclusively. (On the cannibalism of beasts see Brehm, *Thierleben*[2], 1878.)

3. *Primitive cannibalism.*—Primitive man and even man's immediate precursor were already far in advance of the higher apes. One line of advance is to be seen in their growing ability to supply their rapidly extending needs, and there can be little doubt that they desired and obtained a more varied and a more regular food supply. If, as is certain, the higher apes were already omnivorous, the increasing development of primitive man would make him more so, through his increasing adaptation to a more varied diet. At the same time, increasing skill as a hunter of his prey, increasing wariness, and the use of stone or cudgel as weapons would cause him to master even large mammals, whose flesh would be used as food. There would be a growing taste for flesh food, and there seems no reason to suppose that any discrimination as to the kind of flesh eaten was exercised. To eat human flesh need not have seemed to primitive man or to his immediate precursor any more disgusting than to eat any other kind of flesh. When other flesh was wanting, the sight of a dead human being would but excite the flesh-hunger. In this connexion Steinmetz has shown (1) that the fear of the dead body could have been no hindrance to the eating of it, since even now, where ghosts are feared, savages show little fear of the corpse, handling it indifferently, remaining with it, subjecting it to various indignities (from our point of view), and also eating it; (2) that the natural disgust which civilized man has at cannibalism does not exist among cannibalistic savages, while many low races, even without the pressure of hunger, eat the most revolting things; (3) that the æsthetic refinement of civilized man is hardly discoverable in the savage. *A fortiori*, then, man, when just emerging from the bestial stage, must have been as the savage (*Endokannibalismus*, ch. 20).

To this it may be added that the satisfaction felt after a meal of flesh of whatever kind, as well as the pressing claims of hunger, were little calculated to make primitive man discriminate as to what he ate. The dead body of friend or foe was but an addition to the primitive larder, and would be readily eaten, when other flesh food was wanting, by one who was at all costs bent on satisfying his hunger. Since cannibalism, which seems to have once existed universally, must have originated at some time, there seems no good reason for crediting primitive man with greater refinement of feeling than his successors who do practise it, or for denying that it originated with him. The earliest men of whose habits we have any actual knowledge, viz. the men of Palæolithic times, were cannibalistic, and we can hardly suppose that the practice began with them. Better that it should have begun at a time when there existed no ethical or æsthetic reason to hinder it, and that, with increasing civilization, men should have begun to give it up, than that we should seek its origin in a later age, when its commencement would involve the shifting of already formed higher feelings. There was a time when cannibalism was natural to man, as there was a time when other things, shocking to our moral sense, *e.g.* incest, were natural to him. It was man's privilege, in becoming more conscious of his manhood, to shake them off and to rise in doing so to a higher ethical plane. Thus Schurtz's dictum that cannibalism is a sickness of childhood, which often overcomes the strongest peoples, is scarcely relevant as regards primitive

man. It assumes that cannibalism, *in its origin*, was pathological, whereas it seems, under the circumstances, perfectly natural. Only when the feelings which now make it abhorrent to us are overcome through madness or gluttony, can it be called pathological, and these are happily the least wide-spread causes of cannibalism. Few maniacs, indeed, whatever other perversions they exhibit, are known to become cannibalistic.

The question of pre-historic cannibalism—Palæolithic and Neolithic—has been much discussed. The arguments for Palæolithic times are mainly these—the presence of human bones, charred, broken, and calcined, mixed with animal bones, ashes, and charcoal, in Quaternary deposits; some of these are split as if to obtain marrow, as in later savage cannibalism; others show traces of scraping with flint instruments as if to scrape off the flesh; or, as in the grotto of Gourdan, fragments of skulls show cutting marks, and in one instance the pericranium is broken with a stone hammer, as if to extract the brains. As no other bones were found, Piette supposes a tribe of head-hunters to have inhabited this cave, who used a similar method to that of the head-hunters of Luzon (*BSAL*, 1873, p. 407). In late Palæolithic interments, *e.g.* those of Baousses-Rousses at Mentone, the custom of removing flesh from the bones before interment—a common savage custom—had been followed, and may indicate cannibalism. Quaternary man also made necklaces of human teeth, as many cannibalistic savages now do. It has been thought too, that, as the flesh of the larger mammals may not always have been available through the poverty of Palæolithic man's weapons, he may frequently have been reduced to hunger, and may thus have been driven to anthropophagy. Against all this it has been contended that the charring may have been accidental; that fractures on human bones bear no resemblance to those on animal bones, and may have been caused through the weight of the superincumbent layers; and that there was abundance of flesh food available. There is, however, no *a priori* reason why Palæolithic man should not have been an occasional though not an habitual cannibal; and if cannibalism through hunger arose in still earlier times, he may have practised it already from some other motive also. Neolithic cannibalism rests on similar evidence, as well as the presence of human bones in refuse heaps or kitchen middens. The Palæolithic evidence rests mainly on caves in Belgium and France; the Neolithic, on deposits in Egypt (where Petrie suggests cannibalism with the motive of obtaining the virtues of the deceased), Iberian Peninsula, Palmaria, and Keiss and Ardrossan in Scotland. The Neolithic lake-dwellers in Switzerland used the skulls of enemies as drinking-cups (Gross, *Les Protohelvètes*, 1883, p. 107). See reports of discussions at Inter. Congress of Anthropol. at Paris (1862), Brussels (1872), Lisbon (1880); papers in *BSAP*, 1866, and following years; Dawkins, *Cave Hunting*, 1874; Sergi, *Mediterranean Race*, 1901, p. 93; Munro, *Prehist. Scotland*, 1899, p. 82; Thurnam, *Archæologia*, xlii. 161; Greenwell, *British Barrows*, 1877, p. 543; Nadaillac, *Prehist. Peoples*, 1892, p. 51; Vogt, *Lect. on Man*, 1864, p. 346.

Cases of cannibalism during famine, siege, or shipwreck are well known. In these cases the overpowering, through raging hunger, of the civilized man's natural disgust at eating human flesh, rather than actual madness, gave rise to it. Some cases of cannibalism through madness, cited by Bergemann, are of doubtful authenticity (*Verb. der Anthropophagie*, p. 2). Steinmetz (*op. cit.* ch. 23) could discover no instances of it, and the works of modern alienists do not refer to it. Plutarch cites a confused story of the daughters of Minyas, who went mad with desire for human flesh and slew one of their children (*Quæst. Gr.* 38).

4. The most satisfactory hypothesis of the primitive social group is that which makes it analogous to the family groups of the higher apes, viz. the sire, a number of females, and their younger progeny. From this group, *ex hypothesi*, the sons, as they grow up, are driven off by the sire through the influence of sexual jealousy. They are thus forced to seek mates by capture from some other group (Lang and Atkinson, *Social Origins: Primal Law*, 1903). Assuming, then, as we have reason for doing, that the members of such a group had omnivorous tastes, and through hunger ate their fellows as well as the other mammals, whom would they eat—members of the group, or outsiders (foes), or both? Such love as may have existed between the sire and his mates or progeny was little likely to hinder him from eating them when dead, especially as no other reason kept him from it, and the practice was as yet natural. To the sons who had been driven out he was hostile; if he killed them while attempting to interfere with his wives, again nothing hindered their being eaten. Finally, the members of all other groups, being hostile, would, when killed, afford a food supply. Thus relatives and enemies alike would be eaten. Hence it is impossible to assume, as some writers (*e.g.* Steinmetz) do, the priority of endo-cannibalism (viz. the eating of relatives) over exo-cannibalism (the eating of non-relatives). Cannibalism existed without these distinctions first of all, and the desire for food made no distinction between relative and enemy. Or the distinction may have been thus far suggested, that, while an enemy might be killed in order to be eaten, a relative would be eaten only when dead. The sons, though relatives, were strictly in the position of enemies. The distinction between friend and foe, so far as forming a possible food supply was concerned, would, of course, exist, whatever was the form of the earliest human or semi-human social group.

Bordier (*BSAP*, 3me sér., xi. 67) used the words 'exo-anthropophagy' and 'endo-anthropophagy'; Steinmetz (*Endokannibalismus*, p. 1) prefers the forms 'exo-cannibalism' and 'endo-cannibalism' to these and to the usual English forms 'exophagy' and 'endophagy,' which are also used for the ordinary food restrictions of totemistic peoples.

5. *Totemism and cannibalism.*—The earliest cannibals were thus unconsciously both endo- and exo-cannibals. The distinction between eating a relative and eating an enemy, with the consequent tabu against eating a kinsman, could have arisen only with the growing sense of kinship. Man soon discovered that there were certain persons whom he must not marry, viz. those of kin to him—not, however, in our sense of the word. Whether an exogamous tendency existed before totemism is uncertain; if it did, totemism made it absolute. Was there also a growing dislike of endo-cannibalism which totemism also made absolute? One result of totemism was certainly to make tabu the eating of the animal or plant which was the totem of the group of kinsmen, because, in effect, it was a kinsman. This tabu, aided by the increased sense of kinship and the customary laws which it involved, as well as by the growing dislike of endo-cannibalism (if such existed), may quite conceivably have made tabu the eating of a human kinsman. Frazer has pointed out that 'the further we go back we should find how much the less the clansman distinguishes between conduct towards his totem and towards his fellow-clansmen' (*Totemism*, p. 3). If it is wrong to kill and eat one's totem-animal because it is of kin to one, it is equally wrong to eat a kinsman. And in actual practice we find that among totemistic peoples it is generally considered wrong to kill a kinsman. In Mangaia, to kill a fellow-clansman was regarded as falling on the god (totem) himself, the literal sense of *ta atua* (to kill a member of the same totem-clan) being 'god-killing' (Gill, *Myths and Songs*, 1876, p. 38). The animal kinsman being tabu, not to be killed or eaten, the human kinsman must have been so too. Conceivably, then, a man might eat his wife (just as he could eat freely of her totem-animal), since she was bound to be of a different totem kin and class from himself, and yet would be breaking no law forbidding endo-cannibalism. But he could not eat his sister, or brother, or mother, since these were within the list of forbidden degrees and of the same totem kin. The tabu against eating relatives may possibly be seen in the savage custom of not eating in a house where a dead man is lying, lest his ghost should by accident be eaten. Why then are relatives sometimes eaten among present or earlier totemistic peoples? Totemism is now generally a declining institution, and its sanctions are frequently not observed. Hunger might impel to the eating of a dead kinsman, as it does sometimes, even in Australia, to the eating of a totem animal. So affection or some powerful animistic or semi-religious motive

might here and there overcome the totem cannibal tabu.

Strictly speaking, the words 'exo-cannibalism' and 'endo-cannibalism' should be used only where totem clans practise cannibalism, since a man may eat another who, from our point of view, is a relative, and yet from the totem point of view is not a kinsman (not of the same totem). But in actual use this is overlooked, and the eating of relatives, or even more loosely of tribesmen, is spoken of as endo-cannibalism, and that of any others as exo-cannibalism; whereas endo-cannibalism should be confined to the eating of totem kinsmen where it occurs. This (which resembles the loose use of the word 'exogamy') is partly due to the fact that observers of cannibalism seldom state what relatives are eaten or by whom. This is important, since, even where totemism as an institution has passed away, its restrictions frequently remain (see below). But, using the terms in their wider sense, we find, from a survey of information given by travellers and missionaries, that many peoples who eat enemies also eat, on certain occasions, fellow-tribesmen or 'relations.' A closer investigation might have shown that the latter were often not kinsmen in the totemistic sense. As far as most cannibal areas are concerned, since so many peoples have abandoned the practice, the time for this has gone by. A closer scrutiny of existing cannibal tribes may bring fresh information to light.

Among actual totem peoples some data exist to show the truth of our contention. From the Australians we have a few recorded facts by observers who have connected totemism and cannibalism. Some tribes eat only enemies, *e.g.* the Kurnai and Maneroo (Fison and Howitt, *Kamilaroi and Kurnai*, 1880, pp. 214, 218, 223). Spencer and Gillen report of North Central Australia that Gnanji eat enemies and probably their own dead; with the Binbinga tribe, men of a different class from the dead man eat him; in one case cited from the Anula tribe, the woman was eaten by four men, two of them her own 'tribal fathers,' and of the same class as she, and two of a different class, but all of a different totem from the woman (Spencer-Gillen[b], pp. 545, 548). Other tribes eat only relatives; but we seldom hear what the relationship is, save among the Dieri, with whom 'the father does not eat the child or the child the father, but mother eats child and child eats mother, while brothers-in-law and sisters-in-law eat each other' (Curr, *Aust. Race*, 1887, ii. 63). The Dieri do not count descent through the mother, however, and eat their own totems. In other cases in Australia the restriction as to eating the totem is sometimes overcome, especially through hunger, as among tribes in N.W. and W. Australia and in the south (Wotjobaluk, Buandik, Wonghibon [Eyre, *Journals*, 1845, ii. 228; Howitt, *S. Aust.* 145]). In Victoria there seems to be no objection to eating the totem; in Central Australia, while it is not eaten by men of the kin, yet old men may eat it, and kinsmen try to increase the numbers of their totem so that men of other kins may eat it (Howitt, p. 145; Spencer-Gillen[b], pp. 167, 321). Among some Central Australian tribes the totem is eaten ceremonially. It is thus evident that there is a tendency to break down the earlier restriction on eating the totem animal, and the same tendency may explain the eating of kinsmen. Hunger and the strong influence of other motives would certainly tend in this direction (ii. § 12). With the American Indians, also totemists, extreme hunger alone drives isolated tribes to eat relatives; elsewhere only enemies are eaten, and for magical reasons (ii. § 17). Of the Caribs and other tribes Im Thurn says: 'tribal feeling is always very strong among Indians, so that they cannot be suspected of feeding on individuals of their own tribe' (*Ind. of Guiana*, p. 418). In New Caledonia, Fiji, and the New Hebrides, where a past totemism has left a legacy of food restrictions, the eating of relatives is certainly occasional; while in the New Hebrides and Duke of York Island the bodies are sold or exchanged (Powell, *Wanderings*, 1883, p. 93; Nadaillac, *BSAP*, 1888, p. 34).

In Fiji, where an earlier totemism had given rise to the idea of the gods being incarnate in certain animals which must never be eaten by the worshippers, we find that 'some were tabu from eating human flesh, because the shrine of their god is a man' (Williams, *Fiji*, 1858, i. 220). Here, probably, an earlier totem restriction on the eating of kinsmen has become, with the curious local development of the institution, a tabu against eating any human flesh where the clan god had a man for his shrine. Another suggestive case is found among the Maoris, formerly totemists, according to Maclennan. When some of the natives fought with the English against their fellows, after the fight some of the young men proposed to eat the fallen of the other side. But others forbade this, because the fallen and the victors were all 'Ngapuhi' together (*i.e.* of the same clan), and to eat a relative was a deadly sin (*Old New Zealand*, 1893, p. 229). So in a Maori myth, when Maui's grandmother was on the point of devouring him, she suddenly discovered him to be a relative, and her desire ceased; while one family who devoured their near relatives became cowards as a consequence (Grey, *Polyn. Myth.*, 1855, pp. 34, 131).

In Africa no eating of relatives occurs in the south (Bechuanas, etc.), where there are totem-animal restrictions; while most remarkable of all is the reluctance of the worst cannibals in the world—those of Central Africa—to eat relatives, whose bodies are invariably sold or exchanged. Here, too, the presence of an earlier totemism has been found (Maclennan, *Studies in Anc. Hist.*[2], 1886, chs. xxii.–xxv.).

In support of the theory that totemism tabued the eating of kinsmen is the parallel (noted by W. R. Smith, *Kinship*, 1885, p. 307) drawn by certain peoples between cannibalism and the eating of tabued animals. Porphyry says the Egyptians and Phœnicians would rather have eaten human flesh than that of the cow (*de Abst.* ii. 11). Generally, even by cannibals, there is a distinction drawn between eating of enemies and eating of relatives—the former out of revenge, etc., the latter generally for ceremonial purposes. Livingstone reports that the people of the Zambesi were shocked at the idea of eating a donkey (presumably a totem-animal): 'it would be like eating man himself' (*Zambesi*, 1865, p. 335). The Solomon Islanders, who have exogamous clans, never eat the body of a member of the same tribe (*L'Anthrop.* x. 492).

6. Taking the word 'endo-cannibalism' in the wider sense of eating members of the tribal group, we may make certain deductions from the data. (1) Endo- and exo-cannibalism frequently coexist, especially where some motive other than hunger underlies man-eating, *e.g.* the desire to assimilate the virtues, soul, or strength of the deceased. In these cases we may assume that the totemistic restriction has been overridden by some stronger cause. (2) Exo-cannibalism frequently exists alone, even among very low races. This may result (*a*) from totemistic traditions; (*b*) where enemies are eaten to show contempt for them or out of sheer rage—motives which obviously could not underlie the eating of relatives or fellow-tribesmen, and which would inevitably bring that to an end where it still existed. The only exception to this latter case is where the criminal, *i.e.* a member of the tribal group, is eaten as an expression of legal punishment. (*c*) Exo-cannibalism occasionally exists alone, with sheer gluttony as the motive; the bodies of relatives, as has been seen, are exchanged or sold — a proof that the strong desire for human flesh may be overruled in the case of relatives by some powerful law, even though it be only a survival. This law we hold to be totemistic. (*d*) Where cannibalism is dying out, it continues to exist mainly in an attenuated form as exo-cannibalism, as among some American Indian tribes. (3) Endo-cannibalism seldom exists alone, and this suggests the inference that at first no distinction was made between eating friend and eating foe. It was only later that the distinction arose. This is also suggested by the fact that, among races who have abandoned cannibalism and who do not possess totemism as a flourishing institution, the bodies of dead *relatives* are eaten under the pressure of famine, as among the Eskimos, and wherever cannibalism has occurred among civilized peoples.

ii. Varieties of cannibalism. — 1. *Cannibalism from hunger.*—Where cannibalism now occurs out of hunger, a distinction must be noted between eating the dead and killing the living in order to eat them. In the latter case, sometimes it is the sick and old who are killed, but usually these are put to death for another motive, as will be seen. Dead bodies are eaten among the Eskimos (though some deny this), a few isolated American Indian tribes, some S. American tribes, the Tongans, and the Basutos. Cannibal murder is found among the Australians, New Caledonians, islanders of Nuka Hiva, Marquesans, Samoans, Ainus, Sakhalin islanders, Ostiaks, Samoyeds, Tiering Dayaks, in further India, among some American Indian tribes, and among the Fuegians. With all these peoples, except the Tongans, New Caledonians, and Marquesans, cannibalism is occasional and through stress of

famine, while it is mainly relatives or members of the same tribe who are eaten. In a few cases, *e.g.* American Indians and Basutos, we find cannibalism through famine causing a taste for human flesh, and resulting in man-eating through gluttony.

The cannibalism of the Eskimos has been denied, as by Egede (*Bruchstucke eines Tagebuches*, p. 107), who says that in famine they kill their dogs as we would do horses, dogs not being usually eaten by them. Its earlier existence, however, is suggested by *Marchen*, which tell of its being practised by distant tribes, who are differentiated from the Eskimos, and are certainly in some cases American Indians, or by hags and ogres. It is also shown in the *Märchen* that it causes madness in those who are unaccustomed to it (see Rink, *Tales and Traditions of the Eskimo*, 1875; Boas, 'Central Eskimo,' in *6 RBEW*, p. 409 ff.). Part of the body is certainly eaten for magical purposes (see below). Among the American Indians some members of the Fish tribe in B. Columbia are said to dig up and eat the dead, to the abhorrence of the others. In times of famine it occurred in Labrador. A tradition of the Nishinam (California) says they ate their dead; while the Utes dug up corpses (Mayne, *Four Years in British Columbia and Vancouver Island*, 1862, p. 257; Hind, *Labrador*, 1863, i. 14; Powers, *Contr. N. Am. Eth.* iii. 343; Nadaillac, *BSAP*, 1888, p. 28). Some S. American tribes on the Amazon are said by Bates and Wallace to eat the dead when hunger presses (Bates, *Nat. on Am.*, 1863, p. 382; Wallace, *Travels on Am.*, 1853, pp. 347, 353, 359). If the Basutos were cannibals in the past, they had largely given it up, until, during the early wars with the British, famine drove some of them to consume the corpses of the slain. Certain of them thus acquired a taste for human flesh, and, retiring to the mountains, spared no one in their desire. A cave explored by Bowker showed evidence of recent cannibalism—heaps of bones, many of them split to obtain the marrow. Horror at these cannibals was widespread, and they or perhaps earlier cannibals appear in native *Märchen* in much the same light as the ogres of our nursery tales (Casalis, *The Basutos*, 1861; *Anth. Rev.*, 1869, vii. 121; Jacottet, *Contes pop. des Ba-Soutos*, 1895, p. 71; cf. also Stow, *Native Races of S. Africa*, 1905, pp. 510, 558).

Certain Australian tribes, *e.g.* the Watchandi of W. Australia, kill children in time of need—the mother getting the head, the father the body; hunger occasionally drives other W. Australian tribes to kill enemies (Oldfield, *Trans. of Eth. Soc.*, N.S., iii. 245 f.), as they also eat the old after death, 'that so much good food may not be lost'; but in general the motive is not hunger. In Nuka Hiva, wives, children, and parents were killed and eaten (Krusenstern, *Reise um die Welt*, i. 258); Ellis says the Marquesans (who ate enemies) killed children in want (*Tour through Hawaii*, 1826, p. 72); the Samoans (also enemy-eaters) killed wives and children (Langsdorf, *Reise um die Welt*, 1813, i. 120). The remoter Ainu tribes are said to be 'eaters of their own kind,' the father killing the crippled son, the husband an unfruitful wife. Other tribes are certainly not cannibals (but see below), though early Japanese writers usually attributed the practice to them (Batchelor, *Ainu of Japan*, 1892, pp. 288, 305; Preuss, *Die Begräbnisarten der Amer. u. Nordostas.*, 1894, pp. 218, 298). As late as 1863 the eating of children among the Ostiaks was reported (*AA* iii. 333). Wilken says the Tiering Dayaks of Borneo kill and eat the sick through hunger. Cannibal murder in famine is confined, with the American Indians, to such tribes as the Nasquapees, Hare Indians, Chippewayans, Denés, and Utes (Hind, *Labrador*, i. 244; Waitz, *Anthrop. der Naturv.*, 1872, iii. 89; Faraud, *Dix-huit ans chez les Sauvages*, 1870, p. 38; Nadaillac, *op. cit.* p. 28). The Tinnés think that, when a man is driven to cannibalism through hunger, he acquires a taste for it; hence he is avoided and frequently killed (Hearne, *From Prince of Wales's Fort . . . to the N. Ocean*, 1796). As to the Fuegians the evidence is doubtful; Darwin (*Journal of Researches*, 1840, p. 155), Fitzroy, Snow, and others have asserted that old women are killed and eaten in time of famine, as also members of a hostile tribe after a fight; but Marquin and Hyades deny the accusation (*Bull. de la Soc. de Géog.*, 1875, p. 501; *Rev. d'Eth.* iv. 552).

In ancient and modern times, civilized societies and individuals, through stress of famine, as in siege or shipwreck, have occasionally resorted to cannibalism. Josephus (*BJ* v. x. 4, vi. iii. 4) tells this of the Jews in the siege of Jerusalem (cf. an earlier instance, 2 K 6[28]), and Dio Cassius of the Jews who revolted against Trajan (lxviii. 32). Valer. Max. (vii. 6) mentions people in besieged towns in Spain eating wives, children, and prisoners. Cannibalism occurred sporadically in Europe in mediæval times after great scarcity, in the 7th and 11th cents.; at the siege of Paris in 1590; among the Saxons at the end of the Thirty Years' War; during famine in Algiers in 1868; and during the siege of Messina (Letourneau, *Evol. of Morality*, 1886, p. 215; Bergemann, *op. cit.* p. 1 f.).

2. *Other motives.*—It has now to be shown how other motives than the primitive one of hunger influenced the practice of cannibalism, and occasionally were strong enough to override the totemistic restriction regarding the eating of kinsmen, or, assuming that they existed before the rise of totemism, prevented the application of the food restriction so far as it concerned human kinsmen.

That this is not contrary to fact is proved by the actual eating of kinsmen among some totem peoples. The permission to eat human kinsmen *plus* the restriction on eating animal kinsmen may seem a contradiction, but savage law, however strict, is frequently accommodating, and we have an analogous contradiction in this, that, while human kinsmen were absolutely forbidden to marry, the animal kinsmen must have been known to pair among themselves. Eagle man might not marry Eagle woman, but the actual Eagle had an Eagle mate. Various totemistic peoples also kill or eat their totem animal on certain solemn occasions, while other tribes who regard certain animals as sacred, and do not ordinarily kill or eat them, will do so under pressure of hunger (some African tribes) or at an annual religious festival (Todas, Central African tribes, heathen Arabs, Peruvians, Egyptians, American Indian Dog tribe in Arkansas). See Marshall, *Phrenologist among Todas*, 1873, p. 129; Frazer, *Totemism*, 1905, *Golden Bough*[2]; W. R. Smith, *Rel. of Semites*, p. 278; Réville, *Rel. of Mexico and Peru*, 1884, p. 226; Herodotus, ii. 47; Bancroft, *Native Races*, 1875, iii. 316.

Men are eaten with the purpose of acquiring their qualities, their strength, or their soul; for magical or medical purposes; out of affection; out of hatred; through gluttony; for religious or ritual, political, and social reasons. In some cases more than one of these motives exist together. Generally speaking, they have arisen later than the eating of human flesh through hunger; in many instances they have arisen directly out of it, but we must not overlook the possibility of any of them having arisen separately and apart from a taste for this food acquired in time of starvation. Each of these motives will be discussed separately, and its range and extent set forth. It should be observed that, when cannibalism has become an established custom, it exists usually quite independently of the presence or absence of plenty of other kinds of food.

3. *Cannibalism to obtain strength, etc.*—First may be noted the common savage belief that by eating a human being or an animal one acquires the qualities and virtues of such a person or animal. The strength of the lion, the ferocity of the tiger, the courage of the warrior, will be communicated to the eater of the flesh of lion, tiger, or warrior. In itself the belief is primarily a development of what must already have been patent to primitive man, viz. the strengthening power of food. Hence it was easy to believe that the qualities of a beast or man—strength, swiftness, cunning, valour, etc.—would also be acquired by eating. This sacramental transfusion of qualities and energies must have originated in early times, while it is found universally among all peoples of a low range of culture. It was also aided by the growing magical theory of things, and especially by that branch of it by which it was held that the part was equal to the whole, or could convey the qualities of the whole, since the nature of anything adheres to its parts even when they are separated from it. Hence, to eat even a small piece of the flesh of beast or man would result in the assimilation of his qualities by the eater. Even totemism itself may have assisted this belief in the assimilation of qualities, if totemistic peoples held that the life circulating in the group of kinsmen was a fixed quantity, any part of which it was dangerous to lose. Hence, if a kinsman dies, his share of the life must be received by his fellow-kinsmen to prevent its passing out of the kin. Therefore they may smear themselves with his blood or fat, or even eat a part of him (Frazer, *Totemism*, p. 80). In the same way wearing a bone or tooth of a dead man is sometimes held to convey to the wearer his properties. Thus, while totemism generally forbade the eating of relatives, it may here and there have suggested it. In the same way, when totemism was weakened, the sacred totem animal became a sacred magical animal with healing qualities when eaten (S. Reinach, *L'Anthrop.* xiv. 355; W. R. Smith, *Kinship in Arabia*,[2] p. 231). This motive has led to the eating of relatives, but especially to the eating of enemies, in order to acquire their qualities.

4. The growth of Animism, with its belief in an indwelling spirit in all things, helped this theory of transmission of qualities, and introduced some of the strongest reasons for the continuance of cannibalism. While a man's strength or bravery may not have been conceived of as a separate entity, but simply as wrapped up in the man himself, Animism, with its belief in a shadowy replica of man—his soul or spirit—gave these things a new psychic significance. Hence in actual cannibalism we find that many tribes eat a man to be possessed of his soul, which in turn makes them possessors of all the qualities of the man. His life and all its manifestations — strength, wit, courage — are conceived of as being in the soul which lurks in his flesh; and, as in the earlier theory, by eating a man one obtained his strength, so now by eating him one obtains his soul. In many cases, where the heart or liver or marrow is said to be eaten, or the blood drunk for the sake of obtaining its owner's strength, it is probable that the assimilation of the owner's soul or life is intended, since it is so commonly believed that the life or soul is in one of these parts.

5. It might be thought that Animism, with its belief in soul, or spirit, or ghost, which, when freed from the body, was held to have many additional powers or, at least, greater freedom in using them, would have caused a fear of the dead and a natural shrinking from eating the body of an enemy, whereby his soul would be introduced into the eater, and thus work him harm. In effect, Animism did give rise to the fear of the dead and of ghosts, and in many cases it was held that the soul of a man, living or dead, could work considerable harm to the body or soul of another. But as, in spite of this, the bodies of the dead and of those most likely to harm the eater, viz. enemies, continued to be eaten, it is obvious that some counter theories were strong enough, in most cases, to aid men in overcoming their fears. These were (1) that by eating a man one overcame his ghost or soul, which was thenceforth harmless, and subservient to the will of the eater, or was even destroyed. We shall find this as a working belief among Australians, Maoris, Eskimos, and in Central Africa, while it also supplies one strong motive for head-hunting, frequently associated with cannibalism (§ 14). (2) Again, the curious ideas regarding eating, viz. that it established a bond of union between persons eating together (hence to eat the food of the spirit world, later of fairy-land, or of the gods, bound one to the company of ghosts or gods), may also have assisted to overcome the fear of the dead by a kind of inversion. If persons eating together became of one kin, so also might the eater with the thing or person eaten. Thus the eater of friend or foe, as it were, became inoculated with him, and so rendered him harmless. In the case of relatives this eating may easily have come to be regarded as part of the funeral ceremonies, to neglect which would ensure the ghost's vengeance, but to fulfil which caused his continued friendship. Thus cannibalism does not seem to have been much hindered, as far as fear was concerned, by the prevailing animistic beliefs, though these may have occasionally caused it to cease in another direction (see below, iii.). Frequently the bodies of relatives are eaten in order that their souls may strengthen the eaters, or pass over into them, possibly with the notion of their being re-incarnate in the bodies of the next children born into the family. Or again, the old and sick are killed and eaten to prevent the soul becoming weak with the body. Some analogy to this negative influence of Animism is found where cannibalism, involving the handling of a dead body, prevails among peoples, *e.g.* the Maoris, to whom such handling caused uncleanness. And parallels to the idea of the ghost strengthening or helping the eater of the body are found, *e.g.*, in the Melanesian belief that arrows tipped with human bone are deadly, because the ghost to whom the piece of bone belonged will work upon the wounded person (*JAI* xix. 215), or in the Andaman custom of wearing necklaces of human bones in the belief that the disembodied spirit will shield the wearer against evil spirits, through gratitude for the respect thus paid to his memory (*ib.* xii. 86).

6. Where cannibalism occurs for the purpose of obtaining the strength or other qualities of the person eaten, it is most frequently only a part of the body which is used; hence there is seldom a cannibalistic meal. This motive underlies cannibalism in parts of Australia, in the Sandwich Islands, Torres Straits and Nagir Islands, Timor-Laut, Celebes, and New Zealand, in some parts of Asia, among some African tribes, with the majority of American Indian tribes, occasionally in S. America, and even now and then in civilized lands.

Some tribes in North Australia eat the cheeks and eyes of enemies to make them brave (MacGillivray, *Voyage of Rattlesnake*, 1852, i. 152); in Queensland enemies do not appear to be eaten, but members of the tribe are, for various reasons, including the obtaining of their qualities; *e.g.* a mother will eat her child to get back the strength which she has given it; relatives are also eaten, as well as members of the tribe who fall in battle, and honoured headmen (Palmer, *JAI* xiii. 283; Howitt, *Native Tribes*, p. 753; Finch-Hatton, *Advance Australia!*, 1885, p. 143); in N.S. Wales the fat of the fallen, to which great strength is attributed, is eaten, while at burial a piece of the flesh is divided among the relatives, out of which they suck strength or throw it into the river to nourish the fish (Waitz, *Anthrop.* vi. 748; *JAI* xiii. 135); in S. Australia, besides other motives, the acquiring of strength appears among the Kurnai, Theddora, and Ngarigo, who eat the hands and feet of enemies (Howitt, *op. cit.* p. 752); the Dieri of Central Australia eat a man and drink his blood; the Luritcha frequently kill a strong child and feed a weak one on its flesh, while most of the tribesmen, before starting on an expedition, draw blood from one or more of their members, and drink it to make them lithe and active (*JAI* xxiv. 172; Spencer-Gillen[a], pp. 461, 475). Bonwick says of the Tasmanians that a man's blood was sometimes administered as a healing draught (*Daily Life and Origin of the Tasmanians*, 1870, p. 89). In the Sandwich Islands the eating of an enemy's eye by the king at his coronation to get his strength was the reduced form of an earlier, wider cannibalism (see § 18). In the Torres Straits Islands the tongue of a slain enemy was eaten as a charm for bravery; the sweat of warriors was drunk for the same reason; the eyes and cheeks of a shipwrecked party in 1834 were said to have been eaten to 'increase their desire after the blood of white men.' Beyond this cannibalism did not exist (Haddon, *JAI* xix. 312). On Nagir Island boys were made to eat the eyes and tongue of an enemy that their hearts might know no fear (Petermann's *Mitteilungen*, vi. 96). In Timor-Laut the flesh of a dead enemy was eaten to cure impotence; in Celebes the blood of an enemy was drunk to acquire courage (Riedel, *Selebes*, 1886, p. 279). Savage tribes in N.E. Burma preserve blood of enemies in bamboo canes till dry, and then eat it in a feast to obtain courage (Lumholtz, *Among Cannibals*, 1889, p. 274). The Dayak head-hunters would eat a piece of the cheek-skin as a charm to make them fearless (Ling Roth, *JAI* xxii. 59). Eating the eye and sucking the blood to get strength appear with the motive of revenge among the Maoris (Taylor, *N.Z.* ch. xxi.). Among the Yakuts and Kamtchatkans, and in Liu-kiu, a mother would eat the placenta in order to bear quickly again (*Inter. Arch. für Eth.* iii. 71), while in Muzaffarnagar a barren woman is recorded as killing a child to drink its blood (*PR* ii. 172). The lamas in Tibet are said to have a craving for human blood in order to obtain vigour and genius (Landor, *In the Forbidden Land*, 1898, ii. 68). Drinking an enemy's blood is reported of the people of Dardistan (Leitner, *Tour in D.* i. 9); the brains and lungs of an enemy are eaten and his blood is drunk in Luzon (Featherman, *Races of Mankind*, 1888, ii. 501). In Africa the practice as an isolated custom is found mainly in the south. The Basutos, in Moshesh's time, ate their Boer enemies to get their courage; warriors were also painted with a mixture into which pieces of human flesh (enemy's) entered, for the same reason; some of it was occasionally drunk; the hearts of conspicuous warriors are eaten by most of the tribes (*JAI* xix. 284 ff., xx. 137). The Kāfirs will eat a human heart to obtain strength; a similar notion doubtless underlay the custom among the Ama-pondo Kāfirs at the instalment of a chief—a relative having been killed, the chief bathed in his blood and drank from his skull. The Bechuanas, though disliking the practice, also eat an enemy's flesh for superstitious reasons (Crawley, *Mystic Rose*, 1902, p. 102). Tribes in East Central Africa cut out an enemy's heart and liver and eat them on the spot, while parts of the flesh are reduced to ashes and made into a broth, which is swallowed to give courage, perseverance, and wisdom (Macdonald, *JAI* xxii. 111; Buchanan, *Shirè Highlands*, 1885, p. 138). Among the

Negro tribes, who are cannibal mainly out of revenge or gluttony, this motive is occasionally found, either along with these or by itself: the Jaggas (Angola) ate men because it gave them courage, according to a 17th cent. traveller, and among the Bassongi of the Kassai men after circumcision and unfruitful women eat men's flesh to recuperate their powers; at Great Bassam (Ivory Coast) the heart and liver of a sacrificial victim, slain at the founding of a new town, are eaten by all present so that they may not die within the year; in Dahomey an enemy's heart is occasionally eaten at festivals (Wissmann, *Unter deut. Flagge*[2], 1892, p. 139; Ratzel, *Völkerkunde*, 1888, i. 613-614). In N. Africa, where cannibalism has been practically uprooted by Muhammadanism, it is believed, *e.g.* among the Nubians, that every bullet they fire will kill a man if they consume the liver of an enemy (Baker, *Ismailia*, 1874, ii. 354). Among the American Indians, with the exception of the outlying tribes, who are cannibals through famine, very little of the body is eaten, and that usually to obtain the courage of a dead enemy, though occasionally through revenge. Chippewa women fed their children with the blood and pieces of flesh of English prisoners to make warriors of them. The heart was eaten by such tribes as the Crees and Blackfeet; Dakotas and Sioux are known to have cut up a prisoner into small pieces, which were distributed to all the warriors, who ate them to get his bravery. There seems little doubt, however, that more extensive cannibalism had prevailed in earlier times (Long, *Voyages*, 1791, p. 115; Faraud, *op. cit.* p. 38; Keating, *Exped. to St. Peter's River*, 1825, i. 412). Occasionally Indians have been known to eat part of a slain enemy out of bravado (*3 RBEW*, p. 272). Among S. American tribes where mainly gluttony or more purely animistic motives prevail, there is sometimes a practice of rubbing children's faces with a slain enemy's blood to make them brave; the Tarianas and Tucanos of the Amazon burn the corpse of a warrior and drink the ashes in water in order to be brave; this is also reported of the Rio Negro tribes and Ximanes (Wallace, *Amazon*, 1853, p. 374; Steinmetz, p. 10; Muller, *Amer. Urrel.*, 1855, p. 289). Survivals of the practice in civilized lands have occasionally been noted; de Maricourt 'saw two Sicilians tear with their teeth the heart of a Neapolitan just killed' (*FLJ* i. 301). We may also note the belief current in the N.W. Provinces of India, embodied in various tales, that to eat the flesh or taste the blood of a saint or of a wizard is of peculiar religious efficacy, giving the eater wisdom and mystic powers (Crooke, *Rel. and Folk-lore of N. India*[2], 1896, ii. 255; Burton, *Sindh*, 1851, pp. 86, 388).

7. *Medical cannibalism.* — Derived from the idea of obtaining strength is the belief that the flesh, etc., of the dead has medical virtues. What strengthened the body would also cure its ills; hence primitive and even later pharmacopœias occasionally prescribe some part of the dead body as a medicine. The most remarkable examples of this practice occur in China. Among the poor it is not uncommon for a member of the family to cut a piece of flesh from arm or leg, which is cooked and then given to a sick relative. Parts of the bodies of criminals are eaten as medicine; their blood is drunk as a cure for consumption. In some cases murder is committed so that the diseased, *e.g.* lepers, may drink the blood of the victim. A popular work on materia medica gives many such cannibal remedies; in general, each part of the body has some particular curative virtue. The whole superstition in China is certainly connected with the idea that the eating of the human body strengthens the eater, for this is wide-spread, and at times it is difficult to say which purpose is intended. Thus Wells Williams writes: 'It is not uncommon for him [the executioner] to cut out the gall-bladder of notorious robbers, and sell it, to be eaten as a specific for courage' (*Middle Kingdom*, 1848, i. 415; Dennys, *Folk-lore of China*, 1876, p. 69; Bergemann, p. 21). Among savages the practice is found of giving a sick man some blood to drink drawn from the veins of a relative (Australia, *JAI* xiii. 132; American Indians, Petitot, *Trad. Ind.*, 1886, p. 269). Pliny cites a number of remedies concocted from portions of human bodies and used by the sick (*HN* xxviii. 1 f.). The medical properties of human flesh were believed in throughout mediæval Europe and even in much later times. Even in the 17th cent. the Hon. Robert Boyle speaks of the curative properties of the thigh-bone of a criminal. Popular superstition still makes occasional use of such remedies in Germany, but generally the flesh is used magically, though in some cases it is eaten. Drinking out of the skull of a dead criminal or suicide has always been a favourite remedy, and is still made use of in out-of-the-way corners—cases have been reported from the Scottish Highlands within the last few years. The custom of the sick drinking water in which the relics of a saint had been washed, or from his skull, or of a stream diverted so that it might flow under the altar of a church over the bones of a saint, was a favourite practice in mediæval times, as it still is in Roman Catholic lands and in, *e.g.*, the Cyclades (Bent, *The Cyclades*, 1885, p. 122). Louville (*Memoirs*, 1818, ii. 107) cites the case of the duchess of Alva in the 17th cent., who, alarmed for the health of her son, obtained a finger of St. Isidore from the monks of Madrid, pounded it up, and made him drink part of it in a potion. Probably the idea of the value of the flesh of a criminal for medical purposes was a relic from the time when criminals or prisoners or slaves were used as human sacrificial victims, sometimes representing the divinity, and either eaten in a cannibal feast, or their flesh or blood used for healing purposes. Since criminals had frequently been chosen as sacrificial victims, it was argued that there must be some virtue in a criminal's body. Thus when human sacrifices ceased, the executed criminal was still held to possess special virtues (see an article by M. Peacock, 'Executed Criminals and Folk-Medicine,' in *FL* vii. [1896] 268, for other instances).

8. *Magical cannibalism.* — In some cases the flesh of the dead is eaten for magical purposes; here also the underlying idea is that of acquiring the powers of the deceased. In the Torres Straits Islands, where only the tongue of dead enemies is eaten in ordinary circumstances, youths at initiation into the craft of sorcery are required to eat part of a putrid human corpse; this is also done by sorcerers before practising their art. In both cases it causes frenzy, and the eater is not held accountable for his actions, even for murder (Haddon, *JAI* xix. 316, 398). In various parts of Australia this eating of the dead forms part of the making of medicine-men, but with many of the tribes initiation is held to be the work of spirits; hence, possibly, eating the dead ensures the help of the ghost. Among the Wiimbaio of S. Australia the candidates must chew the bones of a dead man, dug up for this purpose, and, as in the previous case, they then become frenzied and act as maniacs (Howitt, *op. cit.* p. 404). The same practice occurs in Africa, as among the Bantu negroes generally, who think that the person desirous of becoming a sorcerer (as well as the sorcerer himself) is a corpse-eater, either from morbid tastes, or more probably with the idea that the dead body will invest him with magical powers. In E. Central Africa it is believed that witches and wizards feed on corpses in midnight orgies, and that any one eating such food is thereby converted into a wizard (Johnston, *Uganda Protectorate*, 1902, ii. 578; J. Macdonald, *JAI* xxii. 107). In W. Africa witches are held to feed upon living human victims by sending their 'power' into the body; but this power is dangerous to its owner, as it may feed upon himself if not regularly fed otherwise. Similarly, witches can extract the life-soul—a less material duplicate of the victim—and feast on it in a magic orgy; its owner then sickens and dies (M. H. Kingsley, *W. Af. Studies*, 1899, p. 209; Nassau, *Fetichism in W. Africa*, 1904, p. 55). Horace refers to witch practices in his day, and describes love-philtres in which dried human marrow and liver were ingredients (*Odes*, v. v.); while Petronius and Plautus also speak of witches devouring the nerves and intestines of their victims; the former mentions images of straw substituted by them for kidnapped children (Pet. cap. 63, 134; Plaut. *Pseud.* iii. 2. 31). Similar crimes were laid at the door of witches in Christian times, and the belief still

survives in Slavonic lands, where many tales are told of how the hags take out their victims' heart while they sleep and devour it, substituting some straw or a hare's heart, and thus changing their nature (see iv. § 4 for other instances). This branch of cannibalism is closely bound up with a whole group of practices in which part of a dead body is used for magical purposes, on account of its virtues, or because the soul of the dead man will act through the part which is made use of. These are found universally among savages, and with sorcerers and witches in more civilized lands, while they have given rise to a vast series of folk-superstitions (see RELICS).

9. *Animistic cannibalism.*—The belief that by eating the dead one acquires their strength is scarcely to be distinguished from the purely animistic motive—to obtain their soul, or otherwise to influence it—and it is possible that in some of the cases already cited 'strength' is equivalent to 'soul.' Where relatives are eaten, the passing over of the soul to the eater for the benefit of the latter is mainly aimed at; but in the case of an enemy the destruction or hurt of his soul is also intended, though instances with the intention of obtaining his services and goodwill are known. This is suggested in the curious 'ritual' performed by a murderer in ancient Greece, viz. to lick up the blood and then spit it forth. This was said to be done by way of ridding himself of the pollution of murder; in reality it 'took away the force of the dead,' which was still further effected by the lopping off of his limbs (Apoll. Rhod. iv. 470 f.). The former practice is found in Australia and Tibet, in N. and S. America occasionally, and in Africa; the latter is clearly found among the Maoris, the Eskimos, the Tupis of S. America, the Ashantis, and in New Caledonia. The idea of destroying the soul through eating the body is illustrated by the Ainu belief that until the body is decomposed the ghost remains active, and the Indian idea that a man-eating tiger obtains possession of the souls of his victims; hence he walks with bent head weighed down by their souls (Crooke, ii. 211); while, generally, the belief that by obtaining or acting upon a part of any one's body—hair-cuttings, nail-parings, bones, etc.—control over his spirit for its hurt is possible, is also suggestive in this connexion.

(1) *Eating of relatives.*—The Australian instances show how easily 'strength' and 'soul' are confounded. In most cases the obtaining of strength is desired (§ 6), but the passing over to the idea of receiving the soul is seen where certain parts—kidneys, fat, etc.—as containing particular virtues, are alone eaten. That 'strength' is mainly equivalent to 'soul' is seen in W. Australian cannibalism, where the old are eaten for food, because, being old, they have no longer a soul which might cause the eater discomfort; *i.e.* weakness and want of soul are identical (Oldfield, *Trans. Eth. Soc.* N.S. iii. 248). In Tibet, the lamas first and then the relatives of the dead man eat his flesh with the idea that the spirit whose flesh has been swallowed will always remain friendly to the eater (Landor, *op. cit.* ii. 68 f.). In N. America the acquiring of strength is mainly aimed at; but sometimes, as with the Shoshones, the eater of an enemy became animated with his spirit (Featherman, *op. cit.* iii. 206). In S. America the Chavantis eat dead children that their souls may pass over to the parents, while the Yamas, now extinct, broke the bones of their dead to suck out the marrow, believing that the soul resided in it and would pass over to them (Andree, p. 89; Marcoy, in *Tour de Monde*, xv. 139). In Uganda it was held that the liver, as the seat of the soul, would, when eaten, benefit the eater (*TRSE* xiii. 218).

(2) *Eating of enemies.*—The Maoris, whose cannibalism existed mainly out of revenge, believed that in eating the enemy they destroyed his spirit, thus avoiding his posthumous vengeance, since the spirits of the slain wander about seeking to revenge themselves (*L'Anthropologie*, vi. 443). With the Eskimos a curious belief prevails. After killing a man, they must eat part of his liver, as Rink says, to prevent his ghost rushing into the murderer—possibly through the eater being now one with the victim and thus forestalling his vengeance. The heart of a dead witch is also eaten by all the community to prevent her ghost haunting or frightening the living (Rink, *op. cit.* p. 45; Egede, *op. cit.* p. 138; Crantz, *Hist. of Greenland*, 1820, gives a curious reason for eating the heart of a murderer, viz. to cause his relatives to lose their courage; Bergemann, p. 20, says the Chukchis eat the heart of a dead enemy to make his relatives sick). The East Prussians ate a piece of murdered victims so as never to remember their evil deed again, *i.e.* probably to prevent the appearance of the ghost (Strack, *Blutaberglaube*, p. 59). The taking of the name of the victim by his slayer, after eating him, occurred with the Tupis of S. America, who are cannibals out of revenge, and with the people of Marshall Island; the 'name' being usually equivalent to 'soul' or 'spirit,' it is obvious that the slayer thus acquired his victim's soul (Andree, p. 87; Chamisso, *Bemerkungen*, p. 136). With the Ashantis the fetish-priest prepares the heart of an enemy with sacred herbs, and gives it to all who have not yet killed an enemy, that the ghost, which has its seat in the heart, may not take away their courage (Bowdich, *Ashantee*, 1819, p. 402). If a Manjuema man should kill his wife in a quarrel, he eats her heart with goat's flesh, to prevent revenge on the part of her ghost (Livingstone, *Last Journals*, 1874, ii. 58). In Melanesia, the eating of human flesh is held to give the eater *mana*—a spiritual essence which circulates in all things (Codrington, *JAI* x. 285); or a man will eat part of a corpse to obtain communion with the ghost, which will then assist him against living enemies (Codrington, *Melanesians*, 1891, p. 222).

10. *Cannibalism and blood-covenant.*—In some of the cases cited, and perhaps running more or less through all animistic or strength-acquiring eating of enemies, appears the idea that eaters and eaten are now one; hence the revenge of the ghost is forestalled; hence, too, the relatives of the victim cannot harm the murderer. This seems to underlie the Chukchi, Eskimo, and E. Prussian cases; it reappears among the Hurons, who drank the blood of an enemy to become invulnerable against the attacks of other enemies (presumably his relatives); among the Botocudos, who ate an enemy to be protected from his revenge and to be invulnerable against the arrows of the hostile tribe; in New Britain; and in modern Italy, where a murderer believes he will not escape unless he taste his victim's blood (Featherman, *Aonco-Mar.* p. 60, *Chiapo-Mar.* p. 355; Powell, *Wanderings*, p. 92; *Rivista*, i. 640). In all these cases there is a dim recognition of kinship acquired with the victim and his relatives, which has doubtless been suggested by the rite of blood-brotherhood, by which, when two persons, not otherwise related, have tasted each other's blood, they are henceforth one (see BROTHERHOOD [artificial]).

11. *Honorific cannibalism.*—Other motives besides the above must be noted, especially in connexion with the eating of relatives. It is possible that an animistic reason may underlie these. In certain cases the sick or old are killed in order that their souls may not be weakened with the body; thus the soul is set free in comparative strength to animate the eater. From one point of view this is to honour the dead, and honour may well be the motive even where it is not expressly stated. We may therefore join all cases where this animistic intention is found with those in which honour to the dead is the prevailing idea, and those in which the eating by relatives ensures proper burial, or the prevention of corruption or of worms doing harm to the body or soul. Among those practising cannibalism for this reason are several peoples mentioned by classical writers, some Australian tribes, various Asiatic peoples, and S. American tribes. Thus it hardly occurs in those regions where cannibalism existed out of revenge or gluttony, save in a few notable instances.

Herodotus (i. 216) describes the cannibalism of the Massagetæ, a Scythian people living to the N.E. of the Caspian. When a man had attained a great age, his kinsmen 'sacrificed' him with cattle, boiled the flesh, and ate it, accounting this a happy death. This account is confirmed by Strabo (xi. 513). Their neighbours, the Issedones, had a similar practice when the father died, his flesh with that of cattle being cut up and eaten at a banquet by the relatives, who then cleansed the head, gilded the skull, and afterwards honoured it with sacrifices (Herod. iv. 26). Strabo also says that the Derbikes, a people of North Iran, killed and ate all old men over 70; all others (including women) were buried. He also describes the people of the Caucasus as eating the flesh of relatives. Indians called Padaioi are mentioned by Herodotus (iii. 99) as cannibals: a sick man was killed and eaten by male relatives, a sick woman by female relatives. Any who attained old age were also

killed and eaten. Other Indian peoples, *e.g.* the Kallatiai, ate their dead parents (iii. 38). These were doubtless aboriginal and not Hindu tribes. Farther west, the inhabitants of Ireland (Ἰέρνη) are said by Strabo to deem it 'honourable to eat the bodies of their deceased parents' (iv. 5); Diodorus Siculus also refers to their cannibalism, but mentions only the eating of dead enemies (vi. 16). There seems no reason for throwing doubt on these assertions, especially as they are paralleled by recent or existing customs not only in Asia but elsewhere. The Weletabi or Wilze, a Slavonic people, are said by Notker to have eaten their old parents (Grimm, *Teut. Myth.* iii. 1081); and the same is related of the Wends in ancient chronicles (Steinmetz, p. 24). In *Australia*, honour to dead relatives and the conferring of a benefit upon them are mentioned as motives among tribes on the Mary River (Queensland) and in Western Victoria. In the latter case only those dying not by illness are eaten; and brothers and sisters do not eat each other (*JAI* ii. 179; Dawson, *Aust. Abor.*, 1881, p. 67). In the Turbal tribe, when a man is killed at the ceremonial initiation fights, his tribesmen eat him 'because they knew him and were fond of him, and they now knew where he was, and his flesh would not stink' (Howitt, *op. cit.* p. 753). In *Asia*, the classic example of cannibalism is found among the Battas of Sumatra, who practise legal cannibalism on enemies and criminals, but also eat the sick and old out of respect—an unusual combination of contradictory motives. It is probable that they are the people mentioned by Marco Polo and others as dwelling in the kingdom of Dagroian. Marco Polo's account is that when any one is ill a sorcerer is sent for, and if he foretells that the patient will not recover, the sick man is put to death and eaten by his kinsmen. They are careful to leave nothing lest it should breed worms, which would die for want of food, and the death of these worms would be laid to the charge of the deceased man's soul (Yule's *Marco Polo*, 1871, ii. 275). Leyden, in 1805, gave a slightly different account. Aged and infirm relatives are eaten as a pious ceremony. They invite their descendants to kill them. The victim ascends a tree, round which the others assemble singing a funeral dirge —'The season is come, the fruit is ripe, and it must descend.' He then descends, and is put to death and eaten in a solemn banquet. The custom existed sporadically among the wilder tribes of Eastern Asia within recent times. The wild people of Arakan eat the old (Yule, *op. cit.* i. 281); some of the Gonds of Central India, *e.g.* the Binderwurs, killed and ate the sick and the aged, 'thinking this an act of kindness and acceptable to the goddess Kali'; so also did the Birhor and the Gonds in Oudh (Yule, ii. 281; Sartori, 'Die Sitte der Alten- und Krankentodtung,' *Globus*, 1895, p. 126). The Kweichans were said by the Chinese to eat old relatives, as also did the people of Uei-Po with old men; women were exempt. The same was asserted of the Tibetans in the case of the old, 'honourable burial' being reported as the motive (Yule, i. 292); while the Samoyeds and Ostiaks ate them with shamanic ceremonies, so that their condition after death might be improved (*Inter. Arch. für Eth.* iii. 71). For some of the *S. American* tribes, with whom this motive appears, the evidence is conflicting, as they are also accused of eating enemies out of revenge or gluttony. This is true of the Botocudos, with whom the old father is said to implore his children to eat him, and the mother eats a dead child out of tenderness (Preuss, *Begräbnisarten der Amerikaner*, p. 219; Waitz, iii. 446); of the Miranhas, said to eat the sick and old (Marcoy, in *Tour du Monde*, xv. 139); and of the Kashibos, said to eat their elders from religious motives (*Anthrop. Rev.* i. 38). Surer ground is reached with the Mundrucus, who kill and eat the sick and old out of kindness; the Capanahuas and the Cocomas, who eat the dead out of honour, because it is 'better to be inside a friend than to be swallowed up by the cold earth'; the Mayorunas and the tribes on the Orinoco, with whom the reason is that it is better to be eaten by a friend than by worms; and the Acumas on the Maranon, who ate dead relatives (Markham, *JAI* xxiv. 248, etc.; Spencer, *Prin. of Ethics*, 1893, i. 330; Steinmetz, p. 18 f.). Tapuya mothers eat their dead infants as well as the placenta (Nieuhof, *Gedenk. Brasil. Zee- en Lantreize*, Amsterdam, 1682, p. 216).

12. Closely akin to the above motive is that of *morbid affection*, eating the dead out of sheer love, which is found with many Australian tribes. The idea is clearly that of obtaining communion with the dead, which is also effected in Australia, Timor-Laut, New Britain, etc., by smearing the body with the decomposed matter of the corpse; or, in Australia and the Andaman Islands, by a near relative carrying about the skull or bones. It is expressed in two different ways by the Australian tribes. (1) Among the coast tribes of north central Australia, the flesh of the dead is eaten as part of the burial rites, apparently out of affection, and always by certain definitely arranged persons (Spencer-Gillen[b], p. 547 ff.). Other writers refer to the so-called 'love-feasts' of east central tribes, in which, when a young woman dies, her male relatives and men with whom she has had sexual relations eat parts of her body (Steinmetz, p. 11). With these tribes, the bones are the object of the utmost care and the most minute ceremonial. (2) A curious motive is that of the relatives eating the dead in order that they may no longer be sad. This occurs among tribes on the Peak Flood river (along with other motives). They eat dead children, else they will for ever mourn them; the mother gets the head, while the other children are given part in order to strengthen them (Andree, p. 45). With the Dieri, the fat adhering to the face, thighs, arms, and stomach is eaten according to strict rules of relationship, and in order that the relatives may not be sad or weep: this is also the case with other tribes of S. Australia—the Yanrorka, Yantruwunta, Marula, and Tangara. The latter eat the flesh also, carrying the remains about and eating a piece whenever their grief overcomes them (Howitt, *op. cit.* pp. 449, 751). The custom is not unknown even among Christianized American Indians in British Columbia, instances being known of some of the blood or juices of the corpse being rubbed on the body or swallowed in a frenzy of grief to obtain union with the beloved dead (Allison, *JAI* xxi. 316). Precisely the same idea of morbid affection is found in the story of Artemisia, who drank the ashes of Mausolus out of love for him (Aul. Gell. x. 18). Civilized Greek and savage Australian were at one. It was possibly also a custom among the ancient Celts, since in the heroic cycles we read how Emer, the wife of Cúchulainn, after her husband's head had been cut off, washed it, pressed it to her bosom, and sucked in the blood (Hyde, *Lit. Hist. of Ireland*, 1899, p. 352). Déirdre also lapped the blood of her husband when he was slain (*ib.* p. 315). The custom is also referred to in much later Gaelic poetry, while Spenser saw a woman drink the blood of her foster-son at Limerick (Carmichael, *Carmina Gadelica*, 1900, ii. 282).

13. *Cannibalism through revenge.*—Probably at a later stage an entirely new motive arose with respect to the eating of enemies, though it may always have been more or less latent in this practice, and, where it prevailed, it put a stop to the eating of relatives (where that existed) or fellow-tribesmen, except for one particular reason. This is probably a late motive, since it seems mainly to affect savages at a higher stage of civilization, while it also prevails with those who are most cruel. Here enemies are eaten out of rage, and in order to glut revenge and cause their lasting contumely. The dead enemy was treated with the utmost contempt, and finally eaten with every mark of degradation. It is obvious that, where the eating of relatives out of honour still continued, the rise of this motive must have soon put an end to it. For eating the dead could not signify in the one case contempt and in the other honour. And, in fact, where enemies are eaten for this precise reason, the eating of fellow-tribesmen does not exist except where gluttony, as in certain Polynesian cases, causes all loss of distinction between friend and foe, or in cases of extreme hunger (Marquesas Islands) when an enemy is not available. The motive of revenge, however, gave an impetus to the eating of fellow-tribesmen in a new direction, viz. as a punishment, and produced legal cannibalism. The criminal was eaten, as elsewhere he is executed. In certain cases the motive of sheer gluttony coexists with this motive of contempt, and here also mainly among higher savages. Raids are made on surrounding tribes, and cannibalism causes a regular trade in bodies, which are bought and sold in the market as meat is in a butcher's shop.

14. The eating of enemies out of rage or contempt, with its correlate, legal cannibalism—the eating of criminal members of the community—has a comparatively wide range, and mainly among higher savages and barbaric races. In some cases

it is connected with the idea of obtaining the enemies' strength, while it cannot always be dissociated from the motive of gluttony. In many cases, however, the eating is reduced to a minimum, and becomes a mere formal act of revenge. Its connexion with actual head-hunting—a practice which extends eastwards from India, through Malaysia, to Melanesia, and which is mainly concerned with showing contempt for enemies—as well as with the cutting off and preservation of the head or skull or scalp, after the cannibal meal, as a trophy, should be noted; while we must distinguish between this latter custom and the preservation of a relative's head out of honour or for the purpose of a definite cult. The cutting off and preservation of the head as a trophy must have originated early, as in Neolithic graves headless bodies are frequently found (*JAI* v. 146). While rage and contempt are clearly indicated in the custom, actual head-hunters now believe that the ghost of the slain will become the victor's slave in the next world, or will become his guardian and benefactor—an animistic motive which doubtless underlies the practice wherever found, while it recalls the already noted instances of subduing the ghost through eating (Dayaks [Ling Roth, *Nat. of Sarawak*, 1896, ii. 140; *L'Anthrop.* xiv. 96]; Lushais [Woodthorpe, *Lushai Expedition*, 1873, p. 136]). Cannibalism out of contempt, whether associated or not with head-hunting, occurred among the ancient Celts and Scythians. It is found among a few Australian tribes; in E. Asia; in Melanesia, Polynesia, and Micronesia; it is common in Africa and also in S. America.

Of the Irish *Celts*, Diodorus Siculus (vi. 12) says that they ate their enemies; while it is certain that the heads of enemies were cut off, and carried at the girdle, or otherwise preserved. In some cases the victor tore the features with his teeth, as did the Prince of Leinster in Fitzstephen's time (Girald. Cambr. *Conq. of Irel.* bk. i. cap. 4; cf. also Hyde, *op. cit.* p. 295; *Rev. Celt.* viii. 59, x. 217). The heads of slain warriors were dedicated to Morrigu, the Irish war-goddess, or were considered her property (Stokes, *Three Irish Glossaries*, 1862, p. xxxv). The *Scythians* drank the blood of slain enemies, stripped off the scalp and hung it on the bridle-rein, and made a drinking-cup of the upper part of the skull. This was also done to relatives with whom they were at enmity (Herod. iv. 64 f.). Strabo speaks of the *Karmanians*, a people west of the Indus, among whom none may marry till he cuts off an enemy's head and brings it to the king, in whose dwelling it is hung up; the tongue is mixed with flour, cooked, and eaten by the slayer and his relatives (xv. 727). *Asia; Pacific.*—The Garos of Bengal eat the fruit of a tree with the juice of an antagonist's head after a family feud, the tree having been planted by both parties for that purpose (*JAI* ii. 396). Cannibalism is associated with many of the head-hunting ceremonies among the wilder Dayaks, and probably was once more widely prevalent, the motive being revenge (St. John, *Forests of Far East*, 1862, i. 123–124). The brains, palms of hands, and flesh of the knees were eaten as tit-bits. It also prevailed among the wild tribes of the Philippines at the time of their discovery, the heart of an enemy being eaten with citron juice out of revenge. Later this custom seems to have been restricted to the priest, who opened the breast, dipped a talisman of the gods in the blood, and ate a piece of heart and liver (Semper, *Die Philippinen*, 1869, p. 62). Some head-hunters eat the brains of the enemy; this is also done in Luzon, though here the motive is rather to obtain courage, but the skull is kept in the house as a trophy (Andree, p. 20; Featherman, *Races*, 2nd div. pp. 501–502). The head-hunting tribes of the interior of Celebes were also cannibals out of revenge, though occasionally from gluttony, begging the bodies of condemned criminals from their more civilized neighbours (Bickmore, *Travels*, 1868, p. 70). The Battas of Sumatra eat prisoners of war to show their contempt for them. They bind the victim to a pole, throw lances at him till he is killed, and then rush forward and hack him with their knives, roasting and eating the pieces with salt and citron juice (Marsden, *Sumatra*, 1811, p. 390; Miller, in *Phil. Trans.* lxviii. 161). The heads are preserved as trophies in the village-house (Featherman, *op. cit.* p. 335). Marco Polo asserts the eating of a war prisoner in Zipangu (Japan) if he was too poor to buy his freedom; while Sebastian Münster describes the roasting and eating of prisoners, and the drinking of their blood, by the Tatars (*Cosmographia*, p. mcxlvii). Mediæval chronicles assert similar things of the Tatar invaders of Europe; but the evidence must be received with caution, as such stories are common in time of war regarding dreaded enemies. *Melanesia.*—In some islands of the Torres Straits group, *e.g.* *Muralug*, the heads of enemies were cut off, placed in an oven and partially cooked. The eyes and parts of the cheeks were eaten by the victors to make them brave; the skull was then kicked along the ground and afterwards hung up near the camp (MacGillivray, *Voyage of Rattlesnake*, ii. 4–7). In the *Solomon Islands* both revenge and gluttony lead to the eating of war-prisoners, who are cooked in a pit with hot stones, and eaten with frantic joy. The scalp and hair are put on a coco-nut and hung in the common hall; canoe-houses are also adorned with enemies' skulls (Verguet, *RE* iv. 214; Woodford, *Nat. among Head-Hunters*, 1890, pp. 92, 152; Guppy, *Sol. Is.*, 1887, p. 16). The same mixed motives are found in the *New Hebrides*; some refer it to an unnatural taste after revenge; others, to gluttony, as plenty of food exists in the islands. In some cases the crimes of an enemy are alleged by the natives as their reason for eating him; in other cases the bodies are supplied by the chief to the villages as a feast. The practice now exists only in the interior, and members of another tribe are asked to cut up the body (Turner, *Nineteen Years in Polynesia*, 1861, p. 83; *L'Anthrop.* x. 360; Steel, *New Heb.*, 1880, p. 25). In *New Caledonia* the ferocity of the natives is well known, one group attacking another neighbouring group, murdering and devouring them. Man-eating is here ascribed by the natives themselves to the lack of animal food, but revenge also enters into it to a large extent. The smallest pretext is used for fighting, and revenge is not complete until the slain have been devoured. It appears to be mainly the privilege of the chiefs, who even eat their own tribesmen, causing a tumult to be raised and eating the offenders as a punishment, and inviting guests to share in the meal (Lang, *Social Origins*, p. 167; De Rochas, *Nouvelle Caled.*, 1862, p. 206; *BSAP*, 1860, p. 414; Montrouzier, *ib.* 1870, p. 30). In *Fiji* revenge and gluttony as well as religious motives have caused cannibalism. One of the victims was usually offered by the priest to the war-god, or sacrificed at the building of a temple or the launching of a canoe; in the latter case the bodies were used as rollers. Cannibalistic feasts on bodies of enemies were common, and 'as tender as men's flesh' had passed into a proverb. Chiefs sent bodies of the victims of war to each other, or kept a register of the numbers they had eaten—in one case this reached 872. The skulls were sometimes used as drinking vessels. Ovens and pots in which the dead were cooked, and the dishes from which they were eaten, were *tabu* (Williams, *Fiji*, 1858, *passim*; Miss Gordon-Cumming, *At Home in Fiji*, 1881, p. 134; Erskine, *Western Pacific*, 1853). In the *Marquesas Islands*, as in *New Zealand*, cannibalism in great part showed contempt for the slain enemy, and this was further marked by the semi-animistic motive already mentioned—the satisfaction at destroying the enemy's soul. The religious aspect of cannibalism in these countries will be referred to later. In the former, cannibalism was latterly restricted to chiefs (descendants of the gods) and priests—the heart and eyes being eaten and the blood drunk. In the latter, gluttony was also a motive, and the circumstances of the feast were most gruesome. The head was placed on a pole and the oven was *tabu* (*L'Anthrop.* vi. 443; Miss Clarke, *Maori Tales and Legends*, 1896, p. 126 f.; Andree, p. 68; Bergemann, p. 36). In *Tonga* the liver of a slain enemy was eaten through hate (Mariner, *Tonga Islands*, 1817, i. 321); in *Samoa* the motives were also hatred and revenge, 'I will roast thee' being the greatest insult which could be offered to a Samoan, while, even after the practice was given up, captives, in token of submission, would offer burning wood, and say, 'Kill and cook us when it seems good to thee' (Turner, *Polynesia*, p. 194); in *Micronesia*, cannibalism was reduced to eating part of a great warrior out of hate, the eaters taking his name (Andree, p. 71). Instances from *Africa* are usually connected with gluttony; in *Manjuema*, as also among some tribes of the Niger delta, enemies are eaten mainly out of revenge; skulls of enemies decorate the houses and villages. Robertson Smith has shown that cannibalism existed among the early Arabs to the extent of eating the liver or drinking the blood of an enemy; drinking wine from the skull is also referred to, and the wearing of necklets, etc., of noses and ears (*Kinship*², p. 296). In *S. America* the Mesayas kept a prisoner for some time, giving him a wife. At the end of 3 months he was sent to gather wood for the oven; warriors then selected, by painting with a mark, that part of his body which they would eat. A dance took place by night, after which the prisoner was slain and eaten; the bones were split for the marrow; the head was painted and placed in the hut of the bravest warrior. Revenge was the motive, and warfare between neighbouring tribes was frequent (Marcoy, in *Tour du Monde*, xv. 135). Blood revenge was attributed as the motive of Miranha cannibalism (Martius, *Beitr. zur Eth. Amer.*, 1867, p. 538); also among the Columbian Indians; the Botocudos (head stuck on a pole and used as a mark for arrows); probably the Coroatos (enemy's arms eaten during a dance of warriors); and the Araucanians (head chief and other chiefs suck blood of hearts) (Andree, p. 82 f.; Neuwied, *Reise nach Brasil.* ii. 49; Smith, *The Araucanians*, p. 274). With the Tupis, dead enemies were eaten, while their children were brought home and cared for till the age of 14, when they were slain and eaten. This was also done to young women; while to male prisoners were given wives. They were then kept till a festival was arranged, which was carried through according to strict ceremonial. The prisoner had to light the fire at which he was to be roasted; he was slain with a special club, round which women had sung and danced all night. All took part in the eating. The motive was revenge, the prisoner being told that he was thus treated because he had killed and eaten his captors' friends. If a child had been born to the prisoner, it was also eaten, and was held to be of the same flesh and blood as their enemies (Hans Staden, cited in Andree, p. 85 f.; Southey, *Hist. of Brazil*, 1819, p. 299). With civilized peoples eating part of an obnoxious enemy or ruler has occasionally occurred on the part of rough soldiers or the mob. Christian soldiers are said to

have roasted and eaten Turkish prisoners at the siege of Antioch (Bergemann, p. 18); at Florence, in the 14th cent., citizens ate the flesh of their rulers (Machiavelli, ii. ch. 8); and in the French Revolution eating the heart of victims of mob violence was not unknown (for the Scots instance of Lord Soulis see Scott, *Minstrelsy*, 1839, p. 462, and cases cited there).

It is obvious from many of these cases that head-hunting was, in its origin, closely connected with cannibalism, while it forms one of a series of practices in which the remains of dead enemies are treated with contumely or regarded as trophies, or worn to increase the wearers' strength. For Celtic and Scandinavian instances of making trophies of heads, see Elton, *Origins of Eng. Hist.*, 1882, p. 112. For American Indian scalping, see paper by Burton in *Anthrop. Rev.*, 1864, and Friederici, *Skalpieren und ähnliche Kriegsgebrauche in Amerika*, Brunswick, 1906. The Botocudos, people of New Hebrides, Niam-Niams, and Ashantis wear teeth of victims as necklaces, in some instances to obtain their courage (Keane, *Man Past and Present*, 1900, p. 437; Beecham, *Ashantee*, 1841, p. 76; see other references above). Some of these also wear bones, as the Tshis make trophies of jawbones (Ellis, *Tshi-speaking Peoples*, 1887, p. 266). The Maoris made utensils and vessels of their victims' bones. Cf. also the frequent use of the skull as a drinking vessel in the instances cited. In New Guinea (natives of Mowat and Dandai, *JAI* xix. 462) the penis of warriors is believed to possess great virtue; it is cut off and worn, as is the vagina of women. Among the Chinese the ear is commonly cut off (*JAI* xxii. 172 f.); the ancient Celts cut out the tongue (*Rev. Celt.* i. 261); and the Mexicans flayed an enemy's or victim's body.

15. *Legal cannibalism* is found among the Battas, who treat their evil-doers and criminals precisely as they do enemies (*vide supra*, p. 200*a*, § 9 (2)), eating them as an ignominious punishment (see *Geog. Jour.*, June 1898). Marco Polo describes the eating of dead malefactors among the Tatars of Xandu, and the people of Fo-kien and Kiang-si (Yule, p. 207). Thieves and assassins were eaten in Bow Island as well as enemies, and in Francis Island thieves were consumed (Letourneau, *op. cit.* p. 212; Turner, *Samoa*, 1884, p. 300). Among the Maoris, adulteresses and murderers were eaten and their bones made into utensils; the eyes were swallowed raw by the Ariki (Shortland, *N.Z.*, 1851, p. 230). Wrong-doers were not eaten by their own tribesmen in Duke of York Island, but killed and sold to another tribe (Powell, *Wanderings*, p. 93); murderers or particularly detested enemies are eaten in Lepers' Island in anger and to show ill-treatment (Codrington, *Melanesians*, p. 344); evil-doers are killed and eaten by order of the chiefs in New Caledonia (Andree, p. 58, citing Garnier); witches were sold for food as a punishment in New Georgia (Woodford, *Head-hunters*, p. 150); while in Fiji a whole tribe would be condemned to be eaten for offending the paramount chief (Keane, *Man Past and Present*, p. 137).

Among the *African Negroes* the practice is common, sorcerers being generally killed and eaten by all the tribes (*L'Anth.* xiv. 91). The *Mambanga* eat murderers or those asserted to be so by an oracle (Andree, p. 39); the *Ba-Ngala* occasionally eat debtors (Coquilhat, *Sur le Haut-Congo*, 1888, p. 337); the *Tupende* and *Tukette* are said to eat malefactors (Wissmann, *Im Innern Afrikas*, p. 98). Among the *Kissama* a debtor or criminal is eaten as a punishment (Hamilton, *JAI* i. 187); dead rebels are eaten in *Concobella*, and murderers are killed, torn to pieces, and eaten in *Bonny*; while among the *Agni* of the Ivory Coast those condemned to death as criminals were eaten (Steinmetz, pp. 21-22; *L'Anthrop.* iv. 424). In *E. Africa* an offender is sometimes made to eat one of his own members cut off for the purpose (*JAI* xxii. 110). The *Eskimo* custom of eating a witch's heart (already noted) may be regarded also as a legal punishment. Two *S. Australian* tribes, the Mukjarawaint and the Jupagalk, kill men marrying within the forbidden degrees, and part of the body is eaten by members of the same totem-clan (Howitt, *op. cit.* p. 247).

16. *Cannibalism through sheer gluttony*—the worst form of all—is found mainly in Africa, along the Guinea Coast, southwards into Congo-land, and eastwards to about 30° E. longitude. Captain Hindes, at the meeting of the British Association in 1895, said, 'The Negro takes human flesh as food purely and simply, and not from any religious or superstitious reasons.' To this, however, there are some exceptions. It also occurs among the Negroes of Hayti, apart from their religious cannibalism. It is found among a few N. American and several S. American tribes in a particularly odious form, in New Guinea sporadically, and in Melanesia.

In the Guinea coast region and the Niger delta, cannibalism through gluttony appears to be dying out, and only a few tribes here and there within recent years are accused of it—the people of Calabar, the Obotschi and Onitscha on the Niger, Bambaras, Quaquas, and Bourbonris (Hutchinson, *Ten Years among Ethiopians*, pp. 48, 58; F. du Langle, in *Tour du Monde*, xxvi. 374). In Ashanti and Dahomey it has become a mere formal rite. In French Congo the worst offenders are the Fans, who, however, are becoming ashamed of it (du Chaillu, *Eq. Africa*, 1861, p. 74 f., *Tour du Monde*, xii. 308; Schweinfurth, *Heart of Africa*, 1873, ii. 18). But the greatest seat of gluttonous cannibalism is in Central Africa, especially in the regions untouched by Muhammadan influence. The tribes in and around the Congo Free State—Niam-Niams, Monbuttus, Mam-banga, Manjuema, Bongos, Balutu, Bassanje, and others—are mentioned by Stanley (*In Darkest Africa*, 1890), Schweinfurth, and other explorers, as inveterate cannibals. Among all these gluttonous cannibals it is mainly enemies who are eaten. Earlier writers speak of some of them eating their own dead, but this is probably a mistake. Modern authorities lay particular emphasis on the fact that relatives are not eaten, through an existing horror at eating the flesh of blood relations, but their bodies are frequently sold or exchanged to neighbouring villages or tribes. With many of the tribes, raids are regularly undertaken to obtain prisoners, who are then sold, living or dead, in the market-places as butcher meat. Prisoners are kept till required; dead bodies are frequently salted down or dried; but the Manjuema are most disgusting and depraved, soaking the body in water till putrid, and eating it raw. The Yokomas, Bougous, and others also eat putrid human flesh (*L'Anthrop.* vii. 119, xii. 78). Among the Niam-Niams the children born to slave women are killed and eaten. In all cases human flesh is regarded and treated exactly as the flesh of animals would be elsewhere. The skulls of victims ornament the villages; their teeth are worn as necklaces; the fat is used to feed lamps. Occasionally cannibalism is found as one of the principal objects of a secret society, like that of the Leopards in Sierra Leone, every person entering which must provide a human victim, who is secretly murdered; the liver and kidneys are eaten by the 'kings' of the society, while the body is devoured by the other members. All of them rub the fat on their faces and hands, as well as on the fetish, which is the property of the society (*L'Anthrop.* vii. 621). A similar society of ghouls exists in Uganda, although cannibalism is otherwise little known in E. Africa; the herding of victims in pens, to be slaughtered as required, is, however, described in 1586 (*JAI* xxii. 99). The members of this society are called Basezi, and have their headquarters mainly in the Sese islands on Lake Victoria. They kill their victims secretly, and also disinter and devour corpses. Both of these societies are abhorred in their respective districts (Sir H. Johnston, *Uganda Protectorate*, ii. 692). In Hayti, Vaudoux cannibalism is doubtless a survival of African man-eating, and occurs through gluttony as well as from a religious motive (see below). Murder for this end is frequent; midwives are accused of killing children in order to eat them; while human flesh is said to have been exposed for sale in the markets (St. John, *Hayti*, 1884, p. 223 f.). Analogous to the African societies is one which formerly existed among the Indians of Vancouver Island and the coast district near it, called the Hametze, and composed of those of the highest rank. The preparation for admission lasted four years; at the end of it the candidate had to drink human blood, which he did by attacking and biting the first person he met. At the feasts of the society, slaves and prisoners were killed and eaten. The British rule put an end to the custom, but the eating of corpses is alleged to have still continued (Jacobsen, *Reise*, 1896, p. 47 f.).

S. America.—The witness of travellers, as well as the existence of shell-mounds with human bones split for the extraction of the marrow, proves that the Caribs of the Antilles were cannibals, raiding other islands and the coast to obtain victims of their gluttony. The other tribes still retain a traditional fear of this ferocious people (Im Thurn, *Indians of Guiana*, p. 418; Brett, *Legends of B. Guiana*, 1880, p. 100; cf. Andree, p. 72). The Kashibos of Peru make war on neighbouring tribes in order to get prisoners to eat, and are detested by them for this practice (Tschudi, *Trav. in Peru*, ii. 222; Marcoy, xi. 220). Similar statements are made of the Cobens (Wallace, *Amazon*, p. 498). Other tribes are accused by old travellers of gluttonous cannibalism; thus Herrera says of the Colombian Indians that 'the living are the grave of the dead, for the husband has been seen to eat his wife, the brother his brother or sister, the son his father; captives are also fattened and eaten roasted' (Herrera, in Purchas, pt. 3, p. 890); but all these statements must be received with caution. The Catios, a branch of the Chocas in Columbia (now extinct), were also said to fatten captives for the table, while their Darien neighbours cohabited with female prisoners, and brought up the children of such unions till they were fourteen, when they and the mother were killed.

The doors of chiefs were here decorated with men's skulls (Cieza de Leon, in Hakluyt Soc. p. 60 f.). The eating of the offspring of a captive to whom one of their own women had been given among the Tupis has already been noted. In parts of New Guinea, *e.g.* in the south-east, human victims were and are eaten as 'the best possible nourishment'; some of the tribes were constantly at war for the sake of a feast off the prisoners taken (Chalmers and Gill, *New Guinea*, 1885, pp. 44, 188, etc.). Elsewhere the practice is abhorred, or exists only for other reasons (see above). In New Ireland the people glory in cannibal banquets, and many bodies are to be seen in the houses ready for eating (*Roy. Geog. Soc. Report*, 1887; Bergemann, p. 31). For the New Hebrides and Solomon Islands see above; the gluttonous motive of the former is confirmed by Steel (*New Heb.*, 1880, p. 25), who says appetite sometimes leads them to capture victims; while Woodford (*Nat. among Head-hunters*, 1890, p. 157) speaks of cannibalism as a daily practice in the Solomon Islands. In some parts of New Ireland a tribe will hire itself out for fighting, the only payment required being the bodies of the slain. A society in New Britain, the Duk-Duk, whose main purpose is the secret administration of justice, has occasional feasts in which (as in the African and American Indian societies) human flesh is the principal dish (Deniker, *Races of Man*, 1900, p. 254; Powell, *Wanderings*, 1883, p. 63).

17. *Religious cannibalism.*—Religion as a motive for cannibalism exists more or less wherever the animistic motive or the desire of honouring the dead is found. There is here, however, a blending of magic and religion, since, though honour to the ghost of the dead may suggest the practice, there is also the intention of assimilating the qualities or the soul of the deceased. It is mainly where enemies are eaten that cannibalism as a strictly religious rite exists, and usually in connexion with the sacrifice of the victim to the gods. This suggests that the religious aspect of cannibalism is a late one, more especially as in such comparatively civilized countries as Mexico and Nicaragua cannibalism was entirely ritual and religious. The eating of prisoners would naturally be only occasional; hence it would become a festival with a religious aspect. The question of the relation of human sacrifice to cannibalism requires consideration. Did human sacrifice arise through an earlier cannibalism, viz. on the principle that, as men ate human flesh and liked it, therefore they could offer nothing better to the gods—sacrifice being primarily a feeding of ghosts or gods? Or did human sacrifice have a separate origin to which divine cannibalistic ideas were transferred by human cannibals? The former is much more likely, as the gods are universally believed in early times to *eat* the sacrifice. We may also note instances of human sacrifices to animal divinities who actually eat the victims. It could only then have been at a later time that the worshipper shared in the human victim with the gods or ghosts at a sacrificial feast. We cannot therefore seek the origin of cannibalism in such a feast. It presupposes cannibalism; instances of it are rare, and are found only among higher savages; while cannibalism is not always associated with human sacrifice, and sometimes exists, as with the Australians, where sacrifice of any kind is unknown. The human victim may sometimes have been eaten as in a common meal in which gods and men shared, or, to judge by several actual instances, as himself representing the divinity of whose life men partook by eating the human representative. But such a view certainly does not belong to the earliest stages of religious thought. Religious cannibalism is found to have existed among the Maoris and Melanesians; possibly among the Dayaks; in Central Africa and sporadically in other parts of the continent; in Hayti; among the higher races of N. America; occasionally in S. America; in India; among the Greeks and other ancient peoples.

Maori cannibalism has already been described; the first enemy slain was offered as a propitiatory sacrifice to the Atua; the hair was offered to the war-god. The ear of this victim was eaten by the female Ariki or priestess; the heart by the male Ariki (sometimes by the priestess); the second enemy slain was reserved for the priest; all other bodies fell to the warriors (Shortland, *op. cit.* p. 247; *JAI* xix. 105). In *Tahiti* the eye of sacrificial victims was given to the king as 'the eye of the people.' In later times he did not eat it, but offered it to the gods. Much the same procedure as in N. Zealand was followed in *Fiji*, one of the prisoners being offered to the war-god by the priest before the feast began (Williams, *Fiji*, i. 147). Garnier says that in *New Caledonia* old people were killed by their own desire, offered to the gods, and eaten (*Tour du Monde*, xvi. 11). In the *Marquesas Islands* cannibalism had a strong religious aspect. The victims were called 'food of the gods,' and the chiefs, being descendants of gods and therefore divine, had a first right to a part of the feast. When the victims were enemies they were tortured by the priests, who received the heads; and the whole feast was accompanied by religious chants. Human sacrifices, however, were offered also without a cannibalistic feast (*L'Anthrop.* vi. 443, 449). The use of sacred hymns at cannibalistic war-feasts in the *Solomon Islands* is also suggestive of a ritual and religious aspect (Bergemann, p. 32). *West Central Africa.*—Among tribes on the Guinea coast, as at Great Bassam, at the founding of a new town a victim was offered in sacrifice. The priests gave auguries from the entrails, after which the heart, liver, and other parts were cooked with fowls, a goat, and fish; all present partook of the feast, lest they should die within the year (Hecquard, *Reise*, p. 49). There is some slight evidence that in *Dahomey* the frequent human sacrifices were accompanied in earlier times by a cannibal feast. Norris asserts this in 1772, and some proof of it exists in the custom of the king's dipping his finger in the blood and licking it. Probably this is a survival of an earlier feast (Labarthe, *Reise*, p. 238). The eating of an enemy's heart in *Ashanti* after it had been cut out by the priest had also a ritual significance (see above); it was eaten with sacred herbs. In *Bonny*, where enemies were eaten out of revenge, they were first offered to the Ju-ju; in another case which was observed, the entrails were given to the iguana, the guardian animal-god (Andree, p. 26, citing Bp. Crowther; Hutchinson, *Ten Years' Wanderings*, p. 66). The *Kimbunda* of Portuguese West Africa eat the flesh of enemies to acquire bravery, but the diviner first cuts up the body, tears out the entrails, and divines with them (Magyar, *Reisen in Süd-Afrika*, 1859, i. 275). Among the Kassanje, the human victim of the Sambamento feast was received with the same honour as a chief. The headman then stabbed him, tore out his heart and ate a piece, while his attendants allowed the blood to stream over his body. The flesh was then eaten by all in due order along with that of animals (Valdez, *Six Years in W. Africa*, 1861, ii. 159). In *Hayti* these African practices are still continued by the cannibalistic Vaudoux sects among the Negroes. St. John, citing trustworthy witnesses and the evidence produced at murder trials, shows that at the obscene orgiastic meetings connected with the worship of a serpent, a sacrifice of a child or adult, 'the goat without horns,' frequently takes place to propitiate this serpent-divinity, either for particular purposes or at stated festivals. The *papaloi*, or priest, having slain and offered the victim, the skin and entrails are buried, and the flesh is eaten cooked or raw, amid singing of sacred chants and dancing. The victims are usually children who have been kidnapped, but sometimes women are drugged and, after having been buried, are exhumed and sacrificed (St. John, *Hayti*, ch. 5). The typical example of religious cannibalism is found among the ancient *Mexicans*, who, in spite of their civilization, had a taste for human flesh little different from the gluttonous Negro, although it had the sanction of religion. The victims were invariably enemies or slaves, and were offered before the images of the gods. The priest cut open the breast with an obsidian knife, tore out the heart, and offered it to the gods; then he sprinkled his assistants and the offerers with the blood. After this a cannibalistic feast on the body took place, priest and offerers partaking. Dressing in the skin of the victim was usually a part of the ceremony. On particular occasions the victim had been kept for a year beforehand and treated as a prince, and there is reason to believe that he then represented the divinity, so that the worshippers, in eating his flesh, sacramentally partook of their god through his representative. In other cases paste images of the god Huitzilopochtli were mixed with human blood and eaten sacramentally. Early writers estimate these cannibalistic sacrifices by thousands yearly, and there seems little reason to suppose much exaggeration in their accounts (Bernal Diaz and Sahagun give the best accounts; cf. Jourdanet's *Étude sur les sacrifices humains et l'anthropophagie chez les Aztèques*, in his edition of the former Paris, 1877). Mendieta reports a rite similar to the Mexican sacrament from Vera Cruz among the Totonacs. Every three years children were killed, and their hearts' blood was mixed with the sap of a tree, herbs, and dough. The mixture, called *toyolliaytlaqual*, was eaten every six months by women over sixteen and men over twenty-five (*Mexico*, bk. ii. cap. 16, 19). Cannibalistic sacrifices were common among the *Central American* tribes, *e.g.* in Nicaragua. To obtain rain from Quiateot, the rain-god, children and adults were sacrificed to him and his images were sprinkled with their blood. Caciques and priests then feasted on the bodies of men; children's bodies were buried. Here, too, the victims were prisoners of war or slaves (*Trans. Amer. Eth. Soc.* iii. 138; Bancroft, iii. 492). Acosta, in his *History of the Indies*, 1590, says that the victim represented the god, as in the Mexican instance. Among the wilder tribes of Peru, human sacrifices with cannibalistic feasts are said to have prevailed till the coming of the Incas (Cieza de Leon, *Chron. of Peru*, 1864, pt. i. ch. xxxviii.), who, according to Garcilasso de la Vega, put an end to both (*Royal Commentaries*, 1688, p. 137 f.), thus showing themselves in a more amiable light than the Mexicans. The custom was to offer the heart and blood of a captive to the animal-gods, while the worshippers feasted on the flesh of the sacrifice (de la Vega, ii. 344).

As in nearly all these cannibalistic sacrifices the victims were enemies, it is far from unlikely that, in many cases where the eating of enemies for various motives—to obtain strength, out of revenge or gluttony—is reported, without any mention of a religious rite, this also existed, so that cannibalism with a ritual aspect would have a wider range (cf. the case of the Philippine islanders, § 14).

The cannibalism of the *Aghorī*, a sect of Śiva, which continued in India until lately, appears to have been partially religious and by way of self-abnegation. Corpses of those who had been slaughtered or had died a natural death were eaten, and frequently stolen for that purpose (Balfour, *Cycl. of Ind.*³, 1885, i. 42; Tod, *Rajasthan*, 1832). The sect, which flourished in mediæval times, was accustomed to buy human flesh in the open market as late as the 17th cent.; but the eating of the dead has now practically disappeared, and the sect is much reduced (see AGHORĪ).

To the instances of orgiastic cannibalism and eating the victim who represents the god may be added certain cases in *ancient Greece*. In later times a fragment of human flesh, probably representing an earlier human victim, was placed among the parts of animal victims sacrificed to Zeus Lycæus in Arcadia, and, in the feast which followed, the man who ate this fragment was believed to become a werwolf (Plato, *Repub.* viii. 565). This is undoubtedly a survival of an earlier cannibal sacrificial feast. It is still more marked in the Dionysiac rites, especially in Crete, where, in order to be identified with the god who had himself been torn and eaten by the Titans, the worshipper tore and ate the raw flesh of a bull or goat (ὠμοφαγία; cf. Plutarch, *de Def. Or.* xiv.; Porphyry, *de Abst.* iv. 19). But occasionally a human victim represented the god and was similarly treated. Porphyry says Dionysos Omadius exacted such a human victim in Chios and at Tenedos; and Pausanias says that formerly a child was the victim in Bœotia (*de Abst.* ii. 55; Paus. ix. 5. 2); while a vase painting shows a Thracian tearing a child with his teeth in presence of the god (*JHS*, 1890, p. 343). Fragments of an epic poem recently discovered and dealing with Bacchic subjects refer to the eating of a human victim disguised as a stag. The tearing and eating of animal flesh is known to have occurred among the heathen Arabs, and the eating of a sacrificial animal which represented the god was common. These may be extensions of totemism; but possibly, as in the Cretan rite, behind them may lie the eating of a human victim. We may compare with the Cretan rite that of the Khoṇḍs, where a girl representing the goddess Tari was sacrificed and torn limb from limb by the worshippers, eager to obtain a piece of the deified victim (Reclus, *Prim. Folk*, 1891, p. 304), or that of the Marimos, a S. African people, who strewed the blood and ashes of brains and skull of a human sacrifice on the field to make it fruitful, and consumed the remainder (Schneider, *Rel. d. afrik. Naturvölker*, 1891, i. 175).

Reference may also be made to the employment of human blood in ritual ceremonies by the Ostiaks, and the use of a child's blood in the Sacrament among the Christian sectaries of Great Russia (*L'Anthrop.* v. 508).

18. *Political and social cannibalism.*—Cannibalism has also political and social aspects, though both, probably, are connected with religion. The former is most marked in certain African coronation rites, as at Darfur, where, even after the introduction of Islām, two boys were sacrificed and their flesh eaten by the Sultan and his nobles. He who did not eat was regarded as a traitor (Munzinger, *Ostafrik. Stud.*², 1883, p. 558). Another instance is that of the Ama-pondo Kāfirs, with whom the new chief bathed in the blood of a relative and drank out of his skull (Bergemann, p. 39). In the Cameroon district a new chief must kill one or more men and divide the flesh among his relatives and the other chiefs (Ratzel, *Völkerkunde*, 1885–88, i. 613). Compare the survival at the coronation of a king in the Sandwich Islands. The left eye of a human victim was given him to swallow, so that an accession of strength might be his (Turnbull, *Travels*, 1840, p. 240). The social aspect of cannibalism appears in the rites of blood-brotherhood (see BROTHERHOOD [artif.]), where the covenanting parties mingle their blood and drink it, and in those of initiation (*q.v.*), where the candidate tastes or drinks the blood of the older men of the clan, or is smeared with it. Both these customs are very marked with most Australian tribes: 'The drawing and also the drinking of blood on certain special occasions is associated with the idea that those who take part in the ceremony are thereby bound together in friendship, and obliged to assist one another' (Spencer-Gillen ᵇ, p. 598; cf. Howitt, *op. cit.* pp. 658, 668, 670; Frazer, *Totemism*, p. 45). They are thus analogous to the drinking of a friend's blood in sickness (see above, § 7), or as a mark of affection, as among the Celts (§ 12). Eating of the flesh of a fallen enemy by both contending parties after a fight, as a token of entering on a covenant of peace, is akin to the blood-brotherhood rites, and is found among the Liu-kiu islanders and the Garo hill-tribes (Steinmetz, p. 3, and see § 10). In Timor-Laut, bonds are sealed by both parties eating a slave (Bergemann, p. 22). Both Sallust and Tertullian mention the drinking of human blood to strengthen a bond between contracting parties among the Romans (*Catil.* xxii.; *adv. Gnost. scorp.* vii.).

19. *Lowest peoples and cannibalism.*—Evidence thus goes to show that the worst forms of cannibalism do not occur among the lowest savages, but among barbaric races (Battas, Negroes, Maoris, S. Americans) with a certain amount of culture. Among other races of that grade or next above it (American Indians, S. African races, some Polynesians) it tends to disappear, or occurs through other motives than gluttony, and often in a reduced form. Among the lowest savages the worst forms are never found, and it is doubtful whether cannibalism now exists among some of them. The Australians are cannibals from a variety of motives, never through gluttony; the cannibalism of the Tasmanians and Andamanese, asserted by early travellers, is denied by later authorities, though the North and Little Andaman Islanders are accused of it by their fellows (Ling Roth, *Abor. of Tasmania*, p. 97; E. H. Man, *JAI* xii. 117 ff.); the Bushmen and Hottentots do not seem to be cannibals, though one tribe (considered by some to be an earlier people than the Bushmen) have cannibalistic traits, eating the placenta after birth (Stow, *Races of S. Africa*, 1905, pp. 20, 51, 336), while the Dwarfs of Central Africa 'repudiate the idea with horror,' though they eat animal flesh freely (Sir H. Johnston, *Uganda Protectorate*, ii. 540); the Negritoes of the Malay Archipelago (Aetas and Sakkas) are doubtful (see *Fasc. Malay Anthrop.*, 1903, i. 20; Semang interment shows no evidence of the head being eaten, as has been said to be done, and the authors failed to obtain evidence of cannibalism among the Semangs, though the true Semangs are said by the Hami to eat men).

Ainus, Eskimos, and Fuegians all seem to have been occasionally cannibals. We can hardly, however, argue that the non-cannibal peoples referred to were not formerly cannibals. Their present reduced numbers, the pressure of more cultured tribes upon them, and the presence in some cases of a higher civilization, may have altered earlier customs, and have made the slaying and eating of enemies difficult, and in any case a matter of secrecy. It is possible also that fear of the dead, which exists strongly among some of these peoples, *e.g.* Tasmanians and Sakkas (the former 'never name the dead' [Roth, *Abor. of Tas.* p. 97]), may have hindered cannibalism. Their case cannot, therefore, be alleged in proof of cannibalism's being non-existent in primitive times when man was on their own or a still lower level. Palæolithic man was already higher in culture than they. All that can be said is that cannibalism is an occasional custom rather than a fixed habit among the lowest races.

The weakening of cannibal customs is seen in cases where the people but rarely take part, and the act is restricted, in a more or less formal manner, to the chief, king, or priest, as among the Araucanians, in Ashanti, Dahomey, and Cameroon, in the Philippines, Marquesas Islands, New Caledonia, and Sandwich and Society Islands, and in the N. American cannibal societies (see above). It is obvious that, where certain selected portions of the flesh have been the special privilege of chief or priest as a result of their natural pre-

eminence, when the custom was dying out among the people it would still be kept up by those privileged persons out of pride or as an honorific act. Thus the eye as the seat of the soul was eaten by the chief in New Zealand, the Society and Sandwich Islands, and in the Marquesas group, where, even after their conversion to Christianity, the priests kept the name of *aimata*, 'eye-eater' (Letourneau, *op. cit.* p. 208 ; Taylor, *N.Z.*, 1885, ch. xxi. ; *L'Anthrop.* vi. 443 ; cf. § 17). In New Zealand the priest ate the heart, and the warriors ate selected portions ; the heart and entrails fell to the priests and his assistants in Kimbunda ; to the chief in Kassanje ; to the bravest in the W. India Islands ; in Tangale (Guinea) the Sultan received the breast ; in Monbuttu (C. Africa) children captured in war were reserved for kings ; among the Shekiam people of Senegal the fetish-priest received the liver as a tit-bit (§ 17 ; du Tertre, *Hist. gén. des Antilles*, 1671, ii. 401 ; Andree, p. 27 ; Schweinfurth, *op. cit.* ii. 98 ; Bergemann, p. 47). These selected portions would certainly continue to be eaten by the persons privileged to do so after the general custom had ceased. The same idea of privilege is seen where priest or chief eats first, and not till he has done so may the others take part in the feast.

20. *Women and cannibalism.*—Women sometimes occupied a curious position in cannibalistic customs. While the head was occasionally regarded as a special portion, in some places, as in Tangale, it was considered the worst part, and was given to women to consume. This part was also given to women among the Wakhandi of W. Australia, and among the Peak River tribes of S. Australia. With several peoples women were not allowed to take part in the cannibalistic meal ; it was tabu to them. We find this tabu existing among the Maoris (with certain exceptions) and Tonga islanders, in Fiji, and the Marquesas Islands ; among the Manjuemas, Fans, Ba'ngalu, and Bassanje in Africa ; and in Nicaragua. Children were forbidden to take part among the Bassanje and Fans, and in the Marquesas Islands ; men not tatued could not take part in the last-mentioned place. The prohibition against women's eating human flesh is doubtless nothing but an instance of that universal sexual tabu in connexion with eating which forbids men and women to eat together or to eat the same kind of food (see Crawley, *Mystic Rose*, p. 167 f.), and which is known to exist in most of the districts referred to. In the Solomon Islands women and children must not be present when the body is cut up, but a portion is sent to them (*L'Anthrop.* x. 492).

A similar extension of the sexual tabu, which regards woman as potentially or actually dangerous to man, will also explain the fact that, while the flesh of men is freely eaten, that of women was abhorred or regarded as poisonous in New Zealand, with the Manjuemas, the Kashibos, in Nicaragua, and probably in other places where the custom has not been referred to by observers. It may also explain why women were not eaten by their relatives while men were, among the Derbikes, as reported by Strabo (see § 11). Elsewhere the tabu does not exist, and certain parts of female flesh, breasts, hips, etc., were regarded as tit-bits.

21. Some cannibals, while eating freely of their own kind, or of black people, abhor the flesh of white men. The Tongans thought it a wicked and dangerous practice, some Tongans having died after it ; in the New Hebrides and New Caledonia it was thought too salt ; among the Fans it is thought to be poisonous, and other Negro cannibals dislike it ; the Botocudos mutilated but did not eat the bodies of white men ; certain Australian tribes also thought it salt, while it produced nausea (Mariner, *Tonga Is.*, 1817, i. 321 ; Turner, *Polynesia*, p. 83 ; De Rochas, *Bull. soc. d'Anthr.* 1860, p. 414 ; Andree, pp. 30, 88 ; Lumholtz, *Among Cannibals*, p. 273).

iii. Present range of cannibalism.—At the present time, cannibalism as a regular custom exists only among isolated S. American tribes, in West, Equatorial, and Central Africa, in Malaysia, some of the South Sea Islands (mainly in Melanesia), and in Australia. Excluding Australia, it is thus confined to a belt of land extending to little more than 10° N. and S. of the Equator. Beyond these regions, of which the worst is Central Africa, it occurs only through hunger, or in an attenuated form for magical or medical purposes. What have been the causes of this gradual weakening of a once extensive and probably world-wide custom? Increasing civilization has everywhere played its part, and this appears in the mythology of various peoples. Orpheus was held to have weaned the Greeks, Osiris the Egyptians—cannibals in Neolithic times (see i. § 3)—and the divine Aioina the Ainus, from their earlier cannibalism (Hor., *Ars poet.* 391 ; Diod. Sic. i. 14 ; Batchelor, *Ainu and their Folk-lore*, 1901, p. 2). Even among savage peoples may be noted an out-growing of or disgust at the custom, or an attempt to put it down on the part of chiefs or priests, often quite apart from outside influences. In several of the Pacific Islands (Hawaii, Tahiti) it was dying out at the time of their discovery, and shame at the practice was arising ; in the Fiji Islands several pagan chiefs tried to stop it but unsuccessfully, while Marquesan priests protested against it in the name of the gods ; among the American Indians the custom seems to have become much diminished through a gradual dislike of it ; in Africa among the southern tribes there was a general disgust at those who had relapsed into man-eating, and Moshesh tried to extirpate it ; the Riamba cult, with its practice of hemp-smoking, has uprooted it among some Central African tribes, *e.g.* the Tuschilange (Andree, pp. 61, 63 ; Turnbull, *Travels*, p. 204 ; Wake, *Evol. of Moral.*², 1878, i. 427 ; Wissmann, *Im Innern Afrikas*, p. 152). We must also note the part which totemism has played in forbidding the eating of near relatives (see i. § 5). Animism, too, by furthering the idea of the dignity of the soul, suggested also the idea of the dignity of the body which contained it, and thus may have had a certain influence in forbidding the eating of relatives where no stronger religious motive impelled to it. This is suggested by the fact that enemies are frequently eaten out of contempt, and where this happens relatives are seldom eaten (see ii. § 13). The presence of a higher civilization, and especially of a higher religion, and the spread of commercial relations among lower races, have usually a beneficial effect in putting an end to anthropophagy. Even in the worst man-eating districts the feasts are frequently held in secret. The case of the Inca rule in Peru has already been considered (ii. § 17). The higher ancient religions doubtless had similar effects among the wild tribes of Asia. Muhammadanism has extirpated or reduced the once universal cannibalism of the Negro tribes of North and East Africa, in Sumatra, and other parts of the Malay Archipelago, not only among those professing it, but among other tribes bordering upon them. Christianity, together with other European civilizing influences, has also put an end to it in many parts of S. America, in New Zealand, and many islands of the South Seas, once hotbeds of cannibalism, as well as in large tracts of the African continent. With the further spread of civilization and religion over the cannibalistic zone, there is little reason to doubt that the custom will soon become little more than a memory.

iv. Folk-lore survivals.—The former univer-

sality of cannibalism is suggested by the existence of occasional ritual practices, as well as of myths and *Märchen* among peoples who are scarcely if ever cannibals, and also among higher races who have long since abandoned cannibalism. Such things have descended from a time when they did practise it, or were borrowed by them from cannibalistic peoples at a time when they themselves were not far removed from the custom.

1. *Folk-custom.*—Hartland has suggested by comparison of a large range of customs at funeral feasts, that such feasts may have replaced an earlier honorific eating of dead relatives. Especial links of connexion are eating the food across the corpse (England), on the table where the dead has lain (Abruzzi), or at the grave (ancient Greeks and Romans, Albania); the use of special food, *e.g.* corpse-cakes (Bavaria), or some form of pulse which is often identified in folk-belief with human flesh (France, Italy; cf. Pliny, xviii. 30); the impression of a human form on the cakes (Albania; cf. sweetmeats stamped with images of skulls, etc., eaten in Italy on All Souls' Day; the custom is called 'eating the dead'); the use of pious exclamations while eating, or of conversation about the virtues of the deceased; the idea that the corpse-cake actually contains the virtues and strength of the deceased through the dough having been laid on his body (Bavaria); the custom of the 'sin-eater'—some person eating food which had been placed in contact with the dead, thus becoming responsible for his sins (Wales; cf. similar practices in India). Although in some cases these feasts are also survivals of earlier feasts in which part of the food was laid out for the dead, the idea of communion with the dead runs through all of them, and the various points noted are certainly suggestive of an earlier eating of the dead (Hartland, *Legend of Perseus*, 1895, ii. 287 f.; Gomme, *Ethnol. in Folklore*, 1892, p. 116 ff.).

2. *Myths.*—Even a cultured people like the Greeks had myths which prove that in some far distant time their ancestors had been cannibals. It has already been seen that orgiastic cannibalism and ritual survival existed even down to late times. The saga of Tantalus and his descendants is a curious instance of persistent cannibalism. He, wishing to test the knowledge of the gods, set before them his son Pelops whom he had slain, but all of them save Demeter refused the ghastly meal. Later, Pelops' son, Thyestes, having debauched his brother's wife, had two children by her; these his brother killed and served up to him. A like punishment befell Tereus, who unwittingly ate his son Itys. Athenæus preserves a story of the glutton Cambleta, king of the Lydians, who cut his wife to pieces and ate her, while in the *Odyssey* the Polyphemus saga of man-eating giants dwelling in caves is itself suggestive of the quaternary cave-dwelling cannibals. Here, too, the cannibalism of gods and semi-divine beings was told of in myth. Pindar (*Ol. Odes*, i.) refuses to tell the tale of the cannibalism of the blessed gods, but others were less discreet. The myth of Cronus swallowing his children was well known, and has been compared with similar 'swallow' myths from all parts of the world which attribute a like action to divinities, human beings, and sometimes animals. Though some of these may be Nature-myths—the heavenly bodies appearing to swallow their children, the stars—they were obviously suggested in a cannibalistic age. The eating of children was also attributed to Lamia, the prototype of the Lamiæ of ancient and modern Greece, also cannibals. The human sacrifices to Zeus Lycæus on Mt. Lycæum (Paus. viii. 38. 6) had given rise to a cannibalistic myth. That the sacrifice had arisen at a time when the god was supposed to eat the victim is clear from the myth of Lycaon's setting human food before Zeus, while the belief that those who tasted part of the sacrifice were changed to wolves implies a former cannibalistic banquet. Such local titles of Zeus as Laphystius (according to Suidas, 'the glutton'), or of Dionysus as 'the raw-eater,' are doubtless explainable through human sacrifices which the gods were supposed to devour, just as, among the Polynesians, the god Tane was called 'the man-eater,' and his teeth were stained with the blood of his victims (Gill, pp. 30, 263). Finally, the myth of Dionysus, slain and eaten by the Titans, though it may be ætiological, explaining the origin of the Dionysiac rites, none the less reflects actual cannibalism among those who invented it. That this is true of all these myths is found by comparing them with precisely similar myths existing among actual cannibals. In Polynesia, where human sacrifices were common, the gods were believed to eat the victims, if not actually, at least in essence, and the title 'man-eater' is applied to some of the gods (as in Greece) in several of the islands. The gods were held to eat and digest the spirits of the dead, people of higher rank being eaten by the higher gods, and common people by a deity in the shape of a bird, in which form also the gods ate the human sacrificial victims (Ellis, *Pol. Res.*, 1830, i. 396 f.). The mythology is full of these accounts, and in one myth we hear of the escape of the hero Ngaru from the oven of the hag Miru, queen of Hades, who cooked and ate her victims precisely in the manner of the cannibal ogres of European *Märchen* (Gill, *Myths and Songs of the Pacific*, p. 229). In the Marquesas Islands the chiefs, as descendants of gods, had a right to select portions of the human victims—the 'food of the gods' (*L'Anthrop.* vi. 443). Such divine eating of human victims is also shown wherever at a cannibal feast, as in Fiji, part of the slain is first offered to the gods. Among the ancient Celts the Morrigu, or goddess of war, and her attendants were believed to feast on the slain; while the Greeks held that a demon in Hades called Eurynomos gnawed the flesh of the dead (Paus. x. 28. 4). Similar myths also linger on among low races who have more or less abandoned cannibalism, as well as among some who still practise it. The Mintira of the Malay peninsula and the Hos of N.E. India have myths in which the sun and moon are conceived of as human, and as devouring their children the stars (Tylor, *Prim. Cult*, i. 356; for other instances, see Lang, *Myth, Ritual, and Religion*[2], 1899, i. 130, and *Custom and Myth*[2], 1893, p. 53 f.). The Malays think that the *badi* of a dead man feeds on the soul (or liver) of the living, while certain sea-spirits feed entirely on dead men (*Fasc. Malay. Anthrop.* i. 81, 101). A mythical being among the Eskimos is called Erdlaveersissok, 'the entrail-seizer.' She resides on the way to the moon, and takes out the entrails of all whom she can make laugh; while akin to the myth of the Polynesian gods is that of a god who devours the bowels of the ghosts (Rink, *Tales and Traditions of the Eskimo*, p. 48). The Haidas think that the god of the clouds seeks human victims on days when the clouds are low; any one caught out on such a day dies in six months to furnish a meal for this god. He draws out the man's spirit, and then sends it to fetch his body to be eaten. If the spirit refuses, it is eaten, and, in consequence, is annihilated (Harrison, *JAI* xxi. 16, 18).

3. *Folk-lore.*—In the various horrible man-eating ogres of races who have abandoned cannibalism we may see memories of earlier cannibalistic practices. They represent the man-eating gods of earlier paganism, now appearing as demons, or they reflect later opinion of man-eating ancestors, or they may have been suggested by hostile races

who devoured their prisoners and made war on non-cannibalistic peoples. The Rakshasas and Rakshasis or Yaks of the East, the Cyclops, Drakos, and ogres of European *Märchen*, the Greek Lamiæ, and the Russian Baba-Yaga are typical forms. They are the dark shadows of actual cannibals of an earlier time, and are paralleled by more nearly human forms in the folk-tales of lower races who are themselves, or who live among, cannibals. Other dark figures of folk-lore have also been, in part at least, suggested by earlier cannibalism. Vampires, dead people come to life again who suck the blood of the living, are mainly believed in by the Slavs, Celts, and Scandinavians; but a similar being occurs in Negro Vaudoux belief, the offspring, probably, of the West African *Uvengwa*, a self-resurrected human being, thirsting for human blood; and among the Melanesians who believe in the Talamaur, the soul of a living person which goes out to eat the dead—a reversal of the usual Vampire belief. The Ghouls of Arab belief have a certain resemblance to Vampires; they are demons who take various forms and eat the dead, or are simply cannibals. The Werwolf, also, a human being, witch or wizard, or their victim, who takes the form of a wolf or some other animal and eats human beings, is frequently connected with the Vampire in folk-belief, and its existence as a superstition is also largely due to cannibalism. The belief is an early one, and was known in classical times; it is found in all European countries, as well as in India, China, Malaysia, Africa, and N. and S. America. See the articles VAMPIRE, LYCANTHROPY, and cf. the Australian belief that sorcerers (*boyl-yas*) can invisibly enter their victims and consume their flesh (Grey, *Journals*, 1841, ii. 339).

4. *Märchen* which contain a cannibalistic episode may be divided into definite classes—(1) Those in which a man-eating ogre, demon, or witch is outwitted in various ways by the hero he intends to eat (Odysseus and the Cyclops, Hansel and Grethel, and Mally Whuppie types). There are countless European variants of this tale, as well as Lapp, Kirghiz, Indian, Persian, Karen, Ainu, Eskimo, Malagasy, E. African, American Indian, and Melanesian variants.—(2) Those in which a person, who is married to a cannibalistic husband or wife of another tribe, or who has fallen into the clutches of such a tribe more or less human, escapes. This version is found among the Kāfirs, Eskimos, Chinese, Japanese, American Indians, and Malagasy, as well as in civilized European and Asiatic lands. Both classes are evidently the reflexion of an actual state of things, viz. of the horror with which a race which had given up cannibalism would look upon others still cannibals with whom they were in actual contact or had been so traditionally. Where such tales occur among the lower races the cannibals have human traits, but, advancing higher, we find them becoming less and less human, till finally the ogre proper is arrived at. Actual instances of such feelings of fear and horror at neighbouring cannibal races causing them to be regarded with various repulsive traits are found, *e.g.*, among the Eskimos with respect to the American Indians, whom they call Irtkily, cannibals with dogs' heads; among African tribes with respect to their man-eating neighbours; among the Savage Islanders with respect to the Tongans. The same order of facts underlies the charges brought, *e.g.*, by Greeks against most barbarians; by Hindus against the 'goat-nosed' Turanians; by pagans against Jews and primitive Christians; in mediæval times against Templars and Jews, in modern times against gipsies and (in Russia) the Jews.—(3) In another class of *Märchen*, as well as in actual folk-belief, witches figure as cannibals, stealing newborn babes or enticing away older children to eat them either privately or at the Sabbat. In Teutonic lands this belief seems to have been especially strong; the folk-tales are full of descriptions of cannibalistic witches (cf. Grimm, *Teut. Myth.* 1081, 1625); and at witch-trials the charge of cannibalism was commonly made. The Russian Baba-Yaga is also a cannibalistic witch, who steals, cooks, and eats her victims, and has her house ornamented with skull and bones—a frequent practice among savage cannibals; and the same is true of the Greek *strigæ*, mysterious women who swoop down as birds on their sleeping victims and suck their blood or devour them. It is possible that the mediæval witch may have succeeded to the inheritance of earlier pagan priestesses who presided over the orgiastic rites of a goddess of fertility to whom children were sacrificed and afterwards eaten. The great mortality among children in the Middle Ages, and the fact that midwives were frequently accused of witchcraft and held responsible for causing the death of children for sinister ends, would all serve to strengthen the traditional stories of witch-cannibalism. Reference has already been made to cases of actual anthropophagy in mediæval times, but it is probable that the tradition of earlier cannibalism, quite as much as these, caused the general belief and led to the condemnation in the Salic Law of witches who eat men for magical purposes. Pieces of a corpse were, however, actually used in witch-magic, as among the Australians and others.—(4) A frequent incident in *Märchen* is that of the child being sent out by the parent to be killed, while the assassin is ordered to bring back the victim's heart, liver, etc. Out of pity he slays some animal instead, and the parent is frequently represented as eating it under the impression that it is the child's. Grimm's story of Snow-White is a typical instance. Here we may see a reminiscence of the practice of eating heart, liver, etc., in order to acquire the strength or soul of their owner.—(5) In some Cinderella tales the mother of the heroine is changed to a beast by the second wife, slain, and eaten; the daughter refuses to eat, knowing that it is her mother. But in Greek and Dalmatian variants the jealous elder daughters kill and eat their mother, the youngest again refusing. Is there here some confused memory of actual parent-eating as well as of an early rule forbidding the eating of one's own kin? (The stories will be found in Miss Cox, *Cinderella*, 1893.)—(6) Two other well-defined groups of tales exhibit cannibalism as a perverted taste. The first of these is the story of the mother who kills her child and sends it cooked to the father (Grimm's story of the Juniper-Tree, common in Europe, and with a Malagasy variant); in the second the interest circles round a person—frequently a woman—who suddenly becomes a cannibal, and will thenceforth be contented with nothing but human flesh. Of this story there are versions from all parts of the world. Both groups reflect what has been frequently seen in actual practice—the lapse into the customs of the savage past through desire or during famine.—(7) Lastly, fairies were sometimes believed to eat children whom they stole or inveigled from their parents, *e.g.* in Welsh folk-lore. Rhŷs (*Celtic Folklore*, 1901, ii. 694) is inclined to equate these with the man-eating Atecotti; and, so far as fairies reflect an early race, this may be correct.

5. *Myths of the origin of cannibalism.*—In a few cases such myths are found among actual cannibalistic peoples. The Mesayas say that in early times a band of their hungry ancestors found a Umana asleep, and killed and ate him. A bird told this to the Umanas. Hence arose endless

feuds in which all prisoners were slain and eaten (Marcoy, in *Tour du Monde*, xv. 135). The Tupis ascribe the origin of cannibalism to the murder of a youth, whose mother rushed upon one of the murderers, bit a piece out of his shoulder, and ate it. He showed the wound to his people, who forthwith began to eat the flesh of enemies (Andree, p. 84, citing Pigafetta). The Fijians say that the coming of cannibalism took place through their ancestors eating, instead of burying, king Tue Dreketi, lest he should rise again. Hence arose the eating of enemies in battle, a story which suggests the animistic motive of destroying the soul (Bergemann, p. 34). In New Zealand, as with the Tupis, the origin is ascribed to the first murder. Hauriki killed Hotua, and Hotua's friends killed Hauriki and his friends. They presented Hauriki's heart to the high priest, who ate it, after which all feasted on the body. The blood of his friends was offered to the gods, while the bodies were cooked and eaten (White, *Anc. Hist. of the Maori*, 1887–89, i. 43). It is remarkable how the consciousness of cannibalism as a violent act runs through these tales, only one of which speaks of hunger as the motive.

A curious myth, perhaps hinting at early Iranian cannibalism, occurs in the Persian *Bundahiš* (West's *Pah. Texts*, pt. i., *SBE* vol. v.), regarding the first human pair, Mashya and Mashyôi, to whom two children were born, and who 'out of tenderness for offspring' devoured them. This 'tenderness' was then taken from them by Aûharmazd. This eating of their children is evidently regarded as part of their 'fall.'

CANON (Buddhist).—See LITERATURE (Buddhist).

CANON (Christian).—See BIBLE.

CANONIZATION.—The earlier part of this subject is dealt with in the article BEATIFICATION. The cult of martyrs and of persons eminent for their virtues goes back to very early times, and began in popular reverence, which came to be authorized by bishops or by local councils. But the history of the process of veneration took a different course in East and West. It will be necessary, therefore, to treat separately of the Western and Eastern Churches.

1. The West.—Canonization, while it was not distinguished from beatification, remained for a long time in the power of the local episcopate. It is asserted as at least probable, by Ferraris (*Prompta Bibliotheca*, Rome, 1766, t. vii.), that Leo III. in 804 began the rule of requiring the submission of a name to the Pope; but the letter he refers to is probably not authentic. (The matter is further discussed in Benedict XIV., *de Servorum Dei beatificatione*, etc., Rome, 1787, t. i. lib. i. cap. 7.) It is also stated that the rule was begun by John XV. in the case of St. Udalric, in 993 (*MGH* iv. 377–428). There is no doubt that at the beginning of the 12th cent. Urban II., Calixtus II., and Eugenius III. claimed that the power could not be exercised by bishops, but that cases, if not decided by the Popes themselves, should be submitted to councils, and, if possible, general councils. Eugenius III. himself canonized the Emperor Henry II., and Alexander III. canonized Edward the Confessor, St. Thomas of Canterbury, St. Bernard of Clairvaux, and others (see Benedict XIV., *op. cit.* lib. i. cap. viii. and cap. x.). A decree of Alexander III. in 1170 (see art. BEATIFICATION) reserves the right to the Roman See. Some maintain that this is a new departure; others see in it merely a formal declaration of ancient custom and right. But Benedict XIV. shows strong reason to believe (as is indeed natural) that the local episcopate could never cause veneration throughout the Catholic Church (*op. cit.* lib. i. cap. x.). The exercise of the power locally by bishops remained, however, untouched till at least that date (cf. *AS*, Julii, i. 587; Junii, vii. 556). The decree of Alexander III. was renewed by Innocent III. in 1210 (*Decretal.* lib. iii. tit. xlv. cap. ii.); but it was some time before it became fully effective, local veneration and popular 'canonization' continuing in some parts of Europe till a much later date (instances are the case of Simon de Montfort, for whom an office was written, and whose veneration, though condemned by the Popes, was long unsuppressed [cf. 'Dictum de Kenilworth,' ch. 8, in Stubbs, *Select Charters*, 1895, *Carmen de bello Lewensi*, ed. Kingsford, 1890, and Halliwell, *Miracula Simonis*, 1840]; and of Thomas of Lancaster [cf. *Anecdota ex codicibus hagiographicis J. Gielemans*, 1895, pp. 80–100]). Indeed, it was not until the decree of Urban VIII., July 5, 1634, that the whole process was finally and authoritatively declared to belong to the Roman pontiff, to the exclusion of every other person or power whatever. From this date we find canonization to be recognized as a formal act of the Pope, giving a definitive sentence by which the name of a person who had been beatified is placed in the ranks of the saints, as already having entered into the bliss of heaven, and his memory is to be celebrated on a given day throughout the whole Church. Churches and altars may be erected freely in his name (Benedict XIV., *op. cit.* lib. i. cap. xxxix. 10).

As in the case of Beatification (*q.v.*), there is a distinction between formal and equivalent or equipollent canonization. Urban VIII. declared that the formal process should not prejudice the case of those who were already the objects of a general cult arising from general consent, immemorial custom, the testimony of the fathers, or the tacit consent of the Holy See. Such cases were from time to time legalized without the long formal process (Benedict XIV., *op. cit.* lib. i. cap. xli. 4). Prominent cases are those of St. Wenceslas of Bohemia (*ob.* 929), whose equipollent canonization dates from 1729; St. Romwald (*ob.* 1027, can. 1595); St. Stephen of Hungary (*ob.* 1038, can. 1686); Gregory VII. (*ob.* 1085, can. 1728); St. Margaret of Scotland (*ob.* 1093, can. 1691); and there are many others. Under the class of equipollent canonizations come also all those of infants (among them a number of those, such as St. Simon of Trent, St. Hugh of Lincoln, and St. William of Norwich, who were supposed to have been murdered by Jews), because they are not martyrs in will (Benedict XIV., *op. cit.* lib. iii. cap. xvi. n. 6). A remarkable case is that of Charles the Great, canonized by the anti-Pope Pascal III., but accepted by the Holy See (cf. art. BEATIFICATION and *AS*, Jan., iii. 490, 503).

In formal canonizations it is claimed that the Pope is infallible (the matter is discussed at length in Vacant and Mangenot, *Dictionnaire de théologie catholique*, fasc. xv., Paris, 1905, col. 1640–1642), but that it is 'not of divine faith but of ecclesiastical faith' that the person canonized is already in heaven (*Salmanticensis Cursus theolog.*, t. xvii., 'de Fide theologia,' Paris, 1870–81, xi. 275).

The actual process of canonization in the Roman Church may now be briefly sketched. The growth

of the present system is traced in Benedict XIV. (*op. cit.* lib. i. cap. xx. xxiii.; lib. ii. cap. xxxv.). The first step is a public statement by the ordinary of a particular place of the public regard for the person in question. This is followed by a prohibition of public veneration. The bishop then considers, with evidence of repute and of miracles, the claim for public veneration, and if satisfied transmits it to Rome. If the sentence of the ordinary is approved by the Sacred Congregation of Rites, the writings of the person are submitted to a rigorous examination with a view to discovering if there is any taint, however small, of heresy or unsound teaching. This is the work of several theologians, working separately, and a report is submitted to the cardinal whom the Pope has charged with the preliminary investigations. This report is submitted to the Sacred Congregation. The advocate of the cause, if the decision is favourable, then sends a formal petition, through the Sacred Congregation, to the Pope. If the Pope agrees to the continuance of the process, he writes *placet* on the petition, the person whose case is submitted receives the title of 'venerable,' as one whose public fame is saintly, and the formal introduction of the cause takes place. The commission visits the scenes of the life and miracles, and collects and tests evidence, which is again examined by the Sacred Congregation. Evidence need not be oral or documentary: for example, at the beatification of the 'English Martyrs' by Leo XIII., Dec. 29, 1886, the evidence of a book of engravings, showing that in some frescoes, long destroyed, in the Church of the English College at Rome, they were placed among canonized saints, was regarded as justifying equipollent beatification (Dom Bede Camm, *Lives of the English Martyrs*, London, 1904, i. xvi ff.). Three sessions are necessary for the discussion of the virtue and miracles of the person, the third of which takes place in the Vatican, under the presidency of the Pope. The case is argued by the postulator and the promoter of the faith, and if the decision is favourable the Pope issues a decree of beatification.

Before the process of canonization is opened, it is necessary to submit evidence of miracles since beatification was accepted by the Congregation of Rites. The Pope again issues a commission, and there is a local examination as before, followed by a triple session of the Sacred Congregation; and afterwards in three consistories, separated by some lapse of time, but not interrupted by a vacancy of the Papal See. The question is then submitted to the whole college of cardinals, to patriarchs, archbishops, and bishops at Rome, and to bishops of the neighbourhood. A private meeting of the Sacred College is next consulted, and its assent is followed by a solemn and public consistory, in which the claim is pleaded by a consistorial advocate. A third consistory then takes place, at which all prelates present in Rome appear and give their advice to the Pope, the bishops thus preserving their ancient rights (Benedict XIV., *op. cit.* lib. i. cap. xxxiv. n. 9). The Pope now names the day for the formal canonization, which since the end of the Great Schism has always taken place in Rome. As a rule, several saints are canonized on the same day, and in the basilica of the Vatican. The Pope himself completes the process of canonization by declaring that the persons are saints, and that he inscribes their names on the roll of saints, and requires the Universal Church to celebrate their memory yearly on a fixed day (Benedict XIV., *op. cit.* lib. i. cap. xxxvi.). A formal act is registered, the *Te Deum* is sung, and the Pope recites the names of the new saints in prayer. The canonization is now complete.

A few words may be added on the *rationale* of canonization. It is a recognition of the solidarity of the Church based on the doctrine of the Communion of Saints. Originating in the fundamental human admiration for heroic virtue, it was adapted and developed by the Church, under continual popular pressure, till it became first a theological and then an ecclesiastical system. In its main principles it is rooted deep in universal feeling and supported by continuous tradition in the Church. This applies to the 'unchanging East' as well as to the West, and we may now trace the Eastern history of the subject.

2. The East.—Down to the 11th cent. the history of canonization follows on the same lines in the East as in the West. Local saints were elevated in popular reverence, were accepted by bishops and councils, and were locally venerated; but geographical barriers prevented much interchange of this sentiment between East and West (see, however, the case of St. Maria Antiqua, *Proc. of the Brit. School at Rome*, vol. i., No. 1, London, 1902; and the history of the veneration of St. Anne, whose cult probably reached the West from the East through the Crusades, is of considerable interest). In the greater part of the East the custom remained unaltered. The episcopate retained the authority to place the saint on the diptychs, and to sanction the creation and veneration of images (icons). In the separated Churches (Armenian, Syrian, etc.) the same custom was observed, with some local differences. In Russia, owing to the special history of that Church, more significant differences occurred. At the present time three distinct groups are recognized among those whose cult is permitted: (1) those venerated, by order of the supreme ecclesiastical authority, throughout the whole Russian Church; (2) those whose cult is approved for a particular part of the Church, a district, a monastery, or a church; and (3) those who are venerated by popular feeling, with tacit sanction of ecclesiastical authority, although not yet canonized. These classes to some extent correspond to those whom the Roman Church styles 'canonized,' 'beatified,' and 'venerable.' The earliest Russian saints, Boris and Glyeb, were inscribed in the calendar within a short time of their martyrdom (or political murder), and the *Chronicle* of Nestor (ed. Leger, Paris, 1884) shows that miracles were attributed to them, while the chronicler Jacob, in describing the institution of their festival, states that its formal institution, which was equivalent to canonization, was preceded by a period of popular veneration and pilgrimage to the tomb to which their bodies had been translated (Golubinski, *Hist. of Canonization of Saints*[2], p. 45 f.). In 1108, Theodosius Pecherski was admitted by all the bishops, it would seem (there was certainly a petition to that effect, through Svjatopolk, the ruler of the Russians), to commemoration in the Synodik throughout Russia (*ib.* p. 51); *i.e.* his name was inserted in the list of saints commemorated in the festal *litia*, sung at the end of vespers. There are other, but not numerous, instances which point to a general cult, before the Councils of 1547 and 1549 under the patriarch Macarius. At those councils the list of saints universally venerated received large additions, and additions were made also to those whose local veneration was permitted. These 'canonisations en masse' have been attributed to the new position of dignity which was assumed by the Russian Church when the Mother Church fell under the domination of the Turks (*Dict. de théol. cath.*, fasc. xv., Paris, 1905, col. 1660); but the date hardly supports this view, and the step was more likely due to the growing political strength of the monarchy and the sense of unity which it

diffused, and to the efforts for reform which culminated in the 'Council of a hundred chapters' at Moscow in 1551. From 1517 to 1721, when the new constitution of Peter the Great, the Most Holy Synod, took its beginning, there were only fifteen saints canonized for universal veneration; and since then there have been but six. It should be added that, during the period of the separation of the church of Kiev from that of Moscow (1458–1685), 141 new saints were introduced into the calendar of the former. The number of saints universally venerated (*i.e.*, in a strict Western sense, canonized), therefore, remains small; but saints who are locally venerated have their own offices, festivals, veneration of relics, and icons. The third class of persons venerated consists of those on the anniversary of whose death special services are said in which their intercession is invoked. It is from this commemoration, it would appear, that in almost every case the higher steps in veneration have arisen (cf. the case of the veneration of the martyrs John, Stephen, and Peter, killed by pagan Tatars, begun by Hermogenes of Kasan in 1592 [Golubinski, *op. cit.* p. 272 ff.].

For canonization, the attribution of miracle to the person venerated, as well as peculiar sanctity of life, or martyrdom, is practically essential. The incorruption of the body, on special inquiry, was also an important point in the evidence submitted. This applies to the cases mentioned above, SS. Boris and Glyeb and Theodosius Pecherski; but St. Vladimir, the typical Slavonic hero and saint (972–1054), who was 'canonized' by the creation of his festival in 1240, was not declared to have wrought miracles. It appears that the new saints of 1547–49 were all designated as 'thaumaturges,' and that miracles wrought by their intercession were regarded as the evidence of their sanctity. In 1690, when application was made for the canonization of Germanus, one of the founders of the monastery of Solovetz, it was answered that, besides the consent of the Czar and the Patriarch, a severe inquiry establishing the holiness and miracles of the person was necessary (*ib.* p. 428 f.). A further class of hiero-martyrs is, however, known; and for admission to this miracles would not seem to be necessary. The incorruptibility of the body, again, is not regarded as essential to canonization, as has been formally declared on the canonization of St. Seraphim of Sarov in 1903, by the Metropolitan Antonius of St. Petersburg (*Tserkovnyja Vjêdomosti* [official journal of the Synod], St. Petersburg, June 28, 1903). This is contrary to the view taken by Nectarius, Patriarch of Jerusalem in 1682 (cf. Golubinski, *op. cit.* p. 406 f.).

The right of canonization exercised by local bishops was generally, if not always, subject to the sanction of the Metropolitan (*ib.* p. 295). The Metropolitans also acted independently or with the support of a synod, and up to 1547 these commanded universal veneration on their own authority. The intervention, or sanction, of the Sovereign was, however, frequent if not essential (see the case of Svjatopolk in regard to St. Theodosius Pecherski, in Nestor's *Chronicle*, ed. Leger, p. 223). The canonization of 1547–49 was the work of the Metropolitan and the council of bishops. After that the Metropolitan is again found acting independently, as well as with the counsel of his synod, though the consent of the Patriarch and the Czar seems to have been regarded as essential (cf. case of Germanus of Solovetz above). At least from 1667, when a council insisted on an examination of the cause by the assembled bishops, the final decision was in the hands of the Patriarch, with the concurrence of his synod and of the Czar. A typical case is the canonization of St. Anne of Kashin (*ob.* 1368), which was completed in 1650 (Golubinski, *op. cit.* p. 167 f.). The case is a very curious one in many respects, as the canonization was quashed by the Patriarch Joachim in 1678. From the time of Peter the Great, canonizations are issued formally by the Holy Synod, local veneration (or beatification) being without any formal proclamation, though approved by the Synod. The process of canonization begins with the submission of the cause by a bishop, with testimony as to miracles, to the Holy Synod; but there are exceptions where the petition has been begun by civil authority. The Holy Synod then appoints a commission of investigation, which considers, *inter alia*, the state of the body and the evidence for miracles. The inquiry as to the life of the person is embodied in a document issued after the canonization by the Holy Synod, with a view to its public use in commemorations. At the conclusion of the inquiry the Holy Synod may decide to continue the process immediately, or, as is more generally done, to defer it for about two years, and then to seek further evidence. A further commission then reports to the Holy Synod, which issues a statement, submitted to the Imperial authority for sanction, which places the person in the list of saints, and orders an exposition of his relics, the composition of an office, the creation of a festival, and the publication of this decree for the instruction of the faithful. This is followed, if possible, by a translation and veneration of the relics, with special solemnity, under the authority of the Holy Synod and in the presence of some of the highest prelates. It includes the final recitation of special prayers for the repose of the soul of the saint, and for all those who have taken part in the ceremony. At the time of the translation a special office in honour of the saint is recited and the relics are exposed. From that moment prayers are no longer said for the soul; his intercession is invoked instead. The festival is prolonged, with special masses and sermons, for several days: that of St. Seraphim of Sarov lasted from July 16 to July 21, 1903.

The points in which Russian canonizations differ from those of the rest of the Eastern Church are those involved in the position assumed by the Christian Sovereign and by the Holy Synod; throughout the rest of the East, where these special features do not exist, the ancient custom, which leaves the whole process in the hands of the bishops, still obtains. In the Roman Church the system is more complex and exact, and depends on the Papal authority. In the Anglican Church, though churches have been dedicated in the names of modern persons of holy life, nothing approaching to a custom of canonization exists. The nearest approach to it is the insertion of the name of Charles I., 'King and Martyr,' in the calendar of the English Church by the authority of the Crown, the Convocations, and Parliament, and the compilation of a special office, for use on Jan. 30, which was removed from the Prayer Book (by royal authority only) in 1859. Protestant Churches have no parallel custom. It may be added that, while canonizations tend to increase in the Church of Rome, in the Eastern Church generally the cases of additions to the list of saints in modern times are rare. Though the Russian Church is perhaps becoming more generous in this regard, the Orthodox Church as a whole, and especially in Constantinople, is very chary of adding to the roll of those whom she formally declares to have attained to the highest bliss.

LITERATURE.—Benedict XIV., *de Servorum Dei beatificatione et beatorum canonizatione*, 1st ed., 4 vols., Bologna, 1734–38,

completed in his *Opera Omnia*, Venice, 1767 (the ed. used for the purpose of this art. is that in 15 volumes, Rome, 1787–92); Ferraris, *Prompta bibliotheca canonica*, Paris, 1884 (another ed. is Rome, 1766); Gardellini, *Decreta authentica sacrorum rituum*, Rome, 1898–1901; Vacant and Mangenot, *Dictionnaire de théologie catholique*, fasc. xv., Paris, 1905. There is a large number of earlier authorities, but practically all that they say will be found summarized in the books named above. On Eastern canonization, see Golubinski, *Istoria Kanonisatsii svatykh v russkoi tserkvi* ('History of the Canonization of Saints in the Russian Church')[2], Moscow, 1903, which has a full bibliography (pp. 3–10); Martinov, *Annus ecclesiasticus græco-slavicus*, Brussels, 1863. On the *rationale* of canonization and some theological doctrines involved, reference may be made to W. H. Hutton, *The Influence of Christianity upon National Character*, etc. (*BL*, 1903), and A. C. Headlam, *The Teaching of the Russian Church*, London, 1897, with references there given. The writer's grateful thanks are due to Mr. W. J. Birkbeck for most valuable help in regard to Russia.

CAPITAL PUNISHMENT.—See CRIMES AND PUNISHMENTS.

CAPPADOCIAN THEOLOGY.—i. GENERAL CHARACTERISTICS.—It is only in a limited sense that we can speak of a 'Cappadocian Theology.' The term does not denote a formal system of doctrine, but represents in a more general way the contributions to theology of three Christian Fathers who were united by a common connexion with the Church in Cappadocia, and who brought to the defence of the Christian faith the inspiration of the same religious ideals and the same intellectual interests. The literary activity of the three Cappadocians — **Basil of Cæsarea**, his friend **Gregory of Nazianzus**, and his brother **Gregory of Nyssa**—covers the period 362–394. It thus coincides with a momentous period in the history of the Church. As champions of the Nicene cause in the closing years of the struggle with Arianism, the Cappadocians were the successors of Athanasius, and completed the victory over Arianism in the East. Under their guidance the fresh questions which were coming to the front in their time—the Divinity of the Holy Spirit and the formulation of the doctrine of the Trinity—received a solution. Again, they were called upon to deal with the Christological controversy in its earlier stage, as represented by the teaching of Apollinaris; and here too they rendered services which prepared the way for later theologians. But their place in the history of thought is due also to another cause. They were devoted students of Origen, and, like Origen, they sought to enlist in the service of Christian theology the best philosophical thought of their time, in order to present the Christian faith to the culture of their age in the form of a scientific theology. This dream of 'a league between Faith and Science' (Harnack) is shown in their presentation of the doctrine of the Trinity by the help of conceptions derived from the thought of Plato and Aristotle. But it appears in other directions as well, in the publication by Basil and Gregory of Nazianzus of the *Philocalia* (a selection of extracts from the writings of Origen), in the *Hexaemeron* of Basil, above all in the three treatises of Gregory of Nyssa, *On the Soul and the Resurrection*, *On the Making of Man*, and the *Catechetical Oration*.

The last-named Father was a more thoroughgoing student of Origen than either of the other two. He traverses almost the whole field of problems which had been dealt with by Origen, and seeks to present the Christian religion in relation to the plan of the Universe and human history. The questions of which he treats include the providence of God, the creation of matter, the origin of the soul and its relations to the body, the source and nature of evil, the resurrection of the body, and the eschatological problem. In this way he was the successor of Origen, and the first Father after him who attempted to create a system of thought based upon Christianity. In his speculative idealism he goes beyond Origen in explaining away matter. On the other hand, he does more justice than Origen to the sensuous side of things in his assertion of the interdependence of spirit and matter in the constitution of man. And yet again there is a strain of mysticism in his thought, which gives him a place in the line of mystics between the Alexandrians and pseudo-Dionysius the Areopagite (on Gregory's mysticism see Diekamp, *Die Gotteslehre d. hl. Greg. v. Nyss.* p. 90 ff.; Holl, *Amphilochius von Ikonium*, p. 205 ff.). This breadth of interest shows how many and various were the elements which he had incorporated from the thought of his time.

Another feature of the Cappadocians is the spirituality of their religious conceptions. This again shows the influence of Origen, and marks a point of contact with the best non-Christian thought of the time, which had been profoundly influenced by Neo-Platonism. The Kingdom of Heaven, says Basil (*Ep.* 8), is 'the contemplation of realities.' 'This the Divine Scriptures call blessedness. For "the Kingdom of Heaven is within you."' 'Likeness to God' is the goal set before man (Basil, *de Spir. Sanct.* i. 2, cf. ix. 23). The image of God is shown to us in Christ by the Holy Spirit, and thus through the Spirit and the Son man ascends to the Father (*ib.* xviii. 47). Thus their defence of the Divine unity is inspired by a religious interest.

Side by side with this spirituality of conception there appears in Gregory of Nyssa a tendency to realism, which is exhibited especially in his exposition of the redemption through Christ (see below) and in his language on the Sacraments. In this respect he shows the influence of Methodius. See the present writer's edition of the *Catechetical Oration*, Camb. Patristic Texts, p. xxv ff.

The interest of the Cappadocians in furthering the cause of spiritual religion attracted them to the ascetic movement in the Church, represented by monasticism, in which the age sought to express its ideal of practical piety. Basil's interest in monasticism, of which he was the chief promoter and organizer in the East, communicated itself to the two Gregorys, and the writings of all three are affected by the ascetic ideal, which finds its apologist in Gregory of Nyssa. In his early work *On Virginity*, asceticism is expounded as a philosophy of life, and interpreted as the detachment of heart which enables a man to enjoy the vision of the uncreated Beauty.

The connexion of Amphilochius, Bp. of Iconium, with the Cappadocians has been treated by K. Holl (*Amphilochius v. Ikonium*). While maintaining their Trinitarian and Christological doctrines, Amphilochius does not share their interest in Origen's philosophy or their speculative bent. But as a popular teacher he helped to give currency to the doctrinal formulas which took shape among the Cappadocians.

ii. SOURCES OF DOCTRINE.—1. **Authority of Scripture.**—The supremacy of Holy Scripture was fully recognized by the Cappadocians (see esp. Basil, *de Fide* 1, *Hom. adv. Calumn. SS. Trin.* 4). In their exegesis they were influenced by Origen, though Basil was fully conscious of the dangers of Origen's allegorical method (*Hex.* ix. 1), and often prefers a strictly literal interpretation. In this respect he has points of contact with the school of Antioch. Gregory of Nazianzus makes a moderate use of the allegorical method, which is defended at length by Gregory of Nyssa (*in Cant.* [*PG* xliv. 756]), and more freely employed by him than by either of the other two. In this way he explained the early chapters of Genesis (*Or. Cat.* v., viii.), while he deals (*de Comm. Not.* [*PG* xlv. 181]) with the συγκατάβασις ('accommodation') of the language of Scripture after the manner of Origen.

At the time when the Cappadocians wrote, the allegorical method was beginning to fall under suspicion; and the contest with the Arians, who had been trained in the literal methods of the school of Antioch, showed the need of a more scientific treatment of Scripture. Even Gregory of Nyssa expresses his desire to adhere, wherever possible, to the literal sense (*Hexaemeron* [*PG* xliv. 68]; cf. *in Cant.* [*PG* xliv. 756]). In dealing with the typology of the Old Testament, Basil approximates to the later teaching of the school of Antioch, and exhibits a reserve which is wanting to the more imaginative mind of Gregory of Nyssa. In other respects the Cappadocians show a conscientious desire to bring out the full grammatical sense of Scripture. They appeal occasionally to the Hebrew, and they

quote from other versions than the LXX. See, further, Weiss, *Die grossen Kappadocier . . . als Exegeten* (1872).

2. Tradition.—Next to Scripture, the Cappadocians recognize the importance of tradition. They start from the Church tradition of their time (see Greg. Naz. *Or.* xxxiii. 15; Greg. Nyss. *Ep. iii. ad Eustath. et Ambros.* [*PG* xlvi. 1024]), and exhibit especially the influence of the Creed of their local saint, Gregory Thaumaturgus (see below). In a passage of the *de Spir. Sanct.* (xxvii. 66) Basil makes a distinction between written and unwritten tradition, and claims for the latter an Apostolic origin. In one passage (*Or.* xxxi. 25 ff.) Gregory of Nazianzus assumes a gradual development in revelation, in order to explain the reticence of Scripture on the subject of the Holy Spirit. In another passage he propounds the idea of a 'disciplina arcani' (*Or.* xl. 45).

iii. THE KNOWLEDGE OF GOD.—The Cappadocians are unanimous in asserting the mystery of the Divine Being. 'We know that He exists, but of His essence (*οὐσίας*) we cannot deny that we are ignorant' (Greg. Nyss. *contra Eunomium* [*PG* xlv. 933]; cf. Basil, *Ep.* 234). The writers of Scripture 'lead men, as by the hand, to the understanding of the Divine nature (*φύσεως*), making known to them the bare grandeur of the thought of God; while the question of His essence (*οὐσίας*), as one which it is impossible to grasp . . . they dismiss' (*ib.* p. 945; cf. Greg. Naz. *Or.* xxviii. 5, 7, 17). But, though the 'being' or 'essence' of God is unknowable, God may be known mediately by His energies and operations (Basil, *Ep.* 234. 1), and in Creation those energies are translated into a language that we can understand (Basil. *adv. Eunom.* ii. 32). Basil escapes the dilemma propounded by Eunomius, that either man can know the essence of God or he cannot know God at all, by maintaining that the incompleteness of our knowledge does not deprive it of truth (*Ep.* 233. 2). The Universe exists to manifest the Creator, and from the exhibition of beauty and wisdom which it presents the mind is led to grasp by analogy the Divine Wisdom and the uncreated Beauty (Greg. Nyss. *de Infantibus qui praem.* [*PG* xlvi. 181]). This habit of seeing affinities and analogies between the visible and invisible worlds shows the influence of Origen and Plato. It led the Cappadocians to that profound delight in natural scenery which is characteristic of their writings (see esp. Basil, *Hex.* iii. 10, vi. 1; Greg. Naz. *Or.* xxviii.; Greg. Nyss. *de Infantibus, Ep.* 20 [*PG* xlvi. 181, 1079]. The same feature appears in Plotinus). But it is especially in the human soul that we may find analogies to the Creator, for the soul is a mirror, which reflects the traits of its Divine archetype (Basil, *Hex.* ix. 6; Greg. Nyss. *de An. et Res.* [*PG* xlvi. 41], *de Mortuis* [*ib.* p. 509]). Hence both Gregorys employ the psychology of human nature to illustrate the doctrine of the Trinity (see below). The more complete knowledge of God, however, is unattainable without the light of faith, and in the Old Testament this faith was still incomplete. The Law and the Prophets were like the 'window' and the 'lattice' (Ca 2^9), which admitted only a ray of truth, whereas in the Incarnation the true light itself is revealed (Greg. Nyss. *in Cant.* hom. v. [*PG* xliv. 865]).

iv. THE INCARNATION.—None of the Cappadocians sets forth the purposes of the Incarnation so fully or so adequately as Athanasius had done in his treatise *On the Incarnation.* In Basil the predominant thought is the revelation to man of the image of God in Christ and the restoration of the Divine image in man (*Epp.* 236. 3, 38. 8, *de Spir. Sanct.* ix. 23). In Gregory of Nazianzus the same conceptions appear, but the characteristic idea is the 'deification' (*θέωσις, θεοῦν, θεὸν γενέσθαι*) of man in Christ (see esp. *Orr.* i. 5. xxxix. 17, xl. 45. The same idea appears in Basil and Gregory of Nyssa, and may be traced to the influence of earlier writers, *e.g.* Origen and Athanasius. See Harnack, *Hist. of Dogma*, Eng. tr. iii. 164 n. 2). Gregory of Nyssa, while giving a place to both these conceptions, develops the redemptive aspect of the Incarnation in a manner which recalls the earlier treatment of Irenæus, although in its actual form it finds its closest parallel in the teaching of Methodius (see above). The purpose of the Incarnation was to arrest the process of dissolution in man's nature, which was a result of sin. Death had been ordained after the Fall (the 'coats of skin' in Genesis represent this state of mortality, *Or. Cat.* viii.) as a merciful provision for removing the evil which had been mingled with man's physical nature. Christ assumed humanity as a whole (similarly Methodius), in order to knit together in an inseparable union the elements of human nature (*i.e.* body and soul) which had been severed by death. His redemptive work accordingly was only completed by His resurrection, through which He becomes a new principle of life to all mankind (*Or. Cat.* xvi., xxxv.). This exposition exhibits the realism which has been noticed above as a characteristic of some parts of Gregory's teaching.

Gregory of Nyssa is the only one of the Cappadocians who attempted a formal treatment of the Incarnation, which occupies the larger part of his apologetic work, the *Catechetical Oration.* His object in that treatise is to show the reasonableness of a belief in the Christian religion. He adopts many of the arguments of Athanasius, and appeals to the Gospel history and the rise of the Church as exhibiting the Divine power of Christianity. He justifies the idea of the Incarnation by an appeal to the immanence of God in creation, and by showing that the plan of redemption was consistent with the attributes of God, displaying at once His power, righteousness, wisdom, and goodness. No external remedy would have sufficed, for man needed to be touched in order to be cured (xxvii.). The death of Christ was necessary in order that His assumption of humanity might be complete. For his fuller treatment of the death of Christ, see below. In the latter part of the treatise he shows the relation of the Sacraments to the Incarnation.

v. THE DOCTRINE OF THE TRINITY.—Among the local influences which helped to shape the theology of the Cappadocians must be reckoned the teaching to which currency had been given by the labours of Gregory Thaumaturgus. The Creed of Gregory (see Hahn, *Bibliothek der Symbole*[3], 1897, p. 253), which contains a clear assertion of the unity and eternity of the Three Persons of the Trinity, and closely associates the Holy Spirit with the Son, appears to have formed the starting-point of the Cappadocian theologians, and even to have moulded their language to some extent (see Holl, *Amphilochius von Ikonium*, p. 117 ff.; and cf. Basil, *Ep.* 204, *de Spir. Sanct.* xxix. 74; Greg. Nyss. *Vita Greg. Thaumat.* [*PG* xlvi. 912]). In the Creed of Nicæa they recognized a natural development of such teaching and the starting-point for the still further developments which were forced upon them by their opposition to the advanced Arian teaching of Eunomius and by the controversy on the Holy Spirit. The complete vindication of the Deity of the Son and of the Holy Spirit was one part of the task which lay before them. The other was the settlement of the terminology in which these results were to be expressed, the treatment of the immanent relations of the three 'Persons,' and the manner of their co-existence in the one Divine Being. This latter task, to which they were led by the need of giving scientific precision to the results attained through the controversies of their time, constitutes their chief importance in the history of Christian theology. (At the same time it marks an epoch in the history of thought as a serious attempt to grapple with the conception of personality.) The distinction between the terms *οὐσία* and *ὑπόστασις* marks the starting-point of this later development. Currency

was now given, largely through the influence of the Cappadocians, to the formula *μία οὐσία, τρεῖς ὑποστάσεις*, to denote the coexistence in the one Divine Being of three subsistences or spheres of conscious being ('Persons' in later terminology).

In this task of formulating the doctrine of the Trinity, Basil was the pioneer. The two Gregorys depend upon him, though they advance beyond him and complete his work. To Basil is due, on the one hand, the definition of the terms *οὐσία* and *ὑπόστασις*, and, on the other hand, the beginnings of the attempt to discover the characteristics (*γνωρίσματα, ἰδιώματα, ἰδιότητες*) of each of the *ὑποστάσεις*, and their relations to one another in the Godhead. In the former task the other two Cappadocians advance little beyond Basil. In the latter they develop and complete his work, especially in regard to the doctrine of the Holy Spirit. At the same time they were more alive than Basil appears to have been to the dangers of tritheism, and they exhibit a stronger interest in defending the Unity of the Deity and in refuting the charge of Tritheism. Both of them insist that the unity of the three Persons is no mere abstraction or generic unity. That which constitutes it, the Godhead, is identical in all three Persons. There is one Godhead in three subsistences or Persons. This unity was further secured by a discussion of the 'modes of being' (*τρόποι ὑπάρξεως*) of the Son and of the Holy Spirit. The Father is the source of Deity, while the Son has a derived Godhead (*γεννητός, μονογενὴς θεός*). The Holy Spirit 'proceeds' (*ἐκπορεύεται*) from the Father through the Son (*διὰ τοῦ υἱοῦ*). Finally, the idea of a *περιχώρησις* ('co-inherence') of the three Persons was put forward to express their inseparable will and activity. These results were commended to the thought of the time by an attempt to show that the Christian doctrine of the Trinity was the mean between Judaism on the one hand and Hellenism on the other (Basil and Gregory of Nyssa), and an attempt was made to illustrate the immanent relations of the three Persons and their unity in the Godhead from the analogy of human nature (Greg. Naz., Greg. Nyss.).

The following points deserve attention, as illustrating the particular contributions to the doctrine of the Trinity made by each of the three Fathers.

Basil prepared the way by a careful distinction, based upon 'a popularized Aristotelianism' (Holl), of the terms *οὐσία* and *ὑπόστασις*. The term *οὐσία* 'has the same relation to *ὑπόστασις* as the common has to the particular.' It is 'common, like goodness or Godhead, or any similar attribute; while *ὑπόστασις* is contemplated in the special property of Fatherhood, Sonship, or the power to sanctify' (*Ep.* 214). Basil also contributed to the discussion of the relations of Father, Son, and Holy Spirit. He uses the term 'modes of being' (*τρόποι ὑπάρξεως*; on the history of the expression and its use by Basil and Greg. Nyss. see Holl, *Amphilochius*, p. 240 ff.) to denote the manner of derivation of the Son and Holy Spirit from the Father. The relations of the Father and the Son are expressed by the terms *πατρότης* and *υἱότης* (less commonly *ἀγέννητος* and *γεννητός*). But he could not arrive at any conclusion as to the 'mode of being' of the Holy Spirit, which he confessed to be ineffable (*de Spir. Sanct.* xviii. 46). The Holy Spirit is from God. He is also called the Spirit of Christ, is 'attached to' Christ and 'intimately associated' with Him (*de Spir. Sanct.* xviii. 46: *contra Sab. et Ar.* [*PG* xxxi. 609]). Though Basil is not so concerned as the two Gregorys to defend the Unity, he is not wanting in clear statements which show his mind on the subject. He rejects the terms 'like' and 'unlike' as applied to the Son, and maintains the identity of nature (*ταὐτότητα τῆς φύσεως*) and oneness of being (*ὁμοούσιον*) of the Father and the Son (*Ep.* 8), and in another passage (*Ep.* 52) he refutes the idea that *οὐσία* denotes a substance anterior to or underlying both. The Father is the source of Deity and the first principle of existing things, 'creating through the Son and perfecting through the Spirit' (*de Spir. Sanct.* xvi. 38), although in the experience of life we ascend from the Holy Spirit, through the Son, to the Father (*ib.* xviii. 47).

Gregory of Nazianzus, starting from Basil's teaching, completed his definitions by giving currency to the term *ἐκπόρευσις* to denote the 'procession' of the Holy Spirit. His ruling conception of the *ἰδιότητες*, or 'characteristics,' of the three Persons is that the Father is unbegotten, the Son begotten, while the Holy Spirit 'proceeds' (*ἀγεννησία, γέννησις, ἐκπόρευσις*). The procession through the Son is only indicated; it is not clearly defined. Gregory has a clear statement of the Divine unity, which is characterized by 'equality of nature, unanimity of judgment, identity of action, and concurrence of the other two Persons with the One from whom they are derived; so that, though there is a numerical difference, there is no division or separation in being' (*Or.* xxix. 2). 'There is one God, because there is only one thing that can be called Godhead.' The Persons derived from the One source are referred back to the One, though we believe them to be three (*Or.* xxxi. 14). At the same time he safeguards the unity from being regarded as a mere abstraction or generic unity. Peter, Paul, and John are not *ὁμοούσιοι* ('of one substance or being') in the same sense as the Persons of the Trinity (*Or.* xxxi. 19). Elsewhere he uses almost Sabellian language to express the closeness of the relations of the Son and Spirit to the Father (*Or.* xxix. 2).

Gregory of Nyssa starts, like Gregory of Nazianzus, from the standpoint of Basil; and develops in an independent manner his own thought upon the subject. Like Gregory of Nazianzus, he has a strong interest in maintaining the unity of the Godhead. In place of the terms *γεννητός* and *ἐκπορευτός* to denote the modes of being of the Son and the Spirit he prefers the expressions *μονογενής* (or *μονογενὴς θεός*) and *διὰ τοῦ υἱοῦ* (in this latter expression we see the influence of Gregory Thaumaturgus). But his most suggestive treatment of the relations of the three Persons in the Godhead is contained in the two treatises, *de Communibus Notionibus* and *Quod non sint tres Dii*, in which he refutes the charge of tritheism. He starts from the objection that, if Peter, James, and John are three men, why may we not speak of Father, Son, and Holy Spirit as three Gods? To this he replies that the word 'God' denotes 'being' or 'essence,' not 'person.' Strictly speaking, in referring alike to God and man we ought to maintain the oneness of their *οὐσία*, or 'being,' in each case. It is only by an incorrect manner of speech that we use the plural and speak of 'three men,' seeing that the *οὐσία*, 'man,' is one and the same in all three cases. Similarly in the case of the Godhead the *οὐσία* of the three Persons is one and the same. (This conception of the unity of human nature exhibits the realism of Gregory.) Again, he urges, individual men are distinguished sharply by the varying relations of time and place and circumstance, whereas the Persons of the Godhead exhibit a constant causal relation.

There are I. *τὸ αἴτιον*, the cause = the Father,
II. *τὸ αἰτιατόν*, the caused, either
(*a*) immediately (*τὸ προσεχῶς ἐκ τοῦ πρώτου*), *i.e.* the Son,
(*b*) mediately (*τὸ διὰ τοῦ προσεχῶς ἐκ τοῦ πρώτου*), *i.e.* the Holy Spirit. (Cf. also *de Spir. Sanct.* [*PG* xlv. 1304], *ἐκ τοῦ θεοῦ ἐστί, καὶ τοῦ Χριστοῦ ἐστί.*)

Thus Gregory of Nyssa advances beyond the other Cappadocians in his clearer definition of the procession of the Spirit through the Son, and in this respect he represents the final stage of development attained in the Eastern Church. Another contribution made by him in the *Quod non sint tres Dii* is the clear statement of the *περιχώρησις* ('co-inherence,' 'interpenetration') of the three Persons. The operations of the Godhead are conducted by all Three, acting together without mark of time or distinction of separate action, 'so that there is one motion of, and disposition of, the goodwill which is communicated from the Father through the Son to the Spirit.' Lastly, we may notice (see Holl, *op. cit.* p. 220) that Gregory's insistence on the unity of the Godhead is bound up with his speculative interest and his Origenism, which led him to seek a single Principle as the source of the evolution of the world and human history.

Some distinguished German theologians (Harnack, Zahn, Loofs) have in recent times attempted a fresh reading of the work of the Cappadocians in relation to the doctrine of the Trinity. According to this view, the Cappadocians modified the sense of the *ὁμοούσιον* and secured adherence to their new interpretation, by which it came to denote likeness (or equality) of substance rather than unity of substance. In this new development the Cappadocians are supposed to have been influenced by the theology of Basil of Ancyra. According to their reading of *ὁμοούσιον*, the terms *οὐσία* ('being') and *φύσις* ('nature') became nearly equivalent, and it was permissible to believe in three hypostases of like nature which together form the Godhead, instead of one Godhead existing in three distinct spheres of conscious being. By this view the Church became committed to an interpretation which is really tritheistic. But this theory appears to have gained ground from the weight of the authorities by which it is supported rather than from its intrinsic merits. It introduces confusion into the careful language of Gregory of Nazianzus and Gregory of Nyssa, and on its presuppositions the argument of the latter in his *Quod non sint tres Dii* becomes unintelligible. Nor does the theory receive any adequate support from the less complete treatment of Basil. A careful study of the theological stand-

point of all the Cappadocians (especially the two Gregorys) shows how vital to their whole view of religion was the belief in the unity of the Godhead.

For the theory itself, see Zahn, *Marcellus v. Ancyra*, 1867; Harnack, *History of Dogma*, Eng. tr. (1894-99); Loofs, *Leitfaden zum Stud. der Dogmengeschichte* (1893); and art. 'Gregor. v. Naz.' in *PRE*³, vol. vii. (1899). For a careful criticism of the theory, see Bethune-Baker, *Texts and Studies*, vii. (1901) n. 1; and for a general treatment of the Cappadocian theology, see Holl, *Amphilochius v. Ikonium* (1904). Cf. also Ullmann, *Greg. v. Naz.*² (1867), p. 341 ff.; Dorner, *Doctr. of Person of Christ*, Eng. tr. (1861-63), I. ii. 506 ff.

vi. CHRISTOLOGY.—The Christological problem was discussed by the Cappadocians in connexion with the teaching of Apollinaris. Beyond a few passing notices, Basil does not deal with the theories of Apollinaris, which are, however, treated of at length by Gregory of Nazianzus in his two *Epistles to Cledonius* and in his *Epistle to Nectarius*, and by Gregory of Nyssa in his *Antirrheticus adv. Apoll.* and his *Epistle to Theophilus*. Their influence on later speculation is seen in the following directions:

(1) Gregory of Nazianzus employed, and gave currency to, the expression 'two natures' (δύο φύσεις, used earlier by Origen), while emphasizing clearly a principle of unity in Christ.

(2) Both Fathers prepared the way for future discussions by emphasizing the reality and completeness of the human nature assumed by Christ. Especially valuable is the appeal of Gregory of Nyssa to the portrait of Christ in the Gospels and its exhibition of a human will, human ignorance, growth in knowledge, submission to temptation, sorrow, and dereliction (see esp. *Antirrh.* 11, 14, 24, 32). In this respect he has affinities with the Antiochene theologians. The vindication of the existence of a rational soul in Christ (against Apollinaris) was further prompted by the interest of both Fathers in the doctrine of redemption. If Christ had no human soul, the soul of man was not redeemed (Greg. Naz. *Ep.* i. *ad Cled.* 7, *Ep.* ii. 4; Greg. Nyss. *Antirrh.* 11, 17, *Ep. ad. Theophil.*).

(3) In dealing with the central problem raised by Apollinaris, 'How is the existence in Christ of two complete natures compatible with the unity of His Person?' both Gregorys tended towards the idea of a transmutation of the human nature into the Divine. They employ, as earlier writers had done, the terms 'mixture,' 'blending' (μίξις, κρᾶσις, σύγκρασις, ἀνάκρασις), to denote the union of the two natures. But, further, they speak of the human nature as 'deified,' and 'transmuted' into the Divine. Gregory of Nyssa appears to regard the unity of the human nature with the Divine in Christ as a progressive unity, which was fully accomplished only at the Ascension, when the humanity ceased to retain its own characteristics, and was blended with the Deity 'like a drop of vinegar with the ocean' (*Antirrh.* 42, *Ep. ad Theophil.*). In this way he was able to meet the objection of Apollinaris that, if Christ's humanity was complete, 'the triad (or Trinity) was expanded into a tetrad'; but his language exhibits a tendency which is perilously near to that which afterwards produced Monophysitism.

(4) Neither of the two Gregorys fully reached the solution of later theology, which maintained the impersonal character of the humanity of Christ. In a few passages Gregory of Nyssa appears to allow a relative independence to the humanity, and even employs the term 'person' (πρόσωπον) in connexion with it as well as with the Divine nature (*c. Eunom.* ii. [*PG* xlv. 504]; *Antirrh.* 2, 27). Similarly, both Fathers occasionally use language which has a Nestorian ring (see Masson, *Five Orations of Greg. Naz.*, 1899, Introd. p. xvi ff.; and cf. Greg. Nyss. *Or. Cat.* xvi., xxvii., xxxii.). On the other hand, Gregory of Nazianzus clearly anticipates the later language of Cyril of Alexandria, when he speaks of the union of the two natures as an 'essential' union (συνάπτεσθαι κατ' οὐσίαν, *Ep.* 101, where κατ' οὐσίαν is opposed to κατὰ χάριν). Similarly his interest in the redemptive work of Christ led him to attribute to the Divine Person the human acts and sufferings. Thus he freely uses the terms θεοτόκος, θεὸς παθητός, and similar expressions (see Holl, *op. cit.* pp. 179, 190 ff.). Lastly, both Gregorys expound the idea of a *communicatio idiomatum* (see Greg. Naz. *Or.* xxx. 8; Greg. Nyss. *Ep. ad. Theophil.*). In this way they make approaches towards the later Alexandrian theology.

The question raised by Apollinaris, 'How could Christ have assumed human nature in its completeness and yet be without sin?' is only indirectly treated of by Gregory of Nyssa. He affirms (1) the reality and completeness of our Lord's human nature; (2) the completeness of the union between the Divine and human natures in Christ. Scripture affirms that Christ became sin for us, 'that is, that He united to Himself the sinful soul of man' (*Antirrh.* 23). 'He endured not to repel from communion with Himself our nature, fallen though it was as the result of sin' (*ib.* 53). But 'though He took our filth upon Himself, yet He is not Himself defiled by the pollution, but in His own self He purifies the filth' (*ib.* 26). This purification was effected at the very moment of the conception of the Virgin. The Divine nature was present in both the body and the soul of Christ from the very first, and rendered each of them sinless (*Antirrh.* 54). Christ shared our human feelings and weaknesses, but did not share our tendency to sin or disease of will (*c. Eunom.* bk. vi. [*PG* xlv. 721]; *Ep. ad Eustathiam* [*PG* xlvi. 1020, 1021]). 'Immediately the man in Mary . . . along with the coming upon her of the Holy Ghost, and the overshadowing of the power of the Most High became what that overshadowing power in its own nature was' (*Ep. ad Eustath. ib.*). See, further, *JThSt* vii. 434 ff.

In his treatment of the participation of the Godhead in the human experiences of Christ, Gregory approaches the later treatment of Cyril of Alexandria. Though God cannot suffer, 'He was in Him who suffered, and made His suffering His own.' See *Antirrh.* 54, 55, and cf. Cyril's *2nd Epistle to Nestorius*.

vii. THE CREATION OF MAN AND THE FALL.—(1) Though the Cappadocians rejected definitely Origen's theory of the pre-existence of souls, their doctrine of human nature exhibits, especially in the two Gregorys, lingering traces of Origen's influence. All alike represent the primal condition of man as almost angelic in character (see Basil, *Hex.* viii. 2, ix. 2; Greg. Naz. *in Ps. cxviii.* iv. 2; Greg. Nyss. *de Hom. Op.* 16, 17). Both Gregorys allegorize the coats of skin in Genesis, and see in them the type of the sensuous life and the subjection to mortality, which were results of the Fall (Greg. Naz. *Or.* xxxviii. 12; Greg. Nyss. *Or. Cat.* viii., *de Virg.* 12, *de An. et Res.* [*PG* xlvi. 148]). Gregory of Nyssa even regards human generation as a consequence of the Fall (*de Virg.* 12; cf. *de Hom. Op.* 16, 17), though in his later work, the *Oratio Catechetica* (c. xxviii.), he gives up this view.

(2) As to the origin of the soul, while Gregory of Nazianzus shows himself a Creationist (*Or.* xxxviii. 11), Gregory of Nyssa uses language which implies a Traducianist conception (*de Hom. Op.* 28, 29, *de An. et Res.* [*PG* xlvi. 125 ff.]). The soul is not created before the body, nor the body before the soul. There is one beginning for soul and body alike, and the powers of the former unfold gradually with the body's growth. Just as a seed contains in germ all future developments, so does the principle of life in man (*de Hom. Op.* 29). The closeness of the intercommunion between soul and body is a characteristic feature of the teaching of Gregory of Nyssa. In other respects Gregory of Nyssa advanced interesting speculations on human nature. He has a realistic conception of the unity of the race (see above, §§ iv., v.), maintaining that the whole of humanity was created ideally beforehand by God (*de Hom. Op.* 16, 17). This conception, by which Adam represents the whole of mankind, presents points of contact with Philo on the one hand and Methodius on the other. Again, he dwells upon the idea that man is a microcosm, the meeting-point of the two worlds of matter and spirit (*Or. Cat.* v.; cf. Greg. Naz. *Or.* xxxviii. 11). Hence he employs the terminology 'intellig-

ible' and 'sensible,' or 'invisible' and 'visible' to denote the constituents of human nature, in preference to Origen's trichotomy—'body,' 'soul,' and 'spirit.'

(3) All the Cappadocians emphasize man's possession of free-will. This again marks a point of contact with Origen, and was further developed in face of the fatalism of Greek thought and through the opposition to Manichæism. The possession of free-will was a consequence of man's creation in the image of God. Sin was the result of the misuse of man's free-will in departing from what is good. The Fall only weakened, it did not destroy, man's freedom (see, *e.g.*, Basil, *de Spir. Sanct.* ix. 23, *Ep.* 233; Greg. Naz. *Or.* ii. 17, xvi. 15, xxxvii. 13; Greg. Nyss. *Or. Cat.* xxx., xxxi., *Antirrh.* 29). In this respect the Cappadocians represent the general attitude of Greek thought as contrasted with the later teaching of Augustine.

(4) In their conception of the negative character of evil the Cappadocians exhibit the influence of Plato and Origen (so also Athanasius). Evil has no substantive existence. It springs from within and is 'a disposition in the soul opposed to virtue.' It arises through man's free-will, when the soul departs from good. See Basil, *Hex.* ii. 4; Greg. Nyss. *Or. Cat.* v.

(5) In their treatment of the effects of the Fall, the Cappadocians mark an advance beyond the position of Athanasius. The idea of a transmission of sin and death appears in Basil (*Hom. in famem et sicc.* 7, *Sermo de renunt. sæculi*, 7). Gregory of Nazianzus speaks of Adam as having involved all men in condemnation through his sin (*Or.* xxxviii. 4, xxxix. 13. 16). He also speaks of the defilement attaching to human nature, and regards the Virgin-birth as delivering man from 'the fetters of his birth' (*Or.* xxxviii. 17). Gregory of Nyssa goes further, and appears to teach the idea of an inherited moral taint. He speaks of man's nature as 'sinful' (*de Vita Moysis* [*PG* xliv. 336]), and as having 'fallen into sin' (*ib.* p. 337). 'He who partakes of Adam's nature, partakes also of his fall' (*de Oratione Dom. Or.* v. [*ib.* p. 1184]). Sin is born in our nature (*in Psalmos* [*ib.* p. 609]). The adversary of man 'through his deception mingled evil with man's will and succeeded in extinguishing and obscuring in a way the Divine blessing' (*Or. Cat.* viii.). By baptism man is released from his connexion with evil (*Or. Cat.* xxxv.). For further reff. see Tennant, *The Fall and Original Sin*, 1903, pp. 316–323. In these respects Gregory of Nyssa develops the later (as opposed to the earlier) teaching of Origen, and approximates towards the teaching of Augustine on Original Sin.

viii. THE ATONEMENT.—Theological reflexion on the death of Christ and its relation to the work of man's redemption in the period preceding the Cappadocians had emphasized two ideas. (1) Christ's death was a sacrifice to God. This idea had reached its fullest expression in Athanasius. (2) Christ's death was a ransom paid to Satan. The chief representative of this thought was Origen. The former idea was not systematically developed by the Cappadocians, who appear to have been influenced but little by the teaching of Athanasius on the subject.

Basil scarcely deals with the question, which had not been made a subject of controversy (see, however, on the sacrifice to God, *Hom. in Ps. xlviii.*; and on the deception and defeat of Satan, *Hom. xx. de Humilitate*, 2; see, further, *Ep.* 261).

Gregory of Nazianzus exhibits a more profoundly religious interest in the question than either Basil or Gregory of Nyssa, and approaches more nearly than they to Athanasius in the spirit of his teaching. Christ's death delivered us from the curse of sin. The Atonement was the work of God (hence the phrases θεὸς παθητός, θεὸς παθών), and yet the sacrifice could only be made by One who was a member of the human race. Hence he insists on the representative and vicarious character of Christ's sufferings in a way which anticipates St. Bernard's teaching on the suffering of the Head for the members (see esp. *Or.* xxx. 5). He criticizes existing theories (*Or.* xlv. 22), and indignantly repudiates the idea of a ransom to Satan. But he will not commit himself to say in what sense the sacrifice was offered to God, beyond suggesting that, though the Father had not asked for it or required it, it was perhaps due to the 'economy' of God. The necessity of the sacrifice is not, in fact, made absolute by him. Man's deliverance from Satan and man's sanctification required it, and, further, it was offered in honour of the Father (*ib.*).

Gregory of Nyssa does not dwell upon the thought of a propitiation at all. But he develops in a crude and repulsive manner Origen's idea of a ransom paid to Satan, and of an act of deception practised upon the latter. Man had freely sold himself to Satan, and, in delivering man, God could proceed only by methods of strict justice, *i.e.* by a bargain such as would be acceptable to the adversary. Christ was the ransom price. But the veil of the humanity hid from Satan the Godhead of Christ, and thus, by an act of strict retribution, the deceiver was in turn deceived (*Or. Cat.* xxiii.). The idea of a deception practised on Satan appears also in Gregory of Nazianzus (*Or.* xxxix. 13), while the whole conception of Gregory of Nyssa is found in his contemporary Amphilochius of Iconium (see Holl, *op. cit.* p. 98 ff.). The theory thus developed by Gregory of Nyssa became widely current in both East and West, and proved a fatal legacy to the Church.

ix. THE SACRAMENTS.—The only important developments in the doctrine of the Sacraments to be found in the teaching of the Cappadocians are contained in the *Catechetical Oration* of Gregory of Nyssa (chs. xxxiii.–xxxvii.), where he treats of Baptism and the Eucharist. The main points in his teaching are as follows:—

(1) Gregory appeals to the immanence of God in support of the principle of a Divine operation through sacramental channels, while he urges that the assurance of God's presence and operation rests upon His promise to be present in this way when invoked (chs. xxxiv., xxxvi.).

(2) Gregory clearly states the idea that the Sacraments are an 'extension' of the Incarnation, in that the process of 'deification' effected once for all in the humanity of Christ, through its union with the Personal Word, is progressively effected in humanity as a whole by participation in Christ through the Sacraments (xxxv., xxxvii.).

(3) Gregory distinguishes between the effects of Baptism and the Eucharist by saying that in Baptism the soul is united to the Saviour through faith, while in the Eucharist the body is brought into the same union, though here again only through the faith of him who partakes of the Sacrament (xxxvii.).

(4) Gregory teaches an objective change of the elements (effected through the prayer of consecration) into the Body and Blood of Christ, and he represents the manner of the change in a striking and original way. Anticipating the later problem of the 'ubiquity' of the Lord's Body, he sets himself to solve the question how the one Body can be given whole to thousands of believers. He employs the Aristotelian distinction of 'form' and 'matter,' and draws a parallel between the change of food and drink into the human body through digestion, and the change of bread and wine into the Body and Blood of Christ. The 'constituent elements' (στοιχεῖα) of bread and wine in each case are re-

arranged under a new 'form,' although in the one case it is through the process of digestion, in the other immediately 'by the power of the Word' (xxxvii.). This statement of Gregory is the first attempt to propound a theory of the conversion of the elements. Gregory gave a direction to Eucharistic doctrine, which eventually led in the West to the theory of a transformation of substance in the elements. But Gregory himself is far removed from such a theory. His language is of the nature of an illustration, and even while applying his analogy from physiology to the Eucharist he shows signs of hesitation. (See Batiffol, *Études d'histoire et de théologie positive*, 2ième série [1905], p. 260 f., and the present writer's ed. of the *Oratio Catechetica* in *Cambridge Patristic Texts*, p. xxxviii ff. and notes on ch. xxxvii. There is an interesting later parallel to Gregory's theory in Descartes' letters to Mesland on the Eucharist.) Gregory's teaching exercised considerable influence on John of Damascus, and through him on the later Eastern Church.

As a contrast to the treatment of the Eucharist exhibited in the language of Gregory of Nyssa just quoted, Basil's language in *Ep.* 8. 4 deserves attention. In accordance with his spiritualizing tendency (see above, § i.), he says (commenting on Jn 6^{57}): 'We eat His flesh, and drink His blood, being made through His Incarnation and His visible life partakers of His Word and of His Wisdom. For all His mystic sojourn among us He called flesh and blood, and set forth the teaching consisting of practical science, of physics, and of theology, whereby our soul is nourished and is meanwhile trained for the contemplation of actual realities.'

x. ESCHATOLOGY.—Gregory of Nyssa is the only one of the Cappadocian Fathers who exhibits any considerable interest in eschatological problems, and it is here that he shows himself a most thoroughgoing disciple of Origen. His chief contributions are: (1) his treatment of the resurrection of the body; (2) his theory of the purification of souls by fire after the Resurrection; and (3) his idea of the restoration of all spirits, Satan included, to final blessedness.

(1) The first of these is discussed in his treatise *On the Soul and the Resurrection* (cf. also *de Hom. Op.* 27). The theory which he propounds is a modified form of the spiritualistic view of Origen. As in his discussion on the Eucharist, he employs the Aristotelian terms 'form' (εἶδος) and 'elements' (στοιχεῖα). The 'constituent elements' (στοιχεῖα) of the body, having once received the impress of the soul, are recognized by it at the time of the Resurrection, and are received back again from the common source. By death, however, the body is purged of its sensuous character, and in the Resurrection is of a more subtle and ethereal character.

(2) The idea of a purifying fire, derived from Origen, and found also in a passage of Gregory of Nazianzus (*Or.* xxxix. 19), has its source in Plato. According to Gregory, the soul stained by sin finds its remedy in the practice of virtue in this life and in the sifting judgment and refining fire of the after-life (*Or. Cat.* viii.). Elsewhere he says that for those who have not received the grace of baptism there waits a purification by fire hereafter (*ib.* xxxvi.). This doctrine, which, like the rest of Gregory's Origenistic speculations, was quietly dropped by the Eastern Church, has little resemblance to the later Western doctrine of Purgatory, inasmuch as it applies to a different time (after, and not before, the Resurrection), and is intended to benefit not the good but the evil.

(3) The doctrine of an ἀποκατάστασις, or universal restoration of all souls, is another indication of the influence of Origen upon Gregory of Nyssa. In both writers this belief is bound up with their theodicy, which was based on the thought that the world-process must result in God becoming 'all in all' (1 Co 15^{28}; cf. Greg. Naz. *Or.* xxx. 6); while evil, having no subsistence of its own, cannot be eternal. Satan himself will be purged, and from all Creation there will arise a chorus of thanksgiving (*Or. Cat.* xxvi.; *de An. et Res.* [*PG* xlvi. 72]). In later times, after the condemnation of Origen's teaching, the theory of an interpolation of the works of Gregory of Nyssa by the Origenists was employed to get rid of this idea from the writings of one who was a canonized doctor of the Church. But there is no justification for such a suspicion.

General Summary.—The one permanent service rendered to Christian thought by the Cappadocian Fathers was their formulation of the doctrine of the Trinity. In this respect their theology remained the standard of faith for the Eastern Church, which refused to accept from the West in later times the *filioque* clause. But their influence in this respect was not limited to the East. Through Ambrose, who was a diligent student of Basil's writings, the theology of the Cappadocians was imported into the West, and influenced the later developments of Trinitarian doctrine found in Augustine. In other respects their work was of a tentative or preparatory character. They helped to shape some of the terminology of the later Christological definitions, and they prepared the way for a careful statement of the reality of the two natures in Christ. Their attempt to re-introduce into the Church a modified form of Origen's theology met with only slight success, while the more pronounced Origenistic speculations of Gregory of Nyssa were entirely dropped. The Origenists of the fifth and sixth centuries appealed to their authority, while the mystical and pantheistic tendencies of Gregory of Nyssa received fresh developments in the teaching of the later Monophysites and of pseudo-Dionysius the Areopagite. Their attempt to create a scientific theology was not altogether without results. For a few generations they succeeded in enlisting the best culture of the time in the cause of Christianity, while by the spirituality of their religious conceptions and their devotion to the practical ideals of monastic piety they arrested for a time the inroads of the cruder and more materialistic forms of popular religion which were already invading the Eastern Church.

LITERATURE. (1) On the place of the Cappadocians in the history of Christian thought, see Harnack, *Hist. of Dogma*, Eng. tr. (1894–99) vols. iii. and iv.; Dorner, *Doctrine of Person of Christ*, Eng. tr. (1861–63) div. I. vol. II.; Neander, *Church History*^{3} (1841), vol. iv.; Loofs, *Leitfaden zum Studium der Dogmengeschichte*^{3} (1893); Schwane, *Dogmengeschichte*^{2}, vol. ii. (1895); Ottley, *Doctrine of Incarnation*, vol. II. (1896); Bethune-Baker, *Introd. to Early History of Christian Doctrine* (1903).

Vollert, *Die Lehre Gregors v. Nyss. vom Guten und Bösen* (1897). See also Bardenhewer, *Patrologie*; Loofs, art. 'Gregor v. Nyss.' in *PRE*^{3}, vol. vii. (1899); and Prolegomena in translation of Gregory's works in *Nicene and Post-Nicene Fathers*, ser. ii. vol. v. (1893).

J. H. SRAWLEY.

CAPRICE.—Lexicographers are in general agreement that the word 'caprice' is derived, through Ital. *capriccio*, from the stem of Lat. *caper*, 'goat.' In the literal sense, 'caprice' is, therefore, an unexpected movement, seemingly without motive or purpose, like the frisky antics of a goat. In the metaphorical sense, 'caprice' is used of mental movement, and means 'a sudden change or turn of the mind without apparent or adequate motive' (*OED*). True to the fundamental idea is the use of *capriccio* as a musical term signifying a species of free composition, not subject to rule as to form or figure. As applied to human action, the word 'caprice' connotes conduct which appears purposeless, if not motiveless—either inconsistent with, or indicating fickleness of, character. The solution of the ethical problem involved must be sought by studying psychologically the relation of will to desire. As applied to Divine action, the word 'caprice' implies an imputation of arbitrary procedure to God; as when, for example, capriciousness is ascribed to the Heavenly Father who has promised to hear and answer His children's prayers. The solution of the religious problem involved must be sought by reverent study of the relation of the Divine will to the Divine nature.

1. Caprice in human action.—When human actions are said to be due to mere caprice, nothing more may be intended than a reflexion upon a general fickleness of character. Emotional natures are often 'unstable as water.' As the pregnant phrase expresses it, they 'cannot be depended upon.' It is, however, only lack of knowledge that compels observers to explain such conduct as caprice. Even to intimate friends a capricious person's actions may be quite unaccountable as well as altogether surprising, but deeper insight would reveal the fact that they are only '*seemingly* without motive or purpose.' All that can be said with certainty of the man who is double-minded, and therefore is unstable in *all* his ways (Ja 1[8]), is that, because he has no fixity of purpose, no unity of aim, it is uncertain how he will act on any given occasion. The true psychological estimate of all such characters is given by McCosh:

'People of whom this chameleon liability to change of affection is characteristic . . . appear very inconsistent, and so they are, and they do not gain our permanent confidence. But they are, after all, acting consistently with their character, which goes by impulses and jerks, and not by steady principle' (*Psychology: The Motive Powers*, 1887, p. 185 f.).

Determinists, who contend that human actions are always and necessarily decided by the strongest motive, have, in the course of the free-will controversy, charged indeterminists with asserting that it is possible for men to act from mere caprice, or, in other words, to make 'an unmotived choice between motives.' T. H. Green, in his profound analysis of human personality, has shown that, when 'motive' is accurately defined and distinguished from 'desire,' there is no such thing as unmotived choice. But he insists that it is the 'Self' that decides which desire shall prevail and become the motive to action. The will is free, because it is determined by motive, and is not swayed hither and thither by chance desires (*Proleg. to Ethics*[3], 1890, bk. ii. ch. 1). It follows that the explanation of what is usually called caprice will be found in the weakening of the will. Psychological analysis may rule out caprice as insufficient to account for human action, but the activity of the Self may be reduced to a minimum, so that there may be little or no interval between the uprising of the desire and its acceptance as a motive by the will. In such a case the resultant action may not improperly be described as capricious. But after the consciousness of an impulse to act, the mind has the power to pause and to consider the consequences likely to follow from yielding to the impulse. It is on the cultivation of that power—which enables the mind to attend to other considerations and to reinforce, it may be, weaker impulses—that the elimination of caprice depends. An absorbing interest is the psychological condition of unity of purpose, and therefore of consistency of conduct (cf. W. James, *Principles of Psychology*[2], 1901, vol. i. ch. 11, 'Attention'). The highest application of this principle is in religious experience. 'This one thing I do' means that diverse actions all tend to a single goal (Ph 3[13]); and the reason why caprice has become impossible is that all other desires have been subordinated to the permanent motive: 'For to me to live is Christ' (Ph 1[21]). For a lucid statement of the reasons why 'unchartered freedom or the introduction of sheer caprice' is not implied in the somewhat misunderstood phrase 'the will to believe,' see art. BELIEF, ii. 462[b].

2. Caprice ascribed to God.—The permissibility of arguing from human to Divine personality is recognized by Theists generally as a legitimate philosophical procedure. Therefore, the bearing of what has been said in the earlier section of this article will be evident. In the single statement 'God is love' the possibility of His acting from caprice is excluded. His will can never be purposeless, inasmuch as it is determined by His nature, and 'His nature and His name is love.' Dorner succinctly states the essential truth involved in the Christian view: 'God can be thought neither as fate nor mere law, neither as absolute indifference nor as caprice' (*Syst. of Christian Doctrine*, Eng tr. i. 447). Theistic doctrines which do injustice to the revelation of God in Christ are: (1) the Scotist view of the Middle Ages, which represents the Divine will as arbitrary, because it finds 'the essence of personality in the power of unrestricted choice'; and (2) the teaching of the earlier Calvinists, who made 'grace a synonym for arbitrary choice.' Theories which hide the Divine Fatherhood leave men in uncertainty as to the Divine purpose, and lead them to regard the Divine action as capricious. But a false dualism is involved in the attempt to assign qualities to the Divine will which are not conceived to be attributes of the Divine nature.

'The ethical in God cannot be exclusively attributed and ascribed to His Will to the exclusion of His Being. . . . Such a will, because undetermined by the Essence and Being of God, would be ethically absolutely undetermined—that is to say, it would be mere caprice and absolute power (*supremum liberum arbitrium*)' (Dorner, *op. cit.* i. 315).

Primitive conceptions of the Deity as arbitrary and lawless account for the identifying of the miraculous with the mysterious, the inexplicable, and the capricious. But again the thought which eliminates caprice from the Divine action is that of a unifying and adequate purpose. The revival of ancient teaching on the immanence of God has altered the aspect of the problem. The *unity* of Nature is accepted as a more adequate description of the world than the *uniformity* of Nature. 'Unity is essentially a spiritual conception . . . since spirit is the only unifying agent that we know'; therefore, according to the Christian view of the world, miracles may be in accord with, and may throw light upon, God's one increasing purpose. Miracles are no longer held to be antecedently impossible, for, 'if nature is sustained only by its intimate union with spirit, it is no wonder that the processes of nature should be modified for an adequate spiritual end' (Illingworth, *Divine Immanence*, 1898, p. 106).

The comparative study of religion has made us familiar not only with the Science of History, but also with the Philosophy of History. The latter expression cannot imply less than that rational principle, and not caprice, guides the development

of tendencies and the progress of events. God's choice of Israel, for example, is seen to be no capricious favour, when it is viewed in the light of His redeeming purpose and His love towards all mankind. But to affirm that there is a revelation of God in history is to assert that the world is the scene of the Divine providence. His purpose concerning individuals may, indeed, at times be difficult to discern. But, conscious that we behold only 'part of His ways,' we may find comfort in the truth, to which Science and Scripture alike bear witness, that

'God's method is a method of *law*; that is to say, it is not arbitrary or irregular, but consistent, and in its great principles unchanging. . . . God's method is a method of *progress*. . . . We think of Him as ever at work, forming, training, and perfecting the moral personalities whom He has designed for union with Himself' (W. Adams Brown, *Christian Theology in Outline*, 1907, p. 217 ff.).

As belief in law does not hinder, but rather helps men to trust in God's providence, because He does not work arbitrarily and capriciously, so belief in law presents no difficulties to those who have a worthy conception of prayer because they have true thoughts of God. Nevertheless, there is a view of prayer which, as Rufus M. Jones says,

'takes us . . . into a world of caprice. It introduces a world in which almost anything may happen. . . . It is a low, crude view of God—a Being off above the world who makes "laws" like a modern legislator and again changes them to meet a new situation' (*The Double Search*, 1906, p. 80 f.).

But the Christian view of prayer implies neither ignorance of the facts of science nor expectation of answers to petitions by violation of Nature's laws. True prayer is spiritual communion. It is the child's fellowship with Him who is made known by Christ and in his own experience as 'the Father who seeth in secret'; in His presence all wants and wishes are made known, and according to the intimacy of the communion is the degree of confidence that the blessings asked for are not contrary to the Father's will. Yet, in whatever direction the surface ripples of desires may flow, the deep, strong yearning of the praying spirit is 'Father, Thy will be done.' If that will could be swayed by what men call caprice, true prayer would be impossible. But there is 'no sealing of the lips in the presence of the discovery that all is law.' When this is understood, the Atonement of Christ will be seen as the supreme manifestation of the Love which is law, and as the Father's own drawing near to His children, in order that, when in Christ He has reconciled them unto Himself, they may confidently approach, asking for the forgiveness of their sins in the name of Christ. 'Forgiveness is not a gift which can fall upon us from the skies, in return for a capricious request. . . . The deep cry for forgiveness must rise out of a forgiving spirit' (Rufus M. Jones, *op. cit.* p. 101).

LITERATURE.—Full references are given in the body of the article. For the first division of the subject handbooks of Psychology should be consulted, and for the latter division handbooks of Theology. The following works will also be helpful: Arthur, *On the Difference between Physical and Moral Law*, London, 1883; D'Arcy, *A Short Study of Ethics*, London, 1895; Dykes, *The Divine Worker in Creation and Providence*, Edinburgh, 1909. The delightful parable, frequently used by Professor Henry Drummond, deserves special mention: Finlayson, 'Law, Miracle, and Prayer,' *Expositor*, 1st series, vol. v. [1877] p. 235 ff.

J. G. TASKER.

CARLYLE.—1. Life and writings. Thomas Carlyle (1795-1881)—essayist, historian, critic, modern prophet—was born on 4th Dec. 1795 at Ecclefechan, Annandale. He was the son of James Carlyle, a mason, born in 1757. James Carlyle's first wife was a cousin, and died after giving birth to one son, John. Two years after her death (1791) he married Janet Aitken. Thomas was the first child, and was followed by three sons and a daughter. Thomas was educated at the Grammar School of Annan, and afterwards at Edinburgh University. This he left in 1814 without taking a degree, but having distinguished himself in mathematics. At this time he intended to enter the ministry, and went up twice a year to deliver addresses at the Divinity Hall, Edinburgh, while teaching in the school at Haddington. Divinity and Law having failed to satisfy him, his mind turned in the direction of Literature. His early days were full of the struggles involved in getting a footing in this precarious profession. The salient points of that struggle may be noted.

From 1820 to 1825 he contributed sixteen articles to the *Edinburgh Encyclopædia* under the editorship of Sir David Brewster.

In May or June 1821, Edward Irving introduced Carlyle to Miss Jane Welsh. About the same time the inward illumination took place which is recorded in *Sartor Resartus* (bk ii. ch. vii.) as the transition from the Everlasting No to the Everlasting Yea. The plain meaning of this was that disbelief in Divine or human justice, freedom, and immortality had been dismissed in favour of a steadfast determination to live in God's world as a servant of Truth.

The following publications mark his rise into public attention: (*a*) a Life of Schiller in the *London Magazine* in 1823-1824, which in 1825 was published separately in book form, and in 1830 translated into German at the suggestion of Goethe; (*b*) *Wilhelm Meister's Apprenticeship*, which appeared in 1824-1827, one of the best translations into English of any foreign author. (*c*) In 1827 elaborate and extensive criticisms of European literature established Carlyle as the English purveyor and critic of European culture. Among his well-known contributions of this order are an article on Voltaire, a finished and memorable sketch of Novalis, two papers on Jean Paul Richter in the *Foreign Review*, a review of Schiller in *Fraser's Magazine*, and of Goethe's works in the *Foreign Quarterly*.

On 17th Oct. 1826, Jane Welsh and Thomas Carlyle were married. They began married life normally at 21 Comely Bank, Edinburgh, and continued it abnormally (1828) at Craigenputtock, a farm belonging to the Welsh family. Carlyle was by temperament unsuited for domestic life, and his wife was as ambitious and as keen intellectually as himself. At Craigenputtock his life became a monologue on literary and ethical subjects, and hers for six years a bitter experience of household drudgery. Among the visitors to Craigenputtock were the Jeffreys (1829-1830), and Ralph Waldo Emerson, who began in this way a life-long friendship with Carlyle. In 1831, Carlyle went to London to negotiate the sale of *Sartor Resartus*, which was eventually published in *Fraser's Magazine*. Hardly any one but Emerson recognized that the 'articles by the crazy tailor' were really 'a criticism of the age in which we live, exhibiting in the most just and novel light the present aspect of religion, politics, literature, and social life.'

In 1834, Carlyle moved to 24 Cheyne Row, Chelsea, near the Thames. It was a bold venture to attack the metropolis on a reserve fund of from £200 to £300, but it was successful, and Cheyne Row was his home for 47 years. The first eight years were years of severe struggle on narrow means, but they produced the *French Revolution*, the *Lectures on Heroes, Hero-worship, and the Heroic in History*, and *Chartism*. At the end of this time the death of Mrs. Welsh brought pecuniary relief.

The next decade (1842-1853) was a time of vigorous literary production, which gave to the world the *Life and Letters of Cromwell*, *Past and Present*, *Latter-Day Pamphlets*, and *Life of John Sterling*.

From 1853 to 1866, Carlyle was at the zenith of his fame. He published his monumental *History*

of Frederick the Great, and gratified even his wife's ambition for him by being elected to the Lord Rectorship of Edinburgh University, where he delivered a notable rectorial address.

In 1866, Mrs. Carlyle died, and after this Carlyle's life went haltingly. The years till 1881 are best regarded as a long eventide. His comments on public questions, such as the recall of Governor Eyre and the Reform Bill of 1867 (*Shooting Niagara*), show him as a resolute critic of democracy. He dictated a historical sketch of the Early Kings of Norway and an essay on the Portraits of John Knox. In 1874 he accepted the Prussian 'ordre pour le mérite,' and refused a pension and a distinction offered by Disraeli. Money came freely when he could no longer use it except by bequeathing it, and friends when he could no longer reciprocate friendship. The appointment of James Anthony Froude as his literary executor and Froude's discharge of that trust led to a keen controversy, not yet finished, on the real character of Carlyle and his relations with his wife. At the end he was almost absolutely alone, and died on 4th Dec. 1881.

2. **Teaching.**—Carlyle's teaching was not sufficiently self-consistent to bear exact analysis as a statement of ethical and religious truth. Letters and conversations are sometimes at variance with judgments expressed in his books. But the general outlines of his teaching may be indicated.

(1) *Concerning God.*—It may be said of Carlyle, as he said of Frederick of Prussia, 'To him, as to all of us, it was flatly inconceivable that intellect and moral emotion could have been put into him by an entity that had none of its own.' *Sartor Resartus* is a vigorous and resounding counterblast to materialism. In the discussions of the time, Carlyle's theism was commonly classed as pantheism; but no classification is adequate for an author who wrote or spoke as he saw truth, but who saw different aspects of truth in different moods. He teaches that the universe is perpetually formed and renewed by the Spirit of God, not that matter is God, but that it is the 'living garment of God.' The universe is the vesture of God as man's body is the vesture of his spirit. As man claims personality for himself, he may logically assign to the Spirit of God that personality, consciousness, intelligence, which are the highest attributes of the spirit of man.

His belief in the essentials of religion is combined with a distrust of its formulas. In *Latter-Day Pamphlets* (no. viii.) he makes a protest against what he calls the gospel of Ignatius (*i.e.* Loyola),

'that God can be served by believing what is not true.' 'That to please the supreme Fountain of Truth, your readiest method, now and then, was to persist in believing what your whole soul found to be doubtful or incredible. That poor human symbols were higher than the God Almighty's facts they symbolized; that formulas, with or without the facts symbolized by them, were sacred and salutary; that formulas, well persisted in, could still save us when the facts were all fled.'

Other quotations, more emphatically negative, might be made from writings in later life, when the negative mood grew more marked. Yet he comes very near attributing moral personality to God in His government of the world.

'No world, or thing, here below, ever fell into misery without having first fallen into folly.' 'Nature would not treat weakness as vicious unless weakness were necessarily vicious.' 'The first principle of moral government is that, where guilt is deliberate, undoubted, and wilful, punishment ought to be inflicted. This pillar of the moral universe in human affairs rests not upon mere social expediency, but upon those authoritative instincts of our spiritual nature in which we hear the voice of God.' 'The law of England, in dealing with criminals, must correspond to the law of the universe' (*Latter-Day Pamphlets*, no. vi.). 'The moral nature of a man is not a composite factitious concern, but lies in the very heart of his being, as his very self of selves. The first alleviation to irremediable pain is some conviction that it has been merited, that it comes from the All-just—from God' (Froude, *Thomas Carlyle: Hist. of First Forty Years of his Life*, ii. 86).

'The free man is he who is *loyal* to the Laws of this Universe; who in his heart sees and knows, across all contradictions, that injustice *cannot* befall him here; that except by sloth and cowardly falsity evil is not possible here. The first symptom of such a man is not that he resists and rebels, but that he obeys' (*Latter-Day Pamphlets*, no. vi.).

(2) *Concerning man.*—Carlyle's optimism about the universe is combined with pessimism about human nature. Something of this may be put down to Calvinism, and something to temperament. He believed that 'God's in His heaven,' but not that 'all's right with the world.' At Craigenputtock he wrote:

'What is Hope? a smiling rainbow
Children follow through the wet;
'Tis not here, still yonder, yonder!
Never urchin found it yet.

What is Life? a thawing iceboard
On a sea with sunny shore.
Gay we sail—it melts beneath us!
We are sunk, and seen no more.

What is man? a foolish baby;
Vainly strives, and fights, and frets;
Demanding all—deserving nothing!
One small grave is what he gets.'
(Froude, *op. cit.* ii. 420.)

His fundamental scepticism about human nature and the prospects of the race is closely connected with his disbelief in democracy. Democracy depends on and requires an optimistic view of man and his destiny, and implies ultimately that *vox populi* is *vox Dei*, which Carlyle emphatically denied. His criticism of democracy rests on the discovery that

'in democracy can lie no finality; that with the completest winning of democracy there is nothing yet won—except emptiness, and the free chance to win! Democracy is, by the nature of it, a self-cancelling business; and gives in the long-run a net result of zero.' 'In Rome and Athens, as elsewhere, if we look practically, we shall find that it was not by loud voting and debating of many, but by wise insight and ordering of a few, that the work was done—so it is—so will it ever be.'

Nevertheless he does not depreciate the real task of politics; 'society is a wonder of wonders, and politics (in the right sense far, very far, from the common one) is the noblest science' (Diary, Froude, *op. cit.* ii. 86).

(3) *Religion.*—Carlyle conceived religion as universal and spiritual. It is everywhere an expression of man's relationship to a spiritual God, dimly or vividly realized. Many of his sayings are more in keeping with the results of the modern study of comparative religion than with any order of thought existing in his own day.

'The early Nations of the world, all Nations, so long as they continued simple and in earnest, knew without teaching that their History was an Epic and Bible, the clouded struggling Image of a God's Presence, the action of heroes and God-inspired men. The noble intellect that could disenthral such divine image, and present it to them clear, unclouded, in visible coherency comprehensible to human thought, was felt to be a *Vates* and the chief of intellects. No need to bid him sing it, make a Poem of it. Nature herself compelled him; except in Song or in Psalm, such an insight by human eyes into the divine was not utterable.'

'Every Nation, I suppose, was made by God, and every man too. Only there are some Nations, like some men, who know it; and some who do not. The great Nations are they that have known it well; the small and contemptible, both of men and Nations, are they that have either never known it, or soon forgotten it and never laid it to heart' (*Latter-Day Pamphlets*, no. viii.).

'To the last,' says Froude, 'he believed as strongly as ever Hebrew prophet did in spiritual religion,' and approved of prayer as a 'turning of one's soul to the Highest.'

Carlyle's belief in immortality grew in intensity, but after his wife's death he describes himself as

'bankrupt in hope and heart, as good as without hope and without fear' (*Correspondence of Carlyle and R. W. Emerson*, ii. 337).

In 1835 he wrote to Emerson on the loss of his brother:

'Sorrow not above measure for him that is gone. He is in very deed and truth with God, where you and I both are' (*ib.* i. 392). 'What a thin film it is that divides the living from the dead' (*ib.* i. 37).

On his father's death he wrote (Froude, *Carlyle: First Forty Years*, ii. 248–260):

'Man follows man. His life is as a tale that has been told; yet under time does there not lie eternity? . . . Perhaps my father, all that essentially was my father, is even now near me, with me. Both he and I are with God. Perhaps, if it so please God, we shall in some higher state of being meet one another, recognize one another. . . . The possibility, nay (in some way) the certainty, of perennial existence daily grows plainer to me.'

On the death of Mrs. Welsh he wrote to his wife:

'We shall yet go to her. God is great. God is good.'

In 1869, after the death of his wife, he wrote:

'I occasionally feel able to wish with my whole softened heart—it is my only form of prayer—"Great Father, oh, if Thou canst, have pity on her and on me, and on all such!" In this at least there is no harm' (Froude, *Carlyle: Life in London*, ii. 387).

Carlyle's most positive contribution to a religious conception of life is to be found in vivid, eloquent, and memorable passages describing the spiritual universe. Nothing shows better than these passages how, to Carlyle, life was shot through with spiritual relationships, and set in a framework of a spiritual cosmos. In the Diary (Froude, *Carlyle: First Forty Years*, ii. 86) he exclaims:

'I have strange glimpses of the power of Spiritual union, of association among men of like object. Therein lies the true element of religion. It is a truly supernatural climate; all wondrous things from a Pennenden Heath or Penny-a-week Purgatory Society to the foundation of a Christianity or the (now obsolete) exercise of magic take their rise here. Men work God-like miracles thereby, and the horridest abominations.'

In judging of his attitude to religion, we ought to give weight to his serious work rather than to casual utterances. The lecture on 'The Hero as Prophet,' and his appreciative estimate of Muhammad and the influence of Islām, show how Carlyle understood the nature and function of religion.

Carlyle's positive attitude to religion and his negative attitude to Christianity are among the paradoxes which perplex his readers. He fails to recognize in Christianity, as he finds it, the supreme form of the religious powers which he reveres elsewhere.

(4) *Ethic.*—Carlyle's ethic is essentially the ethic of Puritanism—that is, his ideal of the conduct of life is an ideal conceived under the overwhelming impression of the righteousness of God. Man is ever in the great Task-master's eye. If men do their duty and faithfully obey the laws of God, living soberly and justly, God will do the best for them in this life. Duty is to him Wordsworth's 'stern daughter of the voice of God.' It involves surrender to the 'vast soul that o'er us plans'—and continually in the present it means work. Do the duty nearest to hand—*Laborare est orare*. The only honourable thing is work, whether with sword or plough or pen. Strength is the crown of toil. Action makes men.

The paradoxical working of Carlyle's mind comes out in his inconsistent acceptance and rejection of parts of mutually related truths. He insisted on the community of the race, and poured scorn on the man who said, 'Am I my brother's keeper?' Yet he failed to discover that this solidarity is the key unlocking the mystery of the vicarious sacrifice of Jesus Christ, which he entirely rejected. He believed that good and evil were absolute opposites, yet rejected the only way in which good can overcome evil, *i.e.* when good is returned for evil. He revered the character of Jesus Christ, yet talked incessantly of the 'Exodus from Houndsditch,' failing to see that the life history of Jesus is only to be understood as the culmination of a national history in which the Spirit of God is manifestly active, and working to this climax. He believed in God as revealed in that larger Bible—the history of the human race—but did not see that universal revelation was the basis which makes reasonable the special revelation in the history of Israel. He believed in no historical Resurrection or Ascension, yet he vindicates in impressive eloquence the existence of a spiritual universe, and declares that a thousand million ghosts are walking the earth openly at noontide. 'O Heaven, it is mysterious, it is awful, to consider that we not only carry each a future ghost within us, but are in very deed ghosts.' He imposed an infinite duty on a finite being, but did not see that the assertion of our weakness and deficiency is the 'fine innuendo by which the soul makes its enormous claims.' It is clear that this mingling of negative and positive teaching has nothing final or conclusive in it. It is a half-way house, where no one would think of stopping but the man who built it.

In spite of his pessimism about human nature in general, Carlyle had an intense belief in the greatness of personality raised to its highest power. Much light is thrown on the development of his mind by comparison with Nietzsche. Just as Nietzsche's reverence for personality led to belief in the superman as the hope of the race, Carlyle's led to Hero-worship. In both cases the belief was accompanied by contempt for those who fail to attain personality, and in both it may be connected with the failure to see that full personality in man is dependent on dealing with God as fully and effectively personal.

(5) *Concerning history.*—Carlyle's absorbing concern with personality was partly cause and partly consequence of his historical studies, and it made his work the recognized standard for one method of writing history. The supreme interests of history, whether modern or ancient, lie in the biographies of men and women and the history of movements, and for Carlyle the first is more central; for there is no movement which does not enter history through a life. 'Great truths are portions of the souls of men.' Reforms, institutions, eras, and even constitutions are to be interpreted through the men who lived in them, and in whom they lived. The modern school of scientific historians has introduced methods which modify the first impression made by Carlyle's historical work, but its essential truth is not to be shaken, and a reaction in favour of his view of history is to be expected, for 'by-gone ages were actually filled by living men, not by protocols, State papers, controversies, and abstractions of men.'

The charge that Carlyle confounded right with might is not true as it stands. Its basis is his conviction that the history of a man or a nation is the Divine judgment of the man or nation. If a man succeeds and prospers, the cause must have been adequate to the effect. History and life alike contain their own laws, and supply their own principles of judgment. Men are powerful in proportion as they build on facts and see truth. The prophet who sees and the hero who acts appear to be a law unto themselves, only because there is no higher human authority. It is the wisdom of the mass of men not to question or judge them, but to follow them and go where they lead. There is truth in all this, but it is a truth which only a history of all time can vindicate. The historian would require omniscience to judge correctly of success and failure.

3. **Influence.**—Carlyle's influence was provocative rather than constructive. He challenged the conventions of his time in thought and in act as much as he challenged its literary conventions by his style. His message worked like a leaven in the general culture of two generations. He moved men by antagonism rather than leadership. He threw them back on the saving facts of life. He made realities in life and history stand out as greater things than the conventions that commonly conceal them. His influence may be compared with that of a prophet in ancient Israel. His summons

to men was to repent and put away the evil of their doings. His words burned and stung rather than healed and helped those he influenced most.

His function, in spite of all his strenuous thinking, was the purification of feeling about life by fear and reverence, scorn, indignation, humour, and tenderness. His books have the sentiment and effect of a Gothic cathedral, expressing, with all the purpose, ingenuity, and elaborate care of a mediæval craftsman, the awe of the natural man in the presence of God's universe.

LITERATURE.—Literature about the Carlyles is constantly growing. It consists chiefly, however, of fresh estimates of the original material contained in Carlyle's own books, and the publications which contain his letters, such as: (1) *Reminiscences*, published by J. A. Froude in 1881; the same author's *Thomas Carlyle: a History of the first forty Years of his Life*, 2 vols., 1882, and *Thomas Carlyle: a History of his Life in London*, 2 vols., 1884; (2) *Letters and Memorials of Jane Welsh Carlyle*, prepared for publication by Thomas Carlyle, and edited by Froude, 3 vols., 1883; (3) *Correspondence of Thomas Carlyle and R. W. Emerson*, 2 vols., 1883, and *Correspondence between Goethe and Carlyle*, ed. C. E. Norton, 1887.

Of other literature the following may be noted: Leslie Stephen, art. 'Carlyle,' in *DNB*; J. Martineau, *Essays, Reviews, and Addresses*, i. [1890] 219; T. P. Walter, 'Thomas Carlyle and his Message,' in *Meth. Rev.* xc. [1908] 574; J. Clifford, *Typical Christian Leaders*, 1898, p. 175; R. S. Craig, *The Making of Carlyle*, London, 1908; A. S. Arnold, *Story of Thomas Carlyle*, London, 1903; W. Howie Wylie, *Thomas Carlyle: the Man and his Books*, London, 1881; D. Masson, *Carlyle personally and in his Writings*, London, 1885.

D. MACFADYEN.

CARMATIANS.—The Carmatians were a religio-political sect of Shī'ites that took its rise about the middle of the 3rd cent. of the Hijra, and developed a tremendous strength, which, more than anything else, undermined the power of the Khalifate of Baghdad. The name was given to them by their adversaries. They called themselves Fāṭimids, from Fāṭima, the daughter of the Prophet and the spouse of 'Alī; or Ismā'īlīs, from Ismā'īl ibn Ja'far, a descendant of Ḥusain, son of 'Alī and Fāṭima, and, by his great-grandmother, of the last king of Persia, representing thus not only the Prophetic, but also the Kingly right to the Imāmate, or Supremacy (cf. Browne, *A Literary History of Persia*, p. 130).

The religious system of these sectaries, which in its principal features is still that of the Druses (*q.v.*), seems at first sight very extraordinary. On closer examination we find it composed of elements borrowed from various sources. Guyard, in his art. 'Un grand maître des Assassins' (*JA*, 1877, i. 327), said truly:

'In this Orient, where everything has been thought, the atmosphere is, so to speak, impregnated with the most diverse conceptions; none is lost; scattered for a moment, they gather again around some new germ. Magianism, Judaism, Christianity, Gnosticism, philosophy thus lent some of their elements to the small sects which each imām of the race of 'Alī saw come to light under his eyes and in his honour.'

The man who originated this system, or rather adapted it for his purposes, was a certain 'Abdallāh ibn Maimūn, of Persian origin and an oculist (*qaddāḥ*) by profession. He is often spoken of by the name of al-Qaddāḥ. He lived about the middle of the 3rd cent. of the Hijra in 'Askar Mukram, a town of Khūzistān, where he had some possessions; and he combined with a great aversion for the Arabs and their religion a boundless ambition. His ultimate aim seems to have been to subvert the Khalifate of Baghdad, to undermine Islām, and to restore the old Persian religion, the religion of light. He himself and his sons were to be the leaders of this campaign, and, after having accomplished its purpose, were to become the rulers of the new State.

The basis of the doctrine is pure Neo-Platonism. From God, the mysterious Being who is wholly incomprehensible to mankind and cannot be defined by any attributes, emanated by His will (see Goldziher's able study on the *amr allāhi* in *REJ* vol. iv. pp. 32–41) the Universal Reason, which produced the Universal Soul, the creator of Primal Matter, Space, and Time. These are the five constituents of the Universe, and consequently of man, the microcosm. But, as every emanation has a tendency to return to its source, man's object in life is perfect union with the Universal Reason. This, however, would be wholly unattainable by him without heavenly help. Therefore the Universal Reason and the Universal Soul have manifested themselves to the world in human shape, the one as prophet-legislator, the other as his assistant and supporter. So appeared successively Adam and Seth, Noah and Shem, Abraham and Ishmael, Moses and Aaron, Jesus and Peter, Muhammad and 'Alī. After the disappearance of the prophet-legislator, the assistant continues his work, and is the *imām*, or leader, the sole interpreter of the true meaning of the Divine Word. He is followed by six other *imāms*, after the death of the last of whom a new incarnation takes place. 'Alī was succeeded by his son al-Ḥasan; he by his brother al-Ḥusain; then followed 'Alī the son of al-Ḥusain, Muḥammad the son of 'Alī, Ja'far the son of Muḥammad, and Ismā'īl the son of Ja'far. Muḥammad the son of Ismā'īl is the seventh incarnation. His assistant is 'Abdallāh ibn Maimūn, who, with his successors, has to preach and promulgate his law, till with the reappearance of the last of these as the *mahdī* the end and scope of human life will be reached. All these legislations, though each in succession is better than its predecessor, so that the last is the most perfect, are in reality one, only adapted to the understanding of the men of each period. Moreover, it is always the same Being that incarnates itself in different forms; even as the soul of each *imām* passes into the body of his successor.

The main object of this system, of which the preceding description gives only the outlines, was to place unlimited power in the hands of 'Abdallāh ibn Maimūn and his descendants. Ismā'īl, the son of Ja'far, died in his father's lifetime. Ja'far died in A.H. 148, leaving a son Muḥammad, who, according to the Ismā'īlīs, fled to India from the persecution of Hārūn ar-Rashīd, and is said to have died there about A.H. 180. In the belief of the Ismā'īlīs he became merely invisible, to remain so till the time of his reappearance as the *mahdī* should come. In the meantime the *imām* is invested with the supreme authority, which he exercises by his deputies and missionaries. Whatever the ultimate designs of 'Abdallāh ibn Maimūn may have been, his immediate object was to lay hold of the minds of a great many followers, who were bound to unlimited obedience to his orders, and were ready to furnish the means necessary for promoting the cause. Mystery has for most men a great attraction. Therefore, every one who was to be admitted as a member of the sect had to pledge himself by oath never to betray any secret of the community. Nor were they admitted before they had given sufficient proofs of the earnestness of their desires. For the same reason, the *imām* himself was said to be hidden and to communicate with his followers only by his deputy, who in fact was the *imām* himself or his son, and who, backed by this mysterious authority, could speak with double stress. It was he who chose and instructed the *dā'īs* (lit. 'those who call or invite'), or missionaries.

'Abdallāh ibn Maimūn instituted, we are told, several grades of initiation. The accounts we have of the higher ones are confused, and it is difficult to see what could have been their practical use. It is quite certain, however, that even the chief missionaries did not know them. These were, without question, men of fervent zeal, devoted to what they thought to be the sacred truth. The

missionary established himself by preference in a populous country in the character of a merchant or physician, in order to come into contact with many people, whom he sought, first of all, to impress with admiration for his abstemiousness, the devoutness of his living, his charity, and his irreproachable, if somewhat mysterious, conduct. Aided by his superior knowledge, he could often give good practical advice, by which he gained the confidence of the people; and one or two marvellous tricks procured him the reputation of possessing supernatural powers. The missionaries of the Fāṭimids were evidently able jugglers, and knew how to perform miracles. By means of carrier-pigeons, for instance, they often received information of an event many days before it could be known in the country by the ordinary means of communication. So they could make a prediction that must certainly turn out to be true. Moreover, they were generally versed in astronomy. But their principal strength lay in the cordial love of all believers for the house of the Prophet, which, since the tragic death of al-Ḥusain, had been everywhere revived and reanimated by the missionaries of the 'Alids and 'Abbāsids. Against these latter, the means which they had employed to undermine and destroy the dominion of the Umayyads were turned with success, when it had become evident that their government had in no wise brought the period of peace, justice, and general prosperity that had been promised. In order to get rid of the Umayyads, the 'Abbāsids had promulgated the principle that the family of the Prophet had incontestable rights to the throne, whence it followed that the Umayyads were usurpers. The 'Alids, descendants of the daughter of the Prophet, while the ancestor of the 'Abbāsids was only his uncle, did not fail to turn this principle against the 'Abbāsids who had supplanted them. It was, therefore, easy to inspire the people with the hope that the saviour, the *mahdī* (the man 'guided' by God, who alone is able to show the right path), would come forth from the house of 'Alī, and to find, by an allegorical interpretation, the announcement of his coming in the sacred book itself. Thereby the way was prepared for the acknowledgment of this *mahdī* as a superior being whose word is Truth, and to whom is due unlimited obedience. For that end it was not necessary to attack the authority of the Qur'ān; only its literal interpretation was rejected, and with that the dogmas founded on it, and also the religious ceremonies, as having only a symbolical value. All this was replaced by the doctrinal authority of the true *imām*, because he knew better than anybody else the veritable religion. One of the first uses he made of that authority was to prescribe to his followers, as their principal duty, to be full of that devotional disinterestedness which enables men spontaneously to make the greatest sacrifices.

The funds needed for the organization of the mission were furnished, in the first instance, by a high-placed Persian officer, who, according to some authors, was a descendant of the old Persian kings. But soon the contributions of the new adepts commenced to flow in. The two principal offerings required of them were one for the founding of a kind of house of government, called *Dār al-hijra* (House of refuge), and a communal treasure out of which the poor could get assistance and the general expenses could be paid; the other, destined for the *imām*, consisted in a fifth part of all property to be paid once, and a fifth part of all revenues to be paid yearly. By this latter contribution the believers were linked by the strongest bands to the cause of the *mahdī*, whose triumph could be the only means of bringing a compensation for the great sacrifices they had made.

But the paying of contributions was not the only act of devotion expected from the believers. Their chief duty was to lead a life of purity and brotherly love. The morals preached by the Fāṭimid missionaries have been called evangelical. They explain the charm exercised by the doctrine on many men of high understanding, and the fact that the Carmatian communities and States were, as a rule, excellently organized and administered. The *Fragments relatifs à la doctrine des Ismaélis*, published by Guyard, contain sufficient proofs to stamp all that has been said about the looseness of their morality as mere slander.

The first *dā'ī* in 'Irāq was Ḥamdān, surnamed Qarmaṭ, after whom all followers of the new faith were nicknamed Carmatians. Just as each prophet has his assistant, each *imām* his deputy, so every *dā'ī* has a coadjutor. That of Ḥamdān Qarmaṭ was his brother-in-law 'Abdān, who was the author of many of the sacred books of the sect. The district in which they began their preaching was that part of the province of Kūfa where Babylon lies, and here the Dār al-hijra was built, in A.H. 277. The author of the *Fihrist* says (p. 187) that Ḥamdān Qarmaṭ established himself in 261 at Kalwādha, between Baghdad and Madā'in. It is probable that this took place at a later date. But it is certain that even then the Carmatians had attained to significance. For at the time when the rising of the negro slaves in the south of 'Irāq was at its height (*i.e.* before 267), Ḥamdān Qarmaṭ had a meeting with the chief of the slaves, who gave himself out for a descendant of 'Alī, of which he himself gives the following report (Ṭabarī, iii. 2130)—

'I went to the chief of the negroes and said to him: "I profess a doctrine and have 100,000 swords under my orders. Let us compare our tenets. If they agree, I will join you with all my men. If not, you must give me your word to let me return to my place unmolested." That he promised, and we conversed till noon, by which time it had become clear to me that we could never agree. He rose then for prayers, and I slipped away from his town and went back to the land of Kūfa.'

As long as the war against the negroes lasted, the government of Baghdad took no notice at all of the Carmatians. After the suppression of that terrible insurrection, the governor of western 'Irāq contented himself with levying a tax of one *dīnār* on each member of the sect; and, as this procured him a good revenue, he opposed the taking of any hostile measures. It was not till 284 that the government at Baghdad began to have some misgivings about this movement, and discovered that the sect had adherents in the capital itself. This led to a persecution, in which a certain number of their chief men were killed (288), but which was soon stopped, the governor being afraid that it would ruin the land, as they were its farmers and labourers. About the same time the Khalīf seems to have found out who was the real head of the sect. In 270 the government had been informed that there lived in 'Askar Mukram in Khūzistān a very dangerous man called 'Abdallāh ibn Maimūn al-Qaddāḥ; and orders were issued to apprehend him. 'Abdallāh escaped to Baṣra, where he lived some time in hiding. Thence he went to Salamīya in northern Syria, where a son of his had established himself about 255, and which remained the headquarters of the family till 287, when 'Ubaidallāh, 'Abdallāh ibn Maimūn's grandson, fled from that place to Egypt and thence to the far west of North Africa, whence he reappeared at Kairwan, the African capital, in 297, as the *mahdī*, the first Khalīf of the Fāṭimids. The mission to Yemen, organized in 'Irāq in 266, began its preaching in 268, and had great success. In 293 news reached Baghdad that the Carmatians had conquered nearly the whole province, and that the inhabitants of Mecca were in great anxiety. The final reduction of Ṣan'ā, the capital, in 299,

made them absolute masters of the country. From Yemen the mission to North Africa was planned. In 280, Abū 'Abdallāh, surnamed al-Muḥtasib, because he had been inspector of markets, entered it and within the space of a few years founded the empire of the Fāṭimids. Far more dangerous for the Khalifate of Baghdad at the time was the rising of another Carmaṭian State in Baḥrain, the north-east province of Arabia, founded between 280 and 290 by Abū Sa'īd al-Jannābī. In 287 this chief routed an army sent against him by the Khalīf, but did not pursue that advantage, as he needed all his energy to make himself master of Central Arabia, of 'Omān, and of the desert roads. The great disasters that befell the Khalifate at the hands of these Carmaṭians happened between the years 311 and 320. In 315 a great army, intended to make an end of the dominion of the Carmaṭians, was utterly defeated by Abū Ṭāhir Sulaimān, the son of Abū Sa'īd, and Baghdad itself was seriously threatened. Next year, Mecca was taken and plundered; even the sacred black stone was transported to Laḥsā, the residence of the Carmaṭian princes, where it remained till 339, when it was restored to the Ka'ba.

It is not surprising that the fiction of the Grand-master of Salamīya about the hidden *imām* was not always accepted without some distrust. When he had fled for his life, probably without having been able to regulate his affairs, and was for a while cut off from intercourse with the *dā'īs*, this distrust increased. The ambitious head of the mission in western 'Irāq and the Syrian desert, Zikrwaih, caused his son to give himself out for the *imām*. As long as the energetic Khalīf al-Mu'taḍid lived, he did not dare to undertake anything. But from 289 till 294 he and his sons did much damage in Syria and the borderland of the Euphrates, and it required the greatest efforts to get the better of them. As for Ḥamdān Qarmaṭ and 'Abdān, we know for certain that they separated themselves from 'Ubaidallāh; but this happened, in all probability, later, when he had proclaimed himself the *imām*, the expected *mahdī*. Apostasy, by the laws of the Carmaṭians as well as by those of Islām, is punished by death. Abū 'Abdallāh, who had conquered the empire for 'Ubaidallāh, was murdered, together with his brother, because, the conduct of this prince not corresponding to their ideal, they doubted whether the man they had fought for was really the *mahdī*. This happened near the end of 298. When the murderer lifted up the weapon, Abū 'Abdallāh said, 'Do not, my child.' He answered, 'He whom thou hast ordered me to obey, and to whom thou hast given the empire after having conquered it, has ordered me to kill thee.' 'Ubaidallāh wrote then to his followers in the East: 'Ye know what a high place Abū 'Abdallāh and Abu-l-'Abbās occupied in Islām (*i.e.* the true religion, that of the Carmaṭians), but Satan caused them to slip, and I have purified them by the sword. Peace be with you.' About the same time, 'Abdān—and probably also Ḥamdān Qarmaṭ—was assassinated.

The same thing happened in Yemen. Ibn Faḍl, the head of the mission, cast off his allegiance to 'Ubaidallāh and proclaimed himself *imām*. In 303 he perished, poisoned by a mysterious stranger. We are not quite sure about Abū Sa'īd, the Carmaṭian ruler of Baḥrain, but the fact that he was slain in 301, together with several of his principal officers, combined with the apparently trustworthy information that he was reverenced like a superior being, and the saying of the Yemenite chief that he followed the example of Abū Sa'īd (Omāra's *History of Yemen*, ed. Kay, 1892, p. 202), makes it probable that he also had refused to acknowledge 'Ubaidallāh as the *imām mahdī*. Henceforward, however, till the conquest of Egypt by the Fāṭimids in 358, the Carmaṭians of Baḥrain were the firm supporters of 'Ubaidallāh and his successors.

The intercourse between the two parties could take place only very secretly. If the subjects of the Fāṭimid Khalīf could have had the least suspicion that all the atrocities that filled the breast of every Muslim with terror and horror, for instance the sack of Mecca by Abū Ṭāhir—the pillage of the temple and the carrying off of the sacred black stone to Laḥsā—had been committed in the name of their master, he would not have occupied the throne a single year. On the contrary, it was indispensable in the empire of the Fāṭimids to condemn openly the proceedings of their Carmaṭian friends. Thus, for instance, the well-known traveller, Ibn Ḥauqal, though a fervent partisan of the Fāṭimids, and knowing that the Carmaṭians acknowledged them as *imāms*, speaks (p. 211) of Abū Ṭāhir with indignation, and curses him for his crimes; he has not the slightest suspicion that this prince did nothing but execute the rules laid down by his revered chiefs, or rather their formal orders. The author of the *Fihrist* (p. 189) says that he cannot understand the fact that in Egypt, in the empire of the Fāṭimids itself, the doctrine preached by the Fāṭimid missionaries is not practised at all. Lastly, the famous poet and traveller Nāṣir ibn Khusrau, who had embraced the faith of the Fāṭimids with his whole heart, and who spent a long time in Egypt, whence he returned to Persia as head of the propaganda, is entirely ignorant of any relations between them and the Carmaṭians, whom he knew also, having visited them at Laḥsā (Schefer, *Sefer Nameh*, p. 225 ff.).

But, however necessary this secrecy was for the dynastic interests of the Fāṭimids, it could not fail to have a bad influence on the harmony between the two parties. There were still people amongst the chiefs of Baḥrain who questioned the alleged descent of the Fāṭimid Khalīfs from Muḥammad ibn Ismā'īl, and who asked themselves whether the rising of this upstart family had done aught for the realization of their ideals. The triumph of this party in 358, though it was overthrown a few years later, broke for a time the admirable union of these Carmaṭians, and did great harm to their power. They had a short period of revival in the first half of the 5th cent., and it was with their aid that, in 450, the Fāṭimid Khalīf Mustanṣir was proclaimed Khalīf in Baghdad. But in 474 their dominion came to an end, though the Carmaṭian faith continued to have many adherents for a long time thereafter.

The State of these Carmaṭians is the only one about which we have any trustworthy information. The government was not strictly monarchical. Abū Sa'īd was assisted by a council composed of his principal supporters and called *al-'Iqdānīya*, that is, 'having the power to bind and to loose.' Later, this council consisted of twelve members, six of whom belonged to the reigning house, with the title of Sayyids, and six to the other principal families. In time of war one of the Sayyids was appointed as commander. If, however, this man had a strong personal character, as in the case of Abū Sa'īd himself and his son Abū Ṭāhir, he had almost the power of an absolute monarch. In the period of the last-named prince, the Carmaṭian State had large revenues, so that the fifth destined for the *imām* amounted to 300,000 *dīnārs*. It is probable that this fifth replaced that required originally of each individual member of the sect. For Nāṣir ibn Khusrau tells (p. 227) that the citizens had no tribute or tax whatever to pay. On the contrary, if poor or in debt, they got assistance from the State. The tilling of

the land and every kind of mechanical work was done by negro slaves, a great many of whom were the property of the State. The citizens themselves were educated chiefly for military service. Monogamy seems to have been the rule, and women did not wear a veil. This seems to have given rise to all the accusations of immorality that their enemies invented. The use of wine was strictly forbidden. The religious prescriptions of Islām—daily prayers, Friday-service, fasting, etc. —had been abolished. Even the flesh of animals declared impure by Islam was sold in the market and eaten. Therefore the Muslim proverb says: 'Thinner than the saliva of the bee and the religion of the Carmaṭians.' It is not easy to say whether they had any religious ceremonies of their own. Certainly, they never performed the fifty daily prayers, said to have been prescribed by Ḥamdān Qarmaṭ. We know only that they had regular meetings for teaching the Ismāʿīlian doctrine. The Qur'ān had not lost its sacred character with them; but it was to be read according to its spiritual meaning. They dressed in white and had white banners, symbolizing the religion of light which they professed and the purity of life required of its fellowers.

It is most regrettable that it is impossible not only to paint, but even to sketch, the religious and social life of the Carmaṭians. From themselves we have nothing but a few dogmatical and parænetical tracts. The accounts that have reached us are from their bitter enemies, and are usually full of obvious slander. But the few glimpses we get of their internal life from such less biased authors as Ibn Ḥauqal and Nāṣir ibn Khusrau suffice to make us form favourable opinions about them. They had an ideal, for the realization of which they were ready to make the greatest sacrifices, and which seems to have influenced, if not governed, their whole existence. For purity of life was required of each member of the community. And as for their social state, the above-cited authors attest their admirable union, their excellent administration, and their institutions on behalf of the poor. But there is no chance of ever being able to find the details we want.

Not many years after the final overthrow of the Carmaṭian empire in Baḥrain, there rose another branch of the Ismāʿīlīs, known by the name of the Assassins (*q.v.*), who during two centuries filled the world with the rumours of their sinister exploits, though they are commonly painted in much blacker colours than they deserved. The first centre of their power was 'Alamūt in the neighbourhood of Kazvīn, south of the Caspian Sea; a second centre was Masyāf in the Lebanon. Their dominion was annihilated by the Mongol prince Hūlāgū, the conqueror of Baghdad, and this is perhaps the only feat for which history has to thank him. Since then there has not been another rising of the Ismāʿīlīs. Yet there are adherents of this doctrine in various parts of the East, living as quiet citizens, and known by the name of Khōjas, in Syria, Arabia, and Zanzibar, Persia, Kirmān, and India. They are also in communication with each other and have an acknowledged chief. This was until lately the well-known Aghā-Khān in Bombay, a very rich man, whose father and grandfather had been governors of Kirmān, and who himself was son-in-law of the Shāh of Persia. His lineage goes back to the princes of 'Alamūt, who themselves pretended to descend from a Fāṭimid prince. Baron von Oppenheim, who gives some details on the Khojas in a note to his *Vom Mittelmeer zum persischen Golf*, 1899 (i. 133), told the present writer that still every year an embassy sets out from Salamīya in Syria for Bombay to bring to the *imām* the contributions of the faithful.

M. J. DE GOEJE.

CARNIVAL.—On the Sunday before Ash Wednesday, *i.e.* at the commencement of the great fast by which the Roman Catholic Church makes preparation for Easter, there is observed in many countries a popular festival which, while exhibiting great variations in the character and order of its celebration, is yet, in every locality where it passes under the name of 'Carnival,' a recognized occasion for exuberant mirth and unrestricted freedom, combined with masquerade, jesting, and burlesque. It is a fact worthy of notice that the name 'Carnival' and the manner of observance referred to have alike come to prevail in the regions which have been most permanently under the domination of Rome, viz. France, Italy, and the Rhenish provinces. In Teutonic countries generally, on the other hand, the festival preceding Lent is called 'Fastnacht,' popularly—and at one time universally—'Fasenacht' or 'Fasnacht.' But the observance of Fasnacht and that of the Carnival, while presenting apparently similar features, show at the same time so many points of contrast in conception and procedure as make it impossible to trace the celebration to a single direct source. Pagan, Teutonic, and Roman elements may all be recognized, though greatly modified by Christianity. In Romance countries and in the neighbourhood of the Rhine, therefore, the Carnival has acquired its present character under Roman influence, and so far shows a decided contrast to the corresponding Teutonic festival.

The name 'Carnival' is of obscure origin, and admits of various interpretations. A widely received explanation is that which emphasizes the influence of Christianity upon either name, 'Carnival' or 'Fastnacht.' Here 'Carnival' is said to be derived from *carne vale*, i.e. 'flesh, farewell,' an apt enough appellation for the day on which the unconstrained indulgence of the senses was permitted for the last time before the great Lenten fast. Of similar character is the derivation from the name first applied by Pope Gregory to the last Sunday before Lent, viz. 'dominica ad carnes levandas.' This was shortened to 'carnes levandas,' thence passing, it is said, through the forms 'carnelevamen,' 'carnelevale' to 'carneval.' If this etymology be correct, the Teutonic term 'Fastnacht' (Fastens-even, Fasterns-e'en) would signify practically the same thing—the Lenten feast, Lenten-*eve*, according to the Teutonic practice of commencing the day with the evening. In Germanic lands, and especially in the Rhine district, the term 'Fastelovend' is locally used, *Ovend* being a vernacular form of *Abend*. 'Fastnacht' would accordingly apply to the day which, in view of the approaching Lent, was given up to feasting and carouse.

But this explanation, well as it accords with the interpretation of 'Carnival' just indicated, fails to harmonize with the name still given by the people, and in the Middle Ages by all classes, to the Teutonic festival, viz., 'Fasenacht' or 'Fasnacht,' from the root *fasen*. The dialectic word *faseln* means 'to talk nonsense,' 'to drivel,' and 'Fasnacht' would thus denote a feast of folly, revelry, licence. This corresponds well enough with many customary features of the

Carnival, but has no other link of connexion with Christianity.

This is also true of a further derivation of 'Carnival'—one which carries us back to the classical ages, first of all, indeed, to Athens. Certain Greek vase-paintings of the 6th cent. B.C. show a procession of masked figures moving to the strains of music. An Attic vase now in Bologna represents the god Dionysus on the way to his ship. This vessel is furnished with wheels; and, as a matter of fact, we learn from Greek writers that a ship of this kind, dedicated to Dionysus, was driven through the streets of Athens, and that satirical songs were recited from this 'currus navalis.'

We would here remind the reader that it was from the scurrilous and satirical songs in honour of Dionysus, once they had become venerable by ancient usage, that Greek comedy was at length developed. Aristophanes himself, indeed, is not so very far from this starting-point. It was the opinion of Aristotle that comedy attained its initial form in spontaneous popular merry-making, and later writers state explicitly that it took its rise in the sarcastic songs recited from the chariot. In the later history of Greece we still hear occasionally of 'ship-carts' in connexion with processions in honour of gods and goddesses. We learn that during the closing years of the Roman period a naval procession in honour of the Egyptian Isis was held at the annual re-opening of navigation in spring, a 'ship-car' being used for the occasion. There is evidence to show that a similar custom obtained in ancient Germany. Tacitus (*Germania*, 40) speaks of the processions of Nerthus, *i.e.* Hertha, the Teutonic 'Earth-Mother,' and states that her image was carried about the country in a 'vehiculum.' Of this 'vehiculum' he gives no further particulars, but the customs he thereafter refers to seem to indicate that it was a ship-cart—a theory which finds further support in the fact that the procession of the goddess set out from her sacred grove in an island of the ocean. Sometimes a plough took the place of the image as a symbol of the Earth-goddess. A monk of the Abbey of St. Trond makes mention of a spring festival in the district of Jülich, in Lower Germany. Here, in the year 1133, a ship was constructed in the forest, and then taken upon wheels from Aix-la-Chapelle to Holland, attended by a great procession of men and women. With hair dishevelled, and with a shirt for their only garment, the women danced, says the monk, 'in devilish wantonness' around the ship-cart, and the strange cortège was received everywhere with rejoicing. Our monastic chronicler inveighs passionately against this 'pagan' festival. We find repeated references to the use of such ship-waggons in German towns during the Middle Ages. At that period, moreover, the itinerant waggon often carried a plough. A minute of the town-council of Ulm, dating from the beginning of the 16th cent., contains an injunction against carrying the plough or the ship about the city. Sebastian Brandt, a German satiric poet who lived towards the close of the mediæval period, published in 1494 a work entitled *Narrenschiff* ('Ship of Fools'), and it appears from the book itself that its leading idea was suggested by some standing custom—more especially as the author often speaks of the ship as a 'cart' (*Karren*). In Styria and Carinthia it was the custom for women and girls to drag a plough across the landmark in spring.

We may therefore infer that, as in Greece and probably Italy as well, so also in Celtic and Teutonic lands, it was the practice in springtime to drive through the country a ship-waggon bearing an image or other symbol of a deity. Promiscuous dances and masquerades were performed as acts of worship. Just as in Athens the sarcastic songs recited from the ship-cart developed into comedy, so in Teutonic countries the procession attendant upon the waggon, with its masquerades, and its burlesque and ribald ditties, gave rise to the dramatic representations for which, according to numerous references in mediæval writings, the Carnival waggon formed the stage. From these performances, again, arose real Fastnacht plays, in the composition of which even dignitaries of the Church did not disdain to engage. Hans Sachs, the famous Meistersinger of Nuremberg, wrote numerous pieces of this kind, which in his own day were performed in the market-place. These Fastnacht plays were the forerunners of the drama, and remained in vogue till the 17th century. The ship-cart of the goddess still finds a place in the Carnival as now observed. When the festival was re-constituted at Cologne in 1823, the ship-cart became once more a permanent accessory of the procession. The dancing women, who in their masquerade of scanty clothing formed part of the train accompanying the ship-cart in Lower Germany, have now become the 'fair youths and maidens' of the Carnival of Cologne. Arrayed in antique garb, they lead off the procession with dances.

We are now confronted with the question as to the origin of these processions. It has been very commonly believed that their prototype is to be found in the cult of Isis, and that the ship-waggon of Teutonic and Celtic countries was simply borrowed from the festivals associated therewith. This theory, however, fails to take account of the procession of Dionysus and the 'ship-cart' portrayed on Attic vases, as also of the 'vehiculum' mentioned by Tacitus in the passage cited above. It would be more accurate to say that, when the Isis cult, as diffused amongst the Greeks and the Romans, at length reached Gaul and Germany, it found in all quarters not only a form of ship-waggon, but also something analogous to the root-idea of the festival. The derivation of the word 'carnival' from *currus navalis* (Romance *carnavale*) has thus a good deal in its favour.

As indicated above, the Athenian processions with the ship-cart were held in honour of the god Dionysus. The worship of Dionysus had its Roman counterpart in the Bacchanalia, as also in the Saturnalia and Lupercalia—festivals which in the later Roman period were characterized by wanton raillery and unbridled freedom, and were in a manner a temporary subversion of civil order. This general spirit, together with certain special features, was transmitted to the Carnival in particular, and this explains why that festival has assumed its peculiar character in regions where Roman civilization reigned supreme. We must not infer, however, that the Græco-Roman festivals were orginally of such a nature. The mysteries of Dionysus, as well as the Bacchanalia and the Saturnalia, had a substratum of religious ideas. It is a well-known fact that, in the 2nd cent. B.C., the Roman Senate resolved upon an extensive persecution of the Bacchanalia. The adherents of these mysteries were currently charged with the grossest offences against morality and against the State. The persecution was particularly ruthless in Southern Italy, and succeeded not only in practically suppressing the cult, but also in completely paralyzing the influence of Hellenism in that region. We have here, in fact, an early precedent of the policy according to which in the Middle Ages the Jews, the Templars, and others were first of all traduced, and then maltreated, on the ground of their assumed guilt. Recent investigations have shown the groundless character of the charges preferred against the Bacchanalia (Salomon

Reinach, *Cultes, mythes, et religions*, 1905–1908). Alike in the Bacchanalia and in the Saturnalia we can trace a basis of animistic mythology. During the Saturnalia slaves ate with their masters; every householder kept open house, and invited to his table as many guests as he could find; garlands of ivy were donned, and mirth and frolic were indulged in without restraint. Such doings were in the first instance, no doubt, an expression of the inherent human need of occasionally breaking the monotony of use and wont, and as such we find them also in the spring festivals of the Teutons. But all this hardly touches the essential element in the festival.

The earliest phase of religious development is doubtless to be found in animistic ideas, which again are closely connected with the cult of the dead, and, in fact, derive their origin therefrom. In course of time the fundamental conceptions of Animism took on an accretion of mythical ideas. The Romans believed in Lares, Larvæ, and Lemures—all originally the spirits of the departed. The *lares* came at length to be regarded as good-natured, kindly-disposed household gods, the *larvæ* as ghosts that terrify and injure human beings. The latter character was borne also by the *lemures*, which were worshipped and propitiated in special festivals known as the 'Lemuria.' Now, in the Bacchanalia and Saturnalia, celebrated just after the turn of the year, it was the custom to impersonate the *larvæ*. This was regarded as an effective means of conciliating these evil spirits and of warding off their malevolence—an idea which, in its connexion with the cult of the dead and the derivative belief in ghosts, can still be traced in so many surviving customs and practices of all countries. The impersonation, or even the symbol, of a spirit could work with magical results. The impersonator wore for the time white garments, *i.e.* dead-clothes, and a mask for the face. From the latter were subsequently derived the masks of actors in the theatre, while the disguise as a whole formed the starting-point of the masquerades in Græco-Roman celebrations. A similar development is found in Celtic and Teutonic countries. Here, too, the masquerade had a place in the spring festivals. The principal figures in the celebrated Carnival of modern Rome—the Pulcinello and the Pierrot—are dressed in white, as required by the traditions of antiquity. Numerous superstitions specially connecting spirits and ghosts with the Carnival season may be traced without difficulty in usages still maintained. This 'popular belief' has not, of course, survived to the same extent in every locality, and it is only by making a mosaic-like combination of all the ideas and practices prevailing in various districts that we can discover the link with the past. Thus, for instance, during the Carnival gifts are collected by children, or in some cases even by adults, who go about singing certain songs; and a common feast is made of the materials thus received. Single families also have their great and merry feasts, and during the Middle Ages such family festivities were famed for their long duration, and are frequently mentioned in books. A special loaf was baked, and a portion thereof set apart for the 'poor souls,' *i.e.* spirits, on the evening before the Carnival (or at the beginning of the ancient festival). Grimm (*Deutsche Mythol.*, p. 896) gives the following excerpt from a mediæval chronicle: 'To eat flesh on Tuesday in the Fastnacht, or to let other foods stand upon the table during the whole night of the first Sunday in Lent, is a rude, irreverent, *heathenish* superstition.' In some parts the 'poor souls' are spoken of as 'the dear little angels,' and a portion is devoted to them as such. This transformation of spirits into angels took place also among the Slavs. An old Czech weather-adage says that 'the feast of all angels' should be celebrated on Carnival Tuesday. In the 'good little angels' we recognize once more the Roman *lares*. During the festival, therefore, the spirits take up their abode in the house, and share in the festivities. Hence no work must be done; it was indeed popularly believed in ancient times that, if one sewed at this season, the fowls would not lay; and that, if one knitted, contentions would arise. During the festival days, again, energetic dancing and leaping must be indulged in, so that the flax crop might prosper. The amount of superstition that gathers around all sorts of actions during the Carnival—as recorded by Grimm and other investigators—is simply enormous. In Chemnitz, for example, old wives' philosophy declares that any one who takes soup in the Fastnacht will have a dripping at the nose; that, if millet be watered at that season, it swells into money; that a person whose body is then observed to cast no shadow by moonlight is marked for death; and much more of the same kind.

Security against the machinations of ghosts, or evil spirits, again, is to be gained at the Carnival season in particular by various operations of a special kind. Large fires are made, locally called 'Halefeuer.' The materials, straw and wood, are gathered by young men; and a living cat, a doll, or a cross is made fast to the top of the pile, and consumed in the flames. In some localities the fire is called 'the witch-burning.' The moment before lighting the fire is given to silent devotion, and then, when the flame leaps up, there is great shouting and uproar. The young men jump through the flames, and roll fiery wheels—symbols of the sun—down the mountain-side. These are either actual wheels, with straw twisted round them and set on fire, or flaming disks of wood, which, having a hole in the centre, are hurled away by means of a stick. The fire and the smoke, according to popular notions, bring fertility to the fields, and secure them against the ravages of hail, while they also shield the people from all injuries that might otherwise be wrought by evil spirits. In some districts, again, a pair of lovers take their stand in front of the bonfire, and this act is regarded as lending a sanction to their relationship.

To water also, equally with fire, important functions were assigned at the time of the Carnival. The practice of worshipping water in the springtime was universal at an earlier day. In Munich the ceremony called the *Metzgersprung* ('butcher's leap') took place on Carnival Monday. Those who had newly become members of the craft were required on that day to plunge into the basin of the fountain in the Marienplatz. A similar custom prevailed also in Austria, Switzerland, and even Hungary.

As we might well expect, the various customs referred to, and in particular the making of bonfires and the burning of an animal, a doll, or the like, underwent manifold changes. In the neighbourhood of Düsseldorf, for instance, those who gather the gifts at Fastnacht are splashed with water by little girls. On the Rhine, the children who act as collectors carry a cock—or, as in Holstein, a dead fox—in a basket. These things are but the aftermath of the ancient sacrifices. It is here and there the custom to carry about a straw doll, which is at length either burned, or buried, or thrust under water—an act which, according to present-day practice, brings the festival to a close. In Essen this is called the 'burying of Bacchus.' In the famous Carnival of Venice likewise we find a 'burying of Bacchus,' which was carried out in the Piazza di San Marco. All these customs are, in the last resort, traceable to the desire of protection against evil spirits. In Cologne, during the Carnival, little brooms, specially made for the

occasion, are sold in great numbers. Armed with these, the young people march about the town, brandishing them aloft, and now and again using them to brush the backs of those walking in front. The broom, as is well known, plays a great part in the belief in witchcraft. When witches travel to their secret rendezvous on the Blocksberg, they ride by night upon broomsticks. In this case, as in so many others, the instrument of possible evil becomes a talisman; the broom acts as a protection against witchcraft, or—what according to primitive ideas was the same thing—the machinations of evil spirits. Hence the custom, in some Teutonic countries, of using a broom to sweep the way behind a coffin, so that the spirit may not return to the place where the deceased had lived. Accordingly, the practice of going about with brooms during the Carnival at Cologne had its origin in the notion that the power of evil spirits could in this way be rendered innocuous.

With the customs of the Carnival, moreover, are intermingled ideas of a mythological character, which find expression in the cult of a particular goddess. This has already been shown in our account of the itinerating 'ship-car' (in which we found the explanation of the term 'Carnival') bearing the image of the goddess, who is, in reality, the Earth-mother, Nerthus, or Hertha, now sometimes called simply 'die Frau,' 'das Weib.' Her cult had its origin in ancient Rome and Germany. In Rome it was represented by the mysteries of the 'Bona Dea,' from which all males were stringently excluded. Analogous features are still found among the customs of the Carnival season. In Cologne the Thursday before Fastnacht is known as 'Weiberfastnacht.' It begins at 12 o'clock noon, and formerly the women used to exercise absolute authority for the day. As the custom gave occasion for many excesses, however, it was formally proscribed in the 19th cent., though traces of it still survive. In some parts of Rhineland the women meet together, hold a court, and then cut down a tree, defraying the expenses of their celebration from the proceeds of the timber. At the Carnival season in the Alpine country is held the Perchta-race—Perchta, or Bertha, being simply the ancient Earth-goddess. Those who take part in the race wear masks of a special kind, called 'Perchtelmasken.' In the Rhine district the youths who collect the Fastnacht gifts are named 'Zimbertsburschen.' The word 'Zimbert' is a corruption of 'Sankt Bertha,' *Sankt* being pronounced dialectically as *Zim* or *Zin*. As 'Saint Bertha' or 'die Frau,' it was an easy matter for the Earth-goddess to hold her place in popular thought. In an ancient chorus sung at the time of the Carnival, and containing many reminiscences of primitive ideas, we find the words: 'Morge wolle mer de fru obsetze.' This recalls once more the ship-car with the image of the goddess. It was not without good reason that the Roman Catholic Church appointed a festival of the Virgin Mary for the month of February—the season associated with processions in honour of the Earth-mother. Mary simply took the place of the heathen divinity. At this festival—*Marie Lichtmess* (Candlemas [*q.v.*], Feb. 2)—an image of the Mother of God is carried through the church in a solemn procession illuminated with candles, as is to this day the practice at Cologne. Here, accordingly, we have a survival of the primitive Indo-Germanic custom of carrying the Earth-goddess about the country. By way of effecting a desirable change in the character of long-established popular festivals which could not be summarily abolished, the Church adopted the plan of providing them with Christian motives—a procedure which was very largely adopted in the case of the Carnival festivities.

Mention may also be made of a curious article made use of in the Carnival procession at Cologne. This is the so-called 'Streckschere,' or stretching-shears, formed by nine crossed pairs of laths as in a line of trellis-work. The laths are jointed at the ends and the points of intersection by wooden pegs, so that the whole can be easily and quickly stretched to a great length and as readily drawn in again. Nowadays this 'shears' is employed for the purpose of passing bouquets and the like to the ladies, and indeed, even apart from the procession, it is used during the Carnival as an instrument of general trickery. Originally, however, it must have had a different purpose. In the Perchta-race of the Alpine country a leading part is played by the so-called 'tailor,' who, though dressed in ordinary garb, is marked out from others by his huge pair of shears. This is likewise a 'stretching-shears,' and by its means the 'tailor' divests the unwary bystander of his head-gear. A counterpart of this article is found among the Hopis of Arizona. It is stated by J. W. Fewkes (*21 RBEW* [1903], p. 90; cf. Hein, *Correspondenzblatt der deutschen anthr. Gesellsch.* 1899) that at the summer festivals observed by this tribe their god Püükoñ appears on the scene with a long wooden pair of stretching-shears. The writer named believes that the shears represent the lightning-flash hurled by the god. The summer festival of these Amerinds is regarded as a means of ensuring the fertility of their land—an idea which, as we have seen, had a place in the Teutonic Fastnacht. In connexion with the latter, again, the custom of seizing hats with the shears underwent a further development in most localities, including the Rhine district. Those in the crowd suddenly snatch off each other's head-dress and throw it in the air, or pull each other's hair. This buffoonery is practised on the Thursday before Fastnacht, and accordingly that day is sometimes called 'Mötzefastelovend' (Germ. *Mütze*, 'cap').

Recapitulating in brief our whole inquiry, we note, first of all, how many sources have contributed to the development of the Carnival. In ancient Greece and Rome, as among the early Celts and Germans, the first approach of spring was heralded by festivals which derived their origin from the cult of the dead, the belief in spirits, and the desire of security against their malevolence, and which, moreover, in course of time, assimilated certain mythological elements. The festivals thus observed in various lands were originally very much alike in their fundamental ideas, and therefore also in the manner of their celebration, as was but natural in the case of peoples belonging to the Indo-Germanic stock. In Greece and Rome they assumed a special form of development as Mysteries, and generated at length a peculiar type of festival. In this distinctive form they were carried across the Alps by the Romans, and spread rapidly on their new ground. This transplanting was rendered all the easier by the fact that there already existed in the Transalpine district festivals of a similar character, though developed in a different way. Within this region, therefore, it is only in Gaul and Rhineland that we find the Carnival with its distinctively Roman features, while in other parts of the Teutonic area the native festivals retain their ancient character with but little change. When Christianity at length penetrated to these lands, it was unable, with all its efforts, to suppress entirely either the indigenous festivals or those which had to a greater or less extent come under Roman influence. In certain cases it succeeded in rendering the festivals innocuous by associating them with Christian ideas; in others, by a rigid arrangement of the Christian year, it strove to take away all opportunity for their celebration. To the season after Christmas, therefore, the Church assigned a

when it is needful for him to be fully persuaded in his own mind—when he reverts to his clergyman or lawyer for advice. In them likewise the broader casuistry has an office to perform, even although we do not so designate it. Probabilities and possibilities have to be considered before the fact; after it, unforeseen sequels may well raise questions of blameworthiness. Now, lawyer and physician, and, in a different way, the clergy, can refer to a fixed or external body of knowledge, of customary writ, whence to set out. The moralist is hardly in the same situation, so casuistry too often comes to possess a different meaning when his advice is required. Jeremy Taylor's definition of conscience shows why: 'Conscience is the Mind of a Man governed by a Rule, and measured by the Proportions of Good and Evil, in Order to Practice; *viz.* to conduct all our Relations, and all our intercourse between God, our Neighbours, and ourselves: that is, in all moral actions' (*Ductor Dubitantium* [1660], bk. i. rule i.). The bare terms of this strange definition—Rule, Good, Evil, Relations, God, Neighbours—demand extensive elucidation; whereupon the broader casuistry arises.

(2) In the narrower and more technical sense, casuistry presupposes (*a*) the existence of external rules, nomistic opinions, or systematic prescriptions (especially the last); and (*b*) individual cases, peculiar to separate persons at particular times, when the approved sanctions seem doubtful or silent, or require elucidation with a view to the justification of exceptions. It deals here with means of action in relation to ends, and there is no reason why it should confine itself to abnormalities, as many seem to suppose. This procedure may lead readily, however, to that over-subtle discussion of the 'rightness' or 'wrongness' of single acts, with reference to minimum requirements of an ecclesiastical or other code, which has come to be associated with casuistry as its distinguishing (and dangerous or pernicious) feature. The present writer records it as a personal opinion that, owing to the whole nature of the ethical theory approved within the Latin obedience, this tendency can hardly be eradicated; some Roman Catholics lean to this view themselves. Hence the sinister implications of the term 'casuistry,' as in the parallel case of 'sophistry.' For, without doubt, these prudent, mechanical analyses or adjustments of pros and cons, with their mental reservations, probabilities, and expectations that ends may justify means, may descend easily to the level of verbalism or hair-splitting, and result in a relaxation of principle distasteful to the moral standard of an age, and calculated to confuse the sense of right which governs the plain man almost automatically in the ordinary relations of life (cf. 'The Sorbonne Condemnation,' in the *Corpus Doctrinae*, ed. by C. M. Pfaff, 1718). This, in turn, may offer justification of acts in conflict with the conscientious scruples of the community. The reference to the ideal becomes obscured, and, this stage reached, anything may happen. But this is reducing the matter to the level of a practical art. Thus the dubious associations of casuistry, especially for the modern mind, arise: it is held to depend upon an appeal to external sanctions.

Taken in this, the narrow ecclesiastico-technical sense, casuistry can be no more than an appendage of ethics, a purely secondary or, at best, supplementary division. It does nothing to elicit or formulate the nature of ethical principles, nothing to elucidate the psychological character of motive, nothing to ground or guarantee the objective validity of norms, nothing to clarify the basis of responsibility and obligation; in a word, it presupposes theological ethics, and, this done, confines itself to subjective and individual considerations, in the light of a pre-existent system. Now, ethics, as such, may formulate itself so as to leave little, if any, room for technical casuistry, as has been the fact with the main body of scientific ethics, particularly since Kant. On the other hand, ethics may eventuate into a department of theology, and become a kind of translation into human language of laws regarded as given by an extra-mundane creator-judge. This view maintains itself in the Latin Church, and offers scope for technical casuistry in the sense now under consideration. Here, once more, circumstances alter cases profoundly; for, thanks to the practical needs of the Counter-Reformation, we may trace even a third, and narrowest, acceptation of the term. When the fourth Lateran Council (1215) made confession of sin obligatory upon the faithful at least once a year, the necessity for a 'science' which would adjust cases to 'penance' or to guiltiness became clamant. Hence Moral Theology was developed in the Latin Church, and casuistry took its place as the most important element in what might be termed, without offence, the science and art of the confessional. As a direct consequence, there arose in the 17th cent. the great controversy between 'Rigorists' and 'Laxists,' which brought casuistry into disrepute as a bulwark of tergiversation, and an incentive to, or at least justification of, evil-doing. The need to win men back to the bosom of the Church intensified this movement. Obviously enough, an outsider cannot pronounce with decision on the practice of an organization so extensive and complex as the Latin Church, wherein many shades of usage and theory may co-exist. Nevertheless, it is probably true that the present position within the Latin obedience dates from 1803, when the Congregation of Rites, confirmed by Pope Pius VII., found the *Theologia Moralis* (1756) of St. Alphonsus (Alfonso Maria de Lignori, 1696–1787) free from matter deserving censure, that is, of 'extrinsic' probability. While there is room for divergence—by less or by more—from his equiprobabilism (as by J. H. Newman; cf. his *Apologia* [London, 1882], p. 273 f., and note G), it may be said that, in the Latin obedience, casuistry has proceeded with reference to Liguorian norms. In any event, he was the last writer on Moral Theology to be canonized (1839), and declared a Doctor of the Church (1871).

The objections to the Latin view raised by other Christians, especially outside Anglicanism, may be put very summarily as follows: In its *form* the Latin conception is held to be external, and legalistic—therefore, necessarily fragmentary, or devoid of unitary inner principle. In its *content* it is held to be ascetic, or based upon a dualism between the spirit and the flesh. Consequently, it is negative in its attitude towards the world; and equivocal, because it contemplates a twofold standard—one for the average man, another for the 'perfect.' As a result, it is said to entangle itself in a maze of prescriptions that interpose between the individual will and God's will. Quite obviously, the two conceptions proceed from antagonistic theories of the nature of the Christian religion as a whole. The Latin position affirms that the proper regulation of moral activity lies with an institution designed supernaturally to aid individuals, to be the keeper of their conscience, because the sole depository and interpreter of the only possible, the only Divine, authoritative norms. The Reformation contention is that personal subjection to the will of God bestows that self-devotion from which alone right moral action can proceed. The non-Catholic Christian

cannot admit that two contrary actions can be duties equally; nor can he do more than his duty (cf. SUPEREROGATION); nor can he entertain the idea that some actions are unmoral—without moral import (cf. ADIAPHORISM). Hence the need for technical casuistry disappears.

To sum up: whenever men realize their separation from, or conflict with, the operative norms of the social whole, and, in their strait, appeal to 'conscience,' it may be affirmed that 'conscience' and casuistry, on a broad scale of ideal reference, become correlative, even although no method of casuistical procedure with reference to particular cases may have emerged on the basis of reflective or dogmatic system. Reference to a moral ideal appears in practice, and this after no merely utilitarian fashion. Accordingly, the narrower interpretations of our term would appear to depend upon a more or less marked collocation of institutional issues in a civilization, rather than upon definite reference to an ideal. Means come to throw ends into the shade. In a word, the more self-conscious casuistry grows, the more its dangerous qualities tend to assert themselves. A glance at the history of moral effort in this connexion may suffice to illustrate this. Prior to the Christian era, casuistry in the broad sense dominates the field, except in Judaism. After the solidification of the organization of the Church, the broad sense maintains itself still, but with tendencies to the narrower and more technical procedure, which culminate, under the influence of inner movements and of external historical events, in the 17th century. Thereafter, in modern thought, the broad, ideal sense reasserts itself.

2. Historical outlines.—(*a*) *Greek.*—Casuistry, in the narrow theologico-moral sense, could not play any distinctive rôle during the characteristic periods of Greece, because the conception of 'conscience' (*συνείδησις*) did not achieve determinative development before the age of Stoicism. The *γνῶθι σεαυτόν* of Heraclitus, and even *σωφροσύνη*, fall short of the self-condemnation integral to 'conscience.' It is true that 'moral consciousness,' in something more than the Aristotelian sense of recognition, may be traced sporadically from time to time; *e.g.* in Homer (*Il.* vi. 417, xvii. 254; *Od.* ii. 138), and in the Orators, especially Antiphon (*e.g. Or.* ii. γ. 3, iii. δ. 9); but the attitudes are incidental rather than normative. Casuistry (cf. Plato, *Euthyd.* 7 E), in the broad sense described above, reared its head only when the older polytheistic religion had sunk with many to the level of superstition, and when, therefore, the search for another ideal began (5th cent. B.C.). Aristophanes, the Sophists, Socrates, Euripides, Plato, and their circles, furnish the illustrative material. The Nomothetæ and the poets (*e.g.* Simonides) were the traditional authorities (cf. Homer, *Il.* xvi. 386 f.; Hesiod, *Works and Days*, 225 f., 275 f.; Theognis, 205 f.; Pindar, *Ol.* xiii. 6 f.; Xenophon, *Symp.* iii. 5). By the 5th cent. the force of their teaching abated, because it lacked the pliancy demanded by unprecedented circumstances and situations (cf. Meyer, *Gesch. d. Alterthums*, 1901, iii. 436 f.). It had been deterrent rather than originative, and its uninspiring utilitarian reference palled (cf. Pindar, *Pyth.* xi. 52 f.; Plutarch, *Solon*, 27). Similarly, its intimate relation with, almost dependence upon, written law (cf. Æschines, *c. Tim.* 6 f.; Aristotle, *Eth. Nic.* 1137 A, 16; Plutarch, *Lyc.* 8 f.) tended to stereotype it. New developments gave rise inevitably to the idea of a higher, unwritten and ideal, law, which appeared in the dramatists (cf. *e.g.* Æschylus, *Supp.* 707; Sophocles, *Ajax*, 1130, 1343, *Œd. Tyr.* 863 f.), and was presented on a large scale in *Antigone* (cf. Xenophon, *Mem.* IV. iv.). Hence, by an easy transition, we come to the doctrine of the Sophists, that laws, with morals as their appanage, are no more than conventions. And the fountainhead of 'conscience,' in any sense understood by the Greeks, is to be found in the opposition between *φύσις* (nature as the basis of law) and *νόμος* (convention as the basis of law). When, with the great philosophers, investigation passed from the cosmos to man, the problem of ultimate sanctions could not but emerge, and the utilitarianism of the old view offered a point of departure by lending colour to the aphorism, 'Justice is the interest of the stronger.' 'Law is the tyrant of mankind, and often forces us to do many things contrary to nature' (Hippias, in Plato, *Protag.* 337 C; cf. Xenophon, *Cyrop.* I. vi. 31 f.). The casuistry of opportunism ensued among the Sophists, especially, in all likelihood, the Eristics. Nevertheless, the hints dropped by the greater Sophists about the necessity for system in morals, as about the *inner* and *outer* factors of the ideal, occasioned lively discussion, thoroughly casuistical (after the broader sense) in principle. Doubtful issues were conceived clearly with reference to the basis of the ideal; the fact of opposition in morals became a common-place, as we can see plainly from Euripides (*e.g.* how reconcile his statements in *Ion*, 884 f., frag. 49, frag. 86, and frag. 511? Cf. *Bacchæ*, 882). Thus the idea of a *φύσις ἀνθρωπίνη* was precipitated. Casuistical questions were ventilated, about the State and the family, friendship, worldly goods, slavery, suicide, lying, oaths, and the like, but, as a rule, with the object of attaining some fresh interpretation of the ideal. It was not a simple case of conflicting rules, each enjoying the same universality. Possibly, Plato's *Gorgias* indicates a turning-point (cf. Gomperz, *Gr. Denker*, ii. 277 f. [Eng. tr., 1901, ii. 342 f.]). Morality is now illuminated by reason, and man is shown that the origin of ideals lies in his own nature, like their sanction. Thus there is a self-likening to the Divine (cf. Plato, *Theæt.* 176 A). Alcidamas (4th cent.) refers to some such ideal when he says, 'The Deity has made all men free; Nature has enslaved no man' (cf. Gomperz, i. 324 [Eng. tr. i. 403]). Thanks to Plato, the most real has become the most knowable (*Rep.* 477 A), and so the highest activity of the spirit furnishes the guarantee that casuistical questions can occur only when more explicit development of the ideal is in progress (Plato, *Prot.* 343 A, *Laws*, 875 D, 965 D). Life is not tortured by that absolute separation between 'ought' and 'is' which leads to the conception of morality as embodied in a number of rules all equally authoritative and universal. And so, apart from questions (*e.g.* Aristotle, *Eth. Nic.*, bk. iii.) that seem *to us* as if they savoured of narrow casuistry (like the position of women, personal purity, slavery), the absence of dislocation between the ideal spirit and the real career, so evident in the Greek *ethos* (cf. Aristotle, *Met.* 982*b*), restricts casuistry in the main to those larger vital problems that must accompany further definition of the ideal itself (Plato, *Rep.* 500 C f.).

(*b*) *Hebrew.*—Having regard to the position occupied by the Law in Judaism, it is not surprising that casuistry resulted, and wielded extensive influence from time to time. For, in Judaism, the Law may be said to fill a place parallel with that of dogma in Christianity. But the primary sources for the subject are so vast and tortuous, and demand such special linguistic knowledge, that no more than general hints are feasible here. It seems fair to say that, on the whole, Jewish casuistry provides an admirable example, on a large scale, of the possible oscillation between reference to a living, ethical ideal, and minute, often clever, sometimes puerile, interpretations of

traditional rules. At the present time, the leaders of Reformed Judaism represent the former, while Conservative, in many ways reactionary, Rabbinism represents the latter. Similarly, the view of the operation of the Law in Palestine when Jesus appeared, held by such scholars as Schürer (*GJV*[4] ii. §§ 22–30) and Bousset (*Rel. des Judent.*[2] 1906), emphasizes the narrower casuistry; that insisted upon by Jewish investigators, like Schechter (*JQR* xi. 626 f.) and F. Perles (*Bousset's Die Religion . . . kritisch untersucht*, 1903), illustrates the higher casuistical principle in the developmental movement always associated with the expression of an ethical ideal (cf. J. Elbogen, *Die Religionsanschauungen d. Pharisäer mit besonderer Berücksichtigung d. Begriffe Gott und Mensch*, 1904; Chwolson, *Das letzte Passamahl Christi u. d. Tag s. Todes*[2], 1892, App.; Friedländer, *Die relig. Bewegungen innerhalb d. Judenthums im Zeitalter Jesu*, 1905). The Law, as the embodiment of the ideal, is formulated in many OT passages (*e.g.* Jer 31^{33}, Ps 37^{31} $119^{33\text{ff.}}$). The central conception is that human insight fails to suffice either for solution of the problems inseparable from life or for the decisive revelation of the Divine will. As a consequence, these recurrent problems must always be re-interpreted in the light of the norm which remains supreme from age to age; and, as a corollary, the ideal itself is the subject of continuous, and more explicit, affirmation. On the other hand, the vicissitudes of the Jewish people, after their deportation to the Euphrates-Tigris region, and, later, after the destruction of the national theocracy by Titus, produced circumstances favourable to minute elaboration of the Law, and to its use as an external framework to preserve the religious and racial unity of the scattered folk. Thus casuistry arose and, according as concomitant events varied, played a greater or a lesser rôle. Provisions, conformable to changed conditions of life, were heaped up endlessly, and experts were needed to render ethico-judicial decisions. Thus a vast amorphous mass of regulations and decisions grew, by accretion, during centuries. Following Aristotle's ethical principles to a large extent, Maimonides (1135–1204) attempted to call order from this chaos, especially with regard to personal conduct in relations with others; and he may be said to have reinstated the idealistic reference. However successful at the moment, his methods were not destined to full fruitage till Spinoza, Solomon Maimon, Moses Mendelssohn, and the contemporary Reform movement. Indeed, they stimulated the half-opposition of Nachmanides (1194–1270), who paved the way for the domination of the French school, which held casuistical study of the Talmud to be an end in itself. The extreme development of hair-splitting casuistry dates from Jacob Pollak (1460–1541), the chief originator of the procedure known as *Pilpul*, or 'spicing' the Law by ingenious disputation. This was essentially a method of dialectical interpretation, fertile in far-fetched analyses and combinations, often productive of pitiful sophistry, and, as a rule, pursued for its own sake, without distinctive reference to moral ends. Although it doubtless arose from that renewed interest in the Law due to the less hopeless condition of European Judaism after the middle of the 15th cent., its theoretical (often anti-cultural) tendencies became stumbling-blocks to Jewish development; it can hardly be alleged that they operated to the same practical consequences as Jesuitical casuistry. Yet, in spite of this, the ideal ethico-religious conception of the Law never died out—the intrinsic value of the person asserted itself as superior to external regulations (cf. Travers Herford, *Christianity in Talmud and Midrash*, 1903, p. 7 f.).

'It was the study as well as the fulfilment of the Law which prevented the Jews from sinking in the scale of manhood, throughout the middle ages, intellectually and even morally. Like every other ideal, it had its evil side, and was capable of lamentable perversions: ideally, the study of the law is equivalent to the study of perfect truth: practically, it is often the study of puerilities: the evolving of juridic hair-splittings upon the one hand, and fantastic and disordered imaginings upon the other' (Montefiore, *Hibbert Lectures* [1892], p. 496; cf. Schechter's Appendix).

From the 18th cent. *Aufklarung*, where Moses Mendelssohn's influence was pivotal, a return to the higher principle must be traced. And, for Reformed Judaism, the Law is an ideal which, like other ideals, is the subject of progressive interpretation, thus involving the broader principle of casuistry. Reason, in the form of goodness, alone prefigures the Divine norm.

(*c*) *Muslim.*—Like Judaism, Muhammadanism embodies an elaborate system of casuistry applying to all sides of life. This is to be found in the development of Muslim law. Although the Prophet's position as God's representative made any decision of his absolutely valid, local conditions left a wide margin for opportunism, and Muhammad was an eclectic in these matters. Local usage at Medina necessitated certain abatements; so too did the Rabbinical-Roman law observed by the Arabian Jews, the commercial law of Mecca, and so forth. Thus, after his death, when the Muslim law came to be codified, all the conditions productive of accommodation were gathered together. For, if the Qur'ān failed, decisions of the Prophet, preserved by his disciples, might avail; if not, then the common law of the community was there; and if none of these availed, then the judge might place his own construction upon the case. Accordingly, interpretation, probable and speculative, of the usage of the Prophet came to be a 'science,' and conflict of 'sayings' formed the basis of casuistical procedure. Later, a broad opposition arose between those who appealed to tradition and those who desired to systematize the law. This in itself prepared the way for familiarity with compromise. And, as Muslim conquest widened, the operation of Roman law had to be taken into account. With the advent of the Umayyad dynasty, the old law of Muhammad came to be more and more a religio-ethical system, governing the personal lives of good Muslims. Under the Abbāsids the four great schools arose which formulated the norms that still rule the Muhammadan world. The general result has been that there is a casuistical code applicable to private affairs, and, alongside this, the law of the land. The former is sacred, and provides the definite prescriptions from which the necessity for casuistical interpretation proceeds. The situation is not unlike that of mediævalism, where the canon law and the king's law furnished what might be called private and public codes, and the more private application of the former rendered it inevitably more casuistical in the moral sense. That is to say, it governed relations primarily moral rather than legal. Cf. LAW (Muham.).

Further information may be found in the following: I. Goldziher, *Muham. Studien*, i. and ii. (1889–90); E. Sachau, *Zur ältesten Gesch. d. muham. Rechts* (1870); Th. W. Juynboll, *Handleiding tot de Kennis van de Moham. Wet* (1903, Germ. tr. 1909); von Kremer, *Culturgesch d. Orients unter d. Chalifen*, i. 470 f. (1875–77); Hughes, *DI*, p. 285 f. (1896); M. Hartmann, *Der Islam* (1909); the best review of the subject is to be found in D. B. Macdonald, *The Development of Muslim Theology*, 65–117 (1903); see also art. 'Mahommedan Law,' in *EBr*[10]; further bibliography in *Bulletin of the New York Public Library*, Jan 1907.

(*d*) *Christian.*—Thanks to its Judaistic origin, we find casuistry in Christianity from the beginning (cf. *HDB* i., *s.v.* 'Conscience'). But the several NT issues (*e.g.* Mt $5^{21\text{ff.}}$ $6^{1\text{ff.}}$, Lk $14^{3\text{ff.}}$, 1 Co $7^{8\text{ff.}}$ $8^{1\text{-}6}$) presuppose the existence of that higher ideal whose principles St. Paul states (Ro 12^{1}). The urgency of casuistical difficulties

admits of little doubt, as we know from the outbreak of Antinomianism (*q.v.*) in the primitive communities of Asia Minor and Greece, which vexed the Apostle's soul (cf. Jowett, *St. Paul's Epp. to the Thess., Romans, Gal.*, 1894, i. 76 f., ii. 338 f.). As the *Epistle of Barnabas* says, a little later (*c.* 78 A.D.), the Lord chose for Apostles those who neglected the Law, and were above all sin (ch. v.)—a view which blossomed in the Gnostic societies (cf. E. von Dobschütz, *Christian Life in the Primitive Church*, 1904, ch. xvi.).

The practical problems of sin and repentance agitate Tertullian (cf. *adv. Jud.*), an early rigorist, whose strong ascetic tendencies were such that his opposition to luxury (cf. *de Spectaculis*) and laxity (cf. *de Poen.*) witnesses to an incipient growth of moral-theological decisions. The lives and works of Fathers and saints, like Gregory Thaumaturgus (d. 270), Peter of Alexandria (martyred 311), Basil (d. 379), Gregory of Nyssa (d. c. 395), and especially Augustine (d. 430), exhibit penitential decisions based on the opposition between inward worth and overt deed. And, as the ecclesiastical organization consolidated, papal and diocesan decisions, conciliar decrees, and the like furnished instances of the practical application of prescribed rule to moral life. The development went so far that Johannes Jejunator (d. 596) was able to produce a guide for confessors; while Gregory the Great (*c.* 582) wrote his celebrated *Moralia in Job*, in which the seven deadly sins, being regarded as dependent upon psychological conditions, already furnish material for casuistical interpretation; his *Regula Pastoralis* (*c.* 600) provided a moral code for the clergy. 'Penitential Books,' digests of canons, decisions, and sentences also made their appearance (cf. the *Penitential* [or enumeration of penances] of Theodore of Canterbury [602?-690] in Haddan and Stubbs' *Eccles. Documents*, iii. 114 f.; and the *Poenitentiale* of Bede [673-735], *ib.* 226 f.). Manuals of this sort seem to have sufficed till the time of Abelard (1079-1142), whose *Scito te ipsum* and *Sic et non* mark the rise of a new dialectic. As St. Bernard said: 'The human mind usurps all, no longer leaving anything to faith . . . it forces rather than opens the holy places' (cf. *Introd. ad theol.* c. 1121). Petrus Lombardus (d. 1164) carried the dialectic operation further in his *Libri quatuor sententiarum*, particularly bks. ii. and iii., endeavouring to reconcile the contradictions which Abelard had been content to state. With him the first period closed: casuistry has been sporadic, casual, and without definite system grounded in conscious principle.

The second phase of the development dates from the Fourth Lateran Council (1215) till the Council of Trent (1545-63), and may be called the age of the Summists. The new importance of auricular confession raised the casuist to a position of relative equality with the older canonist.

The type was formulated early in the period (*c.* 1235) by Raymund de Pennaforte, general of the Dominican Order (1238), in his *Summa de Poen. et Matrimonio.* In the same age, the great scholastic systems, especially that of Thomas Aquinas (1227-74), crystallized the attitude in which moral questions were to be approached. 'To teach morality without dogma, is to build a house without foundations: to teach it without an infallible substratum of positive theology, is to build upon the sand' (R. B. Vaughan, *Life and Labours of S. Thomas of Aquin*, 1871-73, ii. 907 n.). The dogmatic and logical basis whence casuistry is to proceed is thus laid down. And this definite work is accomplished in the *Secunda Secundae* of Aquinas' *Summa Theologica*, which subjects human nature to minute analysis, in the form of a discussion of the theological virtues (faith, hope, charity), and of the cardinal (prudence, justice, fortitude, temperance). The method and primary content of Moral Theology are provided here, once for all. Whatever may be thought of Aquinas' procedure in its theological bearings, as a contribution to ethics it takes rank with Aristotle. Only when this is understood and admitted can its vast influence be appreciated. At the same time, its form is systematic, not practical. So, meanwhile, following the direction taken by Raymund, a Franciscan of Asti in Piedmont published his *Summa Astesana* (1317); the Dominican, Bartholomew, of San Concordio, his *Summa Pisana* (*c.* 1340); and Angelus, of Genoa, his *Summa Angelica* (1486). Meanwhile, the Nominalist controversy, symptomatic of the decline and fall of Scholasticism, raised doubts concerning the basis of the whole moral-theological structure, as may be gathered from the determinist tendencies of Buridan (Rector of the Univ. of Paris, 1327) in the free-will controversy, and from Gerson's (1363-1429) leaning to mysticism. Nevertheless, practical questions in morals continued to receive systematic presentation, as in the *Summa Confessionalis* and *Summa Confessorum* of St. Antoninus of Florence (d. 1459), who has established a title to rank as the founder of Moral Theology in its later casuistical development. This phase ends with the *Summa Sylvestrina* (1515) of the Dominican, Sylvester Prierias, an alphabetical compilation from other works.

The third period originates in the wide-spread displacements connected with the Reformation. A *corpus* of rules, traditional and authoritative, came into collision with circumstances which demanded a fresh interpretation of the meaning, and particularly of the limits, of obedience. The activity of the Society of Jesus was directed in large measure to the solution of this problem, and the great age of casuistry began, with the result that external rule, modified with exquisite subtlety to suit particular cases, and directed frequently to the practical end of restoring penitents to the Church, took the place of ideal principle, and ran to such lengths that, even within the Latin obedience, strong protests were raised (cf. JANSENISM). The famous *Letters* of Pascal (*q.v.*), which were translated speedily into the principal European languages, drew the attention of the Western world to the situation; in a word, the controversy over Probabilism had entered its acute stage.

The Moral Theology of which casuistry was an appanage developed chiefly among the Spanish Jesuits.

Luis Molina (1535-1600), whose work, *Liberi arbitrii*, etc. (1588), seemed to the Dominicans to make human will the medium of Divine action, and to substitute Pelagian for Augustinian doctrines, influenced Suarez (1548-1617), the last eminent scholastic, who produced a system of congruism in theology, and taught God's supremacy in political, juridical, and ethical law—theories which he elaborated with extreme ingenuity. Kindred views, especially on the question of political sovereignty, were advocated by Juan Mariana (1537-1624), whose *de Rege et Regis Institutione* (1599) is a classic in political casuistry; its teaching may be studied comparatively with that of Machiavelli (*q.v.*). Possibly by inadvertence, he also exhibited the inner tendencies of Jesuit casuistry as early as 1625 (cf. *De las Enfermedades de la Compañia de Jesú*, which should be considered alongside of Pascal's *Provinciales* and Antoine Arnauld's *Morale pratique des Jésuites*, 1669-94). In contrast with these speculative writers, Sanchez (1551-1610) dealt more directly with practical cases of casuistry, though in the same general spirit (cf. *de Sacramento Matrimonii*, 1592). Another Spanish production, the *Institutiones Mor., in quibus universae quaest. ad conscientiam recte aut prave factorum pertinentes, breviter tractantur* (1616-25) of Azor (1533-1603), was used widely, and earned the praise of Clement VIII. But the author who became most distinguished as a casuist was Escobar y Mendoza (1589-1669), whose *Summula Casuum Conscientiae* and *Universae Theol. Mor. Problemata* proclaim their contents by title, and offer the most representative illustration of the Jesuit moral-theological methods of their period. His *Liber Theol. Mor.* (1646) enjoyed such vogue that forty editions were called for before his death. The Moral Theology movement had prominent representatives in France, of whom E. Bauny (1564-1649), an eminent teacher of the Laxist school (*Theol. Mor.* 1640), ought to be mentioned. It flourished vigorously in Germany, where Hermann Busenbaum produced the *Medulla Theol. Mor.* (1645), which became an accepted Jesuit manual and, later, the starting-point of St. Alphonsus, whose re-interpretation, extension, and further systematization of it have won a place as a most authoritative treatise on the subject. Paul Laymann's (1575-1635) *Theol. Mor.* (1625) was also a work of great repute. Eusebius Amort (1692-1775), who is sometimes characterized, in the Latin communion, as the most eminent German teacher of theology in the 18th cent. (*Theol. Mor. inter rigorem et laxitatem media*, 1739; *Eth. christiana*, 1758; Lat. tr. of *Dict. des cas de conscience* of Pontas, its rigorism modified by the translator, 1733), was a correspondent of St. Alphonsus, who admired his cautious views. In Italy V. Figliucci (1566-1622), who was singled out for attack by Pascal, produced his *Mor. quaest. de christ. officiis et casibus conscientiae* (1626); while Pietro Ballerini (1698-1754), an acute commentator on Augustine, and a defender of Probabiliorism, edited the *Summa* of St. Antony (1740), and of St. Raymund (1774). In Holland, L. Lessius (1554-1623), who fell into Pelagianism during the controversy concerning Bajus (1587), wrote *Libri IV. de Justitia* (1605). Later still, in Germany, B. Stattler (1728-97) produced *Eth. christ. universalis* (1782 f.), and came into collision with nascent modern idealism in his *Anti-Kant* (1788); while, in France, the *Compendium theol. mor.* (1850, 1875) and the *Casus conscientiae* (1863) of the Jesuit father J. P. Gury (1801-75) aroused lively criticism, of the kind familiar in Pascal, by their reversion to laxity.

Although Luther burned the *Summa Angelica*, it was not possible for those who repudiated the authority of the Pope to be rid forthwith of casuistical traditions, which maintained themselves for a time in the Lutheran, Calvinist-Puritan, and Anglican communions. In the Lutheran communion, after Melanchthon's (1497-1560) mediating *Unterricht der Visitatoren*, Balduin attempted a purified casuistry (*Tractatus de Casibus Consc.* 1628), in the shape of a *corpus* compiled from Roman books. Loose in form, it is thoroughly mediæval in character, and filled with curious superstitions.

Other Lutheran exponents of casuistry were J. F. König (1619-64), professor at Rostock (*Theol. positiva acroamatica*, 1664); Konrad Dannhauer (1603-66), one of Spener's teachers at Strassburg (*Theol. Conscientiaria*); Joh. Olearius (1639-1713), professor at Leipzig (*Introd. ad theol. mor. et casuisticam*); and V. E. Loscher (1673-1749), the last representative of strict Lutheran orthodoxy (*Timotheus Verinus*, 1718-22). Like Loscher, A. H. Francke (1663-1727), a powerful practical force in ethics, illustrates the influence of Pietism (*q.v.*)—a fresh evangelical movement destined to make an end of a casuistry reminiscent of Romanism. Spener's (1635-1705) *Pia Desideria* (1675) marked the dawn of a new epoch, notwithstanding the venomous opposition represented by such works as *Die Christlutherischen Vorstellung* (1695) by Deutschmann, and other Wittenberg enemies of Halle; his *Einfaltige Erklarung der christl. Lehre* (1677), and *Tabulae catecheticae* (1683) also exercised influence in the direction of substituting the idea of a priesthood of the laity, accompanied by personal godliness of life, for the approved subtleties of doctorial casuistry, although they also encouraged certain perfectionist aberrations. But the works most effective in compassing the disappearance of Latin casuistry were the *Instit. Theol. Mor.* (1711), and *Isagoge Hist. ad Theol. Universam* (1727), of J. F. Buddeus (1667-1729).

Lutheran casuistry tended to be mild, if not lax; mediated by Pietism, it gave place to Christian ethics in the sense now current. Meanwhile, casuistry of a stricter type, and more penitential in reference, grew up in Calvinistic-Puritan circles.

Its first representatives were Lambert Daneau (Dannaeus), of Geneva (1530?-95), author of *Eth. Christiana* (1577), and William Perkins (1558-1602), of Christ's College, Cambridge, whose *Armilla Aurea* (1590) precipitated the Arminian controversy; his casuistical writings, *A Case of Conscience* (1592), and *A Discourse of Conscience* (1597), prepared the way for *The whole Treatise of the Cases of Conscience* (1606), which enjoyed favour on the Continent. Perkins felt that confessional casuistry was superficial, and, consonant with his Calvinism, tried to make edification a dominant motive. His pupil, William Ames, better known as Amesius (1576-1633), despairing of success in England, migrated to Holland, became a professor at Franeker, and produced *Medulla Theol. de Conscientia, ejus Jure et Casibus* (1633), generally regarded as the best Protestant manual on the subject. To the Reformed development belong also Joh. Wolleb (1586-1626), professor at Basel (*Compend. Theol. Christ.* [1626]); and J. H. Alstedt (1588-1638), a member of the Synod of Dort (1618), who wrote *Theol. Casuum* (1621), and *Encycl. septem tomis distincta* (1630).

The casuistry of the Reformed Churches passed into New England by a natural sequence, the religious atmosphere of the colleges favouring this kind of ethical instruction till the middle of the 19th cent. (cf. Thomas Clap, *The Religious Constitution of Colleges, especially of Yale College*, 1754; G. Stanley Hall, in *Mind* [O.S.], iv. 89 f.).

In 1730 the works of Ames and Wolleb 'were the established standards of orthodoxy' at Yale (I. W. Riley, *Amer. Philosophy: the Early Schools*, 1907, pp. 64, 248; cf. W. Walker, *Ten New Eng. Leaders*, 1901, p. 220 f.). Although no formal casuistry is to be found in Jon. Edwards (1703-58), his exposition of the 'dialectic of the heart' (*ib.* 126) operated in this direction, inducing an attitude comparable with that of Bishop Butler. His *True Virtue* (1778) illustrates the outlook vividly. In circles where deistic and materialistic influences were felt, tendencies similar to those of Paley may be noted, *e.g.* in Thomas Clap (1703-67), the opponent of Whitefield, and in Cadwallader Colden (1688-1776), whose *Ethica* (1752) and *Reflections* (1770) exhibit the utilitarian trend. Perhaps the best example of formal casuistical instruction is afforded by Francis Wayland's (1796-1865) *The Elements of Moral Science* (1835), which displaced Paley as an approved text-book in the United States to such an extent that 60,000 copies were sold ere its author died. Book ii., 'Practical Ethics,' is thoroughly casuistical in matter. One of Wayland's few surviving pupils, President James Burrill Angell (1829-), once an undergraduate at Brown University (1845-49), informed the present writer that casuistical instruction in Ethics was 'axiomatic' in his time. The atmosphere of theological authority in which it flourished may be judged from Wayland's own statements: 'I have endeavoured to make known the ways of God to man. Lord God of Hosts, I commend to Thee, through Jesus Christ Thy Son, this work. May it promote the cause of truth, of peace, and of righteousness' (F. and H. L. Wayland, *A Memoir of the Life and Labors of Francis Wayland*, i. 381 f.); of similar intent is Wayland's *Limitations of Human Responsibility* (1838), where the casuistical vein is quite conscious (cf. J. O. Murray, *Francis Wayland* [1891], 209 f.). In Mark Hopkins' (1802-87) Lowell Lectures *On Moral Science* (1863), especially Lect. ix., kindred tendencies may be traced, though they are expressed with far less system; and the overt statement is reduced finally to a small magazine article, doubtless reminiscent (*New Englander*, xxxii., 1873), by an aged minister, H. N. Day (1808-90). In the United States, as in Europe, modern ethical developments have eventuated in other problems; but it is interesting to note that the old paths were followed later in the new country (cf. F. H. Foster, *A Genetic History of New England Theology* [1907], especially chs. ix., xii., and xvi.).

In the Anglican communion, early casuistry is concerned, naturally enough, with political issues. Omitting the divorce literature relative to Henry VIII., a point of departure may be found in Lancelot Andrewes (1555-1626), bishop of Winchester, whose *Tortura Torti, sive ad Matthaei Torti Librum Responsio* (1609), written in reply to Cardinal Bellarmine's (1542-1621) attack upon the oath of allegiance imposed upon Roman Catholics after the Gunpowder Plot, embodies juridical rather than ethical casuistry. It is interesting because indicative of the scholastic atmosphere still prevalent in England. It might be characterized as the Anglican counterpart of Mariana's *de Rege*, the common subject being the papal doctrine of the deposing power.

The principal writers in the more strictly ethical line are: Joseph Hall (1574-1656), bishop of Norwich (*Resolutions and Cases of Conscience*, 1650); Jeremy Taylor (1613-67), bishop of Down, Connor, and Dromore, whose *Holy Living* (1650) and public eloquence gave vogue to his extensive casuistical work, *Ductor Dubitantium, or the Rule of Conscience in all her General Measures* (1660)—an acute treatise, evincing great intellectual quickness and subjective subtlety, but not notable either for profound thought or for systematic grasp of ethical principles. Thomas Barlow (1607-91), eventually bishop of Lincoln, a notorious political trimmer, wrote several casuistical tracts during his Oxford career, which were published posthumously as *Cases of Conscience* (1692); perhaps the most representative is *Mr. Cottington's Divorce Case*, written in 1677. The most eminent Anglican casuist was Robert Sanderson (1587-1662), bishop of Lincoln, whose *de Obligatione Conscientiae* (1647) is generally regarded as the strongest book on the subject; he wrote also *Nine Cases of Conscience occasionally determined* (1678).

With the birth of the 18th cent. ethical interest shifts its centre; thanks to the Deistic controversy and the advance of science, the venue changes with Hobbes (1588-1679) and Cudworth (1617-88), whose *Treatise on Eternal and Immutable Morality* (1731) illustrates the new issues. No doubt, subjective discussion of conscience is maintained, as may be seen from Joseph Butler's (1692-1752) *Sermons on Human Nature* (1726); but the famous passage on probability as the guide of life, at the beginning of the *Analogy* (1736), has no specific casuistical reference.

Similar subjectivity may be traced in Thomas Rutherforth's (1712-71) *An Essay on the Nature and Obligations of Virtue* (1744), but, as a reply to Samuel Clarke (1675-1729), its central interest is theoretical. Philip Doddridge (1702-51) manifests kindred tendencies in the ranks of Dissent not unfriendly to the Church (*The Rise and Progress of Religion in the Soul*, 1745); finally, the stream loses itself in the prolixities of Tucker (1705-74), a leisured layman (*The Light of Nature Pursued*, 1765-77), and in the academic, utilitarian prudences of Paley (1743-1805) and Whewell (1794-1866).

In the early years of the Oxford Movement the Bampton Lectures on 'Scholastic Philosophy,' by R. D. Hampden (1793-1868), which refer to casuistry incidentally, stirred up a hornets' nest (cf. R. W. Church, *The Oxford Movement*[3], 1892, p. 152 f.), and led to acrimonious discussion marked by no little intellectual casuistry (cf. Introduction to *BL*[2] [1832]; *Edin. Rev.* lxiii.; *Dublin Rev.* xvii. [1868]; *Theol. Rev.* viii.), which, moreover, concerned the whole authoritative basis of casuistical guidance as conceived in Moral Theology. *The Conscience, Lectures on Casuistry* (1868), of J. F. D. Maurice (1805-72), is by no means a profound work. Henceforward the Anglican development may be said to turn upon the accompaniments and results of the 'Anglo-Catholic' movement. While these are a continuation of the tendency within the Church, dating from the 17th cent., to maintain the chief traditions of pre-Reformation teaching, their contemporary manifestation begins with Edward Bouverie Pusey (1800-82). The renewed practice of confession goes back to the publication of his two sermons, *The Entire Absolution of the Penitent* (1846). Prior to this there should be mentioned *The Churchman's Manual* (1833), by the Tractarian coterie at Oxford, and *Tracts for the Times* (especially No. 80, 'On Reserve in Communicating

Religious Knowledge' [1837], by Isaac Williams [1802–65]). Moved by the outcry over *The Priest in Absolution*, Pusey produced *Advice for those who exercise the Ministry of Reconciliation through Confession and Absolution* (1878). It is based on the *Manuel des Confesseurs* [10] (1872), by the celebrated French casuist, Abbé Jean Joseph Gaume (1802–79). The historical introduction gives a careful account of opinion in the Anglican Church, while the body of the book has been so revised and worked over as to be practically Pusey's rather than Gaume's (cf. H. P. Liddon, *Life of E. B. Pusey*, 1893–94, iv. 303 f.).

Among significant works in which the movement has crystallized are: William Gresley, *The Ordinance of Confession* [2] (1852); *The Priest in Absolution: A Manual for such as are called unto the Higher Ministries in the English Church* (1866); *The Church and the World*, edited by Orby Shipley (esp. Art. vii., 'Private Confession and Absolution,' 1866–68); *Tracts for the Day* (1868); *Pardon through the Precious Blood, or the Benefit of Absolution* (1870); with the exception of the famous *Priest in Absolution*, these deal mainly with the sacramental aspect of the question. The ethical and casuistical problems are discussed in the following: J. Skinner, *A Synopsis of Moral and Ascetical Theology* (1882), a work that has received warm commendation from Anglo-Catholics; John J. Elmendorf, Professor at Racine College, Wisconsin, U.S., *Elements of Moral Theology based on the Summa Theologiae of St. Thomas Aquinas* (New York, 1892); W. W. Webb (1857–), bishop of Milwaukee, *Cure of Souls* (1892), the manual commonly used in the American branch of the English Church.

Anglo-Catholics would probably admit that, on the whole question of casuistry in morals, they have been too dependent upon Roman sources. For, consonant with the English, as contrasted with the Latin, temperament, they incline to deal as simply and plainly as possible with the issues raised, avoiding too curious subtleties. The standard of a positive righteousness, rather than the attempt to explain away moral situations, best consorts with the atmosphere where English and American Churchmen are most at home. The leaders would contend, doubtless, that the importance of casuistry as an aid to conduct has been minimized unduly, and that the increasing complications of modern life render necessary the guidance of a fixed scheme for the application of general principles to particular cases.

LITERATURE.—*N.B.* With reference to the following list, two points must be remembered: (1) Outside Romanism and Anglicanism, casuistical questions involve so many general factors of accommodation that the treatment is usually incidental to other problems, often quite subordinate. As concerns accommodation, for example, the history of Galileo's or Darwin's discoveries affords admirable illustrations. (2) The literature is so vast that this list can be taken only as suggestive, not complete. In addition to the works mentioned in the text above:

I. *GENERAL*: art. 'Casuistry' in *EBr* [9], *DPhP* (and in vol. ii. pt. ii. lit. of 'Christian Ethics,' p. 874; 'Casuistry,' p. 880; 'Conscience,' p. 882), *Catholic Encyc.*, *Dict. de théol. cath.* (lit. full), *PRE* [2.3]; art. R. M. WENLEY.

CATACOMBS.—The numerous ancient Christian cemeteries, better known by the generic name of 'catacombs,' constitute the most notable monument of primitive Christianity in Rome which has come down to us. Their origin goes back to the 1st cent. A.D., and is directly connected with the preaching and diffusion of Christianity in Rome initiated by the Apostle Peter. Just as the Jewish community in Rome had its places of assembly in the synagogues, and its places of burial in the Jewish cemeteries, so the Christian community in Rome had, even from the end of the 1st cent., its places for liturgical meetings called *ecclesiæ domesticæ* or *tituli*, and common cemeteries which were in close connexion with and dependence upon these same ancient *tituli*. Thus, we know that the very ancient cemetery of Priscilla, the oldest in subterranean Rome, situated on the Via Salaria Nuova, was dependent upon and connected with the *tituli* in memory of Pudens in the 'Vico Patricio,' and with those of Aquila and Priscilla on the Aventine, as has been shown by G. B. de Rossi. And, just as the primitive *tituli* had their origin in the houses of rich Christian patricians who placed at the disposal of the faithful, for their meetings, one or more halls in their palaces, so the first *cubicula* and galleries of the catacombs were excavated beneath the suburban farms of some of the faithful, who placed at the disposal of their brethren in the faith the area above and below ground of their country properties. Thus, from the very first, the Christian cemeteries were safeguarded under the protection of private possession. That this was the origin of the cemetery excavations is clearly proved by the very names of the Roman cemeteries, which almost always have a double denomination—the first consisting of the personal name of the ancient possessor of the property in which the cemetery was excavated, the second of the name of the martyrs who, in the centuries when peace prevailed, were held in especial reverence there, *e.g.* 'cœmeterium Prætextati ad S. Januarium,' 'cœmeterium Pontiani ad SS. Abdon et Sennen,' 'cœmeterium Domitillæ ad SS. Nereum et Achilleum,' etc.

The excavation of the first nuclei of the Roman catacombs must have been very restricted, and so it remained throughout the whole of the 1st and 2nd cents.; the great system of cemetery excavation which we see to-day belongs almost exclusively to the 4th cent., and the regions belonging to the 1st and 2nd cents. are rare.

At the beginning of the 3rd cent., owing to the extraordinary increase in the number of the Christians, the cemeteries underwent a correspondingly wide extension. It was precisely on this account that the catacombs were considered by the Roman authorities to be the collective property of the *corpus Christianorum*, that is, of the Christian society; and this exposed the catacombs directly to temporary confiscations by the Imperial government. This is the heroic period, so to speak, in the history of the Roman catacombs. During the storm and continous succession of the terrible persecutions of the 3rd cent., the Christian cemeteries were twice confiscated, namely, during the persecution of Valerian in the year 258, and during that of Diocletian in the year 303. Of this dangerous period in the history of our cemeteries the echoes and traces remain in the excavations themselves, as well as in the inscriptions in the catacombs. At that time, and particularly in the second half of the 3rd cent., secret and hidden entrances were opened; and de Rossi was able to verify the existence in the cemetery of Callixtus of a mysterious stairway, cut short and hanging as it were in mid-air, which must have been constructed for the purpose of escape from danger in times of persecution and of confiscation of the cemeteries. Further, the Christian epigraphy of the 3rd cent. reflects the very difficult conditions in which the society of the faithful found itself, for this epigraphy is more than ever bound by the restrictions of the *arcani disciplina* (*q.v.*), which reveals itself in an involved and enigmatic symbolism which escaped the attention of the profane.

The great persecution of Diocletian, which was the longest, the most sanguinary, and the most terrible of all, for ever ended the cruel struggle which for three centuries Christianity, with the weapons of humility and with the moral and religious force of its new principles, had carried on against a decrepit and corrupt paganism. Constantine, after his victory over Maxentius at the Milvian bridge, proclaimed at Milan (A.D. 313), together with his colleague Licinius, the edict which granted a final peace to the Church. Christianity triumphed, and its shout of victory found a faithful echo even in the obscure caves of the Roman catacombs. In the 4th cent. the excavation of cemeteries extended in a marvellous way, and subterranean architecture attained an imposing magnificence of form and of style previously unknown, so that, even in its external forms, catacomb excavation demonstrates the security, tranquillity, and peace which characterized that happy century in the history of Christianity.

The cemeteries above ground, or *sub divo*, which had been formed in modest proportions even from the time of the persecutions, were greatly developed in the Constantinian and post-Constantinian periods; they were embellished with basilicas, cells, exedræ, and porticoes, while, with this increase and spread of sepulture above ground, subterranean burial proportionately decreased. The most important and characteristic period is that of the second half of the 4th cent., and in this period stands out the grand figure of Pope Damasus. During the persecution of Diocletian some historical crypts had been concealed by the Christians in order to preserve them from the fury of the pagans. Pope Damasus, in the turbulent period of the schism of Ursinus, had made a vow that, if he were able to bring back the clergy to the wished-for unity, he would restore and adorn the crypts of the martyrs. After his triumph in that difficult crisis, Damasus kept his promise. He found again

the crypts which were hidden beneath the rubbish; he constructed new entrances, wider and more commodious, to facilitate the pious pilgrims' access to the venerated tombs; and he opened *lucernaria* to give light and air to the crypts, which he also enlarged and embellished, placing there inscriptions, for the most part in metrical form, in which he related the circumstances of the martyrdom of the saints, and at times referred to the works which he himself had executed. These epigraphs he caused to be engraved in honour of the martyrs, in a special form of calligraphy known to archæologists as 'Damasan,' or 'Filocalan,' because it was invented by Damasus's friend, Furius Dionysius Filocalus. Many were the works carried out by Damasus in the crypts of the Roman catacombs, and these were continued and brought to a conclusion by his immediate successor, Siricius.

These works of restoration and embellishment excited a lively desire among Christians to have their tombs within or near the venerated crypts. In this way there arose the so-called *retro-sanctos*, that is, regions or galleries in the cemeteries, excavated near the historical crypts, and in which the faithful strove to obtain sepulture, in order to be materially as near as possible to the tombs of the martyrs. The ardour with which this endeavour was prosecuted caused the grave-diggers to take advantage of it for the purpose of gain; and, at the end of the 4th cent. and at the beginning of the 5th, the buying and selling of subterranean sepulchres remained the almost exclusive privilege of the *fossores*, who at times sold the sepulchres near the tombs of the martyrs at a very high price.

Cemetery excavations finally ceased in the first half of the 5th cent., and thenceforward burial took place in cemeteries formed *sub divo* over the catacombs until the middle of the 6th cent., when, these cemeteries being abandoned and the funeral prescriptions of the Laws of the XII Tables forgotten, centres for burial began to be formed within the city. Thus, after the catacombs had been used for about four centuries as cemeteries, they became exclusively sanctuaries of the martyrs, and consequently the goal of devout pilgrimages. The pilgrims came from all parts of the Roman world, and especially from the northern regions of Europe; and in the so-called *Itineraries of the Pilgrims* we have vivid and very eloquent evidence of these continued visits, which went on from the 6th to the 9th century. These valuable guides to the historic sanctuaries of the Roman catacombs constitute the fundamental documents for the reconstruction of the topography of subterranean Rome; they were compiled in the 7th and 8th centuries by priests of the Roman Church, for the use of the pilgrims who came to Rome, and not by the pilgrims themselves, as the present writer has recently demonstrated (*Nuovo Bullettino d'archeologia cristiana*, 1909, p. 79 ff.). During this period many Popes set themselves to adorn the historic tombs with paintings and other ornaments, and to repair them; and we still see the traces of their labours, and sometimes we have a record of them in the biographies of Popes in the *Liber Pontificalis*.

We thus reach the 9th cent., with which terminates this first long period in the history of the catacombs. Continual invasions and raids, especially those of the Lombards, in the Roman Campagna had rendered them insecure and too much exposed to damage and ruin. The Popes, in this state of things, saw themselves constrained, however unwillingly, to remove the bodies of the martyrs from the catacombs, and to place them in security in the churches and basilicas of the city. Thus commenced the period of translation, and the translations were carried out in the case of a great number of the martyrs by Popes Paul I., Stephen III., Paschal I. in the beginning of the 9th century, and finally Leo IV. in the middle of the 9th century. With the translations of this last Pope, the catacombs were almost totally deprived of their most precious treasures; and, on this account, visits to the suburban sanctuaries gradually ceased, their chief object having come to an end. The crypts gradually came to be abandoned, and the earth, precipitated down the stairways and the *lucernaria*, slowly filled up the crypts and subterranean galleries, which thus disappeared and became hidden in the course of centuries. The oblivion into which these sanctuaries had fallen hindered a right knowledge of the topography of the Roman catacombs, and the names of individual cemeteries were confused and identified with those of contiguous cemeteries. In this way, in the course of the 10th and 11th centuries, the Roman catacombs were forgotten by every one. There remained only here and there in the Roman Campagna a few names which vaguely recalled the great historic memories of the monuments and of the martyrs of the primitive Church.

From the 10th and 11th centuries down to the first half of the 15th the Roman catacombs lay neglected and forgotten. It is with this century that the dawn of a new period begins. The first visitors to the subterranean cemeteries were the Minor Friars, who, between the years 1433 and 1482, examined a region of the cemetery of Callixtus, on the Appian Way. Only one date is anterior to this period, namely, that of 1432, connected with the name of Johannes Lonck. In 1475 the members of the Roman Academy, with the celebrated humanist, Pomponio Leto, at their head, went through some regions of the cemeteries of Callixtus, Prætextus, Priscilla, and SS. Peter and Marcellinus, not for the purpose of a pious and religious examination, but out of mere scientific and literary curiosity. The visits of the Roman Academy remained fruitless of scientific results, and found no echo among contemporaries.

At the end of the 16th and beginning of the 17th cent., Antonio Bosio, who may be regarded as the real founder of Christian archæology, descended into the catacombs. He went through many of the Roman cemeteries, and diligently studied, with adequate scientific criteria, their historical records, connecting the notices of the *Acts of the Martyrs* with the topography of the cemeteries. The fruit of his immense labours appeared in a posthumous work entitled *Roma Sotterranea Cristiana* (Rome, 1632). Bosio died in the year 1629; but even from the beginning of the 17th cent. a mischievous tendency turned aside those who studied Christian archæology from the system of topographical research so happily instituted by Bosio. At that time began the search for the bodies of the martyrs, based upon criteria scientifically false; and the catacombs were compelled to undergo a deplorable, however pious, sack. In this work of anxious and feverish search for the bodies of the saints, the canon Marcantonio Boldetti distinguished himself. He had in his possession a very treasure of cemetery monuments, and during the space of forty years he examined numerous regions of the catacombs which up till then had remained intact. In his work entitled *Osservazioni sopra i sacri cimiteri dei Santi Martiri ed antichi cristiani* (Rome, 1720), he gathered together, without any scientific order, a great number of records, without troubling himself with aught save the distinctive signs and the recognition of the bodies of the martyrs. This false tendency threw discredit upon the study of the Roman catacombs, while Protestantism derided the search for relics, and Montfaucon wrote a

pamphlet to demonstrate the small number of martyrs belonging to the catacombs of Rome. The 18th cent. marks the most deplorable period in the history of the Roman catacombs; they were plundered of their most noteworthy treasures, the inscriptions were dispersed, the *loculi* were violated, and the paintings were removed.

With the commencement of the 19th cent. a new period opened in the study of Christian archæology. The names of Adami, Raoul-Rochette, and Settele, with the learned compositions of which they were the authors, mark this notable revival. The learned Jesuit, Padre Giuseppe Marchi, gave a definite impulse to this study, and published in 1844 his important work on the *Monumenti delle arti cristiane primitive nella metropoli del cristianesimo*. Marchi happily arrived at some data for a scientific system, and he had the great merit of being the master of Giovanni Battista de Rossi, the restorer of the science of Christian archæology. The young disciple at once perceived the importance of Christian epigraphy and topography. Of the former he laid down the chief canons and the fundamental laws, and, with respect to the latter, he showed for the first time the great importance of the *Itineraries of the Pilgrims*. He created, from its foundations, the science of cemetery topography, which he based upon solid and unshakable criteria, so that during his long scientific career he was able to find again many of the historical crypts of the catacombs. De Rossi published three volumes of the *Nuova Roma Sotterranea* (1864, 1867, 1877). After his death, study and research were continued by a numerous band of students, among whom the names of his disciples constantly hold the first place, and who constituted the first and true Roman school of Christian archæology. These men were worthy continuators of the work of the great master; and we may record, as a tribute of sincere praise, the names of Henry Stevenson, Mariano Armellini, and Orazio Marucchi: the first two were very soon removed by death, and to the third has now been deservedly assigned by the Commission of Sacred Archæology the compilation of some volumes of the *Nuova Roma Sotterranea*, a work which has for its purpose the prosecution of that already begun in so masterly a way by de Rossi (1st fasc. 1909).

The Roman catacombs occupy a long zone of the breadth of three miles around the city of Rome, starting from the walls of Aurelian. They had their primitive entrances upon the margin of the great consular roads, or near the small cross-ways which led off from the principal roads. These entrances were constructed in the full light of day, which proves that the Christians possessed cemeteries *æquo jure* from the first centuries of Christianity. We have a fine example of this in the monumental ingress to the cemetery of Domitilla, which opens on a cross-way of the Via Ardeatina. The excavation of a Christian cemetery was begun with a stairway which descended from the surface of the ground; directly it reached the level of the granular tufa, the first gallery, with its *cubicula*, was excavated at its foot. Thus the cemeteries arose from very limited *hypogea* of a domestic character, with stairways; and, later on, by the enlargement of the excavations, they joined one another, thus forming the immense labyrinth of the Roman catacombs. The opinion is consequently false which holds that the catacombs arose from ancient *arenaria* abandoned by the pagans.

The cemetery galleries were excavated, as has been said, almost exclusively in the granular tufa, and have a width of between 75 centimetres and one metre. To right and left, *loculi* were excavated in the walls, and these were sometimes closed by marble slabs or by tiles, and were capable of containing one or more bodies; the *arcosolia*, on the other hand, were formed by a tomb called *solium*, over which an arch was turned, whence the name *arcosolium*. Here and there to right and left opened *cubicula*, or family-chambers, which were sometimes adorned with paintings and marble, and furnished with *luminaria*. Further, in the pavement of the galleries tombs were made, known by the name of *formæ*, and these were covered with great slabs of marble with inscriptions.
